Prompted solely by a desire for public service the New York Times Company and its
President, Mr. Adolph S. Ochs, have made possible the preparation of the manuscript
of the Dictionary of American Biography through a subvention of more than $500,000
and with the understanding that the entire responsibility for the contents of the vol-
umes rests with the American Council of Learned Societies.

The Dictionary of American Biography is published under the auspices of the American Council of Learned Societies and under the direction of a Committee of Management which consists of J. Franklin Jameson, Chairman, John H. Finley, Allen Johnson, Frederic L. Paxson, Iphigene Ochs Sulzberger, Carl Van Doren, Charles Warren.

The American Council of Learned Societies consists of the following societies:

American Philosophical Society
American Academy of Arts and Sciences
American Antiquarian Society
American Oriental Society
American Philological Association
Archaeological Institute of America
Modern Language Association of America
American Historical Association
American Economic Association
American Philosophical Association
American Political Science Association
American Sociological Society
Linguistic Society of America
History of Science Society
Mediaeval Academy of America
Society of Biblical Literature and Exegesis
Bibliographical Society of America

DICTIONARY OF
AMERICAN BIOGRAPHY

CHANFRAU, FRANCIS S. (Feb. 22, 1824—Oct. 2, 1884), actor, was the son of a French naval officer who settled in America, and of his wife, Mehitable Trenchard of Westchester County. He was born at the corner of the Bowery and Pell St., New York City, in a wooden tenement known as the Old Tree House. After receiving a fair education he left home and went adventuring out west. For a time he was a driver on the Ohio Canal, subsequently he learned the trade of carpentry, but eventually an inclination toward acting led him, first, into amateur organizations, and finally back to New York to the Edwin Forrest Dramatic Association. His début on the professional stage was as a super at the Bowery Theatre. Mimicry appears to have been his forte, and his imitations of Forrest won him considerable popularity. His reputation as an actor became established when as Jeremiah Chip in The Widow's Victim, at Mitchell's Olympic, he gave imitations of every actor of note. Henceforth he had no difficulty in finding engagements, playing Laertes to the Hamlet of James W. Wallack, Jr., at the Chatham (July 17, 1844), and Cedric in Ivanhoe at Palmo's Opera House (Apr. 7, 1845).

The first great hit of Chanfrau’s career was at Mitchell’s Olympic, New York (Feb. 15, 1848), when in Benjamin A. Baker’s sketch A Glance at New York he took the part of Mose—a typical fireman of that period of hand engines, a half-ruffian, half-hero dare-devil, ever ready for an adventure or a fight. His performance of this rôle raised Chanfrau to stardom, and he carried the play to nearly every theatrical town in America. Identified with the character of Mose, he later had some difficulty in freeing himself from it. “Mr. Chanfrau’s immense success in this character,” writes J. N. Ireland, “has been somewhat detrimental to his standing in his native city in a more elevated range of the drama; some squeamish connoisseurs insisting that an artist cannot excel in lines dissimilar. The conclusion, however, is unwarrantable and unjust, for his versatility, although unbounded in aim, is almost unequaled in merit, and his name is ever a reliable source of attraction and profit in almost every other city of the Union in a much higher grade of character” (Records of the New York Stage, 1866, II, 419).

Meanwhile Chanfrau undertook various managerial ventures. In 1848, in conjunction with W. Ogilvie Ewen, he leased the Chatham, opening it as Chanfrau’s National Theatre; from this he withdrew in 1850. Subsequently he had a disastrous managerial experience at the Brooklyn Museum. In 1851 he went to California. Returning a year later, he again tried his hand at management. Taking a lease of the historic Astor Opera House, the scene of the fatal Forrest-Macleary riots, he reopened it with James Stark in Lear (Aug. 27, 1852); the following month he changed the name of the house to New York Theatre. He was also the manager of White’s Varieties, opened the same year at 17-19 Bowery.

In 1858 he married Henrietta Baker of Philadelphia, already an actress of reputation, who later became, as Mrs. F. S. Chanfrau, one of the most noted actresses on the American stage (see sketch of Henrietta Baker Chanfrau). They preferred for the most part to star separately but in London Assurance he appeared as Sir Harcourt Courtley and she as Lady Gay Spanker. Chanfrau’s last stage success was in Kit the Arkansas Traveller. The rôle of Kit proved as popular throughout the country as
Chanfrau

John T. Raymond's Colonel Sellers or Mayo's Davy Crockett, and Chanfrau played it for twelve consecutive seasons, from Sept. 23, 1872, to the time of his death, Oct. 2, 1884.

CHANFRAU, HENRIETTA BAKER (1837–Sept. 21, 1909), actress, was born in Philadelphia of good family. She was named Jeannette Davis (Henrietta Baker being a stage name). Her début was made at the age of sixteen when, in the summer of 1854, she appeared as a vocalist at the Assembly Buildings, Philadelphia, under the management of Prof. Mueller. She was first seen as an actress on Sept. 19 of that year at the City Museum, Philadelphia, as Miss Ashley in The Willow Copsé. Soon afterward she became a member of the Arch Street Theatre where she remained two seasons. Later she was seen at the Walnut Street Theatre. When Lewis Baker opened the National Theatre in Cincinnati, the season of 1857–58, she became a member of the company and was a great favorite with her audiences. It was while with this organization that she married Francis S. Chanfrau [q.v.], on June 23, 1858. Considered one of the most natural actresses on the American stage, for many years she was one of the most popular performers in the country. She was the original representative in America of Dora (in Charles Reade's play); was very successful as Esther Eccles in Caste and as May Edwards in The Ticket of Leave Man, and starred in East Lynne. She played Ophelia to the Hamlet of Edwin Booth in a long New York run and also supported Mrs. John Drew and Charlotte Cushman. She was the Portia in the noted production, Nov. 25, 1864, of Julius Caesar, in which the three Booth brothers, Edwin, Junius, and Wilkes, appeared together, and she played Ophelia in the hundred nights' run of Hamlet at Booth's Theatre. For some years she was with Forrest and later with the elder Davenport, Wallack, Fechter, and William Warren. While lessee and manager of the old Varieties in New Orleans in the early seventies, she "discovered" Mary Anderson, then playing Julia in The Hunchback in an obscure theatre, and introduced her to the public. She scored one of her greatest successes, June 5, 1876, at the old Eagle Theatre, New York, as Grace Shirley in the drama called Parted in which she later starred. After her husband's death in 1884, she temporarily retired from the stage, but in 1886 she made a European tour and afterward reappeared at the Union Square Theatre, New York. Subse-

quently she purchased the Long Branch News, but withdrew to carry on the work of a Christian Science leader, and was active in that sect in Philadelphia until she moved to Burlington, N. J., where she died at the age of seventy-one.

CHANG AND ENG (May 1811–Jan. 17, 1874), "the Siamese Twins," were born in Meklong, Siam, the sons of a Chinese father and of a mother who was half Chinese. They owed their future celebrity to the fact that they were joined at the waist by a cartilaginous structure, which grew to be about four inches long and eight in circumference. Their parents were poor, and the death of the father in 1819 compelled the boys to fend for themselves. After various make-shifts they went into the duck and egg business and were doing well when in 1824 a British merchant, Robert Hunter, espied them stripped to the waist and realized at once their educational value. He bargained with their mother for their services, and a brother fell heir to the poultry yard. In charge of an American, Capt. Coffin, they left Bangkok on Apr. 1, 1829, and on Aug. 16 arrived in Boston. The public was assured unciously that the moral character of the youths was irreproachable and that "the most fastidious female [would] find nothing in the exhibition to wound her delicate feelings." To those who suggested the feasibility of a sur-dering operation it was answered that the twins were so attached to each other, sympathetically and morally as well as physically, that they heard such suggestions with dismay; and their movements, marvelously accommodated to each other, and their unfeigned solicitude for one another's comfort seemed to testify to the truth of this. After astounding and edifying the North Atlantic seaboard for eight weeks, Chang and Eng embarked for England and for further triumphs. On Mar. 4, 1831, they landed once more in New York, but the rest of their extensive travels here and abroad need not be told. On reaching their majority they began to profit by their tours, the receipts having previously gone to their owner. When they had acquired a fortune of some $60,000 they settled as farmers in Wilkes, and later in Surry, County, N. C., took out naturalization papers, received by act of the legislature the surname of Bunker, and in April 1843 were united in marriage to the Misses Sarah and Ade-laine Yates, daughters of David Yates of Wilkes County. Chang had ten children and Eng nine,
but their collateral domestic life was unhappy. The wives quarreled so that the brothers were forced to maintain separate establishments, which they visited alternately for three days at a time. The Civil War deprived them of their slaves and of much of their money and made it necessary for them to resume their travels for a while. Chang, the more intelligent but also the more irritable of the two, began to drink heavily and when intoxicated would smash furniture and toss the pieces on the fire. Frequently the twins came to blows and once were bound over to keep the peace. Among their neighbors, however, they continued to maintain their reputation for honesty and fair dealing. Their end was hastened by Chang’s intemperance. In August 1870, on a voyage back from Liverpool, he suffered a paralytic stroke. In the night of Jan. 16–17, 1874, Eng awoke to find his brother dead beside him; he himself died, perhaps from fright, a few hours later.

CHANNING, EDWARD TYRRELL (Dec. 12, 1790–Feb. 8, 1856), editor, educator, was born in Newport, R. I., the son of William and Lucy (Ellery) Channing, and brother of William Ellery Channing and Walter Channing [q.q.v.]. At the age of thirteen he entered Harvard College. Owing to his participation in the student rebellion of 1807, he did not receive his degree in course, but was awarded an honorary A.M. in 1819. He studied law with his elder brother, Francis. George Ticknor says regarding him: “In 1813 I was admitted to the bar, at the same time with my friend, Edward T. Channing, who knew, I think, just about as much law as I did, and who afterwards deserted it for letters” (Life, Letters and Journals of George Ticknor, 1909, I, 9). In 1814-15, Channing, Willard Phillips, President Kirkland of Harvard, Richard H. Dana, and a few others, formed an association, of which Channing was secretary, for the publication of a bi-monthly magazine, to be called the New England Magazine and Review. When, however, it was learned that William Tudor was projecting a periodical, they transferred their labors and good will to him, and in May 1815 the first number of the North American Review appeared. In 1817 Tudor retired from the editorship, and the publication passed into the hands of a club composed of the members of the original association with some additions. In May 1818 Channing succeeded Jared Sparks as editor and, assisted by Richard H. Dana, edited the seventh, eighth, and ninth volumes, until his appointment in October 1819 as Boylston professor of rhetoric and oratory at Harvard. In 1826 he married his cousin, Henrietta A. S. Ellery. His sketch of his grandfather, William Ellery [q.q.v.], in Jared Sparks’s Library of American Biography (vol. VI, 1836), opens with the remark that “there are men who exercise an important influence within a limited sphere, in a thousand nameless ways, and, it may be, without a distinct consciousness of it on their own part, or that of others, who pass out of life without one strong result, one striking manifestation to make them of public importance.” In the main this was true of Channing himself. For thirty-two years his life was strictly academic. Except for the sketch just mentioned and an occasional magazine article, he published practically nothing. After his death his Lectures Read to the Seniors in Harvard College (1856) appeared. Their wisdom and charm make them profitable reading still. Indirectly, Channing’s influence was far reaching. He had sound scholarship, exquisite taste in literature, and ability to teach. He “probably trained as many conspicuous authors,” wrote T. W. Higginson, “as all other American instructors put together” (Old Cambridge, 1899, p. 14), and Edward Everett Hale declared, “I had but four teachers in college, Channing, Longfellow, Peirce, and Bachi. The rest heard me recite but taught me nothing” (James Russell Lowell and his Friends, 1899, p. 128). “He deserves the credit of the English of Emerson, Holmes, Sumner, Clarke, Bellows, Lowell, Higginson, and other men whom he trained” (Ibid., p. 19). He retired from his professorship at the age of sixty, as he had long before decided he would do, and died at Cambridge five years later.

CHANNING, WALTER (Apr. 15, 1786–July 27, 1876), physician, was born in Newport, R. I., the son of William Channing, who at one time served as United States district attorney, and of his wife, Lucy, daughter of William Ellery [q.q.v.], a signer of the Declaration of Independence. He was a brother of William Ellery Channing and Edward Tyrrell Channing [q.q.v.]. In 1804 he entered Harvard College in the same class with his cousin, Richard Henry Dana [q.q.v.]. He took part in the undergraduate “Rebellion of 1807” and consequently failed to receive his bachelor’s degree in the regular course. (In 1867 it was granted to him as a member of
Channing

The class of 1808.) His M.D. degree was obtained from the University of Pennsylvania in 1809. After a few years of study abroad, principally in Edinburgh and London, he returned to Boston in 1812 and began to practise obstetrics. In the same year, Harvard conferred upon him the degree of M.D. In 1815, he was appointed the first professor of obstetrics and medical jurisprudence in the Harvard Medical School, a position which he held for nearly forty years. He also acted as dean of the Medical School from 1819 to 1847. His professional interests were many. He assisted in the founding of the Boston Lying-In Hospital in 1832. When the New England Journal of Medicine and Surgery expanded into the Boston Medical and Surgical Journal (1828), he became co-editor with John Ware, M.D. (1795-1864). He served as librarian of the Massachusetts Medical Society from 1822 to 1825 and treasurer from 1828 to 1840. He was also a member of the American Academy of Arts and Sciences.

Channing's chief contribution to medicine came soon after the introduction of anesthetics at the Massachusetts General Hospital (1846). He began to use ether in cases of childbirth the next year and published his first report of two cases, in the Boston Medical and Surgical Journal for May 19, 1847. Later in the same year he was able to issue a small pamphlet on the subject, Six Cases of Inhalation of Ether in Labor. His Treatise on Etherization in Childbirth (1848) reported over 500 cases. In addition to his work on the use of ether in labor, he published many papers on obstetrics and also various addresses of a more general nature. He wrote brief biographies of Enoch Hale, M.D., John Revere, M.D., John D. Fisher, M.D., and Joshua Fisher, M.D., and an anonymous volume of poems, New and Old (1851). His long letter to Dr. J. V. C. Smith, which was later published in pamphlet form as Professional Reminiscences of Foreign Travel, gave a graphic account of the prevalence of puerperal fever in Europe in 1852 and of the ether-chloroform controversy. In 1856, he published A Physician's Vacation, the record of another extensive European tour.

Channing was a devout Unitarian, an ardent temperance reformer, a pacifist, and an active educationalist. He was full of exuberant vivacity and humor; his gayety was irrepressible and he was a brilliant conversationalist. He was married twice: first, in 1815, to Barbara Higginson Perkins, daughter of Samuel G. Perkins of Brookline, Mass.; second in 1831, to Elizabeth Wainwright of Boston.

Channing

CHANNING, WILLIAM ELLERY (Apr. 7, 1780-Oct. 2, 1842), Unitarian clergyman, was born in Newport, R. I. His ancestors on both sides were of the best New England stock. The earliest American Channing was John, who came from Dorsetshire, England, in 1711. His wife was Mary Antram, a fellow passenger on the voyage hither. Their son John became a prosperous merchant of Newport, R. I., but lost his fortune in later life. John's son William, born in Newport in 1751, was graduated from Princeton College in 1769 and entered at once upon the study of the law. In 1773 he married Lucy, daughter of William Ellery [g.e.], who was graduated from Harvard College in 1747. The son of this marriage inherited thus a double academic tradition; on one side the stern Presbyterianism of Princeton, on the other the already threatening liberalism of Harvard. The father would have sent the boy to his own alma mater, but the stronger influence of the family connection with Cambridge decided the matter. The boy's maternal grandmother, Ann Remington, was of Cambridge origin, and Francis Dana, chief justice of Massachusetts, whose wife was a sister of Lucy Ellery, was living there. The boy was received into this uncle's family and spent the four years of his college life there, enjoying the benefits of a refined home but deprived of the rough-and-tumble discipline of dormitory life. Contemporary accounts describe him as a serious, over-thoughtful youth, inclined to self-inspection but acutely sensitive to the conditions of life about him. After graduation from college in 1798 he accepted a position as tutor in the family of David Meade Randolph in Richmond, Va., and spent a year and a half there. Up to this time he had been in good health, fond of exercise, and a cheerful if rather serious companion. During this Southern residence among people of alien sympathies he acquired habits of overwork and ascetic discipline which undermined his health. Returning to Newport he applied himself with characteristic fervor to the study of theology. In 1802 he was called to Cambridge as "Regent" of Harvard College, a kind of proctorial office which left him abundant leisure for his chosen studies. In 1814 at the age of thirty-four he married his cousin Ruth Gibbs. On June 1, 1803, he was ordained and installed as minister of the Federal Street Church in Bos-
Channing

ton, and continued in this pastorate until his death in 1842. Channing's semi-invalidism accounts in a large measure for the social aloofness which was one of his great limitations. He was compelled to husband his physical energy very carefully, and he was shielded by his wife and by his admiring friends from many of the ruder contacts with the world. Only a strong will prevented him from becoming a recluse, and he constantly struggled, not always with conspicuous success, against a valetudinarian habit.

On the pedestal of the statue of Channing in the Public Garden of Boston is the inscription, "He breathed into theology a humane spirit." This expresses his real contribution to theology. He had no novelties of doctrine to propose. He was no innovator. He accepted historic Christianity as a way of life and was eager only to persuade others to walk in it. He was by nature a Broad Churchman of the type common in the Church of England. It is one of the ironies of history that he should have had an important part in some of the bitterest religious and political controversies of his time. A man whose temper was altogether catholic was forced by circumstances to appear as the standard bearer of a new sect.

The "Unitarian Controversy" in which the young minister of the Federal Street Church was destined to take a prominent part was the result of forces which had long been working among the Congregational churches of New England. There had come to be Calvinists, moderate Calvinists, Arminians, and even some ministers darkly suspected of Arianism. About 1815 the differences became acute and the orthodox party, alarmed at the progress of "heresy," insisted upon a thorough house-cleaning. "If Socinians and Arians are among us," they said, "let them show their colors!"

The challenge was promptly accepted, and the word "Unitarian" became henceforth the rallying point for the gathering opposition. New England was in a welter of theological pamphleteering at just the time when Channing was maturing his own thought upon religion. His importance lies in the fact that he refused to identify himself with any of the numerous shades of opinion in the community about him. He committed, what, in the eyes of his critics, was the unpardonable sin of doing his own thinking. Starting with a profound conviction of the sufficiency of the Christian Scriptures as the guide of faith, he sought there a basis for the creed of Calvinism in which he had been reared. A "jealous" God; a mankind conceived in iniquity; the vicarious sacrifice of an innocent victim as atone-ment for "sin" in which man's will had no part; election by grace,—for all these Channing searched the Scriptures in vain. He did not enter the controversy by the barren method of textual criticism, but by the preaching of a gospel founded upon precisely opposite ideas: the goodness of God, the essential virtue and perfectibility of man, and the freedom of the will with its consequent responsibility for action. The effect of his preaching and writing was to bring to a focus all the unrest and dissatisfaction that had long been gathering within the sects, more especially among the Congregationalists.

The name "Unitarian" was borrowed from England but it was some time before the independent thinkers of America could bring themselves to adopt it. Channing himself hesitated, fearing that if a new party with a distinctive name were to be formed, it would soon produce a "Unitarian orthodoxy" with all the limitations and petty tyrannies of the old. He deplored the necessity of organizing a new denomination. "I desire," he said, "to escape the narrow walls of a particular church, and to live under the open sky, looking far and wide and seeing with my own eyes and hearing with my own ears." Soon, however, he recognized that the movement had gone beyond his control and then he not only threw himself heartily into it, but became its acknowledged leader. In 1819 he preached a sermon defining the position of the Unitarian party and defending their right to Christian fellowship. The disruption that followed grieved him, but he accepted it as inevitable. In the following year, 1820, he organized the Berry Street Conference of liberal ministers, at a meeting of which in May 1825 there was organized the American Unitarian Association. The first number of the Christian Register, the weekly unofficial organ of the Unitarian denomination, appeared in 1821. Associations and publications alike became vehicles for Channing's thought. "Channing Unitarianism" came to be and has remained the recognized term for that form of religious liberalism which, while unwavering in its assertion of the right of the human reason as a part of the essential dignity of human nature, still clung fondly to the supernatural element of the Christian tradition.

Channing's objection to the Trinitarian orthodoxy of the time was not so much to its doctrine about the nature of the Godhead, as to its view of the nature of man. This he made clear in his epoch-making sermon, "The Moral Argument against Calvinism." The idea that human nature was essentially depraved and incapable of natural growth into goodness was abhorrent to him.
Channing

His conception of Christ linked him with Arians like John Milton. He did not reject the New Testament miracles, but they became less and less important to him as evidences of the truth of Christianity.

Those who heard Channing preach testify to the arresting quality of his voice and the charm of his manner. His style was unadorned by illustration. To the modern reader he seems unnecessarily didactic, but this was a characteristic which did not impress his contemporaries. He steadily grew away from the stilted manner of his earlier discourses. There are few of his sermons which do not have their moments of real eloquence.

But though he attained a place of great power as a preacher, it was not from the pulpit of the Federal Street Church that he exerted his widest influence upon his generation. In 1822 the state of his health required a prolonged vacation in Europe. After his return, Rev. Ezra Stiles Gannett, himself a man of distinction in the Unitarian body, became his colleague and took upon himself an increasing part of the ministerial work. From that time Channing addressed the public directly through the press. His essays on Milton, Fenelon, and Napoleon had a wide circulation. In his address on Self-Culture he made a plea for adult education, denying the academic distinction between cultural and vocational studies and insisting on the possibility of attaining true culture by means of one's vocational intelligently pursued. It is interesting, as illustrating the sweep of Channing's mind, to find him in this address delivered in 1838 advocating the policy of setting apart the funds derived from the sale of public lands to support public education.

The influence of Channing on American literature was very direct. The term "Channing Unitarians," while not precise when applied to a theological party, was very apt when applied to the group of New England writers who flourished in the middle of the nineteenth century. Emerson, Bryant, Longfellow, Lowell, Holmes were all closely associated with the Unitarian movement, and acknowledged their indebtedness to Channing. If "he breathed into theology a humane spirit" it may with equal truth be said that he breathed into literature a religious spirit.

Channing's Remarks on American Literature, published in 1830, is still worth reading. He defines literature as "the expression of a nation's mind in writing." Then he criticizes the tendency among American writers to imitate English models rather than to find inspiration in what is characteristic of their own land. American literature must become national instead of colonial. The time has come for a literary Declaration of Independence. "We think that the history of the human race is to be rewritten. Men imbued with the prejudices which thrive under aristocracies and state religions cannot understand it... It seems to us that in literature immense work is yet to be done. The most interesting questions of mankind are yet in debate. Great principles are yet to be settled in criticism, in morals, and in politics; and above all, the true character of religion is to be rescued from the disguises and corruptions of ages. We want a reformation... The part which this country is to bear in that intellectual reform we presume not to predict. We feel, however, that if true to itself, it will have the glory and happiness of giving new impulses to the human mind. This is our cherished hope. We should have no heart to encourage native literature did we not hope that it would be instinct with a new spirit. We cannot admit the thought that this country is to be only a repetition of the old world" (Works, 1903 edition, p. 134).

To those who are familiar only with Channing's sermons there is something amusing in his serious denial of the charge that he cherished political ambitions and was desirous of becoming a member of Congress. But he never looked upon politics with indifference. All questions were to him moral questions. Politics was the native air he breathed in childhood. His father, William Channing, was a politician so successful that he was at the same time attorney-general of Rhode Island and United States district attorney. His grandfather, William Ellery, whose companionship he enjoyed to middle life, was one of the most ardent of the Sons of Liberty and one of the signers of the Declaration of Independence. His classmate and intimate friend, Judge Story, tells of Channing's intense interest in political questions while in college. During the exciting year 1798, Channing secured a meeting of his fellow students in Harvard "for the purpose of expressing their opinions on the existing crisis in public affairs." The youthful politician was given the principal part at Commencement and assigned the subject "The Present Age" with the stipulation that all reference to present politics should be avoided. Channing resented the restriction and won the plaudits of the audience by stopping in the midst of his address and declaiming, "But that I am forbid I could a tale unfold that would harrow up your souls." His early associations were with the Federalists. His family was connected with the Cabots, the Lees, Jacksons, and Lowells whose
names counted for much in the society of those days. George Cabot, the leader of the New England Federalists and president of the Hartford convention, was a friend for whom he cherished the most profound respect. Nevertheless, the trend of his own thought allied him with Jefferson rather than with Hamilton, and he soon outgrew fears of the "Jacobins." His account of the failure of the Federalist party and the reasons for it is full of discriminating sympathy. "A purer party than the Federalists, we believe, never existed under any government." But their fear of the French Revolution destroyed their confidence in their own institutions. "We apprehend that it is possible to make experience too much our guide. . . . There are seasons in human affairs of inward and outward revolution, when new depths seem to be broken up in the soul, when new wants are unfolded in multitudes and a new and undefined good is thirsted for. These are periods when the principles of experience need to be modified, when hope and trust and instinct claim a share with prudence in the guidance of affairs, when in truth to dare is the highest wisdom" (Ibid., p. 641).

Unlike the members of the society in which he lived, Channing was conscious of the tremendous revolutionary forces which were at work. He distinguished between the outer and the inner revolution, and his aim was to make the outer revolution peaceful and beneficial, by the timely release of the moral forces which he believed to be stored up in the individual soul. This is emphasized in his pamphlets and addresses on the slavery question. Slavery, he insisted, is an unspeakable evil. But so also is war and of all wars the most dreadful to contemplate is a civil war. He could not dismiss as did many abolitionists the possibility of a war between the states. His residence in Virginia had given him a deep respect for the courage of the Southerners and their willingness to fight in defense of state rights. In his discussions of slavery he addressed himself to the conscience of the South rather than to the New England conscience. He was attacked from both sides, but his addresses did much to prepare people to understand and follow Abraham Lincoln. (See his Slavery, 1835; The Abolitionist, 1836; Open Letter to Henry Clay, 1837; Duty of the Free States, 1842.)

In the modern movement against war, Channing may be counted as a pioneer. He began with an outspoken sermon against the War of 1812. In this he voiced the general feeling of Massachusetts. The great aim of his essay on Napoleon was to destroy the romantic glamour that invests the successful warrior. The Massachusetts Peace Society was organized in his study. His lecture on War delivered in 1838 is almost Tolstoyan in its anti-militarism. Unlike Tolstoy, however, he could not follow literally the injunction "Resist not evil." He admitted the right of a nation to use force in self-defense, but insisted that it must be as carefully defined by law as the similar right of an individual. It is possible for a nation to commit murder.

In his discussion of temperance, the condition of laborers, and public education, Channing was clearly in advance of his time. His viewpoint was surprisingly anticipatory of the thought of present-day social workers. Intemperance he treated as a vice for which the community was largely responsible. The law might properly be invoked to prohibit the sale of intoxicants as of other harmful drugs, but improvements in hygiene, food, and recreation were more needed. "I have insisted on the importance of increasing the innocent gratifications in a community. Let us become more cheerful and we shall become a more temperate people" (Ibid., p. 112). In prophetic words, he warns the advocates of temperance against the attempt to coerce. "We want public opinion to bear on temperance, but to act rationally, generously and not passionately, tyrannically and with a spirit of persecution. Men cannot be driven into temperance" (Ibid., p. 116).

S. M. C.

CHANNING, WILLIAM ELLERY (Nov. 20, 1818-Dec. 23, 1901), poet, was born in Boston, the son of Walter Channing [q.v.] and his wife, Barbara Perkins. His father was an eminent physician and a professor in the Harvard Medical School. His mother died while he was yet young, and Ellery—often so called to distinguish him from his uncle, William Ellery Channing [q.v.]-spent an unhappy childhood in the home of a great-aunt, Mrs. Bennett Forbes of Milton, and was sent rather young to the Round Hill School in Northampton. Later he attended the Boston Latin School and a private school and in the summer of 1834 entered Harvard College. There he remained for only a few months. Already as fractions and in calculable as he was brilliant, he soon found chapel tiresome, and stayed away; then the whole program became a bore, and young Channing walked out. When his family discovered his whereabouts, he was at
Channing

Curzon's Mill, on the Merrimac, about four miles west of Newburyport, writing poetry. The college authorities took a sensible view of the escape, but Ellery did not return. About this time he seems to have decided that poetry was his vocation and that any other activity of his must be subordinate to it. His first verses to appear in print were "The Spider," in the New England Magazine for October 1835. With a friend, Joseph Dwight, he moved out to Woodstock, McHenry County, Ill., in 1839; but learning, as Hawthorne did at Brook Farm, that prolonged bodily labor is not conducive to writing, he sold his quarter-section within a year. Next he jou rneyed in Cincinnati, where his uncle, James H. Perkins, was minister of the Unitarian Church. There he gave private lessons, wrote for newspapers, dallied over law books, and fell in love with the demure, pretty younger sister of Margaret Fuller. In the East he met Emerson, who read some of his poems in manuscript and wrote an appreciative critique of them for the Dial, I, 220–32 (1841). Channing and Ellen Fuller were married in the autumn of 1842 and settled in Concord in order to be near Emerson. In 1844 Channing was in New York writing for Horace Greeley's Tribune; in 1845 he made a visit of a few months to France and Italy; from 1835 to 1858 he was absent from Concord again as an editor of the New Bedford Mercury. Except for these excursions he made Concord his home till the end of his long life. His personality, which was both elfin and elvish and "as naturally whimsical," according to Thoreau, "as a cow is brindled," lives in the writings of his friends, Hawthorne, Emerson, Thoreau, and F. B. Sanborn. To Thoreau he was especially devoted, for they had much in common. He was his almost invariable companion in his walks around Concord and accompanied him also on his trips to Cape Cod, Maine, and Canada. He wrote the first biography of Thoreau and edited several of the posthumous volumes of his friend's writings. Separating from his family, he lived alone for a number of years in a small house in Concord. His old age was passed in the home of Franklin B. Sanborn.

Channing's published works are: Poems (1843); Poems, Second Series (1847); Conversations in Rome between an Artist, a Catholic, and a Critic (1847); The Woodman and Other Poems (1849); Near Home, a Poem (1858); The Wanderer, a Colloquial Poem (1871); Thoreau, the Poet-Naturalist (1873; enlarged edition, 1902); Eliot, a Poem (1885); John Brown and the Heroes of Harper's Ferry, a Poem (1886), and Poems of Sixty-Five Years (selected and edited by F. B. Sanborn, 1902). Several occasional poems were also published separately, and he contributed prose and verse to the Dial and to other magazines. As a poet Channing was and is almost completely unknown. Edgar Allan Poe greeted his first volume with a merciless review in Graham's Magazine for August 1843, and the rest was silence. The faults of diction, meter, and syntax for which Poe excoriated him were deplored by Channing's friends also. Emerson complained that Channing should have lain awake all night to find the true rhyme for a verse instead of availing himself of the first that came. Thoreau recommended that he discipline himself by writing in Latin and described his companion's style with matchless adequacy as "sublimo-slipshod." But Channing's case was beyond help; a thoroughgoing Transcendentalist in his poetic practise, he could only improvise, he could not revise and polish. Yet in spite of his uncertain technique he is a genuine poet, capable of long passages and whole poems of complete felicity. His poetry, moreover, has atmosphere. It is as indigenous to New England as the russet apple, and has the russet's tang and homely flavor. All that it needs is the anthologist who will separate the sound fruit from the culls.

Channing, William Francis (Feb. 22, 1820–Mar. 19, 1901), inventor, was born in Boston, Mass., the son of William Ellery Channing [p.75] and Ruth (Gibbs) Channing. He attended the Boston schools and then entered Harvard College but he did not complete his course there, as his interest in medicine led him to change to the University of Pennsylvania, from which he received his M.D. degree in 1844. Following his graduation he settled first in Boston and subsequently in Providence, but did not practise, his engrossing interest in science causing him to engage in a variety of scientific activities instead. He was an assistant on the first geological survey of New Hampshire, made between 1841 and 1842, and the following year was assistant editor, under Dr. Henry Bowditch, of the Latimer Journal, published in Boston. In 1847, he served as an assistant on the geological survey of the Lake Superior copper region. During the
same year he was associated with Dr. John Bacon, Jr., in the editing and publication of Davis' Manual of Magnetism (1848).

Channing's interest in electricity began as early as 1842 when he called attention to the value of applying electric current to the giving of alarms of fire, and the year after his graduation from college he became intermittently associated with Moses G. Farmer [q.v.], one of America's pioneer electrical experimenters, in the perfection of a fire-alarm telegraph. Channing and Farmer gradually developed their idea between 1845 and 1851, and in June 1851 the city of Boston voted $10,000 to test their device. A short time thereafter the system was in operation with Farmer as superintendent. It was crude and unreliable but was basally correct, and the partners, after many trials and tribulations, gradually obtained public favor. It was not, however, until 1857 that they applied for patents. On May 19 of that year they received Patent No. 17,355, entitled "magnetic electric fire-alarm telegraph for cities." Shortly thereafter the patents were purchased by Gamewell & Company, which organization has since developed the present-day electric fire-alarm system universally in use. On Mar. 5, 1859, Farmer and Channing obtained a second patent on an improvement in their system which was turned over to the purchasing company. Thereafter Channing applied himself in other directions. In 1865 he patented a slip railway for the inter-oceanic transport of ships, and in 1877 invented a portable electro-magnetic telegraph. He was the author of Notes on the Medical Applications of Electricity (1849); "On the Municipal Electric Telegraph," in the American Journal of Science and Arts, 1852; "The American Fire Alarm Telegraph," in Smithsonian Institution Annual Report, 1854; "Inter-Oceanic Ship Railway," remarks before a select committee of the House of Representatives, Mar. 27, 1880. Channing was married to Mary Jane Tarr whose death preceded his by many years.

C.W.M.

CHANNING, WILLIAM HENRY (May 25, 1810-Dec. 23, 1884), Unitarian clergyman, reformer, author, was born in Boston, the son of Francis Dana and Susan Higginsson Channing. His father died the year he was born, and he was brought up by his mother, a woman of strong mind and character, who relied much upon the advice of the boy's uncle, William Ellery Channing [q.v.]. His ancestors, near and remote, had been distinguished in literature, religion, and public service, and the youth, high-strung, imaginative, and chivalrous in the extreme, early showed a tendency toward all three. He studied at the Boston Latin School, graduated from Harvard College in 1829, and from the Harvard Divinity School in 1833.

Due to a certain amount of temperamental instability, an unwillingness to confine himself to fixed forms and institutions, and especially to the utter unpracticability of the man, his career was one of constantly shifting scenes. After supplying several churches, he spent a year (1835-36) in Europe. Upon his return he married, in December 1836, Julia Allen of Rondout, N. Y. He then went to New York City where, under the auspices of the Unitarians, he attempted to establish a free church among the industrial classes. He abandoned the project in August 1837. In September of the following year he accepted an invitation to supply the Unitarian church at Cincinnati, was called to the pastorate in March 1839, and in May was ordained. From June of this year until March 1841, he also edited the Western Messenger, the organ of Unitarianism in the West. Convinced that the Gospels are unreliable as history and that Christianity is not a divine institution, he resigned his pastorate in 1841. As his views clarified, however, he came to have a jubilant and abiding faith in God as the universal Father, and in the human race as an expression of the divine will, destined to attain a state of harmony, righteousness, love, and felicity. "Transfigured humanity" came to be for him the symbol of Christianity, and in the prevailing spirit of reform, he saw a "heavenly hope." From 1843 to 1845 he was the leader of an independent society in New York, the members of which were "fellow-seekers after a higher holiness, wisdom, and humanity." It broke up when Channing felt called to go to Brook Farm, where, however, he remained but a few months. On Jan. 3, 1847, the Religious Union of Associationists was formed in Boston, including among others George Ripley, John S. Dwight, Francis G. Shaw, and Albert Brisbane, with Channing at its head. Its object was mutual sympathy and aid in striving to spread among mankind the reign of love. It came to an end in 1850. In the summer of 1852, Channing went to Rochester to preach for the Unitarian Society and remained there until August 1854.

His convictions being what they were, it was inevitable, that on the platform and by his writings he should give aid to a variety of reforms. He demanded substantial equality for all men, accepted Fourierism as the scientific form of his own social ideal, and, from September 1843 to
Chanute

April 1844, edited The Present, a Socialistic organ. From July 1849 to April 1850 he edited The Spirit of the Age. He was an ardent advocate of the abolition of slavery, opposed the Fugitive Slave Law, and at Rochester was interested in the operation of the "underground railroad." He also labored for the emancipation of women and the promotion of temperance.

After 1854 the most of his life was spent in England. From October 1854 to October 1857 he was in charge of Renshaw Street Chapel, Liverpool, and then succeeded James Martineau at Hope Street Chapel. The Civil War brought him back to the United States in 1861. He became pastor of the Unitarian society in Washington, served in camp and hospital under the Sanitary Commission, and in 1863-64 was chaplain of the House of Representatives. He made a trip to England and Scotland in 1863 and gave public addresses in behalf of the Union. Soon after the close of the War he resumed his residence in England, but made occasional visits to the United States. His son became a member of Parliament, and a daughter, the wife of Sir Edwin Arnold. He died in London and his body was brought to Boston for burial.

He was a person of singular purity of character, radiant faith in man and his divine destiny, unbounded enthusiasm, humble but unflinching honesty and courage. Though his learning was extensive and his mind acute, feeling subordinated reason, and he was a most unpractical idealist and mystic; nevertheless, he lent strength to the causes he championed.

He wrote numerous articles for periodicals, and published sermons and addresses. His most important literary work is his Life of William Ellery Channing (3 vols., 1848), which attracted wide notice and went through several editions. He translated Joubert’s Introduction to Ethics in 1841, published Memoir and Writings of James Handsyd Perkins in 1857, with Emerson and James Freeman Clarke edited Memoirs of Margaret Fuller Ossoli in 1852, and published, in Liverpool, The Civil War in America, or the Slaveholder’s Conspiracy in 1861. In 1873 he edited from manuscripts a volume of William Ellery Channing’s sermons, under the title, The Perfect Life.

H. E. S.

CHANUTE, OCTAVE (Feb. 18, 1832–Nov. 23, 1910), civil engineer, aerial navigator, was born in Paris, the son of Joseph and Eliza (De Bonnaire) Chanute. His parents emigrated to the United States in 1838, and he was educated in private schools in New York City. Without any formal instruction in engineering, for none was then to be had, he began his career with employment by the Hudson River Railroad, and from 1853 to 1863 served in various capacities with Western railroads. On Mar. 12, 1857, he married Annie James of Peoria, Ill. From 1863 to 1867 he was chief engineer of the Chicago & Alton Railroad. In the two years 1867–68 he planned and superintended the construction of the first bridge across the Missouri River, at Kansas City. He subsequently constructed several railroads in Kansas and from 1873 to 1883 he was in private practise as a consulting engineer, mainly on the construction of iron railroad bridges. But though his successful career as a civil engineer brought him many distinctions, his main claim to fame rests on his work in aerial navigation. The honor of the first scientific gliding experiments made in the United States probably belongs to him. The great exponents of gliding, who really learned how flight could be accomplished, at great personal risk paved the way for the achievements of the Wright brothers. The famous Germans, Otto and Gustav Lilienthal, began their gliding experiments in 1867. Pilcher brought the art to England. From the year 1889, Chanute devoted to aerodynamic theory the greater part of his energies, studying Lilienthal’s experiments very carefully. In the year before Lilienthal’s death, he himself began to make gliding flights. In 1896 and 1897, he and his assistants made hundreds of glides from a hill ninety-five feet high on the sand dunes of Dune Park, near Lake Michigan. The courage of a man of sixty in undertaking such work is remarkable. In a truly scientific spirit, Chanute tabulated the results of all his experiments and made many notes on the strength and variations of air currents. His actual glides through the air were less impressive and daring than those of Lilienthal and Pilcher, but he had a better scientific training, and more ability as a designer. He was also an acute observer. The airplane of to-day lends its tail low. Chanute learned this practise by watching the sparrow. “When the latter approaches the street, he throws his body back, tilts his outspread wings nearly square to the course, and on the cushion of air thus encountered he stops his speed and drops lightly to the ground. So do all birds. We tried it with misgivings, but found it perfectly effective.”

His first glides were made with a Lilienthal monoplane which he found unsafe and treacher-
Chanute

ous. He then designed a five-plane glider, with the surfaces vertically superposed, the flier below them, and a rudder in the rear. An important advance lay in the fact that the wings on either side could swerve fore and aft, so as to bring the center of lift always over the center of gravity, to maintain balance. It was no longer necessary to indulge in violent body movements or undignified kicking of the feet. This glider was tractable in a twenty-mile wind and sailed down a slope of one in four. The five-plane glider was later simplified to a three-decker, and finally there emerged the famous Chanute biplane of novel and exquisite design. It consisted of two arched surfaces, held together by vertical posts and diagonal wires, in the form of a Pratt truss. It weighed only twenty-three pounds, had an area of 135 square feet, and readily carried 178 pounds at twenty-three miles per hour. It was steady in flight even when the wind was blowing seventeen miles an hour over ground.

The first glider the Wrights built was largely modeled upon Chanute’s biplane, and they also followed his principle of inherent stability, in conjunction with the use of movable surfaces for control in lieu of shifting weights. In 1901 Chanute visited the camp of the Wrights, watched their experiments and gave them every encouragement; particularly because they were interested in the art without thought of pecuniary gain. The Wrights never failed to acknowledge the help they received from Chanute, and considered him one of the greatest pioneers in the engineering problems of flight.

Always full of enthusiasm and animal spirits, Chanute wrote, at the age of sixty or more, “There is no more delightful sensation than that of gliding through the air. All the faculties are on the alert, and the motion is astonishingly smooth and elastic.” He was an exceedingly able, scientific, and inventive engineer, with a generous, courageous, humorous spirit, and a Gallic power of clear and forceful expression. His writings include *Aerial Navigation* (1891); *Progress in Flying Machines* (1894); “Gliding Experiments,” in *Journal of the Western Society of Engineers*, October 1897; “Recent Progress in Aviation,” *Ibid.*, April 1910 (reprinted in *Annual Report of the Board of Regents of the Smithsonian Institution*, 1910), a remarkable review of power-driven flight experiments from 1904 to the great Rheims Meet of 1909.

Chapelle

**CHAPELLE, PLACIDE LOUIS** (Aug. 28, 1842–Aug. 9, 1905), Catholic Archbishop of New Orleans, La., was born at Runes, Lozère, France. His parents, Jean Baptiste Chapelle and Marie Antoinette de Viala, were noted for their piety and devotion to the Church. An uncle, afterward bishop of Port-au-Prince in Haiti, sent the young Chapelle, when his father died, to the college of Enghien in Belgium, and brought him to the United States in 1859 where he entered St. Mary’s Seminary, Baltimore. In this institution he pursued the philosophical and theological courses with distinction, receiving ordination to the priesthood at the hands of Archbishop Spalding in Baltimore, June 28, 1865, and a doctorate in divinity, maxima cum laude, in 1869. From 1865 to 1869 he was occupied with pastoral work at St. John’s Church, Rockville, Md., whence he was transferred to St. Joseph’s Church, Baltimore, and, in 1882, to St. Matthew’s Church, Washington, D. C. To this important post he brought both competence as a pastor and experience as a man of affairs. He had acted as secretary of the diocesan council of Baltimore (1869) and as Archbishop Spalding’s theological adviser at the Vatican Council (1870). In Washington he attracted many members of the diplomatic corps to St. Matthew’s and won warm friends in official circles. Preferment in the ecclesiastical world also attended his career in Washington. He accompanied Cardinal Gibbons to New Orleans in 1888, was secretary of the Bureau of Catholic Indian Missions, and a promoter of the movement which led to the founding of the Catholic University of America. On Aug. 21, 1891, he was appointed to assist Archbishop Salpointe of Santa Fé, New Mexico, as coadjutor with right of succession, and as titular bishop of Arabissus. He was consecrated by Cardinal Gibbons in the cathedral at Baltimore, Nov. 1, 1891, was made titular archbishop of Sabaste, May 10, 1893, and was inducted as Archbishop Salpointe’s successor, Jan. 9, 1894. He was not, however, to be long in the Southwest. Transferred to New Orleans by a papal brief (Dec. 1, 1897), he took charge of the see on Mar. 24, 1898. A few weeks later the United States and Spain clashed, with results that diverted the attention of the Archbishop from the affairs of his diocese. His familiarity with the ideals and laws of the Church, as well as with those of the United States, caused Leo XIII to commission him to represent ecclesiastical interests at the peace conference at Paris, where he secured the recognition of ecclesiastical concerns in the peace treaty. He was appointed, on Oct. 11, 1898, apostolic delegate to Cuba and Porto Rico and envoy extraordinary to
Chapin

the Philippine Islands, and on Aug. 9, 1899, apostolic delegate to the Philippine Islands. There he was confronted by a situation full of obstacles. American officials in the islands not only had difficulty in understanding the principles of the old Spanish order, in which the temporal and spiritual powers had been closely associated, but also naturally tended to sympathize with the revolutionists, who were anti-clerical. Archbishop Chapelle tactfully and successfully adjusted ecclesiastical affairs to fit the new régime. Though his insular commissions drew him from his diocesan work in New Orleans for months at a time, he remained always active in the affairs of the Church and community there. He founded a Catholic Winter School in New Orleans. Closing the little seminary at Ponchatoula, La., he induced the Lazarists to take charge of the present Seminary of St. Louis. On his accession the diocesan debt amounted to $135,000; this he had wiped out by the end of the year 1903. His last days were spent in making a visitation of the parishes of his diocese while the yellow fever was claiming victims on all sides. Of this disease he himself died, on Aug. 9, 1905.

The New Orleans Picayune characterized him editorially the following day: "The archbishop possessed a sweet and most pleasing manner and was the charming center of the intellectual and social gatherings that were at rare intervals able to secure his presence. He was not only a great prelate . . . but he was also a statesman, a scholar and a citizen of the highest quality, devoted to the public interests and teaching patriotism as well as religion."

[The Rev. J. T. Alexis Orban, who was close to Archbishop Chapelle and who was to have written his biography, contributed a short sketch of his life to the Cath. Encyc. (1908), but furnished no bibliography. References (with ample bibliographies) to the archbishop's work occur in the Cath. Encyc., in articles on New Orleans, Philippine Islands, Porto Rico. See also the files of the diocesan organ, the Morning Star, and the local press, especially the Picayune and the Times-Democrat. The issues of Aug. 10, 1905, contain extended biographical notices and appreciations. The Cath. Dir. and Clergy List (Milwaukee, pub. annually) is valuable for information concerning the dioceses which Archbishop Chapelle administered. The writer is also under obligations to the Archbishop's niece for other data.]

F.J.T.

CHAPIN, AARON LUCIUS (Feb. 6, 1817–July 22, 1892), Congregational clergyman, college president, a son of Laertes and Laura (Colton) Chapin, was born of New England stock in Hartford, Conn. Both of his grandfathers were deacons in the Congregational Church. He prepared for college at the Hartford Grammar School and graduated with honor at Yale College in the class of 1837. He graduated in 1842 at Union Theological Seminary, New York, and went to Milwaukee, Wis., in 1843, to become pastor of the First Presbyterian Church, where he was ordained Jan. 24, 1844. From the outset keenly interested in the educational development of the Territory, he attended in the summer of 1844 a conference held at Cleveland, Ohio, to consider the religious and educational needs of the Mississippi Valley, and was one of seven men who, while returning to Wisconsin together, resolved to initiate a movement for the establishment of a college of the New England type in southern Wisconsin or northern Illinois. The convention which they called for this purpose, consisting of fifty-six delegates from Wisconsin, Illinois, and Iowa, met in Beloit, Wis., as the most important town educationally in the region. The third of a series of four conventions decided in May 1845 upon the establishment of the college at Beloit; the fourth, in October, elected a board of trustees of whom Chapin was one, as he was also a member of its executive committee, an office which he held throughout his life. From the beginning one of the most influential and trusted members of the board, he was called in 1849 to become the first president of the college and entered upon his official duties in February 1850. As president for thirty-six years (1850–86) of the first institution for higher education in all that part of the country extending from Lake Michigan to the Pacific Ocean, Chapin was for over a generation the center of the efforts to equip and endow the young college as well as the guiding spirit of its educational administration. He also gave his influence freely beyond the bounds of the college; was trustee of Chicago Theological Seminary, 1858–91; of Rockford Seminary (later College), 1845–92; corporate member of the American Board for Foreign Missions, 1851–89; director of the American Home Missionary Society, 1850–83; trustee of the Wisconsin Institute for Deaf and Dumb, 1865–81, and president of its board 1873–81; one of the founders (1870) of the Wisconsin Academy of Sciences, and its president, 1878–81; member of the National Council of Education from its foundation in 1881 to 1888. As associate editor of Johnson's Cyclopedia, 1875–78, he contributed articles on social science and political economy. He was editor of the Congregational Review, 1870–71, and associate editor of the New Englander, 1872–73. In 1878 he published a revision of Francis Wayland's Political Economy (1837). His own First Principles of Political Economy (1879) was praised by experts for its lucidity and balance. He was twice married: in 1843, to Martha Colton of Lenox, Mass., who died in 1859; and in 1861, to

12
Chapin

Fanny Learned Coit of New London, Conn. Tall and of vigorous physique, he possessed quick discernment and sound judgment, and the power of prompt leadership without dictation or vanity.

CHAPIN, ALONZO BOWEN (Mar. 10, 1808–July 9, 1858), Episcopal clergyman, descended from Deacon Samuel Chapin of Springfield, Mass., whose statue by Saint-Gaudens is widely known as "The Puritan," was born at Somers, Conn., the eldest son of Reuben and Lovisa (Russell) Chapin. His father was educated for the ministry and was licensed to preach, but never became a pastor because of poor health. The son also was delicate, and, relinquishing on that account his early intention to enter the Congregational ministry, studied law in a lawyer's office. Admitted to the bar in 1831, he established himself in Wallingford, Conn. The following year he married Hannah B. Waldo. Coming into contact with some New Haven lawyers who were Episcopalians, he was led to inquire into the claims of their church, and, after diligent study, became himself an ardent Episcopalian. He contributed to the various Church periodicals and in 1836 was chosen as editor of the newly-founded Chronicles of the Church, holding the position for eight years. Having regained his health, he fulfilled his early desire to enter the ministry, and was ordained deacon in 1838 and priest a year later. For twelve years he was rector of Christ Church, West Haven. Pamphlets and magazine articles, mostly on local or Biblical history, came forth from his pen in a steady stream. In 1841 he issued An English Spelling Book, on new philological principles, but it had no special success. A year later appeared his View of the Organization and Order of the Primitive Church (New Haven, 1842), his most important work. It passed through several editions, being regarded by Episcopalians as an arsenal of unanswerable facts and references. But Chapin had not the equipment to make a real historical contribution in this field, and the work has passed from view. His favorite thesis appears from the titles of two pamphlets which he issued soon after, A Churchman's Reasons for Not Joining in Other Worship (1844), and Puritanism Not Genuine Protestantism (1847). The Episcopal Church, that is, he regarded as genuinely Protestant, but a branch of the Catholic Church, as other Protestant bodies were not, by virtue of its Order, Ministry, and Worship. Individuals of other Protestant bodies he considered Christians by virtue of their baptism; but their organizations he looked upon as schismatic, and with such he could have no fellowship. He was not however ritualistic, and he viewed the modern Church of Rome with mingled pity and abhorrence. In 1850 he became rector of St. Luke's Parish in South Glastonbury, Conn., but two years later was so crippled with rheumatism as to be obliged to engage an assistant. He obtained the editorship of the Calendar, a Church paper, which enabled him to defray the expense. In 1853 he published a local history entitled Glastonbury for Two Hundred Years. In 1855 he resigned his cure and removed to Hartford, continuing there his work as editor to the last week of his life.

[The principal sources are the Calendar (Hartford), July 17, 1858; and the Am. Quart. Ch. Rev. and Ecclesiastical Regy. (New Haven), Oct. 1858.] T.D.B.

CHAPIN, CALVIN (July 22, 1763–Mar. 16, 1851), Congregational clergyman, was the fourth son of Deacon Edward Chapin of Chicopee, Mass., and his wife Eunice Colton. His early years were spent after the manner of farmers' sons of the period, and at the age of fifteen he served for six months as a fifer in a Revolutionary militia company. His preparation for college, which was delayed somewhat by the war, was completed under Rev. Charles Backus of Somers, Conn. At Yale he was one of the best scholars of his class, winning the Berkeleian scholarship or "Dean's Bounty," and graduating in 1788. After two years as a successful and popular teacher in Hartford, he began the study of theology under Rev. Nathan Perkins of West Hartford, at the same time continuing to teach. He was licensed to preach by the Hartford North Association in October 1791 but instead of going directly into the ministry, served as tutor at Yale from 1791 to 1794. This was an eminently successful period of his life, and one upon which he always looked back with much satisfaction.

On Apr. 30, 1794, he was ordained pastor of Stepheny Parish, Wethersfield (now Rocky Hill), Conn., where he remained for life. His salary during his entire ministry was $533 per year. From 1805 to 1831 he was a trustee of the Missionary Society of Connecticut in whose interests he was very active, making in 1806 a journey to Ohio to investigate certain difficulties that had there arisen in connection with the work. He was prominent in forming the Connecticut Bible Society in 1809, and in 1810 was one of the five founders of the American Board of Foreign Missions, serving as its recording secretary for thirty-two years. He was one of the founders of the Connecticut Society for the promotion of Good Morals, in 1813, and was active
Chapin

in its affairs till its dissolution. In 1816 he became a member of the board of visitors of Andover Seminary, and was clerk of that board till 1832. He was a member of the Yale Corporation from 1820 to 1846, and was on its prudential committee for twenty-five years. A pioneer in the temperance cause, he took an extreme stand as early as 1812 and for a time went so far as to persuade his people to abolish the sacramental use of wine. His published works consist of several sermons and an essay on *Sacramental Wines* (1835). Although tall and well proportioned, he made a rather ungainly appearance in the pulpit. He was practical, possessed marked independence of character, and had a pithy and telling way of putting things. In the pulpit he was very solemn. But on all other occasions his wit was much in evidence, often subjecting him to criticism. His tastes were scholarly, and he read the Latin and Greek classics all his life.

On Feb. 2, 1795, he was married to Jerusha, daughter of Rev. Jonathan Edwards of New Haven.

CHAPIN, CHESTER WILLIAM (Dec. 16, 1798–June 10, 1883), railroad promoter, was descended from Deacon Samuel Chapin who settled in Springfield in 1642. He was born at Ludlow, Mass., the youngest of the seven children of Ephraim and Mary (Smith) Chapin. His formal education was limited to a few winters at the district school and a season at Westfield Academy. This meager schooling was in part due to his father’s early death which necessitated a boyhood of arduous toil. As a young man, Chapin was employed with a yoke of oxen in constructing the foundations of the Dwight mill, the first of Chicopee’s manufacturing concerns, and for a short time after reaching his majority he tended bar for his brother Erastus, a Springfield inn-keeper. Returning to Chicopee, he conducted a country store, took contracts for building construction, and married Dorcas Chapin, daughter of Col. Abel and Dorcas Chapin. His subsequent career was tied up closely with the development of transportation in the Connecticut Valley. His first connection with the transportation business was as driver of his brother’s ox-team which carried merchandise from the river wharves to the Springfield stores. The next step was the purchase from Horatio Sargeant, who owned most of the Springfield stages, of a part interest in the Northampton line, and the two men soon became partners in the Brattleboro and Hartford line. No sooner had the practicability of steamboat navigation on the Connecticut been demonstrated than Chapin and Sargeant entered aggressively into the building and operation of steamboats until they became not only the chief concern operating river steamboats, but enjoyed for a long time a practical monopoly of the passenger business between Springfield and Hartford. Chapin’s steamboat interests eventually included the ownership of boats running from Hartford and New Haven to New York.

With the coming of railroads Chapin sold his steamboats operating north of Hartford and entered enthusiastically into the development of steam railroads. He was a prime mover in getting the New York & New Haven Railroad to extend to Springfield, and soon became a large stockholder in the Western Railroad (the present Boston & Albany) and in the Connecticut River Railroad. He was president of the latter (1859–54) when he was called to head the Boston & Albany. His presidency, which extended to 1877, was a time of prosperity and wise development and included the period of consolidation with the Boston & Worcester which insured through western connection with Boston. Notwithstanding the fact that the Massachusetts legislature censured him because of the leasing by the Boston & Albany of the Ware River Railroad, an enterprise in which he was personally interested, the *Springfield Republican* said that “He had no sympathy with the modern gambling school which waters stocks and preys upon corporations without regard to the public interest” (June 11, 1883, p. 4).

Chapin was reputed to be the wealthiest resident of Springfield. He was founder of the Chapin Bank and the Agawam Bank and vice-president of the Hampden Savings Bank as well as a director of the Springfield Fire & Marine Insurance Company and the Massasoit Insurance Company. He was also interested in various manufacturing establishments and a large landowner. A transportation enthusiast to the end, he participated prominently in the building of the first street car line in Springfield.

A life-long Democrat in a Republican district, Chapin had the confidence of his fellow citizens sufficiently to be elected to several town and city offices, to the state legislature in 1844, to the Massachusetts constitutional convention of 1853, and on a reform wave to the Forty-fourth Congress in 1874. He was one of the seceders at the Democratic convention at Baltimore in 1860 and
Chapin

was later a Breckenridge and Lane elector. He became a war Democrat and largely paid for the uniforms of the city guard when that body joined the 10th Regiment. In appearance he is described as a man of "commanding presence with a firm impassive face whereon the stubby grey moustache covered the lines of a strong mouth" (Springfield Republican, June 11, 1883, p. 5).

[Springfield Republican, ante; Chester Wells Chapin, Sketches of the Old Inhabitants and Other Citizens of Old Springfield (1893); Railroad Gazette, June 15, 1883; Mason A. Green, Springfield 1836–48 (1888); Chapin Book (1924), comp. by Gilbert W. Chapin.]

H. U. F.

CHAPIN, EDWIN HUBBELL (Dec. 29, 1814–Dec. 26, 1880), Universalist clergyman, was one of the many descendants of Deacon Samuel Chapin, Puritan, of Springfield, Mass. Born in Union Village, Washington County, N. Y., he was the son of Alpheus and Beulah (Hubbell) Chapin. For four years (1828–32) he studied in Pioneer Academy, Bennington, Vt., and was post-office clerk in this town for two years. He studied law for a time in Troy, N. Y., and then removed to Utica. His soul was revolted by the severer aspects of the orthodox religion in which he had been reared, and, becoming acquainted with Universalism in the office of the Evangelical Magazine and Gospel Advocate of which he was associate editor, he entered the Universalist ministry, being ordained on Sept. 27, 1838. During the same year he married Harriet Newland of Utica. He was pastor in Richmond, Va., and Charlestown, Mass., and was the colleague of Hosea Ballou [q. v.], at the School Street Church, Boston. In 1848 he became pastor of the Fourth Universalist Society in New York. Twice the church moved to larger quarters on Broadway and then to Fifth Ave., in order to accommodate ever growing congregations. The Church of the Divine Paternity remains as the monument of his life work. He was a friend and contemporary of Henry Ward Beecher, who said of him, "I have never met or heard a man who in the height and glow of his eloquence surpassed or equalled him." Although he was rather awkward in movement and his clothes were never a happy fit, his voice was well rounded, and he was a master of climaxes and brilliant and original in his metaphors. His emphasis was on Christ, not on the Christianity of the creeds. He had great sympathy with and deeply enjoyed Kingsley, Maurice, and Martineau. A lyceum orator of power, an earnest advocate of temperance, he gave his heart and voice to any benevolent or patriotic enterprise. One of the founders of Chapin Home for indigent men and women, he was also a trustee of Bellemont College and Hospital. He was a voluminous writer, his chief publications being: Duties of Young Men (1840); Discourses on Various Subjects (1841); The Philosophy of Reform (1843); Hours of Communion (1844); The Crown of Thorns (1848); Duties of Young Women (1848); Discourses on the Lord's Prayer (1850); Characters in the Gospels (1852); Moral Aspects of City Life (1853); Discourses on the Beatitudes (1853); True Manliness (1854); Humanity in the City (1854); Select Sermons (1859); Extemporaneous Discourses (1860); Living Words (1860); Lessons of Faith and Life (1877); The Church of the Living God (1881).

[Sumner Ellis, Life of Edwin H. Chapin, D.D. (1882); John Ross Dix, Pulpit Portraits (1854); Charles Follen Lee and T. T. Sawyer, In Memoriam, Edwin Hubbell Chapin, D.D. (1884); Richard Eddy, Universalism in America (1886), containing complete bibliography.]

T. C. R.

CHAPLIN, JEREMIAH (Jan. 2, 1776–May 7, 1841), Baptist clergyman, and college president, was born in Rowley (later Georgetown), Mass., the son of Asa and Mary (Bailey) Chaplin. Brought up in a deeply religious atmosphere, at the age of ten he joined the Baptist Church. He remained at home assisting on his father's farm until he was nearly of age, but at the same time he prepared himself for college and finally entered Brown, where he graduated in 1799 with the highest honors. For a year he was a tutor at Brown and then his early religious interests asserted themselves. He studied theology under the direction of Dr. Baldwin of Boston and probably in the summer of 1802 assumed his first pastoral charge, the Baptist church in Danvers, Mass., where he remained for fourteen years. Seldom has a minister been as revered as Chaplin evidently was. One of his parishioners said he felt toward him as he would have felt toward St. Paul or St. Peter, an attitude shared by many in the community. While he was at Danvers he gathered about him for instruction a group of young men who were preparing to enter the ministry. When in 1817 he was asked to become principal of the Maine Literary and Theological Institution, he took the entire group with him. In 1820 this school was given a college charter and in the next year was known as Waterville College. Here Chaplin remained for thirteen years as president and under his "wise and efficient administration" the foundations of the later success of Colby College were laid. He was a thin, spare, tall man, according to one of his students, with a rather sepulchral voice. At early chapel services when it was actually too dark to read,
in some marshes near the city, through which Northern prisoners escaping from a military prison had to pass, and the boy or the doctor himself would row the prisoners out to the Federal blockaders outside the harbor.

When the war was over, he and his wife became reconciled, and he gradually began to relinquish his practise, because, he humorously says, his growing deafness prevented him from hearing his patient's groans, so that they lost interest in sending for him, but really because botany more and more absorbed his attention. The first edition of his Flora of the Southern States had appeared in 1860, and was for nearly fifty years the only manual of Southern botany. It was not only patterned after Gray's Manual but followed Gray's dictates and judgments in practically all matters. As Chapman's reputation grew he came into personal touch with Torrey and Gray, who visited him and his hunting grounds around Apalachicola, as well as with M. A. Curtis, Charles Mohr, and C. S. Sargent. Botanists of the South came to look to him as their leader and to think of him as a Southern man. Actually he was extremely proud of his New England ancestry, and in his vigorous, upright, almost stern character he certainly bore the marks of the Puritan, though in religious matters he remarked of his "damnation and predestination" ancestry that they had swung the pendulum too far and made him what he was.

A picturesque incident is that of the excursion with Gray in search of a rhododendron which Chapman said was new to science. Gray was skeptical as always, but when he beheld the plant he shook hands with Chapman, saying, "Congratulations on Rhododendron Chapmanni!"

The only slip was that Chapman had reported it as white whereas it turned out to be pink, for its discoverer, unfortunately for a botanist, was color-blind to reds. His deafness, too, in his old age grew upon him and made him a recluse. He published little but his Flora which, considering that he put forth its third edition in his nineties, was task enough. His death at Apalachicola was the result of too arduous a trip through impassable swamps in search of a rare species of ash. He had outlived his friend and preceptor, Gray; he had almost outlived his entire generation of scientists; and he was among the last of the old school botanists. In appearance he was tall but a little stooped, he had rugged and powerful features, and throughout his life enjoyed exceptional powers of endurance; his long stride, his enthusiasm on botanical excursions, and his stoic endurance of hardships
Chapman

were familiar to all who knew him. He had a phenomenal memory for events, places, and plants.

D.C.P.

CHAPMAN, HENRY CADWALADER

(Aug. 17, 1845-Sept. 7, 1909), physician, biologist, was born in Philadelphia, the son of Lieut. George W. Chapman, U. S. N., and his wife Emily Markoe. He was a grandson of Nathaniel Chapman [q.v.], the distinguished physician. After receiving his preliminary education in the Faires Classical Institute, then the best known private school in Philadelphia, he entered the College Department of the University of Pennsylvania, from which he graduated in 1864. He then studied medicine in the Medical Department, receiving his M.D. in 1867. After serving two years as a resident physician in the Pennsylvania Hospital, he went abroad and for three years studied under the leading teachers of his time, Sir Richard Owen in London, Alphonse Milne Edward in Paris, Emile Du Bois-Reymond in Berlin, and Joseph Hyrtl in Vienna. Before his departure he had been elected a member of the Academy of Natural Sciences of Philadelphia and from his return in 1872 he took the most active interest in its affairs, contributing to its Proceedings and serving at various times as curator. In 1874 he became prosector to the Zoological Society of Philadelphia and thereby secured a great supply of various types of animals for dissection. Nolan states that he made two important contributions to original research. One was his study of the pregnancy and delivery of an elephant which he observed in the winter quarters of a circus in Philadelphia. The other was a study of the placenta of the kangaroo. From 1873 to 1876 he was Leidy's assistant in teaching anatomy at the University of Pennsylvania and in 1877 he became demonstrator of physiology in Jefferson Medical College. After the death of Prof. J. A. Meigs [q.v.], in 1879, Chapman was appointed professor of the institutes of medicine and medical jurisprudence at Jefferson. From 1878 to 1888 he was also professor of physiology in the Pennsylvania College of Dental Surgery. For a few years he was coroner's physician of Philadelphia. He published The Evolution of Life in 1873, an immature performance which according to his friend Nolan he subsequently regretted. In 1887 he published a Treatise on Human Physiology, reprinting in it a brochure on the History of the Discovery of the Circulation of the Blood which had been privately printed in 1884. In 1891 he wrote a Memoir of Joseph Leidy for the Proceedings of the Academy of Natural Sciences. In 1892 appeared his Manual of Medical Jurisprudence and Toxicology. He was a fellow of the College of Physicians of Philadelphia, and a member of the Franklin Institute and the American Philosophical Society. In 1876 he married Hannah N. Megargee, daughter of Samuel Megargee. He died at his summer home in Bar Harbor, Me., and was buried in Laurel Hill Cemetery, Philadelphia.

F.R.P.

CHAPMAN, JOHN (c. 1775-Mar. 11, 1847), pioneer, was popularly known as "Johnny Appleseed." His parentage and the exact time and place of his birth have not been discovered. It is generally inferred that he was born in 1775, either in Boston or Springfield, Mass. All that is known of his boyhood is that he had a habit of wandering away on long trips in quest of birds and flowers. His first recorded appearance in the Middle West was in 1800 or 1801, when he was seen as he drifted down the Ohio past Steubenville, in an astonishing craft consisting of two canoes lashed together and freighted with decaying apples brought from the cider presses of western Pennsylvania. His first nursery is claimed to have been planted two miles down the river, and another up Licking Creek. It is believed that he returned frequently to Pennsylvania for more apple seeds, but by 1810 he appears to have made Ashland County, Ohio, his center of activity, living some of the time in a cabin with his half-sister, near Mansfield. It is said that he would travel hundreds of miles to prune his orchards scattered through the wilderness. His price for an apple sapling was a "6p penny bit," but he would exchange it for old clothes or a promissory note which he never collected.

Wherever he went he read aloud to any who would listen from the works of Emanuel Swedenborg, or the Bible, lying on the floor and rolling forth denunciations in tones of thunder, so that he came to be accepted as a sort of Border saint, and the stories of his quixotic kindness to animals, even to insects and rattlers that bit him, are characteristic of the growth of a folk legend. Indians regarded him as a great medicine man; he did indeed scatter the seeds of many reputed herbs of healing, such as catnip, rattlesnake weed, hoarhound, pennyroyal, and, unfortunately, the noxious weed dog-fennel which he believed to be anti-malarial.
Chapman

In 1812, when the Indians around Mansfield were incited by the British to attacks upon the American frontier settlements, Chapman volunteered to speed through the night to Mt. Vernon, Ohio, to get help from Capt. Douglas, warning many lonely homesteads on the way. This incident is authenticated; there is a wider tradition that he traversed much of northern Ohio apprising settlers of the surrender of the American forces under Hull at Detroit and of the imminence of Indian massacres. The most famous tale about him is of a pharisical minister who demanded from the pulpil, “Where is the man who, like the primitive Christian, walks toward heaven barefoot and clad in sackcloth?” “Johnny Appleseed,” clad in short ragged trousers and a single upper garment of coffee sacking with holes cut for head and arms, barefoot, with a tin mush pan on his head for a hat, approached the pulpit, saying, “Here is a primitive Christian!”

About 1838 Chapman crossed gradually into northern Indiana and continued his missionary and horticultural services. But after a long trip to repair damages in a distant orchard he was overtaken by pneumonia, and presented himself at the door of William Worth’s cabin in Allen County, Ind., where he died. He was buried in Archer’s graveyard near Fort Wayne. A monument to him was erected by the Hon. M. B. Bushnell, at Mansfield. His legendary life has inspired numerous literary works such as Denton J. Snider’s Johnny Appleseed’s Rhymes (1894), Nell Hillis’s The Quest of John Chapman (1904), Eleanor Atkinson’s Johnny Appleseed, the Romance of a Sower (1915), and Vachel Lindsay’s “In Praise of Johnny Appleseed” in the Century Magazine, August 1921.

[As the life of Chapman survives largely in reminiscences and hearsay, most of the accounts are little more than collections of current anecdotes. Gen. Brinkhoff and O. E. Randall were the orators upon the dedication of the Mansfield monument; their speeches are reprinted in Ohio Archaeol. and Hist. Quart., IX, 103-17 (1901). A biographical sketch of value is Johnny Appleseed, an Ohio Hero, by W. A. Duff (1914); W. D. Haley’s account in Harper’s Mag., XLIII, 830-36, gives many legends concerning Chapman.] D. C. P.

CHAPMAN, JOHN GADSBY (Dec. 8, 1808–Nov. 28, 1889), painter, was born in Alexandria, Va. He was assisted in his early art studies by George Cooke and C. B. King. At sixteen he tried his first oil painting and at nineteen went to Winchester, Va., as a professional artist. The same year, 1827, found him studying at the Pennsylvania Academy of Fine Arts. Through the aid of friends he was enabled to visit Europe, studying at Rome and Florence. He made numerous copies of the old masters and painted “Hagar and Ishmael Painting in the Wilderness,” with life-size figures. This was the first American painting to be engraved in Italy; it was published in 1830. In 1831 Chapman returned to America, held a successful exhibition of his copies and original pictures in Alexandria, and was soon after working in New York. He was one of the founders of the Century Club, and was an honorary associate of the National Academy in 1832 and a full member in 1836. He taught and practised wood-engraving, painted portraits, and made drawings for publications, furnishing 1,400 drawings for the Harper’s Bible published in 1846. In 1847, he brought out The American Drawing Book which is said to be the finest drawing book ever published; it went through many editions. This book contains 304 pages and about an equal number of fine illustrations. It treats the various subjects thoroughly, clearly, and sensibly; besides showing the methods of drawing, perspective, and painting, Chapman included accurate directions for etching and engraving as well as composition. About the same time he completed “The Baptism of Pocahontas,” one of the eight large paintings in the rotunda of the Capitol at Washington.

In 1848 he returned to Rome, where he lived during most of the remainder of his life. He was one of America’s first etchers, reproducing his own designs. His best known paintings, with the exception of “The Baptism of Pocahontas,” are his landscapes. An indefatigable worker, he must have made a great many pictures, but few if any are owned by public galleries. “The Israelites Spoiling the Egyptians,” “The Etruscan Girl,” and “The Donkey’s Head” were owned by R. L. Stuart of New York; “The Last Arrow,” and “Childhood” after Lawrence, by J. C. McGuire of Washington; “Rachel,” by Marshall O. Roberts; “Pifferini” and “The First Italian Milestone,” by James Lenox. Where these are at present is unknown. Other pictures which Chapman painted are “The Valley of Mexico,” “Sunset on the Campagna,” “Harvest Scene,” “Stone Pines in the Barberini Valley,” “Vintage Scene,” and “Views out of the Porta Salara and over the Lake of Albano.” His “Landings at Jamestown” was engraved by M. I. Danforth, and his “Montpelier, Va. The Seat of the Late James Madison” was engraved by Prudhomme. He is known to have painted portraits of James Madison and Horatio Greenough, and his portrait of Alexander Anderson [q.v.] belongs to the National Academy of Design. As at least half of his life was spent in Europe, much of his work must still be there. From the paintings, etchings, and illustrations that are known, he was an artist of
great ability, whose work has quality, charm, and skill.

R. P. T.

CHAPMAN, JOHN WILBUR (June 17, 1859-Dec. 25, 1918), Presbyterian evangelist, was born in Richmond, Ind., a son of Alexander Hamilton Chapman and his wife Lorinda McWhinney. At sixteen years of age he united with the Presbyterian Church. He spent one year at Oberlin College but graduated from Lake Forest University in 1879 and from Lane Theological Seminary in 1882. He was ordained the same year to the Presbyterian ministry. His principal pastorates were the First Reformed Church, Albany, N.Y.; the Bethany Presbyterian Church, Philadelphia; and the Fourth Presbyterian Church, New York. Eventually he gave up the pastorate for evangelism. He served as executive secretary of the General Assembly's Committee on evangelistic work for the Presbyterian Church and also as the moderator of the national body. On his evangelistic tours he traveled to Australia, Asia, and Great Britain, and he had an international reputation in his chosen field. He was above the average height, with a strong compact frame and great capacity for sustained labor. His voice was mellow, musical, and appealing. His sermons were lucid and definitely outlined. He insisted on the divine nature of Christ, his atoning work and personal return. To secure allegiance to Christ was the purpose of each address. With burning conviction and consuming zeal he preached the gospel; he never spared himself and suffered thirteen serious breakdowns in health. He was married three times: to Irene E. Steddom, May 10, 1882; to Agnes Prynu Strain, Nov. 4, 1888; to Mabel Cornelia Moulton, Aug. 30, 1910. His writings were largely evangelistic and echoes of his preaching. Chief among them were The Secret of a Happy Day (1899); The Surrendered Life (1899); Spiritual Life in the Sunday School (1899); From Life to Life (1900); Received Ye the Holy Ghost (1900); And Peter (1900); Revivals and Missions (1900); Life of D. L. Moody (1900); Present Day Evangelism (1903); The Problem of the Work (1911); Present Day Parables (1911); Chapman's Pocket Sermons (1911); Revival Sermons (1911); When Home is Heaven (1917).

[J. Wilbur Chapman, A Biography (1920), by Ford C. Ottman, a friend and associate. Revivals and Missions (1900), by J. Wilbur Chapman, containing his own account of his methods of evangelism; When Home is Heaven (1917), by J. Wilbur Chapman, which gives light on his early home training; "An Appreciation of a Great Evangelist" by Chas. R. Erdman, in the Congregationalist, Jan. 9, 1919, a careful characterization; personal acquaintance.]

T. C. R.

CHAPMAN, MARIA WESTON (July 25, 1806-July 12, 1885), reformer, daughter of Warren and Anne (Bates) Weston, was born in Weymouth, Mass., of Pilgrim descent. She was married in 1830 to Henry Grafton Chapman, a Boston merchant. Her husband's parents were enthusiastic abolitionists, and in 1834 Maria Weston Chapman went into the movement. She became the soul of the Boston Female Anti-Slavery Society, editing (1836-40) its reports published annually under the title Right and Wrong in Boston. Her services to Garrison were said to have been inestimable, her cooperation with him perfect. She was present at the meeting in Boston in 1835 at which Garrison was mobbed, and it was to her house that the meeting adjourned. Of the Boston gathering she said that when the women left the hall a roar of rage and contempt went up which increased when it was evident that they meant to walk in a regular procession, “each with a colored friend.”

The next year she spoke for the first time in her life in a public meeting, the day before Pennsylvania Hall was destroyed. She became one of the editors of the Non-Resistant, and, with Edmund Quincy, she edited the Liberator at various times during Garrison's illness or absence. In 1840 she was made a member of the executive committee of the Anti-Slavery Society, with Lucretia Mott and Lydia Maria Child, and in the same year, the Massachusetts Society chose her as one of its delegates to the World's Convention. In 1842 her husband died. In the two months after his death, she was very busy with the Anti-Slavery Fair, in supporting the Latimer fugitive slave case agitation and with writing almost weekly for the Liberator. She edited the Liberty Bell (1839-46).

She published Songs of the Free, and Hymns of Christian Freedom (1836) and How Can I Help to Abolish Slavery (1855), and in 1877 edited, with a memoir, the autobiography of Harriet Martineau, whom she had known for many years.

M. A. K.

CHAPMAN, NATHANIEL (May 28, 1780—July 1, 1853), physician, was born at Summer Hill, Fairfax County, Va., the son of George and Amelia Chapman. His mother was a daughter of Allan Macrae, a wealthy merchant of Dumfries, Va. His early education was received at the
Chapman

Alexandria Academy, founded by George Washington. At the age of fifteen he commenced reading medicine under Dr. John Weems of Georgetown, Md., and Dr. Dick of Alexandria, Va., and in 1797 he went to Philadelphia, where he became the private pupil of Dr. Benjamin Rush [q.v.]. He spent several years in studying the classics along with his medical reading, after which he entered the Medical School of the University of Pennsylvania, from which he was graduated with honors in 1801, having presented a dissertation on hydrophobia as his thesis. He then went to Europe and first spent a year in London under Abernethy, after which he was for two years in Edinburgh, then the medical center of the world. In 1804 he returned to Philadelphia to practise medicine.

He had many of the qualifications which ensure success in that calling. He was of good family, of delightful personality, sparkling with wit, gay and jovial to an unusual degree. He had been made much of in Edinburgh, where he had been a social lion. In Philadelphia he almost immediately became the favorite physician of a large section of the wealthy class. He was as socially popular as he was scientifically eminent. His successful career continued for a period of fifty years during which he became the acknowledged leader of a group of great physicians. From 1810 to 1850 he was actively connected with the Medical School of the University of Pennsylvania as a teacher, beginning first as an assistant to Dr. T. C. James in the chair of midwifery, and within three years thereafter being made professor of materia medica, and, later, professor of the theory and practise of medicine. He combined a profound knowledge of his subjects with a delightful style of presentation. As a raconteur he was famous. In 1817 he founded the Medical Institute of Philadelphia, the first post-graduate medical school in the United States, and conducted summer courses therein for twenty years. In 1820 he became the editor of the Journal of Medical and Physical Sciences, later the American Journal of the Medical Sciences. He was clinical lecturer in the Hospital of the Philadelphia Almshouse, now the Philadelphia General Hospital, for a number of years. He was president of the Philadelphia Medical Society for six successive yearly terms. In 1848 he was elected the first president of the American Medical Association by acclamation, no other name being placed before the meeting. One of the honors which he most appreciated was his presidency of the American Philosophical Society founded by Benjamin Franklin. He was the author of several important medical works: Elements of Therapeutics and Materia Medica (1817); Lectures on the More Important Diseases of the Thoracic and Abdominal Viscera (1844); Lectures on the More Important Eruptive Fevers, Hemorrhages, and Dropseis, and on Gout and Rheumatism (1844); A Compendium of Lectures on the Theory and Practice of Medicine (1846). In 1850 he retired from his official positions and from active practise and on July 1, 1853, he died. He was married in 1808 to Rebecca Biddle, daughter of Col. Clement Biddle. His grandson, Henry Cadwalader Chapman [q.v.], also attained distinction in medicine.

C. H. L.

CHAPMAN, REUBEN (July 15, 1802—May 17, 1882), governor of Alabama, was the son of Col. Reuben Chapman and Ann Reynolds of Virginia. Col. Chapman, son of a Scotchman, fought in the Revolution and afterward acquired considerable wealth. The younger Reuben received his education in a school at Bowling Green, Va. In 1824 he located at Huntsville, Ala., which was then the abode of large planters and the most promising town in the state. After a year of reading in the office of his brother, Judge Samuel Chapman, he was admitted to the bar and practised law for a time at Sommerville, Morgan County. In 1832 he was elected to the state Senate, and in 1835 to the national House of Representatives, to which he was returned for five successive terms. In 1847 he retired from Congress to accept the nomination of the Democratic party for the governorship. He was put forward as a compromise candidate by the Martin and Terry factions of the party, and although the Whigs, heartened by the rift in the opposing party over the state bank question, nominated Nicholas Davis of Limestone County, a popular planter with a distinguished public career, Chapman was victorious by a handsome majority. As governor, he pursued an economical and business-like policy, which was fortunate for the state, at a time when its finances were in a deranged condition. But the breach in Democratic ranks produced by the bank issue was scarcely closed before another, quite as serious, was occasioned by William L. Yancey's bold "Alabama Platform." Yancey supported Chapman for re-election, but an alliance between the opponents of Yancey and Ex-Governor Martin's friends, who were disgruntled because their hero had not been allowed a second term, prevented Chapman from polling the required two-thirds majority. He re-
Chappell

Absalom Harris (Dec. 18, 1801—Dec. 11, 1878), lawyer, historian, son of Joseph and Dorothy (Harris) Chappell, was born in Hancock County and died in Columbus, Ga. His mother's father, for whom he was named, was a soldier in the Revolutionary army. His father, born most likely in Virginia, the de-

Chapman

tired to his estate at Huntsville, but entered the political arena again in 1855 to help defend the Democracy against the onrush of the Know-Nothings. He was elected to the lower house of the legislature, defeating Jeremiah Clemens [q.v.]. When the crisis of 1860 came he ranged himself on the side of the conservatives. He attended the Democratic convention at Baltimore and did his utmost in a vain attempt to bring about a reconciliation between the Northern and Southern wings of the party which shortly before had split asunder at Charleston. During the war the Federal troops burned his handsome residence, laid waste his property, annoyed and imprisoned him, and finally drove him beyond their lines. When the war was ended, he returned to Huntsville and affiliated with the Democratic and Conservative party. He remained faithful to the white man's cause during the Reconstruction period, and after it was over he settled down to a quiet and unobtrusive life. He was married on Oct. 17, 1838, to Felicia Pickett, daughter of Col. Steptoe Pickett, a Limestone County planter who had come down from Virginia.

CHAPMAN, VICTOR EMMANUEL (Apr. 17, 1890—June 23, 1916), first pilot of the Escadrille Lafayette to be killed in action, was one of the American youths who at the outbreak of the World War offered their services to France. Born in New York, the son of John Jay Chapman, lawyer and littérateur, and Minna (Timmins) Chapman, child of an Italian mother by an American father, he grew up in advantageous surroundings. He studied at the Fay School, Southboro, Mass., spent several years at St. Paul's School, Concord, N. H., lived for a time in France and Germany, and after a year at the Stone School, Boston, entered Harvard from which he graduated in 1913. A love for scenery and talent for decoration seemed to fit him for architecture or painting, and he went to Paris where in the atelier of M. Gromort he prepared for admission to the Beaux Arts.

From childhood he had been fond of outdoor life. Strong physically but with no aptitude for sports, he nevertheless took keen delight in hazardous exploits. In perilous circumstances he was imperceptible, and all his faculties were at their best. Several life-saving incidents had already marked his career. He was by nature chivalrous and generous-hearted, with a deep-lying strain of mysticism, and to any opportunity for service he gave himself with reckless abandon. It was inevitable that he should offer his life to France. In August 1914 he enlisted in the Foreign Legion. For a year he served with the infantry in the trenches, where he showed himself a natural soldier, adaptable, amenable to discipline, fearless, cheerfully performing any assigned duty whether "kitchen police" or trench-digging. Eager for more aggressive action than was afforded by the comparatively quiet sector which he was helping to defend as aide-chargé to a mitrailleur, he transferred in August 1915 to the aviation corps. After preliminary training as a bombdropper and at aviation schools, on Apr. 20, 1916, he joined the newly formed Escadrille Lafayette. In the dangerous Verdun section he now had opportunity for service suited to his nature, playing hide and seek among the clouds in flights which he describes as an artist and poet, and engaging in fierce individual combats with enemy planes. He soon had the reputation of being the most determined hard-working member of the squadron and as second to none in aerial dueling. During an encounter, June 17, 1916, he received a severe scalp wound, and brought his machine to the ground riddled with bullets and with parts of the command severed. He treated the affair with characteristic indifference, and on June 23, his head bandaged, he put oranges into his plane to take to his comrade, Clyde Balsley, lying desperately wounded in the hospital; but they were never delivered. Seeing Capt. Thenault, Norman Prince, and Lufbery [q.v.] engaged with five German planes, he sped to their assistance. The first three escaped, but Chapman's plane was seen to fall, no longer controlled by the pilot, within the German lines northeast of Douaumont. The death he had expected had come to him in the clouds. His final rank was sergeant, and the French government honored him with the médaille militaire (given posthumously, June 24, 1924), and the croix de guerre with two palms.

Chappell

descendant of Englishmen who came to America in the seventeenth century, died in Georgia in 1807, when about forty years of age. Absalom attended the Mt. Zion Academy near his home, and then read law for two years in New York City. Later, he returned to Athens, Ga., and read law further in the office of Judge Augustin Smith Clayton before being admitted to the bar in 1821. He lived in several places, at times approximately as follows—in Sandersville (1821–24), in Forsyth (1824–36), in Macon (1836–58), and in Columbus (1858–78). During 1836–37 he helped organize the Monroe and the Western & Atlantic railways, and devised schemes for promoting foreign trade directly through Georgia ports. In May 1842, he was married to Loreto Rebecca Lamar, daughter of John Lamar, of Putnam County, Ga., sister of Mirabeau Buonaparte Lamar [q.v.] and of the Lucius Quintus Cincinnatus Lamar whose son of the same name became a justice of the Supreme Court. His successful activities as a lawyer were constantly interrupted by his participation in politics, and, during his Columbus residence, by his farming interests in Alabama. He was for many years a trustee of the state university, a state legislator and senator, and, in 1843–44 a congressman in Washington. In local politics he was of the Troup faction. Nationally, he was a state-rights Whig, but his party loyalty came under such suspicion while he was in Congress that he felt obliged to issue in justification of himself his letter To the People of Georgia (1844). He was a member from time to time—always with distinguished associates—of many public commissions in Georgia. In 1839 he was appointed in this capacity to perfect a system of finance—in 1849, to suggest improvements for the school system—in 1853, to report on public institutions—and, in 1867, to prepare an address to Georgians and to Americans in general on the political abuses then current in the South. When he went to live in Columbus, he thought of himself as withdrawing from public life, but he took part in the agitation for secession. And even when he was past seventy—reduced by the war to poverty, and by Reconstruction to something like despair—his patriotism asserted itself in his Miscellanies of Georgia (1874), a series of reminiscent and historical essays. This book is written in a grandiloquent style, and is of comparatively little worth as history. It remains valuable for the impression it gives of its author who, though perhaps too consistently grave, was always dominated by a sort of classic integrity and fortitude.

Charles

CHARLES, WILLIAM (1776–Aug. 29, 1820), etcher, engraver, caricaturist, is said to have been a native of Edinburgh, on the authority of Dr. Alexander Anderson who knew him in America (B. J. Lossing, Pictorial Field Book of the War of 1812, 1866, p. 228 n.). The earliest etched caricatures of his seen were issued from his shop in London, in 1803 and the first half of 1804. The majority of these were aimed at Bonaparte’s threatened invasion of England. He engraved two line plates for the Edinburgh Cyclopaedia, and in July 1804, he issued a print from “Charles’s Emporium of Art and Fancy’s Produce, Edinburgh.” He is said to have emigrated in order to avoid the consequences of prosecution for caricaturing “one or more magistrates” of the city (Ibid.). The offending caricature was probably that entitled A Fallen Pillar of the Kirk which was published in 1805. Charles was in New York City from the time of his arrival in this country until 1814, practising his art without success (Ibid.). He illustrated The American Magazine of Wit, in New York, in 1808. In 1814 he went to Philadelphia, continued a series of etched caricatures on the War of 1812, then in progress, and opened a print and book-shop. In addition to publishing caricature prints, he also issued a series of chap-books, illustrated by himself and by Joseph Yeager, then a young engraver. He contributed three plates to the American edition of Rees’s Cyclopaedia (Philadelphia, 1810–24), but his line-engraved plate of “Quadrapeds” was so unsatisfactory that afterward it was reengraved by George Murray. For Pinkerton’s Travels (Philadelphia, 1810–12) he made two illustrations in line. His first considerable work in Philadelphia was an edition of The Tour of Doctor Syntax in Search of the Picturesque, with the Rowlandson aquatints rather crudely copied. He also issued an edition of The Vicar of Wakefield, copying the Rowlandson plates. He died in Philadelphia, and was buried in the yard of the New Market Street Baptist Church. His widow, Mary, continued his business for several years and then opened a boarding-house. Frank Weitenkampf (American Graphic Art, 1924, p. 213) writes: “The most noteworthy caricatures of the War of 1812 were prints by William Charles. . . . His caricatures were typical of the Rowlandson-Gillray period . . . whilst not remarkable they have a rough humor which no doubt made them popular.” Although Charles made a few line plates, and many aquatints, he
Charlevoix

was especially fond of the etching needle, and all his caricatures and chap-book illustrations were made by that means. His work, when found colored, usually displays the same crudity as that exhibited by his drawing.

[The chief sources of information respecting Wm. Charles are the footnote in Lossing’s book (above), inscriptions on the engraver’s plates, City Directories of New York and Philadelphia (although his name appears in the latter for 1821) and the burial records of the Philadelphia Board of Health. If his career influenced his contemporaries, none of them, excepting Anderson, has left any comment upon it.] J.J.

CHARLEVOIX, PIERRE FRANCOIS XAVIER de (Oct. 24, 1682-Feb. 1, 1761), French explorer and historian, was born at St. Quentin, the son of Francois de Charlevoix and his wife Antoinette, née Forestier. The Charlevoix were an ancient family of Picardy of noble stock, and Pierre was well educated, early showing a vocation for the religious life. When not quite sixteen years of age he began at Paris his novitiate in the Jesuit order, and he was a student at the Collège Louis le Grand from 1701 to 1704. Then he was ordained to the diaconate, and the next year was sent to Canada as professor of rhetoric in the Jesuit college at Quebec. On his outward passage he was on the same ship with the Sieurs de Raudot and the Marquis de Vaudreuil, Canadian officials, and young Charlevoix by his good manners and pleasing address secured their friendship; thus during his stay at Quebec he was a member of the highest social circle in that place. Recalled to France in 1709 he taught at his Alma Mater, and there had for a pupil the boy Voltaire. Later he became prefect of his college, and when in 1719 the Regent of France desired to send a messenger to New France for the double purpose of ascertaining the boundaries of Acadia and of finding a new route to the West, Father Charlevoix was chosen for the mission.

As the Regent did not wish that the world should know the objects of Charlevoix's visit, the latter disguised his journey as one to examine the Jesuit missions of the New World. He set out late in 1720, and arrived in Canada in time to prepare for his expedition the succeeding spring. In a single canoe he made the voyage up the St. Lawrence, through the Great Lakes, visiting Detroit, Mackinac, and Green Bay en route; he then entered Illinois River by way of the St. Joseph-Kankakee portage, spent some time at the Illinois settlements, and finally reached New Orleans and Biloxi early in 1722. He was wrecked in the Gulf of Mexico, and then returned to France after an absence of two years and a half.

The journal in which Charlevoix recorded his American experiences consists of a series of letters to a noble patroness, the Duchess de Lesdiguieres. This form of writing was, however,
Charlton

a fiction; the letters were never sent, and were compiled to afford information not only about the country through which he passed, but also about the customs and manners of the Indians. The importance of this Journal historique, as it was called, lies in the dispassionate and accurate observation of the writer, and in the fact that he was the only traveler of the first part of the eighteenth century who describes interior America.

After his return from his voyage of inspection, Charlevoix never traveled more; he was offered but declined the position of missionary at a new post to be built on the upper Mississippi, having no desire for the hardship or possible martyrdom consequent upon a Jesuit's residence at a frontier post. He continued to teach until about the age of fifty, when he withdrew from active work and devoted himself to authorship, dying at the Jesuit convent of La Flèche. He was essentially a scholar, never a zealot; a man of the world, received at court and in good society. His histories were popular and had large sales. He was careful and accurate according to the standards of his time, and in his Histoire et description de la Nouvelle France he wrote of what he knew and had learned from documents and contemporaries. He edited for twenty-two years (1733-55) Le Journal de Trevoux, a publication of his order, begun in 1701.

Charlevoix's first work was Histoire de l'établissement, des progrès, et de la decadence du Christianisme dans l'Empire du Japon (Rouen, 1715). It was based on previous works of Jesuits in the Far East. It was rewritten and reissued as Histoire et description générale du Japon (Paris, 1736). His first book after returning from America was La Vie de Mère Marie de l'Incarnation (Paris, 1724), published anonymously. The next volume was Histoire de l'Isle Espagnole ou de Saint Dominique Ecrite particulièrement sur les mémoires et description manuscrit du P. Jean-Baptiste le Pers, S. J. (Paris, 1730). His Histoire de la Nouvelle France did not appear until 1744; in the appendix was the journal of his American voyage, also published separately under the title Journal historique; the first English edition of the journal was published in London in 1761; this was edited by Louise P. Kellogg and reprinted for the Caxton Club (Chicago, 1923). A translation was published by J. G. Shea (N. Y., 1866-72) in six volumes; a new edition of Shea's translation was issued in 1900. Charlevoix's last work was Histoire du Paraguay (Paris, 1756). He has had few biographers; the best sketch is by J. Edmond Roy, "Essai sur Charlevoix" in Canadian Royal Soc. Trans., 1907, sec. 1, 3-25.1

L.P.K.

CHARLTON, THOMAS USHER PULASKI (Nov. 1779-Dec. 14, 1835), jurist, author, was born at Camden, S. C., the son of Thomas and Lucy (Kenan) Charlton. The elder Thomas was a physician who served both as a surgeon and as a lieutenant of the line in the Revolutionary army. He did not live long after the war, and in 1791 his widow moved to Savannah, where the younger Thomas was educated and where he made his home for the rest of his life. He was ad-
mittted to the bar and elected to the state legislature soon after attaining his majority, and at twenty-five he became attorney-general for the State. He was elected by the general assembly judge of the Eastern circuit in 1807, served until 1811, was again elected in 1821 and served until 1822. In 1804 he published his life of Gen. James Jackson, Revolutionary soldier and statesman, who had been his intimate friend. This is a standard biography, well written, of a prominent figure in early Georgia history. Charlton served as chairman of the committee of public safety during the War of 1812, was a member of the committee which compiled the Georgia statutes in 1825, and for six terms was mayor of Savannah. He married twice: first, Emily, a daughter of Thomas Walter, well-known South Carolina and author of the botanical work Flora Caroliniana; and second, Ellen Glasco.

Charlton is chiefly remembered as the compiler of the first volume of Georgia court decisions—Reports of Cases Argued and Determined in the Superior Courts of the Eastern District of the State of Georgia (1824)—but his contemporaries also admired him as an orator and held him in high esteem as a judge. His written opinions reflect an independent spirit and a confidence in his own powers of correctly applying abstract principles to concrete cases not always met with in judges of courts of last resort. In the case, Ex parte Paul Grimball (T. U. P. Charlton, 153), decided in April 1808, he pronounced the unusual doctrine that hard times brought about by governmental action formed good ground for a court of equity to restrain a judgment creditor from selling his debtor's property. Frankly admitting that so far as he knew there was no precedent to sustain him (and all subsequent decisions on the subject are against him), he restrained the holder of an execution from selling the defendant's property because the national Embargo Act had brought about conditions making it impossible for the property to bring its fair value. In sum, he decided that, if during such a time the legislative department failed to do so, courts of equity should, upon proper case made, declare a moratorium, placing his ruling upon the fundamental principle that it was required by equity and good conscience. Startling as the ruling appears to us now there is nothing to indicate that it was regarded as unsound at the time, or that it was adversely criticised. But it may be inferred with reasonable safety that Charlton was not perturbed by the reception his rulings received. Again and again he pronounced judgments he believed to be unpopular, and in his opinions are to be found many such expressions as: "If this
unconstitutional I shall say so, and at the same time feel perfectly tranquil under the clamour of the consequences which may result" and "I am aware of the sensations this opinion may produce. . . . I have obeyed only the principles of the law."

[See Wm. J. Northen, ed., Men of Mark in Ga., vol. II (1910); Cyc. of Ga. (Atlanta, 1906); i Ga. Reports Annotated (Charlottesville, Va., 1903). All of Charlton's written opinions are to be found in his volume of Reports (above), or in the similar volume issued by his son, R. M. Charlton, in 1883.]

CHASE, GEORGE (Dec. 29, 1840-Jan. 8, 1924), law professor, son of David T. and Martha E. (Haynes) Chase, and descendant of Aquila Chase, was born at Portland, Me. He received a good primary education at the public schools, and, proceeding to Yale University, graduated in 1870, being valedictorian of his class. After leaving Yale he taught for three years in the classical department of the University Grammar School in New York City. During the last two of these years he also attended the Columbia Law School, where he graduated LL.B. in 1873, winning also the Townsend Prize. He was admitted to the New York bar but never practised. At Columbia he had come under the influence of Prof. Theodore W. Dwight, who was at that time the head of the Law School, and on the invitation of the latter he joined the faculty as instructor in municipal law, becoming shortly after assistant professor. In 1878 he was appointed professor of criminal law, torts, and procedure, and occupied this post for thirteen years. He was admirably equipped for academic work; a fluent graceful speaker with great powers of exposition and analysis, he was distinguished for accuracy of statement and aptness of illustration. On Nov. 25, 1884, he was married to Eva R. Hawley of Boston. In 1891, when the Columbia Law School was reorganized, he was not in sympathy with the policy which was about to be implemented. He accordingly resigned and founded the New York Law School, with the avowed object of developing the method of instruction devised by Dwight, viewing "the law as a system of principles and not as a mere aggregation of cases decided by the courts" (New York Law School Catalogue). The new institution opened Oct. 1, 1891, with Chase as dean, a position which he retained for over thirty-two years. Steadfastly pursuing the policy that the major subject of study ought to be treatises, the reading of reported cases being merely supplementary, he achieved a notable success. Many of his pupils subsequently attained high positions in public life, among them being Theodore Roosevelt, Charles E. Hughes, and Benjamin Cardozo. In 1920 his health gave way, but, though unable to leave his home, he continued to direct the work of the school until his death.

Chase was the author of The American Students Blackstone (1876-77), an abridgment retaining such of the original as he considered of historic or practical value; Leading Cases Upon the Law of Torts (1892); Leading Cases Upon the Law of Wills (1892); The Code of Civil Procedure of the State of New York as Amended (1909-20); a Supplement to the Public Statutes of New Hampshire (1914); and Pocket Code of the New York (State) Laws, Statutes, etc. (1919). He edited Johnson's Ready Legal Advertiser (1880) and an American edition of Sir James Stephen's Digest of the Law of Evidence (1886). For a time he was editor of the New York Law Journal and also assisted in the preparation of Johnson's Universal Cyclopedia.

Unsystematic details of Chase's ancestry are contained in a series of articles entitled "Chase Genealogy" by W. E. Gould in the Daily Eastern Argus (Portland, Me.), Mar. 2, 1812, et seq. Obituaries appeared in the N. Y. Times and N. Y. Herald of Jan. 9, 1924, and a sympathetic sketch of his career will be found in the Law Student, Feb. 15, 1924. See also Cat. Officers and Grads. Columbia Univ. (1916); N. Y. Law School Cat., 1921; Lewis W. Hicks, Bio. Record Class of 1870, Yale College, 1870-1911 (n.d.).]

CHASE, IRAH (Oct. 5, 1793-Nov. 1, 1864), Baptist educator, was descended from Aquila Chase who came from England and had settled in Hampton, N. H., by 1640. Irah's father, Isaac Chase, served in the Revolution, receiving five bayonet wounds in a battle near New York, where he remained a prisoner of war for almost a year; his mother, Sarah Bond, was a descendant of William Bond who came at an early age to Watertown, Mass., and was speaker of the General Court four times between 1691 and 1695. Irah, the second son, was born at Stratton, Vt. The family soon moved to Westford, however, and Irah attended school in the neighboring towns of Milton and St. Albans. In 1811 he entered the second year class at Middlebury College, taking several honors and being graduated in 1814. He then attended Andover Theological Seminary and upon graduation was ordained to the Baptist ministry, Sept. 17, 1817. Accepting a missionary appointment for western Virginia, late that fall he journeyed thither on horseback. Within a few months he was offered a chair in a theological seminary being organized in Philadelphia. The Philadelphia enterprise was soon transferred to Washington as the theological department of Columbian College, where Chase
Chase

laboried amid great discouragements until 1825, with the exception of a little more than a year, 1823-24, which he spent in travel and study in Europe. Personal contacts, with short residences at the Universities of Halle and Göttingen, strengthened his position in advocacy of scientific study of the Bible; he also negotiated in London the solution of a troublesome problem of property rights in the Rangoon mission.

Chase touched educational movements at many points, but his greatest specific contribution to ministerial education was in and through Newton Theological Institution, where he served as professor from November 1825 until 1845. While yet a student at Andover, he had assisted Rev. James M. Winchell of Boston in drafting a plan for a theological institution, and upon resigning at Washington he soon turned to Boston as the place where he might find opportunity to carry on the work for which he had a real passion. At first he was the only instructor at the new seminary. His ideas for the curriculum were developed and became the basis for the organization of the departments of theological study as new chairs became possible. The scientific study of the Scriptures was the central organizing principle, with linguistic requirements which represented an advance step for the Baptist ministry of that day. Within a decade and a half there came to work in this curriculum such outstanding men as Barnas Sears and Horatio B. Hackett [qq.v.]. Chase wrote many articles of a historical and theological character and four volumes of his writings were published. He was twice married, first, to Harriet Savage, Mar. 15, 1821, who died May 2, 1834; second, to Martha Raymond, Oct. 13, 1835, who died Oct. 25, 1846. There were nine children born of these marriages.

[Chase prepared by request an autobiographical sketch for the Baptist Memorial & Monthly Record (N. Y.), II, 71-82. A memorial volume, a Tribute of Affection to the Memory of Prof. Irab Chase (1865), contains a list of his published works. See also S. F. Smith, Hist. of Newton (1880); J. C. Chase and G. W. Chamberlain, Seven Generations of the Descendants of Aquila and Thomas Chase (1928); Cat. Officers and Students of Middlebury Coll., 1800-1915 (1917); Andover Theol. Sem. Gen. Cat. (1909).]

W. H. A.

CHASE, PHILANDER (Dec. 14, 1775-Sept. 20, 1852), Episcopal bishop, was born in Cornish, N. H., the last of the fifteen children of Dudley and Allace (Corbett) Chase. He graduated from Dartmouth College in 1796, and began his labors by the conversion of his family from Congregationalism. He was ordained deacon in the Episcopal Church in 1798, and priest in 1799. After holding several charges in northern New York, he moved in 1805 to New Or-
Chase

[The chief source of information is Chase's autobiography, Reminiscences of Bishop Chase, an Autobiography (2 vols. 1848). He also wrote A Plea for the West (1826); Star in the West or Kenyon College (1828); Defence of Kenyon College (1831); A Plea for Jubilee (1835). He was a frequent contributor to the Church publications, especially the Spirit of Missions, 1835-52. Much material concerning him is found in the Jour. Annual Convention Prot. Epis. Ch. in Ohio to 1875; ibid., Illinois, 1835-52; and in the Jour. General Convention Prot. Epis. Ch. in America (Triennial). See also Laura Chase Smith, Life of Philiander Chase (1903); Wm. B. Sprague, Annals Am. Pulpit, V (1859), 453-62; G. M. Royce, "Kenyon College" in the Churchman, Nov. 14, 1896; Geo. F. Smythe, Kenyon College, Its First Century (1924); Geo. T. Chapman, Sketches Alumni Dartmouth College (1867).]

K. J. G.

CHASE, PLINY EARLE (Aug. 18, 1820-Dec. 17, 1886), scientist, was born in Worcester, Mass. His father, Anthony Chase, for thirty-four years treasurer of Worcester County, was of a family honorably prominent in New England public affairs from the earliest settlements; his mother, Lydia Earle, of Leicester, was the daughter of Pliny Earle, who introduced the manufacturing of machine-card clothing into America. Brought up a Quaker, he was educated in the Worcester Latin School, in the Friends' School in Providence, R. I., and at Harvard University. Entering college when fifteen years old, he stated as his object the acquisition of "honorable fame." After graduation, honor but hardly fame attended him as principal of district schools in Leicester and Worcester. In 1843 he married Elizabeth Brown Oliver of Lynn, niece of Goold Brown [q.v.]. From 1841 to 1848 he taught in Philadelphia. A severe hemorrhage of the lungs made necessary a break in this profession and for ten or twelve years he was a member of a stove and foundry firm. While so occupied, an old college friend found him "engaged in solving a problem and selling a Franklin stove, with considerable friction between the two occupations." The same friend says: "Upon my asking him, with unaffected wonder, what induced the scholar of our class to dissipate in hardware, he assuaged my indignation with the softly spoken 'Thee must see, Edward, the multitude of bread and butter.'" In 1861 Chase resumed his teaching, which he continued with success until his death. He was appointed professor of natural sciences at Haverford College in 1871 and was transferred to the chair of philosophy and logic in 1875. In 1886 he acted as president of the College during the absence of his brother, Thomas Chase [q.v.], who was its president. He was a prolific writer, his subjects covering a wide range. Among his early publications were arithmetic text-books, one of which was written in conjunction with Horace Mann. In meteorology he collected data, published mostly by the American Philosophical Society, and produced one book, Elements of Meteorology for Schools and Households (1884). In the Proceedings of the American Philosophical Society alone he published more than one hundred and twenty articles. In 1864 the Society presented him with the Magellanic Medal for his paper on "Numerical relations between Gravity and Magnetism." Chase contributed also to the American Journal of Arts and Sciences (Silliman's); to the London, Dublin and Edinburgh Philosophical Magazine; to Comptes Rendus of Paris; to the Journal of the Franklin Institute; and to other periodicals, all of such contributions numbering over one hundred and fifty. As to subject, about one-tenth were philological and the rest mostly meteorological, cosmical, and physical. In later life he was especially interested in the cosmical subjects, striving to establish a common law that "All physical phenomena are due to an Omnipotent Power, acting in ways which may be represented by harmonic or cyclical undulations in an elastic medium." An able linguist, he spoke six or seven languages and with dictionary help could read one hundred and twenty, including dialects. As a lecturer, principally in the fields of astronomy and meteorology, he was notable.

M. H. D.

CHASE, SALMON PORTLAND (Jan. 13, 1808-May 7, 1873), statesman, secretary of the treasury under Lincoln, and chief justice during Reconstruction, was born at Cornish, N. H. His line can be traced through nine generations to Thomas Chase of Chesham, England, and through six generations to the American emigrant, Aquila Chase, who settled at Newbury, Mass., about 1640. From Newbury the Chases moved to Sutton, Mass., and later to Cornish, a frontier community on the Connecticut River. The Cornish farmer, Ithamar Chase, father of Salmon, held various state and local offices and was in politics a Federalist; the mother, Janette Ralston, was a woman of vigorous Scotch ancestry. Salmon was the eighth of eleven children. In his childhood the family moved to Keene, N. H., where Ithamar became a tavern keeper. The boy received his early training in the Keene district school and in a private school kept by a Mr. Dunham at Windsor, Vt.

The death of his father occurred when the boy
was nine years old, and shortly after this he was placed under the stern guidance of his uncle, Philander Chase [q.v.], bishop of Ohio, a vigorous pioneer leader in the Protestant Episcopal Church. For two years the boy lived with the bishop at Worthington, near Columbus, Ohio, entering the church school which the bishop conducted. His days at Worthington were devoted to classical studies, and he was at this time confirmed in the Episcopal Church; but his uncle’s hope of making him an Episcopal clergyman was not realized. When Bishop Chase became president of Cincinnati College in the fall of 1821 Salmon entered the college; and a very serious student he seems to have been, to judge by his own statement that he had little to do with college pranks but spent much time “in reading, either under the bishop’s direction, or at my own will.” “I used to meditate a great deal,” he added, “on religious topics; for my sentiments of religious obligation and . . . responsibility were profound” (Schuckers, p. 16). Leaving Cincinnati after less than a year, he spent some months in preparatory study, and then entered as a junior in Dartmouth College, from which he graduated without marked distinction in 1826. He then solicited the influence of another uncle, Dudley Chase, United States senator from Vermont, for a government clerkship; but, this being refused, he conducted a school for boys in Washington, having at one time under his charge sons of all but one of the members of John Quincy Adams’s cabinet. In Washington and Baltimore he frequently visited in the cultured home of William Wirt [q.v.]; and his otherwise sombre diary glows with youthful romance and sbritliness as it records the evenings spent in the company of the charming Wirt daughters.

Having determined upon his career, he read law under the nominal supervision of Wirt; and with scant legal preparation he was admitted to the bar on Dec. 14, 1829. The following year he settled in Cincinnati, where in addition to legal duties he was soon occupied with anti-slavery activities and with various literary ventures. In 1830 he assisted in organizing the Cincinnati Lyceum which presented a series of lectures, and became himself a lecturer and magazine contributor. In his lecture-essay on the “Life and Character of Henry Brougham” (North American Review, July 1831) his reforming instinct was manifest in his pointed comments on legal abuses of the time. While waiting for clients the lawyer-author sought unsuccessfully to establish a literary magazine for the West, and then turned his energies into the compilation of the Statutes of Ohio (3 vols., Cinn., 1833–35), a standard work which required heavy labor in the preparation and proved most serviceable to lawyers.

The events of Chase’s private life are intimately related in his diary and family memoranda. Three marriages are recorded: the first to Katherine Jane Garniss (Mar. 4, 1834), who died Dec. 1, 1835; the second to Eliza Ann Smith (Sept. 26, 1839), who died Sept. 29, 1845; and the third to Sarah Bella Dunlop Ludlow (Nov. 6, 1846), who died Jan. 13, 1852. Six daughters were born to him, of whom four died when very young. The births and deaths of his children, and the loss of his wives, are recorded in his diary with a revealing tenderness and a grief which takes refuge in religion. Two children reached maturity: the brilliant Katherine, daughter of his second wife, who became the wife of Gov. William Sprague of Rhode Island, and Janette, daughter of his third wife, who became Mrs. William S. Hoyt of New York City.

Despite scornful opposition, Chase prominently defended escaping slaves, and was called the “attorney-general for runaway negroes.” He labored unsuccessfully to obtain the release of Matilda, a slave woman befriended by J. G. Birney; and when Birney himself was indicted for harboring a fugitive, Chase carried the case to the supreme court of Ohio, where he made a vigorous argument, contending that Matilda, having been voluntarily brought into a free state by her master, became free (Birney vs. Ohio, 8 Ohio, 230). Unwilling to commit itself to the Chase doctrine with which it was evidently impressed, the court directed the dismissal of the indictment against Birney on merely technical grounds. On another occasion Chase defended Vanzandt (the original of John Van Trompe in Uncle Tom’s Cabin), prosecuted for aiding the escape of slaves from Kentucky. This case was appealed to the United States Supreme Court, and in its argument Chase was associated with William H. Seward, both giving their services without compensation. Chase contended that the federal government under the Constitution had “nothing whatever to do, directly, with slavery”; that “no claim to persons as property can be maintained under any . . . law of the United States”; and that the fugitive-slave act of 1793 was unconstitutional. The case was lost for his client; but it did much to bring Chase into prominence.

In politics Chase subordinated party interests to the central issue of slavery. Though formerly a Whig, he joined the Liberty party after the nomination of Birney in 1840; and in various of the conventions of this party, state and national, he was an outstanding leader. The
resolutions of the Buffalo convention of August 1843 came chiefly from his pen; and the Southern and Western Liberty Convention at Cincinnati in 1845 (designed as a rallying point for anti-slavery sentiment in the Middle West) was mainly his work. He was active in the Free Soil movement of 1848, presiding at the Buffalo convention, and drafting in part the platform which declared for “no more slave states and no more slave territory.” The power of the new party in the nation at large was shown by the defeat of Cass, whose choice had angered the anti-slavery Democrats; and in the Ohio legislature the Free Soilers used their balance of power in alliance with the Democrats to elect Chase to the United States Senate (Feb. 22, 1849). By this time he had come to realize the weakness of a party grounded on a purely anti-slavery basis, and was turning his attention to the possibility of capturing the Democratic party for the anti-slavery cause.

Chase entered upon his senatorial career at the time of the mid-century crisis over the slavery question. Unwilling to temporize on this issue, and resenting the Southern leanings of the Democratic party, he opposed the compromise measures of 1850; and in 1854 he issued his “Appeal of the Independent Democrats,” denouncing Douglas’s Nebraska bill as a “criminal betrayal of precious rights,” warning the people that the “dearest interests of freedom and the Union” were in “imminent peril,” and imploring all Christians to protest against “this enormous crime.” In this “Appeal” we have the key-note of Chase’s senatorial policy—a policy of writing slavery restrictions into national law wherever possible, and of paving the way for a new Democratic party that would be free from pro-slavery “domination.” He introduced an amendment to Douglas’s Kansas-Nebraska bill affirming the right of the people of a territory to prohibit slavery if they wished (as seemed to be implied in Douglas’s “popular sovereignty” doctrine); but the amendment was emphatically rejected.

In the altered political horizon produced by the dissolution of the Whig organization and the rise of the Republican party, Chase naturally cast his lot with the Republicans. Meeting in Columbus in July 1855 the new party (perhaps best designated as an “anti-Nebraska” party) nominated Chase as governor; and in a triangular contest in which he had to combat the old Whigs and the old-line Democrats, while suffering embarrassment from his Know-Nothing friends, he was victorious. In 1857 he was re-elected as Republican governor; and by this time he had become committed to the new party. As governor his administration was embarrassed by interstate conflicts over the fugitive-slave question, by a threat of Gov. Wise of Virginia to invade Ohio in order to suppress alleged attempts to rescue John Brown (to which Chase sent a vigorous reply), and by corruption in the office of state treasurer. One of his achievements as governor was a reorganization of the militia system which added greatly to the state’s military preparedness in 1861.

In 1856 Chase was an avowed aspirant for the Republican presidential nomination; but he did not even command the support of the full Ohio delegation, and his position at Philadelphia was much weaker than that of Frémont. Again in 1860 his wide prestige and his consistent record of anti-slavery leadership caused him to be prominently mentioned for the presidency; but his expected strength did not materialize in the convention at Chicago, since the Ohio delegation was again divided, and the firmness of his outspoken opinions caused him to be rejected from the standpoint of “availability.” With only 49 votes out of 465 on the first ballot, and with dwindling support as the voting proceeded, his friends gave up the struggle in his behalf; and when the break for Lincoln became apparent, they threw their votes to the Illinois candidate, thus putting Chase in favor with the incoming administration.

When Virginia, in an effort to avert impending war, called the Peace Convention at Washington in February 1861 Chase attended as one of the Ohio commissioners; but he refused to compromise as to slavery extension, and his speeches in the convention, though disclaiming any intention to invade state rights, probably tended to confirm the Southerners’ worst fears.

Chase was again chosen United States senator in 1860, but resigned to become Lincoln’s secretary of the treasury, which office he held from March 1861 until July 1864. As director of the country’s finances during the Civil War it was his task to borrow money from reluctant bankers and investors; to labor with congressional committees in the formulation of financial legislation; to devise remedial measures for a deranged currency; to make forecasts and prepare estimates in days when financial responsibility was diffused and scientific budgets were unknown; to trim the sails of fiscal policy to political winds; to market the huge loans which constituted the chief reliance of an improvident government; and to supervise the enforcement of unusual laws, such as that which provided for the seizure of captured and abandoned property.
in the South. The low state of public credit was reflected in the suspension of specie payments at the close of the year 1861; the high interest rate (over seven per cent) on government loans; the marketing of the bonds at a discount; the difficulty of obtaining loans even on these unfavorable terms and the height and instability of the premium on gold. Chase was fortunate in having the valuable assistance of Jay Cooke who, as “financier of the Civil War,” performed the same kind of service in marketing bonds that Robert Morris and Benjamin Franklin did for the Revolutionary War. When the bill to provide for immense issues of paper money with the legal tender feature was under consideration in Congress, Chase at first disapproved, endeavoring to obtain support among bankers for his national banking system; but when this support failed he grew non-committal and later gave a reluctant approval. The country was thus saddled with the “greenback” problem without such active opposition as his judgment would have dictated. The national banking system, first established by law on Feb. 25, 1863, was originated by Chase, who formally submitted his proposal in December 1862 in order to increase the sale of government bonds, improve the currency by providing reliable bank notes backed by government security, and suppress the notorious evils of state bank notes. This was perhaps his most important piece of constructive statesmanship.

On the major questions of the war Chase was called upon, as a member of the President’s official family, to assist in the formulation of policies. He favored, in a qualified manner, the provisioning of Fort Sumter; urged the confiscation of “rebel” property; approved the admission of West Virginia (the legality and wisdom of which was doubted by certain members of the cabinet); gave reluctant consent to the surrender of Mason and Slidell; urged McClellan’s dismissal; approved Lincoln’s suspension of the habeas corpus privilege, and, in general gave support to those measures which were directed toward a vigorous prosecution of the war. The closing paragraph in Lincoln’s Emancipation Proclamation, invoking the “gracious favor of Almighty God,” was penned by him; but he considered the President’s policy of liberation weak, and did not approve the exceptions of whole states and large districts from the proclamation as issued. Chase never had that easy comradiship with Lincoln which Seward had; and the President never got on well with his minister of finance. To Chase Lincoln seemed to lack force; and he frequently complained of the chief’s lax administration. He spoke with disparagement of the “so-called cabinet,” considered its meetings “useless,” and privately expressed distrust of the President’s whole manner of conducting the public business. Often he was at odds with his colleagues, and many difficulties arose because of the presence of both Seward and Chase in the President’s household—Seward the easy-going opportunist, and Chase the unending apostle of righteousness and reform. In December 1862 the most serious cabinet crisis of Lincoln’s administration arose when, in a Republican caucus of the upper House, certain radical senators, partisans of Chase, expressed lack of confidence in the President and demanded a “reconstruction” of the cabinet, by which was intended primarily the resignation of Seward. One of the senators thus wrote of the designs of the Chase men: “Their game was to drive all the cabinet out—then force upon him [the President] the recall of Mr. Chase as Premier, and form a cabinet of ultra men around him” (Diary of Orville Hickman Browning, 1925, I, 604). Lincoln handled the situation by arranging a meeting in which the intriguing senators were asked to give open expression to their complaints in the presence of the cabinet. In this meeting Chase was placed in a very embarrassing position. With Lincoln and his colleagues in the room he felt impelled to speak favorably of cabinet harmony in the presence of senators to whom he is said to have remarked that “Seward exercised a back stair and malign influence upon the President, and thwarted all the measures of the Cabinet” (Ibid., p. 603). As a result of these bickerings both Seward and Chase resigned; Lincoln promptly refused to accept either resignation, and matters proceeded as before, except that, as the months passed, Chase’s official position became more and more difficult. He honestly differed with Lincoln on essential matters; chafed at the President’s inaction and “looseness”; became increasingly impatient at the slow progress of the war, and probably came to believe in his own superior ability to guide the ship of state. Though not quite disloyal to the President, he nevertheless became the center of an anti-Lincoln movement while retaining his position in the cabinet.

Early in 1864 many zealous Unionists, including Horace Greeley, Henry Ward Beecher, William Cullen Bryant, and Theodore Tilton, had reached the conclusion that Lincoln’s administration was a failure; and a congressional committee of which Senator Pomeroy of Kansas was chairman sounded the call for Chase in a paper known as the “Pomeroy Circular,” which was at first distributed confidentially but soon found its
way into the press. The paper declared that it was practically impossible to reelect Lincoln; that his “manifest tendency toward temporary expedients” would become stronger during a second term, and that Chase united more of the needful qualities than any other available candidate. Chase, it appears, did not know of the circular until he saw it in a Washington paper; but his criticisms of the administration, as well as his willingness to rely upon the good judgment of those who thought that “the public good” would be promoted by the use of his name, were well known. An element of bitterness was injected into the Chase boom when Gen. Francis P. Blair, Jr., of Missouri, delivered an abusive speech against Chase in Congress in April 1864; and the friendliness of the President toward Blair was misconstrued, adding a further strain to the relations between Chase and Lincoln.

When the publication of the Pomeroy circular required an explanation, Chase wrote Lincoln of his entirely passive attitude toward the movement in his behalf, assured the President of his respect and affection, and offered to resign his secretaryship if the President should desire it. Lincoln’s reply indicated that he had not been offended and that he desired no change in the treasury department. The Chase movement soon collapsed, partly from mismanagement, and partly for the lack of any solid foundation. The President’s party managers played a trump card by setting an early date (June 7) for the Republican or “Union” nominating convention at Baltimore; and when a caucus professing to speak for the Union members of the Ohio legislature indorsed the President, Chase withdrew his candidacy.

He did not long remain in the cabinet. After various differences over appointments, he submitted for the office of assistant treasurer at New York the name of M. B. Field whom Lincoln found unacceptable because of influential opposition in the state. When Lincoln suggested that the appointment would subject him to “still greater strain,” Chase replied that he had thought only of fitness in his suggested appointments, referred to the “embarrassment and difficulty” of his position, and, as on various other occasions, presented his resignation. Chase’s diary indicates that he could have been induced to remain in the cabinet (Warden, post, p. 618); but, somewhat to his chagrin, Lincoln accepted the resignation, and he unexpectedly found himself out of office. “Of all I have said in commendation of your ability and fidelity,” wrote the President, “I have nothing to unsay; and yet you and I have reached a point of mutual embarrassment in our official relations which it seems cannot be overcome or long-

Chase

Chase

er sustained consistently with the public service.”

In the depressing summer of 1864 certain factors seemed to be working for a revival of the Chase candidacy. Distrust of the President, combined with anger at his veto of the Wade-Davis reconstruction bill and depression due to the unfavorable military situation, caused certain anti-Lincoln men to launch a movement for another nominating convention “to concentrate the Union strength on some one candidate who commands the confidence of the country” (New York Sun, June 30, 1889, p. 3). The plan contemplated that Lincoln, renominated in June, should be induced to withdraw. On Aug. 18, 1864, Horace Greeley wrote: “Mr. Lincoln is already beaten. He cannot be elected. And we must have another ticket to save us from utter overthrow” (Ibid.). Charles Sumner approved the movement; and various men who had been active in the earlier effort toward Chase’s candidacy, notably Henry Winter Davis, gave it support. Whitelaw Reid, who was very close to Chase, induced the Cincinnati Gazette to come out for Lincoln’s withdrawal. Chase’s own attitude was at first receptive and non-committal. In September, however, the entire political situation changed with the fall of Atlanta and Republican success in Vermont and Maine. The proposed convention was not held; the whole “radical” movement was abandoned; its sponsors came out for the Baltimore candidates, and Chase himself participated in the campaign for Lincoln, making various speeches in the West.

When Chief Justice Taney died, Oct. 12, 1864, Lincoln’s choice fell upon Chase in spite of misgivings as to the former secretary’s presidential ambitions—or, as some thought, the President may have felt that he was putting a perpetual candidate in an office where presumably his ambition would be silenced. The years of Chase’s chief justiceship fell during the turbulent period of Reconstruction. Occupied with problems of unusual complexity in his judicial capacity, he by no means held aloof from political controversies; and the most determined efforts to put him in the presidency came while he wore the toga of judicial office. Though these years witnessed the fruition of cherished hopes in the eradication of slavery and the restoration of the Union, the satisfaction he might have felt in the accomplishment of these objects was clouded by post-war excesses and corruption which put him out of tune with the party of his later choice, while in his own person he suffered disappointment, affront, and injured dignity. He was probably the least happy of our chief justices. At the time of Lincoln’s assassination his life was considered in
Chase

danger and he was protected by military guard. On Apr. 15, 1865, he administered the presidential oath to Johnson; and it seemed for a time that he might become a sort of mentor to the new president. On various occasions he approached Johnson with advice on Reconstruction policies, at times even drafting public statements to be delivered or issued by the President. Warmly advocating negro suffrage, and favoring the radical policy of Reconstruction, he started in May 1865 on an extended Southern tour which occupied two months and was devoted to confidential investigations concerning conditions in the states lately in "rebellion." At Charleston, S. C., and elsewhere he addressed colored audiences, advocating the enfranchisement of their race.

After the war Chase was confronted with the question of reopening federal courts in the South; but he delayed because of the conviction that subordination to the military authorities would be inconsistent with judicial independence; and when at length he did open the United States circuit court at Raleigh, N. C., on June 6, 1867, he carefully explained in his address to the bar that this was done only after the habeas corpus privilege had been restored and assurances given that the "military authority [did] not extend in any respect to the courts of the United States." When planning to reopen the circuit court at Richmond, Va., he declined military protection for himself and the court, with the comment: "If I go to Richmond at all, I intend to have no relations with the military, except those which spring from the good-will which subsists between myself and some of the officers" (Warden, post, p. 659).

A painful duty confronting Chase in his capacity as circuit justice was that of presiding at the proposed trial of Jefferson Davis, who, after two years in military custody, was released to the civil authorities in May 1867 and placed under indictment for treason against the United States. The earlier stages of the case cannot be traced here; but on Mar. 26, 1868, in the United States circuit court at Richmond, a grand jury brought in an elaborate indictment against Davis, charging treason under the federal law of 1790, which prescribed the penalty of death. Chase's reluctance to preside at the Davis prosecution may well have explained his repeated postponements in coming to Richmond to hold court. When he did appear he was annoyed by association on the bench with John C. Underwood [q.v.], federal district judge in Virginia, a man whose pronounced anti-Southern prejudices destroyed his judicial impartiality. In December 1868 a motion to quash the indictment was argued before Justices Chase and Underwood, Davis's counsel contending that any prosecution of the Confederate leader for treason would be inconsistent with the fourteenth amendment of the Federal Constitution, in which disability from office-holding, not death, was prescribed for those in Davis's position. Favoring the quashing of the indictment, Chase disagreed with Underwood; the disagreement was certified to the United States Supreme Court; and the Davis case was pending there when, on Dec. 25, 1868, President Johnson issued an unconditional and universal pardon to all who had participated in the "rebellion." The consequent termination of the case, both at Richmond and at Washington, gave genuine relief to Chase (R. F. Nichols, "United States vs. Jefferson Davis," American Historical Review, XXXI, 266 ff.).

When the peak of radical fury was reached in the attempt to remove President Johnson, it fell to Chase as chief justice to preside over the Senate sitting as a court of impeachment. The flimsiness of the charges betrayed the whole movement as a partisan attack upon the President because of his opposition to the Stevens-Sumner-Wade policy of Reconstruction; and the great danger was that the judicial character of the whole proceeding would be a mere pretense. Denying that the Senate was a court, the anti-Johnson group sought to subordinate the chief justice as a figurehead, to exclude ordinary rules of evidence, to suppress essential testimony, to deny adequate opportunities for defense, to intimidate individual senators, and to rush the whole proceeding through with railroad speed. Chase, however, refused to accept the rôle of puppet and effectively asserted his prerogatives as presiding judge. Characteristically, he began by lecturing the Senate for receiving articles of impeachment and framing rules of procedure before being organized as a court. For this he was criticized; and even Warden states that his "hero" erred in this respect; but the question was essentially a judicial one to which the Chief Justice had given earnest study, and his unwillingness to surrender his own functions is more to be admired than censured. He considered himself a part of the court, with the presiding judge's function of seeing that its proceedings from the outset were properly conducted. The Senate radicals were minded to deny him the casting vote; but he successfully defended this right, taking the opportunity, on the occasion of the first tie on a question of adjournment, to announce his vote and declare the tribunal adjourned. He was attacked as a partisan of the President, accused of seeking converts for acquittal, and assailed for playing politics in allowing his name to be used as a can-
Chase

didate for the presidency during the impeachment proceedings. As to the "stories" of rides in which he advised senators on their duty, he himself said that there was a "grain of fact sunk in gallons of falsehood" (Warden, post, p. 696). He did profoundly disapprove of the whole impeachment movement and did not entirely suppress his views; but there is no reason to reject his own statement that he did not seek to influence or convert any one (not even Sprague, his son-in-law), and that until the final vote he had no idea what the result would be.

Chase's incurable ambition for the presidency found its most striking manifestation in 1868, when, after obtaining no notice in the Republican convention, he became the center of a determined boom among the Democrats. Though certain papers, such as the New York Tribune, put forth his name, he made no effort for the Republican nomination. One should perhaps discount his statements in private letters that he would not take the nomination; for he had no chance whatever in that party, whose radical leaders had repudiated him, and whose emotional swing to Grant was irresistible. From the standpoint of party regularity it seemed to many a shocking thing that so prominent a Republican should not only fail to support his party's candidate, but should seek the leadership of the opposing party. For Chase, however, party regularity had never been an imperative motive; he had often described himself as an independent Democrat, and his attitude toward Grant was that of thorough disapproval and lack of confidence. Newspapers and influential leaders began to work for him; and he decided to allow his name to be used. In correspondence and interview he again showed a receptive attitude, and when asked for a public statement he defined his policy, emphasizing universal amnesty and universal suffrage, though realizing that such an attitude would injure his prospects (Schuckers, post, pp. 584-86). In the Democratic convention at New York an active group of Chase managers labored early and late ("Kate" Sprague turning politician and exerting her personal and social influence); and a "Chase platform" was circulated among the delegates. When it came to the voting, however, his platform was rejected; Ohio declared for Seymour of New York; and in an atmosphere of pandemonium Seymour was unanimously chosen for the presidential candidacy, with Chase's factious enemy, Blair, as running mate. In his disappointment Chase bore himself in silence and dignity and gave no countenance to efforts of his friends to obtain Seymour's withdrawal or launch a third-party movement.

Meanwhile the court over which Chase presided was faced by a menacing Congress and subjected to unusual strain in deciding a series of perplexing cases. In the Milligan case (4 Wallace, 2), it was held that military commissions for the trial of citizens are illegal, except where invasion or war actually deposes the civil courts. On the main point of this decision Chase concurred; but he dissented from that portion which held that Congress could not have provided for such trials if it had wished. At various times it seemed that the court would have to decide on the constitutionality of the Reconstruction Acts; but such a result, which would have precipitated an unseemly contest with Congress, was avoided.

In Mississippi vs. Johnson (4 Wallace, 475) and Georgia vs. Stanton (6 Wallace, 50), the court refused to enjoin the President or a member of the cabinet from enforcing the Reconstruction Acts. This was in keeping with the court's practise of avoiding political questions. In the McC Cardle case (6 Wallace, 318), which again involved the legality of Reconstruction legislation, a decision was avoided by an act of Congress which deprived the court of jurisdiction; and the court permitted its functions thus to be limited. Further questions concerning reconstruction were considered in Texas vs. White (7 Wallace, 700), Cummings vs. Missouri (4 Wallace, 277) and Ex parte Garland (4 Wallace, 333). In these controversies the court held the Union to be indissoluble, declared secession a nullity, and denied the validity of test oaths intended to exclude ex-Confederates from office-holding. The application of the Fourteenth Amendment to certain state legislation was considered in the Slaughterhouse Cases (16 Wallace, 36), in which the court refused to set itself up as a censor of state laws or invade the domain of civil rights theretofore belonging to the states. Preferring a broader application of the amendment, Chase dissented from this opinion, whose main doctrine has since been abandoned by the court.

In 1870 Chase delivered the opinion declaring unconstitutional that part of the Legal Tender Act of 1862 which made the "greenbacks" legal tender as to contracts existing at the time the act was passed (Hepburn vs. Griswold, 8 Wallace, 603). As secretary of the treasury he had issued these government notes; and he was now roundly abused for holding them illegal. When the Hepburn decision was reversed in 1871 (Legal Tender Cases, 12 Wallace, 457), Chase dissented.

It appears that Chase would have accepted a presidential nomination by the Liberal Republi-
Chase

Dans 1872; but, aside from other factors, the state of his health would have prevented such a nomination. His vote this year was given to Greeley (Schuckers, post, p. 593). On May 7, 1873, he died of a paralytic stroke in New York.

Chase was tall, massive, handsome in feature, and distinguished in figure and bearing. His portraits show a large head, with deep-set, blue-gray eyes, prominent brow, spirited nostrils, and firm lips. He was near-sighted and may have lacked magnetism and approachableness; but there was something in his mien that bespoke a determined will. His religious convictions were genuine and earnest. Reading his diaries we find how he chided himself on his sinfulness; how at times he declined communion from self-distrust; how he was equally disturbed if at other times his unworthiness failed to oppress him; how he repeated psalms while bathing or dressing; how he pursued his Scripture reading and prayer as a pure matter of conscience. He considered it sinful to waste time. Though fond of chess, he foreshowed cards and avoided fashionable society. He once described a charming young lady as one with whom he would have fallen in love had she not been "fond of the gay world" and "disinclined to religion," which he valued "more than any earthly possession" (Warden, post, 190). Though he was socially at ease, a sense of humor was denied him; and when telling a story he would usually spoil it. Schuckers speaks of his "modesty"; but others considered him conceited and accessible to flattery. Though hardly the scholar in politics, he was of a literary turn; and in early life he sometimes expressed himself in verse. There are purple patches in his usually grave diaries to which the historian turns with real delight.

Having the "defects of his virtues," he was self-righteous, opinionated, and difficult to work with. Ambition colored all the more prominent phases of his career. That it diminished his usefulness, impaired his dignity, and blinded his judgment as to currents of public opinion, may be conceded; but it did not prompt unworthy bargains nor excessive electioneering. His moral courage was manifest in his opposition in the Cincinnati council to saloon licenses, his defiance of threatened violence, his advocacy of unpopular causes, and his refusal to trounce for the presidency. As war-time minister of finance he resisted alluring opportunities for private gain. Though puritanical, he was not a fanatic. His anti-slavery activities were held within bounds; and he never affiliated with the Garrison or Phillips type of abolitionist. The antagonism between him and Wade was of long standing; and he disliked the excesses of the radical school of Recon-

struction while partly approving its program. His mental operations were steady rather than rapid; his public statements precise and devoid of verbiage. As a speaker he commanded attention rather by conviction and intellectual force than by the orator's art. His opinions as chief justice were characterized by a practical emphasis upon main principles rather than by brilliance or fondness for legal lore.

[Portions of Chase's elaborate diaries and letters have been published in Robert B. Warden, Account of the Private Life and Public Services of Salmon Portland Chase (1874), in J. W. Schuckers, Life and Public Services of Salmon Portland Chase (1874), and in the Annual Report, Am. Hist. Ass., 1902, vol. II. The last mentioned volume includes some interesting letters from Chase to Sumner and a large number of letters from George S. Denison, who, as treasury official at New Orleans during the Civil War, wrote in full concerning conditions in Louisiana. The bulk of the original manuscript of the diary, together with letters and miscellaneous material, is to be found in the library of the Pa. Hist. Soc. at Philadelphia; and another large collection of Chase manuscripts (over one hundred volumes) is deposited in the division of manuscripts of the Lib. of Cong. The biographical work by Warden is garrulous, extravagant, and of considerable importance except as a source book; that of Schuckers, though of somewhat more value, is far from satisfactory. The short volume by A. B. Hart in the Am. Statesmen series (1899), though not free from error, is the best biography. The amending campaign biography by J. T. Trowbridge, The Ferry Boy and the Financier (1864), is based in part upon a series of autobiographical letters written by Chase himself; but Chase's recollections were often dim, and Trowbridge, "Salmon P. Chase" (Ibid., vol. I, 1887); Elbridge G. Spaulding, A Resource of War: ... Hist. of the Legal Tender Paper Money Issued During the Great Rebellion (1869); Chas. Warren, The Supreme Court in U. S. Hist. (1922); Hugh McCulloch, Men and Measures of Half a Century (1888).]

J.G.R.

CHASE, SAMUEL (Apr. 17, 1741—June 19, 1811), Revolutionary leader, signer of the Declaration of Independence, justice of the United States Supreme Court, was born in Somerset County, Md. His father, the Rev. Thomas Chase, was an emigrant from England, and for many years rector of St. Paul's, Baltimore. His mother, Martha [or Matilda] Walker Chase, daughter of a farmer, died when Samuel was still very young, and his education till he was eighteen devolved upon his father. It was largely in the classics. In 1759 young Chase entered upon the study of the law in the offices of Hammond & Hall of Annapolis. He was admitted to practise in the mayor's court in 1761, and in chancery and certain of the county courts two years later. He was married twice: first on May 21, 1762, to Anne Baldwin; second, on Mar. 3, 1784, to Hannah

34
Chase

Kilty Giles. Till 1786, when he moved to Baltimore, his home was in Annapolis.

From 1764 to 1784 Chase was a member of the Maryland Assembly. At the outset he aligned himself with the opposition to the royal governor, going so far as to support a measure regulating clerical salaries which cut his own father’s salary in half. His activity in riotous demonstrations of “The Sons of Liberty” against the Stamp Act caused him to be denounced by the mayor and aldermen of Annapolis as a “busy, restless incendiary, a ringleader of mobs, a foul-mouthed and inflaming son of discord.” He, in turn, characterized his critics as “despicable tools of power, emerged from obscurity and basking in proprietary sunshine” (Sanderson, IX, 191).

Chase was a born leader of insurrection. In 1774 he was a member of the Maryland Committee of Correspondence, and a delegate to the First Continental Congress. Next year he was a member of the Maryland convention and of the Council of Safety, and attended both Congresses at Philadelphia. Here he urged a total embargo upon trade with Great Britain, arguing that such a measure must speedily force Great Britain to submission or bankruptcy. At first he opposed the suggestion of an American navy as the “maddest idea in the world,” but later took the opposite view. According to John Adams, Chase was the member selected to move an effort to secure foreign alliances. He was also an early advocate of confederation, and was the first to develop Maryland’s position on the question of the Western Lands. On Feb. 15, 1776, he was appointed, along with Franklin and Charles Carroll of Carrollton, a member of the commission to win over Canada. The commission reached Montreal at the end of April and returned to Philadelphia in June, having accomplished nothing. Proceeding at once to Maryland, Chase conducted a vigorous campaign which led to the Maryland convention’s rescinding its previous instructions and ordering its delegates to vote for independence. Chase arrived in Philadelphia with the new instructions on the eve of the decisive vote, having ridden one hundred and fifty miles in two days. He signed the enrolled Declaration on Aug. 2; and from this time on till the end of 1778 was reappointed regularly to the Maryland delegation. In 1777, he served on twenty-one Congressional committees; in 1778, on thirty. The most important of these was a committee consisting of himself, R. H. Lee, and Gouverneur Morris to prepare a circular to discredit the British peace proposals of 1778. The resultant document is said to have been largely Chase’s handiwork. Throughout he steadily opposed Congressional intrigues against Washington, a fact which Washington was later to remember.

Toward the end of 1778 Chase’s reputation fell suddenly into shadow. Utilizing information gained as a member of Congress, he combined with others to attempt a corner on flour in view of the approach of the French fleet. In the New York Journal Hamilton, as “Publius,” addressed “The Honourable — Esquire” in an invective modelled on that of “Junius”: “It is your lot to have the peculiar privilege of being universally despised. . . . Were I inclined to make a satire upon the species I would attempt a faithful description of your heart” (Works of Alexander Hamilton, 1904, I, 199-209). The object of Hamilton’s attack has been certainly identified as Chase (W. C. Ford in New York Evening Post, Nov. 1, 1886). In the following two years he was omitted from the Maryland delegation to Congress; and though he was later reappointed, he rarely attended and bore only an inconspicuous part. In 1783 the cloud began to lift. That year he was sent by the governor to England to recover from two fugitive loyalists Maryland’s holdings in stock of the Bank of England. He remained abroad a year but achieved little. The matter in issue was tied up in Chancery proceedings from which it was only extricated years afterward by Chase’s one-time protegé, William Pinkney.

Meanwhile, Chase, still practising his profession, had also entered trade. He was a member of two partnerships which sold supplies to the state and purchased shipping, cannon, and powder for it. Chase himself also purchased an extensive interest in confiscated coal and iron lands. These enterprises resulted disastrously. In 1789, confessing himself insolvent, Chase petitioned the legislature to relieve him from liability for his partnership debts, which was done upon his pledge to turn over certain property to another of the partners. In 1785 he attended the Trade Convention which met at Mt. Vernon and drafted the compact of that year between Maryland and Virginia regarding the navigation of the Potomac. Next year at the urging of friends he removed to Baltimore, where in 1788 he became chief judge of the criminal court. In 1791 he also assumed the post of chief judge of the general court of Maryland. This accumulation of offices, together with a tumultuous episode of the kind that seems to have dogged his footsteps as judge, led to an attempt in the Assembly to remove him from office; and while the motion failed of the necessary two-thirds vote, the majority declared its sense that the constitution had been violated.
Chase

Writing over the signature "Caution," Chase opposed the adoption of the Constitution of the United States (Essays on the Constitution of the United States, ed. by P. L. Ford, 1892), and was one of the eleven members of the Maryland ratifying convention who cast an adverse vote. He was also one of a committee of the convention to propose amendments to the new instrument, among which were clauses protective of trial by jury and of freedom of the press. He was subsequently to be reckoned an enemy of both these institutions. Just why Chase turned Federalist is something of a mystery, especially in view of his strong anti-British prejudice which he voiced as late as 1793. At any rate, in a letter dated June 14, 1795, we find Washington's close friend, Joseph McHenry, suggesting Chase for federal office. McHenry refers to Chase's past "errors (which no longer exist)," and says that his services and merits far overbalance these. "I need not tell you," he adds, "that to his professional knowledge he subjoins a very valuable stock of political science." McHenry also questions what sort of impression "an appearance of neglect is apt to produce in minds constructed like his." Washington's first inclination was to appoint Chase attorney-general; but on Jan. 26, 1796, he nominated him to the Supreme Court. The following day the nomination was unanimously ratified and Chase commissioned.

Chase’s performance on the Supreme bench was the most notable of any previous to Marshall. Opinions were then delivered seriatim, and being the justice of latest appointment, Chase was required for several terms of court to give his opinions first. This accident of position, together with the colorful quality of his judicial utterances, their positiveness of expression, their richness in "political science," have all contributed to give his opinions predominant importance in this period. In his opening term (February 1796) he delivered two notable opinions: that in Hylton vs. United States (3 Dallas, 171) and that in Ware vs. Hylton (Ibid., 198). In the former, in sustaining a specific tax on carriages as an excise, Chase laid down a definition of "direct" taxes which prevailed until Pollock vs. Farmer’s Loan and Trust Company attempted ninety-nine years later to correct "a century of error" (157, 158 U. S.). His opinion in Ware vs. Hylton remains to this day the most impressive assertion of the supremacy of national treaties over state laws. Another outstanding opinion of his is that in Calder vs. Bull in 1798 (3 Dallas, 386). It is still cited for its definition of ex post facto laws; but is even more important for its suggestion that there are unwritten, inherent limita-

Chase

tions on legislative powers. This doctrine was presently taken up by the state courts and may be fairly regarded as the germ of the modern doctrine of due process of law as "reasonable law." In Hollingsworth vs. Virginia (Ibid., p. 378), Chase expressed informally the opinion that Congressional resolutions for amending the Constitution of the United States do not have to be submitted to the president; and this seems to have been the only utterance of the Court on the subject down to the National Prohibition Cases (253 U. S.). His opinion in Cooper vs. Telfair (4 Dallas, 14) contains interesting testimony as to the conversion of bench and bar by that date to the doctrine of judicial review. He had himself previously expressed skepticism. On circuit, Chase’s most important utterance was delivered in United States vs. Worrall (2 Dallas, 384), in which, traversing the previous views of his brethren, he held that the courts of the United States have no jurisdiction over crimes at common law. This view was later accepted by the Supreme Court in United States vs. Hudson and Goodwin (7 Cranch, 32) and is still in the main the law of the land (see Ex parte Grossman 267 U. S.).

The most famous incident of Chase's judgeship was his impeachment and trial. This was partly the outgrowth of his high-handed conduct in 1800 at the trial of Fries for treason (F. Wharton, State Trials, 610-48) and of Calender for sedition (Ibid., 688). On both of these occasions Chase's evident disposition to play the "hanging judge" brought him into serious collision with counsel who threw up their briefs. The immediate occasion of the impeachment was an intemperate charge to a Baltimore grand jury, May 2, 1803. Assaulting the recent repeal of the Judiciary Act of 1801 and the adoption of manhood suffrage in Maryland, Chase predicted the deterioration of "our Republican Constitution . . . into a mobocracy." He was also reported, though probably falsely, with having assailed the administration as "weak, pusillanimous, relaxed." On May 13 Jefferson wrote Nicholson, a Maryland member of the House, suggesting impeachment; and on Mar. 12, 1804, under the leadership of Randolph, the House complied by a vote of 73 to 32. Of the eight articles presented against him, six had to do with the Fries and Calendar trials while the last dealt with the grand jury charge. The trial formally opened Jan. 3, 1805, but did not really get under way until a month later. Among Chase's counsel were Joseph Hopkinson and Luther Martin; the leader of the House "managers" was Randolph. The fundamental question raised was that of the scope
of the term “high crimes and misdemeanors” of Article III, section 4 of the Constitution; did this refer only to indictable offenses or was it broad enough to reach any conduct which the House and Senate might judge to fall short of “good behaviour” (Article III, section 1)? Notwithstanding that Jefferson brought a great deal of secret pressure to bear and that twenty-five of the thirty-four members of the Senate were of his party, the impeachment failed. Five of the articles commanded less than a majority; one failed to receive a single vote; the last received the heaviest vote, 19 votes to 15. It is generally agreed that Chase’s acquittal probably saved Marshall; it is therefore of fundamental importance in our constitutional history.

From Marshall’s accession, Chase’s rôle on the Court became decidedly subordinate. The Chief Justice himself now spoke for the Court, and Chase delivered but one “opinion of the Court” during this whole period, and that in a case which had been appealed from Marshall’s own decision on circuit (see 4 Cranch, 328). He also delivered a brief concurring opinion (2 Cranch, 127), and once announced his dissent (4 Cranch, 293). Indeed, through ill health, more specifically gout, he was absent from the bench the entire term of 1806 and probably also that of 1810; and in 1811, the year of his death, no Court was held.

At his prime Chase was a man of striking appearance, over six feet tall and large in proportion. “His face was broad and massive, his complexion a brownish red. ‘Bacon face’ was a nickname applied to him by the Maryland bar. His head was large, his brow wide, and his hair thick and white...” (Beveridge, Marshall, III, 184). Story found him “the living image” of Dr. Johnson “in person, in manners, in unwieldy strength, in severity of reproof, in real tenderness of heart; and above all in intellect.” At another time Story compared him to Lord Thurlow. His intellectual grasp is fully attested by his judicial opinions; his turbulent disposition appears at every turn in his career.

Chase

III (1919); and Gustavus Myers, Hist. of the Supreme Court (1918)].

E. S. C.

CHASE, THOMAS (June 16, 1827—Oct. 5, 1892), classical scholar, college president, was a son of Anthony and Lydia (Earle) Chase, and a brother of Pliny Earle Chase [g.v.]. He was of the eighth generation in descent from Ralph Earle, who was admitted in 1638 an inhabitant of Aquidneck, R. I., and in 1655 a freeman of the Colony of the Town of Portsmouth. By descent on both sides, and also by education, he was a Quaker. Worcester, Mass., where he was born, was in 1827 a pretty rural town. In its public schools object lessons and the methods of Pestalozzi were already introduced when the child’s school days began before he was three years old. He was studying Latin when he was nine, and Greek when he was ten. English composition was not neglected, and physics, mathematics, ancient and modern history, French, and some general subjects completed the curriculum. His was the last class to enter Harvard College which read the entire Greek Testament as an entrance requirement. He entered Harvard College in 1844 and was graduated with high honors in 1848. He was, to use his own words, “a hard and not unsuccessful student, enjoying more than words can tell the instruction of great men.”

After his graduation he was master of the Cambridge High School, but in 1850 was appointed to the professorship of Latin in Harvard College, which he was to hold for one year, until George Martin Lane returned from Europe. He remained, however, a year and a half longer, first as instructor in history and chemistry, then as tutor in Latin. Early in 1853 he went to Europe. He visited classic sites in Greece and Italy, then studied nearly a year at the University of Berlin and attended lectures at the Sorbonne and the Collège de France for one term. He also heard, by courtesy, lectures at the University of Athens and at several universities of Italy and Germany, besides visiting Oxford and Cambridge.

Upon his return to the United States, in 1855, he was urged to resume his place at Harvard College, but accepted the offer of the chair of philology and classic literature at Haverford College, with the understanding that he was at liberty to leave at the end of the year. He consented, however, to remain and, in 1875, was elected president of the college. In 1885 he obtained leave of absence, and in 1886 he resigned. After a year abroad he settled at Providence, R. I., where for a time he gave instruction in the classics in the Moses Brown School and for a year before his death temporarily occupied the
Chase

chair of Greek in Brown University. He died at Providence, of Bright's disease. He was married on Feb. 8, 1860, to Alice Underhill Cromwell of New York.

Chase was a handsome man, with thick brown hair, a slightly aquiline nose, and an alert and kindly expression. He was not only an admirable teacher and college president but a noted scholar. An early work is *Hellas, Her Monuments and Scenery* (1861). Perhaps his most important work was performed as a member of the New Testament Company of the American Committee for the Revision of the Bible. He was appointed in 1871 and aided the Committee greatly by his translations and criticisms. He contributed a scholarly essay on "The Use of Italics in the English Bible" to a pamphlet on *Bible Revision* issued by the Committee in 1879. He was senior editor of the Chase and Stuart series of Latin texts which were widely used in schools and colleges, making several contributions to the series. He also published a *Latin Grammar* in 1882.

H. N. F.

CHASE, WILLIAM MERRITT (Nov. 1, 1849-Oct. 25, 1916), artist, was born at Williamsburg, Johnson County, Ind., the eldest of seven children of David Hester and Sarah (Swaim) Chase. He began as a child to copy woodcuts and other pictures, making profile portraits of members of the family and of friends. After a removal to Indianapolis in 1861, he soon outstripped his drawing-teacher at school, and as clerk at his father's shoe store, spent much time studying pictures at an art shop near by. At nineteen, a romantic impulse started him to Annapolis, Md., where he joined the U. S. school-ship *Portsmouth* for a cruise of three months. This proved unsatisfactory, and he returned to Indianapolis and chose a career in art. He was placed with the painter Benjamin Hayes, who, after some months, advised his going to New York (1869), giving him a letter to J. O. Eaton. At first he worked in Eaton's studio, at the same time following the classes of the National Academy of Design, and then set up his own studio in the Y. M. C. A. Building, Fourth Ave. and Twenty-third St., painting still-life studies. One of these, "Catawba Grapes," was exhibited at the National Academy. After two years he returned West to St. Louis, where his family now lived, and shared the studio of J. W. Pattison, painting flowers and fruit. In 1872 four gentlemen sent him to Munich to study. Entering the antique classes at the Royal Academy at Munich he made rapid progress during the succeeding years, winning several medals.

He worked under F. Wagner and later Karl von Piloty, at the same time studying the art of Leibl. After he had gained a prize for a composition, "Columbus before the Spanish Court," Piloty wished him to paint it on a large canvas for Washington, but Chase preferred to paint single figures and portraits, among the latter, those of Piloty's five children and another of his friend, Baron von Haberman. During this period he painted "The Dowager," exhibited at the Academy Exhibition in New York (1875), "The Court-Jester," shown at the Centennial in Philadelphia in 1876, and "Ready for the Ride," exhibited at the first Society of American Artists' Exhibition in 1878, and now at the Union League Club, New York. In 1877 he spent nine months in Venice with Duveneck and Twachtman, painting a "Fishmarket in Venice" and the "Antiquary's Shop." The Art Students' League, recently organized, now requested his services as a teacher, and returning to New York in 1878, he brought with him a remarkable collection of curios and pictures which were installed in a large gallery and studio at 51 West Tenth St. It became famous as a meeting place for artists and students. His classes were frequented by a large number of pupils, and Chase, as president of the Society of American Artists, was a leader among the younger painters dissatisfied with the conventions governing the National Academy. He was a prominent member of the celebrated "Tile Club," joining their excursions and visiting Europe during the summers with Beckwith, Blum, and other congenial friends. In London, 1885, he painted the portrait of Whistler now at the Metropolitan Museum, which the subject qualified as a "lampoon," despite Chase's assurances of sincerity. In 1886 he married Alice Gerson, daughter of a Brooklyn friend; by her he had eight children. Living for a time in Brooklyn, he painted some brilliant views in Prospect Park, as well as others in Central Park, Manhattan. After several changes of residence he decided in 1893 to give up his large studio on West Tenth St., and disposing of its valuable contents at auction, he bought a house on Stuyvesant Square, retaining it as a permanent residence for life. At the same time a studio was taken on Fifth Avenue at Thirty-fifth St., and after some years another in the Tiffany Building on Fourth Ave. About 1891-92, he organized a school on the Shinnecock Hills near Southampton, Long Island, where for eleven seasons he taught principally landscape painting to large
Chatard

classes. In 1903 he took a party of students to Europe, supplementing practical work with study in the galleries and studios, and this was continued through succeeding summers until 1914. In the latter year he held his first class in California at Carmel-by-the-Sea. No American painter taught such a large number of pupils, while at the same time rapid methods of execution enabled him to paint many portraits, landscapes, and still-life subjects. He rarely surpassed, however, the remarkable qualities of his earlier paintings done at Munich and Venice. A number of otherwise ably-executed portraits show the limitations of one dealing with exterior appearances rather than with imaginative ideals or spiritual suggestion. His still-life studies, especially those of fish, on the other hand, are veritable masterpieces. His portrait, by Sargent—a commission from Chase’s pupils—is at the Metropolitan Museum, New York, where a number of his works are to be seen.

Beal in Scribner’s Mag., LXI, 255-58; J. W. McSpadden, Famous Painters of America (1907); personal acquaintance.] R. J. W.

CHATARD, FRANCIS SILAS (Dec. 13, 1834—Sept. 7, 1918), Roman Catholic bishop of Indianapolis, was a grandson of Pierre Chatard. The latter, an emigrant from Santo Domingo, whose slaves and plantation were lost in the negro insurrection, had settled in Baltimore, married the daughter of a fellow emigrant, and won local prestige by writing and practising medicine, in which he had been trained in Paris. His son, Ferdinand, had studied medicine in Paris, London, and Edinburgh, practised in Baltimore, and married Eliza Anne, daughter of Silas Marean of Brookline, Mass., who had served in the War of 1812 and as consul in Martinique, where he had married an Irish widow of an English gentleman. Francis Chatard, son of Ferdinand and Eliza Anne, thus came of a distinguished Baltimore family proud of a diversified French, Irish, and native American ancestry. Expecting to follow the paternal profession, on his graduation from Mount St. Mary’s, Emmitsburg, in 1853, he studied medicine under Dr. Donaldson of Baltimore and in the University of Maryland where he obtained his medical degree. After serving two years as an interne in the Baltimore infirmary and as physician of the city almshouse, he heard the religious call and enrolled under Archbishop Kenrick. Nativist rioting and anti-Catholic charges quickened his faith, and close contact with suffering influenced his decision to enter the religious life.

Chatard

For six years Chatard pursued courses in philosophy and theology in the Urban College of the Propaganda at Rome before he was ordained (1862) and awarded the doctorate of divinity (1863). He was then named vice-rector of the American College at Rome under Dr. W. G. McCloskey, later bishop of Louisville. Succeeding to the rectorship in 1868, he headed the College for ten interesting years during which the Vatican Council of 1870 was held. As the nephew of Admiral Chatard of the Confederacy, he took special pride in presenting Grant, Sherman, and Sheridan to Pius IX with whom as a papal chamberlain he was on intimate terms. During his incumbency, he gathered funds in America to pay off the debts and endow the College whose scholastic standards had decidedly improved.

Named by Pope Pius to the See of Vincennes, he was consecrated (1878) by Cardinal Fran- chi, prefect of the Propaganda, in the presence of civil and ecclesiastical visitors of high degree. Later he was installed in his bishopric by Archbishop Purcell. Vincennes welcomed in him a man of polished appearance, a good linguist, an attractive conversationalist, an inspiring preacher, and a deep student of foreign politics. In a sense, due to his wide circle of European friends, he was an international figure in Catholic affairs. He ruled his diocese well and took an active part in civic life. In 1898, on removal of his See to Indianapolis, he built a new cathedral, St. Vincent’s Hospital, schools, and a convent. On his twenty-fifth anniversary, he was honored by the whole state in ceremonies in which Cardinal Gibbons, forty archbishops and bishops, and three hundred priests took part. Although seven years later Joseph Chartand was appointed co-adju- dor, the aged bishop continued active. During the World War, as a stout pro-ally he followed the fortunes of the American Expeditionary Force the more intently because of the enlistment of a favorite nephew in the medical corps. Inactive for the last few months of his long life, he passed away in 1918. Newspapers stressed the unusual fact that he was born at the same time and in the same cathedral parish in Baltimore as Cardinal Gibbons and Bishop John Foley of Detroit.

He translated from the French, The Memoirs of a Scrach, published a book of essays and a treatise, Christian Truths, and wrote a number of articles for the American Catholic Quarterly and the Catholic World, including in the latter publication, “Letters from the Vatican in 1870” which attracted wide attention.

[H. Alerding, Hist. of Cath. Ch. in Diocese of Vin- cennes (1883), pp. 217-25; H. A. Brann, Hist. of the
CHAUMONOT, PIERRE JOSEPH MARIE (Mar. 9, 1611-Feb. 21, 1693), Jesuit missionary, was the son of peasants of Burgundy who gave him a good education under an uncle who was a priest. He studied Latin and music and showed much aptitude, but as a youthful prank he stole money from his uncle, ran away, and became a vagabond. Finally, in Italy, he repented of his evil ways, and on May 18, 1632, was received as a novice in the Society of Jesus at Rome. He then took the names Joseph Marie, and is usually spoken of as Father Joseph Chaumonot. A fellow student showed him one of the Jesuit Relations, whereupon he greatly desired to become a missionary in New France. This wish was granted, and on Aug. 1, 1639, he arrived at Quebec, and immediately set out for Huronia on the shores of Georgian Bay. There he evinced great ability in learning the Indian language, and soon became so useful that he was sent to the Petun tribe with Father Daniel, and to that of the Neutrals with Brébeuf. Upon the destruction of the Huron missions by the Iroquois, Chaumonot escaped martyrdom, and came with the fugitive Christian Hurons to Quebec, where in 1650 they were given a grant of the Isle d’Orlans.

In 1655 Chaumonot was chosen to go with Dablon to open a mission among the Iroquois, who professed to be ready to receive the “black robes.” There he found many captive Christian Hurons and ministered to them. The sites of some of the villages where he ministered are now marked: at Indian Hill, Pompey, N. Y., where he held the first mass; near Mud Creek, Ontario County, where the Hurons dwelt; on Cayuga Lake, where he preached in 1656 to the Cayuga tribe. The mission to the Iroquois was abandoned in 1658, the colonists and missionaries escaping death by flight to Canada. Thereafter Chaumonot dwelt among the Hurons, who had been driven from Isle d’Orlans, and lived successively at Beauport, Notre Dame de Sainte Foy, and Lorette. This last settlement was named at the request of Chaumonot, who had always had a strong devotion for the Casa Loretto in Italy. In all he lived with the refugee Hurons forty years, with the interval of the Iroquois mission 1655-58, and two years as chaplain (1663-64) at Fort Richelieu.

In 1688, at the request of his superior, he wrote his autobiography. He also compiled a Huron grammar, and several sacred writings for the Hurons. In 1692 he retired to the house of his order in Quebec, where he died, much beloved and respected. A simple, naïve, unambitious man, he made an ideal missionary, patienty enduring hardships of every kind, counting all his afflictions to the glory of God and the Holy Family.

[The sources for Chaumonot’s life are abundant. His autobiography was published by J. G. Shea, La Vie du R. P. Pierre Joseph Marie Chaumonot (New York, Cramoisy Press, 1858). There is also a Paris edition of 1885. Shea also published a Supplement called Suite de la Vie etc. (New York, Cramoisy Press, 1858). Chaumonot’s Huron grammar was translated from the Latin and printed in Trans. Lit. and Hist. Soc. of Quebec, vol. II (1832). His missions in Canada and New York are described in Jesuit Relations (Thwaites ed., Cleveland, 1866-1902), with a biographical sketch in XVIII, 255.]

CHAUNCEY, ISAAC (Feb. 20, 1772-Jan. 27, 1840), naval officer, was born in Black Rock, Fairfield County, Conn. Descended from Charles Chauncy [q.v.], the second president of Harvard College, he was the fifth of nine children born to Wolecott and Ann (Brown) Chauncy. Manifesting a liking for the sea, when a mere youth he entered upon his chosen calling and, such was his proficiency, at the age of nineteen he was given command of the ship Jenny, belonging to the Schermerhorns, wealthy New York shipowners. It is narrated that during one of his voyages between Charleston and New York the crew and all the officers except himself were taken sick with yellow fever and that single-handed he brought the vessel into port. On June 11, 1799, he was appointed a first lieutenant of the frigate President, then building at New York, taking rank from Sept. 17, 1798, and during the last year of the naval hostilities with France he made a cruise in her in the West Indies, with Commodore Truxtun in command. Chauncy was retained under the peace establishment of 1801, ranking sixth in the list of lieutenants, and in the war with Tripoli he found employment during the period 1802-05, first as acting commander of the flagship Chesapeake, and later as commander, successively, of the New York and the John Adams. While he was in command of the New York an explosion of gunpowder near the magazine threatened the destruction of the vessel and all on board. Chauncy coolly and bravely led a party of volunteers below who put out the fire and saved the ship. Joining temporarily the flagship Constitution he participated in the attack on Tripoli made by the fleet of Commodore Preble, Aug. 28-29, 1804, when much damage was done to the enemy. His services on this occasion were especially commended by his commodore. He was promoted master-commandant on May 18, 1804, and captain on Apr. 24, 1806—the highest statutory
Chauncey

rank in the navy. About the time of the latter promotion he was furloughed, with permission to make a voyage to the East Indies. This he did in command of a vessel belonging to John Jacob Astor. A year later he returned to the navy and took command of the New York navy-yard, where he was stationed until early in the War of 1812.

Possessing the confidence of President Madison and Secretary of the Navy Hamilton, and having the reputation of being one of the most efficient officers in the navy, Chauncey, early in September 1812, was made commander of the naval forces on Lakes Ontario and Erie, with power to build, purchase, and hire vessels, appoint officers, enlist seamen, buy naval stores, and establish navy-yards. This was the most important command at the disposal of the Navy Department. In October 1812, he arrived at Sackett's Harbor, N. Y., where he made his headquarters for upward of three years. An excellent organizer, he established a navy-yard, with a naval hospital, naval school, and rope walk, and built or otherwise procured a fleet of more than twenty vessels. The objectives of his naval operations on Lake Ontario were three in number and more or less interrelated: the reduction of fortified places in conjunction with the army, the capture or destruction of the ships of the enemy (commanded by Sir James L. Yeo), and the obtaining of a naval superiority on the lake. In 1813 he ably assisted the army in the reduction of York and Fort George. During that year both fleets did considerable cruising, but little fighting. On Sept. 28, in an engagement with Yeo, Chauncey won a victory but failed to make the best use of the force under his command (Roosevelt, post, p. 253). Both commanders proved to be wary and excessively cautious. The year ended indecisively. In the campaign of 1814 Chauncey appeared in an even less favorable light. At critical moments he was inactive (Mahan, post, II, 298-99). Throughout the war he failed, except for brief periods, to establish a naval superiority on Lake Ontario. At last the confidence of President Madison was shaken, and he ordered Commodore Decatur to relieve him. The proposed change, however, did not take place, and Chauncey remained on the lake. It is obvious that among the naval commanders of the War of 1812 he is not of the first rank.

Soon after leaving Sackett's Harbor in the summer of 1815 he took command at Portsmouth, N. H., of the Washington, one of the first ships of the line in the navy. With this vessel as his flagship, he commanded the Mediterranean squadron in 1816-18, and, together with Consul

Chauncy

William Shaler [q.v.], negotiated a treaty with Algiers. During the years 1821-24 he was stationed in Washington as one of the three post-captains comprising the Board of Navy Commissioners, which assisted the secretary of the navy in administering the navy; and in the years 1825-32 he was again commandant of the New York navy-yard. In 1832 he returned as navy commissioner to Washington where he remained until his death, serving for the last three years of his life as president of the board. He is buried in the Congressional Cemetery in that city. He was married to Catharine Sickles of New York. Two of his sons, Charles W. and John S., were naval officers. His portrait (Audaetic Magazine, III, 177) shows him as large and corpulent.

CHAUNCY, CHARLES (1592-Feb. 19, 1671/2), non-conformist clergyman, second president of Harvard, was a son of George Chauncey and his wife Agnes Welch, widow of Edward Humberton. Notwithstanding the statement in Mathers' Magnalia that the date of Chauncey's birth was 1586, it is probable that he was born shortly before Nov. 5, 1592, when his baptism was registered in Yardley-bury, Herts, England. A pupil in Westminster School at the time of the Gunpowder Plot, he matriculated at Trinity College, Cambridge, at Easter, 1610, received the B.A. degree in 1613-14, the M.A. in 1617, and B.D. in 1624. He became a fellow of Trinity in 1614 and was Greek lecturer in the same college in 1624 and 1626 (Zachary Grey, An Impartial Examination of Mr. Daniel Neal's History of the Puritans, II, 183). On Mar. 17, 1630, he was married to Catharine, daughter of Robert Eyre. He was vicar of St. Michael's in Cambridge in 1626; of Ware, Herts, in 1627-33; of Marston St. Lawrence in 1633-37. Because of his opposition to some of Archbishop Laud's regulations, he was twice summoned before the high commission court.—in 1630 while he was in Ware (Proceedings Massachusetts Historical Society, XIII, 337-40; Calendar of State Papers, Domestic Series, 1629-31), and again, in 1634 while he was in Marston St. Lawrence (Calendar of State Papers, Domestic Series, 1635-36). On the second occasion he was imprisoned for some months. In each case he submitted only to regret his submission later. On June 12, 1637, Dr. S. Clerke wrote to Sir
Chauncy

John Lambe: “Mr. Chauncy ... mends like sour ale in summer. He held a fast on Wednesday last, and ... he with another preached some six or eight hours. The whole tribe of God flocked thither, some three-score from New Hampton; the Lord Say, with his lady, honoured them with their presence” (Calendar of State Papers, Domestic Series, 1637). Evidently a new storm was brewing and Chauncy fled before it, reaching New England a few days before the great earthquake, which occurred on June 1, 1638. Before leaving England he wrote a Retraction of his submission which was published in London in 1641. In New England he went first to Plymouth as a helper to Mr. Reyner, the pastor. Trouble soon arose on account of his theory concerning baptism which he seems to have believed should be by immersion even in the case of infants. On Nov. 2, 1640, Hooker of Hartford wrote to Shepard of Cambridge: “Mr. Chauncy and the church [at Plymouth] are to part. ... At a day of fast ... he openly professed he did as verily believe the truth of his opinions as that there was a God in heaven, and that he was settled in it as the earth was upon the center ... I profess how it is possible to keep peace with a man so adventurous and pertinent, who will vent what he list and maintain what he vents, its beyond all the skill I have to conceive” (Lucius R. Paige, History of Cambridge, 1877, pp. 49-50). In 1641, he removed to Scituate where he found some remnants of Mr. Lothrop’s party who sympathized with him but also others who were inclined to the Church of England. The result was a schism and the two churches wrangled until conditions became unbearable (Samuel Deane, History of Scituate, 1831). In 1654, Chauncy left for Boston, intending to return to his former parish in Ware, which had invited him back. At the moment, however, Harvard College was without a president owing to the enforced withdrawal of Henry Dunster because of his Baptist convictions, and the Overseers appointed Mather and Norton a committee to invite Chauncy to the vacant office. Since his views had become well-known, the Committee was instructed to signify to him that the Overseers “expected and desired that he forbear to disseminate or publish any tenets concerning the necessity of immersion in baptism and celebration of the Lord’s Supper at evening or to expose the received doctrine therein” (Publications of the Colonial Society of Massachusetts, vol. XV, p. 206). Accepting these humiliating conditions, and the meager stipend of £100, Chauncy became, on Nov. 29, 1654, the second president of Harvard College and continued in that office until his death on Feb. 19, 1671/2. As president, he seems to have been eminentely successful. His naturally impulsive temper was curbed by the responsibilities of his position, and, although he disagreed with Jonathan Mitchell, pastor of the Cambridge church, upon the Half-way Covenant (see Chauncy’s Anti-Synthia Americana, Cambridge, 1664), their personal relations seem to have continued friendly. His faults of temper were more than offset by his acknowledged erudition, to which Ezra Stiles of Yale bore glowing testimony (The Literary Diary, 1901, I, 133). In addition to works already mentioned, Chauncy published: The Doctrine of the Sacrament (1642); God’s Mercy Shewed to His People (1655); Sermon on Amos (1665); The Plain Doctrine of the Justification of a Sinner in the Sight of God (1659). He also wrote, in Latin prose and verse, various productions for state occasions at Cambridge, England, most of which are in William Chauncy Fowler, Memorials of the Chauncys, Including President Chauncy, His Ancestors and Descendants (1858).

W. W. F.

CHAUNCY, CHARLES (Jan. 1, 1705-Feb. 10, 1787), clergyman, was a great-grandson of Charles Chauncy [q.v.], second president of Harvard College, and the son of Charles Chauncy, a Boston merchant, and of Sarah (Walley) Chauncy, daughter of Judge Walley of the supreme court of Massachusetts. He was prepared for college, probably, at the Boston Latin School, graduated from Harvard in the Class of 1721, and received its A.M. degree in 1724. He was thrice married: on Feb. 14, 1727, to Elizabeth Hirst; on Jan. 8, 1738, to Elizabeth Townsend; on Jan. 15, 1760, to Mary Stoddard. Ordained minister of the First Church in Boston on Oct. 25, 1727, as colleague of Thomas Foxcroft who died in 1760, he spent in all sixty years in the service of this church. John Clarke was ordained as his colleague in 1778. Dr. Howard of Springfield, an intimate friend, says of him: “He was, like Zaccheus, little of stature ... God gave him a slender, feeble body, a very powerful and vigorous mind, and strong passions, and he managed them all exceedingly well” (William B. Sprague, Annals of the American Unitarian Pulpit, p. 12).

He was undoubtedly the most influential clergyman of his time in Boston, and, with the exception of Jonathan Edwards, in all New England,
Chauncy

becoming the acknowledged leader of the liberals of his generation. His literary activity may be grouped around the three controversies in which he was engaged: Revivalism, Episcopacy, and the Benevolence of God. The first arose out of the Great Awakening, of which Edwards was the theological defender as Whitefield was its popular preacher. Chauncy was thoroughly prosaic, wishing that some one would translate "Paradise Lost" into prose that he might understand it; despising rhetoric to the point of praying that he might never be an orator (which prayer as one of his friends remarked was unequivocally answered); a man of the intellect utterly distracting the emotions as calculated to befog and pervert the mind; plainly, he could have no sympathy with either Edwards or Whitefield. Undoubtedly the Revival was open to all his criticisms, but Jonathan Edwards was more judicial than he and, while acknowledging the faults which Chauncy condemned, believed in the Revival, nevertheless, as a manifestation of divine grace and power. In this controversy, Chauncy published Seasonable Thoughts on the State of Religion in New England (1743), besides a Sermon on Enthusiasm (1742), a Letter to a Friend on the French Prophets (1742), and two Letters to Whitefield (1744, 1745).

The second controversy had to do with Episcopacy as the only divinely instituted form of church polity. After the original charter of Massachusetts had been revoked and the colony had become a province, Episcopacy, favored by the royal governors, gained headway, and the argument was advanced that the established religion of England was that of its dependencies also. English bishops wrote as if Congregationalism were no religion at all and there was demand for an American bishop, and even for a college in which young men might prepare for the Episcopal ministry. All this alarmed the sons of the Puritans, and Chauncy devoted nine years to contending against Episcopal claims, beginning with his Dudleian Lecture of 1762 and ending with his Complete View of Episcopacy in 1771. The last mentioned book is the work of a diligent and intelligent scholar who had covered the field so far as one could do so at the time and whose conclusions command respect even when they do not carry conviction. Besides these works, Chauncy contributed to this controversy A Letter to a Friend (1767), A Reply to Dr. Chandler (1768) and a Reply to Dr. Chandler's Rejoinder (1770).

The third controversy was more theological in character. Before the Great Awakening, nearly all the New England ministers had been preaching drowsily an attenuated Calvinism. Edwards started a theological movement designed to support the Revival by restoring the Calvinistic doctrine of grace but his teachings concerning God, man, and their mutual relations were presented in forms which many deemed dishonoring to both God and man. This led to the publication by Dr. Chauncy in 1782 of an anonymous tract entitled Salvation for All Men Illustrated and Vindicated as a Scripture Doctrine and, in 1784, The Benevolence of the Deity and also (anonymously) The Mystery Hidden from Ages . . . or the Salvation of All Men. Chauncy also published, in 1785, Five Dissertations on the Fall and Its Consequences, dealing with the doctrine of depravity.

W. W. F.

CHAUVENET, WILLIAM (May 24, 1820—Dec. 13, 1870), astronomer, mathematician, was a son of William Marc Chauvenet, a native of Narbonne, France, who came to Boston, where he was married to Mary B. Kerr, and later removed to Milford, Pa., and still later to Philadelphia. William Chauvenet, an only child, was born at Milford. From his father he inherited his love for music and from his mother his logical mind. In his youth he cared little for outdoor sports, but was interested in mechanical constructions and feats of legerdemain. He attended a private school in Philadelphia conducted by Dr. Samuel Jones. Here he manifested such marked ability that Dr. Jones prevailed upon the elder Chauvenet to send him to Yale College. He entered at sixteen, and graduated in 1840 with high honors in classics and mathematics. He was a frequent contributor to the college paper and was the pianist of the Beethoven Society. For a short time after graduation he assisted Prof. Alexander Dallas Bache [q.v.], in observations on magnetism at Girard College in Philadelphia. His career was also influenced by Sears C. Walker [q.v.], to whom he attributed his interest in astronomy. In 1841 he married Catherine Hemple of Philadelphia, and in the same year was appointed professor of mathematics in the navy, serving on the U. S. Mississippi. Previous to this, however, the plan of instructing on shipboard had proved so unsatisfactory that a school for midshipmen had been established (1839) at the Naval Asylum in Philadelphia. Upon the death of Prof. David McClure in 1842, Chauvenet was placed in charge of this school. Not satisfied with the eight-months' course, he

43
Chauvenet
drew up a program for a two-years' course. This was approved by Secretary of the Navy Hen-
shaw, but before his order could be put into opera-
tion, it was revoked by his successor, Secretary Mason. The attempt nevertheless established a
precedent for the exercise of power by the De-
partment, and it was to this power that Prof.
Chauvenet directed the attention of several suc-
cessive secretaries of the navy. Finally, in Octo-
ber 1845, Secretary George Bancroft, by the ex-
ercise of this power, established the Naval School
(later called the U. S. Naval Academy) at An-
apolis without going to Congress for either leg-
islation or money. The new two years' course,
rendered ineffective by the appointment and
withdrawal of midshipmen at any time, was fin-
ally changed in 1851 to a regular four years' course.
The actions resulting in this change were recom-
pended to Congress by a board, appointed by
Secretary Preston, consisting of Chauvenet and
several high officers of the navy and army. Chau-
venet also recommended post-graduate study and
in his own department offered induction there-
to by the equipment of an astronomical observa-
tory. This resulted in 1853 in a separate depart-
ment of astronomy and navigation with him in
charge. He did more than any one else to estab-
lish the U. S. Naval Academy on a firm and sci-
entific basis.

In 1835 Yale offered him the position of pro-
fessor of mathematics and in 1859 that of astron-
omy and natural philosophy. Simultaneously
with the second offer came a similar one from
Washington University, then recently established
in St. Louis. He accepted the position at Wash-
ington University to which was added the chanc-
cellorship in 1862. His address, delivered upon
his inauguration as chancellor, revealed a broad
vision of the function of education, as well as a
broad general culture and a deeply religious
nature. His name conferred early distinction upon
the University, which grew and prospered dur-
ing his connection with it. Among Chauvenet's
noteworthy labors in St. Louis, Prof. C. M.
Woodward records in his History of the St.
Louis Bridge (1881), a contribution on "the
theory of the Ribbed Arch" and the design of a
device for measuring modulus of elasticity, both
of which were of service in the construction of
this famous bridge. While in St. Louis his health
became impaired so that in 1866 he was obliged
to resign his position. He died the next year in
St. Paul, Minn., and was buried in Bellefontaine
Cemetery in St. Louis.

In addition to a number of papers on astro-
nomical and mathematical subjects, Chauvenet
published several text-books of great scientific
merit. Of these, A Treatise on Plane and Spher-
éical Trigonometry (1850), pp. 256, is regarded by
the Journal of Franklin Institute (ser. III,
vol. XX, p. 215) as "the most complete treatise
on trigonometry extant in the English language."
His greatest work, A Manual of Spherical and
Practical Astronomy (1863), I, 708, II, 632, had
as great a reputation in Europe as in America.
Prof. Herman Struve, director of the Königliche
Sternwarte in Berlin, considered it the best work
in existence on practical astronomy (Science,
LXIII, 126). These two works are classics in
their respective fields. Chauvenet's last work, A
Treatise on Elementary Geometry, with Appen-
dices Containing a Collection of Exercises for
Students and an Introduction to Modern Geo-
metry (1870), p. 368, was also outstanding in its
field.

Chauvenet was elected to the American Phi-
osophical Society and the American Academy of
Arts and Sciences, was one of the incorporators of
the National Academy of Sciences, of which he
was elected vice-president in 1868, and was
president of the American Association for the
Advancement of Science at the time of his death.
On July 31, 1916, a memorial in the form of a
bronze tablet was placed in the Naval Academy
Library at Annapolis. In 1925 the Mathematical
Association of America honored his memory by
establishing "The Chauvenet Prize for Mathe-
matical Exposition" to be awarded every five

CHAVIS, JOHN (c. 1703-1838), preacher, educa-
tor, was born either in the West Indies or
near Oxford in the County of Granville, N. C.
He was a full-blooded negro of dark brown com-
xplexion and as a free man was sent to Princeton
to study privately under President Witherspoon
of the College of New Jersey, according to tradi-
tion to demonstrate whether or not a negro had
the capacity to take a college education. That
the test was successful, then or later, appears from a
record in the manuscript Order Book of the
Rockbridge County, Va., Court of 1802, which
certifies to the freedom and character of the Rev.
John Chavis, a black, who "as a student at Wash-
ington Academy" (the former "Liberty Hall

44
Cheatham

Academy" of William Graham, now Washington and Lee University) passed successfully "through a regular course of academic studies." Through the influence of the Rev. Samuel Davies, a Presbyterian divine, Chavis became connected as a licentiate with the Presbyteries of Lexington and Hanover, Va. The Hanover records state that in 1801 he was "riding as a missionary under the direction of the General Assembly." About 1805 he migrated to North Carolina, joining in 1809 the Orange Presbytery and ministering to whites and slaves in various churches in at least three counties. He was distinguished for his dignity of manner, purity of diction, simplicity and orthodoxy in teaching. Familiar with Greek and Latin, he established a classical school, teaching sometimes at night, and prepared for college the sons of prominent whites in several counties, sometimes even boarding them with his family. Among his pupils were the subsequent United States Senator Willie P. Mangum, Gov. Charles Manly, Rev. William Harris, two sons of Chief Justice Henderson, and others who became lawyers, doctors, teachers, preachers, and politicians. He was respectfully received in the families of his former pupils. Advised by his Presbytery to yield to the law of 1832 prohibiting negro preaching, the old white-haired black man wrote and published a sermon, The Extent of the Atonement, which, widely sold and read, aided in the support provided for him, and for his wife after his death, by his Presbytery. Chavis died in 1838, aged about seventy-five years, a conspicuous example of merit rewarded by slave-holding whites.

J. C. B.

CHEATHAM, BENJAMIN FRANKLIN (Oct. 20, 1820-Sept. 4, 1886), Confederate soldier, was born at Nashville, Tenn., the son of Leonard Pope and Elizabeth (Robertson) Cheatham. His mother was a descendant of James Robertson, "the father of Tennessee." He served as captain of Tennessee volunteers at Monterey, and as colonel in the campaign against the City of Mexico. In the gold rush of 1849 he went to California but returned to Tennessee in 1853, engaged in farming, and became major-general of militia. After Tennessee passed the ordinance of secession he was appointed brigadier-general in the state forces, May 9, 1861, and then in the Confederate army, July 9, 1861. For three years he commanded a division, at first in Polk's and later in Hardee's corps. He fought at Belmont, Shiloh, Perryville, Murfreesboro, Chickamauga, and Chattanooga, and throughout the Atlanta campaign. In March 1862 he was appointed major-general. When Hood undertook his Tennessee campaign, late in 1864, Cheatham was assigned to the command of a corps. Sherman was on his march to the sea, and only the Army of the Ohio (Schofield) confronted Hood, though Thomas, at Nashville, was improvising an army with troops drawn from every available source. Hood hoped to overwhelm the forces in front of him before they should be prepared to fight, and then, by invading the North, to counteract the effect of Sherman's campaign in Georgia. Schofield's task was to delay Hood until Thomas should be ready to meet him, falling back as slowly as he could without risking the destruction of his army. At Spring Hill, Nov. 29, its withdrawal was deferred so long that Hood gained a position to cut it off. Why he did not do so remains a mystery. A controversy on the subject between Hood and Cheatham lasted the rest of their lives. Each gives a circumstantial and explicit account of events, and the two flatly contradict each other. Hood declares that he personally pointed out to Cheatham the enemy moving along the road and indicated the position his corps should take, that he repeatedly sent urgent orders to attack, which Cheatham disregarded until the golden opportunity was lost, and that Cheatham afterward "frankly confessed the great error of which he was guilty." Cheatham, on the other hand, says that at the time referred to "only a mirage would have made possible the vision" of the enemy on the road, that he disposed his troops exactly as directed, that to his astonishment Hood told him to postpone the attack until daybreak, that he made no such confession as alleged, and that Hood assured him, "I do not censure you for the failure at Spring Hill. I am satisfied you are not responsible for it." Whatever the reason, Schofield made good his escape, and stood in position the next day (Nov. 30) at Franklin, where Hood delivered the furious and unsuccessful attack which broke the strength of his army. Cheatham fought here and at Nashville, and then joined Johnston's army in North Carolina, where he surrendered, and resumed life as a farmer. In 1866 he married Anna Bell, daughter of A. B. Robertson. He was an unsuccessful candidate for Congress in 1872, was for four years superintendent of state prisons, and was appointed postmaster of Nashville a year before his death. As a soldier, he bore a reputation for boldness and hard fighting. If he was remiss at Spring Hill, a point which is unlikely ever to be settled, it was from no dislike for combat.
CHECKLEY, JOHN (1680-Feb. 15, 1754), Anglican clergyman, controversial writer, was born in Boston of English parents. He was an only son and his one sister died at the age of seventeen. Educated at the Boston Latin School under Ezekiel Cheever [q.v.], he later studied at Oxford although he did not matriculate. He learned Greek, Latin, and Hebrew well and traveled extensively through Europe, collecting paintings, books, and manuscripts. He remained in Europe some fifteen years, but about 1710 was again in Boston where in 1717 he bought a house and opened a shop for books, medicines, and small merchandise. On May 28, 1713, he married Rebecca Miller, daughter of Samuel Miller, a prosperous innkeeper of Milton, Mass.

Checkley had read widely in the theological literature of the day and had become a firm believer in the Apostolic origin of Episcopacy. A somewhat dangerous notoriety began to attach to him from his expressions of religious opinions in his shop. In 1719 he published an edition of the Rev. Charles Leslie's treatise, The Religion of Jesus Christ the Only True Religion. Apparently one of his objects was to give currency to the testimony of Ignatius to prove the existence of bishops in Apostolic days. The same year he issued another volume, without his name, called Choice Dialogues between a Godly Minister and an Honest Countryman Concerning Election and Predestination, which assailed the foundations of the Congregational Church. In December a law was passed providing that two justices could tender the oaths of allegiance and abjuration to any one suspected of disaffection to the king or government. Almost immediately Checkley, alone of all Boston, was tendered the oaths, which, in a fit of annoyance, he refused to take. Later he refused again and was fined six pounds and costs. In 1722 he went to England for eight months and it is said took steps to receive Holy Orders, but did not succeed, possibly because of his having refused the oaths. A few months later he wrote his Modest Proof of the Order and Government Settled by Christ and His Apostles (1723) which had a wide circulation, was answered by Edward Wigglesworth, and started a war of pamphlets in which Checkley again joined. He next re-published (1723) Leslie's Short and Easy Meth-

Cheesman

Checkley

[Confed. Mil. Hist. (1899), VIII, 302-04; Official Records (Army), t ser., vols. III, X (pts. 1, 2), XVI (pts. 1, 2), XVII (pt. 2), XX (pts. 1, 2), XXIII (pts. 1, 2), XXX (pts. 2, 4), XXXI (pts. 2, 3), XXXVIII (pts. 3, 4, 5), XXXIX (pt. 3), XLIX (pt. 3), LXX (pts. 1, 2), LXXVII (pts. 1, 2, 3), XLIX (pt. 1); 4 ser., vol. 1; Battles and Leaders of the Civil War (1887-88), IV, 425-39, where extracts quoted from Hood's and Cheatham's writings give their respective versions of the Spring Hill affair.]

T.M.S.

[There are many references to Checkley in Wilkins Updike, Hist. of the Episc. Ch. in Norragansett, R. I. (2nd ed., 1907). A. L. Cross also comments on him in Anglican Episcopate and the Am. Colonies (1902). There is a brief account of Checkley's family in New Eng. Hist. and Gen. Reg., II, 349-54. The standard life, with reprints of many of his writings, is that by E. F. Slaffer, John Checkley (Prince Society, 2 vols., 1897).]

J.T.A.

CHEESMAN, FORMAN (Dec. 11, 1763-Oct. 10, 1821), ship-builder and naval architect, was the son of Thomas and Elizabeth (Forman) Cheesman. His father, one of the first ship-builders in New York, may have been engaged in this occupation even prior to the Revolutionary War for he is recorded as the owner of seventy-five feet of shore front in 1772 between the present Pike and Rutgers Sts. Cheesman's shipyards were variously located. Part of the time he was established on the site of his father's old yards. At another time (during his partnership with Charles Brownne, builder of the Clermont) he was farther uptown at Clinton and Cherry Sts. At that period of American history naval constructors did not make contracts to build vessels but were employed by the Government, and were "detached from all private pursuits by a liberal compensation at the rate of $2,000 per annum." Under such an agreement Cheesman received the contract for the famous 44-gun frigate President, which was, however, built and launched in the yards of Christian Bergh [q.v.]. It is impossible to-day exactly to apportion the credit due each of the two men in the construction of this model of naval architecture. Prior to the launching of the President in 1800 Cheesman had already built the Briganta and the Draper, each of 300 tons, and the Ontario of 500 tons. Later, during his od with the Deists, to which was added "A Discourse Concerning Episcopacy," for which he was proceeded against by the General Court, found guilty of publishing a seditious libel, and fined fifty pounds. About this time he founded the Boston Episcopal Charitable Society which has had a long record of active work. In 1727 he again went to England and again failed to receive Orders as a clergyman. The next year he wrote to the Bishop of London an account of the hardships suffered by Episcopalians in Massachusetts. In 1730 he published the argument he had made at his trial. In 1738 he went to London for the third time in search of Orders and this time was successful. He became deacon and priest, and the Society for the Propagation of the Gospel made him a missionary. He was assigned as rector of King's Church, Providence, R. I., where he ministered for more than ten years. The last two years of his life he was incapacitated by infirmities.
Cheetham partnership with Brownne, some of the finest vessels of the day came from his yards, such as the Silemus, the Triton, and the Illinois.

In the day of Cheesman's father, New York had been an unsuccessful competitor with Philadelphia in the shipbuilding industry. But during the younger Cheesman's life New York came to be recognized for the first time as the equal, at least, of her sister city in that particular industry. Cheesman was one of those most responsible for the growth of the shipbuilding industry in New York City during the first twenty years of the nineteenth century.

He was married at St. Peter's Church in Philadelphia on Feb. 16, 1786, to Ann Cummings of that city.

E. Y.

CHEETHAM, JAMES (1772-Sept. 19, 1810), journalist, was born probably in or near Manchester, England. At the end of the eighteenth century Manchester was restless under the first stirring of the Industrial Revolution and the disquieting news from France. Men of liberal and revolutionary mind were organizing societies for criticism of the government. Of these the most important perhaps was the Constitutional Society, of which Thomas Cooper and Thomas Walker were the leading spirits, and James Cheetham, then a young hatter of Manchester, one of the humbler members. On July 23, 1793, he was arrested with other members of the society charged with conspiracy to overthrow the government. He was freed the following April because of the failure of evidence against him (Proceedings on the Trial ... against James Cheetham ... for a Conspiracy ... 1794). He continued to live in Manchester until the riots of 1798 forced him to remove to America at a time when the United States was passing through the changes incidental to the political revolution of 1800.

Inclined by sympathy to the side of the victorious Republicans Cheetham found employment in their interest in New York. He bought a half interest in Greenleaf's Argus, and on May 1, 1801, in partnership with D. Denniston, a cousin of DeWitt Clinton, issued it under the name of the American Citizen, a daily newspaper devoted to the furtherance of Republican policies. They published also the American Watchman as a weekly paper. The tradition is that Burr was interested in the establishment of the paper, expecting to use it as political support. The breach between the Burr and Clinton factions of the party made it necessary for Cheetham to choose whom he would serve, and in spite of the probability that his first support had come from Burr he decided to follow the fortunes of the Clintons, and became Burr's bitter political enemy. It was he who first made the suggestion in A View of the Political Conduct of Aaron Burr that Burr had not dealt honorably in his efforts to obtain the presidency in 1800. The language of the charges is vindictive, and the style pretentious and verbose. Cheetham based these charges that the Vice-President had made a treacherous alliance with the Federalists on the fact that Burr had ordered suppressed a libelous anti-Federalist work by one John Wood, called A History of the Administration of John Adams. The battle of uncivil words went on; Peter Irving of the Morning Chronicle and William Coleman of the Evening Post opposed the Clinton editor. Bad feeling brought Cheetham and Coleman to the verge of a duel, averted only by the action of Brockholst Livingston in arresting both of them.

In 1802 Cheetham made the acquaintance of Thomas Paine, "an intercourse," he says, "more frequent than agreeable." Respect for Paine, enduring from the impressionable Manchester days, turned to contempt for the unpleasant old man Paine had become, and Cheetham's distorted and partisan Life of Thomas Paine (1809) makes no concealment of his feeling.

Cheetham gathered up such crumbs of patronage as he could, feeling that all good Republicans were in duty bound to give their printing business to his establishment. His letters to Jefferson are filled with minor complaints of neglect and with political tattlings. As time went on he figured less prominently in New York politics; his opposition to the embargo cost him the favor of the Clintons, and his paper was supplanted by the Columbian. He died on Sept. 19, 1810, of a congestion of the brain brought on by walking hateless in the September sun.

[Cheetham's connection with the Constitutional Society and the Walker Trial is established by an account of the trial, The Whole Proceedings of the Trial of Indictment against Thos. Walker of Manchester ... Jas. Cheetham ... for a Conspiracy to Overthrow the Constitution and Goyt. ... tried at the Assizes at Lancaster, Apr. 2, 1794. John W. Francis who knew Cheetham gives some information about his later life in Old N. Y. (1866) and in Grisswold's Mag., vol. V. Cheetham's letters to Jefferson, among the Jefferson papers in the Lib. of Cong., and printed in the Proc. Mass. Hist. Soc., 3 ser., vol. I, throw light on his life as editor. His writings are to be found in numerous political pamphlets and in the files of the Am. Citizen and the Am. Watchman.]

M. A. M.

CHEEVER, EZEKIEL (Jan. 25, 1614/15-Aug. 21, 1708), educator, classicist, was born in London, the son of William Cheever, spinner.
Cheever

At Christ's Hospital (1626) and Emmanuel College, "that Seminary of Puritans in Cambridge," which he entered in 1633, were laid the classical foundations of his life-long service as teacher. He came to Boston in June 1637, and in 1638 removed to New Haven, where he was almost immediately appointed master of the public school, and, during the same year, was married to Mary —. Though he was possessed of but twenty pounds and a few acres of wild land, he was among the important men who signed "the Plantation Covenant" in Newman's Barn, June 4, 1639. When Davenport ordered the church to name twelve of the most godly, "fit for the foundation work," who in turn were to choose "seven out of their own number for the seven pillars of the church," Cheever was one named. That he was highly esteemed is shown by the fact that he represented the free burgesses as deputy to the General Court in 1646, and occasionally occupied the pulpit of the First Church. In 1649, he was censured for failing to vote for clearing certain elders of "partiality and usurpation" and was accused of "uncomely gestures and carriage before the church." His defense rings much better than the charges against him; indeed, his arguments caused considerable uncertainty on the part of Davenport and others. His superb independence of mind is reflected in his declaration, upon dissenting from the judgment of the church, "I had rather suffer anything from men than make shipwreck of a good conscience, or go against my present light." During the same year, 1649, his first wife died, and in 1652 he was married to Ellen Lathrop.

In 1650 he had removed to Ipswich whose Free School he made "famous in all the country," and caused the town itself to "rank in literature and population" above all the rest. In 1661 he removed to Charlestown, where he taught nine years, though he complained that other masters took away his scholars, the house was not kept in repair, and the "constables" were "much behind with him" in the payment of salary. His material rewards were never large. At New Haven he received twenty, then thirty pounds; Ipswich provided a dwelling-house and two acres of land besides salary; Charlestown paid thirty pounds, if he could get it. In 1670 he became master of the Boston Latin School where he received sixty pounds a year and "possession and use of ye schoole-house." Though his discipline was strict, supported now and then by the rod, his reputation and venerable years inspired love, obedience, reverence and even awe, for when he stroked his long white beard to the point, it was a sign for the boys to stand clear. With eight and thirty years at Boston, his life and seventy years' toil as "a skillful, painful, faithful schoolmaster" came to an end. He was buried, says Sewall, from the school-house, honored by the presence of the governor, councillors, ministers, justices and gentlemen whom, and their fathers and grandfathers, he had been at great pains to teach.

Of his religious writings three essays on Scripture Prophecies Explained have been preserved in an edition of 1757. He was long credited with several Latin poems and dissertations, thought to have been composed by him before coming to Boston, but Hassam has shown conclusively that they were not of his making. Far more famous was his Accidence, a Short Introduction to the Latin Tongue, in less than a hundred small pages, which, by 1785, had gone through twenty editions and was republished again in 1838. It has been called the "wonder of the age." It was prepared at New Haven and intended for the lower forms of the Latin School. Its content was doubtless an abridgment of larger works Cheever had known in London, with such modifications as were dictated by the experience of Master Cheever. The form and name were probably suggested by the work of Brinsley. In "simplicity, comprehensiveness and exactness" Quincy declared it had not been "exceeded by any other work"; Walker believed it had "done more to inspire young minds with the love of the Latin language than any other work of the kind since the first settlement of the country." So great was its author's reputation that Mather asserted:

"Do but name Cheever, and the Echo straight
Upon that Name, Good Latin, will Repeat."

T. W.

CHEEVER, GEORGE BARRELL (Apr. 17, 1807—Oct. 1, 1890), clergyman, reformer, was the son of Nathaniel Cheever, a publisher and bookseller of Hallowell, Me., and his wife, Charlotte Barrell. He prepared for college at Hallowell Academy, graduated at Bowdoin in 1825 and at Andover Seminary in 1830. After preaching for two years at Newburyport and in Boston, he
Cheever

was ordained and installed at the Howard Street Congregational Church in Salem, Mass., in 1833. He was pastor of the Allen Street Presbyterian Church in New York, 1838-44, editor of the New York Evangelist, 1845, and pastor of the Church of the Puritans, Union Square, New York, 1846-67, after which he was engaged in literary work in New York and in Englewood, N. J., where he died. He was married on Nov. 21, 1845, to Elizabeth Hoppin Wetmore of New York City.

Cheever was an uncompromising reformer and controversialist. Early in his Salem pastorate he attacked the predominant religious faith of that town in a Fourth-of-July oration, maintaining "the inadequacy of the Unitarian faith to produce the highest excellence in literature." This produced a violent newspaper controversy and much local excitement. Soon after this there appeared from his pen "The True History of Deacon Giles' Distillery" in the Salem Landmark, in which with changed names he told the story of a distillery in Salem whose proprietor was a church deacon who sold Bibles. This produced a violent upheaval. The press was destroyed by a mob and Cheever was assaulted on the street by the foreman of the distillery. He was sued for libel, fined $1,000, and imprisoned for one month. In 1841, after his removal to New York, he engaged in a controversy in which he took the stand of a pronounced advocate of capital punishment, which he defended on biblical grounds; and a little later in another with the Roman Catholics against the abolition of compulsory Bible reading in the public schools. He was violently opposed to the running of Sunday trains and an outspoken critic of the ritualistic tendencies in the Episcopal Church. During the entire slavery agitation he was a fearless champion of the cause of abolition and the full citizenship and education of the negro. His large library was bequeathed to Howard University.

He was a brilliant writer and his literary work covered the entire period of his active life. His writings deal with such a wide variety of subjects as literature, biography, travel, theology, religion, and politics. He was a frequent contributor to the Independent, Bibliotheca Sacra, and to newspapers. His Lectures on the Pilgrim's Progress went through repeated editions and were translated into several foreign languages. As a preacher he was a pronounced Evangelical and an orthodox exponent of that variety of Calvinism known as the "New England Theology." To be at his best in the pulpit he needed the stimulus of a gripping cause and so his ser-

monic output inclined to unevenness in quality. There was in his preaching more of the terrors of the law than of the compassionate spirit of the gospel.

His works consist of twenty-three bound volumes and fifty pamphlets, reviews, and addresses. The following is a list of his more important books: The American Commonplace Book of Prose (1828); The American Commonplace Book of Poetry (1829); Studies in Poetry (1830); Select Works of Archbishop Leighton (1832); God's Hand in America (1841); The Hierarchical Despotism (1844); Sophisms of the Apostolic Succession (1844); Lectures on the Pilgrim's Progress (1844); Wanderings of a Pilgrim in the Shadow of Mt. Blanc (1845); A Defense of Capital Punishment (1846); The Pilgrim Fathers: or, The Journal of the Pilgrims at Plymouth (1849); The Voyage to the Celestial Country (1852); The Voices of Nature to her Foster Child, The Soul of Man (1853); The Right of the Bible in our Public Schools (1854); Lectures on the Life, Genius, and Insanity of Cowper (1856); God against Slavery (1857); The Guilt of Slavery and the Crime of Slave-Holding, Demonstrated from the Hebrew and Greek Scriptures (1860); God's Vouchers for His Written Word, with Critical Illustrations from the Autobiography of Dr. Franklin (1881); God's Time-Piece for Man's Eternity (1888).

[Obit. Record Grads. Bowdoin College (1891); H. Fowler, The Am. Pulpit (1856); H. T. Cheever, Memorial Address... upon the Life, Character and Influence of Geo. Barrell Cheever (1892); H. T. Cheever, ed., Memorabilia of Geo. B. Cheever (1891); Congreg. Year Book, 1891, with full bibliography of Cheever's writings.]

F. T. P.

CHEEVER, HENRY THEODORE (Feb. 6, 1814-Feb. 13, 1897), theologian, was born at Hallowell, Me., the fifth child of Nathaniel and Charlotte (Barrell) Cheever. The Cheevers, of Huguenot stock, who had settled in Canterbury, England, came to Salem, Mass., early in the seventeenth century. Nathaniel Cheever having learned the printer's trade in Worcester, became the founder and first editor of the Hallowell American Advocate in 1810. Removing to Augusta, Ga., where he died in 1810, he left his widow to rear a family of seven children. She, a cultured woman of great piety and strength of mind, was of English ancestors who reached America in the seventeenth century. Henry Theodore Cheever was educated at Hallowell Academy, and at Bowdoin College where Longfellow was his instructor in French and German. Graduating in 1834, he accompanied his younger brother, who was in poor health, through France and Spain, wintering with an uncle, George

49
Cheney

Barrell, then United States consul at Malaga. Returning home, he taught in Louisiana and, after one year at Andover Theological Seminary, entered Bangor Theological Seminary. After graduation in 1839, he spent one year as resident licentiate at Bangor; then he went for his health as a passenger on a whaling ship round Cape Horn to the Hawaiian Islands where a college friend was a missionary, meanwhile writing letters of travel, such as he had written from Spain and France, to the New York Evangelist, of which he was editor, 1849-52, and gathered material for his Life in the Sandwich Islands: or the Heart of the Pacific (1851). His experiences homeward in the Commodore Preble he recorded in The Whale and His Captors (1849). He then entered actively into the Congregational ministry, being ordained June 4, 1847, and holding pastorates in New Jersey, New York City, Long Island, Connecticut, and, finally, Worcester, Mass. (1863-72). Before the Civil War he was, like his distinguished brother, George Barrell Cheever [q.v.], greatly interested in anti-slavery, and as secretary of the Church Anti-Slavery Society, 1859-64, he wrote tracts and articles. He was also a voluminous writer for periodicals, mainly on religious subjects. Other works of his were: memorals of his brother Nathaniel Cheever, M.D. (1851), of a shipmaster, Capt. Obadiah Congar (1851), and of his brother-in-law Ichabod Washburn, inventor, manufacturer, and philanthropist (1878); Correspondences of Faith and Views of Madame Guyon (1885); and The Bible Eschatology (1893). He also edited the travel books of Walter Colton, chaplain, U. S. Navy, published Colton's literary remains with a memoir, and edited some of his brother George's works. In 1857 he married Jane Tyler of Jewett City, Conn., who died in 1885. He was a Republican and an ardent prohibitionist, advocated women's rights and home rule for Ireland, and criticized England's attitude toward Turkey. He was an early supporter of the liberal movement in the Congregational Church. His physical and mental vigor was retained until his death, after a short illness, on Feb. 13, 1897, in Worcester, Mass.

[Obit. Record Grads. Bowdoin College (1897); Worcester Daily Spy, Feb. 15, 1897; "Published Writings of Cheever, Class of 1834" in Bowdoin College Lib. Bibliographical Contributions, No. 5, Mar. 1898; information from Cheever's daughter, Miss Louisa Sewall Cheever, associate professor of English, Smith College.]

C.L.L.

CHENEY, BENJAMIN PIERCE (Aug. 12, 1815-July 23, 1895), pioneer in the express business, was born at Hillsborough, N. H., the son of Jesse and Alice (Steele) Cheney. He came of early New England stock. His great-grandfather, Deacon Tristram Cheney, born in Dedham, Mass., was one of the first settlers of Antrim, N. H., and his grandfather, Elias Cheney, served four years in the Revolutionary War. His father was a blacksmith, a man of no material wealth, and young Cheney completed his formal education when, at the age of ten years, he left the common schools to work in his father's blacksmith shop. Before two years had passed he had gone to Francistown where he found employment in a tavern and later in a store. At the age of sixteen he had purchased his time from his father and begun his career in the transportation business by driving a stage between Nashua and Exeter, N. H. On his next route, between Keene and Nashua, he covered a distance of fifty miles a day for a period of six years. In 1836 he was sent to Boston to be stationed as agent at No. 11 Elm St., the old-time stage center for northern stage routes. Six years later, in partnership with Nathaniel White of Nashua, and William Walker, he established Cheney & Company's Express between Boston and Montreal. The route was covered by rail to Concord, N. H., which was as far as the Boston & Lowell Railroad was built at that time, thence by four-horse team to Montpelier, thence by messengers on the stage to Burlington, and finally by boat to Montreal. In spite of difficulties, the venture was successful and at the end of its first ten years Cheney & Company bought out Fisk & Rice's Express, operating over the Fitchburg Road to Burlington, which was the first of the companies to be consolidated with Cheney's. Future consolidations resulted eventually in the formation of the United States & Canada Express Company which, with its many branches, covered the northern New England States. When, after thirty-seven years of business, Cheney merged his company with the American Express Company, he became one of the largest stockholders of the new concern, its treasurer, and one of its directors. He retained these offices until his retirement from active business life.

Cheney did not confine all his interests to New England, however. He was one of the pioneers in promoting the Northern Pacific Railroad and a little later embarked in the Atchison, Topeka & Santa Fé project. He was interested in the "Overland Mail" to San Francisco and in the Wells, Fargo & Company's Express. Through his business ventures he amassed a great fortune. In the early days of transcontinental transportation there were periods of decline as well as of prosperity, but Cheney had a tenacity of
Cheney

purpose and a conviction as to the worth and future of his projects, which, coupled with an inherent shrewdness and business ability, brought success to his undertakings. For many years he served as a director of the Market National Bank of Boston, and from the time of its foundation was a director of the American Loan & Trust Company. He was a man of erect appearance, easy of approach. He lost an arm in a railroad accident but was otherwise unmarked by it. On June 6, 1865, he married Elizabeth Stuckey Clapp of Boston, whom, as the daughter of his most intimate friend, he had seen grow up from infancy. He had a beautiful country estate at Wellesley, extending for a mile or more along the Charles River, and remarkable for its conservatories and gardens. He made Dartmouth College a gift of $50,000, and presented to his native state a bronze statue of Daniel Webster, one of his early stage-coach passengers, which now stands in State House Park in Concord.

E. Y.

CHENEY, CHARLES EDWARD (Feb. 12, 1836–Nov. 15, 1916), bishop of the Reformed Episcopal Church, was born in Canandaigua, N. Y., the son of Ephraim Warren and Altie (Chipman) Cheney. He graduated from Hobart College in 1857, spent a year at the Virginia Theological Seminary, and then became assistant rector of St. Luke's Church, Rochester, N. Y. He was ordained deacon in the Protestant Episcopal Church at Utica, N. Y., Nov. 21, 1858, was for a brief time in charge of St. Paul's Church, Havana, N. Y., and on Mar. 4, 1860, was ordained presbyter at Rochester. The same year he became rector of Christ Church, Chicago, which office he held until his death. On Apr. 25, 1860, he married Clara E. Griswold of Chicago. He was a magnetic and lovable person, popular and successful in his parish, intense in his convictions, and as low church and evangelical as his bishop, Henry J. Whitehouse, was high church and sacerdotal. He was a signor of the "Chicago Protest" of Feb. 18, 1869, directed against the "unprotestantizing" tendencies in the church, thus bringing upon himself the disfavor of the bishop, who, learning that he was accustomed to omit the word "regenerate" from the baptismal service, brought him to trial before five of the clergy. This was the beginning of litigation which attracted wide attention. An injunction stayed the trial for a time, and it proceeded with four of the original triers, against the protest of Cheney's attorney, Melville W. Fuller [q.v.]. The accused was found guilty and deposed from the ministry until he should express contrition and promise future conformity. He paid no attention to the judgment, was tried again for contumacy, and deposed. An attempt to oust him from the church property was contested in the circuit court of Illinois, which decided that the property belonged to the parish and not to the diocese, and that the original ecclesiastical court which began with five members and ended with four was not a court according to the canons of the church, and therefore that Cheney had not been legally deposed (Inter-Ocean, Chicago, Aug. 17, 1874). In the meantime, December 1873, he had joined with Bishop George D. Cummins [q.v.], and others in organizing the Reformed Episcopal Church into which body his congregation accompanied him.

He was consecrated missionary bishop of the Northwest by Bishop Cummins, Dec. 14, 1873, and was made bishop of the Synod of Chicago in 1878, still retaining his rectorship. His publications include Sermons (1880); A Neglected Power and Other Sermons (1916); What Do Reformed Episcopalians Believe (1888); and several historical brochures, A King of France Unnamed in History (1902); The Second Norman Conquest of England (1907); The Barefoot Maid at the Fountain Inn (1912); A Belated Planlacenet (1914).

[H. E. S.

CHENEY, EDNAH DOW LITTLEHALE (June 27, 1824–Nov. 19, 1904), author, reformer, born in Boston, wrote of herself, "I belong to humble folks, and can trace my descent to neither William the Conqueror nor the Mayflower." Her mother was Ednah Parker (Dow) Littlehale, daughter of an Exeter, N. H., tanner; her father, Sargent Smith Littlehale, the exception in a Gloucester family which followed the sea, was working in a store at the age of twelve and later became a partner in a leading Boston grocery business. He was a Universalist and did not believe in restraint either in religion or in family life. Never a popular girl, and disliking most of the amusements of youth, Ednah attended successively the schools of the Misses Pemberton, William B. Fowle, and Joseph H. Abbot, but was requested to leave the last because her influence was "not helpful to discipline." On May 19, 1853, she married Seth Wells Cheney [q.v.], an artist, and went with him to
Cheney

Europe. Death had been a frequent visitor in the Littlehale family, removing four of the children, and it pursued Ednah Cheney into her married life as her husband died in 1856, leaving her with an infant daughter. Henceforth, living in Boston or the vicinity, she interested herself actively in social service and in writing. She aided in forming the Boston School of Design for Women, the New England Hospital for Women and Children, the New England Woman's Club, and a horticultural school for women. The anti-slavery cause and later the Freedman's Aid Society and woman suffrage were among her foremost interests. She visited colored schools in the Southern states and attended many Freedman's Aid and Woman's Rights conventions. She lectured on horticulture for women before the Massachusetts State Agricultural Society and on the history of art at the Concord School of Philosophy. Through membership in Margaret Fuller's conversation classes she became acquainted with Emerson, the Alcotts, James Freeman Clarke, and Theodore Parker. The variety of her interests is shown by her writings, which include a Handbook for American Citizens (1860), Patience (1870), Faithful to the Light and Other Tales (1871), Social Games (1871), Sally Williams (1873), Child of the Tide (1875), Life of Susan Dimock (1875), Gleanings in Fields of Art (1881), Selected Poems from Michelangelo Buonarroti (1885), Life of Louisa May Alcott (1888), Memoir of John Cheney (1889), Nora's Return (1890), Stories of the Olden Time (1890). In 1882 she lost her daughter Margaret and was left completely alone. Her appearance in age, when she was handsomer than in youth, was not unlike that of Susan B. Anthony. White hair parted and drawn plainly back over the ears framed a rather heavy large-featured face of seriousness and strength, from which looked deep-set, weary eyes. Her writings show simplicity and directness of style, with considerable humor, but no great distinction. It was as a speaker and an organizer in educational, religious, and social causes that she accomplished her most useful work.

[Ednah Dow Cheney, Reminiscences (1902), Memoir of Seth Wells Cheney (1888), and Memoir of Margaret Susan Cheney (1889); Who's Who in America, 1903-05; Boston Herald, Nov. 20, 1904; Boston Evening Transcript, Nov. 19, 1904] S.G.B.

CHENEY, JOHN (Oct. 20, 1801-Aug. 20, 1885), engraver, the second son of George and Electa (Woodbridge) Cheney, and brother of Seth and Ward Cheney [qq.v.], was born at South Manchester, Conn. Little is known regarding his youth. He attended school and helped with the work on the farm and at the mill. He was interested in drawing and learned engraving from books; his first engraving was made on a piece of copper cut from an old kettle. He also constructed his own press. About 1820 he went to Hartford where he worked with the engraver Willard but did not think that he learned anything. In 1826 he was in Boston, working at Pendleton's lithographic shop, but it is not until 1827 that his first engraving was published as the frontispiece of The Poetical Works of Thomas Campbell; it was entitled "Or lips with holy look his evening prayer," being 2 1/4 x 2 1/4 inches. All his finished engravings are small; probably if his whole output were averaged up, the longest dimension would not be over four inches. In 1829, he moved to New York where his brother Seth Wells joined him, studying drawing. In 1830, through the kindness of Joseph Howard of Providence, he was enabled to go to England, where he stayed for two years. The following year Seth joined him in Paris but fell ill, and the brothers thereupon returned to America. During his stay abroad John had made engravings for his publishers in Boston and Philadelphia. On his return he settled in Boston, 1834-37; in the following years he was in New York, in Philadelphia or, when tired of engraving, back at the old homestead. He continued to engrave until 1857, when the demand for fine small engravings was about over. The remainder of his life was spent at the old home or in travel, with a little time devoted to drawing and to his collection of engravings. He never married. Rendered financially independent by his share in the silk-mill of his brothers at South Manchester, he passed his years calmly and serenely with little excitement or adventure. He liked to travel, and visited the upper Mississippi in 1837, Europe again in 1854, California in 1872-74 and in 1882. He died in the house in which he was born.

Among his best engraved works are such plates as "The Guardian Angels," "The Young Princess," "Lesbia," "The Orphans," "The Torn Hat," "Egeria," "Martha Washington," "Mrs. Blodgett," and many others; these were published in annuals and similar books which up to about 1845 were much in vogue. S. R. Koehler says of them that they "are unexcelled of their kind—in delicacy where needed, in force and in suggestion of color where these are called for, in nobility and simplicity of workmanship always... he stands at the head of the engravers of his time in this country, and shoulder to shoulder with those of Europe." His work is undoubtedly of very high quality and if he had
Cheney

lived in the sixteenth century he would have been one of the “Little Masters,” but living in the nineteenth century when line engraving was on the down grade he has been almost forgotten. He produced a few over a hundred finished plates and lithographs and with his brother Seth, twenty-one, after the outlines and sketches of Washington Allston, these being the largest plates which he worked on. Some of these were photographed by the daguerreotype method on to the engraver’s plate and there fixed by tracing the line through the silver. A memorial exhibition of the work of John and Seth Wells Cheney was held in the Museum of Art, Boston, in 1893. This museum also owns a large collection of John Cheney’s engravings; other collections are in the United States National Museum and in the Pennsylvania Academy of the Fine Arts.

[Ednah D. Cheney, Memoir of John Cheney (1889); Mantle Fielding, Dict. Am. Painters, Sculptors and Engravers (1926); S. R. Koehler, Cat. Engraved and Lithographed Work of John and Seth Wells Cheney (1881); Cat. Memorial Exhibition Work of John and Seth Wells Cheney (Museum of Art, Boston, 1893).]

R. P. T.

CHENYE, JOHN VANCE (Dec. 29, 1848—May 1, 1922), author, librarian, belonged to a New England family of singers who with self-assertiveness might have won wealth and fame. His father, Simeon Pease Cheney, a traveling singing-school teacher, produced in Wood Notes Wild (1891) a pioneer volume of notations of bird music. His mother, Christiana Vance Cheney, taught the piano and sang. Cheney himself was gifted musically and during much of his life earned a subsistence by playing church organs. Born at Groveland, N. Y., he grew up at Dorset, Vt., attended Temple Hill Academy, Geneseo, N. Y., and Burr and Burton Seminary, Manchester, Vt., and read law in Woodstock, Vt., Haverhill, Mass., and New York City. He was admitted to the bar but found legal work irksome. From 1873 he was a frequent contributor of poetry to periodicals, especially to the Century under Gilder’s editorship. But he wisely resolved not to rely upon his pen for bread. In the thirty-five years of 1877–1912 he obtained only $5,000 for the three hundred and seventy poems published in magazines, and his prose volumes and hackwork brought his total literary earnings only up to $13,636. In 1876 he married his cousin Abbey Perkins, a teacher of music. Her brilliant and imposing personality was never congenial to Cheney’s quiet nature, and in 1902 they were divorced.

After moving to Sacramento, Cal., in 1876, Cheney encountered lean years in which he was unsettled as to residence and occupation. From 1887 to 1894, however, he was librarian of the Free Public Library of San Francisco. Not technically trained himself, he had the expert assistance of A. J. Rudolph, and the library showed steady advancement under their management. Cheney wore with grace the social prominence now thrust upon him. He was tall, full-bearded, and refined in appearance, had urbanity of manner, and possessed mellow-voiced readiness of speech. He was at his best, however, in a small company to which he could discourse about books or bring delight with his powers as a raconteur. Among his literary associates of the period were Muir, Markham, and especially Joaquin Miller. He was librarian of the Newberry Library, Chicago, 1894–1909. In 1903 he married Sara Barker Chamberlain, a versatile woman whose devotion did much to brighten his days. But it was in a mood somewhat saddened by the trend of affairs and the passing of old literary fashions that he retired to San Diego, Cal., to spend the remainder of his life. He as always attracted friends and did occasional lecturing, but reserve had grown upon him and he often retired to a cabin in the hills or took solitary walks with his little dogs trotting at his heels.

His verse was primarily lyric. He wrote with dignity and taste, was an accomplished technician, but lacked the vision and the faculty divine. Only once, in “The Happiest Heart,” did he strike off stanzas that became at all popular. His volumes of poems—Thistle-Drift (1887), Wood Blooms (1888), Poems (1905), and others—were soon out of print. Of his prose the edition of Derby’s Phainixiana for the Caxton Club of Chicago (1897) is a scholarly work, and The Golden Guess (1892) and That Dome in Air (1895) are collections of critical essays marked by insight, candor, and discrimination. He was, however, a conservative in literature, distrustful Browning and Whitman, and abhorred free verse.

[Cheney’s correspondence, papers, and manuscripts, including an unpublished autobiography written in 1914, in the possession of his former secretary, Miss Jessie Sherck of San Diego, Cal.; Who’s Who in America, 1922–23; information from personal and professional associates.]

G. G.—r.

CHENEY, OREN BURBANK (Dec. 10, 1816—Dec. 22, 1903), Baptist clergyman, college president, was the son of Moses Cheney, a member of the New Hampshire legislature, and of Abigail (Morrison) Cheney, a woman of great energy and strength of character. His early education consisted of a few terms at private schools, a few at public schools, and a year when he was thirteen at New Hampton Institute. When he

53
Cheney

was sixteen he was sent to Parsonsfield Seminary, the first school founded and maintained by Free Baptists, where, as a student, he helped organize a temperance society, believed to be the first school society of that kind in the world. He was present in the same year at the organization of the Free Baptist Foreign Missionary Society. From this school he went again to the New Hampton Literary Institute. A year at Brown in 1835 was followed by a period at Dartmouth where he took his B.A. degree in 1839, and his M.A. in 1842. He taught the Indians who camped near the college, preached at a Free Will Baptist church at Grantham, ten miles away, and taught a school during the winters at Peterboro to pay his college expenses. In the fall after his graduation he was principal at the Farmington (Maine) Academy with Caroline Adelia Rundlett as his assistant. They were married a few months later. The following year he taught at Greenland, N. H., walking to Northampton on Sundays to preach. Soon after he was licensed to preach. At this time he began to contribute articles to the Morning Star which appeared more or less regularly for sixty years. Called subsequently to be principal of Parsonsfield Seminary, he remained there for two years. Then, as he felt that he needed more theological preparation, he went to Whitestown, N. Y., to study. At the end of a year he accepted a country pastorate at West Lebanon, Me., at a salary of $175 a year. His wife had died, and in 1847 he married Nancy S. Perkins, daughter of a Baptist clergyman. At Lebanon, with his customary energy, he founded an academy. After six years here in the church and at the academy, he was called to the Augusta (Maine) Baptist pastorate. In 1851, he was elected to the Maine legislature by a combination of the Free Soil, Independent, and Whig parties. He secured $2,000 from the legislature for the Lebanon Academy and voted for the first prohibition measure introduced in the Maine legislature by Neal Dow. In 1852 he was elected a delegate to the Maine Free Soil Convention at Pittsburgh, Pa., which nominated John P. Hale for the presidency. When Parsonsfield Seminary was burned in 1854, he was deeply stirred and at this time began to consider an ideal school in which students could depend on their own efforts to pay their way. The result was the Maine State Seminary in Lewiston, Me., which opened Sept. 1, 1857, with Cheney as principal. In 1863, the trustees were induced to vote to establish a course of collegiate study, the legislature was petitioned for an enlarged charter, received the ensuing year, and the name was changed to Bates College in honor of its most generous patron.

Cheney

Women as well as men had attended the seminary, but when the college was opened the feeling was so strong against women that all but one withdrew, the one, however, stayed and obtained her degree, and Bates as a result has remained a coeducational institution as its charter first provided. Cheney remained president of the college until 1894 and was president emeritus until his death in 1903. He was married a third time in 1892 to Emeline S. (Aldrich) Burlingame who had been much interested in Christian and reformational work.

M.A.K.

CHENÉY, PERSON COBY (Feb. 25, 1828–June 19, 1901), manufacturer, governor of New Hampshire, was born at Holderness (now Ashland), N. H. He was the son of Moses and Abigail (Morrison) Cheney, his father being one of the pioneer paper manufacturers of the state, a business with which he himself was identified throughout the greater part of his life. The family then moved to Peterboro in 1835, and after completing his education at Hancock Literary and Scientific Institution and the academy at Parsonsfield, Me., Cheney entered business in the same town, becoming in 1853 a partner in the firm of Cheney, Hadley & Gowing, paper manufacturers. In 1863, he served as quartermaster in the 13th New Hampshire Infantry, but was discharged because of ill health after a few months' service. A year later he was elected railroad commissioner for a three-year term. In 1866 he moved to Manchester. He then reorganized and extended his business, engaging in paper-making at Goffstown and the manufacture of wood pulp at Peterboro. Mills at both these places were under the same corporate organization and operations were later extended to several other towns as well. The business prospered, and Cheney became known as one of the leading industrialists of the state. He was also interested in banking in Manchester and was for some time president of the People's Savings Bank.

In 1872 he was elected mayor of Manchester and in the same year a trustee of Bates College of which his brother, Oren Burbank Cheney [q.v.], was president. He served one year as mayor, refusing renomination because of the pressure of private business. He was interested, however, in Republican activities and was an influential leader in party matters. In 1875 he was nominated for the governorship and after a campaign so closely contested that final choice rested with the legislature, was elected. In 1876 he was
Cheney

again elected, this time by the popular vote. He was a successful executive. His terms fell in a period of unemployment and business depression, and his efforts were largely devoted toward economy, improved administration, and the reduction of the public debt. In 1876 when the state was about to hold a constitutional convention he urged the adoption of a simplified amending process, a reduction in the size of the lower house, a larger Senate, the abolition of the religious test for office, and biennial elections. On the liquor question, then an active issue in the state, he declared that the most effective effort was that which "unfailingly seeks to write on men's hearts the law of individual self control." After retirement from office he devoted himself to business affairs but in 1886 served out the unexpired term of Austin F. Pike in the United States Senate (Nov. 24, 1886–June 14, 1887). From December 1892 to June 1893 he served as envoy extraordinary to Switzerland. He was from 1892 until his death a member of the Republican National Committee. In both business and politics he represented the better type of the period, and in both won its conventional rewards for successful effort. He was twice married: on May 22, 1850, to Annie, daughter of Samuel M. Moore of Bronson, Mich., and after her death in 1858, on June 29, 1859, to Mrs. Sarah W. Keith.

[G. F. Willey, Semi-Centennial Book of Manchester (Manchester, N. H., 1896), pp. 257-58; Albert Smith, Hist. of the Town of Peterborough, N. H. (1876); Manchester (Manchester, N. H., 1875); J. N. McClintock, sketch in Granite Mo., III, 65, and obituary, Ibid., XXXI, 60.]

W. A. R.

CHENEY, SETH WELLS (Nov. 26, 1810–Sept. 10, 1856), crayon artist and engraver, was the fifth son of George and Electa (Woodbridge) Cheney and was born at what is now known as South Manchester, Conn. He was not a robust healthy child and on this account was more at home than his seven brothers, but he was earnest and thoughtful. He had an inventive mind and enjoyed mechanical work. His school education ended at high school where he learned a little French and Latin. His art education was largely experience and association with engravers and artists, especially with his brother John [q.v.], of whom he once said, "He taught me all that ever I knew." They were very closely associated, working together on the same engravings, studying at the same schools, traveling together, working for the same publishers. Seth had a position when he was about twenty-two at the Athenæum, where he was able to work and study. It was probably while he was here that he engraved "Mother and Child," after the painting by Washington Allston (Ednah D. Cheney, post, p. 10). But as this is considered his best engraving and as it was not published until 1837, it has been sometimes thought a later work (S. R. Koehler, post). While Cheney did only a few engravings, they are mentioned as the equal of and occasionally as superior to those of his brother, John. Beside the ones he finished himself, he and his brother were associated as well in making twenty-one from the outlines and sketches of Washington Allston. He joined John in Paris in 1834 but worked so hard that his health gave way and his brother was obliged to bring him home. About 1835 the raising of mulberry trees for the use of silk worms became a great speculation: three of Cheney's brothers, Ward [q.v.], Rush, and Frank, were in the business and they sent Seth abroad to buy trees in 1837. He was still there in the spring of 1840, when the mulberry-tree bubble burst, but fortunately the brothers had started a silk-mill at South Manchester in 1838 and they turned their energies with great success to developing this industry which was ultimately to make both John and Seth financially independent. Seth returned home in 1840, settled at the old homestead and made crayon drawings. In the autumn of 1841 he determined to give up engraving and devote his time to portraiture. He moved to Boston where in 1841 and 1842 he did 150 heads, mostly of children. His prices ranged from $10 to $50. Ednah D. Cheney says of the drawings of this period, "There is an exquisite beauty in these early portraits unsurpassed even by the work of his later life, in perception of character and spiritual grace. His execution was free and delicate, and it seemed as if his spirit had breathed itself into form on paper." Having had a very successful two years, and the family being in excellent financial condition, on account of the silk business, in the summer of 1843 Cheney went abroad, studying with Ferrero in Rome, where he was also associated with a number of American artists, such as Daniel Huntington and S. F. B. Morse. In January 1845 he returned to Boston and to his profession, orders were numerous, and his prices were raised to $75 and $100. The work, however, proved exhausting, and he spent the summers in recuperating at South Manchester. Beside his black and white crayon drawings, he made a few paintings, a few engravings, and a few pieces of sculpture. In September 1847 he was married to Emily Pitkin, who died in 1850. In 1853 he married Ednah D. Littlehale (see sketch of Ednah D. Littlehale Cheney). In 1854, together with his wife and a few friends, he visited Europe again, but it was of slight pleasure as
Chesebrough

he was ill much of the time. Little artistic work was done in the last years of his life.

Engraved and Lithographed Work of John Cheney and Seth Wells Cheney (1891); Theodore Bolton, Early Am. Portrait Draughtsmen in Crayons (1923); Cat. Memorial Exhibition Work of John and Seth Wells Cheney (Museum of Art, Boston, 1863).]

R.P.T.

CHENEY, WARD (Feb. 23, 1813–Mar. 22, 1876), pioneer silk manufacturer, was born at South Manchester, Conn., the sixth of nine children born to George and Electa (Woodbridge) Cheney. His boyhood days were divided between attendance at the village school and work on his father’s farm. At the age of fifteen he left for Providence, R. I., where for the next six years he worked in the capacity of clerk for his brother, Charles, who was partner in a dry-goods firm in that city. Here the young man mastered the rudiments of business, and here, also, he married Caroline Jackson, by whom he had three children. In 1834 Charles Cheney moved to a farm in Ohio, and Ward returned to South Manchester. When he arrived at the family homestead he found several of his brothers experimenting with the morus multicaulis tree, a variety of the mulberry, which appears to have been first introduced in America in 1826. During the thirties there was a mania for the raising of this type of mulberry and into the speculation the Cheney brothers plunged headlong. Their nursery at South Manchester proving successful, Ward, with his brothers, Frank and Rush, leased a farm in 1836 at Burlington, N. J., where they operated a nursery and cocoonery until 1841. By the latter date the boom had collapsed and with it the hope of profitably producing raw silk in America. Fortunately while the boom was at its height, four of the brothers, Ralph, Ward, Rush, and Fred, together with Edward Arnold, had organized in 1838 the Mount Nebo Silk Manufacturing Company at South Manchester with a capital stock of $50,000, an organization which has had a longer continuous history than any other similar enterprise in the United States. With the collapse of the Burlington project, Ward returned to South Manchester, where he devoted the remainder of his life to the manufacture of silk.

The early years were difficult ones and “the mechanical genius of Frank Cheney and the business acumen of his brother Ward, seem to have been largely responsible for the survival of the business” (M. Spiess and P. W. Bidwell, History of Manchester, Conn., 1924, p. 100). As the industry developed each of the brothers special-ized in some branch, Ward not only looking after the financial end but devoting himself to a study of silk-dyeing, the fundamentals of which he learned from Edward Valentine of Northampton. When the organization was incorporated in 1854 as Cheney Brothers Silk Manufacturing Company, Ward became president, serving until his death in 1876. His administration was progressive, and immense strides were made not only in enlarging the units already in operation but in developing such new lines as the manufacture of ribbons and grosgrains. During the Civil War the Cheneys financed a gun factory in Boston where Christopher W. Spencer, one of their mechanics who had invented a repeating rifle, turned out 200,000 rifles for the Federal government.

Cheney was not only a man of great executive capacity and business ability, but was endowed with a splendid physique, a vivid personality, and warm human sympathy. As an employer he would have stood out in any age. “It was the constant delight of this remarkable man,” said William Alfred Hinds, “to minister to the happiness and prosperity of his thousand employees. Their homes, the facilities for education and religious improvement, their amusements, all had his sympathetic, practical interest. There was nothing he would not do for them, even to nursing their sick, and laying in the grave with his own hands the body which others, fearing contamination, were unwilling to touch” (American Communities, 1908, p. 513).

H. U. F.

CHESSEBROUGH, CAROLINE (Mar. 30, 1825–Feb. 16, 1873), author, was descended from William Chesbrough, the first white settler and founder of Stonington, Conn., about 1649, who came in 1630 from Boston, England, to the Massachusetts Bay Colony and settled first in Salem. His descendant, Nicholas Goddard Chesbrough, who was born in Stonington, removed to Canandaigua, N. Y., where he was a hatter, wool dealer, and postmaster. He married Betsey Kimball of Covendish, Vt. Their daughter Caroline was born in Canandaigua and always lived there with her family until 1856. She was educated in the Canandaigua Seminary. About 1848 she began writing stories and articles for magazines, first contributing to Graham’s Magazine and Holden’s Dollar Magazine. Two of her stories took prizes offered by newspapers and in a short time she was writing for the Knickerbocker, Putnam’s Magazine, and Harper’s Magazine. Her first

56
Chesnut

publication in book form was a volume of tales and sketches, Dream-Land by Daylight (1852). Other volumes followed: Isa, a Pilgrimage (1852), The Children of Light (1853), The Little Cross-Bearers (1854), Susan, the Fisherman's Daughter (1855), The Beautiful Gate and Other Tales (1855), Getting Along (1855), Philly and Kit (1856), Victoria, or the World Overcome (1856), Peter Carradine (1863), Blessings in Disguise (1863), The Sparrow's Fall and Other Stories (1863), Amy Carr, or the Fortune Teller (1864), The Foe in the Household (1871). Most of these books were novels, some for children, some for adults, and she had a novel ready for the press at the time of her death. Her plots are emotional but slow in action and her dialogue is carried on by the continual use of "he said," "she exclaimed," "answered he," "returned she," and similar expressions. The sentiments expressed are old-fashioned and the moralizing is tedious. The scenes are laid in different parts of the United States, chiefly the East, during her own time, and some of the descriptive passages are vivid and realistic. From 1865 until the time of her death Miss Chesebrough was a teacher of English composition at Packer Collegiate Institute, Brooklyn, N. Y. There she was known as a woman of gentle, serious personality, quiet in voice and manner, but accustomed to the attention of her pupils. As a teacher she had initiative, logical insight, and practical resources, and under her direction were trained several brilliant students who later became teachers in the Institute. One of these students recalls her as "of slight build, with blue eyes that could flash, full brows framed by brown wavy hair, features that indicated sensitiveness and ideality." Miss Chesebrough was a devoted daughter and in a period of family adversity showed herself not only unselshful but heroic. When she went to Packer Institute she acquired a home near Piermont, N. Y., where she died. She was buried in the family lot at Canandaigua.

[Anna Chesebrough Wildley, Genealogy of the Descendants of William Chesebrough (1903); N. Y. Times, Feb. 18, 1873; N. Y. Daily Tribune, Feb. 19, 1873; information from Miss Adelaide E. Wyckoff of Brooklyn, N. Y., one of Miss Chesebrough's students at Packer Institute.]

S.G.B.

CHESNUT, JAMES (Jan. 18, 1815-Feb. 1, 1885), lawyer, planter, senator, Confederate soldier, came of Irish ancestors who left Virginia, their original abode in America, during the French and Indian War, and ultimately settled at Camden, Kershaw County, S. C., where he was born. His father, James, Sr., of the third generation, owned large plantations (said to have aggregated five square miles) in this vicinity, sat for several sessions in the state legislature, and was intendant of Camden in 1866-07. His mother was Mary Cox, of Philadelphia, a sister-in-law of Horace Binney [q.v.]. James, Jr., was the youngest of thirteen children (T. J. Kirkland and R. M. Kennedy, Historic Camden, Colonial and Revolutionary, 1905, pp. 366-71). Like his father he was educated at Princeton where in 1835 he was graduated with an honorary oration (Princeton College Faculty Minutes, 1832-35). Having read law in Charleston, S. C., under the guidance of James Louis Petigru (J. P. Carson, Life, Letters and Speeches of James Louis Petigru, 1920, p. 287), he was admitted to the bar in 1837 and shortly afterward commenced practise in Camden. On Apr. 23, 1840, he married Mary Boykin Miller, daughter of Stephen D. Miller, governor of South Carolina from 1828 to 1830.

Chesnut entered the lower house of the General Assembly as a member for Kershaw in 1840. With the exception of the sessions of 1846-47 and 1848-49 he was regularly returned to this body until 1852. For the next six years he was a member of the state Senate, and its president from 1856 to 1858. Having become a leader of that party in South Carolina which advocated secession, he was sent to the Nashville convention in 1850 and was elected in 1858 to the United States Senate where his ability as an orator made him at once a conspicuous figure among the representatives of the Southern states. His chief efforts were directed to a defense of slavery. "Commerce, civilization, and Christianity go hand in hand," he said, "and their conjoin joints receive their chief earthly impulse from this reviled institution" (Congressional Globe, 36 Cong., 1 Sess., pp. 1613-1619).

When secession became imminent Chesnut resigned his seat in the Senate (Nov. 10, 1860). In the South Carolina convention he was a member of the committee which drafted the ordinance of secession. In the Provisional Congress of the Confederate States he was a member of the committee which drafted the permanent constitution. As an aide on the staff of Gen. Beauregard he, together with Capt. S. D. Lee, bore the messages to Anderson demanding the evacuation of Fort Sumter. The charge that the impetuosity of these messengers was responsible for the firing on the fort (J. F. Rhodes, History of the United States from the Compromise of 1850, 1895, III, p. 237) is not sustained by the evidence (see Official Records (Army), I ser., I, Index, and N. W. Stephenson, The Day of the Confederacy, 1919, pp. 17-18). Chesnut was again an aide to Beauregard during the first
Chester

battle of Manassas. Subsequently he was a member of the executive council of South Carolina, but resigned in October 1862 to become an aide with the rank of colonel of cavalry on the staff of President Davis. In this capacity his duties were varied and extensive. Davis placed great confidence in the judgment of his “cool, quiet, self-poised colonel.” At length, however, Chesnut’s desire for field service was recognized, and he was appointed (April 23, 1864) brigadier-general in command of the reserve forces in South Carolina (Official Records (Army), 1 ser., XXXV, pt. II, p. 456). He was serving at this post when the war ended.

Though disfranchised during the period following the war Chesnut took an active part in the reconstruction of South Carolina. He was president of the convention of 1867 which protested against military rule, a delegate to the Democratic national convention in 1868 and to the state Democratic convention two years later, and chairman of the executive committee of the Taxpayer’s conventions of 1871 and 1874. In the campaign of 1876 he was chairman of the Kershaw County Democratic convention. His death occurred at Saarsfield, his plantation near Camden, in 1885.

[The private papers of Chesnut have been destroyed. Some of his letters as well as other intimate mementos of the war period are preserved in his wife’s journal (Mary Boykin Chesnut, Diary from Dixie, 1905, ed. by I. D. Martin and M. L. Avary). His correspondence with President Davis is to be found in D. Rowland, Jefferson Davis, Constitutionalist, His Letters, Papers and Speeches (1923). Brief accounts of his life occur in Confed. Mil. Hist., vol. V (1899), and T. J. Kirkland and R. K. Manly, Historic Camden, Nineteenth Century (1925). Chesnut’s part in the secession movement is the subject of a careful study by C. W. Jenkins, Jr., a student in the College of Charleston.]

J. H. E.

CHESTER, GEORGE RANDOLPH (1869- Feb. 26, 1924), author, was born in Ohio in 1869. In an interview reported by Herbert Corey (Cosmopolitan, May 1911), he stated that he had worked as a boy, left home early, and drifted about for several years; ran an engine in a planing mill, was a pen-and-ink artist in Davenport, Iowa, cook and waiter in a restaurant, plumber, paper-hanger, ribbon salesman, chain dragger for a civil engineer, bill clerk and also “chair designer” in a chair factory. He began newspaper work on the Detroit News, where there is an office tradition that he was a brilliant fictionist but poor reporter, omitting the victim’s name in a vivid murder story. For seven years thereafter, until 1908, he was on the Cincinnati Enquirer, becoming Sunday editor. He also organized a syndicate which supplied weekly humorous stories to some twenty-five papers. From 1905 on his stories appeared frequently in the Cosmopolit
Chester

handsome bright boy,” but his school days gave no evidence of “budding genius.” After a brief experience as a school-teacher at Ballston, N. Y., he went to New York City, at the age of eighteen, to undertake a law course, but this was soon abandoned for business in the house of Tappan & Company, silk merchants. This firm was unusual in its stress on the moral conduct of its employees, all of whom were aroused to efforts in the causes of temperance and anti-slavery. Before reaching his majority, Chester was lecturing on temperance to audiences all the way from Massachusetts to Ohio. His leisure hours were also given to writing verse, the merit of which was recognized by the Knickerbocker, then the leading literary magazine in the United States. The issue for January 1843 printed his poem “Greenwood Cemetery” under the pseudonym, Julian Cramer, a name he assumed many times. Later in the year a volume, Greenwood Cemetery and Other Poems, was published, which carried his true name as the author. One poem of his collection, “Lonely Auld Wife,” attracted the attention of the composer, William Richardson Demster, who set it to music and included it in his concert repertoire in his tours through the country. Soon after 1845 Chester became a Philadelphian. He spent the business hours in a counting room on Market St., “a quiet unpretending business man,” but devoted himself in spare time to literature and music. Godey’s Lady’s Book (March 1850) prints a portrait of him as “our musical editor,” who is described as “still on the sunny side of thirty.” In 1852, he appears to have left the counting room for journalism, becoming associated with the Philadelphia Inquirer and the Daily Sun; his newspaper connections brought him into the political field for the first time, and he was elected to membership in the Philadelphia City Council as a representative from the Sixth Ward, in 1855. He continued to have strong anti-slavery convictions, being responsible for the publication, in 1854, of Educational Laws of Virginia; The Personal Narrative of Mrs. Margaret Douglass, a Southern Woman who was Imprisoned for One Month in the Common Jail of Norfolk, Under the Laws of Virginia, for the Crime of Teaching Free Colored Children to Read. During the next two years when Congress was the scene of exciting debates on the question of slavery, Chester spent much time in Washington as corresponding editor for the Philadelphia papers; indeed, during the spring of 1856, he was one of the assistant clerks in the House of Representatives. It was during these years also that he served on the staff of Gov. Pollock of Pennsylvania and acquired his much treasured title, “Colonel.” In September 1858, he went to England to try to sell some patent rights, at the same time keeping his connection with the Philadelphia Inquirer, to which he contributed a weekly letter.

Up to the time of his arrival in England it does not appear that he had ever given any attention to genealogical research. Capt. Uriah Rogers of Norwich, his great-grandfather, believed that he carried in his veins the blood of John Rogers, who was burned at the stake for his heresy during the English Reformation and whose picture in the old New England Primer was doubtless familiar to Chester. “To establish, if possible, the correctness of these claims,” his visit to England became “protracted.” He found the family tradition incapable of proof, but he “became thoroughly imbued with the convictions that historical justice had never yet been done” the martyred preacher. Hence his first genealogical contribution, John Rogers: the Compiler of the first authorized English Bible: the Pioneer of the English Reformation; and its first martyr (London, 1861). The reader is referred to the Dictionary of National Biography for information regarding Chester during his continued residence in London. He is credited there with a long list of publications and with research so successful as to gain for him this tribute: “When he died, he had no superior as a genealogist among English speaking people.” Further British tributes to this “master in genealogy and biographical history” were an honorary degree (D.C.L.) from Oxford in 1881, and a tablet to his memory in Westminster Abbey. He remained to the last a citizen of the United States (Notes and Queries, London, 1882, p. 440) and ever maintained that his prodigious labors in making extracts from parish registers, in copying matriculation registers at Oxford, marriage licenses, wills, books of pedigree, etc., had as their primary object the publication of a “general and detailed account of the character, social status, etc., of the English emigrants to New England prior to the Restoration” (Biograph and Review, London, May 1881). His work was well known also in his native country. Columbia University anticipated Oxford in honoring him (LL.D., 1877). He was a frequent contributor to the New England Historical and Genealogical Register, and many articles which appeared first in England were reprinted in the Boston Evening Transcript. Further, he was a highly important and most generous medium through whom American investigators in the same field could obtain accurate information about the English ancestry of American families.
Chetlain

His first volume of verse was dedicated “To his wife (not knowing a better friend)”; she was Catherine Hendrickson Hubbard, of New York, whom he married, June 26, 1830 (Reuben Hyde Walworth, Hyde Genealogy, 1864, I, 443).

CHETLAIN, AUGUSTUS LOUIS (Dec. 26, 1824–Mar. 15, 1914), Union soldier, banker, was born in St. Louis, Mo. His parents, Louis and Julia Droz Chetlain, who were Swiss of French extraction, came in 1821 to the Selkirk settlement in western Canada, and left there in 1823. In 1826 they removed to the neighborhood of Galena, Ill., where the father engaged in mining and teaming, later bought a farm, and prospered in all these undertakings. The son attended school in Galena, and then was employed as clerk by a wholesale merchant. In 1852, with but little capital, he started in business for himself and soon built up a good trade. He sold out in 1859, traveled extensively in Europe, and returned in time to take an active part in the political campaign of 1860. At the outbreak of the Civil War, Galena raised a volunteer company of which Chetlain, at the suggestion of U. S. Grant, was elected captain. He was mustered into service as such on May 2, 1861, and the next day became lieutenant-colonel of the 1st Illinois Infantry, in which the Galena company was incorporated. The regiment remained in camp in southern Illinois until September, when it moved into Kentucky as part of the force with which Grant occupied Paducah. As the colonel was absent in charge of a brigade, the command of the regiment devolved upon Chetlain, and he continued in command as long as he remained with it, although not promoted to the colonelcy until Apr. 27, 1862. He took part in the capture of Forts Henry and Donelson, in the battle of Shiloh, and in the operations which culminated in the battles of Iuka and Corinth. He was then assigned to the command of the post of Corinth. He was appointed brigadier-general of volunteers, Dec. 18, 1863, and put in charge of the organization and recruitment of colored troops in Tennessee and Kentucky, a work in which he was eminently successful. Later he held administrative commands in Tennessee and Alabama until he was mustered out of service, Jan. 15, 1866. From 1867 to 1869 he was United States collector of internal revenue for Utah, and lived in Salt Lake City. For the next three years he was consul at Brussels. Returning to the United States in 1872, he established himself in Chicago, where he organized the Home National Bank and became its president. In 1892, he also organized the Industrial Bank of Chicago, but a year later poor health obliged him finally to withdraw from business. He traveled widely in the United States, Canada, and Europe. Before his retirement he was a director of the Chicago Stock Exchange and a member of the board of education, and was active in many philanthropic enterprises. He was always prominent in the affairs of the Loyal Legion, Grand Army of the Republic, and similar organizations. Besides a pamphlet on The Red River Colony (1893), he published a volume of Recollections, in which he records his personal estimate of many eminent men whom he knew intimately. His range of acquaintance was wide, especially among the prominent generals of the Civil War and the political and business leaders of Illinois: Grant and Sherman, John M. Palmer and Shelby Cullom, George M. Pullman and Cyrus McCormick, Lyman Gage and Franklin McVeagh were among his friends. He married, first, Emily Tenney of Elyria, Ohio; and second, Mrs. Melanchon Smith.

[Chetlain's Recollections of Seventy Years (1893); Official Records (Army), 1 ser., vols. VII, X (pt. 1), XVII (pt. 1), and 3 ser., vol. IV; Who's Who in America, 1912-13.] T. M. S.

CHEVER, JAMES W. (Apr. 20, 1791–May 2, 1857), privateersman, sea captain, the son of Capt. James and Sarah Browne Chever, was born at Salem where the family, sometimes called Cheever, had been prominent for more than a century. His father, a master mariner, had served as lieutenant on the Salem privateer Grand Turk in the Revolution. Young Chever went to sea at thirteen as cabin boy on the America. By 1810, he was mate of the Fame and at nineteen, he was given command of the ship Belisarius. At the outbreak of the War of 1812, the Crowninshield's converted their crack ship America into a privateer, mounting twenty guns, manned by a crew of 150, and cut down so that she was probably the fastest ship afloat. On her first two cruises, Chever served as prize master and lieutenant under Captains Joseph Ropes and John Keheu, respectively. Late in 1813, he was made captain of the ship, at twenty-two. He cruised between the English Channel and the Canary Islands, able to outsail any of the British frigates. On this third cruise of the ship
Cheverus

(Dec. 13, 1813–Mar. 31, 1814) she captured twelve prizes, three of which were burned and a fourth used as a target. The fourth cruise, starting Oct. 31, 1814, lasted only six days, as she struck a derelict and had to return to port. The final cruise (Nov. 24, 1814–Apr. 8, 1815) carried her again to European waters under Chever's command, netted thirteen prizes, and involved a sharp and victorious fight with a well-armed English packet. In less than three years, the America had sent in prizes worth $1,100,000, half of which went to the owners and the rest to officers and crew. For success, this record was approached only by the Grand Turk of Salem, and for boldness, by Capt. Thomas Boyle of Baltimore in the Chasseur. Chever's subsequent career was less spectacular, but he continued for many years in command of Salem ships, later retiring as wharfinger at Salem, where he died. At first he called himself James Chever Jr., but later assumed the middle initial. A portrait, taken in his last years, shows a strong, smooth-shaven face with prominent nose and curly black hair. General tribute was paid to his straightforward, cheerful, guileless character, free from all rough and coarse qualities.

A detailed account of the America, with notes on Chever's life, by B. B. Crowninshield, is found in the Essec Institute Hist. Colls., XXXVII, 1–76. Notes on his father are in the same collections, IV, p. 131. A brief account of the America is in R. D. Paine's Ships and Sailors of Old Salem (revised ed. 1923), 326–34. There is also an account in E. S. Maclay's Hist. of the Am. Privateers (1869), ch. IX. An obituary appeared in the Salem Gazette, May 5, 1857.

R.G.A.—n.

CHEVERUS, JOHN LOUIS ANN MAGDALEN LEFEBRE de (Jan. 28, 1768–July 19, 1836), first Catholic bishop of Boston, born in Mayenne, Lower Maine in France, was the son of a lieutenant of police with judicial powers, John Vincent Lefebre, and his pious wife, Anne Lemarchand des Noyers. No local family was more respected; the mayor was his uncle and the pastor was another uncle. As a day scholar, he attended the local college until at the age of twelve years he accepted the priestly call and received tonsure. Thereupon, he was sent to the College of Louis-le-Grand in Paris, but suffered no ill effects in its radical atmosphere. In public competition, he was selected for the Seminary of St. Magloire (Oratorians) in Paris where he had the advantage of attending lectures at the Sorbonne. Ordained in the last pre-Revolutionary public ordinations in Paris (1790), he was assigned to assist his uncle in Mayenne.

To enter orders at this time was courting persecution. He soon succeeded to the pastorate, but on refusal of an oath to support the civil constitution of the clergy, he was deprived of his parish. Sent to Paris, he was imprisoned in the ill-fated convent of the Cordeliers. In June 1792 he escaped and found a hiding place in the city. Thus he avoided the September massacres when so many of his clerical associates were put to death. In disguise, Cheverus made his way to Calais and thence to London where he found a hospitable asylum. He refused the usual bounty and found employment as a French tutor in a Protestant private school and in a gentleman's family. He also preached to a congregation of refugees. In 1795 Dr. Francis Matignon, his former seminary professor, urged him to come to Boston, where Abbé La Poitrie, a chaplain with the French troops, had gathered a small French and Irish congregation in 1784, to which the erudite Matignon had succeeded in 1792. Renouncing his patrimony, Cheverus sailed for Boston in the fall of 1796. He wrote to Bishop Carroll to send him anywhere with no worry concerning his support for he was both able and willing to earn his own livelihood. For a time, he served among the Penobscots of Maine, living on an annuity of $200 appropriated by the Massachusetts General Court for a Catholic Indian missionary. He also made visitations to scattered New England congregations and isolated families, frequently tramping long distances to save the cost of transportation. Carroll offered him St. Mary's Church in Philadelphia, but the missionary preferred to serve his New England people as priest and doctor. In 1800, when Matignon and Cheverus planned Holy Cross Church, their Protestant admirers headed by President Adams signed the subscription list. Three years later Bishop Carroll consecrated the church and Cheverus preached to a curious crowd. Thereafter Matignon and Cheverus attracted auditors of every creed. The scholarly, urbane, humble Frenchmen were confessors to Catholics but often advisers to Protestants in matters of conscience. No incident suggested the affection in which Cheverus was held more than his seat of honor at a banquet tendered President Adams by his aristocratic fellow-townsmen.

On the conclusion of the Concordat, friends urged Cheverus to return to France but Carroll asked him to remain at his post. Of personal persecution there was none, but even the beloved priest faced annoyances. On marrying two Catholics in Maine, though he sent them to a justice for a second civil ceremony, Cheverus was tried in a criminal action but declared not guilty. The civil action was soon dropped. With the aid of two rich Irish merchants of Newcastle,
Cheverus

Me., he built a chapel, but the superior court declared that even if there was a resident priest the Catholics of the region must continue paying Congregationalist tythes. Again in 1820, when he brought the Ursuline nuns to Boston, there was an outburst which he silenced by a communication to the press. He soon forgot these inconveniences, for in later years he extolled American toleration to King Charles X. He occupied Protestant pulpits on invitation; when an oath of allegiance was framed he was appealed to by the legislature lest Catholic conscience be violated; he was a patron of learned societies, assisting in founding the Athenæum to which he left his library. Harrison Gray Otis and Quincy were among his warmest friends, as were Lemuel Shaw and Col. Samuel Lorenzo Knapp, the litterateur, for whom he procured an honorary degree from Paris.

In 1808, at the request of Matignon, Archbishop Carroll recommended that Cheverus be made bishop of Boston with New England for a diocese. Pius VII made the appointment and Cheverus was consecrated by Carroll (1810). This elevation brought no change in his mode of life. His dress was still shabby. He walked on his visitations. He occupied a humble cottage. His house became a seminary, and in the cholera days a hospital. He continued his missionary labors. Frequent were his visits to the Maine Indians, the lowly Irish construction camps, and religious functions in Canada. After Bishop Concaneen's death, he ministered to the New York diocese. He conferred the pallium on Archbishop Neale in Georgetown but refused a possible selection as his coadjutor. He urged the selection of Maréchal, whom two years later he consecrated as Neale's successor in the See of Baltimore. Cheverus was too active to write much even if he had not had a distaste for what he termed the "scribomania" of his age: a few letters, an occasional journalistic contribution, a manual of hymns and prayers, and a French edition of the New Testament formed his literary contribution.

Cheverus was not destined to end his career in his "dear Boston." Matignon died in 1818 and Romagne after twenty years with the Indians returned to France; Cheverus missed their association. Hardship and exposure brought an attack of chronic asthma which physicians believed would be fatal if he did not seek a milder climate. This Cheverus would not do, but the French minister in Washington urged the King of France to nominate him to a vacant see. Bishop Cheverus refused the appointment to Montauban (1823). The Catholics were worried; two hundred Protestants petitioned the grand almoner of France against his removal; the press in eulogistic notices urged that he remain. Dr. Ellery Channing spoke the mind of Boston: "Has not the metropolis of New England witnessed a sublime example of Christian virtue in a Catholic bishop? Who among our religious teachers would solicit a comparison between himself and the devoted Cheverus?" But the king demanded Cheverus and, with hopes of returning, he obeyed. Three hundred carriages—and few Catholics had carriages—are said to have escorted him out of Boston. Threatened by shipwreck in the Channel, he gained the esteem of the passengers by his heroism. In France, his reputation spread, and even the Huguenots of Montauban became "bishop's men." In 1826, he was elevated to the archbishopric of Bordeaux and made a peer by Charles X, but declined the ministry of ecclesiastical affairs. In 1828, he was named a counselor of state, and two years later a commander of the Order of the Holy Ghost. When the July Revolution broke forth, he maintained order in Bordeaux, which accepted the de facto government. All France clamored for his elevation to the cardinalate, and Louis Philippe gladly urged the appointment in Rome. In 1836, he became a peer of the Church. On July 7, 1836, he fell prostrated at the conclusion of a day's preaching, and when he died all France mourned.

Cheves

R. J. P.

CHEVES, LANGDON (Sept. 17, 1776–June 26, 1857), congressman, financier, was the son of Alexander Chivas, of Buchan, Aberdeen- shire, Scotland, son of John Chivas, or Chivis. [The name is still pronounced Chivis]. In 1762 "honest Sandy Chivis," then twenty-one years of age, came to America and began life as a trader in the Ninety Six district of South Carolina on the frontiers of the Cherokee and Creek nations. In 1774 he married Mary Langdon, daughter of Thomas Langdon, who was a refugee after the "Braddock War" from Augusta County, Va. Alexander Chivas was a lieutenant in Col. Hamilton's Loyal Regiment, and Thomas Lang-
Cheves

on was a captain on the American side in the
Ninety Six Regiment. Langdon Cheves was born
in Abbeville District, in Bull Town Fort, a stock-
ad blockhouse, where his mother had taken refu-
uge from the Cherokee Indians after the British
attack on Charleston. After the death of Mary
Langdon Chivas in 1779, this only son of a bril-
liant mother was brought up in the home of his
aunt, Mrs. Thomas Cheves, for six years, and at-
tended Andrew Weed's school. In 1785 he was
taken to Charleston by his father and sent to a
school kept by a severe old Scotchman who flogged
him for his "up country" twang and tried to teach
him his broad Scotch. Beyond this and the help
from his pastor, Dr. Buist, his education was
obtained by his own untiring study. After serv-
ing an apprenticeship in a factor's supply store
and showing the genius for accurate accounts
that served him so well in his banking days, he
read law under Judge William Marshall and was
admitted to the bar in 1797. His success was pro-
nounced and his law firm was soon the best paid
in the city. He early entered politics and held
in succession the offices of warden for his city
ward in 1802, member of the state legislature
from 1802 to 1809, attorney-general in 1809,
presidential elector in 1809, congressman from
1811 to 1815, and speaker of the national House
of Representatives in the Thirteenth Congress.
On May 6, 1806, he married Mary Elizabeth
Dulles, a school girl of barely seventeen, with
whom he lived for thirty years a life of pecu-
liar domestic charm, and who was the mother of
his fourteen children. His favorite recreation
was house building, and he planned and built at
least six houses of architectural distinction, the
most interesting of which was a summer house
near Pendleton, S. C.

Cheves's national service began with his elec-
tion in 1810 to fill a vacancy in the Eleventh
Congress. He was one of that brilliant quartet
of South Carolina statesmen which included
John C. Calhoun, William Lowndes, and D. R.
Williams. He served on the Committee on Naval
Affairs and later as chairman of the Ways and
Means Committee and of the Select Committee
on Naval Establishment. When Henry Clay
was appointed one of the peace commissioners to
Ghent, Cheves succeeded him in 1814 as speak-
er of the House and served until his retirement
from Congress in 1815. Though little interested
in expansion, he was a prominent member of
the group which precipitated the War of 1812
(J. W. Pratt, Expansionists of 1812, pp. 49,
127), and he was one of the Republicans who did
not attend the caucus to renominate Madison in
1812. As speaker he cast the deciding vote to
defeat Dallas's bill for rechartering the United
States Bank. He was one of the most effective
debaters in the House. Massive and striking in
appearance, dignified and yet forceful in de-
ivery, he was described by Washington Irving
as the first orator he ever heard who satisfied his
idea of Demosthenes. After the peace of 1815,
believing that his national service was accom-
plished, he declined re-election to Congress and
returned to his law practise in Charleston, re-
fusing the position of secretary of the treasury
to succeed Gallatin. In 1816 he was elected a
justice of the court of appeals of South Caro-
Una and served for three years with distinction.

In January 1819, Cheves was elected a director
of the United States Bank and on Mar. 6, 1819,
its president. At the urgent request of the friends
of the Bank he accepted the position, although it
involved the sacrifice of what would have been
to him a preferable position, that of associate
justice of the United States Supreme Court, for
which, he was informed by Senator Middleton,
President Monroe had selected him. He found
the affairs of the Bank in a deplorable condition.
In a little over two years from its opening in
1817 it had done an enormous business but had
so exceeded its resources in the purchase of
drafts, especially on Southern and Western
banks, that its demand liabilities exceeded the
specie in its vaults by $100,000. On Apr. 5, at
the time when Cheves was taking entire control
of the situation, John Quincy Adams wrote in his
diary: "The Bank is so drained of its specie
that it is hardly conceivable that it can go to
June without stopping payments. . . . The state
of our currency is perilous in the highest degree,
and threatens to terminate in a national con-
vulsion." Three weeks after this the Bank was
safe and sound again and able to help other sol-
vent but needy concerns. Cheves accomplished
this by continuing for a short time the policy of
his predecessor, Jones, of curtailing circulation
and especially forbidding banks in the South and
West to issue notes when exchange was against
them, and by a European loan of $2,000,000.
Both of these policies were severely criticized
but were fully justified by results. By 1822 an
accumulation of $3,500,000 had been made to
replace past losses of the Bank, and the capital,
$28,000,000, again stood whole and untrammeled.
Cheves then resigned his place to be succeeded
by Nicholas Biddle.

At this time he was appointed chief commis-
sioner of claims under the Treaty of Ghent and
filled that office until all claims were adjusted.
He resided for a time in Philadelphia and then
at Lancaster, Pa., where he practised law. In
the fall of 1829 he returned to South Carolina, which was then in the throes of the Nullification struggle. Though believing thoroughly in the right of secession, he opposed separate state action as “dangerous and ineffectual” and said that “the metaphysics of Nullification is the worst shape in which its bad principle of separate action can be embodied.” But his long absence from the state in national service had weakened his influence with his countrymen, his opinions clashed with those of their leaders, and, rather than abjure his convictions, he withdrew from public life. He wrote “occasional reviews,” keen analyses of current situations, was a delegate to the Nashville convention of 1850, and advocated a Southern Confederacy but strongly opposed separate action on the part of any state. When about sixty years of age he took up agriculture seriously, built a new and handsome house, “The Delta,” near Savannah, and in the last twenty years of his life amassed a large fortune. He died June 26, 1857, at the home of his daughter Mrs. D. J. McCord, in Columbia, and was buried in Magnolia Cemetery, Charleston. His close friend, Judge Huger, said, “Cheves loved truth; and to it he sacrificed everything.” He was a man of clear and accurate vision, broad sympathies, balanced judgment, and both moral and intellectual honesty.

CHEW, BENJAMIN (Nov. 29, 1722–Jan. 20, 1810), jurist, son of Dr. Samuel Chew, chief justice of the District of New Castle, was born at his father’s seat on West River, Md. Reared a Quaker he subsequently joined the Anglican Church. Sent to Philadelphia to read law under Andrew Hamilton, who died in 1741, Chew, when barely nineteen, went abroad to study at the Middle Temple, where many of his contemporaries were educated. His father dying in 1745, he returned to Philadelphia and was admitted to the bar of the supreme court in September 1746 but did not practise there until about nine years later. Living at Dover, Del., he practised there and at New Castle. He was included (1751) in the Boundary Commission representing the lower counties, and secured a legislative appointment (1752) as trustee to sell certain lands. Removing to Philadelphia about 1754, he became prominent, succeeded Tench Francis as attorney-general and held this office from 1755 to 1769. He was also recorder of Philadelphia until June 25, 1774, and member of the Council, 1755 till the Revolution. He was made speaker of the Assembly of the lower counties (1756) and register-general of the Province of Pennsylvania (1765) in charge of probates for Philadelphia County with deputy-registers for Bucks, Chester, New Castle, and other counties. Resigning as attorney-general (1769) he devoted himself to private practise until 1774 when he became chief justice of the supreme court of Pennsylvania succeeding William Allen. The Revolution swept away his offices with provincial authority, but Chew continued register-general until an Act of Assembly, Mar. 14, 1777, which provided registers of wills for each county but legalized Chew’s activities. When after the Declaration of Independence he did not show evidence of undoubted patriotism, a warrant was issued for him, but he was allowed to remain a prisoner in his house until he was paroled with John Penn, and they were allowed to live at Union Iron Works, N. J., until Congress ordered him with others to be returned to Pennsylvania without paroles. Washington was friendly with Chew and celebrated at Chew House, “Cliveden,” Germantown, May 23, 1787, the wedding dinner of Peggy, Chew’s daughter, and Col. John E. Howard. Commissioned (Oct. 3 and 4, 1791) respectively judge and president of the high court of errors and appeals of Pennsylvania, Chew held these positions till the court was abolished in 1808, shortly before his death. He was characterized by William Rawle, prominent attorney, as “solid judgment, tenacious memory, persevering industry,” with perhaps no superior in accurate knowledge of the common law or in sound exposition of the statutes. At the bar his language was pertinent and correct but without oratory, his arguments close and logical, designed to carry conviction not to win applause. He was married twice: first to Mary Thomas (died 1755), then to Elizabeth Oswald who outlived him.

64
Chickering

CHICKERING, JONAS (Apr. 5, 1798-Dec. 8, 1853), piano manufacturer, was born at Mason Village, N. H., the third child of Abner and Eunice (Dakin) Chickering. Shortly after his birth the family moved to New Ipswich, N. H., where Jonas spent his boyhood in his father’s blacksmith shop and on the family farm. Of a decided mechanical bent, the boy apprenticed himself at the age of seventeen to a cabinet-maker, and toward the end of his apprenticeship undertook to repair the only piano in the village. In this task his skill as a cabinet-maker was happily combined with his passion for music and he discovered his life work. Soon after, at the age of twenty, he left for Boston where he secured employment in the shop of a certain John Osborne, one of the few Americans who were then making pianos.

For five years Chickering labored to master every detail in the art of piano making, and then in 1823 in partnership with a Scotchman, James Stewart, commenced to manufacture pianos under the firm-name of Stewart & Chickering. Stewart soon returned to Europe and Chickering for some years conducted the enterprise alone. Needing capital he established a partnership in 1830 with Capt. John Mackay, a capitalist and sea-captain, whose faith in Chickering led him to invest heavily in the concern. Mackay not only furnished the needed money, thus allowing his partner to devote his whole energy to the technical end, but himself transported and sold pianos in South America, loading on the home voyage with rosewood and mahogany. Mackay was lost at sea in 1841, and Chickering bought out his heirs, supervising until his death the financial as well as the mechanical end of the rapidly growing business.

Chickering’s fame, however, rests not so much upon the fact that he founded and developed one of the earliest and largest of the American piano manufacturing houses, but upon the numerous improvements which he introduced. The difficulty of keeping the earlier grand pianos in tune was conquered by Chickering in 1837 when he succeeded in casting an iron frame built to sustain the great tension necessary to a piano of good quality. In that year he built the first grand piano with a full iron frame in a single casting. Samuel Babcock, it is true, had already experimented with the iron frame but Chickering first perfected it and first applied it to the grand piano. This opened a new era in the making of pianos and justified William Steinway in describing Chickering as the “father of American piano forte-making.” In 1843 the firm patented a new deflection of the strings and in 1845 Chickering invented the first practical method of over-stringing grand pianos. In 1852, the Chickering factory on Washington St., Boston, burned, but with characteristic energy, Chickering laid the foundation of a greater establishment on Tremont St., which, when finished, was thought to be the largest building in the United States with the exception of the Capitol at Washington.

Chickering was an indefatigable worker and until the end of his life could be found in his immense factory clad in his mechanic’s apron and engrossed in the technical end of piano production. As he was shy and retiring in disposition, his rise was due almost solely to his industry and genius. He was beloved for his unostentatious charity, and in his quiet way influenced the development of musical appreciation in America. He had joined the Handel and Haydn Society in 1818 upon his arrival in Boston and later served as trustee and as president (1843–50). His mechanical ability was recognized by his election to the presidency of the Massachusetts Charitable Mechanics Association. On Nov. 30, 1823, he was married to Elizabeth Summer Harraden who with four children survived him. The business was carried on by his three sons.

[The best account of Chickering is the biography written by his friend and protegé, Richard G. Parker, Tribute to the Life and Character of Jonas Chickering (1854); see also Freeman Hunt, Lives of Am. Merchants (1858), I, 493–537. For English ancestry see New Eng. Hist. and Gen. Reg., VIII, 96–97. The American line is traced in P. C. Torrey, One Branch of the Chickering Family (1919).] H.U.F.

CHILD, DAVID LEE (July 8, 1794–Sept. 18, 1874), journalist, was born in West Boylston, Mass., the son of Zachariah and Lydia (Bigelow) Child. He was graduated from Harvard College in 1817. The following year he became sub-master of the Boston Latin School. In 1820 he served as secretary of legation at Lisbon, Portugal. Later in Spain he engaged in the war against the French, saying that he felt it was always his duty to help secure and defend liberty. From then on he engaged in many struggles for freedom of various sorts. He returned to the United States in 1824 and began the study of law with his uncle, Tyler Bigelow, in Watertown, Mass., being admitted to the Suffolk County bar in 1828. During the same year he was a member of the Massachusetts state legislature, edited the Massachusetts Journal, a leading Adams paper, and, in October, married Lydia Maria Francis [see Lydia Maria Francis Child], an author who later became prominent in the anti-slavery movement. Child was himself an early member of the anti-slavery society and in 1832 addressed a se-
ries of letters on the subject to Edward S. Abdy, an English philanthropist. He was a trustee of Noyes Academy at Canaan, N. H., in 1834, and was instrumental in opening the institution to colored youths at that time. In 1836 he went to Belgium to study the beet-sugar industry. He returned and erected in Northampton, Mass., the first beet-sugar factory in this country. The factory failed financially and was closed in 1844. But Child had proved the value of the commodity. He published a pamphlet in 1840 called Culture of the Beet, and Manufacture of Beet-sugar.

About 1843-44, he for a time assisted his wife in editing the National Anti-Slavery Standard in New York. The remainder of his life was spent in bettering conditions among the freed people and in writing on various subjects having to do with freedom. The best examples of his writing and of his political interests are the two pamphlets, The Texan Revolution (1843) and The Taking of Naboth's Vineyard (1845). He died in Wayland, Mass.

Information concerning Child is to be found in Professional and Industrial Hist. of Suffolk County, Mass. (1894): Bench and Bar Commonwealth of Mass. (1895); Elias Child, Geneal. Child, Childs and Childe Families (1881); and Letters of Lydia Maria Child (1883). An account of Child's experiments with sugar-beets is given in F. S. Harris, The Sugar-Beet in America (1919).

M. S.

CHILD, FRANCIS JAMES (Feb. 1, 1825–Sept. 11, 1896), philologist, was born in Boston, the third of the eight children of Joseph Child, a sailmaker, and his wife, Mary James. He played as a boy on the wharves and along the water-front and, expecting no opportunity to go to college, attended the English High School. There his powers of mind attracted the attention of Epes Sargent D ixwell, principal of the Boston Latin School, who had him transferred to his charge and lent him money to go on to Harvard College. At Harvard, Child took first place in a class that numbered Fitzedward Hall, George Frisbie Hoar, George Martin Lane, Charles Eliot Norton, and Charles Short among its members, was elected class orator, and was noted for his friendships, his wide reading, and his participation in amateur theatricals. After his graduation in 1846 he remained at Cambridge as tutor in mathematics 1846-48 and in history and political economy 1848-49. His real interest, however, was in English philology, and his edition of Four Old Plays—Three Interludes: Thersytes, Jack Jugler, and Heywood's Pardoner and Frere; and Jocasta, a Tragedy by Gascoigne and Kinnevelmarsh (Cambridge, 1848) shows that he was already a scholar in that field and ripe for further study abroad. Fortunately, he was able to go, and from 1849 to 1851 he studied philosophy, the classics, and Germanic philology at the Universities of Göttingen and Berlin. Upon his return to Harvard he succeeded his old teacher, Edward Tyrrel Channing [q.v.] as Boylston professor of rhetoric and oratory. In 1854 the University of Göttingen conferred on him the degree of doctor of philosophy honoris causa. On Aug. 23, 1860, he married Elizabeth Ellery Sedgwick, daughter of Robert Sedgwick of New York, who with four daughters survived him. In 1876, after twenty-five years of reading freshman themes, he was made professor of English and devoted himself wholly thereafter to the teaching and study of literature. The last few years of his life were saddened by the deaths of friends, especially of James Russell Lowell, whom he loved, and by the thought that his own death might come before his work was finished. In 1895-96 he met all his classes and other academic appointments with his usual punctuality, but he died before college reopened in the fall.

His chief works are five in number. His edition of the Poetical Works of Edmund Spenser (5 vols., 1855) presented the best text and the fullest biography of Spenser then available, and was not superseded until after Child's death. English and Scottish Ballads (8 vols., 1857-58) was the largest collection of ballads before Child's own magnum opus. "Observations on the Language of Chaucer" (Memoirs of the American Academy of Arts and Sciences, VIII, 1863, ii, 455 ff.), of extraordinary importance, laid a solid foundation for the study of Chaucer's language and versification and began a new era in Chaucerian scholarship. "Observations on the Language of Gower's 'Confessio Amantis'" (Ibid., IX, 1873, ii, 265 ff.) applied the same principles to the study of Chaucer's friend and fellow-poet. English and Scottish Popular Ballads (5 vols., originally issued in 10 parts, 1883-98) was planned "to include every obtainable version of every extant English or Scottish ballad, with the fullest possible discussion of related songs or stories in the popular literature of all nations." The tenth part was virtually complete, except for a general introduction to the whole work, at the time of his death. This great achievement seems destined to endure as long as the ballads themselves; few scholars have left so lasting a monument. It was as a result, too, of his kindly insisitence and generosity that Frederick James Furnivall founded the Chaucer Society and that the owners of the Percy Folio Manuscript finally permitted its publication. The most notable English philologists of the succeeding generation were trained in his classroom, and his total influence on the cultural life of the nation was large.
Child

Indeed. His power lay not merely in his learning but in his character. "He had a moral delicacy and richness of heart that I never saw and never expect to see equaled." William James wrote to his brother Henry. It is worth remembering of him, also, that his sense of humor played over every subject that he touched and that he cared as much for roses as for ballads. "The keenest, soundest, most loved of American scholars," as Francis Barton Gummere called him, he was one of the most significant men of his generation in America, and his fame since his death has become legendary.

[...]

Child, Frank Samuel (Mar. 20, 1854—May 4, 1922), Congregational clergyman, author, a son of Henry Horatio and Betsy (Brand) Child, was born in Exeter, N. Y. He studied at Whistertown Seminary, graduated at Hamilton College in 1875, and at Union Theological Seminary, N. Y., three years later. His inheritance from his parents was intellectual rather than one of money, and he was largely dependent on himself for support while in college and seminary. He was ordained in Greenwich, Conn., Feb. 27, 1879, where, on Oct. 21, 1880, he married Elizabeth J. Lilley, and where he was pastor till 1881. After a change in New Preston, Conn., from 1884 to 1888, he was installed at the First Church in Fairfield, Conn., where he remained till his death, becoming pastor emeritus in 1920. Child was an accomplished student of the life of colonial New England. Perhaps his best known work in this field is The Colonial Parson of New England (1896), a study of various clerical types illustrated by the lives of eminent members of the profession. His ability to use his knowledge of the same period is further displayed in the following works of history and fiction: A Colonial

Child, Lydia Maria Francis (Feb. 11, 1802—Oct. 20, 1880), author, abolitionist, was descended from Richard Francis, who settled in Cambridge, Mass., in 1636. Her paternal grandfather, a weaver, fought at Concord in 1775; her father, Converse Francis, a baker, of West Cambridge and Medford, Mass., was a strong character, a reader, and a foe of slavery; her mother, Susannah Rand, had "a spirit busy in doing good." Lydia, youngest of six children, was born in Medford, where she attended the public schools and for one year a seminary; but her chief mental stimulus in youth came from her brother Convers, a Unitarian clergyman and later a professor in the Harvard Divinity School. As an author she was precocious, publishing two popular novels in 1824 and 1825—Hobomok, on early Salem and Plymouth, and The Rebels, or, Boston before the Revolution. From 1825 to 1828 she had a private school in Watertown, Mass., and in 1826 started Juvenile Miscellany, a bi-monthly magazine. She married David Lee Child [q.v.], a Boston lawyer, in October 1828. They soon joined the abolitionists, and in 1833 Mrs. Child threw a bomb into the pro-slavery
Child

 camps North and South, with _An Appeal in Favor of That Class of Americans Called Africans_. The little book made many converts; Channing, Sumner, Higginson, and other prominent opponents of slavery, acknowledged its influence on them then or later. It also aroused intense hostility: the sale of Mrs. Child's other books fell off badly, and _Juvenile Miscellany_ died in 1834; the Boston Athenæum cancelled her free membership. But she kept on undaunted, attacking slavery in work after work, and attending tumultuous abolition meetings; in old age she remembered "collaring and pulling away a man who was shaking his fist in Mr. Phillips's face at a Music Hall mob—and her surprise when he tumbled down." From 1841 to 1849 she, with for a time the assistance of her husband, edited the _National Anti-Slavery Standard_, a New York weekly newspaper. In 1852 they retired to a small farm she had inherited in Weyland, Mass., henceforth their home. Their interest in public affairs remained as keen as ever: out of a modest income they gave liberally to the anti-slavery cause; and when John Brown lay wounded and in prison, after Harper's Ferry, Mrs. Child asked the governor for permission to come to Virginia and nurse him. The ensuing correspondence, including a fiery letter from a Southern lady, Mrs. Mason, and a calm survey of slavery by Mrs. Child, was published in 1860 in pamphlet form as _Correspondence between Lydia Maria Child and Gov. Wise and Mrs. Mason of Virginia_, and reached a circulation of 300,000 copies. During the Civil War she was dissatisfied because the abolition of slavery was not made the prime issue, and even the Emancipation Proclamation disappointed her as "merely a war measure"; but after Lincoln's reélection she wrote, "I have constantly gone on liking him better and better." Her later life was uneventful; she survived her husband six years, remaining intellectually alert to the end.

Mrs. Child had a wholesome diversity of interests, best shown by her vivacious private correspondence and by her _Letters from New York_ (2 vols., 1843, 1845). "My natural inclinations," she said, "drew me much more strongly toward literature and the arts than toward reform." Beauty remained a life-long passion: "I hang prisms in my windows," she wrote in old age, "to fill the room with rainbows." Her early novels, however, show a strong didactic bent; and _The First Settlers of New England_ (1829), written before she became an abolitionist, contains the germs of her later ideas. At all events American literature lost little by her interest in reforms, for her creative gift was not great. Her stories and poems for children are notable only as pioneer work; some of her tales and sketches for adult readers have fanciful beauty or realistic force, but all lack the final touch; and even her later novels (_Philothea, 1836, on the Age of Pericles; _a Romance of the Republic_, 1867, on slavery and the Civil War) are weak in structure and character-drawing. Mysticism and rationalism, which ran parallel in her nature, early freed her from accepted creeds. Although she never went wholly over into spiritualism, she believed in second sight and saw a profound dualism in all things. Her _Progress of Religious Ideas through Successive Ages_ (3 vols., 1855) lacks a basis of adequate scholarship, but was for its time a remarkable attempt to see Christianity in its relation to other religions. Her practical books show great good sense and some advanced ideas. _The Frugal Housewife_ (1829), packed with useful information and shrewd hints to thrift, seems the work of a female Franklin; it went to a twentieth edition in seven years. _The Mother's Book_ (1831) urged that parents frankly instruct their children on "delicate subjects." Mrs. Child's writings on slavery are compounds of emotional idealism, cool logic, historical and economical truth, and anthropological error. She assumes that negroes and whites differ merely in "complexion," and infers an ancient negro civilization from Homer's reference to "the blameless Ethiopians." _The Freedmen's Book_ (1865) abounds in hopeful counsels of perfection, including a daily cold tub and rub. The _Appeal_ sometimes pictures appalling cruelties without names of witnesses or details of time and place, and the chapter on the slave trade is irrelevant in a discussion of domestic slavery as it then was; yet the style is strong, the tone calm, and the arguments against the moral and economic evils of slavery unanswerable. The crushing reply to Mrs. Mason avoids the faults of the _Appeal_, and is drawn largely from the laws of the Southern states. _The Right Way the Safe Way_ (1860) is a solid piece of work, based on detailed knowledge of emancipation in the British West Indies. The best parts of Mrs. Child's writings on slavery make credible Whittier's statement: "She was wise in counsel; and men like Charles Sumner, Henry Wilson, Salmon P. Chase, and Gov. Andrew availed themselves of her foresight and sound judgment of men and measures."

[The chief sources of information about Mrs. Child are the following: Elias Child, _Genial Child, Child, and Child's Families_ (1881); _Letters of Lydia Maria Child_ (1883), with a biographical introduction by John G. Whittier, Wendell Phillips' remarks at her funeral, a portrait of her at sixty-three, and a list of her works; _Letters from N. Y._ (2 vols., 1843, 1845); a biographical sketch by T. W. Higginson in _Contemporaries_ (1899),

Child

days (1868) and Letters and Journals (1921) ; G. T. Curtis, “Reminiscences of N. P. Willis and Lydia Maria
work and personality may be found in the Atlantic Mo-
Dec. 1882, and the N. Y. Nation, Jan. 25, 1883. Her
more important works, in addition to those named
above, are the following: Biog. of Lady Russell and
Madame Guion (1832) ; Biog. of Madame de Staël and
Madame Roland (1833) ; Good Wives (1833) ; Hist. of
the Condition of Women in Various Ages and Nations
(2 vols., 1835) ; The Oasis (1834), an anti-slavery mis-
cellany ; Authentic Anecdotes of Am. Slavery (1835) ;
The Evils of Slavery and the Cure of Slavery (1836),
in part a compilation of statements by Southerners;
Fact and Fiction (1846), containing her best story,
“The Children of Mount Ida”; Isaac T. Hopper (1853),
life of a Quaker Abolitionist; Autumnal Leaves; Tales
and Sketches in Prose and Rhyme (1857) ; Aspirations
of the World (1878), selections from the religious books
of the world, with introduction by Mrs. Child.] W.C.B.

CHILDE, JOHN (Aug. 30, 1802-Feb. 2, 1858),
pioneer civil engineer, was born in West Boyl-
ston, Mass., one of the twelve children of Zacha-
rial and Lydia (Bigeelow) Child. During his boyhood he worked upon his father’s farm, with
only such educational advantages as those of the
district school, except for two years which he
spent with an older brother in Canada and one
year at Georgetown College, D. C. He was, how-
ever, an exceptionally studious boy, and in 1823
he entered West Point Academy, from which he
was graduated in 1827 with the commission of
second lieutenant. In 1835 he resigned from the
army to enter the profession of civil engineering,
and from that time on was actively engaged in
survey, location, construction, and consulting
work in connection with the establishment of
new railroad lines. One of his earliest and most
difficult tasks was the location of the route for
the Albany & West Stockbridge Railroad be-
tween Springfield and Pittsfield across the Green
Mountain Range. Theretofore no attempt had
been made in the United States to run a line
through a district with such formidable obstacles.
Child entered upon his work with the greatest
professional enthusiasm, and to the amazement
of layman and engineer alike, accomplished it
most satisfactorily. This achievement, in 1844,
resulted in a constant demand for his services by
one railroad or another. His connection with the
Southern lines began in 1848 when he became
chief engineer of the Mobile Railroad Company.
The road to be built was from Mobile to the
mouth of the Ohio River, about 500 miles. It was
the longest that had been attempted in the United
States at that time. Running across four states,
through a region where railroads were unknown,
many difficulties were anticipated—and found.
Child not only superintended the field workers
but he, in order to obtain subscriptions for stock,
canvassed the whole country through which the
line was to run; through his efforts at Washing-
ton, Congress passed in its session of 1849–50
the first of a series of acts donating about one
million acres of land to aid the company; he vis-
ited the legislatures of the various states and ob-
tained valuable privileges from them for the
road. He even made two trips to England to dis-
pose of large issues of bonds. Owing to a change
of directors in 1856, his professional connection
with this work terminated in that year, and when
in 1857 the Board of Harbor Commissioners was
established for constructing an extensive harbor
at Montreal, Canada, Child was placed at the
head of a corps of engineers to make the neces-
ary examination and report. While occupied in
arranging the large amount of statistical data for
this report, he was taken seriously ill and died at
his home in Springfield, Mass. Child’s character,
enormous capacity for work, his unusual execu-
tive ability, and his genius for solving diffi-
cult railroad problems made him an outstanding
figure of his time. Of fearless independence and
absolute honesty, his decisions were respected
alike by employer and employee. He was mar-
rried in 1832 to Laura Dwight of Springfield,
Mass. She and their oldest daughter were lost
on board the fated Arctic in 1854 while returning
from Europe. In 1856 Child was married to
Ellen W. Healy of Boston, Mass., who survived
him.

[Chas. B. Stuart, Biog. Sketch of John Childs (1861),
later included in Lives and Works of Civil and Mili-
tary Engineers of America (1871) ; editorial in Spring-
field Republican, Feb. 3, 1858.] K.W.C.

CHILDS, CEPHAS GRIER (Sept. 8, 1793–
July 7, 1871), engraver, editor, publisher, was
one of the pioneers in establishing lithography
on a commercial basis in the United States. Born
in Plumstead Township, Bucks County, Pa., the
son of a farmer, Cephas Childs, and his wife,
Agnes Grier, at an early age he lost both his par-
ents. He was placed with a wholesale grocer in
Philadelphia, and in 1812 was apprenticed to Gid-
eon Fairman, an eminent engraver in the same
city. The following year he enlisted in the Wash-
ington Guards, a Philadelphia military organiza-
tion, and served during the remainder of the War
of 1812. For the next twenty years he was promi-
nently identified with military organizations in
Philadelphia, and in 1834 was commissioned
colonel of the 128th Regiment of Pennsylvania
Militia. At the same time he was becoming
widely known as an engraver, publisher, and
lithographer. Between 1827 and 1830 he en-
graved and published Child’s Views in Phila-
delphia. In 1829 he became a founder of the litho-
graphic establishment of Pendleton, Kearny &
Childs, Philadelphia, and the following year formed a partnership with Henry Inman, a portrait painter, for the production of lithographs. During a visit to Europe in 1831 in the interest of this business, he suffered an accident on shipboard the results of which forced him to discontinue his engraving. On his return from Europe in 1832 he took renewed interest in his lithograph house, which continued as Childs & Inman until 1833, when with George Lehman the firm became Childs & Lehman. In 1832 Childs became an editor of the Commercial Herald, Philadelphia, and, when this was merged with the North American in 1840, he became the commercial editor. With Walter Colton he purchased the North American, in 1842, but sold his interest in 1845. He was proprietor and editor of the Commercial List and Philadelphia Price Current, from 1835 to 1852, and did not retire from the commercial editorship of the North American until 1847. He was president of the New Creek Coal Company from 1852 to 1864, with the exception of a short interval in 1858–59. From 1839 to 1851 he was secretary of the board of directors of the Philadelphia Board of Trade, of which body he was a charter member. He also was a director of the Bank of Northern Liberties and of the Pennsylvania Academy of the Fine Arts, to which he bequeathed several important paintings by American artists. Childs began business on his own account as an engraver in 1818, and first exhibited his work in the Academy of the Fine Arts in 1824. Three plates for the American edition of Rees's Cyclopedia were engraved by Childs, several subjects being assigned to a plate.

[Phil. Ledger, July 10, 1871; Eugene Munday's "The Press of Phila. in 1870," in the Proof-Sheet, Phila. May 1870; a manuscript "Hist. of Lithography in Phila." by the writer; and facts furnished by a relative of Childs.]

J. J.

CHILDS, GEORGE WILLIAM (May 12, 1829–Feb. 3, 1894), publisher, philanthropist, was born in Baltimore, the acknowledged child of a father belonging to a prominent family of that city. His early years are hidden in mystery save for the few statements he and his biographers have made. At the age of thirteen he entered the United States Navy, and passed fifteen months at Norfolk (Recollections by George W. Childs, 1890, p. 10). When not quite fifteen he went to Philadelphia and worked in a stationery and book-store. In 1848 he started a confectionery business there, under the firm name of George W. Childs & Company but after a few months parted with the store and sold toilet preparations in a small shop in the Ledger Building. In July 1849 he became connected with the book-selling business of R. E. Peterson, who was a silent partner in a firm then dissolved, and who, having been accused of being an infidel, thought it policy to place the business in his clerk's name. In 1853 the firm became R. E. Peterson & Company and undertook Dr. Samuel Austin Allibone's Critical Dictionary of English Literature. In November 1854, the name was changed to Childs & Peterson, whose first great success was Dr. Elisha Kent Kane's Arctic Explorations (1856). Dr. Kane received royalties amounting to $70,000. Childs prevailed upon the author to make his narrative popular rather than scientific, and it owed "a great part of its success to Mr. Childs's skill in engineering and obtaining medals and resolutions complimentary to Dr. Kane from the legislatures of various states, and especially to his labor in Washington" (Review, post, p. 9). The death of Dr. Kane in Cuba the following year was seized upon by the enterprising publisher to keep alive the book's interest, and the body of the explorer was brought back with ceremonies and processions in every city through which it was carried. Upon the dissolution of the firm of Childs & Peterson, in 1860, Childs became a member of that of J. B. Lippincott & Company which took over and completed Allibone's Dictionary. A year or so later he retired from that house and began the publication of several books connected with the war then in progress. In January 1863 he took the Philadelphia agency of the Wheeler & Wilson sewing machine, while still continuing the publishing business, and in May of that year founded the American Publishers' Circular and Literary Gazette, edited by R. Shelton Mackenzie. This publication he continued until 1870. His greatest success and the foundation of his fortune had to do with the Public Ledger, Philadelphia, which newspaper he bought in December 1864, his partners in the enterprise being Anthony J. and Francis A. Drexel, of the banking house of Drexel & Company. When the newspaper was purchased it was losing $3,000 a week. Within a very short time after coming under the proprietorship of Childs, its circulation increased enormously. It reached 90,000 copies a day in 1876, and spread the fame of its proprietor and editor, owing to its high standard of accuracy, decency, and enterprise. Childs was the author of Recollections of General Grant (1885) and Recollections by George W. Childs (1890). He gave the Shakespeare Memorial Fountain, in Stratford-upon-Avon, 1887; a memorial window to the poets Herbert and Cowper, in Westminster Abbey, 1876; a memorial window to Milton, in St. Margaret's Church, Westminster, 1888; the reredos
in St. Thomas’s Church, Winchester, as a memorial to Bishop Ken, 1889. To the West Point Military Academy, of which he was a member of the board of visitors, he presented the portraits of Generals Grant, Sherman, and Sheridan.

He gave his valuable collection of manuscripts to the Drexel Institute, Philadelphia. From 1870, when his mansion was opened, until his death in 1894, he entertained many distinguished visitors to Philadelphia, including the Emperor Dom Pedro of Brazil, the Duke of Veragua, and President Grant. His remains are in a mausoleum in Laurel Hill Cemetery, Philadelphia. He was married to Emma Bouvier Peterson, daughter of his former partner, Robert E. Peterson.

For the early career of Childs the anonymous and suppressed pamphlet, A Review, etc., understood to have been issued by his father-in-law R. E. Peterson about 1873 is most useful. His own Recollections is authority for his later history. The personal knowledge of the writer has supplied the facts both have omitted. See also Jas. Parton, Geo. W. Childs, A Biog. Sketch (1870); J. W. Forney, “Anecdotes of Public Men, No. 2,” Public Ledger (Phila.), supplement, Mar. 1, 1873; Frederick Hudson, Journalism in the U. S. from 1690 to 1872 (1872); Every Saturday, Sept. 10, 1870; Critic, Feb. 10, 1894; Talcott Williams in Am. Rev. of Revs., Mar. 1894; E. J. Edwards in the Chautauquan, Apr. 1894. Obituaries appeared in newspapers all over the world, Feb. 4, 1894.

J. J. CHILDS, THOMAS (1796–Oct. 8, 1853), soldier, was born at Pittsfield, Mass., the son of Dr. Timothy and Rachael (Easton) Childs. He was appointed to the United States Military Academy in 1813. Graduated and promoted in the army to third lieutenant of artillery, Mar. 11, 1814, he served in the Niagara campaign of that year. For spiking the enemy's guns in the successful sortie that raised the siege of Fort Erie (Sept. 17, 1814) he was presented with a captured British quadrant “by order of the President.” After the war Childs settled into the routine life of an officer in the regular army, becoming in due course first lieutenant (1818) and captain (1826). On Jan. 5, 1819, he married Ann Eliza Coryton, of Alexandria, Va., by whom he had nine children. In order to restore the interrupted communication between the military posts in the second Seminole War, he planned the successful attack on Fort Drane (Aug. 21, 1836), for which he was brevetted major. He was later brevetted lieutenant-colonel “for gallant conduct and repeated successes” in the Florida War. In the Mexican War he was brevetted colonel for his conduct in the battles of Palo Alto and Resaca de la Palma. Ordered by Gen. Worth to take Loma de Independencia, which towered seven or eight hundred feet above the Bishop's Palace at Monterey, Childs led six companies of artillery and infantry and 200 Texas riflemen, up the rocky, chaparral-covered hillside. The almost vertical ascent was begun at 3 A. M. (Sept. 22, 1846) in the midst of a torrential rain, and by daybreak Childs was within 100 yards of the breastwork of sandbags, a position considered impregnable by the Mexican generals. The Mexican battery was stormed and Worth's troops enabled to capture the western gate of the city. In the following year, Childs, with a strong garrison, was stationed at Jalapa as military governor (April to June 1847) by Gen. Scott, with orders to keep open as long as possible the line of communication with Vera Cruz. With Scott's advance on Mexico City Childs was called to Puebla, where he was besieged by Santa Anna. In the siege “the chief element of the defence was the large, robust, fine-featured Childs” (Smith, post, II, 174). For his defense of Puebla he was brevetted brigadier-general (1847). There were some complaints of his administration as civil and military governor of Puebla (September–October 1847), but the Bishop of Puebla admitted that Childs did everything he could to prevent abuses. Childs was in command of military operations in East Florida from 1852 until his death from yellow fever at Fort Brooke, Fla.

F. E. R.

CHILTON, WILLIAM PARIS (Aug. 10, 1810–Jan. 20, 1871), jurist, was descended from an English family of that name which settled upon the Potomac River about 1650. His father, Thomas John Chilton, a Baptist minister of some note, married Margaret, sister of Jesse Bledsoe, a Kentucky jurist, and William was born near Elizabethtown, Adair County, Ky. His parents died while he was a child, and little is known of his early life beyond the fact that he was brought up by a maternal relative. His education was scanty; nevertheless at the age of seventeen he was earning his living by teaching. In 1828 he went to Nashville, Tenn., where he studied law for three years, and in 1831 removed to Alabama. After some preliminary prospecting he opened a law office at Mardisville, Talladega County, and finally settled at Talladega, the county seat. In 1839 he was elected as Whig
representative of his county in the state legislature, where he established a reputation for ability out of the ordinary, and was regarded as a rising force in politics. In the presidential campaigns of 1840 and 1844 he was much to the fore, addressing meetings in all parts of the state on behalf of Harrison and Clay, and in 1843 was an unsuccessful candidate for Congress. In 1846 he removed to Tuskegee, Ala., where he established and conducted a law school, also continuing in practise till his election by the state legislature to the position of judge of the supreme court of Alabama, Dec. 31, 1847. This action of the legislature was a signal testimony to his standing in the community, since he was a strong Whig and its membership was predominantly Democratic. He was chief justice from Dec. 2, 1852, until Jan. 2, 1856, when he retired, and resumed practise. In 1859 he was elected as state senator for Macon County. He considered secession unwise but when the step became inevitable he resigned, and, having taken up his residence in Montgomery, was elected to represent that district in the provisional Confederate Congress. Secession having become a fait accompli he threw himself with vigor into the contest, and was an influential member of both regular Confederate Congresses. He acted on important committees and his energy was such that it earned for him the reputation of being “the most laborious member” of the Southern legislative body. The fall of the Confederacy left him in poor financial circumstances, but engaging in law practise he to a large extent retrieved his losses before his death at Montgomery, Jan. 20, 1871. He was twice married: first to Mary Catherine, daughter of George Morgan of Nashville, Tenn., and later to Elvira Frances Morgan, his deceased wife’s sister.

A contemporary says of him: “Justice Chilton was of a rather robust figure with well-formed features and a grave but cheerful manner. A profound lawyer and a dignified and impartial judge—distinguished by pure unselﬁsh patriotism, an incorruptible integrity and a capacity and willingness to work which seemed inexhaustible” (W. Brewer, post). Fluent in speech, attractive in manner, and possessed of an imposing platform appearance—being over six feet in height—he was a favorite speaker at public meetings, and in the legislature had the reputation of being the ablest debater of his period.

Chilton

CHINI, EUSEBIO FRANCISCO. [See King, Eusebio Francisco, 1645-1711.]

CHIPMAN, DANIEL (Oct. 22, 1765-Apr. 23, 1850), lawyer, author, was descended from John Chipman of Dorchester, England, who came to Boston on the Friendship, July 14, 1631, and settled at Barnstable, Mass. John’s great-grandson, Samuel Chipman, a farmer and blacksmith of Salisbury, Conn., married Hannah, daughter of Dr. Nathaniel Austin of Suffield, Conn., and their seventh son, Daniel, was born at Salisbury. Daniel’s early education was received at home and after his father’s removal to Tinmouth, Vt., he studied under his elder brother Nathaniel, assisting also in the farm work. In 1784 he entered Dartmouth College and graduated in 1788. He then took up the study of law in his brother’s ofﬁce at Rutland, and was admitted to the bar of Rutland County in 1790. He ﬁrst opened an ofﬁce in Rutland and was a delegate from that place to the state constitutional convention in 1793, but in 1794 moved to Middlebury, where he practised law for twenty-ﬁve years. In 1796 he married Eletheria, daughter of Rev. Samuel Hedge, of Warwick, Mass., and the following year became state attorney for Addison County, a position which he continued to occupy till 1817. He had, at an early age, taken an active interest in politics, and in 1798 was elected to represent Middlebury in the General Assembly, being reelected almost continuously till 1808. In that year he was elected to the governor’s council and remained a member thereof for seven years, being speaker of the legislature in 1813 and 1814. In 1814 he was elected a representative in Congress, but after serving one session was compelled to resign owing to prostrated illness. On regaining his health in 1818 he was once more elected to the Assembly for Middlebury, serving for the sessions of 1818 and 1821. In the latter year he terminated his long connection with the Vermont legislature. He had, in addition to his legal and political engagements, been professor of law at Middlebury College from 1806 till 1816, and on his retirement from active politics devoted part of his time to writing an Essay on the Law of Contracts for the Payment of Speciﬁc Articles, which was published in 1822. In 1823 he was appointed by the legislature the ﬁrst reporter of the supreme court of Vermont, and prepared volume I of Reports of Cases Argued and Determined in the Supreme Court of . . . Vermont, covering the years 1789-1824, which was issued in 1824. Another attack of serious illness compelled him to resign, and in 1829 he retired to Ripton, where he was able to give free rein to his literary proclivities. On two occa-
Chipman

ensions, however, he emerged from his retirement, being a delegate to the state constitutional conventions of 1843 and 1850. His matured judgment had always carried weight with all parties in Vermont, and he exercised great influence in the five constitutional conventions which he attended. It was at his suggestion that the legislature was divided into a House of Representatives and a Senate. During his last years three valuable biographical works came from his pen: The Life of Hon. Nathaniel Chipman, formerly Member of the U. S. Senate and Chief Justice of the State of Vermont, with Selections from his Miscellaneous Papers (1846); The Life of Colonel Seth Warner, with an Account of the Controversy between New York and Vermont from 1763 to 1775 (1848); A Memoir of Thomas Chittenden, the First Governor of Vermont, with a History of the Constitution during his Administration (1849). While attending the constitutional convention of 1850, he collapsed, and was taken to his home at Ripton where he died.

[VT. Hist. Gazetteer (1868), I, p. 87; Bert Lee Chipman, Chipman Family: Genal. Chipmans in America 1631-1920 (1920).]  
H. W. H. K.

CHIPMAN, NATHANIEL (Nov. 15, 1752-Feb. 15, 1843), jurist, the son of Samuel and Hannah (Austin) Chipman, was born at Salisbury, Conn. He was fourth in descent from John and Hope (Howland) Chipman, who settled in Barnstable, Mass., in 1631. In 1773, after nine months of preparation under a local minister, he entered Yale College, where he received his degree (in absentia) in 1777. That spring he received an ensign's commission in Col. Charles Webb's Second Connecticut Continental Line. After some eighteen months of service, including the winter at Valley Forge where he was promoted to a first lieutenantcy, he resigned. In March 1779 he was admitted to the bar in Litchfield County, Conn., but went immediately to Vermont, where his father had settled at Tinmouth. In June, he was admitted to the bar of Rutland County, Vt., and began the practise of law. Two years later, when the Vermont leaders—Thomas Chittenden [q.v.] and others—were involved in secret negotiations with Gen. Haldimand, and rumor was current regarding their treason, Chipman was called into conference with them, regarding certain letters, which the legislature demanded be read in session. It is said that Chipman expurgated the letters in such a manner that the legislators were satisfied that the negotiations were not treasonable (Daniel Chipman, post, pp. 37-38). In 1784, he was a member of the legislature, and was appointed to a committee to revise certain acts. Three years later, his legal capacity won him an appointment as assistant justice of the supreme court of Vermont—the first lawyer to sit on that bench.

When the ratification of the Federal Constitution was being considered by the various states in 1788, Chipman, who was anxious to see Vermont admitted to the Union, took up the matter with Alexander Hamilton and exchanged several letters with him. In 1789 he was appointed to the Boundary Commission, whose agreement brought about a settlement of the dispute between New York and Vermont in 1790. At this same time he became chief justice of the supreme court of Vermont. When the constitutional convention met at Bennington in January 1791, he took a prominent part in its actions, and his influence was instrumental in securing ratification. He was sent, with Lewis R. Morris, to Congress to negotiate for the admittance of Vermont to the Union. Their efforts were successful, and the State was soon admitted.

Within a short time he was appointed judge of the United States court in the district of Vermont, an office he held only two years. In 1793 he resigned and took up his private practise, publishing in that year his Sketches of the Principles of Government (revised edition, 1833), and his Reports and Dissertations, consisting mainly of reports of cases before the supreme court of Vermont. In 1796, he again became chief justice of the supreme court. At the same time he was made a member of a committee to revise the state code, and the statutes of 1797 were almost entirely his work. In 1798 he was elected to the United States Senate, where he served six years. His work there was not of a spectacular nature, but his judicial mind, with its legal background, proved a valuable asset in Senate affairs. Upon the expiration of his term, he returned to private practise in Tinmouth, but was soon sent to the legislature, representing the town in 1806-09, and in 1811. In March 1813 he became one of the Council of Censors, a committee of thirteen, having power to examine the constitution of the state and institute revision of it. In this same year he was again appointed chief justice. In 1816, he succeeded his brother, Daniel, as professor of law in Middlebury College, where he delivered a series of lectures (printed in part in Daniel Chipman's Life) during the ensuing collegiate year. Owing to serious deafness he never returned to public life, but spent the remainder of his days in Tinmouth, where he died Feb. 15, 1843. A large monument, erected there in 1873, commemorates his service to the state. He was married, in 1781, to Sarah Hill, of Tinmouth, who bore him nine children.
Chipman

He was a thorough student of the law. His heritage of a good mind, his careful training in the classics, and his keen interest in the political affairs of his time made him one of the ablest men of his day in Vermont. In politics he was a Federalist, of the school of Hamilton.

G. H. D.

CHIPMAN, WARD (July 30, 1754–Feb. 9, 1824), Loyalist, the son of John Chipman, a lawyer of Essex County, and Elizabeth (Brown) Chipman, was born in Marblehead, Mass. (Vital Records of Marblehead, Mass., I, 102). He graduated from Harvard with the degree of M.A. in 1770 and, after serving for a short time as preceptor of the free school at Roxbury, studied law under Daniel Leonard and Jonathan Sewall in Boston. He was one of the signers of a loyal address to Gov. Gage on Oct. 14, 1775, and upon the evacuation of Boston in March 1776 removed to Halifax with the British army (Stark, post, pp. 132, 133). From there he went to England where he was granted a pension but, dissatisfied with a life of inactivity, he resigned it and returned to America in 1777. He joined his friend Edward Winslow, muster-master general, at New York, and was appointed deputy muster-master general, an office which he held for the duration of the war. Upon the conclusion of peace, Winslow removed to Nova Scotia, but Chipman remained at New York as secretary of a commission to receive claims for supplies furnished to the British government. He was one of the signers of a petition to the commander-in-chief, asking for a grant of lands in Nova Scotia, but later dissociated himself from this enterprise and wrote to Winslow to provide for him “a very romantic, grand-water-river-falls-lake-prospect with a good cold spring of water” (Winslow Papers, p. 115). Chipman left New York for England with Sir Guy Carleton on Dec. 4, 1783. Winslow favored a separate government for that part of Nova Scotia lying north and west of the Bay of Fundy and in England Chipman did what he could to bring this about. The province of New Brunswick was set off from Nova Scotia in 1784, and Chipman applied for the office of attorney-general in the new government. He failed to receive it but was appointed solicitor-general, an office which he held for many years without pay because he had retained the half-pay of £91 per annum of deputy muster-master general. Chipman sailed from England in August 1784, and took up his residence at St. John, New Brunswick, where he resumed the practise of law. He was elected to the first House of Assembly of New Brunswick for St. John in 1785, and to the second, for Northumberland County, in 1793. He again represented St. John in the fourth legislature, which met in 1802. He was appointed a member of the Council in 1806, and a judge of the supreme court of New Brunswick in 1809. The treaty of 1794 between Great Britain and the United States provided for a commission to locate the St. Croix River, and Chipman served as agent of the Crown. The treaty of 1814 provided for a commission to determine points between the source of the St. Croix and the point of intersection of the St. Lawrence and the forty-fifth parallel, and Chipman again served as agent of Great Britain. Upon the death of Lieutenant-Governor Smyth in 1823, Chipman succeeded as president and commander-in-chief of the province of New Brunswick, an office which he held at the time of his death. He was married, at St. John on Oct. 24, 1786, to Elizabeth, daughter of William Hazen, a fellow Loyalist. An only son, Ward Chipman, Jr., became chief justice of the supreme court of New Brunswick.

I. M. C.

CHISHOLM, HUGH JOSEPH (May 2, 1847–July 8, 1912), paper manufacturer, was born on the Canadian side of Niagara Falls, the son of Alexander Chisholm, who had come from Scotland as a boy, and his wife, Mary (Phelan) Chisholm. Young Chisholm's education at the local schools terminated with the death of his father, and at the age of thirteen he commenced his business career as a newsboy on the Grand Trunk Railway. His unusual industry and thrift enabled him by the time he was sixteen to secure control of newspaper distribution along the whole Grand Trunk system, and in partnership with his brothers, he was a pioneer, if not the originator, in this country "of the transportation publishing business, producing railroad maps, tourists' guides and albums descriptive of routes of travel" (Paper, July 10, 1912, p. 30). In 1855 he moved his residence to Portland, Me., and in 1872 married Henrietta Mason of that city. Shortly after his arrival in Portland he became interested in the manufacture of pulp, and this industry in connection with his railway news business drew his attention to the manufacture of paper. He organized the Somer-
Chisholm

set Fibre Company, in 1881 the Umbagog Pulp Company at Livermore Falls on the Androscoggin River, and in 1887 the Otis Falls Pulp Company on the Androscoggin. In the early eighties he became convinced that the upper reaches of this river offered unlimited water power and excellent advantages for the manufacture of paper. With a group of associates he purchased an eleven-hundred-acre tract, founded the Rumford Falls Power Company (1890), and then, to provide an outlet, took over the moribund Rumford Falls & Buckingham Railroad, which he speedily rehabilitated and opened to traffic as the Portland & Rumford Falls Railway in 1892. Thus were laid the foundations of a town, which by that year had a population of three thousand and all of the features of an up-to-date industrial community. On the site of the new town were established the Rumford Falls Paper Company, the Oxford Paper Company, the Continental Paper Company, and other concerns which Chisholm organized or in which he was heavily interested.

As a prominent figure in the paper industry of the late nineties he took an important part in the formation in 1898 of the International Paper Company, a combination which controlled about thirty of the leading Eastern newspaper and pulp mills as well as large areas of forest land. Shortly after its organization he became president, holding that office from 1899 to 1910 and serving as chairman of the board of directors, 1907–09. In addition to his interests in paper manufacture and railroads, he was a director of banks, power companies, and many other concerns.

Chisholm not only had the ability to create communities, but he was desirous that his mill villages should be decent places in which to live. In the neighborhood of one of his plants at Strathglass Park, near Portland, Me., he established a community of model houses for his employees, and at Rumford Falls he was instrumental in founding Rumford Mechanics' Institute, a center dedicated, Nov. 9, 1911, to "physical and mental development, social and moral improvement and the cultivation of an equality or more intimate relationship and acquaintance between employed and employer" (Paper, Nov. 15, 1911). The extent of his interests led him to move to New York City, which was his headquarters for a number of years prior to his death.

Leonard, p. 442: Men of Progress . . . in the State of Me., (1897), ed. by P. W. McIntyre and Wm. F. Blanding; Sun (N. Y.) and N. Y. Times, July 9, 1912; Who's Who in America, 1912-13.] H. U. F.

Chisolm

CHISOLM, ALEXANDER ROBERT (Nov. 19, 1834–Mar. 10, 1910), soldier, financier, was the son of Edward Newville Chisolm of Beaufort and Chisolm's Island, S. C., who married, Dec. 14, 1831, Mary Elizabeth, daughter of Maj. William Wigg Hazzard of Hazzard's Neck, Port Royal, S. C. His father was the owner of an extensive estate on the coast near Charleston, which had descended to him through four generations from his ancestor, Alexander Chisholm (sic), a lowland Scot, who emigrated to Carolina in 1717. Alexander Robert was born at Beaufort, but both parents died while he was still a child, and his youth was passed in New York City under the guardianship of relatives. He studied for a short time at Columbia College but in 1852 returned to South Carolina, and, taking up his residence on Chisolm's Island a short distance from Charleston, assumed charge of the plantations which he had inherited from his father, together with the 250 slaves thereon. When the Civil War became imminent he joined the South Carolina forces, being commissioned lieutenant-colonel by Gov. Pickens, Mar. 2, 1861. Because of his intimate knowledge of the approaches by water to Charleston, he became personal aide to Gen. Beauregard who was in command of the troops in that neighborhood. He was the bearer of the first communication from Beauregard, Mar. 26, to Maj. Robert Anderson, commanding Fort Sumter, relative to the impending evacuation of that post, and, Apr. 11, personally conveyed to Anderson Beauregard's demand for its surrender. The following day he was present when the first gun of the war was discharged—some accounts stating that he personally gave the order to open fire upon the fort. Thenceforth, throughout the war, he remained on Beauregard's personal staff, being actively engaged in the battles of Bull Run, Shiloh, and Drury's Bluff, and in the sieges of Charleston and Petersburg. At Bull Run he was conspicuous by reason of taking part, though a staff officer, in the Black Horse Cavalry charge, and during the battle of Shiloh all Beauregard's orders were transmitted through him. He "was seldom at a loss for resources in an emergency," and at all times he enjoyed the complete confidence and friendship of his chief (Roman, post, II, 411). At the close of the war he signed at Greensboro, N. C., on behalf of Gen. Joseph E. Johnston the parole of the latter's troops east of the Mississippi.

On returning to private life, he established a cotton and shipping firm in Charleston in partnership with Maj. Edward Willis, but in 1869 he moved to New York City where he entered into the stock brokerage business, trading as A.
Chisolm

R. Chisolm & Company, and being one of the promoters of the New York Consolidated Stock Exchange. On Apr. 7, 1875, he was married to Helen Margaret, widow of William Irving Graham and daughter of Gen. Richard L. Schieffelin. In March 1877 he founded the Mining Record, a weekly paper devoted to the mining resources of the country, with Gen. Thomas Jordan, a former army colleague, as editor, becoming himself co-editor in December 1882. The scope of the paper was subsequently enlarged to cover the financial, railway, and petroleum fields and its name changed to the Financial and Mining Record, novel features being the creation of assay and law departments—the latter expressly stated to be "in the interests of the capitalists who are willing to invest their money for the development of the mines." Later Chisolm was the subject of adverse criticism, the suggestion being that his position as proprietor of an ostensibly impartial financial publication was incompatible with that of an active member of the stock exchange, and in July 1890 he disposed of his interest in the Record and retired from the editorship. He contributed to Battles and Leaders of the Civil War the following articles, "Notes on the Surrender of Fort Sumter" (I, 82), "The Shiloh Battle-Order and the Withdrawal Sunday evening" (I, 606), and "The Failure to Capture Hardee" (IV, 679).

[Family history of W. G. Chisolm, Chisolm Genealogy (1883), which contains (p. 31) a sketch. See also A. Roman, Military Operations of Gen. Beauregard (1884), passim; S. W. Crawford, Genesis of the Civil War (1887); announcements in Mining Record and Financial and Mining Record; obituaries in N. Y. Daily Tribune, Mar. 11, 1910.]

H. W. H. K.

CHISOLM, JOHN JULIAN (Apr. 16, 1830–Nov. 2, 1903), surgeon and oculist, born in Charleston, S. C., was the son of Robert Trail and Harriet Emily Chisolm, and a descendant of Alexander and Janet (Fraser) Chisolm of Inverness, Scotland, who came to South Carolina about 1717. Having received the degree of M.D. at the Medical College of South Carolina (1850), he continued his studies in London and Paris. He returned to Charleston in 1852 and soon demonstrated great skill as a surgeon. He conceived the idea of following the European custom of having gratuitous lectures on medical topics delivered at night for the benefit of all students and covering the school work and lectures of the previous week. The plan was successful and Chisolm was selected to deliver the lectures on surgery. From this system there developed the summer school of medicine (1853), one of the first of its kind. During this period Chisolm conducted a free hospital for slaves. In 1858 he was appointed professor of surgery at his alma mater and is said to have been the youngest professor of surgery in the United States. At the outbreak of the Civil War he received from the Confederacy the first commission issued to a medical officer and attended the wounded at Fort Sumter. He began at once the preparation of his Manual of Military Surgery (1861) and was able to present the first copy to the surgeon-general while the battle of Bull Run was being fought. This text, based on the author's experience in Italy in 1859, when he saw many of the wounded from Magenta and Solferino in the hospitals of Milan, became the standard of the Confederate army and appeared in several editions. He was for a time chief surgeon of the military hospital at Richmond and later directed the plant for the manufacture of medicines at Charleston until it was burned by the Union forces under Sherman during the Civil War. After the war he returned to his professorship and was made dean (1865). He spent 1866 in Europe and in 1868 declined the chair of surgery at New Orleans. He removed to Baltimore in 1869, and within a few months a chair of eye and ear surgery was created for him at the University of Maryland. Before the end of the year he was elected dean. He retained active connection with the University until 1895 after which time he was professor emeritus. He declined professorships at the Universities of St. Louis and Louisville. In 1870 he organized the Baltimore Eye and Ear Institute and in 1877 the Presbyterian Eye and Ear Charity Hospital, of which he was chief surgeon. Beginning in 1873 he limited his practise to ophthalmology which he continued until 1898 despite an attack of apoplexy with aphasia in 1894. He was married, first, to his cousin Mary Edings Chisolm at Charleston, Feb. 3, 1852; and, secondly, to Elizabeth Steel, at Petersburg, Va., on Jan. 14, 1894. He died in Petersburg and was buried in Greenmount Cemetery in Baltimore.

Chisolm was a prolific writer (more than a hundred papers), not only of original articles but of résumés of the literature on special surgical topics to which he added his views and experiences. He was among the first to use cocaine in eye surgery and his operative treatment of cataract was well known. He was one of the first users of chloroform anaesthesia. One of the ablest instructors the University of Maryland ever had, he was the recipient of many honors.

Chisolm
Chittenden

variously in published accounts, have been verified by Wm. G. Chisolm, a nephew.]

E. E. H.

CHITTED, JOHN SIMPSON (Aug. 15, 1824–
Dec. 23, 1884), cattleman, was born in Hardeman
County, Tenn., the son of Claiborne C. and Lucy
(Chisum) Chisum. The family was of Scotch
origin. The father’s name had been Chisholm,
and the altered spelling is said to date from the
time of the battle of New Orleans. Claiborne
Chisum with his family moved to Texas in 1837.
The boy had no advantages and began to work at
an early age. He was diligent and determined,
and success followed his efforts. He became a
contractor and builder and constructed the first
court-house in Paris, Tex. For eight years he was
the county clerk of Lamar County. In 1854, with
a partner, he started in the cattle business in the
same county, but three years later moved to Den-
ton County, where he remained until 1863. In
that year he drove a herd, estimated at 10,000
head, into Concho County, where he engaged in
business with a number of other men on shares.
He was one of the first of the Texas cattlemen to
shift their operations to the ranges of New Mex-
ico. In the late fall of 1866 he drove a herd up
the Pecos to Bosque Grande, about thirty miles
north of Roswell, and in the following spring dis-
posed of it to government contractors for the
Navajo and Mescalero Apache reservations. He
then formed a connection with Charles Good-
night by which for three years he continued to
drive cattle from Texas to Bosque Grande, Good-
night contracting for their sale in Colorado and
Wyoming. Indian raids were frequent, and later
came the depredations of white “rustlers,” but in
spite of heavy losses in cattle and horses Chisum
prospered. In 1873 he made South Spring his
home, establishing a ranch there. His herds mul-
tipled; estimates of the number of cattle owned
by him at the peak of his prosperity vary from
60,000 to 100,000. It seems certain that he was
the largest individual owner in the United States
and may well have held the same title for the
world.

His part, if any, in the famous Lincoln County
War of 1878–79 is a subject of dispute. This
war, growing out of alleged thefts of cattle from
Chisum and others by employees of Maj. L. G.
Murphy, and breaking into savage conflict on the
killing (Feb. 12, 1878) of J. H. Tunstall, a friend
of Chisum, involved most of the cattleman’s par-
tisans. It is denied, however, by Anderson (see
below) that either Chisum or any man employed
by him participated in any of the acts of violence
that followed. Neutrality under the circum-
stances would have been difficult, and that it was
not wholly attained is indicated in a statement
quoted by Burns, in The Saga of Billy the Kid,
which asserts the payment by Chisum of $500 to
the Kid for his services in the war. The evolu-
tion of the Kid into a cattle thief, an indis-
criminate killer, and the leader of a gang of des-
peradoes brought Chisum to the front in the
movement to end lawlessness in New Mexico.
He was largely instrumental in 1880 in having
Pat Garrett elected sheriff, and it was Garrett
who a few months later ended the young bandit’s
career. A popular belief long associated Chisum,
in spite of his disclaimer, with the great Chisholm
cattle trail, but it is now generally conceded that
the trail, which probably he never even saw, takes
its name from Jesse Chisholm, a half-breed Cher-
okee trader and government agent, who was not
related to the cattleman.

Chisum was unmarried. He died at Eureka
Springs, Ark., leaving an estate valued at about
$500,000. For many years he had been known
as the “cattle king of America.” He was a man
adventurous and brave, resolute in purpose and
cool in the face of danger, who in the most law-
less period of New Mexican history often risked
his life. In his community he was, except for the
brief period of the ascendancy of the Murphy
faction in the time of the Lincoln County war, a
dominating influence, and there is no evidence
that he used his power for unworthy ends. By
his many friends, among whom in his later days
he was familiarly known as “Uncle John,” and
by the community generally, he was regarded as
honest, truthful, and public spirited.

CHITTENDEN, HIRAM MARTIN (Oct.
25, 1858–Oct. 9, 1917), military engineer, his-
torian, was born at Yorkshire, in the Chautauqua
Lake region of New York, the son of William F.
and Mary Jane (Wheeler) Chittenden. He was
a student at Cornell when appointed to West
Point from which he graduated with high hon-
ors, June 15, 1884, as a second lieutenant of en-
gineers. On Dec. 30, after entering the Engineer
School of Application for the usual three years’
course, he married Nettie M. Parker of Arcade,
N. Y. He was made a first lieutenant on Dec. 31,
1886, and on his graduation was ordered to
Omaha as engineer officer of the Department of
the Platte. A two years’ detail followed (June
1891–March 1893) as assistant to the officer in
charge of road construction in Yellowstone Na-
tional Park. It marked the awakening in him of

77
Chittenden

a deep and abiding interest in the history and the topography of the Great West and a wish to preserve its chief wonderland, unaltered except by new trails and roadways, "as a genuine example of original nature." Out of this experience came his book, *The Yellowstone National Park*, the first edition of which appeared in 1895. Other details took him for a time elsewhere; as a captain (commissioned Oct. 2, 1895) he had charge of improvement work on the Osage and Gasconade Rivers in Missouri, and in the Spanish-American War he served as chief engineer of the 4th Army Corps. But in the spring of 1899 he was back in the Park, this time in full charge of road construction and with an adequate appropriation; and he kept to the task, in spite of other calls, for the seven years necessary to complete the first stage of the work.

During this period he was promoted to the rank of major (Jan. 23, 1904) and was appointed a member of the Federal Commission on Yosemite Park. In the midst of his arduous duties he somehow found time for much writing. Two technical works on reservoir systems had appeared in 1897 and 1898. *The American Fur Trade of the Far West* was published in 1902, *The History of Early Steamboat Navigation on the Missouri River* a year later, and *The Life, Letters and Travels of Father Pierre Jean de Smet* (written in collaboration with Alfred T. Richardson) in 1905. From 1906 to 1908 he was engaged in engineering projects on the Pacific Coast. In the latter year overwork brought on a stroke of partial paralysis, from which he never fully recovered. On Feb. 10, 1910, he was retired, with the rank of brigadier-general, for disability incident to the service. Despite his infirmity, however, he continued his labors both as an author and an engineer. From Sept. 5, 1911, to Oct. 15, 1915, he was president of the Port Commission of Seattle, and under his charge the excellent docking and terminal facilities of that city were planned and constructed. In 1911 he produced *War or Peace*, in 1915 *Flood Control*, and in 1916 *Letters to an Ultra-Pacifist*. Perhaps his last literary labor was given to a thorough revision and considerable expansion of *The Yellowstone National Park*, a new edition of which appeared after his death. He died in Seattle.

Chittenden was a man of the highest character. He had great energies, an exceptional intensity of purpose, and unflagging industry. Despite his somewhat dignified reserve he was genial and companionable. In the field of engineering, wherein his chief interests were the Park, flood control, and the storage of waters, he was known as a "practical idealist"—one whose imagination and vision were guided by a matter-of-fact regard for the attainable with the means at hand. To his work as a historian he brought an eager spirit of inquiry, a critical judgment, and a passion for exactness; and to these were added a rare art of presentation. In his invaluable history of the fur trade he not only recovered from court records, newspapers, letters, and the dusty papers of the fur companies the unknown or long-forgotten data of the period but he so vitalized his material that he recreated an era. The work has not escaped criticism for an occasional omission or misplacing of emphasis (as, for instance, in T. M. Marshall's paper, "St. Vrain's Expedition to the Gila in 1826," in *The Pacific Ocean in History, 1917*); but the wonder must remain that in this pioneer venture so few defects have been found. Though later discoveries have greatly augmented the documentation of the era, they have not served to impair the basic excellence of this epochal work.

W. J. G—t.

CHITTENDEN, MARTIN (Mar. 12, 1763–Sept. 5, 1840), governor of Vermont, son of Thomas [q.v.] and Elizabeth (Meigs) Chittenden, was born at Salisbury, Conn. When he was about five years old his family removed to Vermont and settled at Williston, where he grew to manhood. He was sent to Dartmouth College, receiving his degree in 1780. On Sept. 7, 1790, he was elected to the General Assembly as the representative of the town of Jericho, where he had taken up his residence. For eight years he held this office, and, upon his removal to Williston in 1798, he was immediately elected to the same office from that town. In 1791 he was a delegate from Jericho to the Bennington convention, called to ratify the Federal Constitution; and, in 1793, he attended the constitutional convention held at Windsor. He was clerk of the Chittenden County Court, later an assistant justice, and finally chief judge, an office he resigned upon his election to Congress, as a Representative, in 1803. He was relected four times. In 1811 and again in 1812 he was a candidate for the governorship of the state, but was defeated both times by his brother-in-law, Jonas Galusha (who married Mary Chittenden). The next year he ran again, as a Federalist, against Galusha. As neither candidate had a majority of the votes cast, the election was decided by the House, who chose Chittenden by a majority of one. The following November he issued his proclamation,
recalling the Vermont militia from New York, where it had been taken under the command of Elias Fassett, who was removed from command by the Assembly at the instance of the Governor, and replaced by Jacob Davis. Chittenden maintained that the militia should not leave the state, and that an officer of the United States Army (Fassett held also a federal commission) did not have the power to call the militia for service outside of the state. The matter was brought up in Congress the following January, when resolutions were presented ordering the prosecution of Chittenden before the Supreme Court of the United States, but, as they failed to carry, noth- ing further was done. Later in the war, however, Chittenden cooperated with the officers of the army in calling for volunteers for the defenses of Plattsburg. In 1814 he was a candidate for re-election, with Galusha as a rival. This time he polled more votes than his opponent, but not a majority, so, once more, he was elected by the House.

During this second term Governor Chittenden presented to the Assembly the proposal of the Massachusetts legislature that delegates be sent to Hartford to consider certain proposed amendments to the Federal Constitution. The Assembly decided that it was wise, but the secretary of state, William Hall, Jr., went unofficially. In 1815, Galusha defeated Chittenden in the election for governor, and the latter, except for a term as judge of probate in 1821–23, practically retired from active political life, and spent the remainder of his years on his farm in Williston. He was married, in 1796, to Anna Bentley, by whom he had twelve children.

G. H. D.

CHITTENDEN, SIMEON BALDWIN (Mar. 29, 1814–Apr. 14, 1889), merchant, congressman, was descended from William Chitten- den, one of the founders of the town of Guilford, Conn., in the early seventeenth century. He was the son of Abel and Anna Hart (Baldwin) Chitten- den. When he was twelve years old his father died and it was impossible for him to obtain the college education that had been planned. He con- tinued his studies, however, until he received an offer of a clerkship in a New Haven store. This he accepted at the age of fourteen, and served a seven-years’ apprenticeship during which the material rewards were scant and appreciation lacking. On coming of age he was able to engage in business for himself at New Haven. Hardly had he begun to prosper in that undertaking when the panic of 1837 brought a check to trade expansion throughout the country; but having weathered that storm Chittenden was soon in a position to embark on a more ambitious ven- ture. In 1842 he went to New York and entered the wholesale dry-goods field on a modest scale. His quick success there seems, when considered in the light of modern conditions, remarkable. He was a shrewd business man, whose sound judgment carried him far, and he excelled most of his contemporaries in the knowledge of the principles on which legitimate trade is based. He early became a student of economics, investigat- ing and testing propositions that were put forward in the name of the “dismal science.”

Up to the campaign of 1860 he had never taken a public stand in politics. In that campaign a demand from the South that his mercantile house be boycotted because of his known opposition to slavery caused him to come out for the election of Lincoln and after the Civil War began he sup- ported the Administration vigorously. Having made Brooklyn his home, he joined with a group of his neighbors in founding a daily newspaper, the Union, to uphold the government at Washing- ton. The journal was a financial success. Chitten- den was elected to Congress in 1874 as an inde- pendent Republican and although a member of the minority party in the House of Representa- tives he made a distinct impression in the debates of that body. In the period preceding the resump- tion of specie payments, when it was commonly remarked that few members of Congress had any expert knowledge of currency questions, Chitten- den quickly took a prominent position in oppos- ing the nostrums put forward by “cheap money” advocates in both political parties. He was a defender of the National Banks and generally in accord with Republican policy, but in several matters he held views in advance of the party’s declarations. In formulating a program for re- sumption he proposed, as a first step, restora- tion of the privilege of funding legal tender payments at par in government securities; as a second step, the abolition of the legal tender quality; as a third, the perfect freedom of issue for bank notes thoroughly secured and constantly redeemed; and finally, the payment and cancella- tion of United States notes after a time fixed. Years afterward it was pointed out by conserva- tive authorities that the adoption of these pro- posals would probably have saved the Adminis- tration considerable trouble and embarrass- ment in the process of resumption. Chittenden’s re- cord in Congress on the whole was noteworthy; it
Chittenden

led the *Brooklyn Daily Eagle*, opposed to him in politics, to characterize him as "the most distinguished and in national respects the most influential representative Brooklyn has ever had in Congress." Chittenden was known for many years as one of Brooklyn's public-spirited citizens. The Academy of Music, the Free Library, and the Polytechnic Institute were among the Brooklyn institutions to which he gave liberally of his time and money. Outside of Brooklyn, Yale University received important gifts from him, including the building that long housed the university library. He was married (1) to Mary Elizabeth Hartwell and (2) to Cornelia Baldwin Coltons.

[Win. Chittenden of Guilford, Conn., and His Descendants, comp. by Alvan Talcott (1882); *Brooklyn Daily Eagle*, Apr. 15, 1889; *N. Y. Times*, Apr. 15, 1889.]

W. B. S.

**CHITTENDEN, THOMAS** (Jan. 6, 1730–Aug. 25, 1797), governor of Vermont, the son of Ebenezer and Mary (Johnson) Chittenden, was born at East Guilford, Conn. He was fourth in descent from William and Joanna (Sheaffe) Chittenden, who came from Cranbrook, Kent, England, and settled in Guilford in 1639. Chittenden received a common-school education. At the age of eighteen, he shipped on a West Indian merchant vessel, which was captured by the French. After several months of privation, he worked his way back to Connecticut, and gave up the sea. In October 1749 he married Elizabeth, daughter of Lieut. Janna and Elizabeth (Dudley) Meigs, and settled in Salisbury, Conn., where he lived for the next twenty-five years. Here he became a man of affairs, holding various public offices and representing the town in the colonial Assembly. In 1774, having received a grant of land on the Winooski River, in Williston, Vt., he removed his family thither. Two years later he represented Williston at the Dorset convention, being, it is said, the only member who had ever sat in a legislative assembly before. His sagacity was soon recognized, and he took a prominent part in this and the succeeding conventions, the outcome of which was the formation of the State of Vermont. There had been a controversy of several years' duration over the jurisdiction of that territory, as both New York and New Hampshire claimed control and the governors of both provinces made grants therein. The situation had become intolerable to the settlers, hence their declaration of independence and the establishment of the state. At the convention of September 1776, Chittenden, with twelve others, was appointed to attend this convention at its next sitting, thus forming what was to become the Council of the State. The following January, Chittenden helped to draw up the "declaration for a new and separate state" and was asked, with others, to present the petition for recognition to the Continental Congress, which was unsuccessful. Between 1777 and 1787, Chittenden and his family lived in Pownal, Williamstown (Mass.), and Arlington, before finally returning to his farm in Williston.

Chittenden, who was president of the Council of Safety, helped Ira Allen [q.v.] draw up the constitution of Vermont, which was closely modeled on that of Pennsylvania; and, in the general election of March 1778, he was chosen first governor of the state, an office he held, with the exception of the year 1789–90, until 1797. His level-headed attitude in a crisis, his ability to make a wise decision, his firm character, and his general disarming friendliness, made him one of the strongest men in the state, and enabled him to conduct successfully the affairs of the young government. He apparently rarely made a mistake in judging men. In 1780–83 he was closely associated with Ethan Allen [q.v.], and others, in the secret negotiations with Gen. Haldimand, commander of the British forces in Canada. The intentions of these men have never been determined. Documentary evidence supports the idea that they were attempting to make the state a British province, but, on the other hand, there is also evidence to confirm the belief that they were merely attempting to force Congress to recognize the independence of the state. When, in 1781, rumor was rife regarding the negotiations, Chittenden wrote a letter to Gen. Washington, which some have claimed as evidence for the loyalty of the Vermonter. It is, however, a carefully worded document, in which very little is said that was not publicly known (the letter and Washington's reply may be found in *Records of the Governor and Council*, II, 350–55). In 1785–87, as an aftermath of the War, there was a crisis in Vermont affairs. Chittenden suffered a period of unpopularity, owing to which he lost the election of 1789; but the following year he took the chair again. In 1791 he saw the culmination of his efforts to procure the recognition of Vermont and her admission to the Union. He continued in the governor's chair until 1797, when he resigned just a few weeks before his death.

By his wife he had ten children, of whom Martin [q.v.] became governor, and the other sons, Noah, Giles, and Truman, each sat in the Assembly and held various public offices. One of the daughters, Mary, became the wife of Gov. Jonas Galusha.
Chivers

G. H. D.

CHIVERS, THOMAS HOLLEY (Oct. 18, 1809-Dec. 18, 1858), poet, was the grandson of Thomas Holley Chivers, who emigrated to Virginia in the mid-eighteenth century but eventually became one of the first settlers of Georgia; and the son of Col. Robert Chivers, who in 1806 married a Miss Digby. He was born on his father's cotton-farm a few miles south of the recently founded Washington, Ga. The date is determined by a poem in Conrad and Eudora, written Oct. 18, 1834 "on the Anniversary of my Twenty-fifth Year." Toward the end of his life, Chivers claimed 1807 as the year of his birth, and his tombstone speaks of his dying at 52 in 1858; but possibly Chivers antedated his birth, so that he would appear older than his rival Poe, who was actually his senior by nine months.

Having been trained at a Georgia preparatory school, he studied medicine at Transylvania University, Lexington, Ky.; in 1830 he wrote his thesis on Intermittent and Remittent Fevers, obtained his M.D. with distinction, and began to practise. Meanwhile he had been writing verse. Though as late as 1856 he refused a chair in physiology at a Southern university, he seems to have given up his medical career soon after graduation. About this time, while recovering from an illness, he had a vision of harp-playing angels and a fountain of water, which his mother could not see (Universealam, Dec. 9, 1848). In 1831 he traveled in "the West," visiting in March the Cherokees, with whose sufferings he sympathized strongly; some of the Indian material in his later poems may have been collected then. In 1832 he printed privately, for distribution among friends, The Path of Sorrows, or the Lament of Youth: A Poem, written while studying medicine in 1828-29. These verses are his defense for a rash marriage, which had broken up much as Byron's was supposed to have broken up; Chivers even rephrases Byron's "Dream" for the title-poem. Later, in his will, he cut off his first wife and her daughter with a dollar apiece. In 1833 he was writing more poems, in the Mississippi Valley, and St. Louis. In 1834 he came North (the date is sometimes given as 1832—an error which arose in calculating from the erroneous birth-year 1807). While in Springfield, Mass., he met and married Harriet Hunt, daughter of George and Jerusha (Smith) Hunt of that city, a famous beauty aged sixteen at the time of her marriage. In the latter part of 1834 Chivers printed privately at Philadelphia his Conrad and Eudora; or, the Death of Alonzo, a five-act version of the Sharpe-Beauchamp murder of 1826, which follows (at times almost verbatim) a pamphlet, The Confession of Jercoochee or, the Beautiful Star, his third book and first published volume, which evidently contains all the juvenilia which he thought worth preserving. The title-poem is an unfinished Indian legend, with a symbolic metaphysics that may have suggested Poe's later "Ulalume," though otherwise the two poems are unlike, "Nacoochee" being written in rather Keats-like Spenserians. The preface is a curious though nebulous statement of Chivers's beliefs as to the transcendental nature of poetry. On Apr. 1, 1838, at Philadelphia, he wrote a sonnet on receiving the news of the death of his mother, and went South for the funeral. In 1839, he was at New York again, preparing a play for presentation: Leoni; or, the Orphan of Venice (never produced or published; manuscript at Harvard). The plot was a complete reworking of the Sharpe-Beauchamp murder, somewhat in the manner of Otway, though with Drydenesque metaphors. It is dignified and well-sustained throughout. On June 25, 1839, his daughter, Florence Allegra, was born; a year later, his son Aster; in these two children he recognized the harp-playing angels of the vision of a decade before. In 1840 he received a prospectus for the Penn Magazine from Poe, to whom he wrote on Aug. 27, with much enthusiasm but no money. In Graham's Magazine (which eventually published thirteen of Chivers's poems) Poe published in his "Autography" (December 1841) a brief critique of Chiver's manuscripts submitted for publication but not published, in which Chivers was characterized as "one of the best and one of the worst poets in America." Chivers protested twice by letter, and was answered at last on June
Chivers

6, 1842: Poe had revived his plans for the Penn Magazine and apologized for the squib, Chivers promised to get subscribers, but complained that the squib had confirmed a popular rumor that he was mad. The correspondence continued, and Poe accepted three poems for Graham's Magazine. Henceforth Chivers's work appeared regularly in various magazines, until about five years before his death. On his thirty-third birthday, Oct. 18, 1842, Florence Allegra was struck down by a virulent form of typhoid, and died in her father's arms that night; he took her body to Georgia and wrote a long rhapsody on the occasion, "The Lost Pleiad"; on Dec. 12, 1842, he wrote another elegy, "To Allegra Florence in Heaven" (rejected with quotations and comments in the Orion, March–April, 1843). Another daughter was born to him, but within a year he lost his three other children. The death of these four children furnished subjects for several poems. In the spring of 1845, he went to New York, to publish a new volume, The Lost Pleiad and Other Poems. While there he met Poe several times (helping him home in an inebriated condition on the first occasion), and after his return to Georgia there ensued a correspondence between the two poets—Poe crying desperately for ready money and Chivers, apparently, giving only good advice and an invitation to come South to be taken care of by him for the rest of Poe's life. In his last letter Poe, sincerely or otherwise, wrote: "Except yourself I have never met the man for whom I felt that intimate sympathy (of intellect as well as soul) which is the sole basis of friendship." Attracted by the visions of Andrew Jackson Davis [q.v.], Chivers, in 1848, contributed liberally to Davis's Universaæum, both poems and prose, including the "Scene from Via Coli; or, the Way to Heaven, a Moral Drama in Five Acts," which contains an account of his own visions. In the same year he published a pamphlet, Search After Truth; or a New Revelation of the Psycho-Physiological Nature of Man. After Poe's death he wrote a "New Life of Edgar Allan Poe," a rhapsody intended to place Poe as a great poet, without concealing his weakness; the manuscript remains unpublished, except for fragments edited by Prof. Woodberry in the Century Magazine (January–February, 1903).

In the latter part of 1850, Chivers published at New York his Eonchs of Ruby, A Gift of Love, a mixture of ultra-musical verse and gorgeous extravagant imagery, with verse collected from the magazines, and much stuff that should have been destroyed. The very evident influence of Poe immediately caused various charges of plagiarism, and there began a controversy which cannot be said to have ended yet. Chivers defended himself at first in private letters with considerable heat, and finally broke out, under the signature of "Fiat Justitia," in the Waverly Magazine (1853), accusing Poe with much blindness and fury of stealing the "Raven" from "To Allegra Florence in Heaven," and quoting the very worst stanza from it as proof. At last the editor closed the controversy with justifiable harshness. The truth of the matter seems to be that Poe and Chivers at first developed their melodic theories of verse independently; that Chivers later followed Poe's lead for some time; that Poe saw in Chivers's more careless work material which he could entirely make over; while Chivers, gaining courage from Poe's example, freely helped himself to Poe's rhymes and names and tricks of refrain. But after Poe's death, Chivers continued his experiments far beyond anything that Poe had ever done. In 1853 he published three more volumes of poetry. Memorials; or, Phials of Amber Full of the Tears of Love was nothing but the unsold copies of Eonchs, the first twenty-six pages of which were replaced with a new title-page, index, preface, and six poems. Virginalia, or Songs of my Summer Nights, though less known than Eonchs, is Chivers's most extraordinary volume; it contains his wildest and most successful experiments in meter. His third volume for 1853 was Atlanta, or the True Blessed Island of Poesy, "a Paul Epic in Three Lustra," which appeared as a pamphlet at Macon, Ga. The preface includes many ideas apparently taken from Poe's Poetic Principle (1850), but is dated July 18, 1842; and elsewhere Chivers insisted on his priority. In 1854 he wrote a five-act play, The Sons of Usna; a Tragi-Apotheosis (published, 1858), which is the first literary treatment in English of the famous legend of Deirdre (barrowing mere translations and paraphrases, as well as Macpherson's "Darthula"). In 1856, he returned South; was asked by a committee to write a Fourth-of-July Oration; and wrote and published in pamphlet form, but did not recite, his Birth-Day Song of Liberty. A Paeon of Glory for the Heroes of Freedom. On Dec. 18, 1858 he died at his home, Villa Allegra, Decatur, Ga. His influence on Swinburne has been demonstrated by Prof. A. G. Newcomber (Seance Review, January 1904). He always was utterly unable to judge his own productions; and Poe's original squib about him still holds. Yet his best work is frequently poetry of a high order, and his originality (despite any question of plagiarism) is unquestionable.
Choate

Mabbott’s edition of Poe’s Politian (Richmond, 1923.)

S. F. D.

CHOATE, JOSEPH HODGES (Jan. 24, 1832–May 14, 1917), lawyer, diplomat, was born at Salem, Mass., the youngest son of Dr. George Choate and Margaret Manning Hodges. He was the seventh in descent from John Choate who came from England in 1643 and settled in Ipswich, Mass. On the maternal side, his grandparents were Capt. Gamaliel Hodges and Sarah Williams. Joseph H. Choate had two sisters, Elizabeth and Caroline (Mrs. E. B. de Gersdorff); and three brothers, Charles F., president of the Old Colony Railroad, George C. S., a physician, and William G., United States district judge. Rufus Choate (q.v.) of Boston was the first cousin of Dr. George Choate, and therefore a first cousin once removed of Joseph H. Choate.

“The lives of my father and mother,” says Choate, “were truly heroic in the matter of the training of their own children. Having four sons and two daughters, they determined at all hazards to give them the best education that the times afforded, and in so doing they set them a wonderful example of self-control, self-denial, and self-sacrifice” (Boyhood and Youth, p. 31). The father, himself a graduate of the academic and medical departments of Harvard, sent his four sons there also, with the result that in 1848–49, one was a medical student, one was a senior in the college, and two were freshmen. In the Commencement of 1852, William gave the Valedictory oration, and Joseph H. the Salutatory oration. The latter always remained devoted to his college, returned often to it at the annual graduation period, and was a president of the Harvard Alumni Association and of the Harvard Club of New York. He entered the Harvard Law School in 1852, where, until his graduation in 1854, he earned his living by tutoring boys preparing to enter the college. A third year was spent in Boston in the office of Hodges & Saltonstall, after which, in October 1855, he was admitted to the Massachusetts bar.

Bearing a letter of introduction from Rufus Choate to William M. Evarts, Choate moved to New York in 1855, and in the following year entered the office of Butler, Evarts & Southmayd. After a three years’ apprenticeship, and a brief interval of practise on his own account, he was invited to join the firm as partner, and maintained that relationship for the rest of his life. The firm now survives as Evarts, Choate, Sherman & Léon. Although Choate was the junior in this firm, and therefore, for ten years or more, played an inconspicuous rôle before the legal public, this period shaped his career in two respects. It taught him, under the wise judgment of Southmayd, how to form the theory of a case, and under Evarts, how to present it effectively in court; and second, it gave him opportunity to take an interest in social intercourse and in projects for the public welfare. He acquired a facility and grace in public utterance to which much of his success in life must be attributed. In 1861, he married Caroline Dutcher Sterling, daughter of Frederick A. Sterling, of Cleveland, Ohio. Their married life extended over fifty-five years.

The life of Choate may be said to present five major aspects which, however, cannot be viewed chronologically, and are not mutually exclusive. They may be labeled as the social, political, public-welfare, legal, and international aspects.

It was not an accident that he became president of the New England Society of New York; the Union League Club; the Pilgrim Society; the Harvard College Alumni and Law School associations and the Harvard Club of New York; the Century Association; and various legal societies; and that the list of his other club memberships was extensive. He was a “club man,” enjoying association with his fellows, getting along well with them, and being often chosen as their leader. His skill as an after-dinner speaker is still a tradition, and his published speeches, models of their kind. For years he divided the laurels in this field with Chauncey Depew, who said of him, “Mr. Choate believed, with me, that the mind is fresher and more capable of grasping the questions arising in one’s vocation or profession, if there is relief in some other direction. We both found that in after-dinner speaking” (Speeches and Literary Contributions, 1918, p. 246).

Politics, compared to his other activities, played a minor rôle in Choate’s life, yet he was an active party man and a life-long Republican. He made his first political speech for Frémont in 1856, and his last for Hughes in 1916. In 1871, he was a leader in arousing New York City against the Tweed Ring. At the mass meeting in Cooper Union, Sept. 4, 1871, as chairman of the Committee on Resolutions, he presented the resolution calling for the organization of the Committee of Seventy; and, on Nov. 3, 1871, when that committee reported, he made
a notable speech which roused the public to
definite action. Twenty-three years later, in
1894, he was again an active crusader as a
member of the Committee of Thirty in opposi-
tion to Tammany Hall and Richard Croker. In
the previous year he had been elected dele-
tate-at-large to the New York Constitutional
Convention of 1894. The Republicans had a
majority in that convention and Choate was
selected as its president. His influence, during
the five months of this convention, according
to Elihu Root, who was leader of the majority
of the floor of the convention, was very great,
and he played a conspicuous part in the election
of November 1894, in bringing about the adoption
of the new constitution by the electorate. The
only political office for which he was ever a
candidate was that of United States senator in
opposition to Thomas C. Platt. He consented
to run as a protest against boss rule within his own
party, but without expectation of election. “I told
them I would run,” he said, after the legislature
had reelected Platt, “if I only got one vote. In
fact I got seven, and I regarded this as a real
triumph” (Strong, post, p. 88).

Not only was he a party man and an active
worker in the ranks to bring about political ac-
tion which he believed would be for the public
good, but he was a leader in non-political cul-
tural and humanitarian activities. It was this
side of his career which in later life, added to
his legal and diplomatic careers, made him stand
out as first-citizen of the City of New York.
He was a founder and from 1860 to 1917 a trustee
of the American Museum of Natural History;
an incorporator and for forty-seven years a
trustee of the Metropolitan Museum of Art, be-
ing at times its vice-president, chairman of its
Law Committee and a member of its Executive
Committee; governor of the New York Hospi-
tal for forty years (1877-1917); president of
the board of directors of the New York State’s
Charities Aid Association (1895-99, 1905-17);
president of the New York Association for the
Blind; vice-president of the Carnegie Endow-
ment for International Peace; president of the
American Society for the Judicial Settlement of
International Disputes; and honorary president
of the National Security League and of the
National Defense Society.

Choate’s legal career was remarkable for its
length (over fifty-five years), for the variety of
its activities, for the number of cases won, and
for the sustained reputation that it brought him.
Honors directly connected with his professional
work were showered upon him. He was a mem-
ber of the Commission on revision of the judicial
system of New York State in 1890; president of
the Association of the Bar of the City of New
York, of the American Bar Association, of the
New York State Bar Association, of the New
York County Lawyers’ Association, and of the
Harvard Law School Association, and in 1905
he was elected a Bencher of the Middle Temple,
London.

Being blessed with a strong constitution and
unusually good health, he was very active during
his whole legal career. A mere catalogue of the
important cases in which he participated would
be too long for a biographical article. Probably
the public knew him best as a jury lawyer; for
he was himself a dramatic figure and both in the
examination of witnesses and in speeches to
juries, as well as in passages at arms with oppo-
sing counsel, he displayed wit, sarcasm, and an
audacity which produced continual surprises.
“Whatever the printed brief or the prepared ad-
dress,” says William V. Rowe, “the oral presen-
tation was bound to be filled with new ideas, a
new point of view, a personal emphasis.” An-
other writer describes him as “physically tall,
with a relatively large head, plentiful hair, often
somewhat tousled, handsome in features, but
manly of line and giving an impression of health
and physical strength, carefully but not obtru-
sively dressed, apt to assume careless attitudes,
standing with one hand in a trousers’ pocket as
he spoke, and with a musical voice of tenor qual-
ity, flexible, well-controlled, not loud, but of
great carrying power.”

Although he was popularly known as an advo-
cate, rather than as a lawyer conspicuous for
legal learning, he was in fact an all-round law-
yer capable of effectively handling any legal
problem. He was engaged in the contests over
the wills of Cruger, Vanderbilt, A. T. Stewart,
Samuel J. Tilden, Hoyt Drake, Hopkins-Searles,
Vassar, and Vanderpoel; in the anti-trust cases
involving the Standard Oil Company, the Tren-
ton Potteries, and the “Tobacco Trust”; in two
famous cases dealing with the law of clubs, Lou-
bat vs. Union Club, and Hutchinson vs. New
York Stock Exchange; in libel suits, including
that of Funk vs. Godkin; in admiralty cases, such
as the Republic (steamship) case; in railroad
cases; in two famous court-martial proceedings,
the McCalla naval case and the Fitz-John Porter
case; in the controversy of Lord Dunraven with
the New York Yacht Club over the race between
the Defender and Valkyrie III; in the Goff con-
tempt proceedings; and in numerous arguments
before the United States Supreme Court, in-
cluding the Neagle case arising out of the at-
tempted assassination of Mr. Justice Field by
Choate

Judge Terry of California, the Leland Stanford case, the California Irrigation Law cases, the Massachusetts Fisheries case, claims under the Alabama awards and the Spanish Treaty, and the Income Tax cases.

Probably his most important arguments were in the Income Tax cases before the United States Supreme Court in March and May 1895, in which he and his associates convinced the court that the income tax law of 1894 was unconstitutional. His argument at the time was compared to that of Webster in the Dartmouth College case. Choate himself, however, once said that he considered the task of proving Gen. Fitz-John Porter innocent of the charge of treason was his most difficult exploit and greatest victory, because two courts martial had decided adversely to Porter, and the true facts were hard to gather and get before the court after the lapse of fifteen years.

Early in 1899 Choate was appointed Ambassador at the Court of St. James's. Being sixty-seven years old, he had already crossed the traditional threshold of old age. He had lived a singularly full life, successful according to the highest social and professional standards, and had reached a peak from which for most men only descent in declining years could have been expected. But for him, unimpaired in health, mind, and spirit, a new career was just beginning. He acquitted himself in the field of international affairs so as to add measurably to the prestige of the United States and to his own reputation. Three matters of major importance were brought to a successful issue by him.

When he went to England, the Joint High Commission of 1898 for the settlement of questions between Canada and the United States had just been dissolved without reaching an agreement. The Commission was in deadlock over the critical question of the Alaskan boundary, the location of which might determine the ownership of gold-bearing lands. Choate and Secretary Hay obtained agreement upon a treaty providing for the submission of the boundary question to a tribunal composed of an equal number of members from each country, charged to hear evidence, and decide according to law. The conference of the tribunal, held in London in 1903, resulted in a determination of the boundary question, and paved the way for the disposal of all the questions which had been unsuccessfully considered by the Joint High Commission.

The Spanish American War, resulting in the acquisition by the United States of Porto Rico and the Philippines, and in responsibility for the protection of Cuba, brought to the United States a realization of the necessity for a canal across Central America. The need was emphasized by the growth of population and commerce on the Pacific coast, and by political development in the Far East. A canal under exclusive American control was wanted; but the way to it was blocked by the Clayton-Bulwer Treaty of 1850, under which the United States and Great Britain had stipulated for joint control of any such canal. One of the achievements of Choate, under Hay's direction, was the abrogation of this treaty, and the substitution of an agreement that any American-controlled canal should "be free and open to the vessels of commerce and war of all nations on terms of entire equality."

Another accomplishment of far-reaching effect was that of securing Great Britain's agreement to the Hay doctrine of the open door in China, resulting in checking the partition of that country by the Great Powers.

These three were large diplomatic achievements, but, in the judgment of many, the most important result of Choate's six years in London was the good feeling engendered by him as representative of the people of the United States to the people of Great Britain. He was uniquely equipped for this undertaking by his personality, his humor, his skill as a speaker both at formal and informal occasions, and by his power of unwearied attention to the details of social intercourse.

Two years after his return to the United States, at the age of seventy-five, he went as head of the American delegation to the Second Hague Conference of 1907. His ambassadorship had made him the logical choice for this mission, for he had become known and respected throughout Europe as a man who, to use the words of Elihu Root, "had learning without pedantry, power of expression which never sacrificed accuracy to rhetoric, or sense to sound, courage saved from rashness by quick perception and long experience, the lawyer's point of view and the statesman's point of view, the technique of forensic debate, and the technique of diplomatic intercourse" ("Memorial of Joseph H. Choate," in Association of the Bar of the City of New York Year Book, 1918). He undoubtedly was one of the great leaders of the Conference, bringing to his work earnestness, technical skill, and knowledge of the history, implications, and probable results of proposed projects, and yet overriding tradition when it stood in the way of progress. Few men without offense could have made the speech, reminiscent of the judicial forum rather than of diplomatic intercourse, which he made on Oct. 10, 1907, in opposition to the proposition of the First Delegate of Austria-Hungary regarding

85
Choate

the Anglo-American project for international arbitration. Such episodes justify the comment of the foreign press that he was the enfant terrible of the Conference. "He seems aware," wrote Saint Maurice, "neither of the grandeur of the mission intrusted to the delegates, nor of the personal majesty of their excellencies. He is barely a diplomat. He it is who, with an air of innocence, inserts into a discussion a few cold words which effectively shatter the grandiloquent bubbles of his colleagues. He it is who unsmilingly emphasizes some imposing puerility. It is he, always he, whose brief logic brings back to earth again discussions which have drifted into the Pacific ether" (Ibid., pp. 98–99).

The period from 1908 to 1914 was as active in Choate’s life as would have been appropriate for a man of middle age. He resumed participation in projects for public welfare, took part in politics, accepted innumerable invitations to speak, was director in many corporations, was active in associations of the bar, and in interpreting his profession to the public, and practised law not only as counsellor and advisor, but also sometimes in the courts. When the European war broke out, he threw himself into the task of arousing the United States to the gravity of the situation and the necessity for entering the war. His speeches had great weight because of his reputation and experience, and more than that because of an enthusiasm and emotional intensity which coming from a man in his ninth decade presented a moving example of patriotism and self-sacrifice. He devoted himself wholly to his self-imposed task, and after the United States had entered the war, served as chairman of the New York Committee for the reception of the Commissions from England and France under Balfour and Viviani and Marshal Joffre. At the end of an arduous week, after the closing exercises at the Cathedral of St. John the Divine, he said to Mr. Balfour, “Remember, we meet again to celebrate the victory” (Martin, post, II, 391). The next day he died.

[The chief sources of information are Choate’s autobiographies, Boyhood and Youth of Jos. Judson Choate (N. Y., privately printed, 1917); Theron G. Strong, Jos. H. Choate; New Englander, New Yorker, Lawyer, Ambassador (1917); Edward S. Martin, Life of Jos. Judson Choate as Gathered Chiefly from His Letters (2 vols., 1920); and Arguments and Addresses of Jos. Judson Choate, collected and ed. by Frederick C. Hicks (St. Paul, West Publishing Co., 1926).]

F.C.H.

CHOATE, RUFUS (Oct. 1, 1790–July 13, 1859), lawyer, statesman, was descended from sturdy Puritan stock, his immigrant ancestor, John Choate, having settled in the town of Ipswich, Mass., in 1643. Rufus, the fourth child and second son of David Choate, a veteran of the Revolution, and of his second wife, Miriam Foster, was born in the family homestead on Hog Island, off the Atlantic coast, in a district then called Chebacco but now part of the town of Essex. When he was six months old, however, his parents moved to a farm on the mainland. Both his father, who had been a teacher, and his mother, who is described as a woman “of strong sense and ready wit,” were fond of books; and he was a precocious lad, who read The Pilgrim’s Progress at the age of six and exhausted the village library before he was ten. He studied under local clergymen or in grammar schools until he was fifteen, following this with a year of formal instruction at an academy in Hampton, N. H. His father having died in 1808, Rufus had to borrow money to take him through Dartmouth College, where he made a brilliant scholastic record, graduating as valedictorian of the class of 1819. He showed little interest in games at Hanover, but sat with his books far into the night, coming to his lectures haggard and worn. Although he was diffident and modest, he was the most romantic undergraduate of his period at Dartmouth, and his intellectual supremacy was conceded by his classmates. In his senior year, because of over-study, he suffered a nervous breakdown, and it was feared that he might not be able to speak at the Commencement exercises; but he rose from his bed at the last moment and delivered an address which amazed his audience, among whom was Daniel Webster.

Webster’s argument in the famous Dartmouth College Case (Mar. 10, 1819) made a lasting impression on Choate and determined him, in emulation of the great orator, to take up the law. For a year after his graduation, however, he remained in Hanover as a tutor, mainly in order to earn enough to pay off his debts. He then spent a few months as a student in the Dane Law School, in Cambridge, going from there to Washington, where he was, for nearly a year, in the law office of William Wirt [q.v.]. After additional preparation under Asa Andrews of Ipswich, and Judge Cummins of Salem, he was admitted, in September 1822, to practise in the Massachusetts court of common pleas and started on that career which was to make him perhaps the most successful pleader of his day. He opened an office in Danvers, only a few miles from Salem, and, in November 1825, was admitted to practise in the supreme judicial court. In the same year he married Helen Olcott, daughter of Mills Olcott of Hanover, N. H., by whom he had seven children.

Throughout his life Choate’s chief interest was always in his profession. From time to time he
Choate

was drawn reluctantly into public affairs, but he invariably returned joyfully to the law. Even with such rivals as Webster, Cushing, and Rantoul, he quickly made a reputation in Essex County and moved gradually to wider fields of activity—to Salem in 1828 and from there to Boston in 1834. He was, from the beginning, primarily a court-room attorney, and most of his cases were tried before a jury. It has been said that, while he was practising in Essex County, no verdict was brought in against any person whom he was defending in a criminal action.

In 1825, rather against his wishes, Choate was elected to the lower house of the Massachusetts General Court. His first speech was in favor of educating teachers for the common schools. Because of the pressure of his legal business, he attended the sessions of the legislature only intermittently, but, on the rare occasion when he addressed his colleagues, his opinion carried weight. In 1827 he was chosen as state senator. Like most Massachusetts leaders of that period, he was an anti-Jackson man. In October 1830 he was nominated by the National Republicans of Essex South District for Congress, and was elected by a majority of 500 over Benjamin W. Crowninshield [q.v.], who had represented that district for eight years. During his first session, which opened in December 1831, he made but two speeches—one favoring Revolutionary pensions and the other defending a protective tariff. In 1832 he was reelected, but resigned within a few months in order to take up residence in Boston. With Webster, Everett, and Cushing, he assisted in organizing the Whig party in Massachusetts, and, when the anti-Masonic mania was at its height in the summer of 1834, he rode with Cushing through the eastern part of the state trying to persuade Masonic lodges to give up their charters in order to keep the Whigs from breaking up on that issue.

Choate's advancement at the Boston bar was rapid, and his position with leaders like Jeremiah Mason, Franklin Dexter, and even Daniel Webster was soon established. He resisted many efforts to draw him into politics, but he was an ardent supporter of Harrison in 1840, and, when Webster resigned his senatorship (Feb. 22, 1841) in order to become secretary of state, Choate, in spite of the opposition of such abolitionists as John Greenleaf Whittier, was chosen to fill the vacant seat. Although his senatorial duties often proved irksome, he took them very seriously. He was a loyal member of the Whig party, opposing the annexation of Texas and favoring the protective tariff and a National Bank. His first speech on the floor of the upper house was made (June 11, 1841) in defense of Webster's conduct in the case of the indictment of Alexander McLeod, a British subject, by the United States courts for the burning of the steamer Caroline. A few days later, Choate, in advocating an amendment to Clay's bill for a National Bank, stated that, unless such an amendment were passed, the measure would be vetoed by President John Tyler. Clay, in his dictatorial manner, insisted on hearing the source of Choate's information, which the latter, quite properly, refused to disclose. On the following morning Clay made a courteous explanation and apology to Choate. Choate spoke forcefully for the confirmation of Edward Everett as minister to England, and made three speeches in 1843 for the Webster-Ashburton Treaty. He was eager to retire in 1844, before the expiration of his term of office, and efforts were made to induce Webster to take his place; but Choate eventually completed his term in March 1845, and gladly returned to private life, resuming the law partnership which he had formed in 1834 with B. F. Crowninshield. This was dissolved in 1849, and a new firm was formed consisting of Choate and his son-in-law, Joseph M. Bell. If he had wished them, he could have had many honors. Gov. Briggs offered him a seat on the bench of the supreme judicial court of Massachusetts, and, on the death of Levi Woodbury, in December 1851, Webster urged Choate to accept a nomination as justice of the Supreme Court of the United States; but Choate declined both places, feeling that he was not temperamentally fitted to be a judge. He was also tempted, in 1848, to accept a professorship in the Dane Law School in Cambridge, but he preferred to remain untrammeled.

Sheer physical and mental weariness led him, in 1850, to make a hurried trip to Europe, where he spent three months traveling restlessly through England, Belgium, France, Germany, and Switzerland—his only experience abroad. He thoroughly approved of the compromise measures of 1850 and of Webster's Seventh-of-March Speech, and he spoke at a Union Meeting in Faneuil Hall (Nov. 6, 1850) in praise of Webster and in justification of his policies. He was invited to deliver the address of welcome to Webster in April 1851, but the mayor and aldermen of Boston, incensed at Webster's alleged "treachery" to the North, refused at the last moment to let Faneuil Hall be opened. At the Baltimore convention in June 1852, Choate made a dramatic but futile appeal to the Whigs for the nomination of Webster for the presidency. Webster died on Oct. 24, 1852, and Choate, who had always idolized him, prepared a eulogy of the dead
Choate

statesman, over which he toiled longer and harder than over any address which he had ever made. It was spoken at Dartmouth College, the alma mater of both Choate and Webster, in August 1853. In the same year Choate was a member of the Massachusetts constitutional convention, at which he spoke effectively in opposition to a proposal to have judges elected by the people.

Choate's attitude toward the unavoidable issue of negro slavery had from the first been conservative, like that of Webster, Everett, and the "old Whigs." Opposed though he was on moral grounds to human servitude, he never advocated abolition, and stated on one occasion, "I do not believe it is the greatest good to the slave or the free that four millions of slaves should be turned loose in all their ignorance, poverty, and degradation, to trust to luck for a home and a living." As the controversy grew violent, Choate insisted that the rights of the South should be respected, and expressed the opinion that the federal government could do nothing to compel a sovereign state to remain within the Union. In the campaign of 1855 in Massachusetts, he wrote a letter (Oct. 1) to the Whig convention at Worcester denying that the party was dead, denouncing the newly formed Republican party, and closing with the sentence, often quoted, "We join ourselves to no party that does not carry the flag and keep step to the music of the Union." In the presidential campaign of the following year, Choate said that the Republicans were "a new geographical party . . . a sectional, anti-Union party, and nothing should be left undone to defeat them." In a long and carefully reasoned letter to the Maine Whig Central Committee (Aug. 9, 1856), he said, "The contest in my judgment is between Mr. Buchanan and Col. Frémont. In these circumstances, I vote for Mr. Buchanan." It was a statement which turned many Whig voters to the Democratic side and marked the death of the Whig party. In making this choice, Choate incurred the animosity of many of his Boston friends, but even those who criticized his course most vigorously were careful not to impugn the honesty of his motives.

In the spring of 1855 Choate had an accident to his leg, resulting in an operation from which he never fully recovered. His strength slowly waned, and in 1859, at the insistence of his physician, he started with his son on a voyage to Europe. When his vessel, the Europa, touched at Halifax, he was so ill that he was removed to lodgings in the town. There, on July 13, 1859, he died, the immediate cause of his death being Bright's disease. His body was brought back to Boston and buried in Mount Auburn Cemetery.

Choate

A memorial meeting was held on July 23, in Faneuil Hall, with Edward Everett as the principal speaker. His only son, Rufus Choate, Jr., served through the Civil War in the Northern ranks and died, Jan. 15, 1866, from illness contracted in the field.

Choate was a picturesque figure, about whose personality and career many legends have gathered. Physically he was nearly six feet in height, robust and broad-chested, with a deeply wrinkled face, an olive complexion, a profusion of wild and fantastic hair, thick bushy eyebrows, and deep spectral eyes. His contorted lips, disheveled locks, and somber expression gave him a weird, exotic appearance, as if he were the product, not of staid New England, but of some far-off planet. Naturally strong, he habitually overworked and suffered from violent sick headaches of an exhausting kind. For an hour or two before breakfast he read, making the most of his free time, and he was tireless in his labors. He once defined a lawyer's vacation as the period between putting a question to a witness and the answer. He was animated by a prodigious nervous energy, which drove him on even when his jaded body protested against its abuse. He was a reckless, dashing, impetuous person, with no serenity of mind, and the stormy working of his brain showed itself in "the unearthly glance of his eye." After a great speech he was always prostrated for a few hours. His nervousness was revealed in the carelessness of his dress and the jerkiness of his movements, as well as in his handwriting, which, with the possible exception of Horace Greeley's, is probably more illegible than that of any other famous man. E. P. Whipple describes it as resembling "the tracks of wildcats with their claws dipped in ink, madly dashing over the surface of a folio sheet of white paper."

Books were Choate's chief relaxation, and he possessed a private library of more than 8,000 volumes. All his spare hours were spent in reading, even when he was dressing and undressing, and he learned some lines of poetry every day. His library table was covered with the latest publications, and he loved to frequent second-hand book-shops, from which he seldom emerged without some treasure. He was especially fond of the Greek and Latin classics, from which, with his retentive and accurate memory, he could quote long passages. He even planned an authoritative work on Greek history, but the appearance of Grote's masterpiece prevented him from carrying his project through.

Choate belongs among the really great orators. He had a pleasing voice—"now like a flute for softness, and now like a clarion"—a ready
Choate
command of language, and a logical faculty which never forsook him even when he was most swayed by emotion. He was persuasive, even magnetic, in his manner, and his impassioned fervor when he was aroused stirred even sluggish hearts. The busts in his library were those of Demosthenes and Cicero, and he labored constantly, as his journal indicates, to model his style on theirs. He paid especial attention to his diction, leaning perhaps too obviously toward the Latin derivatives. His sentences were likely to be long—there is one covering four pages in his eulogy on Webster—but it was seldom that his audience could not follow him, and he never tired his hearers. His spectacular appearance contributed to the dramatic effect when he spoke. He gesticulated with his whole body, and Wendell Phillips described him facetiously as "a monkey in convulsions." Some of his occasional lectures became famous, particularly one on "The Romance of the Sea," which was stolen from his hand-bag and has never been published. He spoke frequently on the lyceum platform, on such subjects as Washington, Sir Walter Scott, Kossuth, and other eminent men. Among the greatest of his addresses was "The Age of the Pilgrims" (1843), delivered in New York City before the New England Association and described by one of the audience as coming "like a series of shocks." Other speeches which attracted attention were his "Eulogy on William H. Harrison" (1841) in Faneuil Hall (printed in the Boston Daily Advertiser, Apr. 22, 1841); "The Annexation of Texas" (1844), in Tremont Temple, Boston; "The Position and Functions of the American Bar" (1845), and "The Eloquence of Revolutionary Periods" (1857).

It is, however, as a practising lawyer that he will be longest remembered. In February 1842, Charles Sumner wrote to Dr. Lieber, "I am glad you like Choate so well. His position here is very firm. He is the leader of our bar, with an overwhelming superfluity of business." George F. Hoar said that his power over a jury was like the fascination of a bird by a snake. He knew instinctively the basic principles of human psychology, and he was always something of an actor, his sentiment, his humor, and his sarcasm being all directed to the one end of winning the twelve men in the box to his side. He did not, moreover, rely on inspiration, but gave to each case, no matter how seemingly trivial, the most careful scrutiny, often sitting up all night before an important trial. Some of his critics were disposed to minimize his knowledge of the law, but he was actually a profound scholar, who neglected no details and was industrious in search-

ing for precedents. His management of a case was usually flawless, and his cross-examinations were appallingly clever. In argument with his opponents he was uniformly courteous, even under strong provocation, and his urbanity became a tradition with the Boston bar. His manner was adapted to the situation—sometimes conversational, sometimes theatrical—but in the full swing of his discourse he spoke with a rapid rush of words and ideas, his mind seeming to sweep along with startling velocity. A shorthand reporter, sent to take down an argument by Choate, came back saying, "Who can report chain lighting?" When he was wrought up, he made ordinary persons appear like great tragic figures. One of his contemporaries said of him, "He dressed the common and mean things of life with a poetic charm and romance." Yet the basis of his argument was usually Yankee common-sense. His wit was unfailing, and stories of his brilliant repartee passed from mouth to mouth in legal circles. Few lawyers in this country have ever been more talked about, and it is no exaggeration to state that he has had no superior as an advocate.

Some of his cases have become part of legal history, among them being the Tirrell murder trial, in which he employed somnambulism as a defense and secured an acquittal for his client; the Gillespie case, in which he obtained the exonerations by a Protestant jury of a Roman Catholic priest accused by a girl of criminal assault; and the Dalton divorce case, in which he blocked the attempt by a husband to procure a separation from his wife whom he had deserted and wrongfully accused. No one of his cases, however, was as important in legal history as some of those which gave Webster his reputation as a constitutional lawyer. Choate was almost absurdly indifferent to money, and his fees were for years ridiculously low. Indeed, he often defended cases for nothing when he saw that a client had little property. After his partnership with his son-in-law, however, his affairs were arranged more systematically, and his income increased. His largest recorded fee for a single case was $2,500, and his heaviest receipts for any one year were $22,000.

In his private life Choate was kind and gentle, a thoughtful husband and father. To those in need he was charitable, often giving away more than he could afford. He was not a sociable person, and hated formal dinners and conventional entertainments. He liked to take solitary walks, and he did not seek or need the companionship of others. He had no vices, and the legend that he took opium as a stimulant has long been dis-
Chopin

proved. He was a man of sound character, against whose integrity no one cast the slightest suspicion. President Buchanan described him accurately when he said, "He was an unselfish patriot, devoted to the Constitution and the Union."

Although Choate stirred the imaginations of his contemporaries, his reputation has in some degree shared the fate of those of most great lawyers—such advocates, for instance, as Jeremiah Mason and William Pinkney and Sergeant S. Prentiss. Choate's indifference to politics has been unfortunate for his fame. Had he been politically ambitious, he might have taken Webster's place as the leader of the Unionist party, but he was not to be lured from the law. As a statesman, then, he exercised no important influence. The days of great jury trials, moreover, have gone by, and forensic eloquence is seldom to-day a factor in deciding the issue of a case. But Choate's romantic personality, his fiery energy, his devastating wit, and his almost hypnotic power over other men have lent a fascination to his name, and he is praised and remembered by those who would be unable to point to anything definite which he contributed to our national history.

C.M.F.

CHOPIN, KATE O'FLAHERTY (Feb. 8, 1851-Aug. 22, 1904), author, was descended through her mother from a French family which settled at old Kaskaskia in the early part of the eighteenth century, and through her father, Thomas O'Flaherty, from an honorable Irish family which had for generations been land agents in the County Galway. Thomas, who had come to St. Louis a lad of eighteen, was markedly successful in business, but his death in the Gasconade Bridge disaster when his daughter Kate was a mere child prevented his influencing her. His lavish hospitality was continued by his wife Eliza (Faris) O'Flaherty, a society-loving woman of unusual beauty and force. From the perpetual callers and entertainments as well as from the troubles of the Civil War period the daughter's favorite refuge was a stepladder in the attic where she pored over the works of Scott, Fielding, and Spenser. Her schooling was rather irregular, and she herself attributed more of her education to her wide reading than to the music, French literature, theology, and elementary science which she was taught at the Sacred Heart Convent. After her graduation from there in 1868 she was for two years one of the belles of St. Louis. In June 1870, she married Oscar Chopin, a native of Louisiana, who was then working in a bank owned by relatives. After a honeymoon in Europe, the move to the Southland which was undoubtedly the most important influence in Mrs. Chopin's literary development was made. In view of the fact that five sons were born in the ten years in which her husband acted as a cotton factor in New Orleans and that she was immediately drawn into the social life of the city, it is not surprising that her début as a writer was still postponed. Her husband's decision to manage his own and his younger sister's large plantations on the Red River brought her to a new and fascinating world, the world which is even yet best described in her short stories. At this home in Cloutiersville her only daughter was born and her husband died from a swamp fever in 1882. The difficulties of managing a large estate and her mother's desire to have the family reunited in St. Louis caused Mrs. Chopin first to rent and then to sell the plantation although she always loved and frequently revisited Natchitoches Parish.

One of the most modest and retiring of women, in her new leisure she was induced to take up writing by friends who had been charmed by her letters. As she herself realized, her first novel, At Paul, published in her home city in 1890, is distinctly amateurish, its chief interest being in the fact that the central character represents her mother. Her critical faculty, however, and her study of the French masters whom she admired and translated, notably De Maupassant and Daudet, produced in a short time an amazing development in technique. The Youth's Companion, Harper's Young People, and Wide Awake took all her children's stories; her work for mature readers appeared in such magazines as the Century and Harper's. She is known to-day, however, through her interpretations of the Creoles in her collections, Bayou Folk (1894) and A Night in Acadie (1897), and her second novel, The Awakening (1899). A new edition of the best of her work is now in preparation by her daughter, Mrs. Leila Hattersley.

Unquestionably Mrs. Chopin's stories rank very high in the local color movement of the nineties. Although some of them are mere sketches, a tale like "Désirée's Baby" could scarcely be excelled. All of her shorter pieces are marked by sympathy, a delicately objective treatment, and endings poignant in their restraint. These
same qualities make The Awakening almost exotic. The sensuous loveliness of the description, the subtle symbolism, the jewel-like polish of each haunting episode, the masterly manner in which are unveiled the tumults of a woman's soul, all are Gallic in effect. It is one of the tragedies of recent American literature that Mrs. Chopin should have written this book two decades in advance of its time, that she should have been so grievously hurt by the attacks of provincial critics as to lay aside her pen. Always a self-sacrificing mother, she devoted herself with special solicitude at this time to her son Jean. Renewed plans for work were prevented by her sudden death from a brain hemorrhage.

Mrs. Chopin's early photographs show her a charming girlish figure in the quaint costume of the mid-century. At the time she was writing, the premature whitening which often accompanies black hair and which formed a marked contrast to her brilliant brown eyes and delicate complexion as well as her small plump figure caused her friends to compare her to a French marquise. Always quiet and unassuming, she is said to have been a most stimulating listener; undoubtedly to this fact, even though she never consciously sought for materials, must be attributed the range of her characterizations—from the cotton-picking negro to great Creole ladies. As for her method of composition, the effortless ease of her style makes plausible the account of how she wrote a story as soon as the theme occurred to her, recopied it, and sent it off with practically no revision.

[Mrs. Chopin's work has been treated by F. L. Pattee in Hist. of Am. Lit. since 1870 (1915) and by D. A. Dondore in The Prairie and the Making of Middle America: Four Centuries of Description (1926). Biographical accounts are found in Wm. Hyde and H. L. Conard, Encyc. of the Hist. of St. Louis (1899); in the Lib. of Southern Lit., II (1909), 863 ff.; in A. N. De Menil, Lit. of the La. Territory (1904); and in the Writer, Aug. 1894. This latter article by Wm. Schuyler, a personal friend, is the best of the contemporary accounts.]

D. A. D.

CHORPENNING, GEORGE (June 1, 1820–April 3, 1894), pioneer western mail man, the second of the seven children of George Chorpenning and Elizabeth (Flick) Chorpenning, was born in Somerset, Pa. His first American ancestor came to North Carolina with the French Huguenots in colonial days. As a young man he assisted his father in various enterprises and became manager of a store. He was tall and well-built, active and ambitious (data from Mrs. Frank G. Chorpenning, Clearfield, Pa.). When the United States mail between Salt Lake City and California was to be established, young Chorpenning and Absalom Woodward joined in offering a bid for the service. A contract was made with them which provided for a monthly service over the emigrant trail at $14,000 per year. They at once went to California and on May 1, 1851, set out from Sacramento with the first mail. Great obstacles were encountered in crossing the Sierras. For sixteen days they struggled through deep drifts, beating down the snow with mauls. Throughout the summer Indians threatened, and in November Woodward and several of his men were killed by them. The winter of 1851–52 brought renewed difficulties; horses were frozen and carriers endured frightful sufferings. For some years thereafter the mail was carried from San Francisco via Los Angeles and the Mormon Trail to Salt Lake City. Indian depredations continued, and Chorpenning made an appeal to Congress which in 1857 resulted in an appropriation for his relief. In 1858 he changed from pack-horses to coaches and improved the service to a weekly schedule. The following year he changed to a more direct course across the Nevada desert—the route now followed by the Lincoln Highway. Friction with the Department developed and resulted in the annulment of his mail contract in May 1860. Thus ended nine years of pioneering from Utah to the Pacific Coast over three different routes. Chorpenning now went east to present his claims. When the war broke out he assisted in recruiting and organizing two Union regiments in Maryland and was commissioned major of the 1st Maryland Infantry, June 11, 1861. But in order to remain in Washington and prosecute his claims against the government he tendered his resignation and was discharged from the service in September 1861. Now began his long attempt to obtain compensation for the losses sustained in his overland mail service. Congress responded in 1870 by ordering an adjustment of the claim and in conformity therewith the post-master-general awarded him $443,010.60. Just before this was to be paid it was assailed in Congress as fraudulent; payment was suspended and then revoked. Testimony given at a criminal case in 1878 indicated that the persons primarily responsible for revoking payment were extortioners. The matter was again presented to Congress and was still unsettled when Chorpenning died. He was married twice: on Jan. 19, 1841, to Mary Margaret Pile, and, after her death, to Mrs. Carrie Dunlap.

CHOUART, MEDART. [See Grosseilliers, Medart Chouart, Sieur des, 1621-1698?]

CHOUTEAU, AUGUSTE. [See Chouteau, René Auguste, 1749-1829.]

CHOUTEAU, AUGUSTE PIERRE (May 9, 1786-Dec. 25, 1838), fur trader, was born in St. Louis, the son of (Jean) Pierre and Pelagie (Kiersereau) Chouteau. He entered West Point Academy July 17, 1804, and graduated June 20, 1806, as an ensign in the 2nd Infantry. He served for a short time as aide to Gen. James Wilkinson on the southwestern frontier, but resigned from the army Jan. 13, 1807. In the same year, at the head of a trading party, he accompanied the military expedition led by Ensign Nathaniel Pryor in the first attempt to restore the Mandan chief, Big White (Shehaka), to his people, and for his gallantry in the disastrous battle with the Arikaras, Sept. 9, was commended by Gen. Clark in a report to the secretary of war. He was one of the ten partners of the Saint Louis Missouri Fur Company and accompanied the expedition of 1809 to the mouth of Knife River, returning to St. Louis the following May. In the War of 1812 he served as a captain of the territorial militia, and though on Mar. 1, 1813, he took his seat as judge of the court of common pleas, he appears not to have retained the place, but to have continued in the military service till the peace. In 1815, with Jules de Mun, he conducted a trading and trapping expedition to the upper Arkansas, meeting with great success until the spring of 1817, when the party was captured by Spanish soldiers and taken to Santa Fé. The two leaders were put in chains and imprisoned for forty-eight days, and their property, valued at $30,000, was confiscated.

After his release and return he traded for a time with the Osages in western Missouri and middle Kansas. In 1823 he bought the trading house of Brand & Barbour, on the Verdigris, near its junction with the Arkansas, and in this region he spent the greater part of his remaining days. It was the country of the Arkansas Osages, whom his father had colonized there more than twenty years before—a country soon to be shared by them with the Creeks, the Choc- taws, and the Cherokees. The Dwight Mission, on the Grand, had been established in 1820, and a military post, Fort Gibson, was built in 1824. To this region, thronging with savages often at war, came Indian agents, soldiers, missionaries, traders, and land speculators; and it remained for many years the theatre of the most stirring and colorful drama to be found anywhere on the old frontier. Not the least of its notables was Sam Houston, who from 1829 to 1832 lived with the Cherokees and became an intimate friend of Chouteau's. On the Grand, near the present Salina, Chouteau built a two-story log palace, and here, in the midst of his Indian family and attended by retainers and slaves, he lived the life of a frontier baron, the arbiter of numberless disputes and the dispenser of a lavish hospitality. From St. Louis, where he happened to be in September 1832, he led the party of Commissioner Ellsworth, Gen. Clark, Washington Irving, Count de Pourtales, and Charles Labrode on their long ride over the prairies to his home, and often he was the host of other travelers, eager for a view of the West in its most picturesque setting. In 1835 he built, on the abandoned site of Camp Holmes (near the present Purcell), another trading post, which he put in the charge of an agent. Two years later, appointed by the secretary of war to negotiate treaties among the warring Indians, he visited this post, where he remained for the winter and the following spring. He died in the vicinity of Fort Gibson and was buried at the fort with military honors.

By common consent Chouteau was a colonel, and in distinction from his uncle, "Colonel Auguste," during the latter's lifetime, he was known as "Colonel A. P." He was married at St. Louis in church on Aug. 13, 1814 (a civil ceremony having preceded this one), to his cousin Sophie Labbadie, who with one son and five daughters survived him. He also had an Indian wife, Rosalie, born an Osage but naturalized a Cherokee, by whom he had several children, and he also had children by three other Indian women. "For however it may be considered as a reproach on his character," wrote Indian Agent Montford Stokes to the Commissioner of Indian Affairs, Mar. 19, 1839, "almost all Traders who continue long in an Indian Country have Indian wives." He died heavily in debt, and he was no sooner gone than Indian and white creditors began to seize his property, which would have been wholly dispersed but for the intervention of friends. His personal qualities and his worth as a citizen have been highly extolled by many writers.

ments relating to the Shelaka expedition of 1807; C. J. Latrobe, The Rambler in North America (1835); Washington Irving, Tour on the Prairies (1835).]

W. J. G.—t.

CHOUTEAU, JEAN PIERRE (Oct. 10, 1758—July 10, 1849), fur trader, Indian agent, was born in New Orleans, the son of Marie Thérèse (Bourgeois) Chouteau and Pierre LaClede [q.v.]. The surname Chouteau he bore in accordance with French law, while the given name Jean he appears to have dropped at his majority. With his mother he arrived in the new village of St. Louis in September 1764. What formal schooling he received is not known; in his age he used to say that his chief school had been l'académie osage, though his ability to quote Horace in the original is evidence that he had training not obtainable among the Osages. His connection with these Indians began at an early day; in 1792 they formally presented him with a tract of land in gratitude for his services “of many years.” From 1794 to 1802, while his half-brother held the monopoly of Osage trade, he was stationed with the tribe, both as a trader and as a commandant of Fort Carondelet. In the latter year, when the monopoly was given to a company headed by Manuel Lisa [q.v.], he induced the majority of the tribe, numbering some 3,000 souls, to move to the vicinity of the “Three Forks of the Arkansas” where he had a trading privilege of his own. He gave hearty accord to the American rule on its establishment and shortly afterward sent his eldest son, Auguste Pierre [q.v.], to West Point. In the same year President Jefferson appointed him United States Agent for the Osages, and as the government terminated Lisa's monopoly, he was soon again the dominant influence among the Missouri Osages. He organized the first troop of horse for the territorial militia and was made its captain, later becoming major.

His business interests developed separately from those of his half-brother, though in many projects the two continued to be allied. On Mar. 7, 1809, he joined with his rival, Lisa (who, though distrusted, had become too powerful to be ignored), William Clark, and eight others in the formation of the Saint Louis Missouri Fur Company. This historic company, the first important organization formed to exploit the beaver regions of the West, was at once intrusted by the government with the mission of restoring the Mandan chief, Big White (Shehaka), to his people. Appointed by Gov. Lewis to command the expedition, Chouteau, at the head of a force of 172 well-armed men, left Fort Osage, at the mouth of the Osage River, toward the end of

Chouteau June, and in September, without loss or serious incident, accomplished his mission. By Nov. 20 he was again at home. The company, for all its enterprise and the prestige of its partners, did not thrive, and in January 1814, dissolved. Chouteau had several trading houses in the lower Missouri region, each in the charge of an agent; and for several more years he continued active in business, making frequent trips to the frontier. From about 1820, however, he lived in semi-retirement on a “plantation,” as it was called, which he developed on the outskirts of St. Louis. It was a noted place, where hospitality was shown to all visiting celebrities, among whom was Lafayette, a guest there in 1825. The red man also was welcome, and often his tepee decorated the scene. Chouteau still found time for an occasional journey, and in the year that he was eighty-two he voyaged to New Orleans and back. During his nearly ninety-one years he saw St. Louis grow from a mere camp in the wilderness to a great modern city. Death came to him at the loved plantation.

Chouteau was twice married: to Pelagie Kiersereau on July 26, 1783, and to Brigitte Saucier on Feb. 17, 1794. He had eight sons (of whom Auguste Pierre and Pierre, Jr. [q.v.] were the most noted) and one daughter. He was one of the leading citizens of his community; from the time of the American occupation to the time of his retirement probably no one, except his half-brother, outranked him in civic importance. An excitable and sometimes tempestuous man he may have been in his younger days: Thomas James, who as a boatman and trapper, accompanied the expedition of 1809, pictures a scene in which Chouteau, “frantic with passion and raging like a mad bull,” would have precipitated a bloody encounter among his men had he not been restrained by a group of bystanders, including two of his sons. But his basic nature was genial and companionable, and he mellowed with time.

[For references see René Auguste Chouteau; also Walter B. Douglas (ed.), Three Years Among the Indians and Mexicans, by Thos. James (1910).]

W. J. G.—t.

CHOUTEAU, PIERRE (Jan. 19, 1789—Sept. 6, 1865), merchant, fur trader, financier, was born in St. Louis, son of Jean Pierre and Pelagie (Kiersereau) Chouteau. Although in business he was referred to as Pierre Chouteau, Jr., he was familiarly known among his friends and relatives as “Cadet,” meaning second born. He received his early education from the village school-master, Jean Baptiste Trudea. Before reaching the age of sixteen he became a clerk
in his father's store. In 1808 he accompanied Julien Dubuque to the lead mines on the upper Mississippi, remaining there for two years. In 1809 he joined his father on one of the St. Louis Missouri Fur Trading expeditions. Soon after reaching his majority he went into business on his own account, and in 1813 formed a partnership with his brother-in-law, Bartholemew Berthold, in the Indian trade and general merchandising business. This partnership terminated in 1831, when Chouteau became a member of the firm of Bernard Pratte & Company; later the firm name was changed to Pratte, Chouteau & Company. This company having had the agency of the Western Department of the American Fur Company for some years finally, in 1834, purchased the Western Department. Four years later the firm name was changed to Pierre Chouteau, Jr. & Company, which name it carried for more than twenty years. As his business expanded, Chouteau was drawn into other fields, and for many years resided mainly in New York. He was at this time one of the leading financiers in the country. His business operations during the whole of his life were extensive; his trading area extended over an immense territory, embracing the whole country watered by the upper Mississippi and Missouri rivers, as well as the tributaries of the latter. In 1843 he joined the American Iron Company to work the Iron Mountain deposits in St. Francois County, Mo., and in 1850 the firm of Chouteau, Harrison & Vallette to operate a rolling-mill in North St. Louis. He was also one of the original incorporators of the Ohio & Mississippi Railroad of Illinois in 1851. In 1820 he was elected as one of the delegates from St. Louis County to the constitutional convention of Missouri. He was generous and helpful toward scientific expeditions seeking to go into the Far West, and contributed in no small degree to their success. At the time of his death, which occurred in St. Louis, he had accumulated a fortune amounting to several millions. He was married in church on Aug. 13, 1814 (a civil ceremony having preceded this one) to his cousin Emilie Gratiot, daughter of Charles Gratiot, by whom he had five children.

CHOUTEAU, PIERRE. [See Chouteau, Jean Pierre, 1758-1849.]

CHOUTEAU, RENÉ AUGUSTE (September 17, 1749-Feb. 24, 1829), trader, assistant to Pierre Laclede [q.v.], in the founding of St. Louis, was born in New Orleans, the son of René Auguste and Marie Thérèse (Bourgeois) Chouteau. He was baptized on Sept. 7, 1749, and was probably born on the same day or at most a day or two earlier. Soon after his birth, the mother, alleging gross cruelty on the part of her husband, separated from him taking her infant with her. In 1757 she formed an unsanctioned but generally approved union with Laclede, by whom she had four children, all of whom, in observance of French law, bore the surname of the undivorced husband. In August 1763 Laclede with his family left New Orleans for the Illinois country, reaching Fort de Char- tres in November. Auguste, now a sedate, intelligent, and disciplined lad of fourteen, who enjoyed the utmost confidence of his stepfather, accompanied him in December on a tour of the west bank of the river, where a site was selected for a new settlement. Two months later Laclede sent him in command of a party of thirty men to begin the building of the village, to which the founder, who followed in April, gave the name of St. Louis.

Until the death of Laclede, June 20, 1778, Chouteau was his chief lieutenant in all the many activities in which he was engaged. Succeeding to the management of the business, he built up, by his energy, ability, and tactfulness, a large trade. A connection with the Osage Indians, then on the Osage River, in the present Vernon County, Mo., had been made apparently as early as the eighties, his half-brother Pierre acting as his representative with the tribe. In 1794 he obtained a monopoly of the Osage trade, which he retained until 1802, adding considerably to his fortune. On the transfer of Louisiana to the United States, March 10, 1804, he cordially cooperated with the officials in establishing the new order. He was appointed one of the three justices of the first territorial court, and in 1808 became a colonel of the St. Louis militia, a title which clung to him for the rest of his life. In the following year, when St. Louis was incorporated as a town, he was made chairman of its board of trustees. In 1815, with Governors Edwards of Illinois Territory and Clark of Missouri Territory, he served as a federal commissioner in negotiating treaties with the Sioux, Iowas, Sauks, and Foxes. He was also the United States pension agent for Missouri Territory, 1819-20. He had, however, small inclination toward public office, giving his time chiefly to his many business interests. Others of the family sought the remoter frontier, but "Colonel Auguste" spent most of his days in St. Louis. In this isolated village, insignificant in

94
Chovet

itself, but the chief mart of furs and skins, the frontier capital and the radial point of exploration and settlement, he became the wealthiest citizen and the largest landholder. The humble Laclede cottage he rebuilt and enlarged, adding to it a beautiful garden and making it one of the town's show places. He died at his home.

Chouteau was married, Sept. 26, 1786, to Marie Thérèse Cerré, who with four sons and three daughters survived him. His character was of the highest. The French inscription on his tomb characterizes his life as a model of the civic and social virtues, and contemporary records attest its truth. Delassus, the Spanish lieutenant-governor, wrote of him (May 31, 1794), as "a man of incorruptible integrity." He was of less than medium height, with a high forehead, light brown hair, an oval face which he shaved smooth, straight nose and classic mouth, and his expression was quiet and grave. He left a narrative of the founding of the village which family tradition says is only a fragment of a work embracing the local annals of many years, the larger portion having been accidentally burned.

[Chouteau MSS. in the Mo. Hist. Soc.; "Jour. of the Founding of St. Louis," Mo. Hist. Soc. Colls., vols. III, no. 4 (1911), and various notes and references in other volumes; Louis Houck, Hist. of Mo. from Earliest Explorations and Settlements Until Admission of the State into the Union (1908); Paul Beckwith, Creoles of St. Louis (1853); J. W. J. G—4.

CHOVET, ABRAHAM (May 25, 1704–Mar. 24, 1790), surgeon, anatomist, was the son of David Chovet, a wine merchant of London. In 1720 he was apprenticed for seven years to Peter Gougeux Lamarque, a foreign brother of the Company of the Barber-Surgeons of London, paying Lamarque one hundred and five pounds for the privilege. At the expiration of his apprenticeship he went to France, where he studied anatomy, having Winslow as one of his teachers. In 1732 he was back in London giving demonstrations of anatomy on wax models. At that time teachers of anatomy had the greatest difficulty in procuring subjects for dissection, the lack being supplied by means of wax models and other preparations. Chovet was particularly skilled in constructing such material. An advertisement appeared on Dec. 27, 1733 in the London Evening Post: "To be seen this day and for the future, price 5 s., at Mr. Lamarque's, Surgeon, in Orange Street, Leicester fields, Mr. Chovet's the surgeon's, New Figure of Anatomy, which represents a woman chained down upon a table, suppos'd opened alive; wherein the circula-

Chovet

culation of the blood is made visible through glass veins and arteries: the circulation is also seen from the mother to the child, and from the child to the mother, with the Systolick and Diastolick motion of the heart and the action of the lungs. All which particulars, with several others, will be shewn and clearly explained by Mr. Chovet himself. Note, a Gentlewman qualified will attend the ladies." In 1734 Chovet became a foreign brother of the Company of the Barber-Surgeons of London, and in the same year he was chosen one of the Demonstrators of Anatomy at Surgeons' Hall. (The term "foreign brother" does not necessarily imply that its holder was a foreigner or alien, but that he was "a surgeon who practised within the jurisdiction of the Company of Barber-Surgeons of London and was not 'free' of the Company by patrimony, servitude or redemption.") Sidney Young states that judging from his residence in Leicester Fields and his position in the Company, Chovet must have acquired some eminence (Annals of the Barber-Surgeons of London, 1890). In 1736 Chovet resigned his position of Demonstrator of Anatomy, and as after 1740 his name no longer figures on the lists of the Company, Young thought he must have died. In reality he had only transferred his activities to other fields. He next appears in the Barbados, pursuing his anatomical labors with the same enthusiasm. Peachey found his name as a resident of Antigua in a list of subscribers to the Protestant schools in Ireland. In 1759 he was practising surgery at Kingston, Jamaica. Thence he fled with his wife and daughter to escape a threatened uprising of the blacks and sometime before 1774 he settled in Philadelphia, as on Oct. 12, 1774 he advertised a course on anatomy in that city. His advertisements all stress the fact that studying his preparations is unattended with the disagreeable smells and sights unavoidable in the dissecting room. Many laymen seem to have attended his demonstrations. When John Adams arrived in Philadelphia as a delegate to the Congress of 1774 he was taken to see the anatomical paintings which Dr. Fothergill had presented to the Pennsylvania Hospital to be used by Dr. Shippen in his lectures on anatomy. The statesman was much impressed with what he termed their "exquisite art," but when a little later he saw Chovet's wax preparations he writes, "This exhibition is more exquisite than that of Dr. Shippen at the Hospital." In 1793 after the death of Chovet, the managers of the hospital purchased his collection of preparations and wax models, which in 1824 they presented to the University of Pennsylvania, where it remained until
Christian

utterly destroyed by fire in 1888. From many contemporary pen portraits Chovet seems to have been an eccentric character. Chastellux terms him “a perfect original.” When the English were in Philadelphia he was a Whig, after they left he proclaimed himself a Tory. John F. Watson says he was “licensed to say and do what he pleased, at which no one took umbrage,” and that he was noted for possessing much sarcastic wit and for using expletives which were “neither useful nor ornamental” (Annals of Philadelphia, 1830, pp. 609, 611).

He gives a pathetic picture of him as he appeared on the streets of the city in his old age. Coste the chief medical officer of Rochambeau’s army is quoted as speaking most highly of Chovet’s skill in anatomy and surgery. He was one of the founders of the College of Physicians of Philadelphia in 1787. S. Weir Mitchell depicts him, quite unfairly, in one of the characters of his novel The Red City (1908).

F. R. P.

CHRISTIAN, WILLIAM (c. 1743-Apr. 9, 1786), soldier, politician, was a descendant of a Manx family that had settled in Ireland, whence his parents, Israel and Elizabeth (Stark) Christian, came to Virginia in 1740. They soon afterward opened a general store at Staunton, Augusta County, where William was born. He must have begun his military career early, for at the age of twenty he had risen to the rank of captain in Col. William Byrd’s regiment. About four years later he entered the law office of Patrick Henry as a student, with more success in wooing and marrying Henry’s favorite sister, Anne, than in acquiring a profession. He Resied successively in Botetourt and Fincastle counties, represented the latter in the lower house of the Virginia legislature in 1773, 1774, and 1775, and both counties in the state Senate during sessions of 1776 and 1780-83. In 1775 he was a member of the Committee of Safety, a member of the conventions of Mar. 20 and July 17, and a member of the committee named to provide plans for the execution of Patrick Henry’s famous resolutions of Mar. 23, 1775. During Dunmore’s War Christian commanded a regiment of Fincastle militia. He was appointed lieutenant-colonel of the 1st Virginia Regiment, Continental Line, on Feb. 13, 1776, and on Mar. 18 following he was promoted to the rank of colonel, a position he held until July, when he resigned and accepted a commission as colonel of militia from the Virginia Council of Defense (Aug. 1, 1776), with orders to organize and lead a punitive expedition against the Cherokee Indians, whose raids, under the leadership of the chiefs Dragging Canoe and Oconostoga, had terrorized the settlements in the upper Holston and Wautaga river valleys. Christian collected a force of about seventeen hundred militiamen from Virginia and North Carolina at Long (also called Great) Island, now Kingsport, on the Holston River, while the Indians retired beyond the French Broad River. The militia followed by the way of Chimney Top Mountain and Lick Creek to the French Broad, destroying crops and a few villages with a show of force that overawed the Indian leaders. Without giving battle, the Indians agreed to a truce which was to be followed by a “permanent” treaty of peace the next year. The army returned to Long Island, where they rebuilt Fort Robinson and renamed it Fort Patrick Henry, and then disbanded after a three months’ bloodless campaign. Christian received the official thanks of the governor and council and was appointed one of the three commissioners on the part of Virginia to negotiate the Cherokee treaty which was signed at Long Island July 20, 1777 (T. W. Preston, Historical Sketches of the Holston Valleys, 1926, pp. 56-59). In August 1785 he moved his family to Kentucky, where his Virginia land grants amounted to nine thousand acres, and located on Bear Grass Creek, near Louisville. The following year he was killed, near the present site of Jeffersonville, Ind., while leading a pursuit party against marauding Wabash Indians.

T. D. M.

CHRISTIANITY, ISAAC PECKHAM (Mar. 12, 1812-Sept. 8, 1890), lawyer, senator, was descended from forebears named Christianaense, who emigrated in 1614 from Leyden to New Amsterdam. He was the son of Thomas and Zilpha (Peckham) Christianity, and was born in Johnston, Fulton County, N. Y. His father was a blacksmith until Isaac was eight years old; after
Christianity

that he cleared a piece of land and cultivated a farm. He was always poor, but did all he could to maintain his family. When Isaac had reached the age of twelve, his father had a serious accident, and it devolved upon the boy to help support the family. He could only attend school three months in winter, two miles from home. His mother, however, taught him a great deal, and at eighteen he began to teach school. For a few months each year he attended first the academies at Johnstown and Kingsborough, and later the one at Ovid. In the fall of 1834 he took up the study of law with John Maynard in Ovid. On May 12, 1836, he left Ovid for Monroe, Mich., where in the same month he became clerk in the United States land office. He kept up his studies, with the result that he was admitted to the bar in 1838. In November 1839 he was married to Elizabeth McClusky. His ability and diligence won for him the position of prosecuting attorney of Monroe County for three terms (1841-46). In 1844 he brought his father, mother, sister, and two brothers to Monroe. Having become a prominent lawyer, he naturally felt a strong interest in politics. Till 1847 he was a staunch Democrat, but the slavery issue impelled him to join the Free-Soil party, whose convention he attended in 1848 at Buffalo. From 1850 to 1852 he was a member of the Michigan Senate, while in 1852 he ran for governor, securing 5,850 votes out of a total of 83,308. When in 1854 the consolidation of the Free-Soil and Whig parties resulted in the formation of the Republican party, Christianity turned Republican. He issued the call for the convention at Jackson, Mich., in 1854, and was a delegate to the first national convention at Philadelphia in 1856. During the latter year he purchased the Monroe Commercial, and as its editor vigorously supported the Republican cause. Early in 1858 he became one of the first four justices of the supreme court of Michigan. Volumes V—XXXI of the Michigan Reports amply testify to his keen sense of justice and equity, his thorough acquaintance with the fundamental principles of law, and his great industry. He was continuously reelected, until in 1874 he resigned the office, in order to go to Washington as senator from Michigan. He owed his selection largely to a split in the Republican party. Within eight days after entering the Senate he made a speech on the Louisiana election (Congressional Record, 44 Cong., Spec. Sess., pp. 39-41) which won for him the respect of his colleagues. But his career as senator was not a success, and he resigned in 1879; whereupon President Hayes appointed him minister to Peru. Returning to the United States two years later, he passed his declining years in the home of his daughter, Mrs. Thomas O'Brien, in Monroe, Mich.

CHRISTY, DAVID (b. 1802), anti-slavery writer, geologist, was a resident of Cincinnati who was active in the colonization movement in Ohio and the author of a number of pamphlets on slavery and scientific subjects. From 1824 to 1836 he was a newspaper man, and it was probably owing to this early training that he acquired his later skill in presenting his views on public questions in an interesting and striking manner. In 1848 he was appointed an agent of the American Colonization Society in Ohio and was instrumental in inducing Charles McMicken of Cincinnati and others to contribute toward the purchase of a tract of land in Africa for the colonization of the free colored laborer. This land lay between Sierra Leone and Liberia and was known as "Ohio in Africa." In his capacity as agent he visited Columbus in January 1849 where he found the legislature in heated discussion over the repeal of the Black Laws which were designed to prevent the immigration of colored men into Ohio. A memorial was presented by the friends of colonization to send emigrants to Liberia, and Christy was asked to deliver lectures on African colonization before the House of Representatives in Ohio, which he did on Feb. 19, 1849, and again on Jan. 19, 1850. These were subsequently published at Columbus as well as a pamphlet, On the Present Relations of Free Labor to Slave in Tropical and Semi-Tropical Countries, which he had prepared for the Ohio Constitutional Convention. In 1852 he published The Republic of Liberia: Facts for Thinking Men, which was originally addressed to the citizens of Cleveland and printed in the columns of the Herald and the Plain Dealer. The agitation over the Kansas-Nebraska Act and the attacks of the Abolitionists on slavery caused Christy in 1855 to publish his most important work. This was entitled Cotton Is King: or the Economical Relations of Slavery (1855). The author's name was withheld in the first edition although it was given in later editions. Christy's object in writing the essay was "to convince the abolitionists of the utter failure of their plans" (Elliott, post, p. 22). The essay ran through three editions and De Bow's Review declared that it was "cogent, well-informed, and temperate" (De Bow's Review, September 1855). This work was followed in 1857 by a pamphlet on Ethiopia: Her Gloom and Glory (1857). In the meantime, due to the fact

97
Christy

that his duties as agent compelled him to travel extensively in the eastern and middle sections of the country and because he had a natural aptitude for the sciences, Christy began to make geological observations. These he reported in a series of letters first published in the *Cincinnati Gazette* and later issued in pamphlet form and addressed to Dr. John Locke, assistant to the chief geologist of Ohio. According to Locke, no one else had "actually drawn approximate sections of the strata from the Atlantic to Iowa and from Lake Erie to the Gulf of Mexico" (*Letters on the Geology of the West and Southwest*, Rossville, 1848). Christy's interest in geology led him to correspond with M. de Verneuil of Paris and to be employed as the geologist of the Nantahala & Tuckasege Land & Mineral Company of North Carolina. In 1867 he was engaged in writing a book on "Geology Attesting Christianity" (*De Bevo's Review*, November 1867).

R. C. M.

CHRISTY, EDWIN P. (1815-May 21, 1862), minstrel, was a native of Philadelphia. Of his early life until 1842, when at Buffalo, N. Y., he originated the Christy Minstrels, little is known. The troupe was first called the Virginia Minstrels, and in addition to its founder, its leading members were George Christy (born Harrington), Lansing Durand, and T. Vaughn. They traveled at first principally through the West and South, and were later joined by Enom Dickerson and Zeke Backus, well-known minstrel performers. They first appeared in New York at Palmo's Opera House, Apr. 27, 1846, and during the following six years they gave more than twenty-five hundred performances in Mechanics Hall and other theatres and entertainment places, winning great favor, and establishing a record for their type of program. In all these performances Edwin P. Christy took the part of interlocutor. It has been claimed that he was the originator of modern negro minstrelsy. All that his announcements asserted, however, was that he was "the first to harmonize and originate the present type of minstrelsy," meaning thereby the singing in harmony and the introducing of various acts, such as wench dancing and solo playing. The Christy Minstrels went to London at one period, and were so cordially received by English audiences that they set the fashion, musical entertainments of that form remaining popular, especially in London, for many years. Christy's two sons were E. Byron Christy (1838-66) and William

Church

A. Christy (1839-62), both of whom were members of their father's profession during their short lives. He acquired a considerable fortune, and lived in retirement after 1854. During his later years, he was subject to attacks of melancholia, suffering from delusions that he was without adequate means of support. While in a period of temporary insanity he jumped from the window of his residence in New York, receiving injuries which proved fatal. His name stands among the first in point of time, and at the head of his profession, as a master in the art of providing the public with that peculiar and now almost non-existent type of entertainment known as blackface or negro minstrelsy.

E. F. E.

CHURCH, ALONZO (Apr. 9, 1793-May 18, 1862), educator, the son of Reuben and Elizabeth (Whipple) Church, was born near Brattleboro, Vt., where his father was engaged in farming. His grandfather, Timothy Church, had fought in the French and Indian War and was a colonel in the Revolution, also taking an active part in the attempt of New York to secure control of Vermont. His father was a lieutenant in the Revolution. Alonzo was ambitious for an education and as soon as he could prepare for entry he was off to Middlebury College where he graduated in 1816. Having helped himself through college by teaching at odd times, he had learned to like such work, and immediately after graduating he joined that train of young college men in the North who had begun to drift southward. Following the practise of most of the migrating Middlebury College graduates, he set out for Georgia. Like his fellows he was bent on teaching and soon appeared in Eatonton, Putnam County, where he became the head of an academy.

As Church was afflicted with "pulmonary infirmity," he felt that he should make his home permanently in a warm climate. Hence he looked upon Georgia as his fixed abode. The year after his arrival he acquired another element of permanency in his marriage to Sarah J. Trippe, the daughter of a Putnam County planter. So great was his success both in teaching and in impressing himself upon the educational leaders of the state that in 1819 he was elected to teach mathematics in the State University at Athens. Undoubtedly another important element aided him in this promotion: he was genuinely religious and had in 1817 placed himself in the care of the Hopewell Presbyterian. This move recommended him to the Presbyterians, who now controlled the

98
Church

University and were largely to continue to do so until the Civil War. In 1820 he was licensed to preach and four years later he was ordained an evangelist at Bethany Church in Greene County. At the time when he came to the University as professor of mathematics, Moses Waddel, another Presbyterian preacher and academy teacher, arrived as the new president. When Waddel left ten years later (1829), Church was his natural successor. By this time the Methodists and Baptists had become powerful enough and self-conscious enough to resent the control of the University by the Presbyterians; the latter especially made a bitter fight against Church solely because he was a Presbyterian. Nevertheless he was elected and for the next thirty years he molded and controlled one of the principal ante bellum Southern universities. Although founded in 1801 (chartered in 1785) the University had never been able to gain strength until Waddel had given it ten years of faithful service. With this basis Church built the University into an institution of great usefulness to Georgians as well as to the youth of surrounding states. He ruled with a firm will both trustees and faculty; he believed in a scrupulous attention to duties; and he held that whatever the rules required was a sacred obligation. His piercing black eyes, dark complexion, graceful and dignified carriage, together with a quick temper, marked him as a positive character. In 1834 he became involved in a long and heated controversy with Stephen Olin, a classmate at Middlebury College, who had recently been a member of the faculty at the University. His most famous dispute was with John and Joseph LeConte, teachers at the University in the early fifties. The issues were varied and confusing but centered in the attempt of the LeConte brothers to remake the University in curriculum and organization along more modern lines. The fight resulted in the departure of the LeContes and the complete reorganization of the faculty in 1836 with Church reelected as president. Worn out and weak, Church informed the trustees in 1838 that he would resign the next year. After his resignation he moved into the country near Athens to spend the last years of his life. His wife died in 1861 and the following year he himself passed away in an atmosphere tense with a civil conflict in which the sons and sons-in-law of this former New Englander were vigorously fighting on the side of the South.

CHURCH, BENJAMIN (1639-Jan. 17, 1718), soldier, was born at Plymouth, Mass., the son of Richard and Elizabeth (Warren) Church. He was brought up to follow his father's trade of carpentry, which, especially in his early years, carried him to many parts of the Plymouth Colony. On Dec. 26, 1671, he married Alice Southworth. By 1674 he had bought land and was engaged in building a house at Sogkonate (Little Compton, R. I.), where he became well acquainted with the Indians and was soon "in great esteem among them." The outbreak of King Philip's War, in June 1675, found Church living on the frontier, where his first act was to dissuade Awashonks, squaw-sachem of the Sogkonate Indians, from joining the Wampanoags. During the summer, commanding small detachments of Plymouth troops, Church fought numerous skirmishes of no great importance aside from their value in teaching methods of Indian warfare. He constantly urged his superior officers to pursue the enemy, instead of building forts, but his suggestions were ignored. In the "Great Swamp Fight" of Dec. 19, 1675, near South Kingston, R. I., he played a prominent part as captain of a Plymouth company, and was twice wounded. Had his advice, that the troops be allowed to remain and recuperate in the Narragansett fort, been followed, the English losses from exposure on the return march might have been greatly diminished. During the following spring and summer the troops of the United Colonies undertook the systematic destruction of the Indians' corn, and the capture of warriors, with their women and children. By offering his captives their choice between slavery or fighting against their kinsmen, Church enlisted many Indians in his forces and, with their assistance, took additional prisoners, including a squaw and son of Philip. The sachem himself, with his remaining followers, took refuge in a swamp near Mount Hope (Bristol, R. I.). Betrayed by a deserter, he was ambushed by Church on Aug. 12, 1676, and shot in attempting to escape, by Alderman, one of Church's Indians. During the following twelve years Church lived at various places within the Plymouth Colony, where he bought lands and served occasionally as magistrate or selectman. During King William's and Queen Anne's wars he served as major, and later colonel, in five expeditions against the French and Indians in Maine and Nova Scotia, in the last of which, in 1704, he plundered the French town of Les Mines and, in his blustering manner, ordered the governor of Port Royal to discontinue the raids on
Church

the English settlements. These expeditions accomplished little, since the enemy avoided decisive engagements, and Church, poorly compensated for his services, retired in disgust in 1704. He seems to have been a man “of uncommon activity” even in his later years, when he had grown so fat that the aid of a stout sergeant was needed to lift him over fallen trees. On one occasion his impetuosity caused some of his French prisoners to be “knocked on the head,” an act which he found difficult to explain on his return to Boston. He died Jan. 17, 1718, near Little Compton, R. I., from injuries sustained in a fall from his horse.

[Thos. Church, a son of Benj. Church, was the author of Entertaining Passages Relating to King Philip’s War (1716). The book describes his father’s part in King Philip’s War and in the later expeditions to Maine, was written from his notes, and received his approval. The best edition, that of Henry M. Dexter (1865), is in two volumes, and contains in the Introduction a detailed account of Benj. Church’s life. Numerous references to him appear in the Plymouth Colony Records (1855).]

H. P. S.

CHURCH, BENJAMIN (Aug. 24, 1734–1776), physician, traitor, poet, and author, was a grandson of Col. Benjamin Church [q.v.], who was conspicuous in the Indian and French Wars, and a son of Benjamin, deacon of Mather Byles’s church (Boston). He was born at Newport, R. I., entered the Boston Latin School in 1745, and graduated from Harvard College in 1754. Soon after graduation he wrote two poems which appeared in a collection in celebration of the accession of George III. He studied medicine with Dr. Joseph Pynchon, later going to London where he married Hannah Hill of Ross, Herefordshire. About 1768 he built a fine house at Raynham, Mass., which some think threw him into debt. Seemingly his pen supported the Whig cause vigorously, but it is said that he parodied the patriotic songs in favor of the British and that his political essays were answered from the Tory side by his own pen. The Times ... “by an American” (Boston, 1765), a satire upon the Stamp Act, has been attributed to him. He examined the body of Crispus Attucks, killed in the Boston Massacre, 1770, and his deposition was printed in the narrative of the town (James Spear Loring, The Hundred Boston Orators . . . 4th ed., Boston, 1855, p. 37). He is said to have written for the Loyalist paper, The Censor, but on Oct. 28, 1772, being a member with Adams and Warren of a committee of correspondence, he was appointed to draft a letter to the other towns about the colony’s rights (Justin Winsor, editor, Memorial History of Boston, 1881, III, 44). On Mar. 5, 1773, he delivered An Oration . . . to Commemorate the Bloody Tragedy of the Fifth

Church of March, 1770, which ranks high amongst these utterances. In 1774, after a caucus of Whigs, sworn to secrecy, it was learned, according to Paul Revere, that the proceedings had been divulged to the Tories, and Revere did not doubt that Church had supplied the information to Hutchinson (see letter in Massachusetts Historical Society Collections, ser. I, vol. V, pp. 166–12). Church, nevertheless, continued in the confidence of the Whigs, for, with Dr. Joseph Warren and others, he was appointed a delegate in 1774 to the Provincial Congress. According to Samuel Kettel, soon after the battle of Lexington, Church told his confreres that he must go into Boston, to see about medicines. On his return, he said he had been made prisoner and taken before Gen. Gage, but it was learned later that he had paid Gage a voluntary visit. In May 1775, on the other hand, he went to consult the Continental Congress, Philadelphia, about the defense of the colony. He was unanimously elected director and chief physician of the first Army Hospital (at Cambridge), July 25, 1775, at a salary of four dollars a day, but his management of its affairs seems to have been not altogether successful, finally causing an inquiry to be held into his conduct. It must be admitted, however, that he had rivals seeking his position (see Church’s letter to Gen. Sullivan, American Archives, ser. IV, vol. III, p. 712). He evidently wrote to Washington, Sept. 20, seeking permission to leave the army (American Archives, ser. IV, vol. III, p. 786).

Church was tried by court martial, Oct. 4, 1775, Washington presiding, and was found guilty of “holding criminal correspondence with the enemy.” In July 1775, he had sent a cipher letter to the commander of a British vessel at Newport. The correspondence had been intercepted, Henry Ward taking it to Washington at the end of September. The Massachusetts Provincial Congress unanimously expelled Church from their body on Nov. 4. He defended himself ably but was not convincing. He admitted that he wrote the letter, but said he was not acting traitorously as he purposely had exaggerated the numbers of the Continental Army in order to frighten the British and quickly end hostilities. The Continental Congress resolved on Nov. 6 that he should be imprisoned at Norwich, Conn., but, because of illness, he was removed to Massachusetts and put on parole not to leave the colony (Richard Frothingham, History of the Siege of Boston, 3rd ed., 1872, pp. 259–60). Eventually allowed by the Massachusetts Council to depart for the West Indies, he sailed from Boston probably in 1778, but the ship was never
Church

heard from again. Church's family was pensioned by the Crown.

A.C.M.

CHURCH, FREDERICK EDWIN (May 4, 1826-Apr. 7, 1900), landscape painter, born at Hartford, Conn., was descended in a direct line from Richard Church, one of the earliest settlers of that city, who arrived with the Rev. Thomas Hooker, in June 1636 by way of Newton, Mass., having emigrated from Braintree, Essex, England, a few years previously. Frederick's father was Joseph Church a prominent citizen of Hartford and his mother's maiden name was Eliza Janes. Notwithstanding certain misgivings as to the boy's choice of art as a profession, his parents, in view of marked evidences of his talent, placed him with Benjamin A. Coe to learn drawing, and for six months with A. H. Emmons to study color. He was also encouraged by the sculptor E. S. Bartholomew who had studied at the National Academy of Design in New York. Thomas Cole [q.v.] was induced to receive Church as a pupil in 1844, and from that time till Cole's death in 1848, Church was an inmate of his house and studio. After his master's death, Church continued his studies from nature and painted a number of pictures for which he found subjects in the mountains and along the rivers and coasts in the vicinity of New York—effects of storm in which the sky and clouds play an important part, or striking masses of rock, such as "View of West Rock near New Haven" (bought by Cyrus W. Field), or the hills that border the Hudson. These gave evidence of a love for the exceptional, cultivated by association with Cole, though he did not share that painter's story-telling and allegorical tendencies. He had read of Humboldt's travels in South America and desiring to realize pictorially that naturalist's eloquent descriptions, he visited South America in 1853 and again in 1857, occupying at Quito the house Humboldt had lived in fifty years before. He brought back to New York an ample supply of studies and sketches, and in 1859 exhibited successfully his famous picture, "The Heart of the Andes," besides a number of other realistically painted tropical landscapes, "The Falls of Tecemdamara," "Cotopaxi" (1854), and "The Mountains of Ecuador" (1855). In the mean-
time, he had visited Niagara Falls and from near Table Rock on the Canadian side, painted, in 1857, the Horse-shoe and American Falls, on an oblong canvas, seven by three feet in size. It has been considered his masterpiece, and was the first satisfactory delineation of the Falls in art. At the Paris Exposition of 1867, it was awarded a second medal. From the collection of John Taylor Johnston it was purchased for the Corcoran Gallery in Washington. As a complete change from tropical subjects, he sought the effects of extreme cold in the north, going to Labrador, where he made studies for "Icebergs" (1863) and "Aurora Borealis" (1865). A trip to Jamaica yielded "The Vale of St. Thomas" (1867) and other West Indian subjects. Emulating in painting what Washington Irving had accomplished in literature, he turned from America to Europe in 1871, finding in Greece and the Near East inspiration for "The Parthenon,"—a truly noble picture,—and the decorative "Egean Sea," now at the Metropolitan Museum, New York. He also visited Palestine and made studies at Jerusalem and Damascus. Returning to New York, he continued painting from his ample supply of studies, notes, and sketches till about 1877, when an attack of inflammatory rheumatism deprived him of the use of his right arm and hand. He learned to use his left hand, till that also failed him, and he was obliged to cease work "in the maturity of his powers and still retaining the enthusiasm of his youth." He was a member of the National Academy of Design, where he often exhibited, and was also represented in 1852 at the Royal Academy in Lon-
don. Of his exhibits at the Paris Exposition (1867), a celebrated critic wrote, "The originality of this artist, more than his technical skill with the brush, entitled him to the leading position,"—and Ruskin wrote to Charles Eliot Norton of Church's "Cotopaxi," now at the Public Library Galleries, New York, "Church's 'Coto-
pxi' is an interesting picture. He can draw clouds as few men can . . . he has a great gift of his own." After a forced inactivity of over twenty years, Church died at New York on the eve of his seventy-fourth birthday, after returning from Mexico, where he had spent a number of winters.

R.J.W.

CHURCH, FREDERICK STUART (Dec. 1, 1842-Feb. 18, 1924), painter, son of Thomas B. and Mary Elizabeth (Stuart) Church, was
Church

born at Grand Rapids, Mich. As a young boy he was taught to draw by a local painter and engraver named Hartung, a native of Holland. His parents, however, destining him for business, he was sent at thirteen years to Chicago to enter the employ of the American Express Company. While in the office his clever caricatures made him known as "the art chap." At seventeen he enlisted as a private in Company A, Chicago Light Artillery, and saw honorable service in the Civil War, including participation in Sherman's march to the sea. After he was mustered out he went to New York where he studied drawing and painting with Walter Shirlaw and L. M. Wilmarth. He began to show pictures at the National Academy of Design and to make illustrations for Harper's Weekly and other publications. For three years he was employed by the Elgin Watch Company as commercial illustrator. He began at this time to make studies of animals which, as he generally endowed them with human and humorous attributes, proved popular and salable. He took an active part in 1875 in the formation of the Art Students' League of New York, called by his friend and associate William St. John Harper "the most democratic and American of art academies." Of Church himself Harper wrote: "Himself one of the most unconventional and least academic of draftsmen, he has always maintained the importance of thorough academic training." Church showed his sympathy with both the radicals and the conservatives in painting by belonging simultaneously to the Society of American Artists and to the National Academy and he helped to effect the union of these societies. He was active in the American Water Color Society and the New York Etching Club, and he served as a trustee of the Harper Fund to help young students through the art schools. He was a member of the Lotus Club and of the Architectural League of New York, and for several years was chairman of the art committee of the Union League Club. Though resident at New York during most of his professional life he retained characteristics of the Middle West. Notably American in aspirations and reactions, he was an old man when he first visited Europe, and he created a mild newspaper sensation on his return by announcing that European art could teach Americans little or nothing. But while he painted pictures in which subject seemed to be of primary consideration, he was a thoroughly artistic technician whose work was remarkable for its refined tonality, broad handling, and truth of tone relations. He is represented in the National Gallery, Washington; in the Metropolitan Mu-

seum, New York; in the City Art Museum, St. Louis; and in other public and private collections.

F. W. C.

CHURCH, GEORGE EARL (Dec. 7, 1835-Jan. 5, 1910), civil engineer, explorer, writer, was born in New Bedford, Mass., the son of Washington; and Margaret (Fisher) Church. On his father's side he was descended from Richard Church who came from Oxford, England, to Plymouth, Mass., in 1632; on his mother's side he was a lineal descendant of Edward Winslow who came over on the Mayflower and was several times governor of the colony at Plymouth. When he was a small boy, Church's family moved to Rhode Island where he attended the Providence High School. His father had died before this, so when the boy decided to become a civil engineer he was obliged to make his way by means of practical experience instead of by going through college. After some experience in helping to make a topographical map of the state of Massachusetts, as an assistant engineer on the Hoosac Tunnel, and in the construction of railways in Iowa, in 1857 he went to Buenos Aires to serve as chief engineer on a railway project for the Argentine Republic. The work was postponed, and he was appointed a member of a scientific commission which was to explore the Republic's southwestern border and report on a system of defense against the savages on the slopes of the Andes. This commission, which covered a distance of 7,000 miles in nine months, had many exciting adventures with the Indians and on one occasion it was reported that Church had been captured and burned to death. In 1860 and 1861 he acted as chief assistant engineer on the construction of the Great Northern Railway of Buenos Aires which he had previously surveyed and located; but at the outbreak of the Civil War he gave up his position to return to the United States and enlist in the army. He was commissioned captain in the 7th Rhode Island Infantry and sent to the front. His service was with the 7th, 11th, and 22nd Regiments, Rhode Island Volunteers, and as a brigade commander in the Army of the Potomac. He earned special distinction in the battle of Fredericksburg where his regiment suffered heavy losses. He entered it as a captain and came out a lieutenant-colonel in command of what was left of his regiment. Afterward he was promoted to a colonelcy.

Soon after the war Church went to Mexico
Church

where he acted as special war correspondent for the New York Herald during the revolution against Emperor Maximilian. He attached himself to the army of President Juarez and shared its fortunes until the capture of Maximilian in 1867. Then, in 1868, he went back to South America where his greatest work was accomplished in connection with the Madeira & Mamoré Railway. For ten years, at the request of the Bolivian Government, he engaged in the task of opening Bolivia to trade by way of the Amazon River and its tributaries. He obtained from Brazil a concession to construct a railway in order to avoid the falls of the Madeira River, conducting not only the negotiations with the Brazilian Government but persuading European capitalists to finance the undertaking. The concession, and the companies formed in connection with it, became involved in legal proceedings and eventually had to be abandoned for many years, but the enterprise was eventually resumed and the terminus of this railway which Church had done so much to promote was named Villa Church in his honor. In 1880 he was appointed United States commissioner to report on the political, financial, and trade conditions of Ecuador. His report, "Ecuador in 1881," was published as a special message of the President to Congress. On the completion of this mission he took up his residence in London. Although he retained his United States citizenship, he lived the remainder of his life in London. He was connected with various Argentine railway undertakings, and with some in North America which brought him back frequently but only for short periods. After taking up his residence in London he devoted much time to literary pursuits and to the scientific societies of which he was a member. His experiences in South America, supplemented by a lifetime of study of the experiences of other travelers on that continent, gave him the knowledge which led the Geographical Journal to speak of him as "one of the foremost authorities on the history and geography of South America" (XXXV, 203). The Transactions of the American Society of Civil Engineers says of him: "Colonel Church probably possessed a wider and more complete knowledge of the history, geography, and resources of South America than any other authority" (LXXI, 407). His presidential address, "Argentine Geography and the Ancient Pampean Sea," before the Geographical Section of the British Association was pronounced by the London Times to be "the most scientific paper ever read before that section." He was the first, and until his death, the only Fellow of the Royal Geographical Society not a British subject to be elected a member of its Council. He was a frequent contributor to its Journal. His book, Aborigines of South America, which he was still working on at the time of his death, was published in 1912. He died and was buried in London but left his library, a valuable collection of 3,500 volumes, to Brown University. He was married twice: first, in 1882, to Mrs. Alice Helena Carter who died in 1898; second, to Anna Marion Chapman, daughter of Sir Robert Harding. He had no children.

[In addition to references above, see John A. Church, Descendants of Richard Church of Plymouth (1913).] E. Y.

CHURCH, JOHN ADAMS (Apr. 5, 1843-Feb. 12, 1917), metallurgist, son of Pharcellus [q.v.] and Chara Emily (Conant) Church, was a native of Rochester, N. Y., and a member of the first class (1867) to receive the degree E.M. from the Columbia School of Mines. After graduation he went to Europe, and while pursuing a course at Clausthal visited numerous continental metallurgical establishments. His technical observations were embodied in a publication, Notes on a Metallurgical Journey, which he published in 1873, at which time he was assistant editor of the Engineering and Mining Journal (1872-74). For one semester, after his return from Europe, he took over Prof. Egleston's course at the Columbia School of Mines, and again (1878-81) resumed the teacher's role as professor of mining and metallurgy at the Ohio State University. In 1877 he became a member of the United States Geological Survey West of the 100th Meridian, and produced a monograph on the Comstock Lode, containing an ingenious theory that kaolinization was the cause of the high temperature of the ore body. The publication of this theory (Transactions of the American Institute of Mining Engineers, vol. VII) led to an interesting and spirited discussion, Church's view being opposed notably by G. F. Becker of King's Survey (Ibid., vol. VIII). In 1881 Church resumed his metallurgical work as superintendent of the Tombstone Mining & Milling Company, in which capacity he established a record by his utilization of manganese instead of iron in silver-lead furnace slags, developing successfully a slag with 43 per cent MnO, a classic example of its kind. On July 30, 1884, he was married to Jessie A. Peel, by whom he had one son. Accompanied by his wife, Church went to Ku Shanza, Manchuria, in 1886, under contract with Li Hung Chang, then viceroy, to introduce American methods into certain mining districts in China, taking with him a few
Church

Americans to act as mine and smelter foremen. In sharp contrast with the spirit of modern development shown by Li Hung Chang was the unwillingness of the Chinese officials to disregard an ancient superstition as to a sacred dragon supposed to dominate a conveniently located coal mine. This made it necessary for Church to obtain the fuel for his Ku Shanza smelting operations from a coal deposit, at an almost prohibitive distance, located beyond the reach of the imagined dragon. The Chinese metallurgical operations, at the time of Church’s arrival, were as primitive, in their way, as was such a belief in the existence of the dragon. The smelting furnaces were about the size of ordinary washtubs, the air being supplied by the most crude hand bellows. One can therefore imagine the initiative, patience, and resourcefulness which were required to develop commercially successful metallurgical operations under such conditions, especially when hampered, as Church was, by deep-seated prejudices and unreasonable demands on the part of his native labor, and by the constant danger of depredations from marauding robber bands. Nevertheless he successfully fulfilled his contract with Li Hung Chang. He returned to the United States in 1890 and established a consulting practise which he continued until his death.

CHURCH, PHARCELLUS (Sept. 11, 1801–June 5, 1886), Baptist clergyman, was born in Seneca, N. Y., the son of Willard and Sarah (Davis) Church. His early education was meager. His mother encouraged him at the age of twelve to read the Bible through, and his contact with the Gospel of John brought a religious interest. When a Baptist church was formed near his home, he united with it and soon began to preach. In 1824 he graduated from the Hamilton Literary and Theological Institution (now Colgate University), where he was especially influenced by Dr. Nathaniel Kendrick. His early pastorates were at Poultney, Vt. (1825-28), Providence, R. I. (1828-34), and (temporarily) New Orleans, where he wrote his first book, The Philosophy of Benevolence (1836). He then was called to the First Baptist Church of Rochester, N. Y., where his most important ministerial work was accomplished (1835-48). Here also he wrote his most significant volume, Antioch: or, Increase of Moral Power in the Church of Christ (1843), which anticipated somewhat the argument of Henry Drummond as to the unity of natural and spiritual law, while his attempt to establish a via media between Augustinianism and Pelagianism was prophetic of the later working compromise between Calvinistic and Free Baptists. Although he left Rochester before the University there was established, he was an influential leader in the preliminary efforts; his participation in the attempt to bring the college and seminary from Hamilton is traced somewhat in detail in Jesse L. Rensberger’s Rochester and Colgate; Historical Background of the Two Universities (1925).

Although Church had two more pastorates—Bowdoin Square, Boston (1848-52), and the Second Baptist, Brooklyn (1853-55), during both he was engaged in journalistic activities, first with the Watchman and Reflector (Boston), and then with the New York Chronicle (purchased in 1854 by Church and Dr. Jay S. Backus). The latter magazine, devoted especially to the Bible translation cause, Church edited until its merger into the Examiner (1865). Among his more important writings may be mentioned a prize essay, Religious Dissensions (1838), a novel, Mapleton (published anonymously, 1853), in the interest of prohibition; Seed-Truths (1871), written in Bonn, Germany, during one of several sojourns in Europe. Church was married in 1828 to Chara Emily Conant, sister of Thomas J. Conant [q.v.], the eminent Hebraist (John A. Church, Descendants of Richard Church of Plymouth, Mass., 1913). William Conant and John Adams Church [q.q.v.] were two of his sons.

[Thos. Armitage, sketch in the Examiner, June 17, 1886; obituary in the Watchman, June 10, 1886; First Half Century of Madison Univ. 1819-69 (1872).] W. H. A.

CHURCH, WILLIAM CONANT (Aug. 11, 1836–May 23, 1917), editor, born in Rochester, N. Y., was the son of Pharcellus Church [q.v.] and Chara Emily (Conant) Church. At the age of nineteen, he received editorial experience when he assisted his father to edit the New York Chronicle. After five years of this, he became publisher of the New York Sun but withdrew in 1861 for a European trip. Abroad at the outbreak of the Civil War, he returned in July and became a member of the joint military-naval expedition under Gen. W. T. Sherman and Admiral S. F. Du Pont, and was present at the capture of Port Royal. He was the first bearer to the North of the news of the victory and wrote the account of it for the New York Evening Post. Later he became a volunteer aide on the staff of Gen. Silas Casey and was wounded in the battle of Williamsburg. He also took part in the battle of Fair Oaks. During 1861-62 he was Washington correspondent for the New
Churchill

*York Times* but gave this up when he was appointed inspector and mustering officer of provisional brigades with the rank of captain. He was rapidly promoted to major and lieutenant-colonel of volunteers. Resigning in order to start a military paper, together with his brother, Francis P. Churchill, he began the publication of the *Army and Navy Journal* in 1863. During the same year he was married to Mary Elizabeth Metcalf. Soon after the draft riots broke out in New York, he joined the Civilian Committee which assisted in putting them down. In 1866 the *Galaxy Magazine* was started by the two brothers. This publication lasted for twelve years and was then merged with the *Atlantic Monthly*. Henry James’s first stories appeared in it, also a novel by Charles Reade, and the early writings of Mark Twain. “The Claverings,” by Anthony Trollope, began in the first number, May 1866. With Gen. George W. Wingate, Church established the National Rifle Association and was its first president as well as an honorary director for life. He was one of the founders and a fellow in perpetuity of the Metropolitan Museum of Art, a life member and director of the New York Zoological Society, an original member of the Military Order of the Loyal Legion of the United States, of which he was also senior vice-commander. He was a member of the National Council of the National Economic League, and of the Executive Committee of the National Security League. He was also chairman of the committee in New York which erected a monument to John Ericsson and he delivered an oration at the dedication. He ranked, according to a statement in the *New York Times* at the time of his death, as among the foremost journalists of the country. He had been a newspaper man for more than sixty years. His paper, which was largely the result of his military training and experience, supported an extreme military policy. He was a constant contributor to the *Century*, *Scribner’s*, the *North American Review* and other leading magazines; the *New York Times* and other newspapers. Appointed literary executor of John Ericsson, he published his biography in two volumes (1890). He also wrote *Ulysses S. Grant and the Period of National Preservation and Reconstruction* (1897).

M. A. K.

**CHURCHILL, THOMAS JAMES** (Mar. 10, 1824—Mar. 10, 1905), Confederate soldier, governor of Arkansas, was born in Jefferson County, Ky., the son of Samuel and Abby (Oldham) Churchill, and the grandson of Samuel Churchill, who came from Bushey Park, near London, and settled in Albemarle County, Va. Thomas received his academic training in Saint Mary’s College (1844) and his training in law at Transylvania University. In the Mexican War he served as lieutenant in the 1st Kentucky Mounted Riflemen under Col. Humphrey Marshall. In January 1847 he was taken prisoner and was not exchanged until the war was virtually over. On returning from Mexico he moved to Arkansas (1848), acquired a large plantation near Little Rock, and engaged in planting. He was married, on July 31, 1849, to Ann, daughter of Ambrose H. Sevier. In 1857 he was appointed postmaster at Little Rock and served until the outbreak of the Civil War. He then raised a regiment called the 1st Arkansas Mounted Riflemen and entered the Confederate army. In the battle of Oak Hills (Wilson’s Creek) he rendered notable service. By December 1862 he had risen to the rank of brigadier-general and was assigned to the defense of Arkansas Post. This was considered a key position for blocking the progress of the enemy up the river toward Little Rock and as a menace to Sherman, who was trying to capture Vicksburg. After Sherman’s failure, Gen. John A. McClernand superseded him and gave orders for the capture of Arkansas Post so as to remove any menace in the rear of a second move on Vicksburg. Churchill had but 5,000 men, of whom only 3,000 were really effective, against a much larger force and a fleet. He was poorly equipped with guns and munitions, but fought desperately the first day and held the enemy at bay. That night he received a telegram from Gen. T. H. Holmes ordering him to hold the fort “until help arrives or all are dead.” Next day the enemy attacked with such fury that some of Churchill’s men raised the white flag without his knowledge and he was forced to surrender. His loss in dead and wounded was only 135 while that of the attacking party was 1,061 (D. Y. Thomas, *Arkansas in War and Reconstruction, 1861-74*, 1926, pp. 175-81). Later he took part in the attack upon Banks’s Red River expedition and on Steele at Jenkins’s Ferry. He followed Kirby Smith’s fortunes into Texas and finally surrendered there unwillingly, having risen to the rank of major-general. With the return of the Democrats to power in Arkansas, in 1874 he was elected state treasurer and served until 1880, when he was nominated for governor by the Democrats on a platform endorsing the submission of an amendment repudiating the state debt. This, however, was not an issue between him and his Greenback.
Churchman

Churchill

opponent, W. P. Parker, whom he defeated by a vote of 84,088 to 31,284. He withheld his signature from a legislative bill virtually repudiating, but not vetoing it. Soon after he became governor a shortage of $233,616 in his accounts as treasurer was discovered, and the attorney-general brought suit to recover this sum. Churchill declared that the shortage was due to bad bookkeeping and was able to establish, before the master in chancery, credits for large sums. Final judgment was rendered for $23,973 in currency and $56,428 in scrip. Gov. Churchill claimed that the latter had been burned by mistake by the state debt board and, as none of it ever was presented for payment, he probably was correct. Settlement was made for the currency.

[Confed. Mil. Hist., vol. X (1899); Ark. Leg. Jourls. (1881); Pay Hempstead, Hist. Rev. of Ark., vol. I (1911); D. Y. Thomas, Ark. in War and Reconstruction, 1861-74 (1926).]

D. Y. T.

CHURCHILL, WILLIAM (Oct. 5, 1859–June 9, 1920), philologist, ethnologist, son of William and Sarah Jane (Starkeweather) Churchill, was born in Brooklyn, N. Y. He received all the advantages of early education and entered Yale College with the class of 1881. Owing to ill health, he was obliged to leave in the middle of his sophomore year, but, after a voyage to England on a sailing vessel, he returned and finished his course with the class of 1882. After graduation he taught school for one year in Indianapolis, and then went on a trip to Australia and the South Sea Islands. On his return, he was for two years librarian of the Academy of Sciences at San Francisco. He next held a position in the Signal Service Bureau in Washington, D. C., and in 1891 he became an editor of the Brooklyn Daily Times. A way opened for him as a philologist and ethnologist when he was appointed United States consul-general to Samoa (1896-99). Here in the house where Robert Louis Stevenson died he engaged in the fascinating study of Polynesian languages, a prerequisite in ascertaining the natives' point of view. The amount of data collected by him in these few years is beyond calculation, and formed the basis of his scientific work. On Aug. 14, 1899, he was married to Llevella Pierce. Back in the United States at the beginning of the century, he began a new line of duties as a department editor of the New York Sun (1902-15), then a giant in the newspaper field. In the coterie of brilliant men summoned by Dana, Churchill as a writer of trenchant and pure English was a well-known member. In spite of the exacting work on the Sun, his philological studies were continued and his house in Brooklyn became a transplanted bit of Samoa containing an outstanding library of works on Polynesia. He brought out the results of his years of study in Polynesian Wanderings (1910), in which Polynesian migrations were traced ingeniously by loan words among the Melanesians. Not only was the first application of this method fruitful of results, but as a by-product it was ascertained that Polynesian is a language in process of formation. Polynesian Wanderings was followed by Beach-la-Mar (1911), a study of the trade speech of the Western Pacific, and this by Easter Island, Rapanui Speech and the Peopling of Southeast Polynesia (1912). In 1915 he became an associate in primitive philology of the Carnegie Institution of Washington, D. C. The Great War summoned him to government work in which a knowledge of various languages was requisite, and he performed an exacting bit of war service as director of the division of foreign language publications of the Committee on Public Information. Many other papers and monographs on ethnological and philological topics also came as the result of Churchill's assiduous labors. His conclusions are especially valuable since it is likely that it will be long before any one with Churchill's groundwork will attempt the problem of the most widespread migration ever known, that of the Polynesian to the islands in the west Pacific.

W. H.

CHURCHMAN, WILLIAM HENRY (Nov. 23, 1818–May 18, 1882), educator of the blind, was born in Baltimore, Md., of Quaker parentage, the son of Micajah and Eliza Churchman. When he was fifteen years old his eyesight began to fail, according to family tradition from overtaxing in reading and the study of languages and mathematics; in manhood he was totally blind. When eighteen he entered as an advanced student the new school for the blind in Philadelphia, where he came under the influence of Friedlander, and where he was graduated after three years as a pupil in whom "the institution has reason to be proud." Within a few months he was teaching music and mathematics in the school for the blind at Columbus, Ohio; and when he was only twenty-six he was given full charge of the school at Nashville, Tenn., thus early illustrating in his own person what he later said of some blind men, that they succeeded "by dint of irrepressible energy of character." Thereafter he successively headed similar institutions at Indianapolis, Janesville, Wis., and
again at Indianapolis. Having everywhere shown himself a first-rate planner, organizer, and administrator, he was chosen in his forty-eighth year as the one best fitted by experience to shape the plans and policies of the projected New York State Institution for the Blind. Accepting the call as a duty, he as superintendent-elect submitted his matured views in an elaborate discussion of the whole question involved. Circumstances, however, kept him as superintendent of the Indiana institution until 1879 when he, in company with other heads of the state institutions, lost his position through political change. Here as elsewhere his trustees recorded their satisfaction with him as superintendent. He was at one time president of the American Association for Instructors of the Blind.

The Indiana Institution for the Education of the Blind was his particular child. Having searched out pupils on tour, he showed the need of a school, addressed the legislature, and more than anybody else brought the institution into being. He was the planner of its buildings, a member of its building committee, the organizer of its routine, and he made it "the model for other and older states" (Twentieth Annual Report of the Indiana Institute, 1866, p. 9). He claimed for Indiana the credit of first recognizing an institution of this character as officially a department of public instruction (First New York Annual Report, p. 50), and for himself the plan of having his school industrial department run by a contractor on the business principle of self-interest.

Churchman married Mary Marshall who became a real helpmeet to him. He was described by one who knew him well as having a keen sense of humor; as cheerful, hopeful, dignified in bearing, imaginative, resourceful, wise and generous, but firm in judgment, and as having a good physique and a winning personality.

[For Churchman's ideas and the testimonials of his trustees, see the early reports of the Tenn. Wts., and Ind. Institutes for the Blind, especially the Ind. reports for 1862 and 1867. The Proc. Am. Asso. Instructors of the Blind, 1878, portray him as a presiding officer; those of 1882 contain an obituary.]

E. E. A.

CILLEY, JOSEPH (1734–Aug. 25, 1799), Revolutionary soldier, judge, and politician, was born in Nottingham, N. H. His father, Capt. Joseph Cilley, who came from the Isles of Shoals, was one of the early settlers of Nottingham; his mother was Alice Rollins (or Rawlins). The younger Joseph was married on Nov. 4, 1756, to Sarah Longfellow, by whom he had ten children. He combined the occupations of farmer, lawyer, and business man. In December 1774 he came into notice in an act which has been styled by an enthusiastic historian "the beginning of the Revolution." He was a member of Sullivan's party which entered Fort William and Mary (later Fort Constitution) near Portsmouth, took out fifteen cannon, and by hard labor, breaking the ice in the river, transported them to Durham. Langdon, another patriotic leader, had carried away about 100 pounds of powder, and these, too, were taken up-stream. The action was just in time, as British vessels directly afterward entered the harbor of Portsmouth. The ammunition was stored at Nottingham and other villages, some of it in a meeting-house.

Cilley was a member of the provincial congress of New Hampshire, and was employed on coast guard duty. His regiment was ordered to Cambridge, and he took part in the siege of Boston. In August 1775 he was assigned to the task of transporting the Portsmouth powder to Winter Hill (Medford). After the evacuation of Boston he accompanied Sullivan's brigade to New York, and thence to the St. Lawrence for the relief of Gen. Thomas. He shared the retreat of the unfortunate expedition from Canada, and reached New York in time to take part in the battle of Long Island. In that disaster Sullivan himself and many others were captured, but Cilley succeeded in fighting his way through the lines. He participated in the retreat from New York, and in the battles of Trenton and Princeton. Meanwhile he had been commissioned major of the 2nd New Hampshire, May 20, 1775, and of the 8th Continental Infantry, Jan. 1, 1776, lieutenant-colonel of the 1st New Hampshire, Nov. 8, 1776, and colonel, Feb. 22, 1777. In the summer of 1777 Cilley was at Ticonderoga. He was engaged in the skirmishing and retreat from that fortress. More fortunately, he fought under Arnold at Bemis Heights, and was distinguished at the battle of Stillwater in the capture of cannon. He was at Valley Forge and in the operations which preceded the battle of Monmouth. He was present at that battle, and accompanied his old commander Sullivan in the expedition against the Indians in 1779. In the latter year he received from his state legislature the gift of a pair of pistols, and he was promoted brigadier-general of militia. He retired from the army Jan. 1, 1781, with a reputation as a good disciplinarian, and he became one of the original members of the Cincinnati. After the Revolution he was made justice of the peace and of the quorum for Rockingham County, and held the position for life. In the first year of his term (1786–92) as major-general of militia, a movement developed in New Hampshire similar to Shays's Rebellion. Cilley, collecting troops, repelled the attempt of insur-
Cist

Gents to intimidate the legislature at Exeter, and personally arrested the ringleader. In politics he was a Jeffersonian Republican. He was a member of the state Senate, 1799-91, and of the House, 1792, and was a councillor 1797-98. He was a fluent speaker, a good man of business, and attractive in manner. He died at Nottingham.

[John Scales, Life of Gen. Jos. Cicile (1921); Wm. Abbott, Crisis of the Revolution (1899); E. C. Cogswell, Hist. of Nottingham, Deerfield, and Northwood (1878); Maine Genealogist and Biographer, Mar., June, Dec. 1877, Mar. 1878.] E. K. A.

CIST, CHARLES (Aug. 15, 1738-Dec. 1, 1805), printer, publisher, son of Charles Jacob Sigismund Thiel and Anna (Thomasson) Thiel, was born in St. Petersburg, Russia. He received a good education and was trained in pharmacy and medicine, graduating from the University of Halle as a doctor of medicine. He was probably connected with the court of Catherine the Great where he apparently became involved in difficulties which made it necessary for him to leave the country. In 1760 Thiel determined to emigrate to America and at the same time changed his name to Cist which the initials of his own name formed. He settled in Philadelphia where he was employed by Henry Miller as a translator of English into German. While so engaged he acquired a knowledge of the printer's trade and finally in December 1775 he entered into partnership with Melchior Styner (Steiner) who was the son of the Reform Minister Conrad Steiner of Philadelphia, and who had likewise learned the printer's craft under Miller's tutelage. The new firm of Styner & Cist published works in English and German and was located in Second St. at the corner of Coats's Alley. They soon acquired the reputation of being good and correct printers of books and job work (I. Thomas, History of Printing in America, 1810, II, 80-81). Among their more important publications may be listed Thomas Paine's The American Crisis (1776); William Brown's Pharmacopæa Simplificiorum (1778), the first pharmacopœia of the United States (O. Seidensticker, First Century of German Printing in America, 1728-1830, 1803, p. 103); and the issuance of a German newspaper which owing to an insufficient number of subscribers they were forced to discontinue in April 1776. With the advance of the British army on Philadelphia during the Revolutionary War they were compelled to leave Philadelphia but with the evacuation of the city they returned. Shortly thereafter, in 1781, the firm dissolved, but Cist continued the enterprise and by careful management acquired wealth. In 1784 he undertook the publication of the American Herald and in 1786 that of the Columbian Magazine. He is best remembered, however, as being one of the organizers of the Lehigh Coal Mine Company which was formed in 1792 for the purpose of mining "stone coals" (anthracite) in the Lehigh district. In his efforts to market his product he was threatened with mob violence (Pennsylvania Magazine of History and Biography, April 1915). During the administration of John Adams he was appointed public printer and established in Washington a printing office and book bindery at great expense. He later returned to Philadelphia where he had already married Mary, the daughter of John Jacob and Rebecca Weiss of that city, on June 7, 1781. He died at Bethlehem and was interred in the Moravian cemetery.

[In addition to references above, see C. R. Hildeburn, A Century of Printing, Issues of the Press in Pa., 1685-1784 (1885-86).] R. C. M.

CIST, CHARLES (Apr. 24, 1792-Sept. 5, 1868), editor, the son of Charles [q.v.] and Mary (Weiss) Cist, was born in Philadelphia. He received his education in the public schools of Philadelphia and served in the United States army during the War of 1812. At the close of this conflict he moved to Pittsburgh and later on to Harmony, Pa. On Nov. 18, 1817, he married Janet, daughter of Edward and Sarah White of Whitestown, Pa., by whom he had thirteen children.

"His duties as a parent he took care not to make secondary to any other business" (Cincinnati Gazette, Sept. 8, 1868). In 1827 he removed to Cincinnati and until 1840 was engaged in mercantile pursuits. He soon displayed, however, an interest in movements of social welfare by opening and superintending the first Sunday-school in Cincinnati which he managed until its growth necessitated its division among the churches. He likewise was one of the most earnest advocates of the free-school system, which was then being discussed throughout the country. His connection with the taking of the census of 1840 in his district gave him an opportunity to collect a mass of valuable statistical information about Cincinnati which he determined to utilize in book form. He had acquired a taste for literary work and the publishing business owing to his association with his father's printing establishment; and in 1841 appeared his first book based upon his census data entitled Cincinnati in 1841 (1841), which drew heavily upon Daniel Drake's Natural and Statistical View, or Picture of Cincinnati and the Miami Country (1815). This was followed by Sketches and Statistics of Cincinnati in 1851 (1851) and Sketches and Statistics of
Cincinnati in 1859 (1859). These three works are valuable as they disclose the growth of the city during these years and recount many events "of a local and statistical nature." Of these three, the last is considered the most valuable since it covers the material included in the two former books and contains an interesting account of the early settlement of this area (Peter G. Thomson, A Bibliography of the State of Ohio, 1880, pp. 64, 65). In 1843 Cist began The Western General Advertiser which recounted the early pioneer history of the West and included statistics pertaining to the state of Ohio and to Cincinnati. Two years later the name was changed to Cist's Advertiser and though the enterprise was never profitable to himself "he labored assiduously to make it so to his patrons and to promote the reputation of the city abroad" (Cincinnati Chronicle, Sept. 7, 1868). It was a gossipy paper but it breathed the kindly personality of the editor and his love for his adopted city (Henry Howe, Historical Collections of Ohio, 1891, I, 831–32). In 1845 and 1846 historical sketches from this paper were published in Cincinnati under the title of The Cincinnati Miscellany, or, Antiquities of the West. In 1853 the paper was discontinued and Cist retired from active affairs. He was a Presbyterian and originally a Democrat in politics but like many other northern Democrats he ultimately found himself within the Republican fold. He died at his home in College Hill, a suburb of Cincinnati.

[In addition to above references, see H. A. and Mrs. Kate B. Ford, Hist. of Cincinnati (1881); Cincinnati Daily Gazette, Sept. 7, 1868; Cincinnati Commercial, Sept. 7, 1868.]  

R. C. M.

CIST, HENRY MARTYN (Feb. 20, 1839–Dec. 17, 1902), Union soldier, military historian, was born in Cincinnati, Ohio, the son of Charles Cist [q.v.]. He graduated in 1858 at the Farmers’ College (later Belmont College) in Hamilton County, studied law in the office of George Hoadly, afterward governor of Ohio, and was admitted to the bar shortly before the outbreak of the Civil War. He entered the army as a private in the 6th Ohio Infantry, Apr. 20, 1861, and served through the West Virginia campaign of that summer and fall, including the battles of Carrick’s Ford and Cheat Mountain. On Oct. 22, 1861, he was appointed first lieutenant in the 74th Ohio. The assignment to his new regiment took him to the (old) Army of the Ohio, later renamed Army of the Cumberland, with which he was identified throughout the remainder of the war. He was soon detailed as an assistant adjutant-general, and as such served on the staff of a brigade at the battle of Murfreesboro, and on the staff of the commander of the army—first Gen. Rosecrans and then Gen. Thomas—in the Chickamauga, Atlanta, and Nashville campaigns. He was promoted captain, Apr. 20, 1864, and major, Mar. 13, 1865. Upon his mustering out of the service, Jan. 4, 1866, with the brevet rank of brigadier-general of volunteers, he took up the practise of law, and was for a time mayor of College Hill, Ohio. His avocation was military history, especially of the Civil War, on which he accumulated one of the best private libraries in the country. He wrote extensively on the subject, for periodicals and encyclopedias, and published a book of some importance, The Army of the Cumberland (1882), in Scribner’s Campaigns of the Civil War series. This is a detailed account of the operations of the army from its organization as Buell’s Army of the Ohio until the spring of 1864, after which time it no longer operated independently, but as one of the group of armies under Sherman’s personal control. Cist was one of the most active members of the Loyal Legion and of the Society of the Army of the Cumberland, and for twenty-three years served as corresponding secretary of the latter organization. Failing eyesight finally compelled him to abandon both his professional and his literary work. He was married twice: on Sept. 22, 1868, to Mary E. Morris of Urbana, Ohio; and on Apr. 12, 1882, to Jennie E. Bare of Cincinnati. His later years were largely spent in travel. He died in Rome.

[F. B. Heitman, Hist. Reg. (1903), I, 302; obituary published as Circular No. 11 (1903), Commandery of Ohio, Mil. Order Loyal Legion; Who’s Who in America, 1901-02.]  

T. M. S.

CIST, JACOB (Mar. 13, 1782–Dec. 30, 1825), naturalist, anthracite coal pioneer, inventor, was born in Philadelphia, Pa., the son of Charles Cist [1738–1805, q.v.] and of his wife, Mary Weiss. After attending the Philadelphia public schools and Nazareth Hall, Nazareth, Pa., he entered his father’s printing establishment at the age of fifteen and three years later became manager of a similar business newly founded by his father in Washington, D. C. Some months later this establishment was forced to close by reason of the change of Federal administration and Jacob entered the United States Post Office Department. He served in clerical capacities for eight years, then resigned to settle in Wilkes-Barre, Pa., and was appointed postmaster there, which office he held for the rest of his life. Through his father, educated as a physician and apothecary, Cist became interested in the natural sciences, particularly geology. He was also clever at sketches, both in ink and oils, and was
apt at writing, having from an early age published in magazines and newspapers essays in prose and verse on a variety of subjects—"Morning"; "Noon"; "Ode on Hope"; "Eve's Cotton Gin." With this background, Cist in his leisure studied and "geologized" a large part of the country about Wilkes-Barre and became thoroughly familiar with its mineral resources, especially anthracite coal. With friends he undertook the mining and marketing of this commodity between 1813 and 1815, acquiring a lease on the defunct Lehigh Coal Mine Company's land near Mauch Chunk, Pa. Like its predecessor, Cist's company was unsuccessful in convincing either the domestic or industrial consumer of the value of this new fuel and abandoned the project. Cist's scientific interest did not flag, however, and between 1815 and 1821 he collected and distributed both in this country and France fossil plants and flora, described many of the coal formations, and corresponded with various scientists on the general subject, most of his data being published in the American Journal of Science, in 1822. Cist's interest in the general development of his new environment prompted him to endeavor to organize a glass-works and pottery in 1808 and an iron works in 1820, but without success. He was one of the founders and first corresponding secretary of the Luzerne County Agricultural Society and did much to introduce the finer grades of fruit trees. He spent many years in the preparation of a work on American Entomology, making hundreds of drawings for the same. This was not completed at his death and was subsequently lost. Three inventions are credited to him: one patented in 1803 of an artist's paint-mixing mill; another in 1808 of a printer's ink made from anthracite coal; and a third in 1814 of a stove to burn anthracite. He was treasurer of Luzerne County for 1816; a founder and treasurer of the Wilkes-Barre Bridge Company, 1816-18; and a charter member and first cashier of Wilkes-Barre's first bank in 1817. He married Sarah Hollenback of Wilkes-Barre on Aug. 25, 1807, and was survived by two daughters.

CLAFLIN, HORACE BRIGHAM (Dec. 18, 1811-Nov. 14, 1885), merchant, was born at Milford, Mass., of Scotch descent, the son of John and Lydia (Mellen) Claflin. He attended the common schools and Milford Academy. His father was the owner of a country store and in 1834 he loaned Horace $1,000 with which to start in business at Worcester, Mass., then a small place. The son prospered in his enterprise and within five years had a trade of $200,000 a year. In 1843 he went to New York City and engaged, with others, in the wholesale dry-goods business. There the Worcester experience was repeated on a far greater scale. The Claflin firm was soon selling to retail merchants all over the United States. At the outbreak of the Civil War Southern merchants were owing the house millions of dollars. It was impossible to realize on these credits and the firm had to make an assignment, but its creditors were paid in full within two years. Later, Claflin and his partners weathered the panic of 1873 without disaster or loss to any with whom they had dealings. During that period their business had grown by leaps and bounds, successfully rivalry that of A. T. Stewart, commonly called New York's merchant prince, and in one year passing the $70,000,000 mark in volume. Claflin had been a pioneer in making the jobbing house a manufacturer, as well as an importer and distributor of merchandise. This gave him an advantage in disposing of large stocks of goods in times of crisis. He could undersell competitors and still realize a small profit. Unquestionably the excellent reputation enjoyed by the firm for a long term of years was due in great part to the sound business sense and personal integrity of the senior partner. At one time an effort was made in the federal courts to prove the Claflin firm guilty of defrauding the Government in the payment of customs, but the accusers were charged with attempted blackmail and the trial resulted in a vindication of the firm. Claflin at seventy was a familiar figure in the New York financial district—a ruddy, white-haired man, unusually active for his years. In public affairs he early identified himself with the Republican party and supported the Government in the Civil War. He was a presidential elector in 1872. In the campaign of 1884 he worked for the election of Grover Cleveland as president. For thirty-eight years he was a trustee of Plymouth Church, Brooklyn, in Henry Ward Beecher's pastorale. He gave liberally for many public causes and to relieve individual distress. He was married on Nov. 28, 1836, to Agnes Sanger of Sherborn, Mass., who, with two sons, survived him.

CLAFLIN, TENNESSEE (1845-1923). [See Woodhull, Victoria, 1838-1927.]

CLAFLIN, WILLIAM (Mar. 6, 1818—Jan. 5, 1905), governor of Massachusetts, descended
Clagett

from Robert Mackcclafin (or Mackclafin), a townsman of Wenham, Mass., in 1661, was the eldest of the three children of Lee and Sarah Watkins (Adams) Clafin. He was born in Milford, Mass., where his father was a prosperous boot and shoe manufacturer. After preparation in the local schools and Milford Academy William entered Brown University in 1833 but was obliged to leave before completing the course. After learning the details of his father's business, he went west to St. Louis in 1838, and organized there a wholesale boot and shoe business, in which he held a large interest even after his return East in 1844. In 1845 he entered into business with his father under the firm name of Lee Clafin Company. He was one of the founders and for years president of the Hide and Leather National Bank of Boston and was also one of the organizers of the New England Trust Company, and the Five Cent Savings Bank.

While in Missouri, Clafin had been much interested in the question of slavery extension. His human sympathies had revolted at the sight of the slave block; on one occasion he had purchased with his scanty funds a slave whom he immediately freed. He was one of the members of the Free-Soil Party of Massachusetts on its formation in 1848. As a member of that party he represented the town of Hopkinton in the state legislature from 1849 to 1853. He was a member of the state Senate from 1859 to 1861, being president of that body in 1861. From 1866 to 1868 he was lieutenant-governor and from 1869 to 1871 governor of Massachusetts. In the three gubernatorial elections he had a substantial majority over his Democratic opponent, John Quincy Adams. He was the first governor of Massachusetts to believe in the legal right of female suffrage and he was also an active prohibitionist. While he was governor, legislative bills were enacted extending the rights of women, bettering the condition of criminals, establishing a bureau of statistics for labor, protecting destitute children, and regulating divorce. His messages were straightforward and businesslike, as one would expect from a business man. As governor in 1871, he signed the charter of Boston University, of which his father was a founder. Of this institution's board of trustees, he was for many years president. He was also a trustee of Wellesley College, of Mount Holyoke College, and of the New England Conservatory, and was interested in Clafin University, a negro institution in Orangeburg, S. C., which had been named for his father. From 1877 to 1881 he was a representative in the Forty-fifth and Forty-sixth Congresses. He was married twice: first to Nancy Warren Harding in October 1840, who died in January 1842; and second to Mary Bucklin Davenport on Feb. 12, 1845. He numbered among his intimate friends such notables as Henry Wilson, John Greenleaf Whittier, and Henry Ward Beecher. Their visits to the Clafin home and other events have been described by Mrs. Mary B. Clafin in her books, Brampton Sketches (1890), Real Happenings (1890), Personal Recollections of John G. Whittier (1893), and Under the Old Elms (1895).

R.E.M.

CLAGETT, WYSEMAN (August 1721-Dec. 4, 1784), lawyer, was born at Bristol, England, the son of Wyseman Clagett, a barrister at law. He received an excellent education, became an articled student in a law office, and was admitted as an attorney of the Court of King's Bench. In 1748 he left England, went to the West Indies, and settled in Antigua, where he practised with success for ten years, becoming secretary of the colony. In 1758 he came to New England, established his home in Portsmouth, N. H., and was admitted as an attorney of the superior court of that province. Shortly afterward he was appointed a justice of the peace and in this position proved efficient, exacting, severe, and overbearing, so much so that a new figure of speech was added to the vernacular, the expression "I'll prosecute you," giving way to "I'll Clagett you." In 1765 he was appointed King's Attorney for the province, continuing as such till 1769, when he went with his family to England. On returning to America in 1771 he moved to Litchfield, N. H. Aligning himself with the colonists in the pre-revolutionary struggle with Parliament, he represented Litchfield and Nottingham West in the last General Court under the British crown. He was an active member of the provincial congresses, and had a large share in drafting the constitution of the new state, becoming in 1776 a member of the Council and Committee of Public Safety. In 1778 he was made a special justice of the superior court, which position he resigned in November 1781 in order to become solicitor-general under the temporary form of government then adopted by New Hampshire. He was the only person who ever held this office, since the new constitution of 1784 abolished it.

He died at Litchfield, Dec. 4, 1784. He was married in 1759 to Lettie, daughter of Dr. Mitchell of Portsmouth.

I I I
Clagorn

Clagett was a man of striking personality. Possessed of great learning, “he wrote the Latin language with ease and elegance, and spoke it with fluency” (Adams, *post*, p. 281). He had a fine taste for poetry, was generous, and enjoyed society. On the other hand, his manners were rude, and his habitual profanity of speech was appalling. He never obtained any considerable practise, except in criminal cases. He was not a profound lawyer, yet in the constitutional discussions anted the post-revolution government of New Hampshire he displayed much statecraft and exercised great influence. In his later years he was often embarrassed financially, but never relinquished his full bottomed wig and laced hat, and, in his once fine clothing “he exhibited a striking picture of delapidated importance” (C. W. Brewster, *post*).

H. W. H. K.

CLAGHORN, GEORGE (July 6, 1748–Feb. 3, 1824), Revolutionary soldier, ship-builder, born in Chilmark, Mass., was a descendant of James Claghorn, a Scotchman who settled in or near Barnstable in the seventeenth century. His father was Shubael Claghorn, a soldier in the Louisburg expedition of 1745; and his mother was Experience Hawes. He himself served in the Revolutionary War as first lieutenant and then captain in the second Bristol regiment, and was wounded at Bunker Hill. Subsequently he became major and then colonel; and Colonel Claghorn he remained after he became a well-known ship-builder at New Bedford. There, in 1785, he built and launched the *Rebecca*, said to have been the first American whaler to double Cape Horn and obtain cargo oil in the Pacific (*New England Historical and Genealogical Register*, XXV, 127). She was a vessel of 175 tons and aroused much interest because of her size (Daniel Ricketson, *The History of New Bedford*, 1858). In 1794 he was appointed naval constructor of the *Constitution*, one of the four 44-gun frigates authorized by Congress to protect commerce against the Algerine corsairs. The design was drawn by Joshua Humphreys [q.v.] of Philadelphia, and the keel was laid at Hartt’s naval yard in Boston. The frigate was nearing completion when a treaty was signed with Algiers in November 1795, and work was then suspended. The threatened rupture with France, however, moved Congress to provide for completion of three frigates—the *Constitution*, the *United States*, and the *Constellation*.

Wednesday, Sept. 20, 1797, was the day set for the launching of the *Constitution*, when the president, the governor, and other notables were to attend. Solicitous that no accident should mar the launching, Claghorn issued a circular, Sept. 18, 1797, warning his fellow citizens not to allow their curiosity to carry them too near the frigate or the water’s edge. “The loss of life of a single citizen,” he declared, “would mar the satisfaction and pleasure that the constructor would otherwise enjoy of building and constructing for the ocean a powerful agent of national justice which hope dictates may become the pride and ornament of the American race” (Circular in possession of the Brookline Public Library, reprinted in *The Claghorn Family*, pp. 38–39).

To the chagrin of the builder, the vessel moved only a few feet, when the props were knocked away, and refused to budge farther. Two days later a second attempt was made to launch her and again she stuck on the ways. Finally, on Oct. 21, “she descended into the bosom of the ocean with an ease and dignity” gratifying to thousands of spectators (Commercial Gazette, Boston, Oct. 23, 1797). No blame was attached to Claghorn for these failures. On the contrary he was commended for his skill, intelligence, and circumspection (Independent Chronicle, Boston, Sept. 21, 1797). He had erred, if at all, from excessive caution. Desiring to avoid a repetition of the accident to the *United States*, which had been damaged at the launching by a premature and too rapid descent, he had given a smaller declivity to the ways of the *Constitution* (*Columbian Centinel*, Boston, Sept. 23, 1797). The excessive pressure on her keel amidships, however, gave the *Constitution* a permanent hog or sag (F. A. Magoun, *The Frigate Constitution*, p. 67). Further records of Claghorn’s ship-building have not been found. He married Deborah Brownell, who bore him four sons and four daughters. He died at Seekonk, R. I.

A. J.

CLAIBORNE, JOHN FRANCIS HAMTRAMCK (Apr. 24, 1807–May 17, 1884), congressman, editor, historian, born near Natchez, Miss., was descended from William Claiborne [q.v.]. His father was Gen. Ferdinand Leigh Claiborne, who married a daughter of Col. Anthony Hutchins, a retired British officer who had settled on a large royal grant in what was then West Florida. The name, John Francis Hamtramck was bestowed on Gen. Claiborne's
Claiborne

eldest son in honor of a German officer under whom the general had served in the American Revolution. Young Claiborne studied law in the office of his cousin, Benjamin Watkins Leigh in Richmond, Va., until a slight hemorrhage caused him to return to the warmer climate of his childhood home. He resumed his studies in the office of Griffith & Quitman of Natchez, Miss., but again gave up and went to Cuba for his health. Six months later he returned to Virginia and completed his studies under the direction of Gen. Alexander Smythe, at Wytheville. His delicate constitution, however, caused him to abandon his intention of living in Virginia, and he once more returned to Mississippi. In December 1828 he was married to Martha Dunbar of Dunbarton, near Natchez. Being an ardent Democrat, he took charge of a Jackson paper, published in Natchez. He was then elected to the legislature from Adams County for three successive terms. In 1835 he removed to Madison County, and in the same year was nominated for Congress by the first Democratic convention held in Mississippi and was elected by a large majority. When he entered Congress he was the youngest member of that body, and the only one who was a native of the West. Although he was in feeble health during his brief congressional career, his speeches established his reputation as an orator and debater. He was reelected to Congress in July 1837, an extra session having been called to meet in September of that year. He and his colleague Gholson were seated by the House not only for the special session, but for the regular session which was to follow in December. They did not, therefore, enter the November election, and Prentiss and Ward, the Whig candidates, were elected. As a result there was a spirited contest between the two sets of representatives for seats in the House, when the regular session of Congress began in December. Claiborne, being very ill, was not able to participate in the debate, and under the influence of Prentiss’s eloquence the House “rescinded” its former action, but refused to seat Prentiss and Ward, and notified the governor of Mississippi that the seats were vacant (Chester H. Rowell, *A Historical and Legal Digest of All the Contested Election Cases in the House of Representatives of the United States, 1789–1901, 1902*).

Upon the advice of his physician, Claiborne then retired from public life and went to Cuba a second time for his health. Later he returned to Natchez, and in July 1841, became one of the editors of the *Mississippi Free Trader*, an influential organ of the Democratic party. In 1842 he was appointed president of a commission to adjudicate the claims of the Choctaw Indians to several thousands of acres of valuable land, which were also claimed by speculators, whose designs he thwarted. In 1844 he removed to New Orleans and became editor of the *Jeffersonian*, published in French and in English, and of the *Statesman*, published in German and in English. Several years later, he became editor of the *Louisiana Courier*, which supported Franklin Pierce for the presidency. After the election of Pierce he accepted a position as custodian of the public timber in Alabama, Mississippi, and Louisiana, a position which he held until these states seceded from the Union. His opposition to secession caused him to hold aloof from all official connection with the Confederacy, though his only son, Willis Herbert, entered the Confederate Army and died from wounds received in the service. Having inherited a large collection of “time-worn papers and documents” from his father, his uncle and his grandfather, all of whom were connected with the early history of Mississippi, Claiborne set himself to work to add thereto from every available source. His manuscript history of the Southwest, “when ready for the press,” was lost by the sinking of a steamboat on the Mississippi. He then reproduced from memory part of this book under the title, *Life and Times of Sam Dale*, which was published in 1860. In the same year appeared his *Life and Correspondence of John A. Quitman*, in two volumes. Shortly after the Civil War, warned by declining health, he retired from all other pursuits and devoted his energies to writing a history of Mississippi, the first volume of his *Mississippi as a Province, Territory and State* appearing in 1881. He completed the second volume of this work, but the manuscript was destroyed by the burning of his home, Mar. 2, 1884. The shock and grief caused by the double loss hastened his death, which occurred on May 17, 1884.

F. L. R.

CLAIBORNE, NATHANIEL HERBERT

(Nov. 14, 1777–Aug. 15, 1859), congressman, descended from William Claiborne [q.v.], was the youngest son of Mary (Leigh) Claiborne and Col. William Claiborne of King William County, Va., a veteran of the Revolutionary War. He was born in Sussex County, Va.; re-
Claiborne received a classical education at the Richmond Academy; settled in Franklin County, where he soon entered public life, and there spent his remaining days. In 1815 he married Elizabeth Archer Binford, of Goochland County, by whom he had eleven children. He represented his district in the Virginia General Assembly, in the House of Delegates (1810–12) and in the Senate (1821–25), achieving reputation as a “watchdog of the treasury” and as a reformer of various abuses in the state government. During the War of 1812 he was a member of the Virginia Executive Council. In 1818 he was on the special board whose report to the legislature resulted in the establishment of the state university. From 1825 to 1837 he was a member of the House of Representatives from Virginia, but seldom entered into debate, speaking from the floor only three or four times during his incumbency. In his opposition to internal improvements at national expense he was in perfect accord with President Jackson; his disapproval of pension or relief bills was another phase of his concern for governmental economy. He stood with his Southern colleagues against increased tariffs, although he supported the tariff bill of 1832 which provoked South Carolina to nullification and, while opposing the Force Bill, supported Clay’s compromise tariff of 1833. After voting against the rechartering of the United States Bank he broke with the Administration’s fiscal policy, indorsing the proposal for an Independent Sub-Treasury and denouncing as derogatory to laws and constitution Jackson’s action in removing the deposits. His Notes on the War in the South, with Biographical Sketches of . . . Montgomery, Jackson, Sevier, the Late Governor Claiborne and Others (1819), is an account of the campaign against the Creek Indians and the operations about New Orleans in the War of 1812, written with clearness and vigor but with little concern for nuances of style. It is an artless and often personal narrative, composed that the author’s family “may see the part their relations have taken in the contest through which we have just past” (p. 79), but despite its vehemently anti-British temper, a confessed carelessness of dates, and occasional moralizings, it is reasonably accurate history.

[See autobiographical portions of Claiborne’s Notes on the War in the South; Va. Mag. of Hist. and Biog., vols. I, II, passim; Geo. Mason Claiborne, Claiborne Pedigree (1900); John Herbert Claiborne, Wm. Claiborne of Va. (1917); Richmond Standard, Aug. 28, 1886.]

A.C.G., Jr.

CLAIBORNE, WILLIAM (c. 1587–c. 1677), colonist, was descended from a family which possessed the manor of Cleburne, or Cliburne, in Westmoreland County, England, as early as 1686. He was the second son of Edmund Cleburne, lord of the manor, and his wife, Grace, daughter of Sir Alan Bellingham. In June 1621 he was appointed surveyor for the colony of Virginia, where he arrived in the following October. In March 1625/26 he was appointed secretary of state for the colony and a member of the Council. He continued to serve as secretary until 1637, and again from 1652 to 1660. In April 1642 King Charles appointed him treasurer of the colony. He led an expedition against the Indians in 1629 and again in 1644. In recognition of his services he was granted large tracts of land. With the governor’s license he was active in Indian trade along the shores of the Chesapeake in 1627 and 1628. He was one of the Virginians who tendered Lord Baltimore the oaths of supremacy and allegiance in 1629. Following him to England, he opposed his application for territory within the limits of the grant of 1609 to the Virginia Company, associated with him a firm of London merchants known as Cloberry & Company, and obtained a commission signed by William Alexander, secretary of state for Scotland, which licensed him to trade for corn, furs, or other commodities in all parts of New England and Nova Scotia where there was not already a patent granted to others for sole trade. With this license, dated May 16, 1631, he returned to Virginia and in August of the same year commenced the establishment of a trading settlement on Kent Island in the Chesapeake Bay and within the limits of the grant, the following year, to Lord Baltimore. He purchased the island from the Indians, stocked it with cattle and hogs, planted corn and tobacco, and within a few months the settlement had a representative in the Virginia House of Burgesses. Upon the arrival of the Maryland colonists, in 1634, Claiborne spurned an offer from the proprietor to promote his welfare should he recognize the proprietary jurisdiction over the island. He had previously asked the advice of the Council of Virginia in the matter and that body had answered, “They knew no reason why they should render up the right of the Isle of Kent, which they were bound in duty to maintain.” Hearing that Claiborne was charged with inciting the Indians against the Maryland colonists, Lord Baltimore, in a letter dated Sept. 4, 1634, instructed the governor to arrest him and reduce the island to submission. A petty warfare followed, both sides in the meantime petitioning the king for a redress of grievances against the other. Claiborne and his associates contended that the grant to Lord Baltimore em-
Claiborne

braced only land not cultivated or planted. In 1635 discord arose between Claiborne and his London associates, and subsequently each blamed the other for failure to overthrow the Maryland charter. In May 1637, Claiborne departed for England for an accounting, and during his absence the governor of Maryland reduced the island to submission. This was in February 1637/38, and in the following month the Assembly passed an act for the attainer of Claiborne. On Apr. 4, 1638, the Commissioners of Plantation decided wholly in favor of Lord Baltimore. "The Isle of Kent," they declared, "is wholly within the bounds and limits of Lord Baltimore's patent and Captain Claiborne's commission is only a license under the signet of Scotland to trade with Indians where the sole trade had not been formerly granted by the king to any other."

During the next decade when anti-Catholic feelings were strong in Maryland, Claiborne, claiming to have a commission from King Charles, together with Richard Ingle, claiming authority from Parliament, incited an insurrection, drove Gov. Calvert into Virginia, and held the province from October 1644 to December 1646. In September 1651, Claiborne was appointed a member of a commission of the Puritan Parliament for the government of "the plantations within the Bay of Chesapeake," and from 1652 to 1657 the affairs of Maryland were subject to the control of this body. Although Claiborne did not at this time lay hands on Kent Island, one of the last records of his career is a petition, in 1676–77, to King Charles II for that island.

Claiborne was a strong man with a successful career in Virginia; but his zeal for that colony, his associates, and his strong dislike of Catholics led him astray in Maryland. In a painting in the State Capitol of Virginia he appears with long flowing hair, high forehead, penetrating eyes, large straight nose, agreeable mouth, pointed mustache, and short narrow beard.

[Much has been written about Claiborne, but the most reliable sources of information are B. C. Steiner, Beginnings of Md. (1903); Archives of Md., vols. I, III, IV, and V; Va. Mag. of Hist. and Biog. (1893- ); and The Calvert Papers. J. H. Claiborne, Wm. Claiborne of Va. (1917), is dominated by pride of ancestry.]

N. D. M.

CLAIBORNE, WILLIAM CHARLES COLES (1775–Nov. 23, 1817), governor of Louisiana, was born in Sussex County, Va., son of William and Mary (Leigh) Claiborne, and brother of Nathaniel Herbert Claiborne [q.v.]. After a brief period of instruction at the Richmond Academy and at William and Mary College, at the age of fifteen he secured a position under the clerk of Congress and continued therein for a few years. Upon the advice of John Sevier [q.v.], having already displayed some oratorical ability, he returned to Virginia and studied law. Thence he moved to Sullivan County, Tenn., where he speedily gained a large criminal practise. He was a member of the convention that in 1796 framed a constitution for Tennessee. Under the new state government he was appointed a judge of its supreme court by Gov. Sevier. In August 1797, he was elected to Congress to fill out the term of Andrew Jackson and was reelected for the next regular period, although still under the constitutional age. In his second term he held the vote of his state for his friend Jefferson in preference to Aaron Burr. Shortly thereafter the President made him governor of Mississippi Territory. He married his first wife, Eliza W. Lewis of Nashville (who died in 1804), and reached his new post at Natchez, on Nov. 23, 1801. In the new territory he had to intervene in the factional quarrels that had divided the people under his predecessor and was obliged to organize new counties, settle land claims, and suggest measures for public health, for controlling the negroes and for public instruction. Most of his initial measures stood the test of time. He also acted as superintendent of Indian Affairs and sought to maintain peaceful relations with the Spaniards to the southward. The ordinary difficulties of his task were greatly increased by the prospective cession of Louisiana to France and by the closing of New Orleans, in the fall of 1802, to American trade from up the river. Nevertheless his course as territorial executive proved satisfactory to his superiors.

In the latter part of 1803 he was associated with Gen. James Wilkinson as commissioner to receive the province of Louisiana from the French, and was sent to New Orleans as its governor. Here he found himself in a far more difficult position. For a few months he was a sort of proconsular representative of Jefferson. He had no precedents to guide him, little knowledge of the habits, customs, and laws of the people over whom he was placed and no acquaintance with their language. The Creole population felt resentful at their unexpected transfer to American rule, distrusted their new executive and, when disappointed, were inclined to berate and ridicule him (J. Q. Adams, Memoirs, I, 315). Their discontent was further increased by the action of Congress in dividing the territory of Louisiana and in prohibiting the slave
Claiborne

Claiborne was a man of good motives, pleasing appearance, mild temper, scrupulously honest and diligent. At times he seemed irresolute and was likely to magnify the difficulties that confronted him. His kindly disposition, his evident honesty and his later marriage alliances with Creole families, by his second wife Clarissa Duralde, and his third wife, Suzette Bosque, did much to remove these initial handicaps; but he never escaped bickerings with his legislative and administrative associates. In the early years of his administration he had to meet the puzzling problems caused by Burr's uncertain movements and the hostile advance of the Spaniards, in 1806, beyond the Sabine. In the ensuing complications at New Orleans he acquiesced in the arbitrary course of Gen. Wilkinson and shared in the opprobrium visited on that general. He was severely wounded in a duel with Daniel Clark [q.v.] in the summer of 1807. When Madison determined to annex West Florida, in 1810, Claiborne was selected to take possession of the district of Baton Rouge and later to incorporate it with Louisiana, of which state he had become governor. On the eve of the War of 1812, he found his measures for defense of the new state complicated by the activities of political refugees from Mexico, by filibusters who wished to take part in the revolt there, and by smugglers and pirates operating along the coast. The people at large and the legislators failed to respond to his urgings in behalf of adequate defense. Thus when invasion actually occurred he and his fellow officials received little consideration from the impetuous Jackson. Claiborne's own letters may have given the General an unfair view of the situation, but after the repulse of the British, he warmly defended the loyalty of the state, which had finally rallied to the defense of New Orleans, and thus strongly commended himself to his fellow citizens, whom Jackson had flouted. On Jan. 13, 1817, he was elected to the United States Senate, but died before he could take office. At his premature death he had at least achieved an honorable record on a disturbed frontier during a transitional period of uncertainty and turmoil.

[The principal sources for Claiborne's activities are The Official Letter Books of W. C. C. Claiborne (6 vols., 1917), and The Mississippi Territorial Archives, 1798-1803 (1905), both ed. by Dunbar Rowland. The original documents on which these volumes are based are to be found in Jackson, Miss., and in the State Dept. and the Lib. of Cong. together with supplementary material lacking in the printed text. The correspondence, both printed and manuscript, of Claiborne's contemporaries, particularly of Jefferson, Madison, and Jackson, contains many important references to him, as do the volumes of the Am. State Papers and the Annals of Congress. For secondary works the most important are: N. H. Claiborne, Notes on the War in the South (1819); J. F. H. Claiborne, Miss. as a Province, Territory, and State (1881); I. J. Cox, The West Fla. Controversy (1918); Chas. Gayarre, Hist. of La., IV (1885); and W. F. McCaleb, The Aaron Burr Conspiracy (1903).]

I. J. C.

CLAP, THOMAS (June 26, 1703-Jan. 7, 1767), Congregational clergyman, for more than twenty-six years head of Yale College, first as rector, and afterward, under the revised charter of 1745, as president, was born in Scituate, Mass., the son of Stephen and Temperance Clap, and a descendant in the third generation of Thomas Clap, who came to Dorchester, Mass., from England in 1633, moved to Weymouth, and later settled in Scituate. He prepared for college in part under Rev. James McSparran [q.v.] an Episcopal missionary of Rhode Island, graduated from Harvard at the age of nineteen, and later, it is said, studied theology with McSparran. He was called to the Congregational Church, Windham, Conn., Feb. 22, 1726, and was ordained on Aug. 3. On Nov. 23, 1727, he married Mary, fifteen-year-old daughter of his predecessor, Rev. Samuel Whiting. She died Aug. 9, 1736, and on Feb. 5, 1740, he married Mary (Haynes), twice a widow, first, of Elisha Lord; and second, of Rosewell Saltonstall. He was elected rector of Yale College Oct. 31, 1739, and installed Apr. 2, 1740. While at Windham he had become known as a rigid Calvinist, and a strict disciplinarian. "He impressed himself upon the community by his scholarly accomplishments, his force of character, and his indomitable will." He ruled with a rod of iron and his people endured it, although it was remarked that when in 1739 he accepted the presidency of Yale College, "they acted like boys let out of school" (Windham's Bi-Centennial, 1692-1892, 1893, p. 25).

These characteristics gave him success as an administrator, but made his career a stormy one. Under his rule the college had notable expansion. He drafted a more liberal charter, granted in 1745; drew up a code of laws, approved in 1745; prepared catalogues for the library; and secured the erection of new buildings. His stiff theological convictions and high-handed methods, however, brought trouble to himself and unpopularity to the college. He was unfriendly to Whitefield and the movement he inaugurated. Owing to dissatisfaction with the preaching and theology of the Rev. Joseph Noyes of the First Church, which the students attended, in 1753 at the corporation's request President Clap undertook to preach Sundays in the college hall until a professor of divinity could be secured. This alleged irregular proceeding, which resulted in
Clap

1757 in the establishment of the Church of Christ in Yale College, together with the corporation's requirement that every future officer of the college should publicly assent to the orthodox faith as stated in the Westminster catechism and the Saybrook Confession, awakened violent resentment in the colony. President Clap defended his position in The Religious Constitution of Colleges, Especially of Yale College in New Haven (1754). Bitterly attacked by Dr. Benjamin Gale [q.v.], he replied in The Answer of the Friend in the West to a Letter from a Gentleman in the East, Entitled The Present State of the Colony Considered (1755); and further supported his own and the corporation's action in A Brief History and Vindication of the Doctrines Received and Established in the Churches of New England (1755). Opposition to his policies culminated in a memorial to the General Assembly in 1763, praying for an act authorizing appeal from the authority of the college to the Governor and Council, and the appointment of a commission of visitation to inquire into the affairs of the college. To this attempt at state control President Clap made an elaborate and effective reply. Dissension arose among the tutors and students, however, and the latter petitioned the trustees for his removal on the ground that he was in his dotage. Conditions became chaotic, and in the summer of 1766 the president finding himself "tired and fatigued," his health "not so firm as formerly," and desirous of enjoying the "sweets of retirement and private life," he resigned. The corporation urged him to continue in office, but at commencement in September he retired. He lived but a few months longer.

"As to his person," writes President Stiles, "he was not tall; yet being thick set, he appeared rather large and bulky. . . . He was a calm, still, judicious, great man." His learning was extensive, and he was especially versed in algebra, optics, and astronomy. His publications include a sermon preached at the ordination of Rev. Ephraim Little (1732), and An Introduction to the Study of Philosophy (1743); A Letter to Mr. Edwards Expostulating with Him for his Injurious Reflections in a Late Letter to a Friend (1745); An Essay on the Nature and Foundation of Moral Virtue and Obligation (1765); The Annals or History of Yale College to the Year 1766 (1766); Conjectures upon the Nature and Motion of Meteors (1781).

I (1885), II (1896), III (1903); Lit. Diary of Ezra Stiles (1902); Wm. B. Sprague, Annals Am. Pulpit, vol. I (1857); Naphtali Daggett, The Faithful Serving of God and Our Generation, the only Way to a Peaceful and Happy Death, a Sermon occasioned by the Death of Rev. Thos. Clap (1767).]

H. E. S.

CLAPP, ASA (Mar. 15, 1762-Apr. 17, 1848), shipmaster and merchant, the second son of Abiel and Bathsheba (Pratt) Clapp, was born in Mansfield, Mass. His father, a farmer, was accidentally killed while Asa was still a boy, thus depriving the latter of an opportunity for more than a rudimentary education. He enlisted in the Revolutionary army on May 23, 1776, and thereafter served several short terms of enlistment, for the most part in Rhode Island. Near the end of the war, he went to Boston, there taking up the life of a mariner. He served as an officer on a letter-of-marque, probably the Charming Sally, commanded by Capt. Dunn, being wounded in one of several desperate engagements. Later, while in the merchant service, he was at Port-au-Prince during the negro revolution, and gave aid to the white residents. In 1787 he was married to Eliza Wendell Quincy, daughter of Dr. Jacob Quincy of Boston and niece of Dorothy (Quincy) Hancock. After passing several years at sea, gaining necessary capital in the West Indian trade, he settled down as a merchant in 1798 in Portland in the District of Maine (until 1820 a part of Massachusetts). In this business he was so successful, in spite of some eccentricities and the lack of formal education, that in 1809 he paid taxes in Portland second only to those of his senior partner, Matthew Cobb. Although his trade, which extended to Europe, the East and West Indies, and South America, was seriously affected by the embargo of 1807, Clapp supported the Government. In the unsettled days after the embargo was lifted, his ships were detained in the Sound by the Danes (American State Papers, Foreign Relations, III, 523, 529-31, 562-63), suffering damages for which, in 1831, he submitted a claim totaling with interest $124,520.50 (Manuscript Letter-book). When war came in 1812, he again supported the Government, subscribing, it is said, half his fortune to the national loan. He was one of nine owners of the privateer Mars, commissioned Jan. 4, 1815. Appointed one of the commissioners to obtain subscriptions to the capital stock of the Second Bank of the United States in 1816, he became the largest subscriber in Maine. In politics, he was first a Jeffersonian and later a Jacksonian. In 1811 he was a member of the council of Massachusetts. Having strenuously advocated the separation of Maine from Massachusetts, he was a member of the convention which framed the constitution of the
new state in 1819. From the records it appears that he did not take a prominent part. He was a member of the House of Representatives of Maine from 1820 to 1823. As the wealthiest man in Maine and a lavish dispenser of hospitality, he entertained many notables at his mansion (built 1794, taken down 1925) on Congress St., Portland. The Eastern Argus for July 22, 1817, describes his reception to President Monroe. When Lafayette visited Portland, Clapp was a member of the reception committee. In 1847 President Polk and his Secretary of State, James Buchanan, called on the aged merchant.

[See Ebenezer Clapp, Record Clapp Family in America (1876), 58-62; Freeman Hunt, Lives of the Merchants (1856), 539-53; Portland Advertiser, Apr. 22, 1848; an article by C. H. Farley in the Portland Sunday Press and Times, Oct. 27, 1918. The Me. Hist. Soc. owns an oil portrait of Clapp as well as his business papers, 1825-48. The family Bible and other relics are owned by a descendant, Mr. Gist Blair of Washington, D. C.]

CLAPP, GEORGE ALFRED. [See Dock-stader, Lew, 1856-1924.]

CLAPP, WILLIAM WARLAND (Apr. 11, 1826-Dec. 8, 1891), journalist, author, was born in Boston and died in that city. His father, descended from Thomas Clapp who arrived in New England in 1633, was William Warland Clapp, and his mother Hannah W. Lane. There is little record of the boy's early training. He spent much of his youth about the office of one of his father's papers, the Saturday Evening Gazette, and "he was educated partly in France." He was back in America at the age of twenty-one, in time to be put in charge of the paper with which he had in a sense come to maturity. He owned and operated this publication from 1847 to 1865, when he abandoned it for the editorship of the Boston Journal, a position which he occupied till within a few months of his death. He was most successful as a journalist whether judged as executive or editor. A staunch Republican in his affiliations, he was so just in what he wrote for his paper that he was listened to with interest by people of all parties; throughout New England and especially in the districts north of Boston it may be said that the Journal was for many years the standard newspaper. Aside from his profession, his most notable interest was in the theatre. In 1853, collecting some articles of his that had appeared in the Gazette, he published A Record of the Boston Stage, a solemn but full and dependable history. The Puritans, he said, held the theatre to be "the abode of a species of devil, who, if allowed once to exist, would speedily make converts," but he himself was of no such opinion. He implied, indeed, that "a first class theatre in Boston, properly built and conducted, would prove a boon to the public and a fortune to the manager." Around 1857, he wrote or adapted several plays, La Fiancine (from the French); John Gilbert and his Daughter, A Dramatic Trifle; and My Husband's Mirror, A Domestic Comedietta. His literary methods were not subtle, and the moral at the end of one of his compositions, at least, was driven in with drastic obviousness, but the effect in general was light and pleasing. In 1880, he printed privately a short monograph on Joseph Dennie. He was keenly interested in flowers; he participated in philanthropic and scholarly organizations, and in politics to such a degree that he became an officer in the militia, an alderman of Boston, and a state senator. He was married in 1850 to Caroline Dennie, by whom he had three children.

[See Ebenezer Clapp, Record Clapp Family in America (1876); Boston Post, Dec. 9, 1891; Boston Transcript, Dec. 9, 1891.]

J. D. W.

CLARK, ABRAHAM (Feb. 15, 1726-Sept. 15, 1794), surveyor, lawyer, farmer, signer of the Declaration of Independence, was a leader of the dour, sensible American middle-class. About 1678 one Richard Clark, shipwright, of Southold, Long Island, moved to Elizabethtown, N. J. His grandson Thomas, charter alderman and patriotic magistrate of Elizabethtown, became in due time the father of Abraham, his only child, locally known later as "Congress Abraham" to distinguish him from others of the same name. Studious by nature, too frail for farm work, and much indulged by his parents, the boy got only a local smattering of "education in the English branches" (Sanderson's Biography of the Signers to the Declaration of Independence, edited by R. T. Conrad, 1847). A natural bent for mathematics led him into surveying and this to an informal study of the law as a means of arbitrating and settling land disputes. His zeal in giving legal advice free, and his preference for the common law, made him known as "The Poor Man's Counsellor" and deepen the suspicion that he never was admitted formally to the bar. The New Jersey legislature (1784) passed "An Act for Regulating and Shortening the Proceedings of the Courts of Law." This was popularly known as "Clark's Law," and he was quoted as saying, "If it succeeds it will tear off the ruffles from the lawyers' wrists." His social-political point of view, through life, resembled that of a seventeenth century English "Leveller."

About 1749 he married and brought home to
Clark

his father's house near Elizabethtown, Sarah Hatfield, by whom he had ten children, none of whom rose to eminence. Ten years after his death she was thriftyly conducting his ancestral farm located at what is now Chestnut St. and Ninth Ave., Roselle, N. J. With her solid cooperation he was able to take part in nearly thirty years of public service. Under the Crown he was high sheriff of Essex County and clerk of the Colonial Assembly. In December 1774, adhering to the patriot cause, he became a member of the New Jersey Committee of Safety and later its secretary. In May 1775, he sat in the New Jersey Provincial Congress which drafted the State's first constitution, and appointed him, June 22, 1776, a delegate to the Second Continental Congress. He had been outspoken for separation from Great Britain and was sent to uphold that view at Philadelphia where he voted for and later signed the Declaration of Independence. Despite continued "want of health" and numerous domestic distractions, the British forces on Staten Island being only a few miles from his home, he was thrice re-elected to Congress, besides interim service in the New Jersey legislature. His opposition to lawyers' privileges, to "commutation of pay" for army officers, and to the unlimited issue of paper money, had made him numerous and formidable enemies in politics, but these seem to have affected neither his industry nor his influence. He served on innumerable committees, prepared many reports in his own hand, and was almost invariably present to vote. He was especially active in keeping the disaffected out of public office and in raising supplies for Washington's army.

After the Revolution, New York discriminations against New Jersey commerce led Clark to remonstrate with Gov. Clinton, to urge closer union among the states, and to go as a delegate to the Annapolis Convention in 1786. Representing the broader views of his state as to the constitutional problem confronting the nation, he was elected to the Philadelphia Convention of 1787, but ill-health prevented his attendance. Opposed to the new Constitution until after the adoption of the Bill of Rights, he was kept out of the First Congress, serving 1789-90 as a commissioner to settle New Jersey's accounts with the Federal Government, but was elected to the Second and Third Congresses. In these his hard-sense industry persisted. His pungent and invariably brief remarks are still worth reading and give a clear picture of the man.

While watching the erection of a bridge in his meadow on Sept. 15, 1794, he suffered sun-

stroke, drove his cousin home, and died two hours later. His grave and monument are in the cemetery of the Rahway Presbyterian Church of which he was long a member.

[Clark's letters and papers are not published. The usual accounts of him are from the Hatfield Manuscript (N. Y. Hist. Soc.). The best single source is Abraham Clark by Ann Hart Clark (San Francisco, 1923), a somewhat confused genealogical compilation.]

W. L. W.

CLARK, ALVAN (Mar. 8, 1804–Aug. 19, 1887), astronomer, maker of astronomical lenses, was born in Ashfield, Mass., the fifth of the ten children of Alvan and Mary (Bassett) Clark. He was a direct descendant of Thomas Clark of the Mayflower. The farm of one hundred acres, on which he was reared, was "one of the rough-est and most rocky in that rough and rocky town." But two fine trout brooks ran through the farm and on these were a sawmill and a grist-mill. The first school-house in the district was built on the farm. The school, the farm, and the mills gave the boy occupation until he was about seventeen. He then (1824–25) put himself "at work in good earnest to learn alone engraving and drawing" and made small portraits with "a pretty satisfactory measure of success." In a newspaper used as a wrapper for some brushes that he had ordered from Boston he found an advertisement, headed, "Engravers wanted." He at once set off for Boston and secured a position as engraver of rolls for calico printers in East Chelmsford (now Lowell) at eight dollars per week. Soon thereafter he married Maria Pease of Ashfield, on Mar. 25, 1826. He was able to supplement his income "a little by painting and cutting stamps," and was fortunate enough to meet his "money promises all along, and have a fair reserve for a rainy day." While working at his trade in Lowell, and later in Providence, New York, and Fall River, he kept up his painting. He finally gave up engraving and opened a studio in Boston, where he successfully followed the profession of portrait painter for many years.

At the age of forty he took up the study of optics. His son George Bassett Clark was then at Andover studying to be an engineer. He found that the boy had become greatly interested in the casting and grinding of mirrors for telescopes and had already cast a small mirror. And then, in his own words, "I was at some pains to acquaint myself with what had been done, and how done, in this curious art, that my son could have the benefit of my maturer judgment, in giving effect to his experiments." This was the start of the renowned firm, Alvan Clark & Sons, makers of the world's largest
telescopes. Although they began with reflectors they soon turned to the manufacture of refractors. Their 6-inch and 8-inch lenses were marvels of excellence, “but the encouragement was small” until Clark aroused the interest of W. R. Dawes of England, by reporting the discovery of two difficult double stars. As soon as it became known how good the glasses were there was no difficulty with the sales. Soon the firm was making 12-inch objectives. One went to the Vienna Observatory, one to Wesleyan at Middletown, Conn., and one to the Lick Observatory. Then came the 18-inch, originally intended for the University of Mississippi, but now at the Dearborn Observatory in Evanston, Ill. A 23-inch for Princeton, 26-inch telescopes for the Naval Observatory and for the University of Virginia, and a 30-inch for the Pulkovo Observatory soon followed. Clark lived to see the completion, but not the installation, of his greatest objective, the 36-inch for the Lick telescope. His firm not only made objectives but completely mounted telescopes as well. During the thorough testing to which the telescopes were subjected before being delivered, Clark discovered a number of difficult and interesting double stars. He received the Rumford medal of the American Academy of Arts and Sciences.

R. S. D.

CLARK, ALVAN GRAHAM (July 10, 1832–June 9, 1897), maker of astronomical lenses, astronomer, son of Alvan [q.v.] and Maria (Pease) Clark, was born in Fall River, Mass., and educated in the public schools of Cambridge, Mass. As a boy he was apt at everything requiring keen vision and exactness, and he showed a deep interest in astronomy while still at school, where he received prizes for essays on casting and grinding mirrors. At the age of twenty he was taken into partnership with his father and brother George, in the firm of Alvan Clark & Sons, makers of astronomical lenses. In 1865 he was married to Mary Mitchell Willard. When the 18-inch glass now in the Dearborn Observatory was finished, Clark turned the telescope upon Sirius and discovered the companion which had already revealed its presence by its effect upon the motion of Sirius. For this discovery he was awarded the Lalande Medal of the French Academy of Sciences. He was also the discoverer of sixteen double stars. After the death of his father and of his brother, he carried on the business of the firm and under him it achieved its greatest fame, in the construction of the 40-inch lenses of the Yerkes telescope, the largest in the world. The making of these lenses was a much greater undertaking at that time than it would seem now, and the shipping of them in a carefully padded box, fixed on springs, in a parlor car, was a source of much anxiety. When they were delivered, Clark said he felt as if he had been relieved of a crushing load. Less than ten days after he returned from the trip with the lenses he died.

R. S. D.

CLARK, ARTHUR HAMILTON (Dec. 27, 1841–July 5, 1922), master mariner, historian, was born in Boston. His father, Benjamin Cutler Clark, was a leading merchant-shipowner, and one of the earliest yachtsmen of New England. Arthur graduated from the Boston Latin School in 1857, helped to win a famous regatta on the Charles as member of the Volant crew, and in December shipped as apprentice seaman on the clipper ship Black Prince. He returned as her third mate in March 1860, after a voyage around the world. The following summer he attended a commercial school in Boston, rowing up twelve miles from Nahant every pleasant day, and winning three races for single wherries in rowing regattas. In December 1860 he became second mate of the clipper ship Northern Light on a voyage to San Francisco, and on returning joined the Black Prince as first mate on a government transport charter, staying with her on a China voyage. Clark got his master’s certificate in 1863 in Far Eastern waters, where he remained two years, then traveled in Europe, and in July 1866 sailed the 27-ton sloop yacht Alice from Nahant to the Isle of Wight in twenty days. That winter he took out the S. S. Manchu from New York to China, commanded her in the China seas for two years, and became a well-known figure in the Treaty Ports. His presence of mind once saved his next command, the paddle steamer Sunwolda, from foundering; but in January 1872 she struck an uncharted rock in Hainan Straits. Clark promptly ran her aground on a sand spit, and beat off a flotilla of Chinese pirates until rescued by the U. S. S. Ashuelot. He commanded the Indiana of the American Line (New York-Liverpool) from 1874 to November 1876, when he resigned to become the London
representative of several American marine insurance companies (1877-90). Returning to America as passenger on the *William R. Grace*, he survived a shipwreck off the Delaware Capes. He organized the marine transportation department of the World's Columbian Exposition, and in 1895 was appointed Lloyd's agent in New York, where his wide knowledge of marine affairs, good judgment, and sense of honor made him universally respected. From early life he had been a collector of ship pictures, models, and maritime history. He now tried his hand at writing, publishing *The History of Yachting, 1600-1815* (1904), and *The Clipper Ship Era, and Epitome of Famous American and British Clipper Ships ... 1843-1869* (1910), a brilliant and accurate work containing some of the best description and narrative in the literature of the sea. After retiring from the Lloyd's agency in 1920 he purchased a house at Newburyport, Mass., where he died, July 5, 1922.

CLARK, CHAMP (Mar. 7, 1850-Mar. 2, 1921), speaker of the House of Representatives, was born near Lawrenceburg, Anderson County, Ky., the second child and only son of John Hampton Clark of New Jersey and Alethea Jane Beauchamp of Kentucky. He early dropped his baptismal names James Beauchamp, adopting Champ. He was educated at Kentucky University, Lexington, and at Bethany College, W. Va., graduating from the latter institution in 1873. In college he laid the foundations of a wide acquaintance with classical and other literature which was later one of his distinctions as a public man. Following his graduation, he was for a year president of Marshall College, Huntington, W. Va., the first normal school of the state; then he turned to law, and in 1875 completed a course at the Cincinnati Law School. After brief residences at Wichita, Kan., and Kansas City, he removed in 1876 to Louisiana, Mo., and in 1880 to Bowling Green, in both of which places he was city attorney. At Louisiana he also edited the *Daily News*, and subsequently bought, and edited for a year, the *Riverside Press*, a Democratic paper. His first incursion into national politics was as a Democratic presidential elector in 1880. From 1885 to 1889 he was prosecuting attorney for Pike County. He sat in the Missouri legislature in 1889-91, where he was chairman of the Committee on Criminal Jurisprudence and took a prominent part in the reorganization of the state university, whose administration had become a political issue.

At the Trans-Mississippi Congress at Denver in May 1891 he headed the Missouri delegation. Elected as a Democrat to the Fifty-third Congress (1893-95), he continued to sit in the House until his death, except for the Fifty-fourth Congress (1895-97), when he met defeat in the Republican wave which swept over his state. He entered the House with a local reputation as an orator, and won a wider recognition by a much-applauded speech at Tammany Hall, New York, on July 4, 1893, before he took his seat, but his later manner in debate, while witty and forcible, often trenchered upon the bounds of courtesy. His standing in the House was attested by long service on the committees of Foreign Affairs and Ways and Means, but he showed his political independence by ardently supporting the war with Spain and strongly opposing the annexation of Hawaii. For several years he was the trusted lieutenant of John Sharp Williams [q.v.], the Democratic minority leader of the House, and succeeded to the leadership of his party in the Sixtieth Congress (1907-09). His most conspicuous achievement in Congress was his successful leadership of the fight against Speaker Joseph G. Cannon [q.v.], and the arbitrary control of legislative procedure which had come to be known as Cannonism. At the opening of the Sixty-second Congress (Apr. 14, 1911) he was elected speaker by a House which, for the first time since 1893, had a Democratic majority, and he held the office by successive elections until March 1919. In the pre-convention campaign of 1912 he had the support of Illinois, Iowa, Nebraska, and California as a Democratic candidate for president at the state primaries, and at the Baltimore convention in June received 440 ½ votes on the first ballot against 324 for Woodrow Wilson, his nearest competitor. He continued to lead until after the 14th ballot, when he lost the support of William J. Bryan, who dominated the convention, and who charged him with representing reactionary interests. Thereafter his vote fell off, and on the final ballot he received only 84 votes. Bryan's allegation was later admitted to have been unfounded. Notwithstanding his defeat, Clark supported Wilson in the ensuing campaign. In May 1917 he took the floor in opposition to the Selective Draft Act. He was again minority leader in the Sixty-sixth Congress (1919-21), but was defeated for reelection in the “great and solemn referendum” called for by Wilson in 1920. He was married, on Dec. 14, 1881, to Genevieve Bennett of Aux-Vasae, Calloway County, Mo.

(The main authorities for Clark's life, aside from an official sketch in the *Biog. Cong. Dir. (1913)* and the
Jour. House of Representatives and Cong. Record, are W. R. Hollister and H. Norman, Five Famous Missourians (1900), and a sketch by W. D. Bassford in M. G. and E. L. Webb, Famous Living Americans (1915). Both are uncritical and laudatory. Clarke's own reminiscences, My Quarter Century of Am. Politics (2 vols., 1920), is chiefly valuable, save for his comments on persons and events, for his earlier years. Obituaries were published in the N. Y. Times and N. Y. Tribune, Mar. 3, 1921. The former paper also contains, under date of Mar. 6, 1921, Chas. W. Bryan's account of the elimination of Clarke in the 1912 convention.

W. M.

CLARK, CHARLES (1810-Dec. 18, 1877), Confederate soldier, governor of Mississippi, belonged to a family which reaches back to the first settlement of Maryland. His grandfather was a Revolutionary soldier, and his father was a pioneer settler in what is now the city of Cincinnati, Ohio. Here Charles Clark was born. After finishing his education in Kentucky, he removed (about 1831) to Mississippi, and engaged in teaching in Natchez and in Yazoo and Jefferson counties. In the latter county he became a devoted friend of Gen. Thomas Hinds, an ex-congressman and a hero of the War of 1812, who was one of the most influential men in south Mississippi. Clark entered politics as a Whig, and was elected on that ticket to represent Jefferson County in the legislative sessions from 1838 to 1844. At the beginning of the Mexican War he organized the Thomas Hinds Guards, which became part of the 2nd Mississippi Regiment of Volunteers, of which he later became colonel. In the great party and sectional conflicts which culminated in the Compromise of 1850, Clark followed the lead of Henry Clay. About that time, he removed to a plantation in Bolivar County, Miss. His new constituents elected him to represent them in the legislative sessions from 1856 to 1861. Meantime (1857), he was defeated as the Whig candidate for Congress by his old commander, Reuben Davis. In the late fifties he changed his views on secession, and became a Democrat. He was chosen a delegate to the Democratic State Convention of 1860, and to the national conventions at Charleston and Baltimore, in which latter conventions he supported the Breckinridge faction. As a candidate for delegate to the Mississippi Secession Convention, Clark declared for secession without delay, but was defeated by Miles H. McGehee, who insisted that before taking such a step Mississippi should await the cooperation of other Southern states. In the convention, McGehee found the sentiment for immediate secession so strong that he changed his position and voted with the majority. After the state seceded, Clark was elected one of the first four brigadier-generals of Mississippi, and was later advanced to the rank of major-general. When the state troops were turned over to the Confederacy, he became brigadier-general in the Confederate army. He was wounded in the battle of Shiloh, but was soon able to re-enter the service. In the attack on Baton Rouge (July 1862), he was wounded so severely that his comrades could not move him from the field, and he became a Federal prisoner. He was taken to New Orleans for treatment, and his wife (Ann Eliza Darden) was allowed to pass through the lines to nurse him. As he was never afterward able to walk without crutches, he had to retire from military service. He was elected governor of Mississippi, practically without opposition in 1864, and was re-elected in 1864. When Gen. Richard Taylor surrendered at Meridian (May 4, 1865), Clark issued a call for the legislature to meet in special session. In his last message to this body he referred to the assassination of President Lincoln as follows: "For this act of atrocity, so repugnant to the instincts of our hearts, you feel, I am sure, in common with the whole people, the profoundest sentiment of detestation." The legislature was in session only about an hour, when the report came that Gen. Osband, of the Federal army, had received orders to arrest the members. Clark was taken to Fort Pulaski, near Savannah, Ga., as a prisoner, but was soon released and permitted to return to his home. In reply to an invitation to address the new legislature (Oct. 18, 1865), he wrote that he was "still a prisoner of State and on parole," and that it would be improper for him to accept the invitation, but he expressed a hope that the State would soon be restored to "equal political rights with her sister States." When his party returned to power (1876), he was appointed chancellor of his district, which position he held until his death a year later.

[Sketches will be found in Dunbar Rowland, Mississippi (1907), I, 436-45; Biog. and Hist. Memoirs of Miss. (1891), I, 549-62; R. Lowry and Wm. H. McAdle, Hist. of Miss. (1891), 350-53. Important facts may be gleaned from Jas. W. Garner, Reconstruction in Miss. (1901); Reuben Davis, Recollections of Miss. and Mississippians (1886). Manuscript sources may be found in the Miss. Dept. of Archives and Hist., though some important papers are still in the hands of Clark's descendants.]

F. L. R.

CLARK, CHARLES EDGAR (Aug. 10, 1843-Oct. 2, 1922), naval officer, was born at Bradford, Vt., the son of James Dayton and Mary (Sexton) Clark, the latter being the daughter of Maj. Hiram Sexton of Vermont, an officer in the War of 1812. On the paternal side, Clark was descended from a prominent Massachusetts colonial family. Appointed to the U. S. Naval Academy, Sept. 29, 1860, through the influence
of Senator Morrill of Vermont, he made his first voyage on board the historic frigate *Constitution*, when the midshipmen were transferred from Annapolis to Newport in 1861. Under the stress of war, promotion came fast. Joining the *Ossipee* of Farragut’s fleet, Clark commanded the forward gun division of that vessel in the furious fight on Aug. 5, 1864, with the powerful Confederate ironclad *Tennessee* and her consorts in Mobile Bay, resulting in her capture and the sealing up of the important port of Mobile. He also shared in the bombardment of Fort Morgan. In 1865 he was assigned to the steamer *Vanderbilt* of the Pacific Squadron, and in 1867 was transferred to the *Suwanee*, witnessing in her the bombardment of Valparaíso by the Spanish fleet and its defeat by the batteries at Callao. The *Suwanee* was wrecked July 7, 1868, near the northern extremity of Vancouver Island, and Clark was left in command of a party of rescued sailors on Hope Island until taken off by the steamer *New World*. On Apr. 8, 1869, he was married to Marie Louise Davis, daughter of W. T. Davis of Greenfield, Mass. Between this time and the beginning of the Spanish-American War, he followed the usual routine of alternating periods of sea and land service. Promoted to commander, Nov. 15, 1881, he commanded the steamship *Ranger* and was in charge of the survey of the west coast of Mexico and Central America from 1883 to 1886, and ten years later was at the head of a squadron of six war vessels and two revenue cutters, which cruised in Bering Sea to enforce the regulations agreed upon by the Paris Tribunal. Promoted captain, June 21, 1896, he was assigned, a short time before the outbreak of the war with Spain, to the command of the battleship *Oregon*.

As “Clark of the *Oregon*,” he became one of the best-known and most admired officers of the United States Navy. In the expectation that war might break out at any moment, and in doubt regarding the strength of the Spanish naval resources, the Navy Department ordered the *Oregon*, then in the Pacific, to join the fleet in the Atlantic with all possible dispatch. In accordance with this, Clark left San Francisco on Mar. 19, 1898, and on May 25 reported to Admiral Sampson off the coast of Florida after a voyage through Magellan Strait, his ship arriving in first-class condition and ready to go into battle immediately. This voyage, while its actual significance was exaggerated in the eyes of the public, is still considered to have been a triumph of naval discipline, engineering, and planning.

Joining the fleet of Admiral Sampson off San-

**CLARK, CHARLES HEBER** (July 11, 1847–Aug. 10, 1915), author, was born at Berlin, Md., the son of an Episcopalian clergyman, William J. Clark, who as an abolitionist and Northern sympathizer drifted unprosperously from one Maryland parish to another and finally withdrew from the ministry. His son, “brought up on sweet potatoes and among negroes,” got his
Clark

schooling at Georgetown, D. C., began life at fifteen as an office boy in a Philadelphia commission house, later served two years in the Union army, and on his return to Philadelphia in 1865 found work as a reporter on the Philadelphia Inquirer, where by luck and some ability he rose in two months' time to be editorial writer and book reviewer. The rest of his life was given to Philadelphia journalism, with authorship and politics as by-products. At different times he wrote for the Evening Bulletin as musical and dramatic critic, for the North American as editorial writer during the presidential campaign of 1904, and for the Textile Record, of which he was for some years sole proprietor. His literary repute depended almost entirely on his first book, Out of the Hurly Burly (1874), a collection of humorous sketches of life in a suburban town. For thirty years the horseplay and labored extravagance of the book found an appreciative audience both in America and in England. He followed it with Elbow Room (1876), Random Shots (1879), and The Fortunate Island (1882), a volume of short stories, and after a long interval brought out three novels, Captain Bluff: a Tale of Old Turley (1901), In Happy Hollow (1903), and The Quakeress (1905), and a second collection of stories, By the Bend in the River (1914). Many of these works were written under the pseudonym of "Max Adeler." As a novelist Clark was not very competent, his chief merit being a genuine fondness for his backgrounds, which were either his boyhood Maryland or Conshohocken, on the Schuykill, where he made his home. He was one of the organizers of the Manufacturers' Club of Philadelphia and for ten years its secretary, much of his own income being derived from investments in the enterprises of his former Sunday-school pupil, J. Elwood Lee. In political economy he called himself a disciple of Henry C. Carey [q.v.], and as an advocate of a high protective tariff, for which he harangued voters and lobbied before the Ways and Means Committee at Washington, he was recognized by other manufacturers as a profound student of their problems. In person he was tall and gaunt, with the preternaturally sober face popularly attributed to humorists. He loathed his reputation as a humorist and tried to live it down. His first wife was Clara Lukens of Conshohocken, who died in 1805; in 1807 he married Emily K. Clark, who survived him.

CLARK, CHARLES HOPKINS (Apr. 1, 1848–Sept. 5, 1926), editor, son of Ezra and Mary (Hopkins) Clark, came of a long colonial ancestry. He was born at Hartford, Conn., was graduated at the Hartford Public High School in 1867 and at Yale College, with the B.A. degree in 1871. On Oct. 1 after graduation he entered the office of the Hartford Courant, published and edited by Gen. Joseph R. Hawley and Charles Dudley Warner. Gen. Hawley had a predilection for politics amounting to infatuation. His associate editor, Warner, devoted his life to letters. Thus Clark received his journalistic training where passionate political thought went hand in hand with good writing. Hawley fired the young recruit's native delight in politics and fixed his enthusiasms upon the Republican party. Warner blue-penciled his copy. When Hawley was elected United States senator in 1881, Clark became the paper's chief political writer. In 1890 Hawley retired as publisher, Warner became president of the Hartford Courant Company and Clark its secretary. In 1892 he was made vice-president. Warner's death in 1900 made Clark editor of the paper while Hawley became president of the publishing company. Hawley died in 1905 and the next year the editor became president and publisher as well.

Clark made his newspaper the medium for expressing his own individuality, and by a selection of news and impassioned editorials, a daily brief for his party. Like Dana, Greeley, and Watterston, he became a forceful and militant practitioner of that dogmatic personal journalism which now is almost entirely a thing of the past among daily newspapers. So trenchant was his pen, so devastating his wit, so delicious his sarcasm and irony, that his dynamic and imperious personality stood out in every issue. Men in public life and fellow editors spoke of "Charlie Clark's paper" as frequently as they called it by name. In fact the Courant was Clark and Clark was the Courant. Never caring to be a candidate for office, still he fought the battles of the Republican party each day of every year. His newspaper became a power in Connecticut and an influence far beyond the borders of his state.

From 1910 until his death Clark was a director of the Associated Press, and from 1910 to 1925 a fellow of the Corporation of Yale University. He delivered the Bromley Lectures on Journalism at Yale in 1906 and contributed to the Critic, Scribner's Magazine, and the North American Review. Eight consecutive Republican national conventions, beginning with that of 1888, Clark attended as a reporter, and at all

124
subsequent conventions of the party he was a delegate-at-large from Connecticut. He was a director of three large insurance companies and long a devoted officer in many quasi-public institutions for cultural development or social betterment. He was married twice: first, on Dec. 15, 1873, to Ellen Root of Hartford, who died on Feb. 28, 1895; second, on Nov. 15, 1899, to Matilda Colt Root, a sister of his first wife. He died in Hartford, having completed fifty-four years of continuous service with his paper.

G.B.A.

CLARK, DANIEL (1766-Aug. 16, 1813), merchant and territorial delegate, was born in Sligo, Ireland, and for a time attended Eton and other English schools. In December 1786 he came to New Orleans, where he was associated with an uncle of the same name as merchant and landholder. The two owned properties in the neighboring districts of Baton Rouge and Natchez, and formed commercial connections with the upper Ohio and with Philadelphia. The younger Clark also served as clerk in the local office of the Spanish governor and was looked upon as an enterprising man of wealth, who was socially and politically ambitious but thoroughly honest and public-spirited. In 1798, when the Natchez district was transferred to the United States and organized as the Territory of Mississippi, both men renewed with Gen. Wilkinson, who accompanied the American troops thither, a business and social connection that had been established some ten years before. The younger Clark then became an American citizen. For a few months the Spanish governor permitted him to act in New Orleans as temporary American consul. In that capacity he submitted a partial report on the early commerce between Kentucky and New Orleans (Annals of Congress, 10 Cong., 1 Sess., p. 2731). He served as intermediary between the governor and Wilkinson and Andrew Ellicott, the American boundary commissioner, and helped to bring the trading activities of Philip Nolan to the attention of Jefferson.

On July 16, 1801, Jefferson appointed Clark regular consul at New Orleans. Some months later, after a visit to the seat of government, where he dropped some hints of Wilkinson's earlier intrigues with the Spaniards, he made a hurried trip to France, and held interviews with the officials who were about to take possession of Louisiana (American State Papers, Foreign Relations, 11, 526). After his return, early in 1803, he continued his efforts to establish American control in New Orleans. He concerted measures with friends in that city to thwart the French Commissioner, Laussat, and tried to prevail upon Wilkinson and Gov. Claiborne to embody the regulars and the militia of Mississippi Territory and occupy New Orleans before the French arrived in force. Later, during the brief interregnum of the French Commissioner, he organized in connection with that official a local force to guard the city. He made two trading voyages to Vera Cruz in 1805-06 that were popularly supposed to have some connection with the Burr Conspiracy. When Burr first visited New Orleans in 1805, he bore a letter of introduction from Wilkinson to Clark, and the latter soon warned Wilkinson of the wild rumors that were beginning to cluster around Burr's movements. In the following year Claiborne at first charged Clark with complicity in the conspiracy but later retracted the charge. At that time, as earlier, he was a bitter opponent of Claiborne, and their animosity finally brought about a duel in the summer of 1807, in which the Governor was seriously wounded.

In 1806 Clark was elected as delegate to Congress from Orleans Territory. While serving in that capacity he openly broke with Wilkinson and later secured for the committee of Congress that investigated the General's conduct much of its material. This service provoked a bitter attack on him and in reply he published his book, Proofs of the Corruption of Gen. James Wilkinson (1809), which furnishes much evidence of the General's treachery. Clark served only one term in Congress and withdrew from mercantile activities during the closing years of his life. Between 1801 and 1806 he had formed with Madame Zulime Des Granges an irregular connection, of which two daughters were born and which gave rise some twenty years after his death to a half-century of litigation over his estate.

[The most important source for Clark's services and character is his Proofs of the Corruption. This may be supplemented by Chas. Gayarré, Hist. of La., vol. III (1854), vol. IV (1866); Am. Hist. Rec., XXXII, 861-74; XXXIII, 331-59; Quart. Tex. State Hist. Assoc., VII, 308-17; Jas. Wilkinson, Memoirs of My Own Times, vol. II, passim (1816). The essential facts as to his personal relation with the mother of his children are given in Gaines vs. New Orleans, 6 Wallace, 642-718. For his correspondence with Wilkinson preceding the acquisition of Louisiana, consult in the War Dept., "War Office, Letters Received, 1804 and Prior Years."]

I. J. C.

CLARK, DANIEL (Oct. 24, 1809-Jan. 2, 1891), politician, jurist, was the son of Benjamin and Elizabeth (Wiggin) Clark. He was
Clark

born at Stratham, N. H., and educated in the district school, Hampton Academy, and Dartmouth College, graduating from the latter in 1834. His father was a farmer and blacksmith and because of limited means, Daniel, like many other young men of that period, was obliged to pay for his own education by teaching school during the winter months. After graduation he studied law, was admitted to the bar, began practise at Epping, and in 1839 moved to Manchester. This town was about to enjoy a prolonged period of industrial development, and he soon acquired a considerable practise. For the rest of his life he was active in Manchester affairs, holding several local offices and trusteeships and between 1842 and 1855 serving five times as representative in the legislature, being in charge of the bill for the incorporation of the city in 1846. He was also active in various business enterprises and was for some years a director of the Amoskeag Corporation. Politically, he was a Whig, and when that party disintegrated he was one of the active organizers of the Republican party. In 1857 he was chosen to serve out the unexpired term of Senator James Bell and, being reelected for a full term, was for nine years one of the prominent figures in Washington affairs. He was an accomplished speaker and debater, ranked by S. S. Cox, a veteran member of the lower house, with Sumner, Fessenden, Seward, Trumbull, and other notables in "a galaxy of ability" (Union-Disunion-Reunion; Three Decades of Federal Legislation, 1885). Early in his senatorial career, in the course of the Kansas debate, he declared, "We have had enough of bowing down, and the people in my region have got sick of it" (Congressional Globe, 35 Cong., 1 Sess., App., p. 107). These words are the key to his subsequent course. He was an uncompromising foe of slavery and secession and his attitude in 1861 was criticized by many who believed that reconciliation was still possible. He was prominent throughout the war period and his service on the committees on finance, claims, and judiciary was especially important in view of their war-time responsibilities. In 1866 he failed to receive renomination, apparently largely because of New Hampshire's adherence to the doctrine of rotation in office. On July 27, 1866, President Johnson appointed him United States judge for the district of New Hampshire, although Gideon Welles remarked "On every Constitutional point that has been raised, Clark has opposed the President . . . and has been as maliciously hostile as any man in the Senate" (Diary, 1911, II, 565). Clark resigned from the Senate and spent the remainder of his life on the bench, declining at the age of seventy, because of excellent health, to take advantage of the provisions of the retirement act. He had an excellent standing as a jurist and frequently was called to sit in other courts on the New England circuit. His political activity was, of course, largely at an end but he served as president of the constitutional convention of 1876. He was married twice: on June 9, 1840, to Hannah W. Robbins, daughter of Maxcy Robbins of Stratham, who died in 1844; and on May 13, 1846, to Anne W., daughter of Henry Salter of Portsmouth.

[C. H. Bell, Bench and Bar of N. H. (1894); J. B. Clarke, Manchester (1875); I. W. Smith, Granite Mo., July 1887; J. O. Lyford, Life of Edward H. Rollins (1906).]

W. A. R.

CLARK, FRANCIS EDWARD (Sept. 12, 1851-May 26, 1927), Congregational minister, founder of the Young People's Society of Christian Endeavor, the son of Charles Carey Symmes and Lydia (Clark) Symmes, was descended on both sides from old Massachusetts Puritan stock. He was born at Aylmer, Quebec, where his father, a citizen of Massachusetts, was located as a civil engineer and timber surveyor. Bereft of father, brother, and mother before he was eight years of age, the boy was adopted by his uncle, the Rev. Edward W. Clark, then pastor of the Congregational Church of Auburndale, Mass., and his name was legally changed to Francis Edward Clark. He prepared for college at Kimball Union Academy in Meriden, N. H., and was graduated from Dartmouth College in 1873, and from Andover Theological Seminary in 1876. He then married Harriett E. Abbott, daughter and grand-daughter of ministers, and a descendant of John and Priscilla Alden.

Clark became pastor of the Williston Church at Portland, Me., a small offshoot which began to grow rapidly under his vigorous leadership. Here, on Feb. 2, 1881, he organized the "Williston Young People's Society of Christian Endeavor." This was planned, he said, "to be an out-and-out Christian society." Its characteristic features were the pledge taken by members, not only to endeavor to lead a Christian life, but to pray to God and read the Bible every day, and to attend and "take some part, aside from singing," in every meeting; the monthly consecration meetings; and the committees through which the young people undertook active participation in the work of the church. The plan immediately transformed the young people's prayer-meeting, hitherto a relatively formal and lifeless affair. The idea spread rapidly, partly because there was general interest in the more effective or-
Clark

organization of young people for Christian service, partly because of Clark's ability as an advertiser. In August 1881 he contributed to the Congregationalist an account of his society, and in 1882 he published a pamphlet and a book describing the plan. In 1883 he became pastor of the Phillips Church in South Boston; but he resigned the pastorate four years later, to devote his whole time to Christian Endeavor work. The United Society of Christian Endeavor was incorporated under the laws of Maine in 1885, and transferred to Massachusetts in 1887. The Golden Rule, a religious weekly, was purchased in 1886 by Clark and a group of friends, who organized the Golden Rule Company. Clark became editor of the paper, which he made the organ of the Christian Endeavor movement, though not owned by the United Society. Its name was changed to Christian Endeavor World in 1897. Clark's income from this paper, together with the proceeds of his other writings, enabled him to give his services without salary to the promotion and oversight of the Christian Endeavor movement. He was, in 1887, made president of the United Society of Christian Endeavor, an office which he held for thirty-eight years. In 1888 he went to England, at the invitation of the British Sunday School Union, to tell of the new organization for young people. That was the first of many journeys to many lands in the interest of his cause. A World's Christian Endeavor Union was organized in 1895, and incorporated in 1902; of this he was president from the beginning. In 1919 he resigned as editor of the Christian Endeavor World and was made honorary editor. His last European journey was to preside at the convention of the World's Christian Endeavor Union at London in 1926, where delegates from forty nations, many of which had been at war a decade before, gathered in the interest of Christian fellowship and international good-will.

Clark was a prolific and interesting writer. Thirty-seven titles are contained in the list of books written by him which is appended to his autobiography, published in 1922. Among the more important are: The Children and the Church (1882); Our Journey Around the World (1894); World-Wide Endeavor (1895); A New Way Around an Old World (1900); Christian Endeavor in All Lands (1906); The Continent of Opportunity (1907); Old Homes of New Americans (1913); The Holy Land of Asia Minor (1914); In Christ's Own Country (1914); In the Footsteps of St. Paul (1917); Our Italian Fellow Citizens (1919); Memories of Many Men in Many Lands (1922).

Clark

(The best sources are the files of Golden Rule and Christian Endeavor World and Dr. Clark's own books, cited above. Interesting side-lights are given in The Evolution of an Endeavorer (1924), the autobiography of his long-time associate, Wm. Shaw.)

L.A.W.

CLARK, GEORGE ROGERS (Nov. 19, 1752–Feb. 13, 1818), conqueror of the Northwest during the American Revolution, was the son of John and Ann (Rogers) Clark, both of them native Virginians. He was born two miles east of Charlottesville. When he was five years of age, his parents, after selling their farm, returned to the southwestern corner of Caroline County. Here, for a quarter-century, they lived on a small plantation which was bequeathed to them by an uncle, John Clark. Until the age of nineteen when he began the study of surveying under the direction of his grandfather, George had acquired little in the way of a formal education. He read history, however, and geography, and took a marked interest in natural phenomena, to which there are frequent references in his letters.

Early in June 1772, having already achieved a reputation for courage, Clark set out from Pittsburgh with a few other adventurers on an exploring expedition in canoes, down the Ohio River. He was then six feet in height, strong of body, and is further described as having red hair and black penetrating sparkling eyes. After spending some time in locating parcels of land at the mouth of the Kanawha, he returned to his home. The next spring he returned with a company of men to the mouth of Fish Creek, on the Ohio, one hundred and thirty miles below Pittsburgh. With a single companion, he then descended the river on an exploring trip, an additional one hundred and seventy miles. The two spent the winter alone on Fish Creek devoting their time to hunting, cutting rails, girdling trees, and burning brush in preparation for the cultivation of the land. The next season Clark gave attention also to surveying farms for the settlers who were coming to the region in increasing numbers. In 1774, as captain of militia, he took part in Dunmore's War, and, after the treaty at Camp Charlotte, set out for the Kentucky River, where he was engaged in surveying lands for the Ohio Company.

Quickly accorded a place of leadership among Kentuckians, he devoted his energy to the establishment of orderly government; to offsetting the design of Judge Richard Henderson who aimed to set up a proprietary colony (Transylvania) with Boonesborough as its capital; and to acquainting Patrick Henry, the governor of Virginia, with the necessity of placing Kentucky under the protection of that State. Should
Clark

this be done, he declared, not only would the population of Kentucky increase rapidly but trade would develop and a respectable body of fine riflemen would furnish an effective guarantee for the safety of the interior counties against the attacks of Indians. In response to Clark's challenge that "if a country was not worth protecting, it was not worth claiming," the Virginia Council voted five hundred pounds of powder for the protection of Kentucky. This assistance was timely, for at the close of the year 1776, Kentuckians, cooped up in their three stockaded forts, Harrodsburg, Boonesborough, and Logan's Fort, were forced to defend themselves against a succession of Indian expeditions which had been organized at Detroit by Lieutenant-Henry Hamilton. Thus, it was hoped, at the opening of the Revolution, to establish British control over the country west of the Alleghany Mountains. To Clark, who was commissioned a major, was entrusted the organization of the militia for defense. Having conceived a plan for the conquest of the Illinois country, he secured the approval of Gov. Henry and the Assembly for the enlistment of troops. As lieutenant-colonel, he set out with his little army of one hundred and seventy-five men from Fort Massac, ten miles below Louisville. An overland march of six days, two of them without food, through unbroken forests and trackless plains, brought them to Kaskaskia which was surprised and captured July 4, 1778. By early August, the American flag was also floating over Cahokia and Vincennes and with rare tact Clark had won the allegiance of the French villagers and neighboring Indian tribes. Detroit was his next goal.

Upon hearing of Clark's success, Hamilton prepared an expedition consisting of one hundred and seventy-five white troops, two-thirds of them being French volunteers, and sixty Indians, with which he set out on Oct. 7, for the recapture of the Illinois posts. On the way, his force was increased to the number of five hundred by accessions from the Indians. Panic seized the French at Vincennes on the approach of the enemy and Capt. Leonard Helm, having only a single American soldier to guard the fort, surrendered. Had Hamilton pushed forward at once, it seems probable he could have regained control over the other Illinois villages. But he delayed on account of the midwinter floods. Clark, on the contrary, resolved to risk all he had gained by at once taking the offensive and attempting the reduction of Vincennes. The winter march of one hundred and eighty miles, at times across plains and through overflowing rivers, of this army of one hundred and seventy men, one-half of them French volunteers; the capture of Vincennes; and the surrender of Hamilton with seventy-nine of his followers, Feb. 25, 1779, have furnished topics for many historians and novelists. In the well-known letter to his friend, George Mason, a leading lawyer of Virginia, Clark wrote: "If I was sensible that You woud let no Person see this relation I woud give You a detail of our suffering for four days in crossing those waters, and the manner it was done; as I am sure You woud Credit it; but it is too incredible for any Person to believe except those that are as well acquainted with me as You are or had experienced something similar to it" (Illinois Historical Collections, VIII, 140).

The undertaking of such a project, the skill with which it was executed, and the perseverance in overcoming obstacles, seemingly insurmountable, excited the praise even of Hamilton. Courage born of desperation was manifested by men and leaders alike, for all were fully conscious that failure would mean the loss not alone of the Illinois country but also of Kentucky.

The summer following, Clark was forced to forego the march against Detroit. As he expressed the situation, "Detroit lost for want of a few men." While establishing his headquarters in the newly erected Fort Nelson, at the falls of the Ohio (Louisville), his plans comprehended two main objectives—to raise a force in Kentucky, "with the hopes of giving the Shawnees a drubbing" and to make a "bold push" and reduce Detroit and Michilimackinac. During the year 1780, he was engaged in foiling the plan instituted by the British for the recapture of the Illinois country and the Falls of the Ohio and then of Pittsburgh and Fort Cumberland. If successful, the whole region west of the Alleghany Mountains would have become British territory. Moreover, conditions east of the mountains must have been materially changed, for the British rangers and their hordes of Indian allies would then have been free to join the ranks of the British in Virginia and the South. In response to entreaties from St. Louis and Cahokia, Clark hurried to the latter post with a small body of troops. He claimed for his men and himself the honor of having saved St. Louis and the rest of Louisiana for the Spanish—Spain having entered the war as an enemy of Great Britain. After the retreat of the main body of the enemy, Clark set out for Harrodsburg, in order to prevent the advance of an even more formidable force of British and Indians under Col. Henry Bird. Within seven weeks after leaving
Clark

Cahokia, one thousand volunteers responded to his orders to assemble at the mouth of the Licking River. By a forced march, they reached Piqua where they overtook several hundred Indians. After a fierce engagement, the Indians fled and Col. Bird also retreated.

For upward of two years after the surrender of Cornwallis, Oct. 19, 1781, war in the West continued. After the terrible defeat of the Kentuckians at the battle of the Blue Licks, Aug. 18, 1782, Clark, who had taken no part in the engagement, instituted a plan for a retaliatory expedition against the Shawnee. On Nov. 4, as brigadier-general under Virginia, he led an expedition against their stronghold at Chillicothe which was completely successful. By this stroke, he not only saved the frontier settlements from the danger of attack but he held the British on the defensive at Detroit.

By the terms of the treaty concluded at Paris, Sept. 3, 1783, the old Northwest was ceded to the United States. No reference is made in the diplomatic papers to the conquest of Clark as a factor in reaching the final agreement. If his position at the close of the Shawnee campaign is considered, it is evident he was virtually in military control of the Northwest during 1782 and 1783. This stroke marked the final aggressive movement in his offensive-defensive policy. At no time were the British prepared to reduce Fort Nelson although they were aware that it constituted the key between the East and the Illinois Country and Kentucky; that it dominated western trade; and was the center for operations against Detroit.

For a number of years after the Revolution, Clark served as a member of the Board of Commissioners (much of the time acting as chairman) which supervised the allotment of lands in the Illinois grant. These lands, one hundred and fifty thousand acres, located north of the Ohio across from Louisville, were granted by Virginia to the soldiers of Clark for their services during the Revolution. Clark also served with Richard Butler and S. H. Parsons on a commission for making a treaty with the Indians of the Northwest, and at Fort McIntosh, January 1786, the Indians acknowledged the sovereignty of the United States over the territory ceded by Great Britain.

Because of depredations by the Wabash tribes at Vincennes and in Kentucky, Clark led a retaliatory expedition against them during the summer of 1786. Owing to a mutiny of certain of the Kentucky troops, it proved a failure. Before returning to Kentucky he provided a force of one hundred men for the protection of Vincennes. To secure the necessary food and clothing for this garrison, he ordered the seizure of goods which had been brought by three Spanish merchants to Vincennes for trade. The act was, in general, approved throughout the West, for no progress had been made by the Government of the United States toward securing their demands for the free navigation of the Mississippi River. The opportunity was seized by James Wilkinson, former brigadier-general in the Continental Army, to make an attack on the reputation of Clark, who stood in his path toward preference in Kentucky. A man of daring and selfish ambition, proficient in corruption and intrigue, Wilkinson succeeded in his scheme. Public favor was never again accorded Clark by Virginia nor by the federal government. Thus, at thirty-five years of age, Clark was without means of support, although the State of Virginia was in his debt some twenty thousand dollars for his pay as an officer and for money he had advanced to secure supplies for his troops. Early in 1788, with the hope of improving his condition, he proposed founding a colony in Louisiana opposite the mouth of the Ohio. But his demand that political and religious freedom should be granted the colonists was not acceptable to the Spanish government. During the summer of 1791, Dr. John O'Fallon, an adventurer, proposed to take possession of lands which had been granted by the State of Georgia to the South Carolina Yazoo Company. This grant, over which the Spanish claimed jurisdiction, extended from the mouth of the Yazoo River along the Mississippi almost to Natchez. Clark was to lead an armed force of one thousand men on this expedition, but President Washington issued a proclamation forbidding the project.

In 1793, the French government accepted the proposal made by Clark that he should lead an expedition on behalf of France, for the conquest of Louisiana. It failed because of the demand by Washington that Genêt, the French minister to the United States, should be recalled. The President also issued a proclamation which forbade any American citizen to enlist for such a project. When, in 1798, as a result of the X. Y. Z. affair, war between France and the United States seemed imminent, a strong minority of the Republican party were opposed. Any seeming alliance with Great Britain was especially obnoxious to them. This spirit was particularly notable in the communities west of the Alleghanies where the influence of Thomas Jefferson was marked. Once more, the French government planned for the reconquest of Louisiana. Clark, as general in the French army, was to raise vol-
Clark

unters for the purpose. Refusing to surrender this appointment, on the demand made by United States officers, he took refuge in St. Louis.

Upon his return to Louisville he lived for a time in the home of his youngest brother William. In 1803 he built a cabin at Clarksville. This village near the falls, on the Indiana side of the Ohio River, was located on the land which had been assigned by Virginia to Clark's Illinois Regiment. Here he spent his time, as chairman of the commission, in apportioning lands and in running a grist-mill. That he at times drank to excess and lost some of his power and influence cannot be denied. Evidence is lacking, however, to prove that he was, for the most part, a "sot" after the Revolution, a statement which has been concurred in by some historians. During the year 1791 he completed the writing of his Memoir which consists of one hundred and twenty-eight closely written pages of manuscript. This document, now in the possession of the Wisconsin Historical Society, is essential to a full understanding of the conquest of the Northwest. About the same time, he prepared a lengthy statement on the origin of the mounds in the Ohio and Mississippi valleys. In this letter, published for the first time by H. R. Schoolcraft, in Archives of Aboriginal Knowledge, IV (1860), he developed a theory which, unknown for three-fourths of a century, is now universally accepted by archaeologists, namely, that the builders of the mounds were the ancestors of Indian tribes then occupying that region. Another significant letter was written by him (1798) which has always been accepted as proof regarding the statements made in the famous speech of Logan, an Indian chief at the time of Dunmore's War.

Because of a stroke of paralysis and the amputation of his right leg, Clark went to live with his sister Lucy, the wife of Maj. William Croghan, at Locust Grove, near Louisville (1809). There he died and was buried with marked ceremonial on the part of his former companions in arms and by other citizens of Louisville. The funeral oration was given by Judge John Rowan who also wrote an obituary which is a summary of the significance of the conquest of the Northwest (Western Courier, Louisville, Feb. 21, 1818). A marble tablet about two feet high marks his grave in Cave Hill cemetery. The United States Government in 1928 appropriated $1,000,000 for a memorial to Clark at Vincennes.

J. A. J.

CLARK, GEORGE WHITEFIELD (Feb. 15, 1831–Nov. 10, 1911), Baptist clergyman, was born in South Orange, N. J. He was related to Abraham Clark [q.v.], signer of the Declaration of Independence from the State of New Jersey. His parents, John B. and Rebecca (Ball) Clark, were loyal Baptists and gave their son strict religious training. He was converted and joined the Northfield Baptist church, at the age of twelve. In the public schools of his native town he prepared for college, but taught school at the age of seventeen. He graduated from Amherst College in 1853, and received the degree of A.M. from the college three years later. In 1855 he graduated from Rochester Theological Seminary, was ordained to the Baptist ministry, and married Susan C. Fish, a minister's daughter, of Halifax, Vt. His pastorates included New Market, Elizabeth, and Somerville, N. J., and Ballston, N. Y. An indefatigable student, his persistent and ardent studies brought about a failure in his health, and he resigned his pastorate at Somerville in 1877. From 1880 he was a missionary colporteur of the American Baptist Publication Society in New Jersey. From house to house he plodded, selling and giving away Bibles, tracts, and religious books and earnestly carrying the gospel into homes—preaching and holding prayer-meetings as opportunity offered. To the end of his life he was a real home missionary, carrying on work among Sunday-schools and weaker churches, native and foreign, white and colored. But by instinct and training he was a scholar and a writer. In the theological seminary he was an enthusiastic student of Hebrew and Greek under Prof. T. J. Conant [q.v.], the celebrated Oriental scholar. This study he kept up all his life. At Amherst College he was class poet and a year after graduating from the seminary he edited a Baptist hymn-book, The Harp of Freedom (1856). He also wrote The History of the First Baptist Church, Elizabeth, N. J. (1863). His life ambition and chief work was the writing of a complete commentary on the New Testament. His object was to prepare a popular commentary on a critical basis for Sunday-school teachers and others not able to go to the original sources. There resulted his New Harmony of the Four
Clark

Gospels (1870); Notes on the Gospel of Matthew (1870); Notes on the Gospel of Mark (1872); Notes on the Gospel of Luke (1874); Notes on the Gospel of John (1879); Harmonic Arrangements of the Acts of the Apostles (1884); Brief Notes on the New Testament.—The Gospels (1884); Notes on the Acts (1892); Commentary on Romans and Corinthians (1897); Galatians to Philemon (1903). This whole New Testament work was combined into Clark’s People’s Commentary in nine volumes, O. F. Eacox. Each of these volumes on Hebrews to Second Peter and 1 John to Revelation. This, Clark’s magnum opus, was completed in 1910 just before his death.

CLARK, GREENLEAF (Aug. 23, 1835–Dec. 4, 1904), jurist, born in Plaistow, N. H., was of Puritan stock, being a lineal descendant of Nathaniel Clarke who settled in Newbury, Mass., early in the seventeenth century. His parents were Nathaniel Clarke, a resident of Plaistow, prominent in public affairs, and Betsey (Brickett) Clark. He received his early education there and at Atkinson Academy, N. H., from which he proceeded in 1851 to Dartmouth College, graduating in 1855. After reading law for a short time at Portsmouth, N. H., he completed his course at the Harvard Law School, graduating LL.B. in 1857, and was admitted to the Suffolk bar the same year. He commenced practice at Roxbury, Mass., but in the fall of 1858 removed to St. Paul, Minn. At first entering a law office as clerk, he was connected with several firms during the next seven years. In 1865 he became a partner of Horace R. Bigelow, and was joined in 1870 by Judge Flandrau, the firm name becoming Bigelow, Flandrau & Clark. From the outset they were associated with important corporation interests. They held a retainer as general counsel for the St. Paul & Pacific Railway Company and its subsidiaries, prior to and throughout its reorganization as the St. Paul, Minneapolis & Manitoba Railway Company in 1880. They were attorneys for the Minnesota Central, the St. Paul & Chicago, and the Southern Minnesota Railway companies, and also the Milwaukee & St. Paul system, later known as the Chicago, Milwaukee & St. Paul Railway Company. The majority of these were “land grant” companies, and the volume of legal business accruing in connection with their operation was enormous. Clark’s special province was in connection with organization, acquisition of rights of way, and construction contracts, including the preparation of trust deeds, securities, and contracts. His draftsmanship was superb, and “his important railway contracts and mortgages were models” (H. H. Stevens, post). He was appointed associate justice of the supreme court of Minnesota, Mar. 14, 1881, but retired on Jan. 12, 1882. During his tenure of office, the attempted repudiation of the state railroad bonds came before the court and the decision that the state must recognize and pay them was in great measure due to his opinion. On leaving the bench he resumed practise in St. Paul, and, though not holding any general retainers, was again engaged mainly in legal work for railroad corporations. He retired from practise in 1888, and died on Dec. 4, 1904, at Lamanda Park, near Los Angeles. As a lawyer he was not erudite but eminently safe. Endowed with an infinite capacity for taking pains, he explored and exhausted every contingency and possessed remarkably sound judgment.

CLARK, HENRY JAMES (June 22, 1826–July 1, 1873), zoologist and botanist, son of Rev. Henry Porter and Abigail Jackson (Orton) Clark, was born at Easton, Mass. His father was a Swedeborgian clergyman and a life-long friend of the Rev. Henry James [q.v.], father of Henry and William James. While the young Clark was still a lad his father removed to Brooklyn, N. Y., where he lived many years and where the son received much of his early training and was fitted for college. Entering the University of the City of New York he was graduated there in 1848. From college he went as a teacher to White Plains, and while engaged in the study of botany, made observations upon the structure of Chimaphila and Mimulus. These and subsequent observations upon the flora of the neighborhood attracted the favorable notice of Asa Gray, who invited him to Cambridge. Thither he went in 1850, and for a time was a pupil and private assistant at the Botanic Garden. While a student there he taught, for a single term, the academy at Westfield. Soon after this the lectures of Louis Agassiz developed in him a taste for zoological studies. He was graduated from the Lawrence Scientific School, summa cum laude, in 1854, and during the same year was married to Mary Young Holbrook of
Clark

Boston by whom he had eight children. Immediately after graduation he became the private assistant of Prof. Agassiz. Three years later Agassiz called him “the most accurate observer in the country.” “Clark,” says Jules Marcou, “was the favourite pupil of Agassiz. . . . In the eyes of Agassiz everything and every one in his laboratory was second to Mr. Clark. . . . In fact Clark was his right hand during almost twelve years” (Life, Letters and Works of Louis Agassiz, 1886). In June 1860 he was appointed assistant professor of zoology in the Scientific School at Harvard, a position which he held until 1865. Following this appointment he went abroad for a time mainly in pursuit of health, traveling in England, France, Germany, and Switzerland, visiting the leading universities and museums, and meeting many scientific workers, including Gegenbaur, Haeckel, Huxley, and Owen.

After Clark became a student of Agassiz his love for botany remained undiminished. He studied it in later years from the side of plant histology and morphology in connection with and as illustrating the histology and morphology of animals. It prepared him for his studies on spontaneous generation, on the theory of the cell, on the structure of the protozoa and the nature of protoplasm. His discovery of the flagellated cells of living sponges and demonstration of their animal nature was a great step in advance of previous observers, and his work on the protozoa and coelenterata was a valuable contribution to science. Notwithstanding his constant researches, and lectures at the Museum of Comparative Zoology, Clark found time to prepare a course of lectures—embodying the results of his micro-physiological studies—which he delivered at the Lowell Institute in 1864. These were published the following year, under the title of Mind in Nature; or the Origin of Life, and the Mode of Development of Animals. This work, based on structure and development in the animal kingdom, is crowded with original observations and testifies to years of the severest labor and independent thought. Between 1856 and 1862 he was associated with Agassiz in the preparation of the anatomical and embryological portions of the great work entitled Contributions to the Natural History of the United States of America (4 vols., 1857-62). To these volumes he was a large contributor, most of the histological and embryological portions of the work being his; more than half the plates illustrating the embryology and histology of the turtles and aca­lephs bear his name. Unfortunately, a controversy arose between Agassiz and himself over the authorship of this work, which led Clark to publish a pamphlet entitled A Claim for Scientific Property (1863). At the expiration of his term of office he finally left Cambridge.

In 1866 he accepted the chair of botany, zoology, and geology at the Pennsylvania State College, where he remained for three years, leaving in 1869 for similar duties at the University of Kentucky. Neither of these posts was agreeable to his taste, chiefly because of the pressure of college work, which left him but little time for abstract investigations. It was, therefore, with great readiness that he accepted the call to the Massachusetts Agricultural College in 1872. But his work was now interrupted by a severe illness. Never robust, his assiduous and confining labors had seriously impaired his health. After much suffering, he died on July 1, 1873, at the age of forty-seven.

Clark was admirably adapted by nature for doing histological work of the highest order. He possessed that philosophic insight of the true naturalist which often enables him to divine much further than he can perceive in the tracing of relationships and to anticipate what the microscope is to reveal. In the use of the microscope itself, he showed not only mechanical skill and ingenuity, but a patience, caution, and experience in difficult points in histology, which undoubtedly placed him at the head of observers in this country and rendered him perhaps inferior to few in Europe. He suggested many improvements in the microscope which were carried out by Spencer and Tolles. Five years after his death, the Smithsonian Institution published, as one of its Contributions to Knowledge, his monograph of The Lucernaria and Their Allies (1878)—a beautiful memoir, though a fragment of what was designed to cover at least fifteen parts, two parts only having an actual existence. A list of Clark’s published writings will be found in the first volume of the Biographical Memoirs of the National Academy of Sciences, and in the Catalogue of Scientific Papers compiled by the Royal Society of London.

CLARK, HORACE FRANCIS (Nov. 29, 1815-June 19, 1873), lawyer, banker, railroad executive, was born in Southbury, New Haven County, Conn., the son of the Rev. Daniel A. Clark, a Presbyterian minister, and of Eliza (Barker) Clark. His early education was obtained at the Mount Pleasant Classical Institu-
tion at Amherst, Mass. He then entered Williams College and graduated in 1833. Soon adopting law as a profession he studied in the office of Prescott Hall, and was admitted to the New York bar in 1837 making his home in New York City. In 1856 he was elected a member of the Thirty-fifth Congress and was re-elected, as an independent candidate, to the Thirty-sixth Congress. Identified with the "Hardshell" wing of the Democratic party, he nevertheless dissented from the policy of President Buchanan in regard to Kansas, and supported the views of Senator Douglas. On leaving Congress he resumed the practise of law but abandoned it when railroad interests began to occupy most of his attention. In 1857 he became a director in the New York & Harlem Railroad and at the same time began to acquire stock in other railroads in the management of which he soon began to exert an influence. He became president of the Lake Shore, Michigan Southern & Northern Indiana Railroad and of the Union Pacific Railroad Company, besides being a director in five other railroads and holding much stock in still others. His railroad holdings were so large that his operations exerted an influence upon the New York Stock Exchange, the term "Clark Stock" being applied to those companies in which his holdings were the largest. He was also a member of the executive committee of the Union Trust Company of New York and was chairman of the executive committee of the Western Union Telegraph Company. In many of his railroad ventures he was associated with Commodore Cornelius Vanderbilt, having married his daughter Marie Louise on Apr. 13, 1848.

(1895), p. 55; Nelson Trotman, Hist. of the Union Pacific (1923), pp. 53-54, 66, 100; Clark's testimony before the Congressional Committee investigating the Union Pacific Railroad Co. and the Crédit Mobilier in House Report No. 78, 42 Cong., 3 Sess.; N. Y. Herald, June 20, 1873; N. Y. Times, June 21, 1873; Harper's Weekly, July 12, 1873.]

J.H.F.

CLARK, JAMES (Jan. 16, 1779-Sept. 27, 1839), congressman, judge, governor of Kentucky, was born in Bedford County, Va., near the Peaks of Otter. When a boy, he was brought by his parents, Robert and Susan Clark, to Kentucky where the family settled in Clark County on a farm near the Kentucky River. He received his education from Dr. Blythe who later made a name for himself on the faculty of Transylvania College (Biographical Cyclopedia of the Commonwealth of Kentucky, 1866, p. 577). He returned to Virginia to study law with his brother, Christian, and after completing his studies made an extended trip into the West look-

ing for a suitable place in which to begin the practise of his profession (Lewis and Richard Collins, History of Kentucky, 1877, p. 133). He finally came back to Winchester, Clark County, Ky., and was admitted to the bar there in 1797. He was a successful lawyer, but politics attracted him. In 1807 he was elected to the state House of Representatives, and was re-elected in 1808. In this he was following in the footsteps of his brother, Robert, who had represented Clark County in the legislature for several years. In 1810 he was appointed a judge of the Kentucky Court of Appeals and remained on the bench for two years. In 1813 he was elected to the lower house of Congress and was re-elected for a second term in 1815. His two terms were without distinction, and he brought them to a close by resignation in 1816 (Debates and Proceedings, 14 Cong., 2 Sess., p. 230). In 1817 he was appointed judge of the circuit court of Kentucky and served in that position until his resignation in 1824. He attracted national attention by a decision declaring the popular replevin law of Kentucky unconstitutional. For this decision he was summoned before the Kentucky legislature but refused to appear, making his defense in writing. A subsequent attempt to remove him by legislative action was defeated (Charles Kerr, editor, History of Kentucky, vol. II, 1922, p. 623). In 1825 he was again elected to Congress to fill the place made vacant by Clay's acceptance of a position in the cabinet, and was re-elected in 1827 and 1829. The Debates and Proceedings of Congress indicate that he was not an active member, rarely speaking, and apparently exerting no influence upon legislation. As a neighbor and friend of Clay he became a bitter enemy of Andrew Jackson and was active in organizing the Whig party in Kentucky. In 1831 he declined a nomination for Congress and the next year was elected to the Kentucky Senate, holding the position for four years. Here he made his best legislative record and definitely contributed to state history by his work as chairman of the committee on internal improvements (Senate Journal, 1832-33, 1834-35). He was chosen speaker of the Senate in 1835. In 1836 he was elected governor of Kentucky on the Whig ticket but died in 1839 before the completion of his term. His administration was a good one without being brilliant. He was married to a widow, Mrs. Thornton (née Buckner). His long public career, unbroken from 1808 to 1839, made him the best known man in Kentucky after Henry Clay. He was a man of culture and independence, courageous, of considerable logical powers, and, in the last part of

133
Clark

his life, a bitter partisan. His most definite impression on his time was made as circuit judge.

[The brief sketch of Clark in the Biog. Cong. Dir. is of value because it supplies the day and month of his birth, otherwise practicably unobtainable. The year given for his birth (1757) is a palpable absurdity, the correct date being that given by Collins. His political attitude is revealed in the Circular Address of Jas. Clark to his Constituents (1831), while information as to his judicial conduct is to be found in Niles' Reg., June 22, 1822. There is considerable material on Clark in the possession of the Clark County Hist. Soc. at Winchester, Ky.]

R. S. C.

CLARK, JOHN (Feb. 28, 1766—Oct. 12, 1832), governor of Georgia, was born in Edgecomb County, N. C. As a boy he came with his distinguished father, Elijah Clarke [q.v.], to Wilkes County, where most of his life was spent. He served under his father in campaigns against the Tories, was a lieutenant at fifteen and a captain at sixteen years of age. After the Revolution he received, as did his father, a generous grant of bounty lands. At twenty-one he was made major in the state militia, and fought in a battle against the Creek Indians, named in his honor the battle of Jack's Creek. Shortly after, he married Nancy Williamson, daughter of Micajah Williamson, a prominent man of some substance before the losses of the Revolution.

The main interest of posterity in the career of Clark centers in the long and bitter strife of the Clark and Troup parties in Georgia, in which Clark, almost unlettered, and followed by the democratic, small-farmer, frontier element of the population, maintained himself and his faction successfully against the redoubtable James Jackson, William H. Crawford, and George M. Troup, aristocratic and cultured champions of the wealthy planters of the coast and large farmers of the uplands.

Gen. Elijah Clarke—the son dropped the final “e,” perhaps as an affectation of democratic sentiment—was more or less implicated in the Yazoo affair, and James Jackson's scathing arraignment of all Yazooites drove them into a sort of defensive organization under Clark. This became more defined as time went on, and when Jackson won to his cause the adhesion of William H. Crawford, then a brilliant and prominent young lawyer of the uplands, the Clark faction hitherto supreme in that section began to fear for their laurels. A deliberate plot seems to have been hatched to dispose of Crawford by a duel. Peter Lawrence Van Allen of Elberton, a young New Yorker, Federalist, and Yazooite, was put up to goad him into an encounter. The duel came off, but it was Van Allen who fell. In 1806, new ground of offense having arisen from a sarcastic speech of Crawford in the Georgia legislature, Clark challenged and met Crawford in a famous duel at High Shoals. At the first fire Clark was untouched, and Crawford's left wrist, which should have been held in safety behind him, was painfully shattered. Clark insisted on proceeding, but the seconds objected. Before Crawford's wound had healed, Clark sent him another challenge, but as no new casus belli had arisen Crawford, under the code, could without loss of honor decline.

In the following year Crawford was sent to the United States Senate, to enter upon his brilliant national career. The place left vacant in Georgia politics was filled by George M. Troup. The two factions soon became known as the Troup and Clark parties, violent antagonists contesting every election with varying success. The War of 1812 brought a lull, but on the return of peace the strife broke out with increased bitterness. It became intense in 1819, when Clark announced himself as a candidate for governor. Troup, now a United States senator, resigned his seat in order to oppose him. Clark won in the ballot of the legislature by thirteen votes. Two years later the Troup forces made a strenuous effort to defeat Clark for a second term. Clark won again, by a margin of only two votes. The ensuing two years were made a continuous intensive campaign. The Clark party put up, Matthew Talbot against Troup. On the day of election, amid breathless excitement, the ballots stood 81 to 81 with four still to be counted. These, one after another, proved to be for Troup. In 1825 Clark again in person became a candidate against Troup. In the meantime a constitutional amendment had transferred the election from the legislature to the people. The Clark faction claimed credit for this democratic change. The older centers in general voted for Troup; the newer and frontier settlements for Clark. After weeks of waiting, as the returns came slowly in to Milledgeville it was learned that Troup had received a majority of 683 votes. Curiously enough the newly elected legislature contained a majority of Clark men, indicating that Clark would have triumphed if the system had not been changed. Although the two factions continued their antagonism for years to come, Clark ceased henceforth to take any active share in it. His party assumed the name “Union Party” and later were absorbed in the Democrats, while the Troup party called themselves first the “States Rights” party and later, singularly enough, became Whigs. Clark accepted from the President an appointment as Indian Agent and in 1827 removed to Florida.
Clark

He and his wife both died of yellow fever at St. Andrew's Bay in 1832.

CLARK, JONAS (Dec. 14, 1739 o.s.—Nov. 15, 1805), Congregational clergyman, patriot, was for fifty years pastor of the First Parish Church, Lexington, Mass. Born in Newton, Mass., the son of Thomas and Mary (Bowen) Clark, and a descendant of Hugh Clark, an early settler of Watertown, Mass., later of Roxbury, he graduated from Harvard in 1752, and was called to Lexington, May 19, 1755. Here he was ordained Nov. 5, 1755, and here he spent the remainder of his days. In appearance and behavior he was the typical New England parson, friendly to all but never forgetful of his clerical dignity. He preached sermons considered long even in his time, and it is said that he once prayed in public for two hours. His voice was an organ of power which could be heard far beyond the walls of the meeting-house. On Sept. 21, 1757, he married Lucy Bowes, daughter of Rev. Nicholas and Lucy (Hancock) Bowes, by whom he had thirteen children, one of whom died in infancy. Early each morning he stood at the foot of the stairs in his homestead, and summoned his family in these words, "Polly, Betsey, Lucy, Liddy, Patty, Sally, Thomas, Jonas, William, Peter, Bowen, Harry—Get up! Woe to the delinquent!" (F. H. Bowen, Lexington Epitaphs, 1905). He was a man of method and industry, able to support his large family only by supplementing his salary of eighty pounds and twenty cords of wood with the income of a well-managed sixty-acre farm.

Back of almost everything of importance that happened in Lexington during the Revolutionary period lurked the influence of Jonas Clark. It also extended beyond the town. He was the close friend and adviser of Samuel Adams and John Hancock, who were frequently at his house, where, indeed, they slept, strongly guarded, on the night before the battle of Lexington. The spirit his parishioners displayed on that occasion has ever since been attributed in no small degree to the ideas and feelings he had inculcated. To him they looked for guidance on every political question that arose. It was he who prepared the instructions to the representative of the town with respect to the Stamp Act (Charles

Hudson, History of the Town of Lexington, 1913, I, 69). These were the first of a notable series of papers written by him, expressing the sentiments of the town, the last of which was one condemning "Jay's Treaty." All are inscribed on the town records. In 1799 he was appointed delegate to the convention for drawing up a state constitution, where he served on important committees. Some knowledge of his views and ability may be gathered from his published sermons which include: The Importance of Military Skill, Measures for Defense, and a Martial Spirit in a Time of Peace (1768); The Fate of Blood Thirsty Oppressors and God's Tender Care of His Distressed People (1776), an appendix to which contains an account of the battle of Lexington; A Sermon Preached Before John Hancock... May 30, 1781, being the First Day of General Election (1781); A Sermon Preached to a Religious Society of Young Men in Lexington (1761); A Sermon on the Use and Excellency of Vocal Music in Public Worship (1770); a sermon on the death of Rev. Samuel Cooper, and several ordination sermons.

[Chas. Hudson's Hist. of Lexington (1913) contains a number of Clark's writings. See also Vital Records Newton, Mass., to 1850 (1905); Wm. B. Sprague, Annals Am. Pulpit, vol. I (1857); Proc. Lexington Hist. Soc., vol. IV (1912); Proc. Commemoration Two Hundredth Anniversary Incorporation Lexington (1914); John Clark, Records Descentants Hugh Clark, of Watertown, Mass. (1866).]

CLARK, JONAS GILMAN (Feb. 1, 1815—May 23, 1900), philanthropist, a descendant of Hugh Clark, who settled at Watertown, Mass., early in the seventeenth century, was the son of Elizabeth and William Smith Clark. He was born at Hubbardston, near Worcester, Mass. One of a family of eight children, he absorbed what learning he could from the district school in the winters and toiled early and late on his father's farm in the summers. From sixteen to twenty-one he served an apprenticeship in the carriage-maker's trade and after he came of age he set up for himself in the manufacturing of carriages, exchanging his product with the nearby farmers for hard wood that he made into chairs to sell in Boston and elsewhere for cash. Later he found the tinware business profitable and opened hardware stores at Lowell and Milford, but in 1851-53 he sold these and engaged in the shipping of furniture and other goods to California and the selling of miners' supplies during the gold excitement in that state. He accumulated money and invested it in San Francisco and New York real estate. A temporary breakdown in health caused him to take a European trip in 1861. He had been a member of the famous
Clark

Vigilantes, organized to put down lawlessness in San Francisco, and was one of the five men who formed the Union League of California during the Civil War, thus cooperating with those who were active in holding the state loyal to the Union. He was prominent also in the work of the United States Sanitary Commission. During and after the war he invested heavily in government bonds. His investments in New York and Boston real estate were increasingly profitable. During the fifteen years following the Civil War he lived much of the time in New York City, and in 1881, he sold to John D. Rockefeller nine lots on Fifth Ave., New York City, at a profit of over sixty-six per cent.

A series of journeys to Europe opened Clark's eyes to some of the benefits of schooling to the individual and the state. As his contacts with educated men increased there gradually took form in his mind certain more or less definite plans for a contribution to higher education in America. This began with nothing more ambitious than a scheme to enable young men in Massachusetts towns to have the advantage of college training at lower cost than was possible in existing New England colleges. Conversations with President Eliot of Harvard, President White of Cornell, and other university authorities expanded these ideas as time went on. In 1880 Clark became a resident of Worcester, Mass., and soon decided that the school or schools which he intended to found should be in that city. During eight years he spent all his leisure time in visiting foreign universities and technical schools. The purpose to found an institution that should aim definitely at the expansion of knowledge came to possess his mind. By 1887 he was ready to name his board of trustees and announce the founding of Clark University. His original gifts for this purpose, including notes and buildings and grounds, totaled $1,000,000—the largest amount ever given in New England, up to that time, by any individual for education. The university was to be, in the words of its founder, "without any religious, political or social tests." The cornerstone of the first building was laid in October 1887; in the following year Dr. G. Stanley Hall [q.v.], of Johns Hopkins University, was called to the presidency, and on Oct. 2, 1889, the institution was formally opened. The members of the faculty brought to their tasks an unusual zest, which quickly gave the infant university a renown that became more than national. Yet for an institution that promised and attempted great things the available money resources were painfully inadequate. The founder's extreme reticence and refusal to take his trustees into his confidence helped to bring about a situation that appeared to president, trustees, and faculty alike as nothing less than tragic. After the death of Clark in 1900, however, it was found that his will left the residue of his estate to the University and provided for the establishment of Clark College, with a separate president. Early in life Clark had married Susan Wright of Hubbardston, who was a most loyal and helpful companion throughout his career. She was devotedly interested in the University and herself founded fellowships and scholarships in it.

W.B.S.

CLARK, JOSEPH SYLVESTER (Dec. 19, 1800–Aug. 17, 1861). Congregational clergyman, a descendant of Thomas Clark of the Mayflower, and the son of Seth and Mary (Tupper) Clark, was born and brought up on the ancestral farm at Manomet Ponds, South Plymouth, Mass. He began teaching at seventeen, and this with study and farm work occupied his time till he was twenty-two, when he entered the Amherst Academy and a year later Amherst College where he graduated with the valedictory in 1827. He graduated at Andover Seminary in 1831, his course being interrupted by a year spent as tutor at Amherst. On Dec. 27, 1831, he was married to Harriet B. Bourne of New Bedford, Mass. Six days previously he had been ordained at the Congregational Church in Sturbridge, Mass., where he remained until Dec. 20, 1838. From 1839 to 1857 he was secretary of the Massachusetts Missionary Society. He became corresponding secretary of the Congregational Library Association in 1853, and its financial agent in 1857, devoting the remainder of his life to its interests. His understanding of people and his rare tact made him a successful pastor. As a preacher he was practical and helpful rather than brilliant. His knowledge of rural life contributed to his efficiency as a secretary. He was a strong Congregationalist and was saturated with the civil and ecclesiastical history of New England. While at Sturbridge he wrote a careful and painstaking Historical Sketch (1838) of that town. The literary monument of his secretarship was A Historical Sketch of the Congregational Churches of Massachusetts from 1620 to 1858 (1858), a thorough and scholarly work of permanent value. He did not live to complete the further volume on
Clark

the same subject for which he had gathered the materials. Although a Calvinist, he was opposed to controversy and inclined to be charitable to ward the beliefs of others. His interests were historical rather than theological. The Congregational Library, founded by him, became a great source collection of denominational his- tory. He was editor-in-chief of the Congrega- tional Quarterly, to whose first number, January 1859, he contributed three articles. From 1852 he was alumni secretary of Andover Seminary. A devoted Amherst alumnus, he was a trustee from 1852, secretary of his own class, and was appointed, just before his death, to write the history of the college.

[Edwards A. Park of Andover, a classmate of Clark and life-long friend, wrote a thorough and compre- hensive article on him in the Cong. Quart., vol. IV, no. 1. Jan. 1862. A briefer article is in the Congrega- tionalist, Aug. 23, 1861.]

F. T. P.

CLARK, LEWIS GAYLORD (Oct. 5, 1808- Nov. 3, 1873), editor, twin brother of Willis Gaylord Clark [q. v.], was born in Otisco, N. Y. Eliakim, his father, a descendant of Lieut. William Clark of Massachusetts, after serving in the Revolutionary War, migrated to Onondaga County, N. Y., and married the daughter of Lemon Gaylord, an early settler in the same region from Connecticut. The twin brothers spent a happy, rural childhood, acquiring a lasting love for nature. They won an early reputation for ingenious pranks and for prodigious feats of memory. The formal education at the local school was supplemented by paternal in- struction at home, Eliakim Clark being a man of philosophical and literary tastes. The Rev. George Colton, a maternal relative, furnished additional training in the classics. Probably the chief influence on their youthful ambitions was that of their uncle, Willis Gaylord, locally cele- brated as editor of the Genesee Farmer and Al- bany Cultivator. Upon reaching maturity, both brothers determined upon literary careers. By 1830 Willis had established himself in Phila- delphia, and two or three years later Lewis reached New York City, an obscure aspirant to fame. Early in 1834 he contributed an article to the Knickerbocker Magazine, the periodical with which his career was henceforth to be associated. Established in 1833, the Knicker- bocker (originally Knickerbocker) Magazine had been successively under the editorships of Charles Fenno Hoffman, Timothy Flint, and Samuel D. Langtree. Learning that the maga- zine was in the market, Clark and his friend Clement M. Edson secured financial backing, and in the spring of 1834 became the proprietors of the Knickerbocker. Under Clark’s editorship, which was to cover more than a quarter of a century, the periodical rapidly won popularity and prestige. Its avowed policy of promoting “a national literature” attracted to its pages most American writers then prominent. Clark soon inaugurated his monthly Editor’s Table, which became a permanent and favorite section of the magazine. Subscriptions increased; but under- capitalization and “delinquent subscribers” kept the financial status of the Knickerbocker insecure.

In October 1834, Clark married Ella Maria Curtis, then in her eighteenth year. The marriage was a happy one, Mrs. Clark devoting her- self to their growing family, which eventually numbered four daughters and two sons. Their home was also the frequent scene of festive gather- ings. Clark, always fond of social intercourse, had become a popular citizen of literary New York, and a thorough-going metropolis. He was elected to the St. Nicholas Society (1840), and in 1846 was one of the founders of the Cen- tury Club. At public dinners and literary assem- blages the presence of “Clark of the Knicker- bocker” became indispensable. His literary friendships were numerous, including a con- genial intimacy with Irving. His friendship with Dickens, begun by correspondence, was personally cemented during the latter’s Amer- ican tour in 1842 (W. G. Wilkins, Charles Dick- ens in America, 1911). Through the forties and fifties the Knickerbocker Magazine flourished. Its policy of avoiding controversial issues won favor. In its pages names of established writers mingled with those of the rising generation. The Editor’s Table, with its sub-section of local Gossip, grew in importance and size. Success (except financial) was attained. To remedy the single deficiency, a group of Knickerbocker con- tributors collaborated upon a memorial volume, published in 1855 as The Knickerbocker Gallery, the proceeds from which helped to buy a taste- ful cottage at Piermont, N. Y., where Clark spent his last years. In 1861 the Knickerbocker succumbed to the financial panic of the War, a change of proprietorship keeping it precariously afloat. New editors failed to improve matters, and in 1863 Clark was invited to reassume his duties. This arrangement lasted for several is- sues only; his second retirement barely antici- pated the end of the magazine. He continued to write, contributing to Harper’s and other pub- lications personal and reminiscent articles. For a period he held a position in the New York Custom House. A brief illness following a para- lytic stroke in 1873 resulted in his death. He is
Clark

buried in Nyack Cemetery. His widow survived him twenty years.

Clark's editorial duties allowed him little leisure for independent authorship. The following books bear his name on the title-page: The Literary Remains of the Late Willis Gaylord Clark (1844), with an Introductory Memoir; The Knickerbocker Sketch-Book (1845), a volume of selections; Knick-Knacks from an Editor's Table (1852); The Life, Eulogy, and Great Orations of Daniel Webster (1854). His literary characteristics were sentimental tenderness, gentle humor, and leisurely philosophizing, in a graceful and sometimes patrician style.

Tribune, Nov. 5, 1873; personal information from Mr. Clive Meeklen of New York City, grandson of Clark.]

C. M.

CLARK, MYRON HOLLEY (Oct. 23, 1806–Aug. 23, 1892), governor of New York, was born on a farm in the town of Napies, Ontario County, a son of Maj. Joseph and Mary (Sutton) Clark. His family was of New England origin, his grandfather, Col. William Clark, having migrated from Berkshire County, Mass., to western New York after the Revolution. As a boy he had only the meager schooling that was obtainable in new settlements. He served an apprenticeship as a cabinet-maker. Early in life he was married to Zilpha Watkins. A successful campaign for sheriff, in 1837, helped to make him known to the voters of the county. After completing his term of office, he entered the hardware business in Canandaigua, the county seat, but retained his interest in public affairs and in taking an advanced position in the temperance and other reform movements of the day gradually extended his reputation beyond local bounds. He was one of a small group of Whig politicians prepared to unite the several diverse groups of radical voters to at least a temporary victory. His opportunity came when his Senate district sent him to Albany to uphold the cause of prohibition in the legislature. He was joined then by other legislators equally zealous but not all as convincing speakers as he. Out of this situation came a prohibition bill which passed both Senate and Assembly (1854) and for which Clark received the chief credit. Gov. Seymour promptly vetoed the measure, chiefly on the ground that it deprived persons of property unconstitutionally. Early in the summer Clark was proposed for the governorship by some of the temperance groups. An anti-Nebraska mass-meeting at Saratoga in Au-

Clark

gust adopted a platform written by Horace Greeley. Clark expressed his adhesion to that platform and in the following month was nominated not only by the regular Whig convention at Syracuse but by the Free Democracy, the Anti-Nebraska party, and the Temperance party, each holding its own delegate convention at Auburn. Clark accepted all four nominations and always held that the Republican party of New York was thereby originated (Myron H. Clark to A. N. Cole, Aug. 12, 1884, quoted in F. Curtis, The Republican Party... 1854–1904, 1904, I, 204). The ensuing campaign for the governorship was one of the most complicated in the history of New York politics. The Clark coalition won the election by a plurality of 309 votes. Clark thus came to the governor's chair as an avowed radical in the politics of that day, bent on the placing of a prohibitory liquor law on the statute-books. Back of him stood about one-third of the state's voters and a legislature in sympathy with his aims. A prohibition bill was passed, signed by Clark, and partially enforced for about eight months, until it was declared unconstitutional by the court of appeals. Clark was not renominated at the end of his term because the leaders of his party were convinced that he could not be elected. Sentiment on the liquor question had undergone a change. Clark was appointed collector of internal revenue under the Lincoln administration. After serving in that office for some years he lived in retirement at Canandaigua. Once he emerged as a third-party Prohibitionist candidate for the governorship, but that was his last public appearance.

[See Chas. F. Milliken, Hist. of Ontario County, N. Y. and Its People (1911); obituary in Ontario County Times (Canandaigua, N. Y.), Aug. 23, 1892. An account of the campaign of 1854 is given in the Memoir of Thurlow Weed (1884), p. 247. Reasons for the support of Clark's candidacy for the governorship by the temperance press are given in the Jour. Am. Temperance Union, July 1854. Clark's defense of the prohibitory law which he signed as governor is contained in his annual message of 1856 (State of N. Y.: Messages from the Governors, 1909), vol. IV, ed. by Chas. Z. Lincoln. The adverse decision of the court of appeals is in Wynchamer vs. People (1856), 13 N. Y., 378.]

W. B. S.

CLARK, SHELDON (Jan. 31, 1785–Apr. 10, 1840), friend of learning, was born and spent practically his entire life in Oxford, Conn., a farming community about fifteen miles from New Haven. He had a mind of unusual vigor, and from boyhood was eager for an education; but his father having died, he was brought up by his grandfather, Thomas Clark, a hard-headed, parsimonious farmer, who regarded schooling as a waste of time. Except for a brief period of instruction at Litchfield in 1805–06, his
only opportunity to acquire knowledge was through his own reading on Sundays, stormy days, and in the long nights of winter. His respect for his grandfather’s wishes was rewarded, however, at the former’s death; for he left his grandson an estate valued at $20,000. Being now about twenty-six years old, he went to Prof. Benjamin Silliman [q.v.] of Yale and asked if he might have any of the advantages of the college without being a regular member of the institution. Through the latter’s influence, he was permitted in 1811-12 to pursue a course of study connected with President Dwight’s classes and the lectures in natural philosophy and chemistry.

While engaged in this he determined that he would devote his life to the encouragement of literature and sciences in the only way circumstances had made possible for him. Returning to his farm, he plowed his stony fields, fattened his calves, lent his money, and, spending little upon himself, accumulated thousands of dollars, all of which he devoted to the cause of education. In 1823 he gave to Yale the sum of $5,000 to be placed at interest until it should become the foundation of a professorship. It is now the foundation of what is known as the Sheldon Clark Professorship of Philosophy. For the establishment of a scholarship Clark donated in 1824 $1,000, to be invested and allowed to accumulate for twenty-four years. To replace, by a better one, the telescope of the college which was lost in the wreck of the packet-ship Albion in 1822, he gave sums of money amounting finally to $1,200. In 1835 he had the satisfaction of learning that Halley’s comet had been first observed in this country through the telescope he had provided. He also remembered the college liberally in his will, becoming at his death by far the largest individual contributor thereto.

He was respected and influential in his community, representing it in the General Assembly of 1825 and in several subsequent sessions. He read and wrote much, leaving behind numerous manuscripts on economic matters and more especially upon moral and metaphysical subjects; some of these had been printed and sent to eminent men. His death which came when he was but fifty-five years old was caused by a fall from a scaffolding in his barn. Letters and papers left by him are preserved in the library of Yale University.

[This sketch is based chiefly upon an article by Benj. Silliman in the Am. Jour. Sci., July—Sept. 1841, which is accompanied by portrait. See also Henry Barnard, Am. Jour. Ed., XXVIII, 887.]
Clark

bishop of the Episcopal Church in the United States. His simplicity, genuineness, sane judgment, broad sympathies, and irenic temper made him trusted and beloved by all classes, and during his administration his diocese had peace and growth. His humor and wit were irreplaceable, but always kindly. A massive, magnetic person, with a deep rich voice, and unfailing resourcefulness, he became one of the most popular preachers and lyceum lecturers of the country. He was among the first to discard the old-fashioned pulpit style, and speak directly and plainly. Succeeding Henry Ward Beecher, he contributed an article a week to the New York Ledger, for ten years, receiving a hundred dollars for each. During the Civil War he was an active member of the Sanitary Commission, and an occasional consultant with President Lincoln. He was a representative of this country at the first Lambeth Conference in 1867, and in 1876 officiated in many of the American churches in Europe. He was a Broad-Churchman and one of Bishop Brooks's most intimate friends, but evangelical in his faith and preaching, and while denouncing excesses of ritual, not intolerant toward the High Church party. Among his publications are a series of lectures to young men, Early Discipline and Culture (1855); and Primary Truths of Religion (1860), designed to meet unsettled conditions of mind. Widely read once, it has little help for doubters of a later day. Worthy of mention, also, is John Whopper, a tale of the extraordinary adventures of a newsboy, published anonymously in 1871, and sometimes credited to Edward Everett Hale. It was reprinted in 1905 with an introduction by Bishop Henry C. Potter. In 1895 Clark published his Reminiscences, a book of much charm and value. He died in Newport, and was buried in St. Mary's churchyard, South Portsmouth, R.I.

[Mary C. Sturtevant, Thos. March Clark (1817); Henry C. Potter, Reminiscences of Bishops and Archbishops (1906); Who's Who in America, 1903-5; Providence Jour., Sept. 8, 9, 1903] H.E.S.

CLARK, WALTER (Aug. 19, 1846–May 19, 1924), jurist, was the son of David Clark, later brigadier-general of North Carolina militia, and of Anna M. (Thorne) Clark. He was born in Halifax County, N. C., where the Clarks and Thornes had lived and prospered since leaving Virginia three generations before. Broad lands, books, and influential connections were his heritage, and with them a keen sense of personal and civic responsibility. Eager and quick of mind, the lad at six had read the Bible through, "standing at his mother's knee." At fourteen, aided by a year (1860–61) at Capt. Tew's Military Academy, he was drill-master in the Confederate army; at sixteen he was adjutant of the 35th North Carolina Regiment, with a reputation for coolness and capacity won at Antietam and Fredericksburg. Leaving the army from February 1863 to June 1864, he graduated at the state university. Re-enlisting immediately, he was thenceforth major (temporarily lieutenant-colonel) in the fighting Junior Reserves, and thus was skirmish commander against Sherman in the state's biggest battle. After the war, turning promptly to the law—at the state university, in a Wall St. office, and at the Columbia Law School—Clark had graduated and was practising at twenty-one. He served as Halifax magistrate, as aide to Gov. Worth, as counsel to local railroads, and as editorial director of the Democratic Raleigh News; he attracted attention through his "Mudcut Circular" (1880) and his sketch of Methodistism in North Carolina (1881); he married (1874) Susan Washington Graham (daughter of the former secretary of the navy), by whom he had seven children; he toured Europe (1881); and he built up—in Raleigh after 1873—an extensive law practice. Appointed in 1885, and elected the next year, a superior court judge, in 1888 he threatened to contest the governorship but accepted instead a place on the supreme court bench, by appointment in 1889 and election in 1890. Tarrying with the Populists in 1894 and thus, alone of the Democrats, holding over under the Fusionist régime, he was unbeatable in his campaign for chief justice in 1902 notwithstanding opposition of business interests which supported the Republican candidate. He continued chief justice until his death.

During these forty years Clark's was always "the youngest mind on the bench." "Every age," he said, "should have laws based upon its own intelligence and its own ideas of right and wrong." Authorities and precedents, accordingly, suffered severely at his hands; and when his colleagues refused to follow, men said, "Judge Clark's dissenting opinion of to-day becomes the law of to-morrow." Taxation of railroads despite old exemptions, adequate local support of public schools despite apparent constitutional limitations, inclusion of water supply among the "necessary" expenses of municipalities, a severe narrowing of the doctrine of "contributory negligence," legislative control over offices notwithstanding office-holders—these illustrate his peculiar influence and its direction. During this period were prepared his Annotated Code of Civil Procedure in several editions, his highly commended "Appeal and Error" running a thousand
pages in the *Cyclopedia of Law and Procedure* (1901), and his standard *Supreme Court Reports*, with annotations and index, in 164 volumes. Permitting himself social life only in the Church and in Masonry and toiling far into early morning hours, he translated Constant's *Memoirs of Napoleon* in three volumes (1895), collected and edited sixteen volumes of the *State Records* (1895-1901), and inspired as well as edited the *Histories of North Carolina Regiments* in five volumes (1901). A clear and incisive writer, his political thinking was formulated in multitudinous addresses and magazine and newspaper articles. Although he was an extensive farmer and always identified with progressive farm movements, his radicalism was probably motivated by his intellectual committal to democracy. In behalf of this he branded Blackstone and Coke as bad influences, condemned "usurpation" by an irresponsible federal judiciary, advocated woman's suffrage, and justified Taft's playful remark that he would not "trust the Constitution with Judge Clark over night." "Big Business" was his bête noir. He still-hunted for the peanut trust in Halifax, fought the tobacco trust's influence in Trinity College, tried to curb the power trust—wished, indeed, to outlaw the nefarious things. The tremendous significance of the state's economic regeneration seemed to escape him. Lacking personal attractiveness to the masses, he met overwhelming defeat in the Senatorial primary of 1912; and having then fought the state party machine, he received only the minor recognition of appointment to the National War and Labor Board from President Wilson. But his place as the progressive intellectual leader of his people during a most plastic period seems assured.

[S Sketches appear in S. A. Ashe, ed., *Biog. Hist. of N. C.* (1908), pp. 67-76; in the *Charlotte Observer*, and the *Raleigh News and Observer*, May 20, 1924; and in the *N. C. Bar Ass. Report*, 1925. A campaign biography by D. P. Waters appeared in the *Carolina Democrat* and was reprinted in 1912: *Some Campaign Letters* deal with the opposition to Clark in 1902. His numerous private papers are with the Historical Commission in Raleigh; they contain few letters by him and no autobiographical material.

C. C. P.

**CLARK, WILLIAM** (Aug. 1, 1770—Sept. 1, 1838), explorer, governor of Missouri Territory, Indian agent, was the ninth child of John and Ann (Rogers) Clark of Virginia. He was born at the family home in Caroline County, Va., whether his parents had removed fifteen years earlier from Albemarle County. There was a family tradition that the children inheriting the red hair of a certain ancestress would become persons of force and vitality; of the red-headed Clarks—George Rogers [q.v.], Lucy (mother of George Croghan), William, and Frances (mother of John O'Fallon)—the tradition proved true. In later life William's name among his Indian wards was "Red Head." The boy grew up in his Virginia home, the customary home of a planter with many acres and slaves, enjoying life in the open, with little formal education, but trained by contact with men of affairs, and by constant observation of natural phenomena. He learned to ride and hunt, to survey a piece of land, to notice acutely the habits of wild birds and animals, to draw a little, to make maps, and to manage men. He acquired without knowing it the manners and accomplishments of a Virginia gentleman, yet there was always about him something of the frontiersman, a bluff, direct manner of speaking and acting, which made him at home in the backwoods, where much of his life was spent.

Clark grew up in the stirring times of the Revolutionary War; he was not six years old when his oldest brother Jonathan became a major in the Virginia line. At Germantown his brother John was taken prisoner by the British, and lingered many months in prison, finally dying in 1783 of the effects of his imprisonment. From over the mountains came echoes of the daring deeds of his second brother George Rogers Clark, of his capture of the Illinois and Vincennes; then in the spring before "Billy" was nine his cousin John Rogers passed through Caroline County escorting the British officers taken at Fort Sackville by the audacious courage of the conqueror of the Northwest. The next year Brother George came home himself, was commissioned a general and sent back to protect the western settlements. Finally after the close of the Revolution the Clark family, greatly to the joy of its younger members, decided to remove to Kentucky. They left their Caroline County home in the autumn of 1784, were detained during the cold months near Redstone on the Monongahela, and in the lovely spring days of 1785 floated down the Ohio in a flat boat, taking horses, stock, negroes, furniture, and all the equipment for a new home. At Louisville Gen. Clark received his parents, brothers, and sisters with great pleasure. Soon a house was built on a large tract of land outside of the town, which was called thenceforward "Mulberry Hill"; there young William grew strong and tall until he was over six feet in height. This home he inherited by the will of his father after both parents died in 1799, and there he lived until he started on the expedition to Oregon.

Although the war with Great Britain was over and the United States was no longer a group of
Clark

colonies but an independent nation, Indian war continued on the western border and took its toll of the lives of many men who were neighbors of the Clarks at "Mulberry Hill." In 1785 Gen. George Rogers Clark was one of a commission of three to draw up a treaty with the tribesmen beyond the Ohio; but in spite of all their efforts the peace was a fictitious one and the next year Gen. Clark led a punitive expedition against the Indians on the Wabash. It is probable, but not certain, that William, then a large strong lad of sixteen, accompanied his brother on this occasion. Certain it is that he went on a similar excursion in 1789 when Col. John Hardin led two hundred militia against the White River Indian towns near the Wabash. They left Louisville on Aug. 5 and were away sixteen days, falling in with a party of Indians with whom they had a skirmish, and carrying the wounded whites back to Vincennes. All the following winter was spent in defense of the Kentucky settlements, when William was associated with his brother-in-law, Col. Richard Clough Anderson, with Col. Hardin, and with other experienced Indian fighters (Clark's manuscript diary of this year is in the Missouri Historical Society at St. Louis).

The next year (1791) Clark was again on an excursion with notable soldiers. A letter to his eldest brother says, "Your brother William has gone out as a cadet with Gen. Scott; he is a youth of solid and promising parts and as brave as Caesar" (Draper Manuscripts, 2L28, Wisconsin Historical Library). With Charles Scott on this expedition were John Hardin, James Wilkinson, and other soldiers with whom Clark was associated for several years. The army crossed the Ohio at the mouth of the Kentucky and started across country to the Ouiatamon towns; it was gone from May 23 to June 16 and returned home without loss (William Clark's manuscript diary in the Wisconsin Historical Library). That fall occurred Gen. St. Clair's disastrous defeat on the Miami, and all the frontier was defenseless before the attacks of the marauding Indians. Clark's traditions and training were military; he offered himself for the regular service, was commissioned Mar. 7, 1792, lieutenant of infantry, and was attached to the 4th Sub-legion on the army's reorganization in September of that year.

For four years Clark was an army officer under the command of Gen. Wayne. In September 1793 he was placed in charge of a rifle corps, in which were several Chickasaw Indians, for in June of that year Clark had been ordered to take ammunition and provisions to the Chickasaw tribesmen near Memphis, who were wavering between allegiance to the Americans or to the Spanish. The Spanish governor reported of him on this occasion that he was "an enterprising youth of extraordinary activity" (Spanish manuscripts in Draper Collection 42A76; Clark's manuscript journal in Missouri Historical Society at St. Louis).

During the winter of 1793-94 Clark was in charge of a detachment at Vincennes and on an excursion up the Wabash was frozen in for twenty days, and had to depend upon his rifle for subsistence. He was then stationed at Cincinnati and, when Wayne began his march into the Indian country, was ordered to bring up provisions. About eighteen miles north of the Ohio his detachment was attacked by an Indian party with which he had a severe but successful skirmish, finally joining Wayne at Greeneville before the last of May (Draper Manuscripts, 2L33). Then Clark continued with Wayne until his victory in August over the allied Indians at Fallen Timbers, a campaign minutely described in Clark's journal and letters (Draper Manuscripts, 2L34, 35, 36, 37; 5U33). On this campaign Meriwether Lewis [q.v.], having just entered the army, served in the same division with Clark.

Before resigning from the army, Clark was sent on a second mission down the Mississippi, this time with a flag of truce to the Spanish officers at Natchez, protesting against the fortification of Chickasaw Bluffs by Spain (Clark's manuscript journal in Missouri Historical Society at St. Louis; Spanish manuscripts in Draper Papers, 42J200). Clark made friends with the Spanish governor, Gayoso de Lemos, who three years later granted him a passport to visit New Orleans.

Army life had begun to pall upon Clark even before the Indian submission, but at the earnest request of his superiors, he remained in commission until July 1, 1796, when he resigned and returned to "Mulberry Hill" and to the leisure of private life. During the next few years he traveled widely, visiting Virginia, New Orleans, and the new capital at Washington City. Most of these travels were in the interest of his brother George Rogers Clark, who had lost heavily during his Revolutionary services, and whose accounts Virginia refused to settle. Thereupon he was sued, his lands attached, and William had much difficulty in saving anything from the wreck of his brother's fortune.

In 1803 Clark received an unexpected letter from his friend Capt. Lewis, which changed his whole life; by the acceptance of the invitation it carried, his service for his country expanded to important proportions. Lewis proposed that
Clark

Clark should accompany him in leading an expedition which President Jefferson was sending to explore the continent and to find a route to the Pacific Ocean. The plan made an instant appeal to Clark, and he threw himself into the preparations with all the enthusiasm and vitality he possessed.

During the winter of 1803-04, the expedition was recruited in Illinois, nearly opposite St. Louis, and on May 14, 1804, it set out in several boats up the Missouri River. The entire summer was occupied in reaching the home of the Mandan Indians in North Dakota. At these villages the explorers wintered, sent back superfluous men and possessions to St. Louis, and as early as possible in the spring of 1805 began the ascent of the upper Missouri. Fortunately they obtained as a guide, Sacajawea [q.v.], an Indian woman from an upper river tribe, who not only piloted the expedition, but secured the goodwill of her tribal friends. From them the explorers obtained horses and crossed the continental divide. Then, having reached the headwaters of the Columbia, they built canoes and descended that river to its mouth. There they made camp almost within sound of the ocean and spent the ensuing winter.

It had been planned to return to the states by sea, but no merchant vessels having come to the mouth of the Columbia, Lewis and Clark were obliged to retrace their route by land. On the return journey they found other mountain passes, and Clark descended the Yellowstone River, meeting Lewis at its mouth. They reached St. Louis Sept. 23, 1806, to the great delight of the whole country which had given them up for lost.

The success of the expedition, although Lewis was in ultimate command, was really due to the combined qualities of the two leaders, who worked in complete harmony and supplemented each other at every point. Clark had more enterprise, daring, and resource than Lewis, as he had had more frontier experiences. By his quick thought and action he more than once saved the expedition from disaster. He was the mapmaker, and also the artist, drawing birds, fish, and animals with meticulous care. The explorers kept separate diaries, as did several of their men, and immediately upon their return Clark began putting these records into definite shape for publication. The issuance of the book was delayed until 1814, when after careful editing by Nicholas Biddle and final revision by Paul Allen the journals of the expedition were given to the world.

Clark resigned from the army Feb. 27, 1807, and was at once appointed brigadier-general of militia for Louisiana (later Missouri) Territory and superintendent of Indian affairs at St. Louis, where he thereafter made his home.

Thither in January 1808, he brought his bride Julia Hancock of Fincastle, Va., for whom he had named the Judith River in far distant Montana. Occupied with the new community in which he had cast his lot, with his Indian wards who continually sought him out in his St. Louis home, and with the cooperation he was giving to his friend Gov. Lewis, he was startled to learn of the latter's death on a journey to Washington, and gratified that the President should appoint him as Lewis's successor, an honor he felt at this time obliged to decline. He was appointed governor of Missouri Territory in 1813.

His duties and responsibilities were greatly increased by the War of 1812, when it became his duty in conjunction with Gov. Edwards of Illinois and Gov. Harrison of Indiana to protect the frontiers from the incursions of the Indians, most of whom were allied with the British. Harrison had every confidence in Clark's military skill; in 1813 he wrote of him, "Having served several years with this gentleman and having a perfect knowledge of his character and talents, I do not hesitate to say that in the kind of warfare in which we are engaged I had rather have him with me than any other man in the United States"; and when it was decided that Clark should stay at St. Louis, Harrison declared that, "Missouri may be safely confided to the military talents of Governor Clark" (Draper Manuscripts, 3X31, 4X73).

In 1814 Clark led an expedition into what was then the enemy's country by advancing up the Mississippi River with about fifty regulars and three times as many volunteers, to Prairie du Chien, at the mouth of the Wisconsin River. There he threw up a log fort and ran up the American flag, the first one to float over any building in what is now Wisconsin. Clark named the little post Fort Shelby in honor of the veteran governor of Kentucky; then the time of many of his volunteers being about to expire he retired to St. Louis, leaving a gunboat named the Governor Clark and a small garrison to defend the place. Fort Shelby was attacked a month later by a large force of British and Indians and forced to surrender. Two supporting expeditions were also defeated near Rock Island.

With the close of the war it fell to Clark's lot, in connection with August Chouteau and Ninian Edwards, to reconcile the western Indians by a series of treaties. This was successfully accomplished, and for years thereafter Clark was
Clark

greatly occupied with Indian affairs. He received delegations of chiefs at his home, held councils with them, occasionally escorted some of them to Washington; he appointed agents and factors; sent messages to the various tribes; and in 1825, in conjunction with Gov. Lewis Cass, attempted to bring about permanent peace by the treaty of Prairie du Chien, which defined the tribal boundaries and arranged for conciliation among many tribes. This peace was often broken; twice when in 1827 the Winnibago, and in 1832 the Sauk tribe led by Black Hawk, went on the war-path. Clark was instrumental in subduing these uprisings, and in checking other incipient ones by his prestige with the red men and his skill in treating with them. He had a large collection of Indian and natural curiosities, which formed a kind of museum in his St. Louis home.

His first wife died in 1820 leaving four children of whom only two sons, Meriwether Lewis Clark and George Rogers Hancock Clark, survived their parents. In 1821 William Clark married a cousin of his first wife, Harriet Kennerly, widow of Dr. Radford. Their son was Jefferson Kennerly Clark, who died in St. Louis in 1902, leaving a considerable sum for a monument to his father, which was dedicated in 1908.

Clark passed his last years peacefully in his St. Louis home, which was the center of hospitality for both red men and white. In 1820 he was talked of for state governor, but was not elected; in 1824-25 he was surveyor general for Illinois, Missouri, and Arkansas; in 1828 he laid out the town of Paducah, Ky.; throughout all the period he held his Indian superintendency, and made constant pleas to the government at Washington for humanity and justice to the aborigines. He died at the home of his eldest son, his wife having passed away before him. He was buried with military and Masonic honors (having joined the order in 1809). His collections were given to the St. Louis Natural History Society and have been for the most part lost.

[There is no adequate biography of Clark but his career is sketched in the several editions of his travels, and Wm. R. Lighton has a brief biography of both Lewis and Clark in the Riverside Series (1901). See also Harlow Lindey, "Wm. Clark, the Indian Agent," in Miss. Valley Hist. Asso. Proc., 1908-09, pp. 63-75; also R. G. Thwaites, "Wm. Clark," in Mo. Hist. Soc. Colls., II, 1-21. After the Hist. of the Expedition under the Command of Captains Lewis and Clark (Phil., 1814; Dublin and London, 1817) appeared, no good edition was issued until that of Elliott Coues, Hist. of the Expedition under the Command of Lewis and Clark (4 vols., 1893). R. G. Thwaites edited the Original Journals of Lewis and Clark Expedition (8 vols., 1904-05). Clark manuscripts are in the Wis. Hist. Lib., Draper MSS.; the Mo. Hist. Soc. at St. Louis; and in the Kan. Hist. Soc., Topeka, which has the letter-books for his Indian agency. The journals of the expedition are in the Am. Philosophical Soc., Phila.]
Clark
San Pedro, Los Angeles & Salt Lake Railroad and sold it to the Union Pacific, of which company he became a director. He organized the Los Alamitos Sugar Company and built a large sugar factory near Los Angeles.

Clark early became active in Montana politics. His prestige as a miner made him a leader of the mining interests, but he found a rival in Marcus Daly [q.v.], once his friend but eventually his implacable enemy. Both men were Democrats and both fought to control the Democratic party. This rivalry dominated the mining and political history of Montana during the 80's and 90's. Clark began his political career as president of the constitutional convention of 1884 and presided with dignity and fairness. In 1888 he was nominated for delegate to Congress. Opposed by Thomas H. Carter, then unknown, he believed that he had the support of Marcus Daly, but when the returns came in, he was found to be defeated by about 5,000 votes and where Daly's influence was strong his defeat was overwhelming. In 1889 Clark again presided over a convention that was to frame a constitution for the new state; and again he presided with fairness, although there was complaint from the small number of farming members that the miners were running the convention in their own interests (Proceedings and Debates of the Constitutional Convention, 1889, pp. 472-74). When the state was admitted, Clark was indorsed by the Democrats for United States senator. The legislative vote was close and both parties claimed the election. The United States Senate however seated the Republicans. In 1893 Clark was again a candidate for the Senate and now Daly was openly fighting him. It appears that both sides spent money lavishly. On the last day of the session Clark had six Republican votes but was three votes short of election, and amid cries of fraud from the Daly group the legislature adjourned and left the state with but one senator. The next episode in the feud was the fight over the state capital. Daly had crowed out of Butte and had built Anaconda only a few miles away, desiring to make this city the capital. Clark was willing to further this ambition if Daly would support him for United States senator; but they could come to no agreement and Clark threw his support to Helena, which was eventually chosen. In the legislature which met in 1899 the Democrats had a large majority, but neither Clark nor Daly controlled it. There was a deadlock for many days, and stories were rife of huge bribes offered for votes for Clark (see testimony of Fred Whiteside and Henry L. Myers in Senate Report No. 1052, Pt. 1, 56 Cong., 1 Sess.). One member dramatically produced $30,000, which he said had been given him with which to purchase votes. The Daly men stood firm, but finally eleven Republicans voted for Clark, and he was declared elected. Petitions against seating him were presented to the United States Senate. Clark denied any fraud but admitted the expenditure of $140,000 in the campaign. After an exhaustive investigation the Senate committee on elections reported unanimously, "That William A. Clark was not duly and legally elected to a seat in the Senate of the United States . . ." Before action could be taken on this report Clark resigned. He was immediately appointed by Acting-Governor A. E. Spriggs to fill the unexpired term but did not present himself for the oath of office. In 1901 he was elected to the Senate without much opposition. As senator he ably opposed the Roosevelt conservation policy, urging that the federal government turn over its forests to the states wherein they were located (Congressional Record, 59 Cong., 2 Sess., p. 3724). He also opposed that provision of the Hepburn Act which prohibited railroads from carrying the coal produced in their mines (Ibid., 59 Cong., 1 Sess., p. 6564). He was one of the leaders in defeating the bill to organize Arizona and New Mexico as one state. When his term was over he quietly retired from the Senate. His first wife having died in 1893, he married, on May 25, 1901, Anna E. La Chapelle, of Butte, Mont.

In his palatial but much-ridiculed home in New York, popularly called "Clark's Folly," he built up a notable art gallery. Along with some indifferent material, it contained a number of works by Titian, Van Dyck, Rembrandt, Franz Hals, and Rubens; a representative collection of the best work of the English school, with outstanding paintings by Reynolds, Hogarth, Gainsborough, and Raeburn; some of the finest products of the Barbizon School in France; and an especially fine Cazin collection. The gallery also held a small but fine group of sculpture, some rare Gobelins and Beauvais tapestries, and many specimens of antique lace, and rare rugs (from statement of C. Powell Minnigerode, director of the Corcoran Gallery of Art, which now possesses the Clark collections).

Clark was a man of unusual and contradictory characteristics. Refined and even fastidious in manner, he could nevertheless deal with all classes of people. With intellectual and artistic dreams he was coldly practical in finance and politics. He was self-reliant and always formed his policies and directed their execution with little regard for the opinions of others. He
owned outright practically every enterprise in which he was interested, and he built up one of the greatest mining businesses in the West.

[The most detailed sketch of Clark is in Progressive Men of the State of Mont. (1901). A biased and unfriendly view is given by C. P. Connolly in "The Story of Mont," McClure's Mag., vols. XXVII, XXVIII. There is a sketch by H. R. Knapp in the Cosmopolitan, Feb. 1903. Much valuable information is contained in the files of the Butte Miner. The Cong. Record, 56 to 59 Congress, contains a number of Clark's speeches. Information as to his art collection may be found in Bull. Metropolitan Mus. of Art, N. Y., May 1925; Art News, Apr. 11, Aug. 15, Dec. 5, 1925; Mar. 31, 1928; Frank jewett Mather in The Arts, Apr. 19, 1928; N. Y. Times, Mar. 11, 1928.]

P. C. P.

CLARK, WILLIAM BULLOCK (Dec. 15, 1860–July 27, 1917), geologist, son of Barna A. and Helen (Bullock) Clark was born at Brattleboro, Vt. His earliest American ancestors were Thomas Clark who arrived at Plymouth in 1623 on the ship Ann; Richard Bullock who came to Salem in 1643; and John Howland who came to Plymouth on the Mayflower. Clark received his early training under private tutors and at the Brattleboro high school, from which he graduated in 1879, entering Amherst College in 1880 and graduating in 1884. Prof. B. K. Emerson of Amherst was an inspiring force in turning Clark's mind toward geology. Immediately after graduation, Clark went to Germany, where he devoted himself to geological studies under Professors Groth, Rothpletz, and Zittel and received his degree of Ph.D. at the University of Munich in 1887, after which he gained experience in field work with the official surveys of Prussia and Great Britain. He returned to America in the fall of 1887, and entered at once upon the duties to which he had been appointed as instructor in geology in Johns Hopkins University in Baltimore, advancing rapidly through the academic grades until in 1894 he became full professor and head of the department, a position he continued to occupy until his death. In addition to his professional duties, Clark became in 1888 an assistant geologist on the United States Geological Survey, and in 1892 was appointed director of the Maryland State Weather Service. In 1896 he was elected State Geologist of Maryland, in 1906 executive officer of the State Board of Forestry, and in 1910 State Road Commissioner; these offices he continued to hold for the remainder of his life. In addition, he was appointed in 1900 to represent the state in the resurvey of the Maryland-Pennsylvania or Mason-Dixon line and in 1908 was adviser to the governor at the White House conference on conservation. He also rendered efficient service for sixteen years as president of the Henry Watson Children's Aid Society and was a member of the executive committee of the Maryland Association for the Prevention of Tuberculosis and vice-president and chairman of the executive committee of the Alliance of Charitable Agencies of Baltimore. He was president of the Association of American State Geologists, a foreign correspondent of the Geological Society of London, and a member of the National Academy of Sciences, the American Philosophical Society, the Philadelphia Academy of Natural Sciences, the American Academy of Arts and Sciences, the Deutsche Geologische Gesellschaft, the Paleontologische Gesellschaft, Mining and Metallurgical Society of America, and the American Association for the Advancement of Science. He died suddenly and unexpectedly at his summer home in North Haven, Me., July 27, 1917. He was married on Oct. 12, 1892, to Ellen Strong, daughter of Edward A. Strong of Boston.

Clark's early geological work involved a study and exploration of the sedimentary deposits of southern Maryland. For several years he carried on this work at his own expense; later, under the auspices of the United States Geological Survey, he prepared a bulletin on the Eocene Deposits of the Middle Atlantic Slope in Delaware, Maryland, and Virginia and monographs on the Mesozoic and Cenozoic Echino- dermata of the United States. During his administration of the state survey, there were issued over thirty volumes of reports dealing with building stones, clays, coals, limestones, and other mineral deposits, and in cooperation with the federal bureaus there were prepared and published fifty-seven county maps. As a teacher Clark was eminently successful. "There are not a few graduates of his department who have said that he was the most potent influence in their lives" (J. M. Clarke, post). He insisted on thorough groundwork and permitted no specialization until the student had covered the entire broad field of science, organic as well as inorganic. He was a man of wide interests, with a large and influential circle of acquaintances, and of such varied accomplishments that it was more than once said of him that he would have succeeded in life whatever calling he might have adopted.

CLARK, WILLIAM SMITH (July 31, 1826–Mar. 9, 1886), Union soldier, scientist, college president, son of Dr. Atherton and Harriet (Smith) Clark, was born in the town of Ash-
Clark

field, Mass., and received his early education there and at Williston Seminary, Easthampton. Graduating from Amherst College in 1848, he returned to Williston Seminary, where he taught the natural sciences from 1848 to 1850. He then went abroad and for the next two years devoted himself to the study of chemistry and botany at Göttingen, receiving from that university the degree of Ph.D. in 1852. On his return to the United States, he was offered by Amherst College the professorship of chemistry in 1852, to which was added the chair of zoology in 1853 and that of botany in 1854, the two latter being relinquished in 1858. He was also a member at large of the Massachusetts State Board of Agriculture from 1859 to 1861. On the outbreak of the Civil War he hastened to offer his services in the field, and in August 1861 received a commission as major in the 21st Massachusetts Volunteers. A born leader of men, he was quickly promoted lieutenant-colonel in February 1862 and colonel in May 1862, and was recommended by Gen. Burnside for a "well-deserved promotion" as brigadier-general in September of the same year. He took part in many engagements. At the battle of Chantilly, losing his way and becoming separated from his regiment, accompanied by only a handful of men, he was surrounded by the Confederates and ordered to surrender. Rather than encounter the horrors of Andersonville or Libby, a desperate effort was made to escape, but all were shot down except himself. Bullets whistled through his cap and clothing, but unhurt he reached the cover of the woods, and lay concealed within the enemy's lines for three days, suffering from hunger and exposure, until finally he reached the Union forces in safety, and was welcomed as one returned from the dead, for he had been reported among the fallen. After his military service was over, he returned to his professorship at Amherst, and was also a presidential elector and secretary of the electoral college in 1864, and a representative to the General Court in 1864, 1865, and 1867.

In the latter year he accepted the presidency of the Massachusetts Agricultural College. This and the professorship of botany and horticulture he held from 1867 to 1879. Since he was a forceful and persuasive speaker, it was largely owing to his efforts in town meeting and in the General Court that Amherst was selected as the seat of the Massachusetts Agricultural College. He was virtually its first president, as his predecessors, French and Chadbourne, had been able to do little more than take the initiatory steps. It was left for Clark therefore to organize and establish the new college, and during his administration it greatly prospered. A man of ardent temperament, active mind, enterprising spirit, and boundless energy, he brought to the lecture-room intense enthusiasm and personal magnetism, which quickly established a bond of sympathy between teacher and pupil. While still connected with the Massachusetts Agricultural College, he was invited by the Japanese government to establish and organize the Imperial College of Agriculture, at Sapporo, Japan, and during the years (1876-77) of his residence there continued to preside over the interests of both colleges. He then became interested in the project of a "floating college," and being made president, bent all his energies during the next two years to develop the scheme of uniting scientific study with a tour around the world. This enterprise, owing to the death of its originator, was abandoned. Clark subsequently engaged in mining operations, but these proved disastrous to himself and others.

The author of several chemical papers in Liebig's Annalen in 1851 and 1852, he contributed not a few articles to the reports of the Massachusetts State Board of Agriculture, and also published a monograph on The Phenomena of Plant Life (1875), a work in which he received valuable aid from the investigations of two of his colleagues, Prof. Peabody and Dr. Goessmann. He was married, on May 25, 1853, to Harrietta Keopoulaní Richards, daughter of the Rev. William Richards, of the Sandwich Islands, and adopted daughter of Hon. Samuel Williston of Easthampton. He had eleven children, eight of whom survived him.

F. T.—n.

CLARK, WILLIAM THOMAS (June 20, 1831—Oct. 12, 1905), Union soldier, carpet-bag representative from Galveston, Tex., was born in Norwalk, Conn., the son of Levi and Fanny Clark. His school life was cut short at the age of thirteen, when on account of the poverty of his parents he was thrown on his own resources. For a few years he did odd jobs in his home town, then taught school and studied law. In 1854 he removed to New York and was admitted to the bar. Two years later he was married to Laura Clark of Hartford, and went to Davenport, Iowa, where he practised law in the firm of Judge Dillon, later one of the counsel for the Gould interests. At the beginning of the
Clark

Civil War, with the assistance of a chaplain, a drummer, and a fifer, he raised the 13th Iowa Regiment and went to the front, himself as adjutant of the command with the rank of captain. He took part in many of the western battles, receiving in 1864 a gold medal inscribed "Shiloh, Siege of Corinth, Corinth, Port Gibson, Raymond, Jackson, Champion's Hill, Vicksburg." Almost from the beginning he was a staff officer. When Gen. McPherson took command of the Army of the Tennessee he made Clark his adjutant-general, and it was Clark who brought to Sherman the first news of the tragic death of McPherson before Atlanta. As chief of staff, Clark seems to have been energetic and efficient. In the fall of 1865, now a brigadier-general by brevet (July 22, 1864), he was transferred to Texas, where the Americans were watching the progress of the war against Maximilian. On the Rio Grande he became interested in a scheme by which the liberal general, Mejia, was to hand over Matamoros to the Americans in return for $200,000 (Official Records, ser. I, vol. XLVIII, pt. 2, p. 1259). The plan, eagerly advocated by Clark, won the initial favor of Sheridan in New Orleans and of Grant in Washington, both of whom were anxious for intervention against Maximilian, but was blocked by President Johnson and Secretary Seward, who preferred the slower and less dangerous methods of diplomacy.

Clark now resigned from the army, and in 1866 was in Galveston, helping to organize one of the first national banks in Texas, of which he became cashier. About this time he began to take an active part in the creation of union leagues among the negroes and gave them close affiliation with G. T. Ruby, the mulatto leader of the Galveston negroes. In 1869, Clark was elected to Congress from the Third District of the now "reconstructed" State of Texas. In Congress his speeches were frank and complete expositions of the political philosophy of the carpet-baggers but had little influence on legislation. His plan to sell a vast region in western Texas to the nation for a sum of forty millions of dollars, to be used to subsidize various railroads (in which Clark was reputed to be interested) and to advance negro education, was regarded by conservative newspapers as a mere attempt to add to the resources of a corrupt administration. When he came up for re-election in 1871, the conservative forces were for the first time well organized and ably led, and the election resulted in a plurality of more than three thousand votes in favor of the Democratic candidate, D. C. Giddings of Brenham. E. J. Davis, the Republican governor, had, however, small difficulty in changing these figures into a narrow victory for Clark, who was seated pending an investigation. But, largely owing to the wide publicity given the whole matter by Horace Greeley of the Tribune, on May 13, 1872, Clark was expelled by the unanimous vote of a Republican House and Giddings was seated in his stead. The incident was an important step in what was later to be called the "regeneration of the South."

At the close of his congressional career, Clark secured a post in the Bureau of Internal Revenue, in which he served until his death in 1905. The old general was justly proud of his army record and his military bearing. For forty years he always wore the same type of slouch hat and the same type of high top boots. In Texas, he will be remembered as "the last of the carpet-baggers."

[Clark's speeches in Congress, 1870–72, and especially his farewell address on May 13, 1872 contain biographical references: his life in the army has been traced in the Official Records, especially after he became chief of staff; for his life in Texas see the state newspapers, especially the Galveston Daily News and Flake's Daily Galveston Bull.; the story of the contested election of 1871–72 may be followed in the Cong. Globe, 42 Cong., 2 Sess., and the N. Y. Tribune, Jan.–May 1872; these may be supplemented by N. G. Kittrell, Governors Who Have Been and Other Public Men of Tex. (1921), pp. 95–96, and C. W. Ramsdell, Reconstruction in Tex. (1910), p. 286; for his later life see Who's Who in America, and an obituary in the N. Y. Tribune, Oct. 13, 1905.]

R.G.C.

CLARK, WILLIS GAYLORD (Oct. 5, 1808–June 12, 1841), poet, editor, and publicist, was the son of Eliakim Clark and the twin brother of Lewis Gaylord Clark [q.v.]. He was named after his uncle, Willis Gaylord, whose father, coming to Otisco in 1801, was the third settler in that hamlet (Joshua V. H. Clark, Onondaga, 1849, II, 339–44). In his early education he was materially aided by the Rev. George Colton, a maternal relative, and found in his father's library a somewhat remarkable collection of books on philosophical subjects and on poetry. Going to Philadelphia, he found employment in an editorial capacity on several literary and religious periodicals before he became permanently associated with Relf's Philadelphia Gazette as editor. In 1836 he married Anne Poyntell Caldecough, a niece of Samuel Relf, formerly publisher of the Gazette (Frederic Hudson, Journalism in the United States from 1690–1872, 1873, p. 79). After Clark became the chief editor he changed the paper from an advocacy of Jacksonian democracy to a championship of Whig principles. A leader in Philadelphia jour-
Clarke

nalism, he became through his contributions to the leading literary monthlies the foremost Philadelphia poet of his day. Writing in Graham's Magazine Edgar Allan Poe remarked that in all that Clarke wrote there was "a deep abiding sense of religion" and that Clarke was "almost the first poet to render the poetry of religion attractive" (E. P. Oberholtzer, The Literary History of Philadelphia, 1906, p. 301). Possibly Clarke's most distinguished poems were "The Spirit of Life," read before the Franklin Society of Brown University, Sept. 3, 1833, and "The Past and Present," read before the Athenian Society of Bristol College, July 23, 1834. Always a popular speaker before college audiences, he last appeared in this rôle, on July 4, 1840, when he delivered an address on the characters of Lafayette and Washington before the Washington Society of Lafayette College. Some of his best prose works may be found in the department, "Ollapodiana," which he conducted in his brother's magazine, the Knickerbocker. His name appears frequently as a contributor to American annals such as the Souvenir, the Token, the Keepsake, etc. In one special field his services should not be overlooked: he was the first to advocate in print an international copyright (Knickerbocker Magazine, vol. XIX, No. 4, p. 384). His published volumes include The Literary Remains of the Late W. G. Clark, edited by L. G. Clark (1844), and The Poetical Writings of Willis Gaylord Clark (second and complete edition, 1847). Unusually sad must be the concluding note because both Clark and his wife died of consumption when both should have been in their prime.

[The best account of Willis Clark is unquestionably that by his brother, Lewis Clark, in the Knickerbocker, Apr. 1842. An extended review of some of his poetry appeared in 1837 in the Am. Quart. Rev., XXII, 459-72. An obituary together with an editorial appreciation may be found in the Phila. Ledger and Daily Transcript, June 14, 1843.]

J. M. L.

CLARKE, Sir CASPAR PURDON (Dec. 21, 1846-Mar. 29, 1911), architect, archeologist, art connoisseur, and museum administrator, although born a British subject at his father's home in Richmond, County Dublin, Ireland, and retaining his nationality after coming to New York to live, nevertheless played an important rôle in the art history of the United States. The second son of Edward Marquette Clarke, of an old Somerset family, and Mary Agnes, daughter of James Close of Armagh, Ireland, he studied at Gaultier's Collegiate School, Sydenham, and at a private school in Boulogne, and graduated in 1865 from the architectural department of the National Art Train-

ning School, South Kensington; but is said to have owed most to his contact in early life with Sir Woolaston Franks. For his forty years of service to the South Kensington Museum and other departments of his Government—not only at home, but in Europe, India, and the Orient—for his principal buildings, published work, honors received by him, and portraits painted of him, the reader is referred to a two-column article in the Dictionary of National Biography (Second Supplement, ed. by Sir Sidney Lee). Passing to 1905, the trustees of the Metropolitan Museum of Art in New York were then seeking a man to fill the vacant directorship who should be a recognized art expert and in sympathy with the educational side of museum work, especially as it touched the arts and crafts. These were all among the specialties of Sir Purdon, whose versatility seemed unlimited. It was said that with him judgment was an instinct; "were he blindfolded, he would know spurious objects from their odour." He was also expert in technical processes, knew how everything was made, and enjoyed taking infinite pains, saying, "I could make a cobweb without breaking it." He seldom had to answer, "I don't know," and his memory was perfectly indexed. He had been the patron saint of artisans since at the age of twenty-four he had organized and conducted evening art classes for them in various parts of England. Knighted in 1902, he had been director of the great Victoria and Albert Museum (formerly the South Kensington) since 1896, and was in his fifty-ninth year; but to the surprise of his compatriots he accepted, in January 1905, the New York position—lured chiefly by its constructive possibilities. American criticism at the choice of a Britisher soon evaporated under his charm of personality, simplicity, and kindness. Soon every branch of the art fraternity was frequenting the Museum and interviewing its always genial and entertaining director; the industrial art education began; the public acquired the Museum habit; the critics became friendly. But his health broke. In 1909 he was given a year's leave of absence from which he never returned, resigning in June 1910, but remaining the Museum's European correspondent until his death about eight months later. In 1866 he had married Frances S. Collins, who survived him. He left but a modest estate and his widow was pensioned by the British government. He was a Mason of high degree. In appearance, he was of medium height, very active, bright of eye, ruddy of countenance, "smiling pleasantly over his gold-rimmed glasses." A fascinating talker, a ready
Clarke and lucid writer, a fluent lecturer, a tactful gentleman.

CLARKE, ELIJAH (1733–Jan. 15, 1799). Revolutionary soldier, adventurer, was born in Edgecombe County, S. C. He was probably of Scotch-Irish origin, and had the characteristics of a pioneer; he was strong and active, brave and resolute, uneducated, but a leader in stirring times. In 1774 he had removed to Wilkes County, Ga., and when the war shifted to the South, he became one of the leading partisan commanders. He was colonel of militia, serving at times under Pickens, and was brigadier-general in 1781–83. His name occurs in various skirmishes of the far South, at Alligator Creek in 1778 where he was wounded; at Kettle Creek in 1779, where he shared with Pickens the credit of the victory, displaying foresight in occupying the higher ground; at Musgrove’s Mill in August 1780, where he was severely wounded and had a narrow escape; at Fish Dam and Blackstocks in October 1780; at Long Cane, where he was again wounded; and at Beattie’s Mill, where he defeated the British leader Dunlap. He served at both sieges of Augusta—in September 1780 when he was repulsed, and the next year when he cooperated with Pickens and Lee in the reduction of the town. In recognition of his services Wilkes County and the legislature of Georgia granted him an estate.

After the war Clarke by turns negotiated with the Indians and fought against them, inflicting a defeat at Jack’s Creek, Walton County, Ga., in 1787. In 1792 he became involved in the schemes of Genêt, the intriguing minister of France, directed against Spain. Clarke entered the French service and received a commission as major-general, a salary of $10,000, and some means for the carrying out of the plans. It was his part to enlist Georgians, Creeks, and Cherokees, but there was little fighting; Genêt was soon recalled, and Fauchet his successor stopped the undertaking. The next year Clarke was implicated in a still more serious affair. He led a force into Creek territory across the Oconee River. His motives, according to a biographer, were “not quite clear.” But the Georgians were “land-hungry”; they were irritated with the Creeks and with the attitude of the Federal government, and Clarke claimed to be defending the rights of his state. A few forts were erected, and some towns were laid out. These proceedings brought him to the notice of the law, but he was popular with Georgians, and was acquitted by a Wilkes County tribunal. He continued his project, and the “Trans-Oconee State” received a constitution and a committee of safety. The Federal government, through a letter from Hamilton to the governor of Georgia, then made representations. A blockade along the Oconee was established by Georgia troops, and Clarke, deserted by most of his followers, surrendered. At a time subsequent to 1794 he was accused (probably without foundation) of scheming, with British encouragement, against Florida. He was also charged with complicity in the Yazoo land frauds. His general reputation in the state did not suffer, however, in consequence of these events. On his death, in Wilkes County, the commander of militia issued a general order for mourning. A county in the state bears his name, and a monument at Athens stands in his honor. He was married to Hannah Arrington and was the father of John Clark [q.v.].

E.K.A.

CLARKE, FRANCIS DEVEREUX (Jan. 31, 1849–Sept. 7, 1913), educator of the deaf, was the eldest of the four children of William J. and Mary Bayard (Devereux) Clarke [q.v.] of Raleigh, N. C. His father, an eminent lawyer and judge of the state courts, was also distinguished for bravery as an officer in the Mexican War, and later became a colonel in the Confederate army. His mother was a brilliant writer of both prose and poetry. The family was descended on the father’s side from Scotch ancestry, and on the mother’s from Scotch and from French Huguenot strains. Both families appeared in the Carolinas in the seventeenth century, and were prominent in theology, teaching, and the law. Francis began his education in the primary schools of Raleigh, but moved with the family to San Antonio, Tex., when he was seven years old. Here he was under the instruction of Oliver D. Cooke, a former teacher in the American School for the Deaf. His mother’s failing health improved and the family returned to Raleigh at the opening of the Civil War. Francis entered Davidson College, but after two years of study left to join the Confederate navy as a midshipman, at the age of thirteen. He served with distinction on various ships, including the battleship Tennessee. At the close of the Civil War, though only sixteen years of age, he had risen to
the rank of lieutenant. For three years he engaged in business in North Carolina with a brother, but felt a call to sea service, and went to New York City with the purpose of joining the merchant marine. His old tutor, Oliver D. Cooke, then a teacher in the New York Institution for the Deaf, persuaded Francis to call upon Dr. Isaac L. Peet, principal of the New York Institution, and to observe the work being done for the education of deaf children in this institution. Dr. Peet was so pleased with the young man's intelligent questions that he offered him a place as instructor in his school, and Clarke accepted.

On Sept. 24, 1873, Clarke was married to Celia Laura Ransom of Kalamazoo, Mich., niece of the then chief justice of the state, who later became governor. Miss Ransom was a teacher of the deaf at the time of their marriage. Although Clarke was also much interested in engineering, receiving the degree of Master of Arts in course from Columbia University in 1873 and the degree of Civil Engineer in 1875, and working for a brief time as a civil engineer in North Carolina, he nevertheless remained with Dr. Peet until 1885, and then accepted the superintendency of the Arkansas Institute for the Deaf at Little Rock. He found there a small school, not well provided with buildings or equipment. He revised the course of study, increased the pupilage, and rebuilt the plant in the seven years that he remained. In September 1892 he was invited to take charge of the State School for the Deaf at Flint, Mich. Here again he showed his energy in rebuilding and enlarging an institution. He added a kindergarten department, a physical education department, a normal department, a farm of 350 acres, and he introduced poultry raising, farming, and gardening for the students. He revised the course of study and made many additions to the buildings and equipment, so that the Michigan School took first rank among the state institutions for the education of the deaf in the United States. One of his last acts was the laying of the corner-stone of the handsome new administration building for which he had obtained sufficient funds after a hard fight in the state legislature. He died a few weeks later from heart failure, leaving this excellent school, with its many successful graduates, as a monument to his energy and wisdom.

Clarke was honored by election to the Executive Committee of the Conference of Superintendents and Principals of American Schools for the Deaf in 1900. He was one of the incorporators of the Convention of American Instructors of the Deaf and was a regular contributor of articles on the education of the deaf to the American Annals of the Deaf. Among these are "Courses of Study and Textbooks," "Foundation Work in Arithmetic," "Kindergarten for the Deaf," "The Training of Teachers." One of his most important works was a book entitled Michigan Methods, which is a valuable treatise on primary work for deaf children.

P. H.

CLARKE, GEORGE (1676-Jan. 12, 1760), colonial official, was the son of George Clarke of Swainswick, Somersetshire, near Bath. He was in early youth articled to an attorney. In 1701 he was a resident of Dublin where he became involved in a quarrel with a merchant, for which he had to pay damages of three guineas. He was a nephew of William Blithwait whose well-known influence in matters of patronage in connection with plantation affairs was doubtless responsible for Clarke's appointment to the office of Secretary of the Province of New York. Arriving in New York on July 23, 1703, he remained, except for a brief visit to England in 1705, for forty-two years. He was therefore very far from being an absentee squire. Of no brilliance of gifts or striking force of character, it was rather by a long course of steady attention to the opportunities of his position in the province, coupled with painstaking assiduity in keeping contact with important sources of political and social influence in England, that he finally became a significant figure in New York provincial history. On his journey to England in 1705 he was married to Anne Hyde, who was distantly related to the Clarendons and so to Queen Anne and to Lord Cornbury, who was at that time governor of New York. Subsequent to his marriage he took up his residence on Long Island where he purchased nearly 100 acres of land and erected a villa. Here he spent a great portion of his time, leaving the details of his office to be attended to by his deputy. As landmarks in his official career may be mentioned his appointment in 1716 to membership in the Council of New York, and, in 1718, to the commission to run the Connecticut boundary line, and as deputy for New York to the Auditor General of the Plantations, Horace Walpole. Probably through this latter connection he became a frequent correspondent of the Duke of Newcastle. By 1736 he had amassed a considerable fortune, in small part from the fees of his offices, but much more as a result of extensive dealings in land, for which those offices afforded peculiarly favor-
able opportunities. Throughout these same years he had consistently made himself useful to the successive governors in the domain of provincial politics, and yet, till Cosby’s administration, 1732–36, he had managed to keep on fairly good terms with the provincial leaders. The peculiar circumstances of his accession to the headship of the provincial government as lieutenant-governor in 1736, after the violent excesses of the Cosby administration, brought him, however, to the center of a local situation full of dangerous popular passion. By adroit management, made possible by his acquaintance with the local scene, he was able after a time to reduce the tension. But he was obliged to yield entirely to the ambitions of the Assembly for complete control of provincial finance. It was while he was lieutenant-governor that the precedent was firmly established of supporting the provincial government by annual grants of revenue instead of for terms of three or five years, and of making specific appropriations by legislative act instead of appropriations in general terms supplemented by resolves requesting particular applications. The attainment of this precedent by the Assembly constituted a crisis of the first order of importance in the constitutional development of New York as a royal province. Clarke also abandoned the practise, formerly prevalent, of presiding in the Council when the latter sat as a legislative body. His “interest” at home proved insufficient to obtain for him more than the commission as lieutenant-governor and he was succeeded in the headship of the province by George Clinton to whom the seals and commission were delivered September 1743. Henceforth Clarke took no further part in public affairs. On his voyage home in 1745 he was taken prisoner by the French, but his losses incident to this occasion as well as those from the “Negro Plot” fire in New York in 1741 were made up—and more, according to his enemies—by a Parliamentary donation. He was said to have made a fortune of £100,000 in America. He certainly was able to purchase a handsome estate in Cheshire, and at his death was buried in Chester Cathedral.

C. W. S.

Clarke, Helen Archibald (Nov. 13, 1860–Feb. 8, 1926), author, editor, musician, was born in Philadelphia, the daughter of Hugh Archibald and Jane (Searle) Clarke. On her father’s side she was of Scotch ancestry; on her mother’s of English. Hugh Clarke, who was born in Hamilton, Ontario, was a music-teacher and later professor of harmony in the University of Pennsylvania; his father and grandfather had been musicians in Edinburgh. His wife was born in London and was brought when a child to Canada; she too had musical tastes. Their daughter was trained in music almost from babyhood, received a certificate for proficiency in that art from the University of Pennsylvania in 1883, and played and composed music her life long. The best known of her compositions is probably “The Hidden Dark.” Music, however, was to be her avocation, editing and writing her main occupation. Deeply interested in poetry, she and her friend Charlotte Endymion Porter in 1888 launched a periodical called Poet Lore, which was to be “devoted to Shakespeare, Browning, and the Comparative Study of Literature.” The coupling of the names of Shakespeare and Browning, and the broad program implicit in the third object of the magazine’s devotion, indicate the inclusive enthusiasms of its editors and the atmosphere of American Victorian culture in which Poet Lore was to flourish. It was started amid the benedictions of Walt Whitman, Edmund Clarence Stedman, Richard Hovey, and Bliss Carman, and, besides numerous articles on Shakespeare and Browning, delighted and thrilled its readers by printing translations of Maeterlinck, Strindberg, Gorky, D’Annunzio, Ibsen, and other European writers, who, at that time, were known only as names to most American readers. Early in the nineties Miss Porter and Miss Clarke transferred their paper to Boston, where Dana Estes, the publisher, had offered them office room in exchange for three pages per issue of advertising space. There the two lived until Miss Clarke’s death, spending their summers regularly at Miss Porter’s estate on Isle au Haut, Me., and giving themselves whole-heartedly to editing, writing, lecturing, and Browning. In 1896 they edited a two-volume edition of Browning’s poems, in 1897 a volume of Clever Tales, translated from several languages, and an edition of The Ring and the Book, in 1898 an edition of Browning’s complete poetical works in twelve volumes, in 1900 a volume of Browning Study Programmes and an edition in six volumes of Mrs. Browning’s complete works, and in 1912 an edition of Shakespeare in twelve volumes. Miss Clarke also aided her friend with the first three volumes of a larger undertaking, the First Folio Shakespeare in forty volumes. They sold Poet Lore in 1903.
Clarke

Returning to Boston, he founded there a new Unitarian church modestly named The Church of the Disciples, of which he became pastor on Feb. 28, 1841. The founding of this church made almost as much stir in Boston as that of the Brattle Street Church nearly a century and a half earlier and for similar reasons, the chief of which was its exceptional recognition of the power of the laity. The value of this innovation was signalized during the period from Aug. 11, 1850, to Jan. 1, 1854, when notwithstanding the sale of the church property and the absence of the minister on account of ill health, the organization held together with occasional services, especially the communion services, conducted by lay members of the church. These years, broken by a trip abroad, were spent by Clarke in Meadville, Pa., where he acted as minister of the local Unitarian church which had been founded in 1825 principally by Harm Jan Huidekoper whose daughter Anna he had married in August 1839. With restored health, he returned to Boston in 1854 and resumed his duties as minister of the Church of the Disciples. In this position he speedily won the full and unbroken confidence not only of his clerical colleagues, but also of the community which he served in various ways. He was a member of the State Board of Education (1863–69); trustee of the Boston Public Library (1879–88); non-resident professor in the Harvard Divinity School (1867–71), and lecturer on ethnic religions (1876–77); member of the Board of Overseers of Harvard College (1863–72, 1873–85, 1886–88). In addition, he was active in behalf of temperance, anti-slavery, and woman suffrage. Such labor he refused to regard as “outside activity,” deeming it rather his part, as minister of the church, of its due contribution to the life of the city.

Dr. Clarke’s most notable characteristic was a remarkable balance and wisdom. He was rightly numbered among the Transcendentalists, but his thought was simple and his style lucid. His Transcendentalism appeared chiefly in his confidence in the universality of truth and goodness among men, and in his earnest efforts to discover it in all persons, sects, and religions. A convinced and devout Christian, he studied appreciatively other religions also (Ten Great Religions, pt. I, 1871, pt. II, 1883); a loyal Unitarian, he was sympathetic with other denominations, aiming to give full credit to all that his fellow Christians of whatever name were contributing to human welfare. The same discriminating insight taught him to discern the best in individuals and to labor to free it from base entan-
glements. He was a wise, discriminating, sympathetic and ironic friend and teacher; quick to praise, slow to blame; more eager to cherish good than to crush evil; a rare combination of particular loyalties and universal sympathies. He was a prolific writer: sermons, newspaper and review articles streamed from his facile pen almost beyond enumeration. Besides Ten Great Religions, he published: The Christian Doctrine of Forgiveness of Sin (1852); The Christian Doctrine of Prayer (1854); Orthodoxy: Its Truths and Errors (1866); Common Sense in Religion (1874); Essentials and Non-Essentials in Religion (1878); Self-Culture (1882); Anti-Slavery Days (1884); The Problem of the Fourth Gospel (1886).

CLARKE, JAMES PAUL (Aug. 18, 1854–Oct. 1, 1916), governor of Arkansas, United States senator, was the son of Walter and Ellen (White) Clarke. He was born in Yazoo City, Miss., and was educated in the schools of Mississippi and in the law school of the University of Virginia, where he received the degree of LL.B. in 1878. The next year he opened a law office in Helena, Ark. On Nov. 10, 1883, he was married to Mrs. Sallie (Moore) Wooten of Moon Lake, Miss. From 1887 to 1895 he served as representative, senator, attorney-general, and governor. His administration as governor was uneventful except for the passage of some populist legislation, such as a law to tax national-bank-notes and United States treasury notes in circulation as currency. He declined a second term and in 1897 moved to Little Rock and resumed the practise of law. In 1903 he was elected to the United States Senate as a Democrat to succeed J. K. Jones and was reelected in 1909. In 1914, under popular election, he narrowly missed defeat in the Democratic primary, but was triumphantly elected at the general election. In 1913 he was elected president pro tempore of the Senate and was reelected in 1915, although he had opposed some of the administration measures and did not always vote with his party. During his first term in the Senate his "unqualified independence" caused him to break with his party in its opposition to Roosevelt's policy on Panama Canal legislation, and the President declared that Clarke was largely instrumental in securing its passage. He supported the Bristow amendment for popular election of United States senators with federal control, although his party was for state control. He contributed largely to the defeat of the Ship Purchase Bill (1915), an administration measure, and secured several important modifications in the bill before it was finally passed. He bitterly opposed the Adamson eight-hour law (1916), another administration measure, in which he was supported by only one Democratic senator. He was an ardent advocate of Philippine independence and pushed through the Senate a bill promising independence in a short time, but it failed in the House. Although Clarke was somewhat conservative in certain things he was progressive in others. He favored full control of the railroads. When the Hepburn Bill (1906) was under consideration he advocated physical valuation as a basis for rate making, the giving of the Interstate Commission final power over rates without any right of appeal to the courts, and the prohibition of any preliminary injunction against the enforcement of new rates proclaimed by it (Congressional Record, 50 Cong., 1 sess., pp. 6104-27). In 1908 he opposed the Aldrich Currency Bill as premature. He voted for the exclusion of Reed Smoot and William Lorimer. He supported employers' liability and workmen's compensation legislation, the exemption of farmers and laborers from the anti-trust law, the literacy test for immigrants, and the taxation of trading in cotton futures. He served on several important committees, being chairman of the Committee on Commerce. He made few set speeches, but participated freely in debate and exercised considerable influence on legislation. He died at Little Rock and was buried in Oakland Cemetery.

D.Y.T.

CLARKE, JOHN (Oct. 8, 1600–Apr. 28, 1676), Baptist clergyman, statesman, was the son of Thomas and Rose (Kerrick) Clarke. His maternal grandfather was William Kerrich, of a Suffolk family, while the Clarkes belonged to Bedfordshire. John was born in Westhorpe, Suffolk, the sixth of eight children and the midmost of five sons, four of whom ultimately settled in Newport, R. I. No definite contact with any educational institution has been traced unless a John Clarke of the University of Leyden is to be identified with him; but his intellectual outlook reveals a breadth of view not entirely
Clarke

ascribable to self-training, while various evidences point to some erudition. He was probably married before he left England; his first wife, Elizabeth Harris, may have brought him some dowry. Much later a legacy came from her father out of the manor of Wrestlingsworth.

Clarke landed in Boston in November 1637, just after the General Court had taken its last rigorous action against the Antinomians. His unselfishness stands out clearly as he placed himself among the defeated supporters of the "covenant of grace," who recognized him at once as a leader. He and the others went first to Exeter, N. H., and in the next spring he went with a party to Providence, where they were courteously received by Roger Williams, with whom they conferred about their plans. The result, after Clarke had consulted with the Plymouth authorities, was the decision to settle at Aquidneck. Clarke was one of eighteen who on Mar. 7, 1638, signed a compact incorporating themselves into a body politic. Although Codington was selected as governor, Clarke, as physician and preacher, was equally a leader. A year later, these two with a few others moved to the southern end of the island, settling Newport. Clarke's original relations with the Baptists are as obscure as is the early history of the church at Newport. He may have had contact with Anabaptists in Holland; he may have been among those in Rhode Island who, according to Winthrop, "turned professed anabaptists" in 1641. From 1644, at the latest, he was pastor of the Baptist Church in Newport.

The best-known incident in the career of Clarke was his visit with John Crandall and Obadiah Holmes to Lynn, Mass., when on July 20, 1651, while holding a religious service in the house of William Witter, a non-resident member of the Newport church, they were arrested. Brought first to the public service of worship, where Clarke expressed "his dissent from their order," the next day they were taken to Boston for trial. The specific charges against Clarke were unauthorized preaching, disrespect in the assembly of worship, administering the Lord's Supper to persons under discipline, and denying the lawfulness of infant baptism. All three were sentenced to be fined or be whipped. A friend, without Clarke's knowledge, paid his fine of £20.

Later that same year, Clarke was sent with Roger Williams to England to protect the interests of the colony. In this they were so successful that Williams soon returned to America, but Clarke remained for ten years or more. In the fall of 1654 the assembly of freemen sent him a letter of thanks. A recent writer ("The English Career of John Clarke," Baptist Quarterly, 1923, pp. 192 ff.) ingeniously identifies Clarke with a man who was somewhat implicated in the Fifth Monarchy movement, but by the time of the overthrow of the Venner rebellion had completely dissociated himself from the extremists.

It seems doubtful, however, whether the Rhode Islander would have proceeded so rapidly in his task of securing the charter for that colony if he had not been quite free from political suspicion. Of greater importance is the charge that Clarke was willing to use unworthy methods to advance the interests of Rhode Island. The basis of the charge is probably the pique of some Massachusetts leaders at his diplomatic successes, and at the worst, it represents his enemies' interpretation of an attitude capable of a quite different explanation. It is possible that Clarke returned to America for a short time in 1661; he was in England on Apr. 7, 1663, when he had in his possession the agreement with Connecticut as to the boundary between that colony and Rhode Island. During this year he was largely instrumental in securing the royal charter for Rhode Island. He returned to Newport in 1664, when he again received the thanks of the colony. While continuing to serve as minister and physician, he was elected to the General Assembly and thrice was elected deputy governor. He retired from political activity in 1672. The previous year he had married, as his second wife, Jane Fletcher, who died within about a year; soon thereafter he married Sarah Davis, who survived until 1692.

The democratic character of the charter of Providence Plantation (1647) and of the Code of Laws at once adopted is traceable fully as much to Clarke as to Williams. Captious criticism has interpreted the recognition of the authority of Christ in the Compact of Mar. 7, 1638, as a limitation even upon toleration; but Clarke's attitude in Boston earlier and his influence later upon the legislation in Rhode Island show that for him nothing less than liberty of conscience was compatible with that authority; while his petition to King Charles II (probably 1662) contained the immortal sentiment—"a most flourishing Civill State may stand, yea, and best be maintained . . . with a full liberty in religious concerns" (Records of the Colony of Rhode Island and Providence Plantations, vol. I, 1856, pp. 485-91).

The Story of Dr. John Clarke (1915), by T. W. Bicknell is more pretentious than satisfying. Clarke's
Clarke

III News from New Eng. (London, 1652, reprinted in Mass. Hist. Soc. Colls., 4th ser., vol. II, 1854) is to some extent autobiographical and embodies his account of the Lynn episode. This affair is most fully treated in H. M. King, A Summer Visit of Three Rhode Islanders to the Mass. Bay in 1631 (1896). The criticism of Clarke's conduct in England may best be traced in Jas. Grahame, Hist. of the U. S. (2nd ed., 1856, 1, 224 ff); there is nothing to substantiate Chalmers' statement upon which Grahame relied. A Concordance of the Bible which Clarke prepared and which was licensed for printing seems not to be extant; it has sometimes been confused with Holie Oyle for the Lampes of the Sancturie (London, 1630), an earlier work by an Anglican divine of the same name. The Newport Hist. Soc. has considerable material, including Clarke's will and a Life of Clarke (MS.) by the Rev. Samuel Adlam, but this contains little information not otherwise available.

W. H. A.

CLARKE, JOHN MASON (Apr. 15, 1857– May 29, 1925), paleontologist, was born one of six children, in Canandaigua, N. Y. His father was Noah Clarke whose ancestors William Clarke and his wife Sarah came to America in 1630 on the sailing vessel William and John and settled in 1636 in Dorchester, Mass. His mother was Laura Mason (Merrill) Clarke of Castleton, Vt., whose ancestors were among the Mayflower company. John Clarke's scientific tendencies were early manifested and doubtless in part inherited, for his father for fifty years taught the sciences in Canandaigua Academy of which he was principal. Environment was, however, also favorable. "Born of a father who was a lover and teacher of nature, and in a village whose rocks are replete with Devonian fossils, he began collecting the latter when he was but six years of age" (Schuchert, post). He received his early training at the Canandaigua Academy and entered Amherst College in 1874 to graduate in 1877. During the following year he taught in the Canandaigua Academy, but in 1878 returned to Amherst as a temporary assistant to Prof. B. K. Emerson. In 1880 he taught science classes in the Utica Free Academy whence he was called to become instructor in geology, mineralogy, and zoology at Smith College. At the end of the college year (1883) he went abroad, studying with Prof. von Koenen in Göttingen, returning in the autumn of 1884 with the expectation—unrealized—of resuming his teaching at Smith. The year was spent in lecturing on science and teaching German in the Massachusetts Agricultural College. On Jan. 1, 1886, he received an appointment as assistant to Prof. James Hall, state paleontologist, at Albany, N. Y. Here he continued for the remainder of his life, teaching also in the Rensselaer Polytechnic Institute, and on Hall's death in 1898 succeeding him as state paleontologist. He was instrumental in bringing about the mapping of nearly one-half the sta-

Clarke

tion on a scale of one mile to the inch and brought the knowledge of New York geology and its mineral industry to a condition of which it may be said that "no equal area in America is so completely known and understood." He was also in 1904 made director of the State Museum and of the Science Department, University of the State of New York. Under his direction was completed the new museum building in 1913 and the installation of its collections, forming what has been said to be the best State Museum in America, containing upward of 7,000 types of specimens of invertebrate fossils invaluable to the scientific worker, and a remarkably fine series of restorations of early geological invertebrate forms. A reproduction to scale of the Gilboa Devonian forest furnishes an unrivaled picture of the oldest forest known.

Clarke was a man of culture, a ready speaker and toward the latter part of his life a writer of no ordinary charm and ability. He became one of the world's authorities on the Devonian Age and the author of some 150 papers on various scientific subjects. He received the Hayden Gold Medal of the Philadelphia Academy of Sciences, the Spindaroff prize of the International Geological Congress in Stockholm, the Thompson Medal for distinguished service in geology from the National Academy of Sciences and the gold medal of the Wild Life Permanent Protective Fund. He was the recipient of numerous honorary degrees and belonged to nearly a score of learned societies. A delightful conversationalist and good raconteur, he was usually in amiable mood but was capable of intense likes and dislikes and was a master of sarcasm. He was twice married: first to Mrs. Emma Sill, née Emma Juel of Philadelphia; second to Mrs. Fannie V. Bosler, also of Philadelphia.

G. P. M.

CLARKE, JOHN SLEEPER (Sept. 3, 1833– Sept. 24, 1899), actor, theatrical manager, was born in Baltimore, Md., of English parents, the grandson of Stephen Clarke, a London merchant. He was educated in a private school and studied law in the office of a Baltimore attorney, but having acquired a taste for dramatics, he began his career as a comedian at the Howard Athenæum (Boston) in Paul Pry (1851) and in 1852 appeared in She Would and She Would Not at the Chestnut Street Theatre in Philadelphia, where he later succeeded the elderly John Drew [q.v.], as principal comedian (1853). He then
became low comedian at the Front Street Theatre in Baltimore (1854), took the rôle of Diggory in The Spectre Bridgroom at the Metropolitan Theatre in New York (May 15, 1855) and returned to Philadelphia as leading comedian at the Arch Street Theatre (August 1855), which theatre was afterward leased by Clarke and William Wheatley (June 1858). On Apr. 28, 1859, Clarke married Asia, daughter of Junius Brutus Booth [q.v.]. Retiring from the management of the Arch Street house in 1861 he went to New York, where he appeared in Babes in the Wood (Apr. 1, 1861) and The Toodles (Aug. 19, 1861), which latter performance established his reputation. The Winter Garden reopened Aug. 18, 1864 under the management of William Stuart, with Clarke in the rôle of Maj. Wellington de Boots in Stirling Coyne’s Everybody’s Friend. Clarke and Edwin Booth [q.v.] then went into partnership with Stuart, Clarke selling out to Booth shortly before the destruction of the theatre by fire in March 1867. For a number of years Booth and Clarke controlled the Walnut Street Theatre in Philadelphia, where Clarke frequently appeared in The Toodles, as Asa Trenchard in Our American Cousin, and in many other plays, occasionally making trips through the South. For one season (1866-67) the two controlled the Boston Theatre. On Oct. 16, 1867 Clarke made his first London appearance at the Royal St. James’s Theatre as Maj. de Boots in a new version of Everybody’s Friend, rewritten for him by Coyne and renamed A Widow Hunt. He then played Bob Tyke in The School of Reform (Nov. 20, 1867) and appeared at the Royal Princess’s Theatre as Salem Scudder in The Octoroon (Feb. 10, 1868), after which he made a tour of Great Britain and Ireland. Returning to London for an engagement at the Royal Strand Theatre (Nov. 6, 1868-Mar. 18, 1870), he played Maj. de Boots in A Widow Hunt, Gosling in Fox v. Goose, Babington Jones in John Brougham’s Among the Breakers (166 nights), Timothy Toodles in The Toodles (201 nights), and Dr. Pangloss in The Heir at Law. He then crossed the Atlantic to play The Toodles and A Widow Hunt at Booth’s Theatre in New York (Apr. 18, 1870), made a tour of the principal American cities, and returned to London to appear in The Heir at Law (July 29, 1871) for 150 nights and in the ever popular Toodles at the Royal Strand. He then made another trip to the United States, after which he played Dr. Ollopod in The Poor Gentleman at the Royal Strand (Mar. 9, 1872) and opened the Charing Cross Theatre, Nov. 7, 1872, playing Bob Acres in The Rivals. He later took over the Holborn Theatre, which he opened Apr. 4, 1874, appearing as Phineas Pettiphogge in The Thumb-screw. In the autumn of 1878 he assumed the management of the Theatre Royal, Haymarket, where he resuscitated The Rivals (Oct. 3, 1878), after which he produced The Crisis (Dec. 2, 1878) and Albery’s adaptation of Les Four-chambault (Apr. 14, 1879), the latter being a failure. Rewritten and produced as Brag (June 12, 1879), its immediate failure caused a sudden revival of Dion Bouiccault’s The Life of an Actress four days later. Clarke then sold the Haymarket and later went to Philadelphia to take over the Broad Street Theatre (1881). In England once more he divided his time between English country theatres and the Royal Strand in London, where his occasional appearances included The Heir at Law (Nov. 18, 1882), The Comedy of Errors (Jan. 18, 1883), A Widow Hunt (Apr. 25, 1885), and Cousin Johnny (July 11, 1885). He retired from the stage in 1887 but ten years later assumed the management of the Strand, where he produced The Prodigal Father (Feb. 1, 1897).

Clarke had a rare command of an audience, his spectators delighting in his exuberant humor, droll transitions of expressions and oddities of accent. His intense earnestness made a ludicrous, eccentric character seem natural, for his mimicry was not merely of clothes but of character and modes of thought and feeling. He was more successful in presenting characters in old comedy than in creating new parts.

F. E. R.

CLARKE, JONAS. [See Clark, Jonas, 1730-1805.]

CLARKE, JOSEPH IGNATIUS CONSTANTINE (July 31, 1846-Feb. 27, 1925), journalist, playwright, was born at Kingstown, near Dublin, Ireland, the son of William and Ellen (Quinn) Clarke. His father, a barrister, died while James was still a small boy, and in 1838 the mother moved with her children to

157
Clarke

London. James had attended several Catholic schools in Ireland; in London he managed to get a little more instruction, including some French and Latin, before going to work in the shop of the Queen's Printers. In spare hours he explored the city, delighting as an imaginative boy would in its museums and galleries, its venerable buildings, and its ceaseless, surging crowds. In his sixteenth year he obtained, by a stroke of good luck, a sinecure in the Civil Service, and a career of unruffled though frugal respectability seemed opening before him when his Irish patriotism drew him in 1865 into the Fenian movement. For a time he was by day a sleek, top-hatted young clerk in the Home Office, and by night a hirsute, collarless ruffian who was one of the two "head centers" in London of the Irish Republican Brotherhood. He was working with admirable impartiality and efficiency for both Government and its enemies when the disastrous Clerkenwell explosion of Dec. 13, 1867, which according to his own story (post, pp. 43-59) he had done his best to prevent, aroused the authorities. Before long the trail led to his door. Clarke, however, was foolhardy enough to continue in his position, and when he did make his escape to Paris in February 1868 it was by a nip-and-tuck race with the police.

Paris offering at best a precarious livelihood, he went in April to New York, where he was met by his eldest brother Charles, and soon found work on the Irish Republic, a weekly paper. That autumn he was inveigled half-jokingly into making a speech or two for Grant and Colfax, attracted the attention of Republican managers, and was sent to Missouri on a speaking campaign. After the election he began writing at space rates for the New York Herald, was taken on the staff, went to the Pacific coast in 1871 to report a murder trial and to interview Brigham Young, and continued on the Herald until 1883, acting in turn as night, dramatic, literary, musical, and sporting editor, and displaying a resourcefulness and versatility that gave him a high reputation among newspapermen. He was managing editor of Albert Pulitzer's Morning Journal 1883-95, editor of the Criterion, a literary and weekly paper, 1898-1900, Sunday editor of the Herald 1903-06, and publicity director of the Standard Oil Company 1906-13. His career as a playwright began with Heartease (in collaboration with his friend Charles Klein) in 1896; his other stage plays were: For Bonnie Prince Charlie, The First Violin, Her Majesty, Lady Godiva, The Great Plumed Arrow, and The Prince of India. He was also the author of: Robert Emmet, A Tragedy (1888), Malmorda, a Metrical Romance (1893), The Fighting Race and other Poems and Ballads (1911), various occasional poems, and Japan at First Hand (1918), based on materials gathered during a trip to the Orient in 1914. His best-known poem, "The Fighting Race" (in the New York Sun, Mar. 17, 1898) was prompted by the list of Irish dead in the battle-ship Maine. Its refrain: "Well, here's thank God for the race and the sod! Said Kelly and Burke and Shea," was greatly admired in Irish-American literary circles. His last public appearance was at a dinner given in his honor at the Hotel Astor, Feb. 28, 1924, by the American Irish Historical Society, of which he had been president 1913-23. He died a year later, after a lingering illness, and was survived by his wife, Mary Agnes Cahill, whom he had married in New York, June 18, 1873.

G. H. G.

CLARKE, MARY BAYARD DEVEREUX

(May 13, 1827—Mar. 30, 1886), author, was born in Raleigh and died in New Bern, N. C. Her parents were Thomas Pollock Devereux, of North Carolina, and Katherine Anne Johnson of Connecticut. She was descended from many distinguished ancestors, among whom, in addition to five colonial governors, were Jonathan Edwards and Dr. Samuel Johnson, first president of what is now Columbia University. When her mother died the child was still young, and her father, a lawyer and planter of considerable wealth, employed an English governess to superintend her education. It is said that this personage at length subjected her charge to the full course of instruction prescribed at Yale. She learned to read with discrimination and to write gracefully. She had some command of modern languages, and she conversed with so much erudition, yet so much gaiety, that she impressed acquaintances as one of the few women in America who, "without being a blue-stock- ing, was thoroughly educated." In 1848, she married William J. Clarke. In 1854, she published Wood Notes, a collection of North Carolina poetry, some of which, under her pseudonym, Tenella, she had written herself. Her contributions are romantic and imitative, but at times, in their reference to North Carolina, they give evidence of a wholesome clarity of outlook. An indisposition which was declared tubercular
Clarke

in origin caused her to spend the winter of 1854-55 in Havana—a residence described in her "Reminiscences of Cuba," published in the Southern Literary Messenger, September-December, 1855. Here she danced much, rode horse-back, and attended countless plays and parties, but she was none the less glad, when the climate of San Antonio was judged better for her, to forsake a "land of despotism for the home of liberty and equal laws." That liberty, under the frontier and half-military surroundings in which she and her family found themselves, proved in the event sometimes more inclusive than she had anticipated. At the outbreak of the Civil War, her husband went into the Confederate army, and she with her four children returned to North Carolina. Here she wrote quantities of patriotic verse, which appeared from time to time in the newspapers. Much of this, 'along with other work, was published in 1866 as Mosses from a Rolling Stone or Idle Moments of a Busy Woman. The war having destroyed her family's one-time affluence, she recognized that she was under the necessity of earning money, and followed this necessity arduously but bravely for the remainder of her life. In 1865 she became for a while an editor of the Southern Field and Fireside. Later she contributed to The Old Guard and The Land We Love, and she reviewed books for Harper, Appleton, and Scribner. She published a long narrative poem, Cyliee and Zenobia (1871), translated a French novel, composed a libretto, Miskedced, and wrote "Sunday-school hymns at five dollars a piece." Poverty and illness caused her great despondency, from which, though always a faithful Protestant, she sought relief at times from Rome and at other times from the Ethical Culture Society. She became paralyzed, and a month before her death her husband succumbed to an illness which had long held him powerless.

J. E. Reade in J. Raymond, Southland Writers (1870); W. Hall, in M. B. Clarke, Poems (1905); B. L. Whitaker in E. A. Alderman and J. C. Harris, Lib. of Southern Lit. (1907), II, 915-35J. D. W.

CLARKE, MARY FRANCIS (Mar. 2, 1803-Dec. 4, 1887), Roman Catholic nun, was born in Dublin, Ireland, the daughter of Cornelius and Catherine (Hyland) Clarke. Her mother was the daughter of an English Quakeress; her father was a prosperous dealer in leather. A fire, however, destroyed most of his property, and anxiety brought on a paralytic stroke that left him for the rest of his life an invalid. On Mary, the eldest of his four children, fell the burden of supporting the family. She took charge of the leather business and carried it on successfully. While ministering to victims of the cholera epidemic of 1831 she became acquainted with Margaret Mann, Rose O'Toole, Elizabeth Kelly, and Catherine Byrne, who like herself were inclined toward the life of a religious. Under her leadership they opened "Miss Clarke's School" on Mar. 19, 1832, for Catholic children who were too poor to attend a convent school. Their undertaking prospered, but persuaded by an American priest that in the New World was a larger opportunity to serve God the little group migrated in 1833 to America, the voyage from Liverpool to New York occupying fifty-one days. As they were about to land at New York their store of money rolled out of their purse and was lost overboard. Undaunted by this misfortune they proceeded to Philadelphia, as they had planned, and there on Sept. 10, 1833, they first met Terence James Donaghoe, an Irish priest and a man, among other virtues, of remarkable discernment in things spiritual. He secured their services as teachers in his parish, and under his inspiration and guidance the informal community became, with the consent of Bishop Kenrick, the Sisters of the Blessed Virgin Mary. The act of consecration was performed on All Saints' Day, 1833. Father Donaghoe became Director of the Order, and Sister Mary Clarke its Superior. Father Donaghoe drew up the constitutions of the Order. Until 1843 the Sisters lived in Philadelphia, maintaining their school and contending with a poverty that sometimes meant actual hunger. In June 1843, at the pressing invitation of Bishop Matthias Loras, five of the Sisters went to Dubuque, Ia., and so evident was the need of them in the western diocese that the rest followed before the end of the year. Father Donaghoe was made vicar-general of the diocese. Dubuque was then a frontier settlement of some 700 people; wolves and Indians still roamed the prairie. Amid these primitive conditions the Sisters devoted themselves to teaching, and although their convent was burned by a crazed incendiary May 22, 1849, the Order grew in numbers and effectiveness. It received several testimonies of Papal favor, the Decree of Final Approbation and Confirmation being issued by Pope Leo XIII on Mar. 15, 1885. Mother Clarke led a life hidden entirely from the world and largely even from her own Sisters, but the order that she founded is some index of her character. Charity, simplicity, and humility are the virtues enjoined on its members, with absence of censoriousness as
the form of charity especially to be cultivated.

[In the Early Days: Pages from the Annals of the Sisters of Charity of the Blessed Virgin Mary (1912); minor accounts in E. T. Dehuy, ed., Religious Orders of Women in the U. S. (1913), and in F. T. Oldt, ed., Hist. of Dubuque County, Iowa (n.d.).] G. H. G.

CLARKE, MCDONALD (June 18, 1798–Mar. 5, 1842), the "Mad Poet," was born in Bath, Me.; but, by the age of nine, he was living in New London, Conn., sheltered by his mother, with John G. C. Brainard [q.v.] as playmate. In manhood, Clarke remembered his boyhood as an unhappy one, on account of peculiarities of his own that made him subject to the taunts of other boys. When he was twelve, the death of his mother left him alone, grief-stricken, and apparently without resources. Nothing is known of the interval following until his appearance on Broadway in New York on Aug. 13, 1819. Here he soon became a familiar figure about town: tall and slight in body, with a striking face, well-formed mouth, aquiline nose, grayish-blue eyes shadowed with melancholy, characteristically clad in a long dark-blue frock coat with a large turn-over collar enlivened by a red silk neckerchief. His personality was vivid and his temperament volatile. Music could affect him to tears, social injustice or fashionable folly to wrath; and suffering to sympathy or sentimentality. Terse and witty in repartee, he easily routed those who attempted to make sport of his eccentricities. Not even his friends knew where to draw the line in his case between mild insanity and deliberate pose, but the character of his madness in later life dispels the idea that he was a mere poseur. His insanity, however, was harmless to others and he possessed no vices. He attended the fashionable Grace Church on Broadway regularly. His marriage to Mary Brundage, an actress, which was opposed by her mother, was accomplished by elopement. Their extreme poverty finally made separation necessary. Clarke, constantly penniless and living often on the bounty of his friends, impoverished himself by a generosity, frequently freakish, to those more in need than himself. Friendly by nature, he sought to cultivate companionships which his mental disorder intervened to limit. Nevertheless he won a measure of regard from Fitz-Greene Halleck who frequently helped him over hard places, and commemorated him in a humorous poem, "The Discarded." During the last year of his life, Clarke became almost constantly insane; and, on Mar. 5, 1842, he was drowned in water running from an open faucet in a cell of the Asylum on Blackwell's Island. He seems to have been a prolific writer, but much of his verse received only ephemeral publication, and in consequence most of the editions are now rare. Any object or incident in his neighborhood could form the nucleus of a poem, and many a belle of the town, not always to her delight, found herself the subject of his writings. His verse is frequently grotesque in its irregularity, expressing scornful and even violent indignation against snobbery or social injustice; but it is also often genuinely humorous, tender, or intelligent satirical. Little or none of his verse is remembered to-day save the couplet:

"Now twilight lets her curtain down
And pins it with a star."

[A brief essay on Clarke is to be found in Jas. Grant Wilson, Bryant and His Friends (1886), pp. 398–99. The most complete biographical account is contained in an article by Wm. Sidney Hillyer in the Mo. Illust. Review, XII, 357. Some facts may also be gleaned from Clarke's prefaces to his publications, which include the following: A Review of the Eve of Eternity and other Poems (1820); The Elfish of Moonshine (1822); The Gossip; or, a Laugh with the Ladies, A Glimpse at the Gentlemen and Burlesquers on Byron, A Sentimental Satire; with Other Poems: in a Series of Numbers, No. 1 by McDonald Clarke (1823); Sketches (1826); Afara, a Poem (1826); Death in Disguise; a Temperance Poem, from The Miss. of Mr. McDonald Clarke (1833); Poems of McDonald Clarke (1836); and A Cross and a Coronet (1841). Duymckinck also lists Afara, or the Belles of Broadway (2nd series, 1836.)

A. L. B.

CLARKE, REBECCA SOPHIA (Feb. 22, 1833–Aug. 16, 1906), writer of children's books under the pseudonym Sophie May, was born in a white-columned, red brick house, with a background of hills, in Norridgewock, Me., on the Kennebec River, and there she made her home during her seventy-three years of life. Her parents were Asa and Sophia (Bates) Clarke, both descended from pioneer settlers of that portion of the Massachusetts Colony which later became Maine. She attended the Norridgewock Female Academy where she was considered a precocious child, and her journal, kept between the ages of nine and eleven, contains comments on sermons, debates, and lectures on astronomy and phrenology. An early tendency to verse-making was discouraged by her mother, for which she was afterward grateful. Tutors of Greek and Latin completed her formal education. At eighteen she secured a position to teach in Evansville, Ind., the home of a married sister. Growing deafness caused her resignation and her return to her birthplace, where, at the age of twenty-eight, she wrote her first article, at the request of a friend in Memphis, Tenn., using the nom de plume Sophie May. Her first stories were written for the Little Pilgrim, edited by Grace Greenwood, and became the Little Prudy series, which when published in book
Clarke

form brought her only fifty dollars a volume. Other stories were written for the Congregationalist. When her Dotty Dimple books were ready for publication, she was offered a hundred dollars a volume, but by this time she had become more sophisticated and secured a ten per cent basis. She wrote over forty books for children, of which the most successful, in six volumes each, are: Little Prudy Stories (1863-65); Dotty Dimple Stories (1867-68); Little Prudy's Flyaway Series (1870-73); Quinnebasset Series (1871-91); Flaxie Frizzle Stories (1876-84); Little Prudy's Children Series (1894-1901). Several novels for adults, among them Drone's Honey (1887) and Pauline Wyman (1897), met with slight success. The characters in her stories were all drawn from life, the adults from Norridgewock people, the children from her own nephews and nieces, and Norridgewock furnished nearly all her settings. The boys and girls of her books are natural, fun-loving, sometimes naughty beings, instead of the stiff perfecions of most juvenile literature of her time. Thomas Wentworth Higginson said: 'Real genius came in with Little Prudy.' Children of a later day, however, care little for Sophie May's books, with their lack of plot, their "baby talk," and their obvious moralizing. Rebecca Clarke was in her youth considered beautiful; she had wavy black hair, very dark blue eyes, and an expression which showed kindly interest in others and zest in life on her own account. She and her sister, Sarah J. Clarke, with whom she lived, were concerned in all activities for the welfare of their native town. They often spent their winters in Baltimore, or California, or Europe, but the summers always brought them back to Norridgewock. Shortly before her death in the old family home, Rebecca Clarke purchased and presented to Norridgewock a handsome building for a public library.

S.G.B.

Clarke, Richard

(May 1, 1711-Feb. 27, 1795), Boston merchant, Loyalist, was the son of William and Hannah (Appleton) Clarke of Boston, where he was born, and not, as sometimes stated, of Francis Clarke of Salem. On May 3, 1733 he married Elizabeth Winslow who has been variously said to be the daughter of Edmund, Isaac, and Col. Edward Winslow. It is probable that she was the Elizabeth, daughter of Edward Winslow and Elizabeth his wife, whose birth of Feb. 16, 1712 is recorded in the Boston records (Boston Births, 1700-1800, p. 87). Both Richard Clarke and his wife were of distinguished ancestry and occupied high social position. Richard had graduated from Harvard in 1729 and became one of the most prominent merchants in Boston, his firm at the time of the Revolution including his two sons, Jonathan and Isaac, under the name of Richard Clarke & Sons. Jonathan was in London in 1773 and Richard Clarke & Sons were named as factors for the East India Company and were among the consignees of the tea which was thrown into Boston Harbor in December of that year. On Nov. 2, they had received a letter signed "O. C.,” ordering them to appear at the Liberty Tree the following Wednesday at noon to make a public resignation of their commission as factors. On Wednesday morning some of the other consignees, including Thomas Hutchinson, Benjamin Faneuil, and Joshua Winslow, met the Clarke's at their warehouse in King St. A mob of about five hundred had gathered at the Liberty Tree and, as the merchants did not appear, a considerable number gathered in front of the warehouse. Nine of them went in as emissaries to induce the merchants to yield, and, when they refused to do so, the mob attempted to storm the building but was repulsed. When Jonathan arrived from England there was a gathering of friends at the Clarke's house in School St. to welcome him, which was the occasion of another attack by the mob. The Clarke firm at first refused to sign the Non-Importation Agreement, but afterward consented. Richard Clarke was also one of the signers of the Address to Gen. Gage. The family had become extremely unpopular with the Whigs, and when, on one occasion, Isaac went to Plymouth to collect some debts, he was attacked and forced to make a midnight escape. Susannah Farnum Clarke, one of Richard's four daughters, had married John Singleton Copley [q.v.], the artist, in 1769 and had gone to live with him in London. In view of the growing difficulties in Boston, Clarke decided to go to England also, and after a remarkable voyage of only twenty-one days landed there on Dec. 24, 1775, and, until his death, lived at Copley's house. With one of his sons he joined the Loyalist Club of London. The family was on the American proscription lists, but in his will Clarke disposed of considerable property, including Bank of England stock and American securities.

161
Clarke

J. T. A.

CLARKE, ROBERT (May 1, 1820—Aug. 26, 1899), publisher, the son of Peter Clarke and Margaret (Henderson) Clarke, was born in Annan, Dumfrieshire, Scotland. In 1840 he came with his parents to Cincinnati where he was educated at Woodward College. He soon displayed an interest in literary and scientific subjects, and as bookkeeper for William Hanna probably developed the neat, methodical habits so characteristic of the later man. His first venture into the business field was the opening of a second-hand book-shop at the corner of Sixth and Walnut Sts., which in time became the favorite resort of literary men in the city. With the retirement of the publishing firm of H. W. Derby in 1858 Clarke succeeded to their business and organized the firm which in 1894 was incorporated as the Robert Clarke Company. The directors of the new company were all members of the old firm. Under the skilful guidance of its organizer, the Robert Clarke Company became an influential power in the publishing world, especially in the West. It was the first company "to import books in any considerable number from Europe to the Ohio Valley" and "the leading firm in the West for the publication of law books." One of Clarke's business proverbs was: "Keep a little ahead of the public," and this he endeavored to carry out (W. H. Venable, post, p. 21). He specialized in bibliographies, especially in the fields of American history and archæology, and how well the firm succeeded in its efforts is evidenced by the fact that Justin Winsor declared that the Americana catalogues of the Robert Clarke Company were the most complete published in America (Winsor, Narrative and Critical History of America, vol. IV, 1884, p. 198). In addition to his activities in the printing, binding, and bookselling trade Clarke was both author and editor. He wrote a pamphlet entitled, The Pre-Historic Remains Which Were Found on the Site of the City of Cincinnati, Ohio, with a Vindication of the Cincinnati Tablet (1876), and edited, in large part, the Ohio Valley Historical Series, in seven volumes (1868–71), published over the protests of his partners. The collection and publication of this series was probably his best work. His love of books caused him to be an indefatigable collector of rare Americana. Ex-President R. B. Clarke

Hayes was the purchaser of one of his collections and another, consisting of over 6,000 volumes, was sold to William A. Proctor who presented it to the University of Cincinnati. In 1896 Clarke retired from business, made a tour of the globe, and devoted his remaining years to study and writing. Always interested in furthering the advancement of history and literature, he made his home in Glendale a center of intellectual activity; his modest, unassuming manner attracted a host of friends. He died unmarried.

[The best sketch of Clarke's life is the article by Wm. H. Venable in In Memoriam: Being a Condensed Account of a Meeting of the Members of the Glendale Lyceum and Other Friends of the Late Robert Clarke Held in His Memory at Glendale, Oct. 7, 1899; see also C. F. Goss, Cincinnati, the Queen City (4 vols., 1912); article on Clarke in Ohio Arch. and Hist. Quart., Apr. 1900; Cincinnati Enquirer, Aug. 27, 1899.]

R. C. M.

CLARKE, THOMAS SHIELDS (Apr. 25, 1860–Nov. 15, 1920), sculptor and painter, son of Charles J. and Louisa (Semple) Clarke, was born in Pittsburgh, Pa. He entered the School of Science at Princeton in 1878 where he remained for the full four years though he did not receive his degree of B.S. until 1892. While at Princeton he was instrumental in establishing the college comic paper, the Tiger, and later when studying at the Art Students' League in New York he did illustrations for various magazines. After a year in New York he went to Paris where he studied drawing at the Académie Julien under Boulanger and Lefebvre. For three years he was at the Ecole des Beaux Arts studying under Gérôme, after which he sought instruction under Dagnan-Bouveret. He likewise spent some time in Rome and Florence. But painting soon became of secondary importance to him, and sculpture began to occupy more and more of his time. He exhibited at a number of Salons, at first only paintings: "The Milk Path, Holland," Salon of 1885; "A Fool's Fool" (now in the Pennsylvania Academy), Salon of 1887; "Night Market, Morocco" (Philadelphia Art Club), Salon of 1892. To the Salon of 1893 he sent a plaster fountain group, "The Cider Press," the bronze of which is now in Golden Gate Park, San Francisco. A smaller group of the same subject had been awarded a medal of honor at the Madrid International Exhibition of the year before. To the Chicago Exposition of 1893 he sent, besides the bronze group of "The Cider Press," a number of paintings: "A Fool's Fool" and "The Night Market," which had already been exhibited in Paris; "A Gondola Girl"; "Portrait of Madame d'E."; "Morning, Noon and Night," a triptych which was awarded a medal. Medals were also given him at Atlanta, San Francisco, and
Clarke

Charleston. For the temporary arch erected in New York in honor of Admiral Dewey's return he executed the statue of Commodore McDonough. He designed, for the gunboat Princeton, a bell which was given by the Princeton alumni. One of his most important commissions was for four caryatids, representing the seasons, on the Appellate Court Building, New York (c. 1899). Belonging to his mature style also is the "Alma Mater" at Princeton. Work of a different sort was the mural decoration of the library of a private house in Pittsburgh.

In 1887 Clarke had married Adelaide Knox at Geneva, Switzerland. There is still record of a painting in which he used her and their little girl as models. Although he did not have to depend on his profession for his means of support, he was extremely industrious. At one time he had a home at Lenox, Mass., but he never lost touch with New York, where he became a member of the National Sculpture Society in 1803, of the Architectural League in 1898, and an associate of the National Academy of Design in 1902. He was a member of the Princeton, Century, and Salmagundi clubs. It was in New York, at the Post-Graduate Hospital, that he died.

E.G.N.

CLARKE, WALTER (c. 1638–May 23, 1714), colonial governor of Rhode Island, was the son of Jeremiah (or Jeremy) Clarke and his wife Frances (Latham) Dungan, the former of East Farleigh, Kent, and the latter of Kempston, Bedford, England. Jeremiah came to New England about 1637 and settled at Newport, R. I., where Walter was born. The son became prominent in the colony and was an office-holder most of his life. He was a deputy in 1667, 1670, 1672 and 1673; an assistant in 1673-75 and 1699; deputy-governor from May 1679 to May 1686 and from May 1700 to his death in 1714; he also served as governor from May 1676 to May 1677, from May 1686 to June 29, 1686 (when the charter was suspended), and from January 1696 to March 1698.

On Dec. 22, 1686, Sir Edmund Andros [q.v.] named him as one of the seven men from Rhode Island to serve on his Council, and eight days later demanded of them the delivery of the colonial charter. Clarke and his colleagues replied that it could not be brought from Newport because of the bad weather. In November of the following year when Andros went to Rhode Island with the intention of obtaining possession of the charter, Gov. Clarke sent it to his brother with orders that it should be hidden in some place outside the Governor's knowledge, and when Andros was courteously entertained at the Governor's house, the document could not be found. The Governor, however, surrendered the seal of the colony, which Andros broke. When Andros left, the charter was returned to Clarke, who retained it until the fall of Andros. He declined to surrender it to a committee of the Assembly (though he told them they might break into the chest which contained it) and he did not deliver it up until after the election of May 1690.

After the fall of Andros, Clarke was one of the two men to sign a call to the people to meet and consult as to whether or not they would resume their former charter government (Apr. 23, 1686), and on May 1 signed the declaration proclaiming that they had done so. He was, however, extremely cautious and when called upon to serve as governor declined to do so, the colony remaining without a chief executive for ten months, during which time, the Deputy Governor, who had more courage, acted in that capacity. In 1698 when Lord Bellomont [Richard Coote, q.v.], was examining into conditions in Rhode Island, he inquired closely into Clarke's possible connection with piracy. As a Quaker, Clarke had refused to take the required oaths under the Acts of Trade and it was suggested that he be impeached as an example. He resigned his office in 1698 in favor of his nephew, and the Quaker régime came to an end. In that same year a small tract, called Lithobolia, or the Stone Throwing Devil, was published in London, recounting the remarkable and terrifying happenings in the home of George Walton in New Hampshire where devils or witches had been throwing around stones, cooking utensils, crowbars and other objects. Clarke was one of the witnesses who attested the truth of the facts.

(From New England Historical and Genealogical Register, October 1870.) Clarke was married four times: first, in 1660, to Content Greenman, who died Mar. 27, 1666; second, in February 1667/8, to Hannah Scott, who died July 24, 1681; third, in March 1682/3, to Freeborn (Williams) Hart, who died Dec. 10, 1709; fourth, on Aug. 31, 1711, to Sarah (Prior) Gould, who died in 1714. He had, in all, nine children, three by his first wife and six by his second, but all of his male issue died in infancy. He was buried in the Clifton burial ground at Newport.

Clarke

J. T. A.

CLARKE, WILLIAM NEWTON (Dec. 2, 1841–Jan. 14, 1912), Baptist clergyman, theologian, son of the Rev. William and Urania (Miner) Clarke, was descended from Jeremiah Clarke, one of the founders of Newport, R. I., and from Thomas Miner, who came with Winthrop to Massachusetts Bay. He was born in the Baptist parsonage in Cazenovia, N. Y., and spent his boyhood in that village except during the short pastorate of his father at Whitesboro, which intervened (1852–54) between two pastorates at Cazenovia. Clarke entered the Oneida Conference (Cazenovia) Seminary, graduating in 1858, the youngest of his class. He was admitted to sophomore standing in Madison University, received the degree of A.B. in 1861 and graduated two years later from the Theological Seminary. The spiritual and scholarly character of his first pastorate, at Keene, N. H., led to his call to the First Baptist Church in Newton Center, Mass., where the faculty and students of Newton Theological Institution formed a part of his congregation. He began his Newton pastorate in May 1869 and on Sept. 1 married Emily A. Smith at Waverly, Pa. From the beginning of his pastorate, he was making that independent study of the doctrine of the Atonement which was to lead him away from the traditional static view of theology and make him a recognized interpreter of a new day. He remained eleven years at Newton, but sensing some dissatisfaction among the older parishioners whose ideas were too fixed for change, he accepted a call to the Olivet Baptist Church, Montreal. Here was the most cosmopolitan environment of any place of his residence and his mind expanded with the broader outlook upon life. The main scholarly task of his Montreal pastorate was a Commentary on Mark (1881), which he had been requested to write. Early in 1883, he fell on icy steps and injured a knee which treacherously caused several later falls in which his right elbow also suffered, producing handicaps of motion and considerable suffering, very real but to which he rarely alluded. A call to the chair of New Testament interpretation at the Baptist Theological School in Toronto seemed providential and he began teaching there in the autumn of 1883. These were quiet years spent largely in the intimate study of the New Testament; but his duties included the teaching of homiletics and he was in constant demand to preach in the churches. In the spring of 1887, Clarke returned to the pastorate, going to the scene of his college days, Hamilton, N. Y. On the death of President Ebenezer Dodge, he undertook to carry on some of his work in theology in the Seminary and in June 1890 accepted the election to the J. J. Joslin Professorship of Christian Theology.

On assuming full charge of the course in systematic theology, Clarke began at once to write out his own views, furnishing his students manifolded copies of the material as needed. During two periods of absence, chiefly in California, he was able to prepare his lecture manuscript for printing (1894) for limited circulation; after careful revision, it was published as An Outline of Christian Theology (1898). This was an epoch-making book, for it was the first broad survey of Christian theology which frankly accepted the modern view of the world, substituted vital, dynamic phraseology for the mechanical and static, and subordinated theology to the Christian religion itself, which was to be discerned both by a historical approach to the Scriptures and by the experiential evidence of all times. From August 1901 to June 1902 Clarke was in Europe. At Oxford he began his treatise on The Christian Doctrine of God (1908), but he made an entirely new start after returning home. Much of the next seven years was devoted to this work in addition to his regular teaching. In 1903 he gave a Dudleian lecture at Harvard and in 1905 the Taylor lectures at Yale. In 1908, he resigned his professorship, but a lectureship in Christian Ethics was provided that the Seminary might continue to have his services. On account of the frailty of his own and Mrs. Clarke's health, they spent his last winters in Florida, where, at Deland, he died suddenly on the forty-eighth anniversary of his ordination. Among his more important works not previously mentioned are: Can I Believe in God the Father? (1899); What Shall We Think of Christianity? (1899); A Study of Christian Missions (1900); The Use of the Scriptures in Theology (1905); Sixty Years with the Bible (1909), a spiritual autobiography; The Ideal of Jesus (1911).

[Wm. Newton Clarke; a Biography, with Additional Sketches by His Friends and Colleagues (1916), written and edited by his widow, outlines Clarke's career and interprets his life and thoughts. Evaluations of his work will be found in the Outlook, Jan. 27, 1912, and by Shailer Mathews in Am. Jour. Theol., July 1912.]

W. H. A.

CLARKSON, COKER FIFIELD (Jan. 21, 1811–May 7, 1890), editor, born at Frankfort, Me., was the son of Richard Perkington and Mary (Simpson) Clarkson. His paternal grandfather came to America in 1779, settling in New Hampshire, where his son Richard was born in 1782. Richard Clarkson married the daughter of a
Clarkson
Continental soldier and moved to Maine in 1806; he served in the War of 1812. In 1820 the family removed to Indiana settling about thirty miles northwest of Cincinnati. At seventeen years of age, Coker Clarkson began to learn the printer's trade and in a few years he became the owner of a newspaper (the Indiana American) which he conducted successfully until 1854. In the following year he moved to Iowa and settled in Grundy County where he developed a highly cultivated farm. On Apr. 2, 1833, he married Elizabeth Goudie, who died in 1848; in 1849 he married Elizabeth Colescott, who survived him. In the summer of 1856 he was chosen a delegate to the state constitutional convention but declined to accept because of his brief residence in the state. He was a member of the Iowa delegation to the Republican convention of 1860 and was one of the earliest supporters of Lincoln. In 1863 he was elected to the state Senate and served four years.

In 1870 with his sons, Richard and James S., Clarkson purchased the Iowa State Register, published at Des Moines. As its agricultural editor, in which capacity he served for two decades, he was one of the pioneers in agricultural education in Iowa, becoming known to the people of the state as “Father” Clarkson. He was the leading spirit in the notable contest between the farmers and the Barbed Wire Syndicate, which, supported by capitalists, had formed a combination to control the manufacture and sale of barbed wire. Clarkson understood the situation, and in concert with others called a public meeting, at which he made a vigorous opening speech. He described the controversy and proposed the organization of a Farmers' Protective Association to resist the syndicate. The Association was formed and a factory established to supply the farmers without purchase from the syndicate. The legal contest which followed was the most stubborn in the history of the state, the farmers being represented by Albert B. Cummins [q.v.], later governor and senator. The struggle lasted for several years, but the syndicate was finally broken.

Clarkson continued to live in Grundy County until 1878 when he removed to Des Moines. He continued his editorial work until his last illness, although he disposed of his interest in the paper to his sons a few years after the purchase. In physique he was large and commanding; his convictions were deep and abiding, and his opinions were held with tenacity. His morals were rigid, but he prescribed for others nothing that he was not willing to require of himself. For nearly seventy years he was a loyal Methodist. In early life a Whig, a friend of Henry Clay and zealous opponent of Andrew Jackson, he joined the Republican party when it was organized, and remained an ardent supporter of it for the rest of his life. In one of his letters he declared, “I never split my ticket to vote for a Democrat in forty-four years.”

F. E. H. Stiles, Recollections and Sketches of Notable Lawyers and Pub. Men of Early Iowa (1916), pp. 504-06; B. F. Gue, Hist. of Iowa (1903), vol. IV, pp. 53, 54 (portrait); C. Cole, Hist. of the People of Iowa (1921), p. 435; Daily Iowa State Reg., May 7, 8, 10, 14, 1890.

Clarkson, John Gibson
(July 1, 1861-Feb. 4, 1909), baseball player, was born in Cambridge, Mass. His father, Thomas Clarkson, an enthusiastic sportsman, gave his sons valuable athletic coaching. John G. Clarkson early displayed ability as pitcher for the Beacons and other baseball teams about Boston, and of his three brothers two, Arthur and Walter, were also professional pitchers of ability. Attracting the attention of A. C. Anson [q.v.], manager and captain of the Chicago Club of the National League, John Clarkson was induced by him in 1884 to sign a contract. On Mar. 4, 1884, he was married to Ella M. Barr. From the beginning of his professional career, he met success and speedily became the winning pitcher of Anson’s white-hosed champions. In 1885 he won fifty-five out of the seventy games which he pitched for Chicago, one of the best records ever made. In 1889, together with his catcher, the aggressive Michael J. Kelly [q.v.], he was sold by the Chicago management to Boston for what was then regarded as the phenomenal price of $10,000. The transaction aroused much discussion, and Clarkson and Kelly became famous as “the Ten Thousand Dollar Battery.”

For Boston Clarkson won that year fifty-three games out of seventy-two. And in 1891 and 1892 the work of Clarkson and Kelly virtually gained the pennant for Boston. In 1892 Cleveland secured the services of Clarkson, but he soon afterward retired. Later he conducted a cigar store in Bay City, Mich., until his health failed in 1906. He died at Waltham, Mass. For several years before his death he is said to have been insane.

This famous athlete was not an unusually large man, standing but 5 feet 9 inches and weighing 168-170 pounds. His hair was very dark, but his eyes were gray. In the history of baseball Clarkson stands as the first great exponent of the modern school of pitchers who study the weaknesses of batters and secure their results by control, change of pace, and outguessing their victims rather than by mere speed and curves. Clarkson possessed great speed when he chose
Clarkson

to use it, but he was a clever baseball general who preferred to win by intelligence. At that time pitchers were forced to work day after day, and Clarkson was one of the first to demonstrate that something other than physical strength was necessary to carry on and win games. His coolness at critical stages was proverbial, and he was never more deadly than "in the pinches." Clarkson's chief rival was Tim Keefe of the New York Giants, a pitcher who used somewhat similar methods, and the duels between these two real artists were famous. But though Clarkson played "inside ball" he remained a thorough sportsman who would not tolerate trickery or deception. This high conception of sporting ethics made him one of the most popular players of his generation.

(The Spalding and Reach Baseball Guides for the years of Clarkson's activity contain his records. Obituaries appeared in the N. Y. Times, N. Y. Herald, and Sun, Feb. 5, 1900. Valuable information for this article was furnished by Walter Clarkson and by the veteran sportsman George Wright of Boston.)

E. P. T.

CLARKSON, MATTHEW (Oct. 17, 1758–Apr. 25, 1825), Revolutionary soldier, New York philanthropist, was the son of David and Elizabeth (French) Clarkson, and the great-grandson of Matthew Clarkson, who came from good family connections in England to New York in 1690, as secretary of the province. The descendants of the Secretary intermarried with leading provincial families and otherwise won a strong position in the mercantile and political affairs of the community. In the Revolutionary period they early took a strong patriotic stand, and young Matthew participated as a volunteer in the battle of Long Island. Later he was aide-de-camp to Arnold, was wounded at Fort Edward, and behaved with gallantry in the battle of Saratoga. (His likeness is among the figures in Trumbull's painting in the Capitol rotunda at Washington.) Following his chief to Philadelphia, he became involved in a heated newspaper controversy with Thomas Paine over the Silas Deane affair, his precise relationship to the matter in dispute being somewhat obscure. In the early part of 1779, owing to his refusal in disrespectful terms of a summons from the President and Executive Council of Pennsylvania, he received a reprimand from Congress, which body, however, at the same time granted his request for opportunity to serve in southern territory. He was attached to the staff of Gen. Lincoln, and served with him until the end of the war, and also as assistant to the latter during his term as secretary of war. Clarkson's military career included later service as brigadier-general and then as major-general of New York state militia. Naturally he was called Gen. Clarkson and was an early member of the Cincinnati. He was married twice: first, on May 24, 1785, to Mary Rutherford; second, on Feb. 14, 1792, to Sarah Cornell. His life after retirement from active military service was that of a public-spirited citizen of means and leisure. He was a regent of the State University of New York; a member of the Assembly for one term (1789–90), during which he introduced a bill for the gradual abolition of slavery in the state; United States marshal (1791–92); a member of the state Senate for two terms (1794 and 1795); one of the commissioners to build a new prison (1796–97); president of the New York Hospital (1799); and president of the Bank of New York (1804–25). He was the Federalist candidate for the United States Senate in 1802, but was defeated on the joint ballot by DeWitt Clinton.

Aside from his military record perhaps the most characteristic aspect of his career concerns his connection with the numerous societies and "movements" for public improvement which were coming into existence in New York City in the half-century after independence. His integrity, his high social position, personal amiability, and ample means all combined to give him prominence in this relation. The long and extremely varied list of organizations in which he was a leading figure quite justifies DeWitt Clinton's remark: "Whenever a charitable or public-spirited institution was about to be established Clarkson's presence was deemed essential. His sanction became a passport to public approbation."

Clausen, Claus Lauritz (Nov. 3, 1820–Feb. 20, 1892), pioneer Lutheran clergyman, was born on the island of Aero, Denmark, the son of Erik and Karen Pedersen Clausen. He was destined for the law, but abandoned it for theology after he had fallen under the influence of the Grundtvigian (Lutheran) awakening. Interrupted in his studies by a recurrence of ill health, he went to Norway where he hoped to qualify as missionary to Africa. Failing in this, he undertook to go to Muskego, Wis., as a teacher. There he was ordained to the American Lutheran ministry on Oct. 18, 1843. He lost no time in entering upon the strenuous duties of his ministry. On the day after his ordination he "conducted the first of fifty-four funerals in a period covering the four last months of 1843. This terrible toll of death was taken from the small Muskego settlement alone" (J. Magnus
Clausen

Rohne, Norwegian American Lutheranism up to 1872, 1926, p. 60). His field covered practically all of Wisconsin, and, later, much of northern Iowa and southern Minnesota. In spite of severe headaches from which he suffered constantly, he was a minister in every sense of that word; he could draw a deed or draw a tooth; he was as good a judge of land as of human nature; yet he always remained a worthy and democratic man of God.

Clausen remained at Muskego less than three years; at Luther Valley, seven years. There, in 1846, his first wife, Martha F. Rasmussen, died. Within a year he married Mrs. Bergette Hjort (née Brekke), who died in 1887. In 1851 he joined Rev. H. A. Stub and Rev. A. C. Preus in forming a synod of which he was elected "superintendent." Forced to undo this work, he took a perfunctory part in organizing the so-called Norwegian Synod in 1853. In the same year he led a party of immigrants to St. Ansgar, Iowa, serving as pastor to this group which expanded into a settlement fifty miles wide and two hundred miles long. From 1856 to 1859 he served as immigrant commissioner of Iowa. At the outbreak of the Civil War he enlisted as chaplain for the 15th Wisconsin Regiment, but had to retire in 1862 after suffering shell shock in the bombardment of Island No. 10. Estranged from the Norwegian Synod over questions of Sabbath observance, he left it in 1868, and helped to form the Norwegian-Danish Conference in 1870, being elected first president. Frequent strokes and hemorrhages in the head forced him to resign his pastorate at St. Ansgar in 1872.

After three years of complete mental rest in Virginia, he preached for two years in Philadelphia, and then took up active work at Blooming Prairie, Minn., where he served until his retirement from the ministry in 1885. In 1890 he took active interest in the formation of the United Norwegian Lutheran Church, one of the contracting parties being his beloved Conference. His last years were spent at Austin, Minn., or in travel, of which he was very fond. He died on a visit to his son at Paulsbo, Wash.

Clausen established and edited the religious journal Maanedstidende (Monthly Times) and the secular paper Emigranten, and was a lifelong contributor to the secular and religious press. He wrote two brochures, the so-called Gjennmåle (Rebuttal) to the church council of the Norwegian Synod in the slavery controversy, and his Tilstar (Reply) to Prof. Sverdrup's attack in the struggle between the "old" and "new" tendencies in the Conference.

J.M.R.

CLAXTON, KATE (1848-May 5, 1924), actress, was born in Somerville, N. J., the daughter of Spencer Wallace Cone, a lawyer whose literary inclinations led him to spend more time in the writing of plays, editorial work, and speaking in public, than at the bar. Her grandfather, the Rev. Spencer H. Cone [g.7], had been an actor before he became a clergyman. Her mother was Josephine Martinez, daughter of a Spaniard, Tomas Martinez, and of Margaret Terry. Kate was educated at private schools in New York, and at the age of seventeen, according to her own statement, was married "ill advisedly" to Isadore Lyon (New York Dramatic Mirror, interview, Dec. 8, 1894; W. W. Cone, Some Account of the Cone Family, 1903). Her early stage aspirations received no parental encouragement, and she went to Chicago, where she thought there would be less family opposition to her desire to become an actress, and in that city, at the Dearborn Street Theatre, on Dec. 21, 1869, she made her début as Mary Blake in Andy Blake. A week later she joined Lotta's company at McVicker's Theatre in Chicago, and before long she was back in New York, a full-fledged actress. She joined Augustin Daly's company at the Fifth Avenue Theatre, where she first appeared on Sept. 13, 1870, as Jo, in Man and Wife. She remained there through more than two seasons, but rarely played anything but inconspicuous characters. An engagement by A. M. Palmer at the Union Square Theatre, during which she acted Georgette in Fernando and Mathilde in Led Astray, resulted in her being cast for the part of Louise, the blind girl, in The Two Orphans. This melodrama from the French, in which there is abundant action, pathos, bitter anguish, and a conflict between love and duty, was produced on Dec. 26, 1874. For the rest of her life she was identified with this play throughout the country. She was
Clay

acting in it in 1876, at the Brooklyn Theatre on the evening it was destroyed by fire with a loss of more than two hundred lives. She sought other plays and characters, notably: The World Against Her, Bootles’s Baby, The Sea of Ice, and Cruel London, but the public invariably demanded her Louise in The Two Orphans and nothing else. In that character she had the advantage of the sympathy of impressionable audiences for a hapless girl, placed in a series of overwhelming misfortunes from which she emerged triumphant, and she played it always, in later life as well as in youth, with a simplicity that won the hearts of multitudes. In 1878 she was married to Charles A. Stevenson, an English actor whose professional life was passed almost wholly in this country and who was for many years a member of her company. The marriage was annulled in 1911. She died in New York City.

[Note: The text continues with biographical details about Clay E.]

Clay, Albert Tobias (Dec. 4, 1866–Sept. 14, 1925). Orientalist, the son of John Martin and Mary Barbara (Sharp) Clay, was born at Hanover, Pa. He was graduated from Franklin and Marshall College in 1889 and from the Lutheran Theological Seminary at Mount Airy, Pa., in 1892. He entered the graduate school of the University of Pennsylvania in 1892, working under Professors Hilprecht, Peters, and Jastrow, and received the degree of Ph.D. in 1894. From 1892 to 1895 he was also instructor in Hebrew in the same university. In 1893 he was ordained to the ministry in the Lutheran Church and in 1895–96 was pastor of St. Mark’s Church, South Bethlehem, Pa. On June 11, 1895, he was married to Elizabeth Sommerville McCafferty of Philadelphia. In 1896 he became instructor in Old Testament theology in the Lutheran Theological Seminary, Chicago. In 1899 he was recalled to the University of Pennsylvania as lecturer in Assyriology and assistant curator of the Babylonian section of the University museum. Here he remained until 1910, being promoted through the various grades of professorships until in 1909 he became professor of Semitic philology and archeology. From 1904 to 1910 he was instructor in Hebrew at Mount Airy Lutheran Seminary. When, through the gift of the late J. Pierpont Morgan, the Laffan Professorship of Assyriology was founded at Yale, Clay was called in 1910 to fill the chair, a position which he occupied until his death.

Clay was chiefly noted as an editor of cuneiform texts. His first volume, Business Documents of Murashu Sons of Nippur dated in the Reign of Artaxerxes I (1898), was published conjointly with Prof. Hilprecht, but he afterward published three other volumes in the series of the Babylonian Expedition of the University of Pennsylvania, edited by Hilprecht, and two in the Publications of the University Museum, Babylonian Section, which succeeded it. He also published four volumes of texts in the library of J. Pierpont Morgan. At Yale he organized and built up the Babylonian Collection, in connection with which he inaugurated the publication of a series of volumes of texts, to which he himself contributed two volumes. A third volume, prepared by him, appeared after his death. All these texts were copied with accuracy and beauty. In addition to these publications, Clay brought out a valuable volume on the proper names of the Cassite Period in Babylonia, and, in connection with the late Prof. Jastrow, ‘An Old Babylonian Version of the Gilgamesh Epic on the Basis of Recently Discovered Texts’ (1920). Four volumes of which he was especially proud were: Amurrum, the Home of the Northern Semites (1909); The Empire of the Amorites (1919); A Hebrew Deluge Story in Cuneiform (1922); and The Origin of Biblical Traditions (1923). In these he developed an original theory of the antiquity of the Amorites and their importance as the originators of the civilization of western Asia. His training had not fitted him for such historical investigations, and it is sufficient to say that the theory is already disproved. In addition to his books, he contributed to many scientific journals and publications, and by his enthusiasm and encouragement stimulated scientific activity in others. Several rising Assyriologists were his pupils and contributed to the Yale Oriental Series which he founded. He also projected a series of translations of Semitic inscriptions, to which a large number of American scholars had promised to contribute volumes. His untimely death occurred, however, before the first volume was published. The American Oriental Society has arranged to carry forward the enterprise as a memorial to him.

Clay was twice annual professor in the American School in Jerusalem; once in 1919–20, and again in 1923–24. On the first of his visits to the East he was sent to Iraq by the Mesopotamian Committee of the Archeological Institute of America to ascertain the practicability of estab-
establishing an American School of Oriental Research in that country, and on the second he was sent by the American Schools of Oriental Research as the first annual professor, and professor in charge of the school in Bagdad, which he formally opened in November 1923. During the first of his sojourns in Jerusalem, by his enthusiasm and tact, he brought together the Orientalists resident there, differing as they did both in race and religion, and persuaded them to form the Oriental Society of Palestine, patterned on the American Oriental Society. The Society has ever since published a quarterly journal which contains much valuable scientific work. Clay's training, while giving him a keen appreciation of all evidence which bore on textual interpretation, prevented him from attaining a similar scientific point of view with reference to questions of ethnology and history. On these he was to the end a dogmatist and propagandist. His youthful enthusiasm, which he retained all his life, made him many friends to whom he was devoted. He did much for the advancement of Oriental studies in the United States, and especially for his own subject, Assyriology.

G. A. B.

CLAY, CASSIUS MARCELLUS (Oct. 19, 1810—July 22, 1903), abolitionist, the youngest son of Green Clay [q.v.], and Sally (Lewis) Clay, was born on his father's estate, "White Hall," in Madison County, Ky. His ancestry was Scotch, English, and Welsh; and in him was so strange a mixture of manly vigor, unflagging honesty, indiscrcte pugnacity, and the wild spirit of the crusader, as to make him one of the most remarkable of the lesser figures in American history. When very young he fought his mother, his schoolmaster, and a slave companion; the day before his wedding he caned a rival in the streets of Louisville; and when ninety-three years old, suffering under the hallucination that people were plotting against his life, he converted his ancestral mansion into a fortified castle, protected by a cannon. His career was turbulent in politics, in the army, within the circle of his family, and in all his social and diplomatic relations. In 1841 he fought a duel in Louisville with Robert Wickliffe, Jr.; four years later he so mutilated with a bowie knife Sam M. Brown as to be indicted for mayhem; in 1850 he stabbed to death Cyrus Turner; and in his old age he shot and killed a negro. In all his early political campaigns he carried a bowie knife and two pistols.

Clay was given the best opportunities of his day for an education, first receiving instruction from Joshua Fry in Garrard County, and later under the same master at Danville. He was then sent to the Jesuit College of St. Joseph in Nelson County. He attended Transylvania University for a time, and in 1831 with letters of introduction to President Jackson and to the principal men of note in the East he entered the junior class in Yale College, where he was graduated the next year. He returned to Kentucky and studied law at Transylvania but never took out license to practise. Wealthy and ambitious for a political career, he was elected to the state legislature from Madison County in 1835 and in 1837, being defeated in 1836 on his advocacy of internal improvements. He now moved to Lexington and in 1840 was elected to the legislature to represent Fayette County. The following year he again ran, contrary to the advice of his distant kinsman, Henry Clay, and was defeated on the question of slavery. Though his father had been a large slaveholder, Clay had early developed a bitter hatred toward the institution, and, inspired by William Lloyd Garrison whom he had heard at Yale College, this hatred became a crusading passion. In his defeat for the legislature he saw the blatant tyranny and implacable opposition of the slaveholders, and he resolved to rid Kentucky of the evil. In June 1845 he set up in Lexington a newspaper which he called the True American and began his campaign. Foreseeing trouble he fortified his office with two four-pounder cannon, Mexican lances, and rifles, and strategically placed a keg of powder to be set off against any attackers. In August a committee of sixty prominent Lexingtonians visited his establishment while he was absent, boxed up his equipment, and sent it to Cincinnati. He continued to publish his paper from this new location, and later, changing its name to the Examiner, he moved it to Louisville.

Although Clay had opposed the annexation of Texas, in 1846 he volunteered among the first of those who were to invade Mexico, believing that since his country was at war it was his duty to fight, and feeling that a military record would help him politically. He fought with bravery in a number of engagements and was taken prisoner at Encarnacion in January 1847. After many
Clay

harrowing experiences he was set free, returning to Kentucky to share in a resolution of commendation by the legislature and to receive a sword presented by his fellow citizens. In politics he began a strong follower of Henry Clay, but, during the campaign of 1844, became estranged from him on the issue of abolitionism. In the next presidential campaign he supported Taylor from the beginning, and in 1849 he made a determined effort to build up an emancipation party in Kentucky by holding a convention in Frankfort and running for governor. In the election he received 3,621 votes, enough to defeat the Whig candidate. On the birth of the Republican party he joined it, voting for Fremont in 1856 and for Lincoln in 1860. In this latter year he had a considerable following for the vice-presidency. He was on terms of close friendship with Lincoln, and, having been led to understand that he might have the secretarship of war, was greatly chagrined when he did not receive it. To pacify him Lincoln offered him the diplomatic post at Madrid, which he refused. Later he accepted the Russian post. On his way east he reached Washington in April, at the time when it was cut off and undefended. He quickly grasped the situation and raised 300 men for the protection of the city and government, for which service he might have received appointment as major-general in the Federal army had he not preferred to continue to Russia. In 1862 he was recalled and made a major-general, but he refused to fight until the government should abolish slavery in the seceded states. He returned to Kentucky in the fall of 1862 on a mission to the legislature, did some fighting, and left for Russia again in 1863, where he remained until 1869. He fell out with President Grant and joining the Liberal Republicans supported Greeley in 1872. Disagreeing with the policy of reconstruction, he supported Tilden in 1876, but in 1884 he was for Blaine. After returning from Russia he retired to his estate in Madison County and in his old age, a few weeks before his death, the Richmond court adjudged him a lunatic. He was married to Mary Jane Warfield of Lexington in 1832, but was divorced from her in 1878. On his final return from Russia he brought to his home a Russian boy, whom he named Launey Clay, refusing to disclose his parentage. Shortly before his death he married a young girl from whom he soon secured a divorce.

[A vivid account of Clay's career is set forth in his Life of Cassius Marcellus Clay; Memoirs, Writings and Speeches (1886), vol. I. A second volume was projected but never published. Biog. Memoranda Class of 1832 Yale Coll. (1880) contains sketch "communicated by himself." In 1848 his speeches were brought out by Horace Greeley under the title of Speeches and Writings of C. M. Clay. All of Clay's papers prior to the Civil War were burned during the conflict. Incomplete sketches of him may be found in R. H. and L. R. Collins, Hist. of Ky. (1874), and Biog. Encyc. of Ky. (1877). A short sketch is in Who's Who in America, 1901-02. An account of the last days of his life and an obituary appear in Lexington (Ky.) Leader, July 6-9, 23, 1903. Files of his True American are preserved in the Lexington Pub. Lib.] E. M. C.

CLAY, CLEMENT CLAIBORNE (Dec. 13, 1816-Jan. 3, 1882), lawyer, senator, Confederate diplomat, a member of a distinguished family in the Tennessee Valley of Alabama, was born near Huntsville, the son of Clement Comer Clay [q.v.], and Susanna Claiborne (Withers) Clay. He was graduated from the University of Alabama in 1834, served as private secretary to his father, the Governor, engaged for a time in editorial work on the Huntsville Democrat, and entered the University of Virginia as a law student under the celebrated John B. Minor, receiving his degree in 1839. After a brief service in the state legislature (1842, 1844, 1845), he became judge of the county court of Madison County, resigning in 1848 to resume the active practise of his profession. He made an unsuccessful campaign for a seat in the lower house of the federal Congress in 1853 but soon afterward won election as a Democrat to the United States Senate, defeating his fellow townsman, R. W. Walker. He was unanimously re-elected in 1859. In the Senate, he was an ardent defender of the principle of state rights and a vigorous supporter of the political philosophy of John C. Calhoun. While a member of the state legislature, he had married, on Feb. 1, 1843, at Tuscaloosa, Virginia C. Tunstall, who became "one of the brightest ornaments' of Washington society during her husband's service, a member of a coterie comprising Mrs. James Chesnut of South Carolina, and Mrs. Roger A. Pryor of Virginia.

With the secession of his state from the Union, Clay withdrew from Congress in February 1861, and returned to Alabama. On the organization of the Confederate government, Jefferson Davis, with whom he had served in the United States Senate, tendered him the post of secretary of war, but Clay declined and secured the appointment for his fellow townsman, Leroy Pope Walker. The legislature of Alabama elected him to the Confederate Senate, but at the end of his two years' term he failed of reelection. In April 1864, he was appointed by Davis a member of a secret and confidential mission to Canada, the other members being Jacob Thompson of Mississippi and James P. Holcombe of Virginia.
Clay

This mission was directed to initiate informal negotiations with the Federal government which, it was hoped, would lead to formal negotiations of peace between the United States and the Confederacy. Early in July the commissioners entered into correspondence with Horace Greeley, seeking through him a safe-conduct to Washington and an interview with President Lincoln. At first Lincoln seemed to favor such a conference but soon decided against it, on the ground that the commissioners were not authorized to treat. For nearly a year Clay was in Canada, but, despairing of any result from his mission, he returned South just before the war closed. While he was preparing to set out on horseback for Texas with Gen. Wigfall, to join Gen. Richard Taylor, he learned in LaGrange, Ga., where he was the guest of Benjamin H. Hill, that Lincoln had been assassinated and that President Johnson had offered a reward for his arrest. Clay was accused, with Davis and others, of inciting and encouraging the assassination of Lincoln, of conspiring, while in Canada, to release Confederate prisoners of war on Johnson's Island, and of plotting raids from Canada against the territory of the United States. Though urged to attempt an escape, Clay refused, rode 170 miles to Macon, Ga., and surrendered to the commanding officer of the United States troops. He was taken with Davis and others to Fortress Monroe, where he was kept in solitary confinement for nearly a year. Mrs. Clay and his friends were zealous in their efforts to secure a trial for him, and Clay appealed directly to President Johnson, a former colleague. He was finally released, a broken man, on Apr. 17, 1866, without opportunity to defend himself against the charges preferred against him. The remaining years of his life were spent quietly in the practise of the law and in efforts to restore his health. Apparently he took no active part in the struggle over the reconstruction of the state and did not enter again actively into political life.

[See Willis Brewer, Alabama (1872); Wm. Garrett, Reminiscences of Public Men in Ala. (1872); Thos. M. Owen, Hist. of Ala. and Dict. of Ala. Biog., vol. III (1921); Virginia Clay-Clopton, A Belle of the Fifties (1905), edited by Ada Sterling, a eulogistic and highly colored picture of Clay by his wife. Clay's experiences in Canada are set out in the Official Records (Army), 2 ser., VIII; accounts of his prison life in Fortress Monroe may be found in John J. Craven, Prison Life of Jefferson Davis (1866), and in F. H. Alfriend, Life of Jefferson Davis (1868). The story of his arrest is in Trans. Ala. Hist. Soc. (1897-98), vol. II. For the genealogy of the Clay family, see J. E. Saunders, Early Settlers of Ala. (1890). Mrs. Clay's efforts to secure the release of her husband are recounted in D. S. Freeman, Calendar of Confed. Papers (1908).]

T. H. J.

Clay

CLAY, CLEMENT COMER (Dec. 17, 1789-Sept. 7, 1866), governor of Alabama, United States senator, son of William Clay, a Revolutionary soldier, and Rebecca Comer, was born in Halifax County, Va., and removed as a boy to Grainger County, Tenn., where his early education was obtained. He was graduated from the East Tennessee College (now the University of Tennessee) in 1807, read law under Hugh Lawson White, in Knoxville, and was admitted to the bar in 1809. Two years later he removed to Huntsville, then in the Mississippi Territory, the center of Virginian influence in the Tennessee Valley, where he engaged successfully in the practise of his profession and where, in 1815, he married Susanna Claiborne Withers. Clement Claiborne Clay [q.v.], also a lawyer and man of affairs, was his son.

Though primarily devoted to the practise of law, Clay gave much time to public service for more than thirty years of his life. He was first a private and then adjutant of a battalion in the Creek War of 1813; he was a member of the territorial legislature of Alabama in 1817-19; and he was chosen in 1819 as a delegate to the first constitutional convention of Alabama, serving notably as chairman of the committee which drafted the first organic law of the state. Immediately upon the organization of the judiciary of the new commonwealth, he became chief justice (1820-23), resigning to resume his private practise. In 1827 he was elected to the state legislature and served as speaker of the lower house. He was elected to membership in the lower house of Congress in 1829 and served thereafter by successive re-election without opposition until 1835. He was instrumental in securing the passage of preemption laws for settlers and "relief laws" for the benefit of distressed purchasers of government lands in Alabama. He took an active part in the debates on national affairs during his six years of service in the House, supporting Jackson in his attacks on the Bank, in his removal of the deposits, and in his opposition to nullification in South Carolina, though he refused, as a believer in state sovereignty and state rights, to vote for the Force Bill. After his nomination by the Democrats for the governorship in 1835, he gave his support to Van Buren for the presidency, although his personal preference was for his friend and law teacher, Judge Hugh Lawson White. Because of this, the supporters of White in Alabama made a determined fight against him, but Clay was successful before the people, defeating Gen. Enoch Parsons by 13,000 votes, the largest majority given up to that time to any
Clay

candidate for the governorship. In the spring of 1836, during the first year of Clay's term as governor, the state had serious difficulties with the Creek Indians, and, though Clay was charged with inactivity and neglect of duty in his handling of the situation, he appears to have been active and energetic in cooperating with the federal troops in removing the Indian peril from the state. In the latter part of his administration, he was seriously hampered by the bad economic conditions, culminating in the panic of 1837. Despite these difficulties and criticisms, he was chosen before the expiration of his term as governor to the seat in the Senate made vacant by the appointment of Senator McKinley to the Supreme Court bench. Clay supported the administration and served satisfactorily but without notable distinction till 1841, when financial stress and illness in his family caused his resignation.

On his return to Alabama, he was commissioned by the legislature to prepare a digest of the Alabama laws, which he completed in 1843; in that year he served for a few months by appointment as a member of the state supreme court; and, in 1846, he was one of the commissioners appointed to wind up the affairs of the state bank. He then returned to his private law practise in which he was engaged without further interruption for the remainder of his life. Though he was an ardent advocate of the secession movement, he took no active part in the Civil War. When Huntsville was occupied by Federal troops, Clay's home was seized, his property was dissipated, and he himself was kept for some time under military arrest. He died in Huntsville in 1866.

CLAY, EDWARD WILLIAMS (Apr. 19, 1799-Dec. 31, 1857), etcher, engraver, caricaturist, the son of Robert Clay and Eliza Williams, was born in Philadelphia of well-to-do parents. His father was a sea captain, and his grandfather, Curtis Clay, a merchant of his native city. It is asserted (Scharf and Westcott, II, 1063), that Edward Williams Clay was a midshipman under Commodore Perry, but his name does not appear in the Navy Register. While studying art he was for a time an accountant (Philadelphia Directory, 1824). The following year, on Mar. 12, he was admitted to the Philadelphia bar as an attorney. His name does not appear in the Philadelphia directories for 1825 or 1828, but in that of 1829 he is described as "artist," and evidently practised art there until 1836. Very few examples of his etching or other work survive. For the American Monthly Magazine, 1824, he furnished a drawing, engraved by C. G. Childs, and in 1827 he made the drawing of Sedgeley Park, for Child's Views of Philadelphia, but did not engrave it. In 1828-29, he made a series of comic etchings, entitled Life in Philadelphia, which were published by W. Simpson and S. Hart & Son, Philadelphia. They pictured with good-natured but telling satire the efforts of the negroes of that day to imitate the extravagant conduct of the whites. After the manner of Cruikshank, he projected in 1829 a series of oblong caricatures, entitled Sketches of Character, published by R. H. Hobson, Philadelphia. Only No. 1 appears to have been issued. This is a biting, almost savage attack upon the careless, shiftless militia of his time. It is entitled, "The Nation's Bulwark—A Well Disciplined Militia," and shows a nondescript body of militiamen being drilled. For the same publisher in 1830 he etched four pages of a comic song, "Washing Day," the vignettes illustrating the verses. There is also in existence a single lithographed caricature by Clay which bears the date 1831, and indicates that he was experimenting with the new process, having produced two lithographs the preceding year for the Memoirs of the Old Schuykill Fishing Company. The caricature mentioned, which shows Henry Clay, who had been nominated by the national Republicans, in the guise of a simian, is entitled, "The Monkey System or every one for Himself." Joseph Hopkinson is introduced grinding out "Hail Columbia!" on a hand organ. In 1837 Clay went to New York where in 1839 he was drawing on stone for John Childs, lithographer. Later he went to Europe to study art, but his eyesight failed him and he abandoned his profession on his return to this country. From 1854 to 1856 he was register of the court of Chancery and clerk of the orphans' court of Delaware. He died in New York City in 1857, and was buried in Christ Church burial ground, Philadelphia. He engraved several plates, the best being the portrait of the Rev. Joseph Eastburn. Clay was an artist who had a fresh, original manner and a fancy that was not bound by convention; his only fault was that he made far too few drawings.

The chief authorities are David M. Stauffer, Am. Engravers (1907); J. T. Scharf and T. Westcott, Hist. of Phila. (1884), vol. II; a manuscript "Hist. of Lithography in Phila." by Jos. Jackson; directories of Phila. and N. Y.)

CLAY, GREEN (Aug. 14, 1757-Oct. 31, 1826), soldier, legislator, son of Charles Clay of Welsh
Clay
descent, was born in Powhatan County, Va. His opportunities for schooling were meager, but he obtained from experience an education of great practical value. Because of a disagreement with his father and lured on by the stories he had heard of Daniel Boone's exploits beyond the Alleghanies, he migrated to Kentucky about 1777. Having some knowledge of surveying and liking it, he entered the office of James Thompson, a surveyor, where he learned his subject well. In 1781 he was made a deputy surveyor for Lincoln County. Impressed by the ease with which good land might be obtained, he immediately began to make use of his opportunities. A system that permitted any number of surveys of the same tract brought about much confusion, and Clay, with his expert knowledge of former surveys and his unusual memory for markers, was in great demand. As was the custom of the day he exacted a half of the land called for by the warrants he surveyed. When the lands in central Kentucky were largely taken up, he carried on surveys in the western part of the state, suffering great hardship and many dangers. As a result of his sagacity and good business sense he amassed a fortune. He settled in Madison County and built up an estate which he called "White Hall." In 1787 he was made one of the trustees for the town of Boonesborough. Though not primarily interested in politics, he was elected to the Virginia legislature in 1788 and in 1789. When Kentucky became a state he represented Madison County in 1793 and in 1794 in the lower house of the legislature and was a member of the Senate from 1795 to 1798. In 1807 he was again a member of the Senate and was elected its speaker. When in 1799 a second constitution for Kentucky was to be made, he represented Madison County in the convention and took an active part in the proceedings. Upon the outbreak of the second war with Great Britain he became a major-general in the state militia, and after Winchester's defeat at Frenchtown he was placed at the head of 3,000 Kentuckians and sent to the relief of the American forces at Fort Meigs. Cautious in his movements, on reaching the fort he constructed flatboats with side protections and floated down the Maumee. A detachment, through rashness, was cut to pieces by the Indians, but the main forces reached the fort and raised the siege. Clay was now in command of the fort, and a little later beat off an attack by Proctor and Tecumseh.

As the enlistment of his troops expired within a short time he did not participate in the invasion of Canada. After going as far as Detroit, he returned to Kentucky. He was an able businessman and an excellent farmer, using the best methods of his day. He married Sally Lewis who bore him three sons and four daughters,—the best-known of his children being Cassius Marcellus [q.v.] and Brutus J. Clay. Clay County in Kentucky was named in his honor.

[Life of Cassius Marcellus Clay; Memoirs, Writings and Speeches (Cincinnati, 1886); Lewis and R. H. Collins, Hist. of Ky. (1882); Biog. Encyc. of Ky. (1877).]

E. M. C.

CLAY, HENRY (Apr. 12, 1777—June 29, 1852), congressman, senator, secretary of state, was descended from English ancestors who came to Virginia shortly after the founding of James-town but did not rise to any position of importance in the colony. His father, John Clay, was a Baptist minister, who moved from Henrico County to the frontiers of Hanover County in search of a district more hospitable to the practice of his religion. His mother was Elizabeth Hudson, who came of a family of no greater prominence than the Clays. Henry Clay was born in the midst of the Revolution in a region overrun by war, in that part of Hanover County generally referred to as the Slashes. He was the fourth son, and next to the youngest child, in a family of eight,—three daughters and five sons. Of these children only two sons besides Henry lived far beyond the age of maturity. His father died in 1781 leaving the family little more than the respectability of his name. As Henry was only four years old at the time the influence of his father could have affected him very little. To his mother he owed much. He always held her in affectionate remembrance. His formal education consisted of three years before the master of The Slashes log school, Peter Deacon, whom Clay always pleasantly recalled. In 1791 Clay's mother married Henry Watkins, a man who came to regard his step-children kindly and who took a particular interest in Henry. He moved the family to Richmond where he was a resident, and soon secured for Henry a position in a retail store kept by Richard Denny, where the young clerk remained for a year. Feeling that Henry's capacities recommended him for a higher position, his step-father secured work for him in the office of the clerk of the High Court of Chancery, and here Clay remained for the next four years, until 1796. Though somewhat ungainly in appearance, he attracted attention by his open countenance and industry, and thereby recommended himself to Chancellor George Wythe, who made him his amanuensis to copy the court's decisions when not busied in the clerk's office. In his contact with Wythe, Clay secured good counsel and intelligent direction of the reading which he had begun in Denny's store. All his surround-
Clay

ings and his proclivities suggested to him the study of law. This he began in 1796 in the office of Attorney-General Robert Brooke, and within a year he secured his license to practise. During this time he lived in the home of the Attorney-General and had unusual opportunities to meet the people of prominence in the Virginia capital.

While his introduction to Richmond had been far more fortunate than he could have had reason to expect, he felt that conditions were settled there and competition too keen. The same lure that had drawn so many others to the new state of Kentucky also tempted him. Added to this was the fact that his mother was now living there, having left Virginia the year Kentucky became a state. In 1797 Clay moved to Lexington, the outstanding city of all the West in culture and influence. His reputation as an attorney-at-law was soon made and his clients became numerous. As a criminal lawyer, he came by common consent to have no equal in Kentucky. It has been repeatedly stated that no person was ever hanged in a trial where Clay appeared for the defense. He used every trick in argument and procedure in addition to his great skill as an orator. Infrequently he appeared as prosecutor for the state, once serving under protest for a short time as attorney for Fayette County, but by preference he usually acted for the defense. It was not long before the law became to him the means to a much more important end, the regulation of the political and constitutional relations of Kentucky. His first appearance in a political capacity was in 1798 when he followed George Nicholas in a denunciation of the sedition law before a great throng in Lexington. This speech, which was never forgotten by those who heard it, was a fitting introduction to his new constituents.

In 1803 in a contest against Felix Grundy, he was elected to the legislature, where he continued until 1806. He had by this time become typically Western in his point of view, and when it seemed that the United States might at the last moment be cheated by Spain out of the prize of Louisiana, he became as greatly excited as any other Kentuckian over the possibility of marching on New Orleans.

In this new community, so little acquainted with the sanctity of law and of established usages, Clay generally took a conservative stand. In 1804 when a fight was made to repeal the charter of the Kentucky Insurance Company in which banking powers had been secured by a stratagem, he championed the cause of the corporation by arguing that a contract was involved and could not be broken except by the agreement of both parties; and in 1807 when the animosity against England was so bitter that the legislature was about to exclude from Kentucky courts the citation of English precedents, he was able to limit the application of the law to the period after July 4, 1776. While Clay was still completely identified with Kentucky affairs, Aaron Burr made his second visit to the West (1806) and came violently into conflict with Joseph Hamilton Daveiss [q.v.], a Federalist and the federal district attorney for Kentucky. When Daveiss sought an indictment against Burr, Clay agreed to come to the defense of the latter who appeared to be the object of persecution. Clay was also moved to take this course because he did not like Daveiss, with whom he had come near fighting a duel in 1803. Before the first hearing was held, Clay had been elected to the United States Senate to fill the unexpired term of John Adair and now felt that he should have double assurance of Burr's innocence in the form of a written statement. This Burr gave him. Later when, on going to Washington, he was persuaded by Jefferson of Burr's guilt, he felt that he had been tricked, and never afterward spoke to Burr. In the meantime, when Burr's associate, Harman Blennerhassett, came through Lexington and was proceeded against in a civil matter, Clay defended him. Although Clay's enemies later attempted to implicate him in the Burr schemes, he never suffered in the eyes of the people on account of these charges.

Clay spent the short session of 1806-07 in the United States Senate, where he appeared on the floor as a supporter of internal improvements. When he returned to Kentucky, it was with a pleasant feeling toward national politics. The importance which the legislature had attached to him in 1806 had by this time been increased; and when the next year Fayette County returned him to the legislature he was elected speaker. He remained in this body until he was reelected in 1809 to fill out another unexpired term in the United States Senate. His interests were unmistakably becoming national; and when in 1809 he introduced in the Kentucky House a set of resolutions praising Jefferson's embargo measures and the general accomplishments of the President, Humphrey Marshall brought in a substitute set and started a debate which soon became acrimonious. Later, when Clay introduced a resolution in favor of home manufactures, Marshall's language became so obnoxious that Clay challenged him to a duel, which was fought in Indiana, across the river from Louisville. Both were wounded.

In 1809 Clay returned to Washington, never again to serve his state officially in any other than a national capacity, except in 1822 when he
Clay

went to Richmond in company with George M. Bibb to secure an agreement with Virginia on the occupying claimants' law, and in the following year when again with Bibb he appeared for Kentucky before the Supreme Court in Washington in the case of Green vs. Biddle and lost. From the beginning he took an active part in the discussions in the Senate, here supporting some policies from which he never after swerved and others upon which he completely changed his views. He laid the beginnings of the foundations of his celebrated American system in 1810 when he spoke in favor of promoting home manufactures; also, following the instructions of the Kentucky legislature as well as carrying out his own views, he opposed the re-chartering of the United States Bank, charging it with being a money power dangerous to free institutions and holding it to be unconstitutional. These doctrines he later entirely abandoned. He made his first entry into matters of foreign policy when he upheld the Perdido River as the eastern boundary of the Louisiana Purchase. Much of his enthusiasm and inspiration in official life came from his feeling that he was a direct agent and defender of the people; hence it was only natural that in 1810 he should decide to exchange the Senate for the House of Representatives and should make the following announcement: "In presenting myself to your notice, I conform to sentiments I have invariably felt, in favor of the station of an immediate representative of the people" (Lexington Gazette, May 15, 1810). He was elected from the district of which Fayette County was a part, and which came to be known as the Ashland district, from the name of his home near Lexington. His strong nationalism was by this time unmistakable and was by no means incompatible with his equally strong advocacy of Western interests. He entered the Twelfth Congress as the leader of the young, untutored "war hawks," determined to uphold the national honor against Great Britain whether on the high seas or west of the Alleghanies. He was elected speaker, and intrenched in this position he proceeded to prepare for war by appointing "war hawks" to prominent committees, urging President Madison on to a stern course, advocating military preparation, and arousing general enthusiasm with such flourishishes as the assertion that the Kentucky militia alone could take Montreal and Upper Canada. He pushed Madison into war and stood valiantly behind him. When in 1814 it seemed that Great Britain might be willing to engage in peace parleys, Madison added Clay and then Gallatin to the commission composed of Adams, Russell, and Bayard, and the negotiations at Ghent were started. As Clay had had Western interests in mind in getting into war, he was not now going to forget them in getting out of the war, especially when it came to trading them for Eastern benefits. The conference almost collapsed when Adams insisted on giving England the free navigation of the Mississippi in exchange for the Newfoundland fisheries. Clay saved the Mississippi, won a certain secret contempt in the mind of Adams, and after visiting Paris and London, returned in 1815, convinced that the United States was now one of the powerful nations of the earth. He was reflected to his position in Congress, which he had abandoned the year before, and was again made speaker, to both of which positions he was reflected until 1821, resigning the latter in October 1820, and refusing to stand for election to the former after Mar. 4, 1821.

Unquestionably Clay had been greatly broadened by his European experiences, and his power and influence were much increased. Madison sought to reward him by offers of the Russian post and the secretaryship of war, both of which he refused, largely because he was now intent on consolidating his position of leadership in Congress. He hoped to receive the secretaryship of state from Monroe, who became president in 1817, but this had been reserved for Adams, who thereby became, according to the custom of the times, the designated successor to the presidency. Instead, Monroe successively offered Clay the ministry to England and the secretaryship of war, both of which he declined. He soon found easy means to become a critic of the national administration and with one exception maintained this rôle for the rest of his life. His position in Kentucky being now paramount, his confidence in himself and in his country awakened in him an ambition for the presidency which haunted him to his dying day, making of his life an unending series of disappointments. He developed and set forth a program of nationalism, including surveys for canals and highways and the building of them, the re-chartering of the United States Bank, protection for American industries, and a policy of national defense in keeping with the grandeur and glory of his country. The Bank was re-chartered and the protective principle was incorporated in the tariff of 1816, but Clay was never to see his program of internal improvements carried out.

His impetuosity soon precipitated him into conflicts with the President and various other prominent leaders. He incurred the most momentous and bitter enmity of his life when in 1819 he left the speaker's chair to attack Andrew Jack-

175
son for his invasion of Florida. Jackson never forgave him for his offense. Already critical of Monroe's administration and impelled by a sympathy for the South American revolutionists, Clay began in 1818 his campaign for the recognition of their independence, and by his eloquence and persistency made himself a hero in South America second only to Simon Bolivar. Not being a part of Monroe's administration, he was unconcerned with the effect his speeches were having on the Florida treaty which was then being negotiated with Spain, and when this document came up for ratification he attacked it for its failure to include Texas. His sympathy for the Greeks struggling against Turkey for their independence he strongly expressed in 1824, regardless of the fact that American interference in European affairs was incompatible with the position his country had taken in the recently announced Monroe Doctrine.

In the Missouri Compromise debate the dangers of a divided country first rudely shocked the nation, and propelled Clay into a new rôle, which he was to play thereafter. The essence of the struggle to him was not the extension or restriction of slavery, but the continuance of the Union of equal states. If Congress could lay restrictions on slavery in Missouri, its power might extend to any subject. Herein lay the fundamental danger to the Union. Through the compromise suggested by Senator Thomas, Clay saw the question practically settled, and in 1820 he returned to Kentucky to look after his private affairs, and to be absent from much of the session beginning in the fall. Trouble broke out anew when Missouri sought to exclude free negroes from her boundaries. Clay hastened back to Washington in January 1821 and succeeded in pushing through the House a compromise plan, substantially the same as that which Senator Eaton had introduced in the Senate. He returned to Kentucky at the end of the session, in March 1821, not to reappear in Congress until he should come as an avowed candidate for the presidency. His private affairs in Kentucky engaged his attention for the next two years, during which time he enjoyed the almost universal acclaim of Kentuckians. In 1822 a joint meeting of the legislature nominated him for the presidency, and other states soon followed. He was also re-elected to Congress, where he served from 1823 to 1825, being again the choice of that body for speaker. He now set about consolidating a national program calculated to secure his election. It was during this period that he developed fully his American system of protective tariffs and internal improvements. The tariff bill of 1820 had failed, but in 1824 he secured the passage of the highest protective tariff enacted up to that time. In the presidential election of 1824 he received the smallest number of votes cast for any of the four candidates and was thereby eliminated by the Constitution from those to be voted upon by the House, which body chooses the president when no one receives a majority of the electoral college. Clay had carried Kentucky by an overwhelming vote against Jackson, his nearest competitor, who had received a plurality in the nation. Jackson had grievously wounded the feelings of Kentucky in 1815 when he had accused the Kentucky troops at New Orleans of cowardice, but even so he was much more attractive to Kentuckians than Adams, whose enmity shown at Ghent was well known. The legislature instructed Clay to vote for Jackson when the House should take up the election of the president, instructions which Clay ignored by voting for Adams and effecting his election. For this rebellious conduct Clay suffered his first eclipse in Kentucky, temporary though it was. Jackson and his friends were furious, charged Clay with making a bargain with Adams, and when Clay accepted the secretaryship of state were irrevocably convinced of his duplicity. Clay and his friends labored throughout the rest of their lives to disprove this slander, but it dogged his tracks in every subsequent campaign. When he returned to Kentucky he found considerable hostility, but the warmth of the welcome extended by his friends soon convinced him of the solidarity of his position. He bitterly attacked Jackson, and repeatedly asked how the winning of a military victory and the possession of an imperious and dictatorial spirit could possibly be a recommendation for the civil leadership of the nation. Yet many of Clay's friends could never shake off the feeling that the alliance with Adams was a most unnatural one.

As secretary of state, Clay was thoroughly loyal throughout to the Administration. He served the full term and perhaps never spent a more miserable and uninteresting four years in all his life. He was by nature opposed to the routine of administrative work, finding his chief delight in the excitement of debate and parliamentary maneuvers. Much of the time he was ill, and but for his loyalty would have resigned. No problems of great importance in foreign affairs arose, though he made a host of minor commercial treaties. The best-known incident of his incumbency was the Pan-American Congress, in which he sought to have the United States participate. The enemies of the Administration started an acrimonious debate in Congress over the
Jackson's Crittenden, last wrote of the all place him friend, his departure Kentucky, Clay and John Randolph of Roanoke, precipitated by the cutting sarcasm of the latter.

In the election of 1828 Clay supported Adams, though he was unable to convince his own Kentucky of the New Englander's worth. Jackson carried the state and the nation, and Clay was temporarily disheartened when he saw the government handed over to a military chieftain. He refused to accept a position on the Supreme Court, and returned weary over muddy roads to Kentucky, with his simple faith in the good sense of the people much shaken. The ardor of his reception, however, soon brought a return of the warm glow and enthusiasm that were characteristic of him. In company with his friend, John J. Crittenden, he toured western Kentucky, where he was received with unexpected acclaim. He also visited New Orleans twice within the next two years, his progress up and down the Mississippi reaching the proportions of a triumphal procession. Yet with all this manifestation of support, he was tempted to become a quiet country gentleman. At this time he wrote a friend, "My attachment to rural occupation every day acquires more strength, and if it continues to increase another year as it has the last, I shall be fully prepared to renounce forever the strivings of public life" (Calvin Colton, ed., Private Correspondence of Henry Clay, 1856, p. 261). But in 1830 the legislature again nominated him for the presidency and in order to place him in a more strategic position sent him to the Senate in 1831. Crittenden resigned to make a place for him. Clay now began to weld together all the elements of protest against Jackson and to develop his program. In the debate leading to the tariff of 1832 Clay restated at great length the protectionist argument. He presented to Jackson a bill which to his amazement the President signed. As another move in his campaign he decided that the Second United States Bank should be re-chartered. He pushed the bill through Congress, and Jackson vetoed it. Finally, he wished to settle the question of public lands and the problem of the surplus by distributing the proceeds of land sales among all the states according to population. The bill was finally passed (1833), but Jackson met it with a pocket veto, and at the beginning of the next Congress gave the reasons for his action. Clay then attacked Jackson from every angle and harassed him by leading the Senate to reject the President's nominations, the most conspicuous example being that of Van Buren as minister to London. Clay was nominated by the anti-Jackson men in Baltimore in December 1831, but in the election the next year he was disastrously defeated. The popular appeal of the vigorous Jackson and the activities of the anti-Masons combined to bring about his discomfiture. Again Clay almost despaired of the popular good sense, but he soon found a menacing problem that required his best thought and efforts. South Carolina had assumed a threatening attitude toward the tariff, and when the law of 1832 was passed, nullified it. Jackson's threats disturbed Clay almost as much as did Calhoun's nullification, for he feared lest Jackson should precipitate a civil war. He soon had ready the compromise tariff of 1833, which gradually reduced the rates. Substituting it for the administration bill, he secured its passage with the aid of Calhoun and his friends. Again he had effected a compromise in a menacing situation and perhaps saved the Union from disruption.

Throughout the rest of Jackson's official life Clay battled against him, as an overwhelming threat to the liberties of the people. For the purpose of curtailing Jackson's power, he advocated amendments to the Constitution which if adopted would have been of lasting harm to the country. When the President sought to hurry the destruction of the bank by the removal of the deposits, Clay in 1834 introduced and secured the passage of resolutions of censure. In January 1837, however, these were expunged from the record, an event which so unstrung Clay that he gloomily declared, "The Senate is no longer a place for a decent man." When Jackson's brusque language angered the French and came near precipitating war, Clay as chairman of the Committee on Foreign Relations in the Senate smoothed out the affair satisfactorily. In 1836, however, he felt that no one could stop the headlong course of the Jackson party, and looked upon the election of Van Buren as so inevitable that he did not offer himself to the Whigs as a candidate. He chose to remain in the Senate, to which the Kentucky legislature elected him for another term.

Following the panic of 1837, which soon burst upon the country, Van Buren brought forward the sub-treasury system to take the place of Jackson's "pet banks." Clay opposed the measure, here paring company with Calhoun who supported it and rejoined the Democrats. Thereafter Clay and the South Carolinian engaged in many tilts on the floor of the Senate. Van Buren's administration proved so unsatisfactory to the country that the Whigs felt certain of victory in 1840 and Clay fully expected the nomination. But a new schemer with new tricks now appeared prominently in American politics.
Clay

Thurlow Weed, by his astute maneuvers in the Whig convention at Harrisburg, threw the nomination to William Henry Harrison, a questionable military hero thirty years removed from his exploits and an incomparably less able leader than Clay. John Tyler, a Democrat of the old school and an admirer of Clay, became the vice-presidential candidate. Though Clay was enraged when he learned of Weed’s trickery he campaigned vigorously for the ticket. The Whigs won and Clay rejected the offer of the secretaryship of state in order better to assume the leadership of the new administration. He introduced in the Senate a set of resolutions which he expected to be accepted as the party program, consisting of the repeal of the sub-treasury system, the re-chartering of the United States Bank, the distribution among the states of the proceeds from the public lands sales, and the passage of a new tariff. But when Tyler succeeded to the presidency on the death of Harrison exactly one month after assuming office, he soon showed the Whigs how completely they had been cheated out of their victory. Clay, indeed, succeeded in getting the sub-treasury system repealed, but when he sought to have the United States Bank re-chartered he found Tyler unsympathetic. He so amended his measure that he thought it would secure the President’s approval, and after putting it through Congress was almost stupefied to see Tyler veto it. He had no better success with the tariff, and in 1842 resigned his position in the Senate, making on Mar. 31 a farewell address which created a profound effect on his auditors.

If Clay had revived the idea of retiring to Ashland and settling down to the stock farming which he so much enjoyed, he was soon possessed of the thought, for his reception in Kentucky was so vigorous as to constitute a mandate for the presidency in 1844. Enthusiasm for him was equally marked throughout the rest of the country. The year he retired from the Senate, two years before the election, various states began to nominate him. He made a few trips out of Kentucky, notably one to the states north of the Ohio. In Dayton it was estimated that 100,000 people gathered to hear him. Long before 1844 it was conceded that Clay would be the Whig nominee, and it was no less an accepted fact in Clay’s mind that Van Buren would receive the Democratic nomination. When Van Buren chanced to visit Ashland, the two prospective candidates appear to have agreed to eliminate the question of Texas from the campaign. Accordingly, on the same day in the latter part of April, after Clay had made a trip through the lower South, both he and Van Buren issued statements opposing immediate annexation (for Clay’s letter, see Niles’ Register, LXVI, 152–53). A few days later Clay was nominated by acclamation in the Whig national convention. Van Buren, however, lost the Democratic nomination to Polk, as the Democrats were determined on expansion. The apparent enthusiasm of the country for annexation and the widespread impression that he was favoring the abolitionists, led Clay to restate his position in what came to be called the “Alabama letters.” In these he declared that slavery was not involved one way or the other in the Texas question, and that he would be glad to see Texas annexed, if it could be done “without dishonor, without war, with the common consent of the Union, and upon just and fair terms” (Ibid., LXVI, 439). Owing to this ill-advised maneuver, Clay lost New York, and thereby the election, to Polk. “Never before or since has the defeat of any man in this country brought forth such an exhibition of heartfelt grief from the educated and respectable classes of society as did this defeat of Clay” (James Ford Rhodes, History of the United States, 1902, I, 84).

Polk’s success brought annexation, at the hands of Tyler, and war with Mexico. Clay felt that the declaration of war was an outrage, yet after war was declared he supported it. His favorite son, Henry, was killed at Buena Vista. Much concerned over the ultimate outcome of the war, Clay made a speech in Lexington on Nov. 13, 1847, in which he called upon Congress to disclaim any intention of annexing Mexico and to announce the purposes of the war. During this period of retirement he made two trips to the East and was received with almost unbounded enthusiasm in New York, Philadelphia, and in other cities. Again the clamor began to arise for his nomination in 1848. Convinced of support, he announced his candidacy in April 1848. But there were many Whigs who felt that he could not be elected, and some of these were in Kentucky. A Kentucky Whig wrote John J. Crittenden, Jan. 2, 1847, that “the Whig party cannot exist, or with any hope of success, so long as Mr. Clay continues his political aspirations” (Mrs. C. Coleman, Life of John J. Crittenden, 1871, I, 266). Crittenden’s desertion brought to an end a long-standing friendship. Gen. Zachary Taylor was nominated, and Clay, disconsolate because he did not control even the Kentucky delegation, felt that the Whig party had destroyed itself by its own act. The folly of nominating a military hero who had no qualifications for civil leadership had
Clay

been repeated. Clay definitely refused to take part in the campaign.

After Taylor's election, when the problems growing out of the war and the sectional struggle had nearly driven the country to disunion, he returned to the Senate (1849) in a last effort to ward off disaster. Spurning Taylor's weak course, he set forth in detail his plan for gradual emancipation in the Pindell letter of 1849 and introduced in the Senate his well-known series of resolutions. In the debate in the Senate he made his greatest and last effort to save the Union, begging the radicals, in both North and South, to abandon a course which could mean only disruption. He particularly warned the South against secession, declaring that no such right existed and that he would advocate force in opposing it. Clay hoped that the compromise measures would definitely settle the sectional struggle; but to make doubly sure he with forty-four other members of Congress signed a pledge to oppose for public office any one who did not accept the settlement. In the summer of 1851 he returned to Kentucky by way of Cuba, hoping the Southern climate would help a racking cough with which he was now afflicted, but he found no relief. In the fall he was back in Washington, determined, it seemed, to die in the service of his country. On the following June 29, death closed his career. His remains were taken to Lexington by way of Baltimore, Philadelphia, New York, Albany, Buffalo, Cleveland, and Cincinnati, amid national mourning. He was buried in the Lexington cemetery.

No man in American public life has had more ardent supporters or more bitter enemies than Clay, and no one has depended more for his happiness on the friendship of the people. His mastery of Kentucky's emotions and reason was complete and lasting on every public question except that of slavery. Kentucky absorbed his strong Unionism but refused to adopt his plan of emancipation. Clay obtained much pleasure from his Ashland home with its six hundred acres and fifty slaves; but however often he might resolve to abandon public life, the importunities of his friends and his love of debate changed his mind. When his home was in danger of being sold for his debts, unknown friends throughout the country raised $50,000 with which they settled his obligations. He was not by nature a religious man, though he joined the Episcopal Church in later life (1847). He fought duels, but he afterward came strongly to oppose that method of vindicating honor. In common with his contemporaries, he played cards, was fond of horse-racing, and liked good liquors, though he did not drink to excess. In appearance he was tall, with a high forehead, gray eyes, and a large mouth. His voice was engaging, and in debate he employed every movement of his body with grace and skill, even using his snuff box to great advantage. His personal magnetism was remarkable; he seemed never to be without a proper word or expression, and always seemed to be perfectly at ease. Enthusiasm and warmth characterized his speaking, getting the best of his reason at times and leading him into untenable positions. His knowledge was not characterized by the profundity of Webster's, nor did he have the philosophical powers of Calhoun or the acquaintance with the classics which Adams and Sumner possessed. But in his understanding of human nature, in his ability to appeal to the common reason, and in his absolute fearlessness in stating his convictions, he was unequaled by any of his contemporaries. He was married in 1799 to Lucretia Hart, a daughter of Col. Thomas Hart of Henderson's Transylvania Company, by whom he had eleven children—six daughters and five sons. All his daughters and one son died before him. Another son became insane from an accident. Of the others, Thomas H. Clay was minister to Guatemala under Lincoln and died in 1871; James B. Clay was chargé d'affaires at Lisbon under an appointment from Taylor, was later elected to Congress, and died in 1863; and John M. Clay became a farmer and was the last surviving member of the family, dying in 1887.

[The letters and papers of Henry Clay are voluminous. Many of them have been scattered among his descendants, but the largest single collection is in the Lib. of Cong. Among his published letters and speeches are the following: Richard Chambers' ed., Speeches of the Hon. Henry Clay, in the Cong. of the U. S. (1842); Daniel Mallory, ed., Life and Speeches of Henry Clay (2 vols., 1843); Calvin Colton, ed., Private Correspondence of Henry Clay (1856); Works of Henry Clay (6 vols., 1856, repub., with additional matter, in 7 vols., 1896), and Monument to the Memory of Henry Clay (1857). The principal biographies of Clay are: Geo. D. Prentice, Biog. of Henry Clay (1831); Epes Sargent, Life and Public Service of Henry Clay (1842, repub. with additions, 1848); Calvin Colton, Life and Times of Henry Clay (2 vols., 1846); Calvin Colton, The Last Seven Years of the Life of Henry Clay (1856); Carl Schurz, Henry Clay (2 vols., 1887); Thos. H. Clay and E. P. Oberholtzer, Henry Clay (1910); Jos. M. Rogers, The True Henry Clay (1902). An estimate of Clay's service as speaker of the House of Representatives is in M. P. Follett, The Speaker of the House of Representatives (1909) and H. B. Fuller, Speakers of the House (1909). The ancestry of Clay has been most fully set forth by Zachary P. Smith and Mrs. Mary Rogers Clay in The Clay Family (1899), being no. 14 of the Filson Club Publications.]

E. M. C.

CLAY, JOSEPH (Oct. 16, 1744–Nov. 15, 1804), merchant, Revolutionary officer, and member of the Continental Congress, was promi-
Clay

Among those young colonials of property and position who espoused the Revolutionary cause in Georgia. His father, Ralph Clay, was a native of Yorkshire, England, and there, at Beverley, Joseph was born. His mother, Elizabeth Habersham, was a sister of James Habersham who emigrated to Georgia some five years before Joseph's birth, became a leading citizen, and served as royal governor during the absence in England of Sir James Wright. It was at the instance of this uncle that Joseph, in his nineteenth year, sailed for Savannah. A few years after his arrival, Joseph was placed by his uncle in the general commission business in partnership with his cousin James Habersham, Jr., and a little later, still in association with his Habersham relatives, he acquired interests in rice plantations. He prospered from the first, both as a merchant and as a planter, and at various times was a member of the firms of Joseph Clay & Company, Seth John Cuthbert & Company, Clay, Telfair & Company, all of Savannah, and a co-partner in the house of William Fox & Company of Newport, R. I., although he always lived in Savannah. He has been described as being prompt, energetic, and competent. Early in his career, Jan. 2, 1763, he was married to Ann Legardere, and one of his sons, Joseph Clay [q.v.], attained some distinction in his state. Although Clay's fourteen years out of England had been spent for the most part in a loyal atmosphere under the tutelage of a royalist uncle, he threw himself actively into the conflict on the side of the revolutionists. From the time when as a member of a committee appointed by the Savannah republican mass-meeting of July 27, 1774, he helped draft the resolutions expressing the determination of Georgia to associate herself with the sister colonies in opposition to the acts of the British Parliament, until the end of the war, he held positions of responsibility in the civil government and in the army. There is evidence that he was considered by his contemporaries to be a valuable member of the Council of Safety which took over the administration of the city of Savannah in 1775, and he was placed upon the important committees of the Provincial Congress of that year. He also participated in the secret raid upon the King's powder magazine on the night of May 11, 1775, with a party which seems to have been restricted in its personnel to the corps d'elite of the revolutionary faction. As paymaster-general of the Continental Army for the Southern Department—to which position he was appointed in 1777—he was both honest and efficient, and it appears that he had the confidence and esteem of Gen. Nathanael Greene, his commanding officer. He was included among the twenty-five rebel leaders who were attainted for treason by the royalist Assembly of 1780 in retaliation for similar action taken by the Republican Assembly of 1778. He was a member of the Continental Congress in 1778, 1779, and 1780, but was not conspicuous there.

At the cessation of hostilities he served for one year (1782) as state treasurer, and in the following year he was made a justice of his county. In 1785 he was made a member of the board created by the General Assembly to establish an institution of higher education, and thus became one of the fathers of the University of Georgia, the first state university to be chartered in America. Most of his time after the war, however, was devoted to his private business.

CLAY, JOSEPH (Aug. 16, 1764–Jan. 11, 1811), a Baptist clergyman who attained prominence as such after having had a distinguished career as a lawyer and jurist, was born in Savannah, Ga., the son of Joseph [q.v.] and Ann (Legardere) Clay. He had natural gifts of a high order and the advantage of belonging to a family of means, social standing, and political influence. When twenty years old he graduated from Princeton with highest honors, and later studied law at Williamsburg, Va., under the celebrated jurist and teacher, George Wythe (Georgia Historical Quarterly, September 1923, p. 211). On Nov. 25, 1789, he was married to Mary, daughter of Thomas and Mary (Butler) Savage, of Charleston, S. C.

He was a man of fine personal appearance, above the average height, with a kindly face, and eyes of singular beauty. His ability and eloquence soon brought him into prominence in his native state, where he engaged in the practise of his profession. He was one of the most influential members of the convention of 1795, which revised the Georgia constitution, and the original draft of the constitution which was framed in the convention of 1798 was from his pen. On Sept. 16, 1796, he was commissioned United States district judge for the District of Georgia. Letters to President Washington from the great Carolinian, Chancellor DeSaussure, from the Postmaster-General at that time, Joseph Habersham, and from Representative Abraham Baldwin, indorsing Clay for this office have been published (Ibid., pp. 209–12). On Feb. 24, 1801, he
Clay

was commissioned United States circuit judge for the 5th Circuit, under the "Midnight Judges Bill." By the repeal of this act which took effect July 1, 1802, he was legislated out of office (30 Fed. Cas., 1367).

An Episcopalian by early training, he was converted to Baptist doctrines in 1803, and joined the church in Savannah of which Dr. Henry Holcombe was pastor. He was soon called to be his assistant, and in 1804 he was ordained. From this time on, he devoted himself almost wholly to religious work. As a member of the General Committee of the Baptist Association of the state, he worked to promote education and missionary effort. A visit to New England in the autumn of 1806, where he preached in various cities, resulted in his being called to become an associate of the aged Dr. Samuel Stillman of the First Baptist Church, Boston, with right of succession. He accepted, and on the death of Dr. Stillman became pastor, being installed Aug. 19, 1807. Mr. Clay himself preached the sermon, which was on the nature and duties of the ministry (A Discourse, Delivered in the First Baptist Meeting House in Boston ... by Joseph Clay, A.M., on the Occasion of His Installation, 1807). Failing health caused him to resign in 1809. Death came to him in his forty-seventh year, and he was buried in the Granary Burying Ground, Boston.

(1908); Jour. of the Convention of the State of Ga. (1793); Jas. M. Winchell, Two Discourses Exhibiting an Hist. Sketch of the First Bap. Ch. in Boston (2nd ed., 1820); Hist. of the Bap. Denomination in Ga. (1881, comp. for the Christian Index), esp. chs. v and vi.; N. E. Wood, Hist. of the First Bap. Ch. of Boston (1890); Wm. B. Sprague, Annals Am. Pulpit, VI (1860).) H. E. S.

CLAY, MATTHEW (Mar. 25, 1754–May 27, 1815), congressman, the son of Charles and Martha (Green) Clay, was born in Halifax County, Va., before the establishment of Pittsylvania County out of the western portion of Halifax. His father and Henry Clay's grandfather were brothers and were the sons of Henry Clay, one of the confederates of Nathaniel Bacon, the colonial Virginia rebel (Virginia Magazine of History and Biography, VII, 124–25). In the Revolution, Matthew served as ensign in the 9th Virginia Regiment in 1776, being promoted second lieutenant in 1777 and first lieutenant in 1778. In the latter year he was transferred to the 1st Virginia Regiment, and served as regimental quartermaster. Transferred once more, to the 5th Virginia, in 1781, he retired in 1783. He was a member of the Society of the Cincinnati.

After representing Pittsylvania County in the House of Delegates from 1790 to 1794 he was elected to the national House of Representatives as a member of the Republican party, and served from 1795 to 1813, and from Mar. 4, 1815 until his death. In a "sensible speech," as Benton called it, in which he urged a reorganization of the militia, Clay declared, "I defy any man to say that I ever gave other than a republican vote, or did any other than a republican act, while acting as a public man" (T. H. Benton, Abridgment of the Debates of Congress from 1789 to 1856, 1857–61, III, 659–63). He was apparently much interested in the military organization, notwithstanding his republicanism. He urged that enlistments should be made for a longer period than was customary at the time (Annals of Congress, 12 Cong., 2 Sess., p. 490).

He believed firmly that the United States was justified in entering upon the War of 1812, and declared: "I am not for stopping at Quebec or anywhere else; but I would take the whole continent from them, and ask no favors. ... If we get the continent, she must allow us the freedom of the sea" (Ibid., p. 498). He supported Jefferson in the purchase of Louisiana and in the establishment of a government for that territory (Ibid., 8 Cong., 1 Sess., p. 550) and opposed the re-charter of the United States Bank (Ibid., 11 Cong., 2 Sess., p. 826). From the personal property and land tax books of Pittsylvania County (Manuscripts in Virginia State Library) it appears that in 1813 Clay was the owner of fifteen slaves and held land in the county to the extent of 1,176 acres, valued, for taxation purposes, at $1,058.57, and on which, with all of his personalty, he paid $20.14 tax.

He was twice married, his first wife being Polly Williams and his second, — Saunders. He died at Halifax Court House, Va., and was buried in the family burying-ground in Pittsylvania County.

(A portrait of Matthew Clay, marked no. 39, came into the possession of Hampton L Carson of Philadelphia in 1898, as one of the St. Memin Collection (Wm. and Mary Coll. Quart., IX, 146). For biographical data see: W. H. Powell, List Officers Army U. S., 1779–1900 (1900), p. 22; Lineage Hist. Reg. Officers Continental Army (1914); Biog. Dir. Am. Congress (1928).) E. L. F.

CLAYPOLE, EDWARD WALLER (June 1, 1835–Aug. 17, 1901), geologist, educator, was born at Ross, Herefordshire, England, the eldest of the six children of Edward Angell Claypole, a Baptist minister, and Elizabeth (Blunt) Claypole. His early training is said to have been se-
Claypole

vere and protracted and largely in classical lore, in which his father was very proficient. In 1852, at the age of seventeen, he passed the matriculation examination of the University of London, but owing to certain restrictions did not receive his B.A. degree until ten years later. His first inspiration toward natural history was due to the influence of two sisters of his mother who encouraged him to collect plants and fossils from near-by quarries. He began teaching while quite young (in 1852) at Abingdon, and in 1866 became tutor in the classics and mathematics at Stokescroft College in Bristol. His liberal tendencies in matters pertaining to evolution soon brought him into difficulties. This, together with the death of his wife in 1870 and his failure to procure a professorship in mathematics, caused him in 1872 to cross the Atlantic in the hope of finding a more liberal atmosphere. In 1873 he was appointed professor of natural history in Antioch College, Yellow Springs, Ohio, where he remained for eight years, leaving in 1881 to accept an appointment on the staff of the Geological Survey of Pennsylvania under Lesley. He remained here but two years, accepting in 1883 an appointment as professor of natural sciences in Buchtel College, Akron, Ohio. In 1898 he was appointed professor of geology and biology at the Throop Polytechnic Institute at Pasadena, Cal.

Claypole was more a naturalist of the old school than a modern geologist, as is very evident from his bibliography in which are titles ranging over nearly the whole gamut of the sciences. A large portion of his geological papers dealt with stratigraphic and paleontologic matters, though he wrote also on glacial questions and occasional physical problems, like the "level of no strain" in the earth, the conditions of the earth's interior, and Pennsylvania before and after the elevation of the Appalachian Mountains, in this last attempting to show that the distance along a straight line crossing the range had been actually reduced by some 65 miles by the process of folding. Perhaps his most epoch-making discovery was that of fish remains in Silurian rocks in Pennsylvania. His paper on "The Devonian Formation of the Ohio Basin" was awarded the Walker prize of the Massachusetts Institute of Technology. He is represented to have been of a modest and retiring disposition, caring nothing for display, thoroughly unselfish, and, though of a serious temperament, full of good-fellowship. As a teacher he had a genuine interest in his pupils, willing to go to any length to help but demanding the best in return. "Teaching was his profession and he taught all his working life except two years when he was on the Geological Survey of Pennsylvania. For nearly a third of a century he taught many things, nearly the whole curriculum of an ordinary college at different times, and everything with equal facility, but his specialty was the natural sciences and particularly geology. His early ambition was to be a civil engineer, not a teacher. He might have made a good engineer, but it is certain he was a teacher born, as truly as men are born gentlemen or geniuses" (American Geologist, post).

Dr. Claypole was a member of the Geological Societies of London, Edinburgh, and America, the American Philosophical Society of Pennsylvania, the American Society of Psychical Research, and several smaller and local societies devoted to various subjects. He married first, in 1865, Jane Trotter of Coleford, England, who died in 1870 before his coming to America, leaving a young son and twin daughters but a few weeks old; in 1879, while at Antioch College, he married Katharine Benedita Trotter of Montreal, a second cousin of his first wife, who survived him but a few days. He died suddenly of a cerebral hemorrhage at Long Beach, Cal., Aug. 17, 1901.

[Memorials by J. B. Comstock and others in the Bull. Geol. Soc. of America, XIII, 497, and the Am. Geologist, vol. XXIX; the former containing full bibliography of Claypole's publications.]

G. P. M.

CLAYTON, AUGUSTIN SMITH (Nov. 27, 1783–June 21, 1839), lawyer, congressman, born at Fredericksburg, Va., was the fourth child of Philip and Mildred (Dixon) Clayton. In 1784 the family removed to Georgia and settled in Richmond County. After being graduated from the University of Georgia in 1804, in the first class graduated by that institution, which opened in 1801, he studied law, was admitted to practice (1806), and settled in Athens. He was married in 1808 to Julia Carnes, daughter of Judge Thomas P. Carnes of Augusta. In 1810 he was commissioned by the legislature to compile the Georgia laws from 1800 to 1810; his compilation was published in 1812. After terms in the General Assembly (1810–12) and three years as clerk of the lower house, he was elected judge of the western superior circuit court. He held this office from 1819 to 1825, when he was defeated for reelection. He was again elected to the judgeship in 1828. At that time the northern portion of Georgia was still in the possession of the Cherokee Indians, and the state had begun to take steps to acquire the Cherokee lands. In 1827 the Cherokees adopted a written constitution and claimed to be a sover-
eign state, denying the right of Georgia to interfere in any way with their autonomy. The state's answer to this move was promptly made in 1828 in the form of legislation extending the jurisdiction of Georgia laws and courts over Cherokee land and making it illegal for Cherokee courts to sit or their processes to be executed. Jurisdiction over the Indian land was divided between neighboring Georgia counties, a part of the area being assigned to counties in Clayton's circuit. A bitter struggle followed between Georgia and the Cherokees over the constitutionality of the state's legislation. Clayton vigorously upheld the state's position. The difficulty of the problem was accentuated in 1829 by the discovery of gold in the Indian land. The country was invaded by a turbulent, lawless element, some three thousand men going there within the year. With the idea of controlling the disorder the General Assembly enacted a law (1831) making it illegal for any white men to reside in Cherokee land unless a license from the state were first obtained. Such migrants were also required to swear allegiance to the constitution of Georgia. Among these white residents was a missionary named Worcester. He and others refused either to apply for a license and take the oath of allegiance or to leave the Cherokee nation. They were indicted (1831) by the grand jury of Gwinnett County, which was in Clayton's circuit. In the subsequent trial, the defendant, Worcester, denied the jurisdiction of the court, contending that the Cherokee nation was an independent state and that Georgia was without authority to extend the jurisdiction of state law over them. Clayton overruled this plea; the defendants were convicted and sentenced to four years in the penitentiary. The Governor offered a pardon if they would agree to abide by the law in future. All accepted the offer of clemency except Worcester and one other missionary. Worcester appealed his case to the Supreme Court of the United States. Clayton expressed in no uncertain terms his resentment of the decision of that court, which declared that the Georgia law with reference to the Cherokees was unconstitutional, null and void. Clayton was defeated for reelection to the judgeship in 1831 because of an unpopular decision in connection with the Cherokees. The General Assembly had enacted a law prohibiting Indians from digging gold on their own land. In a test case Clayton declared this law unconstitutional. The decision was rendered shortly before the General Assembly was called upon to elect a judge of the circuit. There was no opposition to Clayton until the decision was rendered, but another candidate saw fit to take advantage of his momentary unpopularity and Clayton was defeated. Many Georgians of the period held that the Indians had no rights that a white man was bound to respect when conflict arose between whites and Indians. In politics Clayton was an uncompromising adherent of the state sovereignty school. His attitude toward the national government was clearly shown by his defiance of the Supreme Court in connection with the Worcester case. It was natural, therefore, that when he entered Congress (1831) at a critical moment in national history, he should throw himself with great zeal into the tariff and bank matters, always championing the strictest state-rights position. His opposition to the tariff rested on constitutional grounds and on the claim that it fostered manufacturing at the expense of agriculture. He had been a member of the company which, in 1828, erected at Athens the first cotton-mill in Georgia (the mill is still operating), and in buttressing his arguments he was able to point to his own excessive profits, the company having doubled its capital within two years. On returning to Georgia in the summer of 1832, Clayton, Berrien, and others organized an anti-tariff convention to meet in the fall. When the convention assembled, Clayton was made chairman of a committee to prepare resolutions on the tariff situation. The resolutions, denouncing the tariff, Jackson's proclamation, and the Force Bill, were adopted. Clayton was in entire agreement with Calhoun as to the right of a state to nullify acts of Congress which the state thought exceeded the powers that had been delegated to Congress. Indeed, he was the only Georgia politician of the first rank who was an avowed nullifier. On the other important question of the period, that of rechartering the second Bank of the United States, he was equally radical. Both in Congress and in numerous communications to the press (writing under the pseudonym "Atticus"), he denounced the Bank as a money monopoly, as interfering in politics, as a subsidizer of the press to gain support, as guilty of oppression, extortion, and fraud, and as being largely foreign-owned. In fact, he reflected the views current in all agricultural sections about centralized banking. He pointed out with great vigor the faults of the Bank, but was totally unable to see any of its virtues. He retired from Congress at the end of the session in March 1835. Personally he was an agreeable and popular man and was regarded by his contemporaries as a jurist and statesman of ability. He was deeply
Clayton

interested in the University of Georgia, serving for many years as trustee and secretary of the board. Late in life he became a member of the Methodist Church. In 1838 he was stricken with paralysis and died the following year.

R. P. B.

CLAYTON, JOHN (c. 1685–Dec. 15, 1773), botanist, was born in Fulham, England, the son of John Clayton, appointed attorney-general for Virginia by the Crown. His uncle was Gen. Jasper Clayton, governor of Gibraltar, and his grandfather, Sir John Clayton, a barrister of London belonging to a Yorkshire family. These points are important in establishing the identity of the botanist, who has been confused with Rev. John Clayton, the rector of Crofton Church, Wakefield, Yorkshire. The latter also went to Virginia, and communicated to the Royal Society of London papers relating to the medical botany and the ethnology of that colony, but he left Virginia in 1686, nineteen years before John Clayton the botanist arrived.

Soon after his coming to Virginia in 1705, John Clayton was appointed assistant to the clerk of Gloster (now Gloucester) County, though he lived in what is now Mathews County, on the Piankatank River, at an estate called "Windsor." Later, he became first clerk of the county, a position he held until his death. It is said that he planted a fine botanical garden. He was in correspondence with Gronovius, Linnaeus, Alexander Garden, and, probably, with Peter Kalm and Peter Collinson, and sent seeds and plants to John Bartram and others, and was constantly collecting Virginia plants. After many delays the results of his work were embodied in the *Flora Virginica* by John Frederick Gronovius. Because Clayton's herbarium specimens formed the basis of this work it is often asserted that it should be called Clayton's *Flora Virginica*, but the final identification of the specimens, the science and system of the book, and the Latinity, were largely the work of Gronovius. Nevertheless Gronovius's *Flora Virginica* may be said to be also Clayton's masterpiece. It was printed by C. Haak at Leyden, the first part appearing in 1739; the second not until 1743. In that same year there was a second imprint issued, which explains why some copies of the first part bear the date 1743. A second revised edition, edited by the elder Gronovius and put through the press by Laurans Theodore Gronovius, appeared in 1762, and represented Clayton's more mature work. This edition is important as appearing after the 1753 edition of Linnaeus's *Species Plantarum*, which is taken as the dividing line between medieval and modern botany. According to the rules of modern botanical nomenclature the first edition of the *Flora Virginica* is of merely historical interest, but the second edition takes rank as true, modern systematic work. It contains a map of Clayton's travels which shows that he was seldom north of the Rappahannock or south of the James, and that his knowledge of the mountains did not extend beyond the Blue Ridge. He was thorough, however, in his exploration of the middle Tidewater districts, and recent botanical work shows that as a field botanist he was more astute than has been realized. In the last year of his life, though of advanced age, he made his most extended trip, as far as Orange County.

Two volumes by Clayton's own hand, with many drawings and a fine supporting herbarium, were left by him at his death, but were destroyed during the British raids in Virginia in the last part of the Revolution. His letter-book, containing his copies of letters to scientists, was known to be in the possession of his descendants until about thirty years ago. All efforts by Virginia antiquarians to trace it since have failed. Most of the herbarium specimens which formed the basis of the *Flora Virginica* and which were of great importance to Linnaeus are now in the National Herbarium in England.

Concerning Clayton's personal life not much has been established. His public duties were discharged faithfully and Gov. Page of Virginia in a letter to B. S. Barton (Jan. 18, 1808) said Clayton was "a strict but not ostentatious observer of the practices of the church of England." Though parsimonious, he would pay money for a new species of plant brought to him. He was personally known to Benjamin Franklin and Thomas Jefferson, and highly esteemed by them.

184
Clayton was prepared with the assistance of notes by Galt, Jefferson, Madison, and Page. Clayton's letters are found only in scattered collections. E. G. Swem, who has rendered assistance in the preparation of this notice, published in the *Wm. and Mary Quart.*, Oct. 1924, the only letter of Clayton to Linnæus in the collection of the Linnean Society of London, and in the same periodical for Oct. 1926, printed one letter never before made public.1

D. C. P.

**CLAYTON, JOHN MIDDLETON** (July 24, 1796–Nov. 9, 1856), farmer, lawyer, statesman, was a descendant of the Quaker, Joshua Clayton, who accompanied William Penn to America. From his mother, Sarah Middleton of Annapolis, Md., he derived conversational fluency and charm; from his father, James Clayton of Delaware, an interest in law and politics. His birthplace was the little village of Dagsborough, Sussex County, Del., but when he was still an infant the family removed to Milford, Kent County, where James Clayton engaged in the milling and tanning business as well as in farming. At home, John was well grounded in the Bible and Shakespeare, and in academies at Berlin, Md., and Lewes and Milford, Del., he secured his early schooling and preparation for Yale College, from which he graduated in 1815 with the highest honors. Following this, he spent some time in the law office of his cousin, Thomas Clayton [q.v.], after which he attended the famous law school at Litchfield, Conn., for almost two years. At Georgetown, Del., in November 1819 he was admitted to the bar, and soon began practise in Dover. In 1822 he married Sarah Ann, daughter of James Fisher, a physician of Kent, Del.

Clayton's superior training, remarkable memory, great eloquence, charming manners, and rare skill as a cross-examiner, won him a reputation unrivaled in Delaware. He was counsel in more than a thousand cases, some of them nationally famous. He reached his majority in the politically dull "era of good feeling," and at first took little interest in partisan politics, though, following family tradition, he allied himself with the Federalist group. He early developed, however, a deep love for his native Delaware, and served it while still very young in various state offices. The bitter Adams-Jackson strife made him an ardent partisan. A Whig, he remained loyal to the party until it went to pieces, when he joined the embryonic Republican group. His services to the local Whigs in 1828 won him a seat in the national Senate. Though the youngest member of that body, he at once became very active, and soon established his reputation as an orator, his first notable speech, made in 1830, being in favor of the Foote Resolution. The next year he began an investigation of the abuses in the Post Office Department, which resulted in reform and reorganization. He had strong affection for the Union, and supported Jackson in the nullification controversy; but opposed the President's bank policy, and voted for the resolution of censure against the removal of the deposits. An intense advocate of protection, he aided Henry Clay greatly in putting through the tariff bill of 1833. As chairman of the Senate Judiciary Committee, he facilitated the settlement of the boundary dispute between Michigan and Ohio, which left the Upper Peninsula to the former. In 1834 he was reelected to the Senate, but, feeling that his family needed him, he resigned in 1836 and became chief justice of Delaware. After two and a half years he left the state bench to campaign for William Henry Harrison, and for some time following Harrison's election he devoted most of his energies to scientific farming near New Castle, and became noted as an agriculturalist far beyond the borders of Delaware.

Though rather disgusted with the political trend, in 1845 Clayton again accepted election to the federal Senate, where he favored peace with England and Mexico, but supported the Mexican War after it had begun. From his position in the Senate he took an active interest in the presidential election of 1848. Though long a close friend of Henry Clay, he felt that the latter had no chance of election, and so gave his support to Gen. Zachary Taylor. His reward was the portfolio of the State Department. But the defection brought a permanent coolness between himself and Clay, and thereafter his closest political friend and adviser was Gov. John J. Crittenden of Kentucky. He was also in close confidential relations with Richard Montgomery Bird, editor of the Philadelphia daily, the *North American*. In this paper, Clayton had a large financial interest, and from it he usually received hearty support for his policies.

When he joined Taylor's cabinet, Clayton was one of the most attractive personalities in the Capital. He was more than six feet tall and well-built, with good features, dominated by large, friendly gray eyes shaded by dark, bushy brows, but his hair, worn brushed back in pompadour style, was prematurely white. In conversation he was brilliant; in manners, polished. He was unusually kind-hearted and unselfish; but was known at times to use questionable methods to gain political ends; and was somewhat wanting in tact and patience, as well as in firmness and stability of character.

As secretary of state, it was his policy to pay strict regard to international obligations, as well as to the rights of his own country, and to pro-
mote assiduously American commerce. He, accordingly, did his utmost to prevent the departure of filibustering expeditions for Cuba, but when a group of alleged filibusters were unjustifiably seized on the Mexican coast by a Spanish vessel, he vigorously contended for and ultimately secured their release. Nevertheless, due largely to the influence of Taylor, he made upon Portugal extreme demands for indemnity for the destruction of American vessels, refused arbitration, and presented what was virtually an ultimatum of war; and with France the United States was brought to the very brink of conflict over the merest trifle, by the Secretary's undiplomatic language and the arbitrary stand of the President.

Clayton's commercial plans were more successful and made for national progress and continental well-being. The program prepared at his instruction for opening up trade relations with the Orient was used a few years later by Perry in his expedition to Japan. With England, he made the famous Clayton-Bulwer Treaty, which was doubtless his most important work. The agreement, which perhaps averted war with England, provided for a neutralized international canal across Central America, and contained pledges that ultimately forced Great Britain to withdraw from large tracts of territory which, in plain violation of the rights of the Central-American nations, it had been occupying upon the Isthmus.

Taylor died, however, before the treaty could be put into effect, and Clayton gave up his office, July 22, 1850, and retired to his farm. But when in 1852 Cass, Douglas, and others began to attack the treaty which he had made with Bulwer, Clayton again returned to the Senate, and ably defended the document. He now worked with great effort, for his health was rapidly declining from kidney disease, and he realized that his career was drawing to a close. The end came in Dover, at the home of his niece, and he was buried beside his wife and sons in the cemetery of the local Presbyterian Church.

[The chief printed sources for the biography of Clayton are the state documents of Delaware, the Cong. Record, Cong. Globe, British Parliamentary Papers, and U. S. documents, but a number of important letters appear in C. Coleman's Life of John J. Crittenden (1871), and in the Appendix to John Bigelow's Breaches of Anglo-American Treaties (1917). The most important sources are, however, still in manuscript form, in the British and American archives, in the Papers of Clayton himself, and in those of John J. Crittenden, Geo. P. Fisher, and Wm. Larned Marey, in the Lib. of Cong., and those of Richard Montgomery Bird, in the Lib. of the Univ. of Pa. No satisfactory biography of Clayton exists. The most inclusive life, Jos. P. Comegys's Memoir of John Middleton Clayton (1882) is frankly eulogistic and contains many errors of fact. The brief sketches by Wm. Elbert Wright in W. D. Lewis, Great Am. Lawyers (1907), vol. III, and by J. T. Scharf, in his Hist. of Del. (1888), vol. I, are based upon Comegys's work. The most comprehensive account of Clayton's career as secretary of state is Mary W. Williams's "John M. Clayton" in vol. VI of Am. Secretaries of State and Their Diplomacy (1928).]

M.W.W.

CLAYTON, JOSHUA, (Dec. 20, 1744--Aug. 11, 1798), physician, governor of Delaware, was a descendant of Joshua Clayton who accompanied William Penn on one of his visits to this country (H. F. Hepburn, The Clayton Family, 1904, and T. J. Clayton, Rambles and Reflections at Home and Abroad, 1893, p. 399). The younger Joshua's father, James Clayton, settled with his wife Grace in Cecil County, Maryland, where their son was born. At one time the father was engaged in milling in Kent County, Del. (H. C. Conrad, History of the State of Delaware, 1908, III, 826, 903). The parents early destined their son for medicine, but where he received his degree of M.D. is not known. He was a student at the University of Pennsylvania, however, from 1757 to 1762 (A Biographical Catalogue of the Matriculates of College, 1894). About this time, he married Rachael McCleary, an adopted daughter of Richard Bassett [q. v.], former governor of Delaware. He practised his profession quietly until he was interrupted by the Revolution. His Quaker antecedents did not hinder him from taking part in the war and on Jan. 6, 1776, he was elected second major of Bohemia Battalion, a body of militia recruited from the inhabitants of Bohemia Manor where he was then living. The battalion was later incorporated into the Continental Army, Clayton being commissioned colonel by Washington and placed on his staff. His active participation in the war seems to have been limited to the battle of Brandywine (George Johnston, History of Cecil County, Maryland, 1881, pp. 323, 326). After the war his career as a statesman began with his election to the Delaware House of Assembly in 1785 and again in 1787. A year previous to the last election he had been made state treasurer. His rise to position was rapid, for on May 30, 1789, he was elected president of Delaware, to succeed Thomas Collins, deceased. He held office in this capacity until 1792, when a new constitution was adopted and the title of president changed to governor. Under this new constitution Clayton sought a second term and in the fall of 1792 was victorious by a majority of 307 over his opponent, Thomas Montgomery. At the end of his second term, Jan. 13, 1796, he resumed his practise at Bohemia Manor in Delaware (Conrad, op. cit., p. 826). A great part of his influence must have resulted from his immense land holdings, some of
Clayton

which were acquired as early as 1791. It is estimated that he and Richard Bassett, his wife's foster father, owned about 20,000 acres in Bohemia Manor (Johnston, op. cit., pp. 184-85; Hepburn, op. cit., p. 26). Clayton was again pressed into public service with his election as United States senator on Jan. 19, 1798. While in Philadelphia in the summer of that year he was in frequent consultation with Dr. Rush and other physicians on the yellow-fever epidemic then prevalent. He contracted the disease and retired at once to his estate, where he died (Conrad, p. 827). Medical men may know of him principally for his discovery of a substitute for Peruvian Bark which became very scarce during the Revolution. This consisted of a mixture of poplar bark, the bark of dogwood root, and the bark of white oak, and was said to be efficacious as a remedy for gangrene and mortifications (James Thacher, American Medical Biography, 1828, I, 225-26).

[In addition to references given above see sketch by Douglas F. Duval in H. A. Kelly and W. L. Burrage, Am. Medic. Biogs. (1920), and Biog. Dir. Am. Cong. (1928).]

C.W.G.

CLAYTON, POWELL (Aug. 7, 1833-Aug. 25, 1914), politician, governor of Arkansas, was born in Bethel County, Pa., a son of John and Ann (Clark) Clayton. He was educated in the common schools, the Partridge Military Academy at Bristol, Pa., and in an engineering school in Wilmington, Del. In 1855 he moved to Kansas where he engaged in civil engineering, becoming city engineer of Leavenworth in 1859. When the Civil War began, he volunteered, serving first as captain of the 1st Kansas Infantry (May 29, 1861), later as colonel of the 5th Kansas Cavalry. He served in Missouri and Arkansas and was assigned to the command of Pine Bluff after the capture of Little Rock (1863) and repulsed an attack there by Gen. Marmaduke. On Aug. 1, 1864, he was made brigadier-general and was mustered out, Aug. 24, 1865. As a military officer he was fairly capable, but showed no remarkable abilities. On retiring from the army, he bought a plantation near Pine Bluff and became a cotton planter. He was married, on Dec. 14, 1865, to Adaline McGraw of Helena. When the new constitution was drawn up by the convention under the congressional plan of Reconstruction (1868), he campaigned for its adoption and was elected governor as a Republican for a term of four years. Upon his election, he became Republican boss of the state, a position which he virtually held for the rest of his active life. He became a member of the Republican National Committee in 1872 and served, with the exception of two years, until his death.

Clayton was an able man, neither the worst nor the best of the carpet-bag governors. Among his acts which were severely criticized was the institution of martial law under which he used negro militia to hunt down the Ku Klux Klan at a cost of $330,675, but he claimed that he stamped out the order. He was also accused of corrupt management of the bond issues authorized in aid of railroads, and of aiding in election frauds. On the last two counts he was impeached by the Arkansas House in 1871, but the Senate was friendly and the prosecution was dropped. On Jan. 10, 1871, he was elected to the United States Senate, but he refused to resign the governorship because he did not want J. M. Johnson, the lieutenant-governor, to succeed him. A way out was found by "persuading" R. J. T. White to resign as secretary of state and appointing Johnson to this more lucrative position. Soon afterward White received $5,000 in money and $25,000 worth of railroad bonds as compensation for giving up his position. Who supplied the funds was never known, but Clayton sent White the certificate of deposit. Clayton was again elected Senator and now accepted, resigning the governorship in March 1871. Many Democrats supported his election to get him out of the governor's chair. Soon after he reached Washington, he was indicted. A majority of a Senate investigating committee gave him a qualified exoneration, and the prosecution was dropped (Congressional Record, 43 Cong., Spec. Sess. of the Senate, vol. I, 160-182). When the Democrats returned to power in 1874, the bonded debt of the state was $10,618,166, of which $6,900,000 had been issued in aid of railroads under the law passed in Clayton's administration and indorsed at the polls by a very large majority. The complaint was, not against the loaning of the credit of the state, but against the corruption connected with it. Clayton's defense was that 315 miles of railroad had been built. It was never proved that he got any of the bonds. In the Brooks-Baxter "War" he at first supported Baxter, but later turned to Brooks and did all in his power to prevent President Grant from recognizing the Baxter government. In Congress he was not a prominent leader, neither was he an inconspicuous member. He introduced a bill to repeal the tax on state banknotes (1874) and voted for Sumner's civil rights bill. Returning to Arkansas in 1877, he established his residence in Little Rock, but moved in 1882 to Eureka Springs, where he constructed and became the manager of the Eureka Springs Railway, president of the Crescent Hotel Com-
Clayton

pany, and a director in the Missouri & North Arkansas Railroad. In 1884 he was nominated by the Republican National Committee as temporary chairman of the National Republican Convention, but was defeated by John R. Lynch, colored, of Mississippi, who was put up by Lodge, Roosevelt, and other supporters of Edmonds. In 1897 he was appointed ambassador to Mexico and held the position until 1905. About 1912 he moved to Washington, D. C., and resided there until his death.

[See the Official Records (Army) for Clayton's military career. T. S. Staples's Reconstruction in Ark. (1923) gives the most scholarly account of his administration. His own defense is contained in his book, The Aftermath of the Civil War in Ark. (1915). See also Who's Who in America, 1912-13; D. Y. Thomas, Ark. in War and Reconstruction (1926); Foreign Relations U. S., 1897-1905.]

D.Y.T.

CLAYTON, THOMAS (July 1777-Aug. 21, 1854), jurist, was the son of Joshua Clayton [q.v.]. Although his father was in 1777 a resident of Delaware, Thomas was born at Massey's Cross Roads, Md., to which place his mother, Rachael (McCleary) Clayton, had been removed to avoid the excitement occasioned by the march of the British across Delaware. Thomas was given a classical education at Newark Academy, and then three years' legal instruction at Dover, Del., after which he was admitted to the bar. After completing his education he married Jeanette Macomb, and practised his profession for about eight years, building up a considerable reputation. The first recognition of his talents was an appointment to the secretariship of state of Delaware under Gov. Truitt. Three years later he was made attorney-general. In 1814 he entered the field of national politics as representative in Congress from Delaware, but he was defeated at the next election, having placed himself in the field as an Independent. An examination of the debates reveals not only his character but the probable reasons for his defeat. Clayton said that although "he would always regard the wishes of his constituents with the highest respect, when he had once made up his mind on any question of great national policy, no consideration would induce him to surrender his conscience to their keeping" (Annals of Congress, 14 Cong., 2 Sess., pp. 648-49). In 1824, however, he was elected by a Federalist legislature to the United States Senate to fill the unexpired term of Caesar Rodney. In 1828 he was appointed chief justice of the court of common pleas. In 1832, after his office had been abolished by constitutional amendment, he was nominated chief justice of Delaware under exceptional circumstances. The constitution required that the supreme court be composed of three judges, one from each county in the state. With Clayton's nomination, Kent County, his residence, had two representatives and the county of New Castle was unrepresented. It was therefore necessary to nominate a judge from New Castle in order to abide by the constitutional provision. This added a fourth and superfluous judge to the supreme court. Many interesting stories are told of Clayton's impartiality, sternness, and uprightness. His decisions bespeak a thorough knowledge of the law and a power of keen analysis in seizing upon the fundamental principles. In January 1837 he was chosen to fill the unexpired term of his cousin, Senator John M. Clayton [q.v.]. His senatorial service continued until 1847. The record of his remarks indicates that he was a moderate but independent Whig. Pennsylvania iron manufactures received his solicitous support, for he at one time introduced a resolution stating that a duty of twenty per cent was not high enough (Congressional Globe, 27 Cong., 2 Sess., p. 281). When the Oregon question was discussed he declared for preparedness (Ibid., 29 Cong., 1 Sess., p. 59). The close of this term marked the close of his public life. He retired to his home in New Castle where he remained until his death.

C.W.G.

CLEAVELAND, MOSES (Jan. 29, 1754-Nov. 16, 1806), pioneer, was born at Canterbury, Conn., the second son of Col. Aaron and Thankful (Paine) Cleaveland. He was descended from Moses Cleaveland who migrated from Yorkshire to Boston in 1635, and a few years later, in company with some companions, founded Woburn, Mass. Two uncles, the Rev. John Cleaveland and the Rev. Ebenezer Cleaveland, were expelled from Yale College in 1745 for having violated its laws and those of the Colony by attending "Separatist" meetings, but were later given their degrees. To Yale Moses was sent, graduating in 1777. In 1775, for about a month, he had held a commission as lieutenant in a group drawn "from sundry places to the relief of Boston in the Lexington Alarm." In January 1777, before his graduation from Yale, he was commissioned ensign in the 2nd Connecticut Continental Regiment. In the following fall he entered active service with Washington's army where he continued until 1781. In December 1777, he was commissioned lieutenant and in August 1799, captain in the corps of sappers and miners. After the Revolution he maintained his
Cleveland

interest in military affairs by membership in the Connecticut Society of the Cincinnati and in the Connecticut militia in which he rose to the rank of brigadier-general. In 1781 he entered upon the practise of law in Canterbury. From 1787 until his death more than eighteen years later, he represented Canterbury in the General Assembly. He was also a member of the state convention (1788) that ratified the Federal Constitution. On Mar. 21, 1794, he was married to Esther Champion, daughter of Col. Henry Champion of Colchester, Conn.

With the return of prosperity, three or four years after the Revolution, projects for settlement of the West and for speculation in frontier land were numerous. Cleveland took a conspicuous part in this movement. He held two shares in the Ohio Company which founded a settlement at Marietta on the Ohio River. It was, however, due to his part in the enterprise of the Connecticut Land Company that he was to link his name inseparably with the development of the West. In 1795, the Connecticut Land Company purchased about three million acres of Connecticut's Western Reserve, agreeing to pay $1,200,000, interest to begin in two years, principal due in five years. Each purchaser gave bond with securities to meet his own obligation. Cleveland was one of the thirty-six who formed the company. His share amounted to $32,600. He was chosen one of the seven directors, and superintendent of the agents and men sent to survey and settle the land. Accordingly, in June 1796, he led out to the south shore of Lake Erie a party of fifty-two persons, surveyors, commissary, physician, boatmen, laborers, and settlers, two of whom were women. The mouth of the Cuyahoga River was selected for the principal settlement and a plan for a city prepared and surveyed. The surveyors named it Cleaveland. At the close of the summer, Gen. Cleaveland's party returned to Connecticut, reporting that three inhabitants had been left in Cleaveland, a similar group at Conneaut, and that progress had been made with the survey of the company's lands. Cleaveland never returned to the Western Reserve. Until his death ten years later, his life was devoted to his legal practice, his lands, and an ever active interest in political and military affairs. In appearance he was of medium height, thick-set, muscular. His complexion was so swarthy that the Indians were inclined to regard him as one of their own race. His companions on the western expedition called him Paqua, the name of an Indian chief. His qualities of leadership are evident in his expedition to the West, and in his public life in Connecticut. If some of the stories about him are to be credited, he possessed a keen sense of humor.

[The chief sources have been compiled and published in part by Chas. Whittlesey in Early Hist. of Cleveland (1867), pp. 250-52, passim, and more fully by Elbert J. Benton in The Conn. Land Company and Accompanying Papers (1916). H. P. Johnston, ed., Record of Conn. Men in the Military and Naval Service During the War of the Revolution (1888); F. B. Dexter, Biog. Sketches Grad. Yale Coll., III (1903), 664-66, give material not otherwise accessible. See also Edmund J. and Horace G. Cleveland, Gen. Cleveland and Cleaveland Families (1899). Cleaveland published Oration Commemorative of the Life and Death of Gen. Geo. Washington (1800). Unfortunately large portions of his Journal and other papers known to have existed have been lost.]

E. J. B.

CLEAVELAND, PARKER (Jan. 15, 1780–Oct. 15, 1858), scientist, was born in Byfield, Essex County, Mass., of ancestry noted for adherence to old Puritan principles and discipline. His grandfather, Rev. John Cleaveland, and his great-uncle, Ebenezer Cleaveland, were expelled from Yale in 1745 for having attended religious services conducted by a lay exhorter of the Whitefield stamp, but they were later given their degrees. His father, also Parker Cleaveland, was a physician in Byfield, who achieved only small success in medicine but more in politics, having been the representative of the town of Rowley in the Massachusetts convention of 1780; his mother was Elizabeth Jackman. He attended Dummer Academy, situated about two and a half miles from his home, and in 1795, before he was sixteen years old, entered Harvard. After being graduated in 1799 he taught school in Haverhill, Mass., for a few months, and then in York, Me., for three years. During this time he read law, but in 1803 decided to study for the ministry. After a few months of theological reading, he received an offer from Harvard College of a tutorship in mathematics and natural philosophy. This he accepted with alacrity, and remained at Harvard until 1805, when he was chosen professor of mathematics and natural philosophy in Bowdoin College, an institution opened three years before in Brunswick, Me. This position he held until his death.

He shortly undertook to give instruction in chemistry, and in 1807, as a result of some questions asked him by local lumbermen, he became interested in mineralogy. His Elementary Treatise on Mineralogy and Geology, published in 1816, was the first American work upon the subject, and attained a considerable degree of popularity in this country and abroad. This was due to the citation of American localities for minerals not previously given in European works, and to the author's having followed the model of Brongniary in classifying minerals according to chemical composition rather than according to
Cleburne

crystal form. A second edition was published in 1822, but since no later revision was made, the book, which for a time had been the leading American authority, was soon supplanted. Upon the establishment of the Medical School of Maine under the administration of Bowdoin College in 1820, Cleaveland began to give instruction in materia medica in that institution, and at the same time to meditate to much of its administrative work. The mineral cleavelandite, a variety of the feldspar albite, discovered by Brooke at Chesterfield, Mass., in 1823, was named after him (Annals of Philosophy, London, V, 381, May 1823). In 1827 he published a pamphlet, Agricultural Queries, and between 1807 and 1859 he kept a record of his meteorological observations which, reduced and discussed by Charles Schott, were published in Vol. XVI of the Smithsonian Contributions to Knowledge (1870).

Cleaveland was an example of that type of college teacher, of pronounced personality, not without idiosyncrasies, which was more common then than it is to-day. The sonnet by Longfellow beginning “Among the many lives that I have known,” written in 1875, refers to him (Complete Poetical Works, Cambridge Edition, p. 319).

[The chief source is an address delivered by Leonard Woods, president of Bowdoin College, and published in the Me. Hist. Soc. Colls., VI (1859), 391. Shorter accounts, drawn largely from the above, are to be found in Nehemiah Cleaveland and Alpheus S. Packard, Hist. of Bowdoin Coll. (1882), p. 126, and in L. C. Hatch, Hist of Bowdoin Coll. (1927).]

M. P. C.

CLEBURNE, PATRICK RONAYNE (Mar. 17, 1828–Nov. 30, 1864), Confederate soldier, was born in the county of Cork, Ireland, son of Joseph Cleburne, physician and farmer. On the side of his mother, Mary Ann Ronayne, he was alleged to be descended from Maurice Ronayne who helped to wring from Henry IV greater liberties in 1406. Young Patrick was instructed by tutors and in a private school and at the age of eighteen apprenticed himself to a druggist to learn the trade. Because of his deficiencies in Greek, Latin, and French he failed to pass the examination set for him in the Apothecaries’ Hall, Trinity College, Dublin. This proved a great humiliation, and Cleburne decided to hide himself by enlisting in the 41st Regiment of Infantry. After three years of service he obtained enough cash from his father’s estate to purchase his discharge and started for America, accompanied by a sister and a half-brother. He landed at New Orleans in 1849 and went to Cincinnati, where he became a druggist’s clerk. After six months he moved to Helena, Ark., to a similar position, and two years later he became a part-

Cleburne

er. Here he found much time for study, conversation, and debate in association with congenial friends, several of whom rose to distinction; indeed, this small town later furnished seven generals to the Confederate army. In 1855, during an epidemic of yellow fever, Cleburne remained to nurse the sick when others fled. In 1856 he was admitted to the bar and continued in practise until the Civil War, by which time he had acquired considerable property, chiefly in land. In politics he was at first an ardent Whig, but when that party gave place to the Know-Nothings, with their anti-foreign principles, he went over to the Democrats. In 1860 he helped to organize the Yell Rifles, a military company, and the following January went with it to Little Rock to seize the Federal arsenal. Gov. Rector had not planned to seize it just at that time, but now demanded its surrender to avoid further trouble. When Arkansas seceded, the Yell Rifles volunteered and Cleburne was soon made captain, then colonel of the 1st (later the 15th) Regiment of Infantry. Early in 1862 he was made a brigadier-general. At Shiloh he won commendation for his valor and skill. He was wounded while leading his men in a fierce charge at Richmond, Ky., but was nevertheless able to participate in the battle of Perryville. On Dec. 12, 1862, he was made a major-general and a few days later showed at Murfreesboro that the confidence of his superiors had not been misplaced. But his most distinguished service was during the fighting around Chattanooga; at Chickamauga his men captured and held a position which had resisted several other attacks, and at Missionary Ridge he repulsed Sherman. At Ringgold Gap, at his own peril, he saved Bragg’s artillery and wagon train from capture by pursuing the enemy for which he received a vote of thanks from the Confederate Congress.

The Confederate ranks were now being more rapidly depleted than they could be filled. Laying aside his rank and appealing to his men, Cleburne succeeded in getting ninety per cent of them to reenlist, but others were not equally successful. Many foresaw disaster, unless something could be done. Because of this Cleburne wrote a carefully prepared paper, advising that the slaves be freed and used as soldiers. This was read to his fellow officers, some of whom approved, but Gen. Johnston, who had succeeded Bragg, declined to forward it to Richmond on the ground that the question was more political than military in character. Cleburne was greatly disappointed, but had no idea of sending it over the head of his superior. A fellow officer, however, thought that so incendiary a paper should be reported, asked
Clemens

for a copy, and sent it to Richmond. President Davis returned it with the indorsement that he approved and appreciated the patriotic motive of the signers—thirteen besides Cleburne had signed—but that he deemed it inexpedient to make the paper public and asked that it be suppressed. Had this paper never been written, Cleburne, instead of Hood, might have succeeded Johnston at Atlanta. His attention was called to the fact that it might stand in the way of advance-

ment, but he persisted in putting what he believed to be the good of his adopted country above per-

sonal ambition. He followed Johnston on to At-

lanta, fought with Hood in his three battles for that city, retreated with him to Tennessee, and died on the field at Franklin after his men had carried two lines of the enemy works, a useless sacrifice to Hood's ill-advised determination to fight whenever the opportunity presented itself. Lee compared him to "a meteor shooting from a clouded sky," and he was known as the "Stonewall Jackson of the West." While not as demonstratively religious as Jackson—he was a member of the Episcopal church—he was no less scrupulously honest. He is said to have paid out of his own pocket for chickens captured by his men from loyalists in Kentucky. He was modest, never pushing himself or his opinions forward. He was a strict disciplinarian, yet commanded the love and confidence of his men. He never mar-

ried.

D.Y.T.

CLEMENS, JEREMIAH (Dec. 28, 1814–May 21, 1865), soldier, novelist, senator, came of a well-to-do cultured Southern family. He was born at Huntsville, Ala., the son of a Kentuckian, James Clemens, who had migrated to the Ten-

nessee Valley in 1812 while it was yet a part of the Mississippi Territory, and had married a sister of Archie E. Mills. Clemens received ex-

cellent educational advantages for the times, studying at La Grange College, in the Valley, and being among the first students matriculated at the University of Alabama on its opening in 1831 at Tuscaloosa. But he seemed never to know just what he really wanted to be or to do. His first choice was the law, and, on account of family connections, he completed a law course in Transylvania College, Lexington, Ky., and re-

turned to Alabama to practise his profession. Not yet twenty years old, he married, on Dec. 4, 1834, a Huntsville girl, Mary L. Read. Before he was well established at the bar, but not before his promise as a lawyer had been recognized, he

was appointed a federal district attorney, served for a short time in a volunteer company engaged against the Cherokees, and represented his coun-

ty in the state legislature from 1839 to 1844, with the exception of one term. These circumstances seem to have shaped his life. Thereafter his law practise was seriously interfered with by his pen-

chant for politics and his desire for a military career. When the war for Texan independence started, he left Alabama in 1842, in command of a company of volunteers, and won promotion to a lieutenant-colonelcy. A few years later, on the outbreak of the war with Mexico, he entered the regular army (Mar. 3, 1847) as major of the 13th United States Infantry, served effectively in Mexico as chief of the depot of supplies, and re-

tired to civil life with the rank of colonel in 1848. On his return to Alabama, he aspired to high po-

litical honors, and, though he suffered a rebuff at the hands of the people of his own district when he attempted to displace an Alabama war-horse, Cobb, as representative in Washington, he was successful later in the same year (1849) in win-

ning, as a Democrat, election to the seat in the United States Senate vacated by the death of Dixon H. Lewis, defeating Benjamin Fitzpat-

rick, an ex-governor and one of the strongest men in the state. In the Senate, Clemens earned a reputation as an able and eloquent debater, though his name was not connected with any leg-

islation of national moment. He lost favor with the people of Alabama by his ardent support of the candidacy of Fillmore for the presidency in 1856 and did not again seek public office for sev-

eral years. In the meanwhile, his interests chang-

ing, he turned eagerly to the writing of historical novels. In rapid succession he published: Bern-

ard Lily: an Historical Romance of the Texan Revolution and the Mexican War (1856); Mus-

tang Gray: a Romance (1858); and The Rivals: a Tale of the Times of Aaron Burr and Alexan-

der Hamilton (1860). The year of his death (1865), Tobias Wilson: a Tale of the Great Re-

bellion, appeared, and it was generally understood that in the last months of his life he was engaged in preparing a history of the war in northern Alabama, a book which was never completed. For a brief time during 1859 he lived in Memphis, where he edited the Memphis Eagle and En-

quirer, with no great success. When he returned to Alabama, the people were seriously divided on the question of immediate secession or delay and cooperation with sister states of the South. Elect-

ed to the convention called to decide the ques-

tion, Clemens, with Robert Jemison, Jr., assumed leadership of the cooperationists. At the organiza-

tion of the convention he controlled 46 of the
Clemens

100 delegates, but as other states acted his strength ebbed, and, when the secession ordinance was put on its passage, he could muster only 39 in opposition. Having lost the fight, Clemens then signed the ordinance, and, because of his military prestige and in an effort to heal the breach in the state, he was appointed major-general of the “Republic of Alabama,” a position in which he never rendered any active service. His Unionist tendencies brought him increasing unpopularity as the war progressed, and, an avowed Unionist in 1862, he moved to Philadelphia where he conducted a pamphlet campaign against his state and advocated the reélection of Lincoln in 1864. He returned to Huntsville toward the close of the war and died a few weeks after peace was declared. He was a man of genuine ability, gifted, but erratic and overambitious, and at times his career was seriously affected by his dissipated habits.

[Details of Clemens’s career are furnished by Willis Brewer, Alabama (1872); Wm. Garrett, Reminiscences of Public Men in Ala. (1872); T. M. Owen, Hist. of Ala. and Dict. of Ala. Biog., vol. III (1921). His position on secession is found in Wm. R. Smith, Hist. and Debates Convention People of Ala. (1861). For his activities during the war see letter from Hon. Jeremiah Clemens issued in pamphlet form by the Union League of Phila. (1864). Descriptions of his appearance and personality are found in Virginia Clay-Clopton, A Belle of the Fifties (1903).]

T.H.J.

Clemens, Samuel Langhorne

(Nov. 30, 1835—Apr. 21, 1910), humorist, novelist, better known by the pseudonym Mark Twain, was born in the village of Florida, Mo., the son of John Marshall Clemens and of Jane Lampton his wife. The father, of Virginia stock, had been married in Kentucky, had gone to Tennessee, and after various removes had settled in Missouri. Always full of visions of great wealth which he expected sooner or later to acquire through the rise in land values, he lived long enough to educate his son in such expectations, but died in 1847, leaving his wife and children little beside a tract of land in Tennessee which for many years kept them in a restless state of hope. The mother, a woman of more practical energy than her husband, was, however, a member of a family which had an earldom in one of its English branches and which not only included certain American claimants to the title but which also, in the person of a cousin (James Lampton), furnished the model for Col. Sellers of The Gilded Age. Samuel Clemens was thus brought up in circumstances which early gave direction to a form of optimism probably native to him, as it was native to many residents of that frontier. At the same time, these circumstances kept him during his youth in the slack casual society which was to serve as the background for most of his best writings, and they deprived him of the regular schooling which might have had important, and possibly unfortunate, effects upon his mind and style.

From 1839 till 1853 the boy lived at Hannibal, Mo., to which the father had followed his de
ductive star on his last move before his death. Hannibal was on the Mississippi and was larger than Florida so that it met the needs of a nature which, though not precocious, widened rapidly in experience. Some record of this boyhood, rearranged for the purposes of comedy, is to be found in Tom Sawyer and Huckleberry Finn, though these books have to be often corrected by reference to the facts before they can be looked upon as in any sense autobiographical. This being understood, it may be said that the Judge of the stories owes something to Mark Twain’s father; Aunt Polly, to his mother; Sid Sawyer, to his brother Henry; the Negro Jim to a slave known as Uncle Dan’; Huckleberry Finn, to Tom Blankenship; and Tom Sawyer, to “a combination of three boys whom I knew”—one of whom was the author himself. Many of the incidents of the books were taken over from actual happenings, and the setting offers a reasonably faithful description of Hannibal and the neighborhood. On the whole it was a boyhood marked by adventure, not too dangerous, and by restraint, not without touches of conscience and punctilio.

The death of the elder Clemens when his third son was only twelve years old forced the boy to leave school in order to earn a part of the small amount of money on which the widow and her children had to live. Apprenticed to a printer, he became expert at his trade, mastering thereunder certain of the niceties of composition which many writers learn late, if ever. Printing led him to reading, and reading to writing, first for the newspaper which his older brother Orion edited and published in Hannibal, and then for other papers elsewhere. More noteworthy was his turn through the world as a journeyman printer. During 1853 and 1854 he worked his way to St. Louis, New York, Philadelphia, and back to Keokuk, Iowa, where he was again employed by his brother, who had left Hannibal. By this time the youth’s restlessness had become a habit which was, presumably, a sign that he needed some larger occupation. In 1856 he made plans to go to South America to seek his fortune collecting cocoa along the Amazon, paying part of his expenses by letters to a Keoku weekly. He got only as far as Cincinnati and wrote only three instalments of The Adven-
Clemens

ures of Thomas Jefferson Snodgrass, which was tiresome country journalism, quite without value. The next year, on the way to New Orleans by boat, he got himself apprenticed to a river pilot, and thus entered what has been called his university.

The resemblance of the Mississippi to a university lay in the fact that it compelled the young pilot to become erudite in all that concerned the course and behavior of the river, in the midst of actual events, under the pressure of serious responsibilities. Perhaps the degree of actuality and of responsibility in this training destroys the resemblance. At any rate, Mark Twain learned another craft which called for precision of knowledge. And beyond that, he became familiar with a world full of diversity and color, a world which was very nearly an epitome of the United States of the time, and which furnished him an epic theme when afterward he gave his version of it in Life on the Mississippi. But his year and a half of apprenticeship and his two years and a half as a licensed pilot brought him, at the time, apparently no closer to authorship. He was gathering material, not using it.

When the outbreak of the Civil War had closed the river, the former pilot was obliged to look for another occupation, and discovered another world of adventure. He joined a volunteer company of young enthusiasts who were not quite sure which side they meant to choose and who broke up as soon as the war took on professional aspects. By that time, Mark Twain, tired of military life, had found a semi-official post in civil life, as secretary to his brother Orion, who in turn was secretary to the territorial governor of Nevada. In 1861 the brothers set out from St. Louis, by boat and overland stage, for Carson City. Roughing It gives the classic account, not only of Mark Twain's Far Western experiences, again heightened for the sake of comedy, but of the new frontier to which the son of an older frontier was introduced. The young Clemens, finding neither duties nor salary attached to his position, became an ardent prospector but an unsuccessful miner, and then, in 1862, a reporter in Virginia City, with the pseudonym Mark Twain, a river term (meaning two fathoms deep) which had already been used by an obscure pilot on the Mississippi.

At last his true career had begun. Few writers have ever had so much experience of life with so little purpose to turn it into literature as the printer-pilot had had during his preparatory years. Even if there were no records to prove this, it would be clear from his early ventures into writing as a livelihood. Having no particular literary principles, he adapted himself to the modes of frontier journalism, wrote burlesques full of topical allusions, and played with hoaxes and such trivialities. The birth in him of a larger ambition came with the visit to Virginia City of Artemus Ward (Charles Farrar Browne, q.v.), already famous as a humorous lecturer. The Yankee encouraged the Westerner and made him believe that he too might find a hearing outside the narrow world which had hitherto been all he aimed at. This encouragement, as well as an absurd duel in which Mark Twain became involved, sent him in 1864 to California, where he again found work as a reporter and where he met Bret Harte [q.v.], already, however little known, a conscious man of letters. There, in 1865, was written the story of the Jumping Frog, which appeared in a newspaper in New York and which promptly ran through the newspapers of the entire country.

California, eager to be known for its native literature, clutched at this small success. Mark Twain was sent by a newspaper to the Sandwich Islands on a roving commission to write about whatever interested him. He did this so well that he greatly increased his personal reputation, to which he added, on his return, by delivering lectures which their Rocky Mountain audiences instantly declared to be as good as Artemus Ward's. Recognition, in those days and in that community, could not be fuller. On the crest of it, Mark Twain set out to make a journalistic tour around the world for another California newspaper, traveled east by way of the Isthmus, and in New York characteristically changed his plans. After publishing his first book, The Celebrated Jumping Frog of Calaveras County, and Other Sketches (1867), and giving a triumphant lecture at Cooper Union, he sailed on the Quaker City with a party of excursionists bound for the Mediterranean and the Holy Land. The reports which he sent back form the basis for the book which made him a national figure, The Innocents Abroad (1869).

Probably no other book in American literature has ever been more representative than The Innocents was of the age which produced it. The United States, having arrived at something like a settlement of its domestic affairs by a civil war, was turning once more to thoughts about the rest of the universe. The Quaker City excursion was a straw in the wind. Its members were not many of them the sort of Americans who had hitherto visited the Old World, but instead were plain citizens, little addicted to history and yet hungry, in the defiant American
way, for the sight of ancient things. They were
typical of a whole stratum of the American popu-
lation which had been thrown up by the war to
a level on which traveling was a possibility.
Mark Twain, though a man of genius and fre-
quently bored by his fellows on the voyage, was
nevertheless very close to them, as he was to the
public at home which read what he wrote about
their adventures. He too, though now and then
genuinely awed by the monuments of antiquity,
was also defiantly American, disposed, if only
to strengthen his self-confidence, to laugh at
what he saw and to boast of the New World in
comparison with the Old. This was a traditional
habit of Americans, and the readers of his book
greeted in his narrative a quality which they
would have displayed themselves in the same
situation. Nor did the fact that they themselves,
displaying it, might have been merely peevish
and dull, make them less willing to be delighted
in a writer who was hilarious, surprising, and
eloquent, with a vast if irregular comic force.
The Innocents Abroad at once brought its au-
thor a reputation and a fortune. Indirectly it
brought him a wife. During the voyage he had
become acquainted with a young man named
Langdon who had with him a miniature of his
sister Olivia. With the picture Mark Twain
virtually fell in love, and on his return late in
1867 he completely fell in love with the original,
to whom he was married in 1870 at her fa-
ther's house in Elmira, N. Y. The effect of this
marriage upon the career of Mark Twain has
been much discussed. (See, particularly, The
Ordeal of Mark Twain, 1920, by Van Wyck
Brooks.) Without going too far into contro-
verted details, it may be agreed that his mar-
rriage put an end to his Bohemian days, that it
brought him into contact with a very conserva-
tive bourgeois society, that his great affection
for his wife probably led him to consider her
opinions more tenderly than they always des-
erved, and that several of his most striking
works were not published until after her death.
There is, however, little reason for claiming that
he resented or hated the pressure which his mar-
rriage put upon him. Toward women he had the
conventional attitude of his time. After a cheer-
ful bachelorhood, without a single recorded love
affair, he settled down as any other American
Victorian might have done, accepted the supre-
macy of his wife in all that concerned his private
existence, and proceeded to make, for his family,
as large a use of his talents as he could. He was
not by temperament a lone wolf prowling the
forests of the intellect. He was a frontiersman
who, having had his fill of the wilds, adapted
himself gratefully to the comforts of civiliza-
tion.
The civilization into which he settled did,
however, greatly condition his work for the next
two decades. All around this native Southerner,
now living and prospering in the North, was the
spectacle of a flushed, triumphant nation en-
gaged in a tremendous exploitation of its natu-
ral resources. Mark Twain saw in his experi-
ce a resource to be exploited by his talents.
His world wanted to hear about the Old South,
which was just then a favorite subject with
writers in both parts of the united country, and
about the Far West, which likewise stirred the
national imagination. Of these two subjects he
had a wide knowledge. Moreover, he had an
unusual range of talents. He could give lec-
tures; he could write for newspapers and mag-
azines; he could sum up what he had to say
in books for larger and longer audiences. Out
of each of these literary processes he could take
a profit. His plans eventually ran to the manu-
facture of a type-setting machine which, he
thought, would enable him to profit by every-
body's printing. His inherited instinct for spec-
ulation was so fostered and stimulated by his
environment that he could have directed it into
other activities only if he had been sustained by a
profound culture, which he was not, or guided
by a ruthless critical code, which he did not have.
Having made a magnificent success with The
Innocents Abroad, he proceeded in Roughing It
(1872) to exploit another chapter of his ex-
periences. This he followed with The Gilded
Age (1873), written in collaboration with
Charles Dudley Warner [q.v.], which was called
A Tale of To-Day but which actually made not
a little use of Mark Twain's recollections of
Hannibal in the days of his own youth. The
Gilded Age, however, touched upon contem-
porary life with a vigor of satire which did not
reappear in its next important successor, The
Adventures of Tom Sawyer (1876). Astringent
critics have found in the turning away from
satire, particularly in the turning to boyhood
reminiscences, an evidence that the humorist
had been intimidated by his conservative family
and friends and had for that reason shirked his
obligations to be drastic. The question is one
about which debate can go on as long as Mark
Twain continues to be an issue with critics.
He himself would pretty certainly have been
surprised if anybody at the time had called his
change of subject-matter a change of front.
The impulse to satirize was only a part of his
mental constitution, so far as he was then aware.

194
His theological, political, economic, and social opinions were at best rough-and-ready, the spontaneous radicalism of the frontier, always susceptible to influence by the more intricate conditions of a settled society, because not grounded in any thoroughgoing set of principles. Nor were Mark Twain's opinions, on any subject, all that he had to work with. There was also an immense delight in life in general, an omnivorous relish for all the phases of comedy, a tenderness too quick to be invariably well-judged, and an eager disposition to please his hearers and readers as well as he pleased himself with the exercise of his robust art. His comic energy, while his powers were at their height, was his nature rather than his purpose or his weapon.

To say, as it may be said, that his comic energy remained at its height for the twenty years between The Innocents Abroad and A Connecticut Yankee in King Arthur's Court (1889) is not to insist that he was by any means always at his best during that period. He was an uneven writer, who poured out many pages as they came and had later to decide, or to have it decided for him, whether they deserved to be kept and published, and how much they needed to be edited. Besides his wife there was also William Dean Howells [q.v.] to restrain him. If there was about this pair of critics a good deal that must have tended to keep Mark Twain's genius within decorous bounds, it is likewise true that he wrote with a violence which frequently drove him into burlesque so fantastic as to be dull. Until the unpublished manuscripts have been exhumed and studied, whatever loss there may have been can only be guessed at. But certain of the published writings, such as Mark Twain's Sketches, New and Old (1875) and similar collections are plainly inferior to Roughing It, The Gilded Age, Tom Sawyer, A Tramp Abroad (1880), and The Adventures of Huckleberry Finn (1884), which themselves are not of equal merit. To this period also belongs 1601 (written 1876), a pamphlet often surreptitiously printed for no particular reason except that its report of fireside conversation in the time of Queen Elizabeth contains numerous obscenities which are common in speech but not in print. Like most memorable writers, Mark Twain could not be forever writing classics. He had to write as he was driven to, and posterity has had to choose what to remember him by.

Without much question he touched his peak for these middle years in the first part of Life on the Mississippi and in Huckleberry Finn. They were both concerned with the river which ran as preëminently through his life as it runs through its own valley. The subject liberated him from the flat lands on either side. Remembering this section of his youth, he could work at his best resource with his best talent. It was his best resource because he knew more about the Mississippi than about anything else and because he had learned what he knew at a time when his perceptions and his memory were keenest. It was his best talent that he employed in both books, the talent for humorous autobiography. From the beginning of his career, whether in conversation, lecturing, or writing, he had always tended to this form. A traveler and a man of adventures, he told, or pretended to tell, what he had gone through. The aim of his method, of course, was not history but amusement. A joke told at his own expense was twice as good as a joke about somebody else. Events which he had, or claimed to have, witnessed could be made twice as interesting as events he had only heard about. Nor did he necessarily think of the narrator as strictly himself, that is, as Samuel Langhorne Clemens. The "I" of his lectures and books was Mark Twain, a personage who, however often identified with the man who used the pseudonym, was occasionally a mere fiction of the comedy. The narrator of Huckleberry Finn is, indeed, neither the actual Clemens nor the invented Mark Twain, but he also delivers himself in the first person, so that the devices and effects are much the same as in the avowedly autobiographical chapters of Mark Twain's history.

It should here be pointed out that the element of humorous autobiography in Mark Twain goes a long way toward accounting for his style. It was a style largely governed by his ear. While he need not be called first a speaker and second a writer, yet he had learned as a speaker to fit his rhythms and his diction, his tempo and his pauses, to listening audiences, and he appears always to have written to the sound of his own words. This everywhere colors his work, particularly when he becomes angry or eloquent. And it serves also to explain certain defects of taste which appear. Speaking, he could verge upon burlesque or rodomontade with comparative safety, able with his matchless voice and his smiling presence to make his hearers understand that he too saw the danger and that he enjoyed the perilous edge. Writing without this advantage, he too often took the same risks, with the consequence that a reader out of hearing and out of sight has only a part of the writer's endowment to judge by and so notices faults which naturally seem greater as each
Clemens

decade removes the reading public a little further from the idiom in which the lecturer spoke.

The custom of adapting himself so closely to his audiences might have had one fatal effect on him if he had been no more than the entertainer he was for a long time thought to be. Like Bret Harte, Mark Twain, introduced to the world as a curiosity from the Far West, encountered the temptation to go on indefinitely working a single vein at the insistence of his readers and his editors. But Mark Twain had too much energy and too wide a range of interests to fall into that familiar American trap. He refused to confine himself to the Mississippi cycle. _The Prince and the Pauper_ has its scene laid in the England of the Elizabethan age. _A Tramp Abroad_ returned to the method of _The Innocents Abroad_ with an account of a walking trip which the author took with Joseph H. Twichell [q.v.] through the Black Forest and the Alps in 1878. _A Connecticut Yankee in King Arthur's Court_ extended this method to an investigation of the chivalric past. The Yankee is only another figurehead used to vary the method of humorous autobiography. But the Yankee is close enough to Mark Twain to have his sympathy throughout his adventures. As _The Innocents_ drew comedy from the presence of simple, rowdy Americans in remote places, so the Yankee drew comedy from the presence in an ancient world of an intensely modern, utilitarian, scientific American. Though scholars and romancers have been hurt by the liberties which Mark Twain took with the Arthurian legend, his comic estimate of chivalry is perhaps not so far from justice as it has been called. In any case, it is comedy, not history.

The Yankee marks the last appearance of the rough, sky-larking vigor of this middle period. Possibly the frontier humorist had been subdued by the various influences engaged in reducing him to something more easily measurable. Certainly he had won increasing consideration from sober critics, and he had received academic recognition in the form of an honorary degree of Master of Arts from Yale in 1888. But more possibly all that had happened was that Mark Twain, now several years past fifty, had begun to lose some of that energy which, hitherto, had furiously impelled him. What looks like the rise of his critical faculties may have been only the decline of his bodily powers. There can be no question that he had been under a heavy strain. His pretense of idleness in all the chapters of his autobiography was only humorous. After _The Innocents_ he had lived for two years (1869–71) in Buffalo, writing for

Clemens

the Buffalo _Express_, a newspaper of which he was part owner, and for the _Galaxy_, a magazine published in New York. For the next seventeen years he had lived in Hartford, from which several of his books were issued by subscription. All that time he wrote constantly as well as violently. He poured out his strength in numerous lectures, traveling to Europe as well as through much of the United States. He accumulated personal relationships which drained off much of his energy. He experimented with the stage, on which the dramatic versions of his novels had some success. He invested heavily in various speculative schemes with no success at all. He became his own publisher by putting money into the firm of Charles L. Webster & Company, which prospered for a time but which was to fail disastrously in the end. It is no wonder that the teeth of life, gnawing at even so powerful a figure, gradually began to wear it away.

The decade of the nineties saw Mark Twain working with less steady nerves and therefore with less steady and unified an output than he had shown during the two previous decades. He returned to the saga of Col. Sellers in _The American Claimant_ (1892), and to the saga of Tom Sawyer in _Tom Sawyer Abroad_ (1894) and _Tom Sawyer, Detective_ (1896). In them, as in _The Tragedy of Pudd'nhead Wilson and the Comedy, Those Extraordinary Twins_ (1894), there was that large element of the incredible or the melodramatic to which the humorist resorted when he was not working with his hands full of familiar material. Either he had exhausted the vein of boyhood reminiscence or else, as is more likely, he had lost the kind of interest in it which could fully arouse his imagination. Now a citizen of the whole world, he was a long way from the Mississippi, so far that he could imagine himself into feeling at home in medieval France, and could put profound emotions into his _Personal Recollections of Joan of Arc_ (1896). In various respects, however, this book is evidence that there was a mood of youth still persisting in Mark Twain. Joan was the character in history who had first made him want to read. For years he had planned to write something about her, and had put more conscious research into the theme than he had ever put into any other. She was the supreme illustration of a type of woman which he had adored as a child and which as a young man on a rough frontier he had continued to reverence in the fashion of such frontiers in the United States. Nor was his attitude toward Joan as a virgin, his sort of secular Mariolatry, a mere obedience to a
Clemens

fashion. It was the quintessence of that tenderness which was as much a part of him as his early boisterousness and his later bitterness. And of course his tenderness was only intensified, in the Personal Recollections, by the contrast which he had to draw between Joan and the malign stupid forces which overwhelmed her.

Writing to Howells in 1899 Mark Twain said: "I have been reading the morning paper. I do it every morning—well knowing that I shall find in it the usual deprivities and base
nesses and hypocries and cruelties that make up civilization, and cause me to put in the rest of the day pleading for the damnation of the human race." The teeth of life had been gnawing cruelly for a decade. He had not only wasted a fortune in money on the type-setting machine before, after many years of hope, the venture was abandoned at the end of 1894, but he had wasted, what was more valuable to an artist, time and energy which could never be recovered. That same year had seen likewise the failure of his publishing house and his own bankruptcy. Determined to pay his debts, Mark Twain had promptly set off on a tour around the world, to lecture as he went, though by now he hated lecturing with all the distaste of a man who, at odds with the human race, was obliged to live by making it laugh. His daughter Susy had died during his absence. Besides these personal shocks there had been the philosophical disturbances likely to come to an American in Asia, in the spectacle of societies too old and disillusioned to have any confidence in the future, resigned to the endless repetition of a barren and meaningless process. Each chapter of Following the Equator (1897), the record of the tour, is opened with a maxim of Pud'nhead Wilson, that village unbeliever whose unbelief, in this book as in the one devoted to him, embraces the universe. "Prosperity is the best protector of principle." "Let me make the superstitions of a nation, and I care not who makes its laws or its songs either." "Everything human is pathetic. The secret source of humor is not joy but sorrow. There is no humor in heaven." "Pity is for the living, envy is for the dead."

The year 1898, in which Mark Twain finished paying off his debts, was nevertheless the darkest year of his life, if his writings may be allowed to furnish the evidence. Then he wrote The Man That Corrupted Hadleyburg (published 1900), What is Man? (first printed, privately, 1906), and The Mysterious Stranger (not published till 1916). The first is a story exhibiting the effects of greed in a smug pro-

Clemens

vincial town—a story which on the surface is specific enough but which manages, thanks to the inclusive contempt and pity with which it was written, to have the general bearings of alleg
y. The second is a kind of theological dia-

logue in which it is argued that the behavior of men is entirely without freedom of choice, each act like each decision following irresistibly from precedent circumstances, and all to be ascribed, evil and good alike, to whatever gods may have bungled their creation and have refused to cor-

rect or destroy it. The third brings a devil into human affairs, in sixteenth-century Austria, lets him comment upon the bad workmanship of the heedless gods, and through him prophesies the time when life shall have been bettered by passing into nothingness. As a work of art The Man That Corrupted Hadleyburg is the best of the three. The Mysterious Stranger is only a fragment, and What is Man? is by no means so novel or so troubling a discourse as Mark Twain thought it. In his dialectic he did not know how to go beyond such self-made skeptics as Paine and Ingersoll, just as, when in 1868 he wrote Captain Stormfield's Visit to Heaven (published 1909), he had carried his criticism of the idea of immortality no further than to a burlesque of the vulgar conceptions of heaven. But of course the dialectic of Mark Twain is less to be con-

terred than the presence in him of this natural 

pessimism. It was the pessimism of a representa-
tive American who, without the aid of subtle philosophies, had drawn his doctrines from his observations. It is as typical of one mood of the United States as the standard optimism is of another.

If no one of Mark Twain's remaining years was apparently so dark as 1898, it is because after that midnight of his mind he grew in resigna-

tion, not despising mankind less but pitying it more. He continued to be a restless traveler, both in America and Europe, and he allowed himself now to comment freely upon numerous contemporary matters, often with a fury which must have been increased by his knowledge that the public found something humorous in the most serious things he had to say about even the Philippines, the Boxer indemnities, the Bel-
gian rule in the Congo. The demand for his books was great, many of his short pieces were issued as separate volumes, and consequently he seemed to be even more active a writer than he was. His only full-length books written after 1900 were Christian Science (1907), his analy-

sis of what he thought a menacing new cult, and Is Shakespeare Dead? (1909), an unim-
portant addition to the Baconian controversy.
Clemens

But he delivered many speeches on all sorts of occasions, and after 1906 he worked steadily at dictating his autobiography upon which was to be based the official life. The death of his wife in 1904 and of his daughter Jean in 1909 caused him a grief too great to be eased by any bitterness. He gradually let go of the world, which during his last days gave him as many honors as he could endure or would accept. What he most valued was perhaps the degree of Doctor of Literature conferred upon him by Oxford in 1907. His death, at his house "Stormfield," in Redding, Conn., caused a more universal regret than has ever followed the death of any other American man of letters.

This regret was accompanied by a revaluation of Mark Twain's work which has made the posthumous figure very different from the living figure of the humorist. Alive, he could never correct the first impression of him, that he was chiefly a fun-maker. Dead, he has come to be regarded, at least by one school of opinion, as a tragic character, a victim of a national misconception, an artist cheapened by an overpowering demand for cheap wares. Though his early writings are still read, nearly as much as ever, his later writings are held to be the truer expressions of his mind and art. The change is due in part to the books published after his death. The Mysterious Stranger, What is Man? and Other Essays (finally published, not merely printed, in 1917), Mark Twain's Letters (1917), Mark Twain's Autobiography (1924), with its Preface as from the Grave—all have served to reveal the inner life of rage and contempt, of dissent and disillusion, of despair and pity which he chose to cover up from most of the world during most of his career. Yet these documents by themselves would not have been enough without the evidence furnished in the authorized biography which, published in 1912, not only touched a high point in biographical writing but also raised an issue. A newer generation, engaged in a critical study of American culture, seized upon Mark Twain's life as proof of the claim that the United States seldom produces authentic genius and subdues or neglects it when the phenomenon occurs. The debate called a special attention to the posthumous books and continues to make them seem intrinsically more valuable than they perhaps are. In the long run they are almost certain to be fused, in the reputation of Mark Twain, with his life rather than with his completed work. They supply the undertones which, without them, might never have been detected in the earlier books, but which, no matter how much they may have been sup-

Clement

pressed, are actually there, and which make it easier to be sure that Mark Twain, despite the dissipation of his energies, belongs with the great humorists—even with the great humorists who have known, better than he did, how to direct their powers.

[The principal source of information about Mark Twain is the authorized Mark Twain: A Biography (1912, 3 vols.) by Albert Bigelow Paine, who condensed this material in A Short Life of Mark Twain (1920), and in Mark Twain's Letters (1917, 2 vols.) and in Mark Twain's Autobiography (1924, 2 vols.) printed the chief written sources. Further material is to be found in Wm. Dean Howells: Life in Letters (1928, 2 vols.), ed. by Mildred Howells. Full lists of Mark Twain's publications are given in the Paine Biography (III, 1672–81) and in The Cambridge Hist. of Am. Lit. (1931, IV, 635–50), the second giving also a list of biographical and critical works. Of these My Mark Twain (1910), by Wm. Dean Howells, and The Ordeal of Mark Twain (1920), by Van Wyck Brooks, are indispensable. See also Friedrich Schö nemann, Mark Twain als Heiler, das Sterben (Jena, 1925); F. W. Lorch, "Mark Twain in Iowa," Iowa Jour. of Hist. and Politics, XXVII, 408–56 (1929).]

C. V. D.

CLEMENT, EDWARD HENRY (Apr. 19, 1843–Feb. 7, 1920), journalist, son of Cyrus and Rebecca Riske (Shortridge) Clement, was born in Chelsea and died in Concord, Mass. His connection with the Civil War being limited to visits to a brother at the front in South Carolina, it was possible for him to be duly graduated from Tufts College in 1864. He had such great faith in the development of the negro under freedom that in 1865 he took up residence where he could observe that development at first hand, in Savannah. Journalism had fascinated him for many years, and the state of Georgia being at the moment under alien control, he was able to procure work with the Savannah Morning News. In 1867 when the ex-Confederates had to a degree come back into power, the editor regretfully sent the boy home,—the paper's clientele, he explained, would not countenance a reporter from Boston. Despair over the South was soon alleviated by a succession of journalistic enterprises which took Clement in 1867 to New York with the Tribune, in 1869 to Newark with the Daily Advertiser, and in 1873 to Elizabeth with the Daily Journal. In 1875, he returned to Boston as associate editor of the Transcript, and in that capacity, before becoming editor-in-chief in 1881, he acquired a lasting interest in dramatic and artistic criticism. His retirement in 1906 was not for the sake of inactivity. He followed sedulously the fortunes of various oppressed races; he took part in societies to prevent imperialism and vivisection, and to better the condition of Boston work horses; and, in addition to a play, The Princess Malea, he wrote poetry and magazine articles

198
Clements

on subjects ranging from the social ideals dominant on the planet Mars, to Boston journalism in the nineteenth century. To the day of his death he contributed to the Transcript a column called the "Listener," and in his old age he devoted himself fervently to painting,—especially to portraiture. He was radical to the extent of opposing the trusts and many aspects of organized religion, but in matters that touched more intimately upon his affections,—the integrity of the family, for instance, and the supremacy of Tennyson as a poet—he was conservative enough to hate Samuel Butler with a perfect hatred. The Transcript spoke of him at the time of his death as mild but determined, fluent and expotitory rather than forceful, an idealist, a typical example of the "Boston upbringing." He was married twice: in 1869, to Gertrude Pound of New York, who died in 1895; and in 1898 to Josephine Hill Russell of Boston.

J. D. W.

CLEMENTS, JUDSON CLAUDIUS (Feb. 12, 1846—June 18, 1917), congressman, judge, the son of Dr. Adam Clements and Mary (Park) Clements, was born on his father's farm in Walker County, in the extreme northwestern corner of Georgia. After attending the ordinary schools of the time and serving in the Confederate army (1864—65), he matriculated in the law school of Cumberland University at Lebanon, Tenn., in 1868. He was admitted to the bar in Georgia in 1869. Locating in La Fayette, Walker County, he there practised his profession until 1892. Between 1872 and 1876 he was a member of the Georgia legislature; was a state senator for one year, 1877; and from 1881 to 1891 represented his district in Congress. At the time of his election to Congress, he was president of the Rome & Northern Railway Company, and it was natural that in Congress his primary interest should be in transportation matters. He helped perfect the Interstate Commerce Act and was appointed by President Cleveland to membership on the Interstate Commerce Commission in 1892. Cleveland's successors reappointed him four times, so that he had twenty-five years' consecutive service in that important regulatory body. On Mar. 17, 1917, the officers and employees of the Commission celebrated the completion of Clements's quarter-century of service. The speeches made by the chairman and others, and the numerous telegrams received by Clements, attest the value placed upon his work by those best fitted to judge it. Three months later he died in his seventy-first year. All witnesses agree that his official conduct was characterized by a high degree of strength, courage, fairness, and sagacity. In an obituary notice the Washington Evening Star bracketed him with Henry G. Turner and Charles F. Crisp, as the ablest men Georgia had sent to Congress since the Civil War, and said that "he had mastered as perhaps no other person the large, complicated and important question of railroad transportation." He was twice married: first, to Elizabeth Wardlaw, who died in 1875 (W. J. Northen, Men of Mark in Georgia, vol. IV, 1908, pp. 14—20), and second, on Dec. 2, 1886, to Lizzie Dulaney of Louisville, Ky., by whom he had three daughters.

[The Interstate Commerce Commission has preserved a record of the services of Clements, as well as a check list of his more important speeches and writings. Among the records is a pamphlet entitled Testimonial of the Officers and Employees of the Interstate Commerce Commission to Hon. Judson C. Clements upon the Completion of Twenty-five Years of Service with the Commission. This publication contains the speeches referred to above. See Who's Who in America, 1916—17, and obituaries in Atlanta Jour. and Evening Star (Washington), June 18, 1917.]

R. P. B.

CLEMMER, MARY (May 6, 1839—Aug. 18, 1884), author, was born in Utica, N. Y. She was the daughter of Abraham Clemmer, a descendant of Alsatian Huguenots settled in Pennsylvania about 1685, and of Margaret (Kneale) Clemmer, born on the Isle of Man. During Mary Clemmer's girlhood, her father removed to Westfield, Mass., and she received her education at the Westfield Academy, an excellent school. Abraham Clemmer, with the temperament of a poet, had been obliged to enter business, in which he never attained success. Family poverty and rapidly-arriving younger brothers and sisters brought early responsibilities and shortened Mary Clemmer's childhood. These causes also had something to do with her marriage when she was only sixteen to a man much older than herself, the Rev. Daniel Ames, a Presbyterian minister, from whom she was divorced in 1874. She lived successively in Massachusetts, Minnesota, New York City, Harper's Ferry where she witnessed the entrance of the Confederate army in 1862 and was herself for a brief time a prisoner, and in Washington, where she worked in army hospitals.

Mary Clemmer's literary work began early, with a poem sent by her Westfield teacher to the Springfield Republican and there published. When barely twenty, she began contributions to
Clemmer

newspapers, in her effort, successful from the start, to provide support for herself and her parents. While living in New York she became the friend of Alice Cary [q.v.], between whose character and her own there were many resemblances. From this friendship resulted the Memorial of Alice and Phæbe Cary (1873), a sympathetic and well-written work. Mary Clemmer always desired to write novels and felt that she was capable of writing better ones than she ever achieved. Her first novel, Victoire (1864), though crude and emotional, shows some ability in interpretation of character; her second, Eirene; or a Woman's Right (1871), introduces war scenes about Harper's Ferry; her third, His Two Wives (1874), diffuse and unconvincing, was often credited with being partly autobiographical, but without justification. When health began to fail, she was writing another novel, which was never finished. What was probably her best work took the form of letters to newspapers on topics of public interest. In 1866 she began contributions to the New York Independent, called "A Woman's Letters from Washington." These continued until within a few months of her death and furnished some of the material for her two books, Outlines of Men, Women, and Things (1873), and Ten Years in Washington (1874). In 1869 she entered into a three-year contract to write a daily column for the Brooklyn Daily Union, and at the end of the time was proud that she had not once failed to send her column. During the last year she received a $5,000 salary, at that time large for a woman. In 1882 her collected poems were published under the title Poems of Life and Nature. Her poetry is characterized by deep religious feeling and love of nature but not by originality of imagination or technique.

In 1876 Mary Clemmer brought her parents to Washington and established a home on Capitol Hill, where on Mondays her drawing-room was always filled with callers. In 1878 she was injured in a runaway accident, and henceforth suffered continuously from severe headache and carried on her literary work with difficulty. In 1883 she was married in St. John's Church, Washington, to Edmund Hudson, editor of the Army and Navy Register, and went with him on a European trip. On her return her health seemed better, but improvement was brief and she soon died, after a cerebral hemorrhage. She is buried in Rock Creek Cemetery, Washington.

Mary Clemmer was slender, graceful, dignified. She liked to trace her blue eyes, light-brown hair and high coloring to her Manx ancestry. Her extreme sensitiveness was perhaps an inheritance from her idealistic father. A conscientious, thorough worker, she was also fearless and vehement in expressing her opinions on political and social questions and because of this often aroused antagonism. She was intensely patriotic, intensely Northern. She felt keenly the various forms of injustice from which women suffered and wrote much on the subject, but was not greatly interested in the suffrage and took no part in organized movements. Her style is sometimes ornate and sentimental.

A Memorial of Mary Clemmer (1886), by her husband, Edmund Hudson; "Mary Clemmer," in Our Famous Women (1884), based on material supplied by Mary Clemmer herself; obituaries in the Nation, Aug. 21, 1884; the N. Y. Commercial Advertiser, Aug. 16, 1884.

S.G.B.

Clemson

Clemson, Thomas Green (July 1, 1807-Apr. 6, 1888), mining engineer, founder of Clemson College, was born in Philadelphia where his father was a merchant. As a student in the Philadelphia public schools and in a laboratory he became deeply interested in chemistry, an interest which took him to Paris about 1826. There he entered a practical laboratory and attended lectures at the Sorbonne by Thénard, Gay-Lussac, and DuLong. In 1827 he entered the laboratory of Robiquet. Through the influence of the American Consul at Paris he was admitted as auditeur libre to the École des Mines Royale (1828-32). He was examined at the Royal Mint of France and received a diploma as assayer. From about 1832 to 1839 he was engaged in Paris, Philadelphia, or Washington as consulting mining engineer, developing a profitable practise, and during this period he contributed numerous articles to the publications of various learned societies. In Washington he came to know the family of John C. Calhoun, in 1838 was married to Calhoun's eldest daughter, Anna Maria, and became associated with his father-in-law in Southern agriculture and gold mining. In 1844 he left his plantation upon being appointed by President Tyler to the post of chargé d'affaires in Belgium. In this post, which he held until 1851, he negotiated important commercial treaties, attempting to promote direct cotton trade between Southern ports and the German states through Antwerp (Letters to Calhoun). He was a keen observer of the growing European interest in agricultural and technical education. From 1853 to 1861 he made his residence at "The Home," near Bladensburg, Prince Georges County, Md., near Washington. He was engaged in planting and assaying, and probably was representing the Belgian government in a professional way. During this time he was a frequent contributor of articles on scientific agriculture and agricultural education, and
Clerc

was influential in the establishment of the Maryland Agricultural College in 1856. Three years later he was appointed superintendent of agriculture by Jacob Thompson, secretary of the interior. In this position he urged both the establishment of an independent bureau of agriculture and the establishment of land grant colleges. Resigning his post Mar. 4, 1861, because of his Southern sympathies, Clemson soon entered the service of the Confederate government. When he was paroled four years later he was supervisor of mines and metal works of the Trans-Mississippi Department. From 1865 to 1888 he lived in South Carolina at Pendleton or at Fort Hill, the latter being the home of the Calhouns. During the greater part of these years he was engaged, with almost passionate zeal, in an attempt to raise funds "for aid to found an institution for the diffusion of scientific knowledge that we may once more become a happy and prosperous people." Finally, despairing of attaining his end during his life, he left by will to the State of South Carolina the bulk of his estate, including Fort Hill, which he and his wife had purchased. When the State of South Carolina accepted his bequest and Clemson College was established, there was brought to fruition the great aim of his life.

Clemson had a very striking personality. He was six feet six inches in height, well proportioned physically, and a man of broad intellectual interests. He was a member of many learned societies, and received the decoration of the Order of Leopold and the French Legion of Honor. Something of a violinist, he was also an amateur in oil painting, and collected in Belgium about forty paintings, some of which are considered of rare value.

[Am. Farmer, 1855-98; Charleston News and Courier, Apr. 9, 1888; Yates Snowden, ed., Hist. of S. C., vol. II (1920); Patent Office Reports, 1859-60; manuscript letters of Clemson to Calhoun, in Clemson Ag. College; recollections of personal acquaintances.]

E.W.S.

CLERC, LAURENT (Dec. 26, 1785-July 18, 1869), educator of the deaf, was the third of a family of five children born to Joseph François Clerc and Marie Elizabeth Candy, at La Balme, near Lyons, France. His father and a number of ancestors before him had served as mayors of La Balme, and his father also held the offices of notary public and judge. A fall into the fire when Laurent was about a year old resulted in deafness. At the age of twelve his formal education was begun at the Institute for the Deaf and Dumb in Paris, presided over by the Abbé Sicard. Clerc's first teacher was a brilliant deaf man, Massieu, but during most of his eight years of schooling he was under the instruction of the Abbé himself. An apt scholar, at twenty he was an assistant teacher in the Paris Institute, where he finally became an instructor of the highest class.

In 1815, during a trip to London by Sicard, Massieu, and Clerc, to exhibit their methods, they met Thomas Hopkins Gallaudet, who had come from America to study the art of teaching the deaf. The latter was invited to visit the Paris Institute, and did so in 1816, after he had found he could get little help in England. Gallaudet, after finishing his study of the Paris school, asked permission of Abbé Sicard to take back young Clerc with him to aid in establishing a permanent school for the deaf in the United States at Hartford, Conn. Finding that Clerc wished to go, Sicard released his brilliant young teacher, who left with Gallaudet on June 18, 1816, arriving in New York on Aug. 9. During the voyage of almost two months Clerc studied English with Gallaudet, who in turn received lessons in the language of signs from Clerc. Within three months after beginning the study of English, Clerc was able to present a written address in this language in Boston on the needs of the deaf, which was clear, convincing, and grammatically correct. He spent several months with Gallaudet in visiting the large cities of New England and the middle states, and in appearing before state legislatures, for the purpose of showing the possibilities of educating the deaf and the need of establishing an institution for their instruction in America. He was everywhere received with attention and kindness, and in a short time a considerable sum of money was raised by Gallaudet and Clerc for opening the first permanent school for the deaf at Hartford, now known as the American School for the Deaf. This school opened its doors on Apr. 15, 1817. Gallaudet was made principal of the school and Clerc a teacher, and within a year thirty-two deaf pupils were under their instruction. In 1819, largely owing to the favorable impression made by Clerc upon Congress, the latter granted to the school 20,000 acres of wild land, later sold for $300,000. During the same year Clerc married Eliza Crocker Boardman of Whiteborough, N. Y., a beautiful and brilliant young woman who had lost her hearing in early childhood and had studied at the school. Although he visited his native land in 1820, and again in 1835 and 1846, he returned each time to his labors. In 1858, at the age of seventy-three, he closed his active work as teacher and retired, though he was constantly in attendance at meetings of deaf people throughout New England, and continued his in-

Cleveland

Cleveland, Aaron (Oct. 29, 1715-Aug. 11, 1757), clergyman of the Congregational and later of the English Church, was born in Cambridge, Mass., the son of Aaron and Abigail (Waters) Cleveland. His father kept a tavern in Cambridge, was a contractor and builder, and in time grew well-to-do by speculating in land at Charlestown and elsewhere. In 1738 he moved to East Haddam, Conn., where he rose to be captain in the militia and was described in the tax list as a “gentleman.” At the time when his son entered Harvard College, however, he was still a publican. Students were graded according to their social position, and accordingly young Aaron Cleveland ranked only thirty-second in a class of thirty-eight. To compensate him for his lowly station he had inherited from his father a large, powerful, and handsome body. His feats of strength and his popularity with the belles of Cambridge and vicinity eclipsed the fame of whatever intellectual attainments he may have displayed. He swam from Cambridge to Boston and back again without resting, knocked senseless a bully who had journeyed all the way from Boston to try the manhood of the collegians, and excelled in general as a swimmer, wrestler, and skater. He graduated in 1735; on Aug. 4, 1739, married Susannah, daughter of the Rev. Aaron Porter of Medford, Mass.; and in the same year accepted a call to the Strict Congregational Church of Haddam, Conn. There he proved to be a witty, scholarly, and earnest pastor, but his Whitefieldian tendencies were too much for some of his parishioners; dissension arose, and in 1746 he resigned, much to the regret, it would seem, of most of his congregation. He was pastor of the South Church in Malden, Mass., 1747-50, when he went to the newly settled town of Halifax in Nova Scotia to organize the congregation known as Mather’s Church. By 1754 he had become convinced of the correctness of the Episcopal position, resigned his charge, went to England, where he was ordained by the Bishop of London, and became a missionary of the Society for the Propagation of the Gospel. The ship on which he returned went aground on Nantucket Shoals; while assisting the sailors Cleveland was struck by a wave and injured severely. He sought to organize a parish at Lewes, Del., but abandoned the field as unpromising. On July 1, 1757, he was commissioned by the Venerable Society to take charge of the church at New Castle, Del. He proceeded thither, was received with cordiality, and set out for Norwich, Conn., to bring his family. At Philadelphia he became ill and found shelter and care at the home of his friend Benjamin Franklin, who was then absent in Europe. He died in Franklin’s house.

P.H.

CLEVELAND, BENJAMIN (May 26, 1738-Oct. 1806), Revolutionary soldier, was born in Prince William County, Va., the son of John and Martha (Coffee) Cleveland. His parents later moved to Orange County, Va., where Benjamin married Mary Graves and showed great fondness for gambling and horse racing. About 1769 Benjamin, his brother Robert, and his father-in-law moved to North Carolina, settling on Roaring Creek, near the Blue Ridge, where Benjamin began farming, assisted by his father-in-law’s servants. Much of his time was spent in hunting and about 1772 he and some equally adventurous friends went to Kentucky on a hunting expedition, but near the Cumberland Gap they were plundered by the Cherokees and ordered off the Indian hunting grounds. With the outbreak of the Revolution he became ensign, and later lieutenant and captain, of the 2nd Regiment of North Carolina militia. Later serving with the county militia in the local warfare of western North Carolina, he commanded “Cleveland’s Bull Dogs,” called by the Loyalists “Cleveland’s Devils.” Administering stern justice, his harsh treatment of Loyalists earned for him a reputation for brutality in a partisan warfare characterized by inhumanity, summary hangings, and mutilation. In the summer of 1776 he acted as a scout on the western frontier and served as a captain in Gen. Rutherford’s campaign against the Cherokees (Colonial Records of North Carolina, X, 882). He also acted as chairman of the Surry County Committee of Safety and after the organization of Wilkes County he became justice of the county court and was elected to the House of Commons (1778). During the winter campaign of 1778-79 in Georgia he served with Gen. Rutherford but returned home after the defeat of Gen. John Ashe [q.v.], at Briar Creek, was promoted colonel, and was elected to the state Senate. With the invasion of North Carolina by Maj. Patrick Ferguson of the 71st Highlanders in September
Cleveland

1780, Cleveland, with 350 militia, joined Col. William Campbell, Col. Isaac Shelby, Col. John Sevier [q.q.v.], and other militia leaders at Quaker Meadow, near the Catawba River. As the officers were of equal rank it was agreed that the command should rest with the board of colonels, and Col. Campbell was elected officer of the day to execute the board’s decisions. Ferguson evaded battle and began withdrawing toward Charlotte, hoping to rejoin Lord Cornwallis, but was pursued and defeated in the battle of King’s Mountain, Oct. 7, 1780, Cleveland commanding the left flank of the Continental forces. After the battle the army encamped at Bickerstaff’s, where Cleveland was conspicuous in securing the execution of a number of captured Loyalists who were accused of being thieves, house-burners, parole-breakers, and assassins. At the close of the Revolution, Cleveland, having lost his plantation, “Round About,” on the Yadkin, “by a better title,” moved to the Tugaloo region of western South Carolina, where he served for many years as a justice of the Pendleton (now Oconee) county court. As a judge he had great contempt for technicalities and the arguments of lawyers and often slept while on the bench, his colleagues prodding the enormously fat judge whenever his snoring interfered with litigation.

CLEVELAND, CHAUNCEY FITCH (Feb. 16, 1799–June 6, 1887), lawyer, governor, congressman, was born at Hampton, Conn., the son of Silas and Lois (Sharpe) Cleveland. After receiving a common-school education, he studied law with Daniel Frost of Canterbury, Conn., for three years, and in August 1819 was admitted to the Windham County bar. He became clerk of the probate court (1827), probate judge (1829), prosecuting attorney (1833), and state bank commissioner (1837). Between 1826 and 1866 he was twelve times elected to the General Assembly from the town of Hampton and was speaker of the House in 1835, 1836, and 1863. Elected governor of Connecticut in 1842 and 1843, he interested himself in social reform and recommended and carried through an act abolishing imprisonment for debt, a child-labor law, and appropriations for a “Retreat” for the insane poor at Hartford. During the Dorr insurrection in Rhode Island, he twice refused to honor the requisition of Charter Governor King for Thomas W. Dorr [q.q.v.], charged with treason against the State of Rhode Island, on the ground that Dorr was a political refugee and not a fugitive from justice (Providence Daily Journal, Sept. 2, 1842). Nominated for Congress, he was defeated in 1838 and 1840 but was elected to the Thirty-first and Thirty-second Congresses, where he defended the United States Supreme Court, asked that the franking privilege of members of Congress be curtailed, and opposed Clay’s compromise measures of 1850 including the Fugitive Slave Bill. He was strongly anti-slavery, twice receiving the nomination of Free-Soilers for Congress, simultaneously with the Democratic nomination, and went so far in obeying the resolutions of the Connecticut legislature against the extension of slavery as to compare Daniel Webster with Benedict Arnold. A leader of the Democrats in Connecticut, he bolted his party in the mid-fifties, joined the new Republican party, acted as one of the vice-presidents of the Republican conventions of 1856 and 1860, and served as Republican presidential elector in 1860. In the following year he was appointed by Gov. Buckingham to the delegation representing Connecticut in the peace conference that met in Washington, Feb. 4–27, 1861, at the invitation of the State of Virginia. After the war he returned to the Democratic fold and was a Democratic presidential elector in 1876. He abandoned his law practise about 1879 and died at Hampton of apoplexy at the age of eighty-eight. He was married, first, to Dianta Hovey, Dec. 13, 1821, by whom he had two children. She died, Oct. 29, 1867, and on Jan. 27, 1869, he was married to Helen Cornelia Litchfield.

CLEVELAND, GROVER. [See Cleveland, Stephen Grover, 1837–1908.]

CLEVELAND, HORACE WILLIAM SHALER (Dec. 16, 1814–Dec. 5, 1900), landscape architect, writer, was born and brought up in Lancaster, Mass., a direct descendant of Moses Cleveland who came from Ipswich, England, in 1635. Horace’s father, Richard Jeffry Cleveland [q.q.v.], who had married his cousin Dorcas Cleveland Hiller in 1804, was a skilled and daring sea
Cleveland

Cleveland, captain gifted with no little literary ability. Although his early prosperity was occasionally interrupted, he lived in ample and hospitable fashion; and with his wife, whose interest in education was exceptional, was instrumental in securing superior educational advantages for his boys by bringing about the establishment of a classical school in Lancaster first presided over by Jared Sparks. Horace therefore had both an hereditary and inculcated taste for writing. A further literary influence was his near relative, Henry R. Cleveland, one of the members of the famous "Five of Clubs," to which Longfellow and Sumner belonged. As a young man, fond of reading, Horace Cleveland deeply appreciated the advantage of frequent intercourse with these older men (mentioned in his Social Life and Literature Fifty Years Ago, published anonymously in 1888).

While his father was vice-consul at Havana, Cleveland saw active service on a coffee plantation. On his return he studied civil engineering, but after a few years devoted himself to agriculture, settling on a farm near Burlington, N. J. Almost immediately (Sept. 4, 1842) he married Maryann Dwinel at Bangor, Me., by whom he had two sons. In 1854 he removed with his family to the vicinity of Boston, living first in Salem and then for ten years in Danvers. He formed a partnership with R. Morris Copeland to pursue the profession of "Landscape and Ornamental Gardening." In 1857 the firm entered the competition for the design of the newly acquired Central Park in New York, but lost to Olmsted & Vaux. With Frederick Law Olmsted, Cleveland later formed a warm friendship. In 1864 he published a pamphlet, Hints to Riflemen. In 1869, he established himself in Chicago, and published his first Western professional paper, Public Grounds of Chicago; How to Give Them Character and Expression. His early work in Chicago was especially on South Park and Drexel Boulevard.

Some of his most important contributions to civic improvement were made at this time, especially in his practise outside of Chicago, which extended to Indiana, Michigan, Wisconsin, Iowa, and Kansas. A pamphlet, A Few Hints on Landscape Gardening in the West (1871), in the nature of a professional announcement, records a loose partnership with W. M. R. French, for the civil engineering phases of Cleveland's practise. In 1873 he published a little book, Landscape Architecture as Applied to the Wants of the West; with an Essay on Forest Planting on the Great Plains, which shows the deep insight into civic needs which twenty years of professional practise had developed. In 1882 he published a pamphlet, The Culture and Management of Our Native Forests, giving his further experience. In 1886 he removed to Minneapolis where his public park and private work had been increasing steadily. A notable fruit of his efforts was the scenic preservation of the Falls of Minnehaha, although his recommendations for a regional park system comprising both St. Paul and Minneapolis were too far in advance of public opinion to succeed. There are two pamphlets on this subject (1885 and 1887) interesting in the history of American city planning. Minneapolis proved a far more congenial home than Chicago, and Cleveland's activities radiating from there were astonishing for a man over seventy. In 1886 he published Voyages of a Merchant Navigator, an extremely interesting account of his father, based on the latter's Narrative of Voyages and Commercial Enterprises (1842). In 1898, having returned to the vicinity of Chicago, he contributed a paper, Influence of Parks on the Character of Children, to the second meeting of the American Park and Outdoor Art Association, of which he was made an honorary member. He died in Hinsdale, Ill., and was buried in Minneapolis.

Among Cleveland's best known works were designs for Roger Williams Park in Providence, R. I.; the Minneapolis park system; the Omaha park system; the grounds about Natural Bridge, Va.; Sleepy Hollow Cemetery, Concord, Mass.; Washington Park, Chicago; Como Park, St. Paul; Brookside Suburb, Indianapolis; and a design for Jekyll Island, Ga., as a winter resort. Cleveland was a broad-minded, far-seeing pioneer, who, aligning himself with and drawing constant inspiration from the leadership of Olmsted, helped to spread the gospel of foresight and planning in the rapidly developing West.

[A brief autobiographical notice may be found in E. J. and H. G. Cleveland, General, Cleveland and Cleveland Families (1899), vol. II. The Voyages of a Merchant Navigator contains autobiographical material. Many of the facts here given have been gleaned here and there in Cleveland's other writings and from unpublished letters written to Frederick Law Olmsted in the eighties. See also A. T. Andreas, Hist. of Chicago (1884); I. Atwater, Hist. of Minneapolis, Minn. (1893); Cha. Eliot, Landscape Architect (1902); Frederick Law Olmsted, Landscape Architect (1922); Chicago Tribune, Dec. 7, 1900. The Codman Collection at the Boston Pub. Lib. contains most of Cleveland's professional publications.]

T. K. H.

Cleveland, Richard Jeffry (Dec. 19, 1773–Nov. 23, 1860), merchant navigator, was born in Salem, Mass., the eldest child of Stephen and Margaret (Jeffry) Cleveland. His father, when sixteen years old, had been kidnapped on the streets of Boston and impressed
Cleveland

into the British navy; later he helped to design and equip Revolutionary privateers and held one of the first naval commissions issued by the Continental government. At fourteen his son left school to enter the counting-house of Elias Hasket Derby [q.v.], and at eighteen went to sea as captain's clerk. A year later he completed a voyage as second mate, the first mate, Charles Derby, being nineteen, and the captain, Nathaniel Silsbee [q.v.], not yet twenty. He himself was a full-fledged captain at twenty-four. In 1797, finding himself footloose in Havre with $2,000 in his pocket, and eager to provide for the comfort of his aging father, he embarked on the series of daring voyages and trading ventures to which he owes his fame. When he returned to Salem, May 13, 1804, he brought with him a fortune of $70,000. In the interim he had sailed twice around the globe, had engaged in a number of successful commercial transactions, had matched wits with Indians on the Alaskan coast and with British, French, and Spanish officials and naval men on the high seas and in a hundred far-flung ports, had had a close escape from Malay pirates, had quelled a mutiny on the China coast, and—most brilliant of all—had performed three extraordinary feats of navigation in small sailing vessels. With a crew of four miscellaneous incompetents and an inexperienced Nantucket boy as mate, he had taken a cutter-sloop of forty-three tons from Havre to the Cape of Good Hope (Dec. 21, 1797-March 21, 1798). In a vessel only slightly larger, with a short-handed, disaffected crew, he beat his way, in midwinter, in the monsoon season, from Canton to Norfolk Sound on the Alaskan coast (Jan. 10-Mar. 30, 1799). Finally, in a boat of only twenty-five tons, he sailed from Balasore Roads, near Calcutta, to the Isle of France (now Mauritius) in forty-five days (Mar. 29-May 14, 1800). It was at Mauritius that he met his lifelong friend and partner, William Shaler [q.v.]. He married his cousin, Dorcas Cleveland Hiller, Oct. 12, 1804, bought a beautiful estate in Lancaster, Mass., and looked forward to a serene domestic life amid his books and flowers; but in 1806 he was compelled to go to sea again, the enterprises in which his winnings were invested having come to grief, and at sea he remained, except for short intermissions, until the end of 1821. During these years he made and lost several fortunes. Twice his ship and cargo were confiscated: in the Caribbean by the notorious Admiral Cochrane of the British navy, at Naples by Napoleon. Throughout these years he acted with his old foresight and competence, but his luck was almost uninterruptedly bad. When his friend Shaler was made consul at Havana in 1828, Cleveland went with him as vice-consul and shared equally in the perquisites of the office. Shaler died there of cholera in 1833; Cleveland was ousted from his post by President Jackson, and found a berth for a while in the Boston Customs House. From 1845 till his death he made his home with his son, Horace W. S. Cleveland [q.v.], first at Burlington, N. J., and after 1854 at Danvers, Mass., where he died. Cleveland was no mere trader and adventurer. He was one of the greatest of the great race of New England sea captains—intrepid, skilful, clean, temperate, honest—but regard for Spanish trade regulations and for the nice conduct of neutrals in wartime was no part of his code. He was interested in art, literature, and education, was a thorough gentleman, and a born writer.

[Cleveland's own Narrative of Voyages and Commercial Enterprises (2 vols., 1842), a fascinating book. There is additional information in H. W. S. Cleveland, Voyages of a Merchant Navigator . . . comp. from the Journals and Letters of the Late Richard J. Cleveland (1886). See also R. D. Paine, The Ships and Sailors of Old Salem (rev. ed. 1924). The Narrative was republished in 1855 anonymously as Voyages and Commercial Enterprises of the Sons of New Eng.]

G. H. G.

Cleveland, Stephen Grover (Mar. 18, 1837-June 24, 1908), President of the United States, was the fifth child of a country clergyman of the Presbyterian Church. His father, Richard Falley Cleveland, a graduate of Yale College and of the theological seminary at Princeton, was descended from a Moses Cleveland who arrived in Massachusetts in 1635. His mother, Ann Neal, was born in 1806 and married in 1829 in Baltimore. She met her husband while he was tutor in that place. Her father was a publisher of whose antecedents little is known except that there was an Irish strain in his blood. Cleveland was born in the parsonage at Caldwell, N. J. (Americana, VII, 150), and was named for the parson who had preceded Richard Falley Cleveland there. In 1841 he was taken by his family to Fayetteville, N. Y., where his father had a church. The family moved again in 1850 to Clinton, N. Y.; and here when the father died in 1853 Grover was forced to undertake the larger part of his own support. He had already worked in a general store, and now he found a position in the New York Institution for the Blind; but life was hard and living was rather precarious for him until he entered the family of an uncle of his mother, Lewis Allen, at Black Rock, near Buffalo. He resisted the Whig tendencies rife in western New York, and became a Democrat before he became a voter. He studied law, was admitted to the bar in

205
Cleveland

1839, and in 1863 became assistant district attorney of Erie County. Financial burdens, and the need to aid his mother, kept him out of the army in the Civil War—to his political disadvantage. But he helped make it possible for two of his brothers to serve. His practice of law grew reasonably, as did his repute as a dependable, steady workman. The post of sheriff of Erie County came to him unsought—to his further political disadvantage since the necessity of the post required him to execute two murderers. He began his long career of making friends through his enemies by relieving Erie County of the burden of dishonest contractors. "We love him most for the enemies he has made," said Gen. Edward S. Bragg of Wisconsin, in seconding the nomination of Cleveland for the presidency in 1884 (Wisconsin State Journal, July 10, 1884).

Grover Cleveland was forty-four years old, a bachelor lawyer of moderate means and slight prominence when in 1881 the Democratic party "catered to the better class" by nominating him for mayor of Buffalo. Elected to reform the city administration, he reformed it. Before his term was out he began to be known as the "veto mayor," and his partisan associates were somewhat dismayed by the degree of reform that they had let loose in electing him. His reputation served him well in 1882. In this year, foreseen as a Democratic year because of the scandals that had injured the Republican party, and the Star Route trials that were immediately before the public, young Democrats were in many places brought to the ticket to make it easier for Republicans to vote it. In New York, in the perennial struggle to control the Republican state organization, where the grip of Conkling was now broken, the secretary of the treasury, Charles J. Folger, was nominated for governor as an Arthur man. Cleveland was no more than a local favorite for the Democratic nomination until it occurred to the state organization (and to Daniel Manning of Albany, in particular) that the best strategy for the campaign would be the nomination of a new man, little known, and dissociated from the taint of membership in the inner ring. Cleveland was nominated at Syracuse, Sept. 22, 1882, and was elected with the aid of many thousand Republican votes as an "unowned candidate" (McElroy, Grover Cleveland, 1923, I, 45). He became governor of New York on Jan. 3, 1883.

For the next two years Albany, as often, was a vestibule to the White House. Cleveland was under scrutiny as any man must be who overturns political order in New York. His admirers watched for, and saw evidence of the same stubborn honesty that had given them satisfaction and him local prominence in Buffalo; his political associates watched with less comfort his independence of judgment and his refusal to play politics as a game of spoils, patronage, and party regularity. One of his vetoes (New York Times, Mar. 3, 1883), that of a five-cent-fare bill for the elevated railroads of New York City, brought him into opposition to a popular movement that had for the moment the support of young Theodore Roosevelt, then in the Assembly. The lowering of the rate from ten cents to five was desired; but was unfortunately an obvious violation of the State's charter contract with the companies, and to Cleveland's simple and direct mind there was no alternative to a veto. Roosevelt, on his second thought, sustained the veto and made apologies for his indorsement of the measure; and together Roosevelt and Cleveland worked for municipal reform legislation for New York City which, when passed in March 1884, became at once useful for the metropolis and proof of Cleveland's willingness for non-partisan cooperation. In his relations with Tammany Hall Cleveland made valuable enemies while governor. His fight with John Kelly, then leader of Tammany, turned upon the continuance in politics of state Senator Thomas F. Grady. Cleveland won the fight, as well as the hostility of the Tammany organization. The latter proceeded, in the spring of 1884, to oppose the drift of the Democratic party toward the nomination of the governor as president of the United States.

It is unlikely that Cleveland would have been nominated or elected president had it not been for James G. Blaine. That Republican statesman, outstanding among the leaders as the Civil War receded, had a record that was defaced by suspicions of near-corruption that he had never been able to dispel. An ambitious aspirant for the presidency, Blaine found that these charges, supported by the Mulligan letters, interfered with his chances in 1876. The deadlock of the convention in 1880 blocked Blaine, so that there was no occasion for his enemies to make great use of the charges in this campaign. As 1884 approached, Blaine was the great aspirant again; and the group that had opposed him for eight years was vigorous in attack and threat. The threat was that in the event of his nomination they would lead a secession into the Democratic party, if only that party would nominate a suitable man. Blaine was, in spite of this, nominated; the insurgents seceded and were given the enduring name of "mugwumps" (M. Sullivan,
Cleveland

Our Times, II, 1927, 382, traces the word to the New York Sun, Mar. 23, 1884); and when the Democratic convention came together in Chicago, July 8, 1884, the delegates knew that if Cleveland should be their choice there would be a chance of enough Republican support to elect him. They also beheld the Tammany delegation opposing him at every point. The opposition was as valuable as the promise of support, for Tammany had a bad name; and Cleveland was nominated on the second ballot, with Thomas A. Hendricks of Indiana for the vice-presidency.

The hope of the mugwumps for a canvass in which the spotted record of Blaine could be opposed by the clean name of Cleveland was soon destroyed. The mugwump attacks on Blaine had gone far beyond the evidence in viciousness and bitterness, and had inspired his supporters to eager search for similar material for a counter-attack. On July 21, 1884, a Buffalo paper gave first publication to what had been found. The story, which had been hawked among the newspapers for several days, purported to show that some eight years previously the Democratic candidate had become the father of an illegitimate child, which he had since supported (Chicago Tribune, July 22, 23, 1884). For the rest of the canvass much of the Republican press published, enlarged, and falsified the case of Maria Halpin (who was the woman named); and made much of the alleged personal immorality of Cleveland. When the Democratic managers, dismayed at the scandal, inquired of Cleveland what they should do, he answered, briefly for once, "Tell the truth" (Harper's Weekly, Aug. 16, 1884, p. 528). A novel, embodying parts of the situation, and presenting its hero in an heroic light, became a best-seller a few years later when Cleveland had been made president for a second term (P. L. Ford, The Honorable Peter Stirling, 1894). How far the scandal hurt him or affected the campaign cannot be known; it was at least partly offset by the accident that befell Blaine when on Oct. 29 the indiscreet Dr. Burchard used the fatal words "rum, Romanism, and rebellion" as a description of the common bond among Democrats. Cleveland was attacked, also, for his failure to serve in the Civil War and for the substitute he hired to take his place when he was drafted; in spite of the fact that Blaine had equally abstained from service. Cleveland was, however, elected by a plurality of about 23,000 votes over Blaine, although he had a minority of all the votes cast. His administration of the presidency must be judged in light of the fact that although the Democrats controlled a majority in the new House of Representatatives, the Senate continued Republican.

At no time was there a possibility of a one-party control of the government, with President, Senate, and House of the same political faith (H. C. Thomas, The Return of the Democratic Party to Power in 1884, 1919).

At the age of forty-eight Grover Cleveland took office, the first Democratic president after the Civil War. "He is a truly American type of the best kind," wrote James Russell Lowell, who was acquainted with enough types to know (to R. W. Gilder, Dec. 26, 1887, in C. E. Norton, Letters of James Russell Lowell, 1894, II, 344). He was still a bachelor, and his unmarried sister, Rose Elizabeth Cleveland, lived with him in the executive mansion. A rather short and unimpressive man, he made up in bulk what he lacked in height and weighed over 250 pounds when inaugurated (C. R. Lingley. "Characteristics of President Cleveland," in Political Science Quarterly, XXXIII, 255). He was clean-shaven, except for a small mustache, at a time when American statesmen generally went bearded. He was reticent and unexpansive, except in the private society of his intimates; but the actor Joseph Jefferson, with whom he fished and near whom he lived in his summer place, "Gray Gables" on Buzzard's Bay, testified that he was a mimic of high order, told a good story, and might have been a great actor (O. S. Straus, Under Four Administrations. From Cleveland to Taft, 1922, p. 115). The close friendship that he maintained for many years with Richard Watson Gilder suggests that although he was without much formal education he had traits that made him companionable to cultivated men; his choice of Princeton as a home for his years of retirement confirms this. But it was the task of his friends constantly to combat the hostile, and apparently untruthful, gossip, that he was habitually intemperate. More than once, after he had married, it was necessary for the wife of one of his cabinet members to assert the untruthfulness of the slander that in drunken fits he beat his wife (Mrs. William C. Whitney, Milwaukee Sentinel, Dec. 13, 1888); and even Mrs. Cleveland was driven to assert that she was happy (to Mrs. Maggie Nicodemus, June 3, 1888. McElroy, Grover Cleveland, I, 286). The persistence of slander and attack showed the resourcefulness of the political opposition (which was as likely to be Democratic as Republican), and the craving of the press for sensation. Cleveland's marriage, June 2, 1886, to Frances Folsom, daughter of his former law partner Oscar Folsom, was "news" interesting to the public and oppressive to the persons concerned. No
Cleveland
detail was too small for the ubiquitous reporters, and Cleveland was outraged by the "colossal
impertinence" with which his private life was pried into by the press (McElroy, I, 187). There
were five children by this marriage, of whom all but one survived him.
The history of the Democratic party for the twenty-five years before 1885 was not such as
to produce a large group of recognized and available party leaders from whom might be select-
ed an impressive cabinet. Only Thomas F. Bay-
ard, who became secretary of state, and who had
been Cleveland's chief rival for the nomination, had a name that meant much to Americans at
large; and his prominence owed much to the generations of service rendered by his forebears
in Delaware. Daniel Manning, the anti-Tam-
many New Yorker who had "invented" Cleve-
land, received the Treasury. William C. Endi-
cott of Massachusetts went to the War Depart-
ment and paid part of Cleveland's debt to the independent.
William C. Whitney, New York business man and son-in-law of the Ohio Stan-
ard Oil magnate, Senator Henry B. Payne, took
over the Navy. The Post Office was given to
William F. Vilas of Wisconsin, railroad mag-
nate and orator. To the southern Democrats,
who had seen little of office for so many years,
went the Interior Department, to Lucius Q. C.
Lamar of Mississippi; and the office of attorney-
general, to Augustus H. Garland of Arkansas.
The last two appointments received violent de-
nunciation from the Republican press; but
Cleveland subsequently promoted Lamar still
further to the Supreme Court. In 1888 Melville
W. Fuller of Chicago was appointed to be chief
justice of the United States. The minor ap-
pointments tested the sincerity of Cleveland's pledge for a "practical reform in the civil ser-
vice" (to G. W. Curtis, Dec. 25, 1884, McEl-
roy, I, 124). His party had advocated this re-
form for many years, so long as there was no prospect of success; but with the inauguration of
Cleveland the political "bread line" formed at
once, and Democrats of every order demanded jobs, to throw Republicans out, or as party re-
wards, or for the health of their wives, or frank-
ly because they needed the money. They had
been kept away from such opportunities for twenty-four years. Cleveland had made no prom-
ise of such complete disregard of political con-
siderations as would have lifted him out of all contact with the standards of his time; but his slow and reluctant compliance with partisan de-
mands, and the steady support that he gave to
the work of the Civil Service Commission mark
a definite break from the practise of presiden-
tial politics that had long prevailed. He induced
Congress to repeal the Tenure-of-Office Act that
had hobbled presidents since 1863, and he main-
tained with acidity and success the independence
of the president in appointments. But the de-
vo ted civil-service reformers were not satisfied,
and the party politicians were enraged. Cleve-
land disliked and suffered under the criticism of
disappointed politicians but was not diverted by
it from his chosen course, and could never under-
stand why the public would not see his duty as
he saw it.
An even more unpopular duty than that which
guarded the public offices led Cleveland to pro-
tect the Civil War pensioners from the attack of
fraudulent claimants and cheap political senti-
mentalists. The Arrears of Pensions Act (1879)
had made it profitable for veterans to search for
excuses that would place them on the lists. They
could now receive not only current pensions, as
allowed by law, but back pensions from the time
of discharge until the time of going on the pen-
sion list. In many cases these arrears ran into
hundreds or thousands of dollars. A swarm of
astute attorneys discovered the easy money to be
made by aiding veterans to get pensions; and the
more dubious the evidence, the larger were the
fees. Congress was willing, with the surplus in
the treasury, to pass in the form of private bills
many claims that, for lack of authority, or lack of
fact, could not be granted through the ordi-
nary channels of the pension bureau. No con-
gressman liked the unpleasant notoriety that
might attach to a refusal to vote a pension to
a soldier, however undeserved. Such bills de-
scended upon Cleveland in a flood. In the spring of
1886 he began to read these bills and the pa-
pers that accompanied them, and to veto those
that were without merit. Many were so com-
pletely bad as to be a scandal upon the Congress
that voted them; pensions to deserters, pensions
to men who had not been in the army, pensions
for injuries received many years after the war
was over. In February 1887, he vetoed a gen-
eral pension bill based upon the new principle of
allowing relief to veterans, not because of
wounds incurred in the service, but "upon the
ground of service and present disability alone"
(J. D. Richardson, Messages and Papers of the
Presidents, VIII, 549). The persons interested
in such legislation turned upon Cleveland as an
enemy to old soldiers; and many of them, run-
ing for office, promised friendship as a bait for
soldier votes. In May 1887, Cleveland made a
damaging error in judgment. Upon a recom-
endation from the War Department he ordered
the return to the states of their origin of such

208
Cleveland

Confederate battle-flags as were in the possession of the government. In 1905 President Roosevelt accomplished this return with general approval, but the time was not ripe for it in 1887; and a Democrat was not the proper agent for such a friendly gesture. In Ohio a soldier candidate for governor gained votes by asserting that "No Rebel flags will be surrendered while I am Governor" (J. B. Foraker, Notes of a Busy Life, 1916, I, 242); and the commander of the Grand Army of the Republic declared, in violent denunciation, "May God palsy the hand that wrote the order!"

The great surplus revenue that began to accumulate in the United States Treasury after the resumption of specie payments (1879) constituted the most embarrassing of the problems of internal policy for President Cleveland. It was a certain incentive to extravagance, and invited the opposition to attack the government for over-taxing the people; yet it could not well be lessened without legislation revising and reducing many of the customs duties and thereby stirring up the same opposition to resist a departure from the principles of protection. Within the Democratic party the years 1881-87 brought about the overthrow of the Randall Democrats, who were generally protectionists, and the rise to power of the Carlisle-Mills group who indorsed varying degrees of tariff reform. Cleveland, never a free trader, was led to an attack upon the tariff because he was embarrassed by the surplus, and because he believed that tariff rates had come to be evidence of improper favoritism to the protected industries. He gave his support to Carlisle, who had been elected speaker of the House in 1883, and who was reelected in 1885 and 1887; and when Congress met for the session of 1887-88 the message of the President was a comprehensive broadside against the existing rates, and an invitation to revise them. The debates of 1888 over the proposed Mills bill were the result; a second result was the decision of the Republican party to undertake an aggressive movement in favor of even more protection. The conventions of 1888 were held before the tariff debate was over. Cleveland was renominated (with Allen G. Thurman of Ohio as vice-president), and his friends were able to persuade the convention to indorse the Mills bill as a proper Democratic tariff. Benjamin Harrison and Levi P. Morton were nominated by the Republican convention. The political waters were muddied in the closing days of the canvass, as they were in 1884, by a political trick or roorkack that this time took the form of the Murchison letter. This letter, released to the press at Los Angeles, Oct. 21, 1888, was the consequence of a trap that had been baited for Sir Lionel Sackville-West, the British minister in Washington. Sir Lionel incautiously fell into it, and gave great glee to Republicans by writing to an unknown correspondent, Murchison, that a vote for Cleveland would be useful to England. Cleveland dismissed the minister for his indiscretion; but the damage was done, for the letter appeared to sustain one of the Republican contentions, that tariff reduction was a British policy, and was perhaps inspired by British gold. In spite of having a plurality of the popular vote, Cleveland lost the election.

In 1889 Cleveland retired to New York, to resume the practise of law and to seek such privacy as is allowed to ex-presidents. He was forced to undertake gainful work, because he had no private fortune; but his associates testified that he was indifferent to fees and profits. He enjoyed his family, his fishing trips, his summer home, and an increasing amount of respect and attention from his fellow citizens. In 1890 the revulsion against the protective tariff moved on of itself to an overwhelming defeat of the Republicans at the polls. The extreme McKinley Tariff (1890) had uncovered dangerous discontent in the West and the South; and tariff opponents turned more and more to Cleveland to resume his leadership. There was much spontaneity in the popular demand that he should be the Democratic candidate again in 1892, although some of his friends played a skilful hand in nursing it (G. F. Parker, post, p. 136). The movement gained such volume in 1891 that Cleveland's great New York rival, David B. Hill, sought to head it off by holding the Democratic convention to select delegates to the national convention early in the year. The "snap" convention did its work Feb. 22, 1892, and was a boomerang for Hill. He gained control of the New York delegation with ease, but his opposition did now what John Kelly's had done in 1884. It advertised Cleveland not only among tariff reformers but also among friends of the Australian ballot and enemies of "boss" rule. The Cleveland movement swept the party, and the Chicago convention approved it on the first ballot. Adlai E. Stevenson of Illinois was nominated for vice-president. Tariff reduction was confirmed as the major issue of the canvass. In the ensuing struggle it was not hard to defeat the Republican ticket, Benjamin Harrison and Whitelaw Reid, for Harrison had lost control of the party leaders. He was losing votes as well, for Republicans in the western states were still angry about the McKinley bill and were seeking financial re-
Cleveland

relief through the agency of free-silver coinage. Some of them turned Democrat, and more than one million of them seceded for the time and voted in the new People’s party. But it was impossible for Cleveland, when re-elected, and re-inaugurated in 1893, to satisfy the voters who had chosen him. A great financial panic was imminent, and the sufferers from it were calling for impossible relief; there was still a protectionist minority within his own party, ably led by Senator A. P. Gorman of Maryland; and the free-silver coinage that was demanded by western and southern populist elements was a form of currency inflation that he bitterly disapproved.

As far back as 1885, Cleveland had gone squarely on record against inflation (Letter to A. J. Warner, Feb. 24, 1885, New York Herald, Feb. 28, 1885). He now continued this attitude in the face of the financial crisis that broke in April 1893, and instead of surrendering to the demand for free silver he summoned the Fifty-third Congress, Democratic for once in both Houses, to repeal the Sherman Silver Purchase Act 1890, which was the most visible and concrete of the elements of financial unsoundness. He secured the repeal of this act, with the support of many Republican votes, but thereby he broke his party and drew upon himself the permanent hostility of the inflationist wing. It was not, for many years, common knowledge that at the moment when the special session of 1893 was called, the life of the President was uncertain because of the diseased condition of the roof of his mouth. This was successfully operated on, and his convalescence was concealed from the public (Dr. W. W. Keen, in Saturday Evening Post, Sept. 22, 1917). When, in the winter after the panic, Congress undertook the fulfilment of the Democratic pledge for tariff reduction, the animosities left from the fight on silver prevented harmony on any program. The protectionist Democrats stood out against revision and forced the drafting of a bill (the Wilson bill) that was so little a compliance with the pledge that Cleveland openly denounced it as “party perfidy and party dishonor.” He was not willing to sign it; but the situation of the treasury was such that he did not dare veto it and thus forego the chance of improving revenue. He permitted the Wilson bill to become a law without his signature; and he himself became a president without a party for the remaining years of his term.

The cabinet of the second administration showed a greater familiarity with the problem of government and a wider acquaintance among Democratic leaders than did that of the first term. It was not bitterly partisan, for at its head was Judge Walter Q. Gresham, who had only recently left the Republican party. John G. Carlisle, as secretary of the treasury, had to wrestle with the panic. The War Department was given to Daniel S. Lamont, private secretary of the first administration. Richard Olney of Massachusetts was attorney-general; Wilson S. Bissell, an old law partner of the President, was postmaster-general; Hilary A. Herbert, who while in Congress had been chairman of the committee on naval affairs, was secretary of the navy; Hoke Smith of Georgia was at the Interior; J. Sterling Morton of the Nebraska sound-money wing was secretary of agriculture. But Cleveland himself was unquestionably the dominant figure of the cabinet, and he still continued somewhat to slow down administration by his inability to delegate authority, or to act upon any judgment but his own. The typical stories tell of his long hours of patient work over papers in minor cases, and of his briefs and notes upon matters that, soundly administered, would never have got beyond the desk of some subordinate. In his first term he often answered White House telephone calls; he never grew to be entirely comfortable with secretaries. The voluminous long-hand memoranda that he drew up would have been invaluable sources for the historian, had he not regarded them as personal, taken them into retirement with him, and destroyed many of them.

Out of the treasury, whose plethoric condition had caused him so much care in his first term, came the problem of a shrinking balance, that threatened even to disappear. Receipts fell away because of business depression. Gold was hoarded by its nervous owners, who paid their debts to the government in paper money whenever they could. It was not only impossible to make receipts balance expenditures in any fiscal year of the second term, but it was uncertain whether the treasury could continue its policy of redeeming on demand every type of currency in gold. The gold reserve, upon which this policy depended, fell below 100 millions in April 1893. Thereafter Cleveland, through Carlisle, kept it alive only by the desperate means of four bond issues, aggregating $293,000,000. Even with these it was difficult to draw gold into the treasury as rapidly as it was drained out. The Republican opposition made much of this embarrassment, charging Cleveland with running the government on borrowed money in time of peace; the Democratic opposition, desirous of a silver or a paper basis, made equal use of it to indicate Cleveland’s close alliance with the great.
Cleveland financial interests. His large capacity for taking punishment was needed, and was adequate.

An aftermath of the panic of 1893 was the railroad strike of 1894, in which the American Railway Union, engineered by Eugene V. Debs, undertook to tie up railway traffic by a strike in sympathy with the employees of the Pullman Company. The center of the strike was in the vicinity of Chicago, where the boycott on the Pullman palace cars originated. There was violence in the train yards, but the governor of Illinois, John P. Altgeld, believed that the violence was under control. The federal government intervened in two ways, both of which were novel: an injunction was issued by a federal court restraining the strikers, and Cleveland, upon application of federal officials, sent troops from the regular army to Chicago, to enforce the laws. The strikers had interfered with the free flowing of the mail service. Altgeld asked in vain for the withdrawal of the troops from his state, and criticized their presence as "this un-called for reflection on our people"; but Cleveland had his way.

Cleveland's dominance of the State Department revealed itself first in Gresham's withdrawal of American recognition from the revolutionary government in Hawaii, and in his refusing to have anything to do with the overturning of the native monarchy there. The American residents had engineered the revolution in the final weeks of the Harrison administration, believing that prompt recognition and speedy incorporation in the United States would follow. Had the phrase been current, Cleveland would have been correctly described as vigorously anti-imperialist. He showed the same temper between 1895 and 1897, during the Cuban insurrection, when American filibustering expeditions were organizing for Cuban service, and American arms salesmen were trying to make deliveries of consignments of munitions of war. Part of the American press whipped up an enthusiasm for the Cuban patriots, and played in detail upon the excesses of the royalist troops and the sufferings of non-combatants. Congressmen were openly sympathetic. But the President tried to enforce the neutrality law, and refused to be driven by sentiment into a war with Spain. Even with both houses joining in concurrent resolutions for Cuban recognition, he declined to be forced. He was strongly American, however, when he believed that the facts called for sharp action; and he brought England and the United States to the verge of war by intervening in the old quarrel between England and Venezuela over their joint boundary. In this, in a message to Congress, Dec. 17, 1895, Cleveland gave new precision to the interpretation of the Monroe Doctrine, maintaining the hegemony of the United States in the Americas, and the vital interest of the United States in having boundary disputes with European countries settled without risk of aggravization. England yielded the point, believing that Cleveland was correctly interpreting American opinion; and the matter was steered into an amicable arbitration. In the reaction of relief at the passing of this danger, Cleveland and Olney, now secretary of state, negotiated a general arbitration treaty with England; but the Senate mutilated this until it was no longer useful.

Long before the end of the second term, Cleveland and his official family were outside the dominant currents of the Democratic party, and western and southern demands were driving the party into a campaign for free silver. There was much denunciation of him before and during the convention of 1896. After the nomination of William J. Bryan, the Cleveland Democrats, who could not bring themselves to vote for Maj. William McKinley the Republican candidate, and who would not vote for Bryan, organized a gold Democratic convention that nominated independent candidates. For these they voted, in protest to the course of their party. In the following March, Cleveland retired to a modest home in Princeton, N. J., and here maintained his residence for the rest of his life.

As a private citizen, Cleveland became a public and impressive figure. After a very few months the animosities began to fade, and opinion began more and more to turn to him as one of the few independent and disinterested voices in America. He was in demand for speeches and articles, and spent much of his time in preparing the autobiographical essays which he delivered as lectures, and later printed as Presidential Problems. He found time for friendship and recreation, and for active participation in the affairs of Princeton University, which had made him one of its trustees. On three more occasions he came prominently into the circle of great events. In 1902, during the anthracite coal strike, President Roosevelt turned to him for aid, and sought his cooperation in a public commission that was to investigate this phase of the labor controversy (J. B. Bishop, Theodore Roosevelt and His Time, 1920, I, 204). The project fell through because of difficulties over personnel, but for a moment it brought together in a common non-political purpose the outstanding figures of the two great parties. In 1904 there was talk of a third term for Cleveland, not so much because of a change among radical Demo-
crats as because the enemies of Bryan saw little chance of a victory without the use of Cleveland's name. Cleveland enjoyed the anxiety that this talk caused among the friends of Bryan (McElroy, II, 321), but had no intention of trying to profit by it. In 1905 he undertook the heavy duty of assisting in the reorganization of the Equitable Life Assurance Society after the damaging revelations that had been brought out by Charles E. Hughes for the Armstrong investigation in New York. Thomas F. Ryan had purchased the control of the stock in the company, in order that reorganization might have a free hand; and Cleveland became one of the three trustees to whom the management was intrusted. With these affairs on his hands, his life was full until, in his seventy-first year, he died. His death came in the interval between the Republican and Democratic conventions of 1908, and brought about a pause in the preparations of partisanship. There were gestures of esteem from nearly every American group, but these were fewest from the radical followers of Bryan who were preparing to nominate him for a third campaign. In the ensuing canvass much use was made of a forged letter in which Cleveland was made to indorse William H. Taft instead of the Democratic candidate (New York Times, Sept. 12, 1908).

[Robert McElroy, Grover Cleveland the Man and the Statesman (2 vols., 1923), is easily the most important work on Cleveland, and has been executed with science and intelligence. It reveals that Cleveland kept a diary of his fishing trips, but left his files of correspondence in deliberate disorder (II, 389). The most important writing by Cleveland, apart from his state papers which may be found in J. D. Richardson, Messages and Papers of the Presidents (1920), vol. VIII, was his Presidential Problems (1904). There are many campaign and fugitive biographies, listed by McElroy (II, 400), and there is a multitude of special articles on him; but the best of the personal books are Geo. F. Parker, Recollections of Grover Cleveland (1900), and Richard Watson Gilder, Grover Cleveland, A Record of Friendship (1910).]  
F.L.P—n.

CLEVENGER, SHOBAL VAIL (Oct. 22, 1812—September 1843), sculptor, was born on a farm near Middletown, Ohio, where his father, a New Jersey weaver, had settled in 1808. His mother is said to have been related to John Hancock. The year following Shobal's birth his parents moved to Ridgeville and later to Indian Creek. Shobal was the third child of a family of ten, and until his fifteenth year he worked on the farm in summer and attended school occasionally in winter. When fifteen he was sent to learn stone-cutting with his brother who was employed on the canal at Centerville. Here young Clevenger contracted a fever and was forced to return home. When he had recovered he went to Louisville and then to Cincinnati. On the market house of the latter city was a female figure in wood which aroused his admiration and a desire to emulate it. He placed himself under a stone cutter, David Guion (Guiou, Guino, Guio) with whom he remained about four years. Tradition records that Clevenger criticized an angel's head carved by his master who thereupon challenged him to do better. Clevenger did, and was thereafter entrusted with the ornamental work of the shop. In order to procure models to study he crept into the graveyard on moonlight nights and took impressions in clay from some of the sculptured tombstones, especially of allegorical reliefs and a statue of Grief by John Airy, on the monument to Gen. Gambo. Soon after he left Guion he married Elizabeth Wright of Cincinnati and went to Xenia where he set up for himself, but receiving only a few commissions he returned to Cincinnati and again worked for his former master. He soon, however, formed a partnership with a man named Basset. E. S. Thomas, editor of the Evening Post, attracted by some of his work, gave him a commendatory notice in his paper. When Hiram Powers [q.v.] was about to return from Washington with a model of Chief Justice Marshall from which he was to carve a bust, Clevenger said he "would cut the first bust from stone in Cincinnati, if he couldn't cut the best," and accordingly made one of Thomas, cut directly from the stone without any model (c. 1836). From this time on his reputation seems to have increased, and commissions multiplied. Nicholas Longworth became interested in him and enabled him to follow a course of anatomical lectures at the Ohio Medical College. During this period he made a number of busts from the fine-grained freestone of the region, among them one of William Henry Harrison. At Lexington, Ky., he made those of Clay and Gov. Poin- dexter. Visiting Washington, Philadelphia, New York, and Boston, he modeled, in plaster, busts of Washington Allston, Isaac P. Davis, and Joseph Hopkinson which are in the Pennsylvania Academy of the Fine Arts; and busts of Clay, Edward Everett, W. H. Harrison, Philip Hone, and Webster, plaster casts of which are in the New York Historical Society's collection. Marbles of Allston, John Davis, and Lemuel Shaw, the two latter dated 1839, are in the Boston Athenæum. Besides these he is said to have made busts of J. Q. Adams, Van Buren, Biddle, Woodbury, Dr. James Jackson, Jeremiah Mason, H. G. Otis, and Joseph Tilden. His bust of Webster was represented on the fifteen-cent stamp.

In the spring of 1840 he went again to New York where he made busts of Samuel Ward, Ward's daughter, Gov. Wolcott of Connecticut, and Chancellor Kent (plaster casts of the last two
Clevenger

are in the New York Historical Society's collection), and in October 1840, Longworth having supplied the means, he sailed for Havre. After spending a few days in Paris he went on to Florence. In the spring of 1842 he had trouble with his eyes, but after visiting Rome he returned to Florence and made busts of Powers and Louis Bonaparte as well as an idealized bust called "The Lady of the Lake." He began, in October of that year, what was to prove his last work. It was a nude, life-size figure of an Indian warrior, which has since entirely disappeared. On account of the subject it caused, at the time, a considerable sensation and was even called the first distinctively American sculpture. When the model was practically completed, the sculptor's health failed, and in June 1843 his physician pronounced the disease consumption, brought on, some say, by the inhalation of marble dust. On Sept. 17 he sailed for home with his wife and his three children. A day or two after passing Gibraltar he died. His youngest son, Shobal Vail Clevenger [q.v.], attained some distinction as a psychiatrist.

Clevenger's work consisted almost entirely of busts, and in these he showed a carefulness and exactitude in portraiture and a skilful use of the chisel. Though somewhat deficient in general education, he profited by association with his sisters, some of whom were men of culture. They were attracted by his personality, for he was frank and unaffected, industrious and patient in the pursuit of his art. In appearance Tuckerman described him as "a compact and manly figure, with a certain vigor of outline [that] promised more continuity of action than is often realized by artists."

The exact date of Clevenger's death is variously given as Sept. 23, 27, and 28. The more important sources of information concerning him are: Southern Lit. Messenger, Apr. 1839; Sculpture and the Plastic Art (1850); H. T. Tuckerman, Book of the Artists (1867); Lorado Taft, Hist. of Am. Sculpture (1903); Boston Transcript, Nov. 13, 1843; N. Y. Tribune, Nov. 11, 1843; U. S. Mag. and Democratic Rev., Feb. 1844; and the biography of his son, The Don Quixote of Psychiatry (1919), by Victor Robinson.] E.G.N.

CLEVENGER, SHOBAL VAIL (Mar. 24, 1843–Mar. 24, 1920), psychiatrist, son of Shobal Vail Clevenger [q.v.] and his wife, Elizabeth Wright of Cincinnati, was born in Florence, Italy. But six months old when his father died, he was cared for during part of his early childhood by relatives in the United States. He joined his mother and stepfather Thwing in New Orleans to begin his schooling, but a visitation of yellow fever in 1853 scattered this family, and a relative in St. Louis put him to work as a bank messenger (1855). Several years later he served as clerk and interpreter for Señor Aguirre who was engaged in freighting goods between Kansas City and Mexico; and when the Civil War broke out he enlisted in a Kansas City company but was soon transferred, at Nashville, to the United States Engineer Corps, in which he had much experience in building railways and bridges. Having secured some money after the close of the war by service as a claims agent, he married a college girl, Mariana Knapp, and migrated to Montana where he functioned as justice of the peace, probate judge, court commissioner, and revenue collector. He was later a government surveyor in the Dakotas and civil engineer in charge of building the South Dakota Railway. He also installed telegraph lines and telegraphed weather reports to the Smithsonian Institution. He contributed articles on scientific subjects to Van Nostrand's Engineering Magazine and published a Treatise on Government Surveying (1874) which went through several editions. For years he had collected evidence of corruption in the Land and Indian departments and early in the seventies made a trip to Washington for the joint purpose of securing contracts and submitting his evidence, but the results were so unsatisfactory that he returned home determined to change his profession. Although he was made superintendent of the government observatory at Fort Sully, he began to read medicine with an army post surgeon, Dr. Bergen; then, having lost his government position through politics, he worked as a steamboat clerk to get funds for his medical project. He finally obtained his M.D. from the Chicago Medical College (1879), and with his large family settled in that city as a general practitioner. He began to specialize in neurology and psychiatry and to write articles under these heads. In 1883 he secured the position of special pathologist to the Cook County Insane Asylum at Dunning and began to make case records and autopsies on the brains of the insane. The corruption which prevailed in such institutions was shameless, and, although he was an ap- pointee of the political machine, he began to expose the abuses in the Chicago Inter-Ocean but was unsuccessful in obtaining the cooperation of the press, pulpit, bar, clubmen, business men, or any other group. He resigned when a pistol bullet had imperilled his family and devoted himself to private practise, serving for a time as neu- rologist to the Alexian Brothers' and Michael Reese Hospitals. In 1884 appeared his Comparative Physiology and Psychology, and his classic work, Spinal Concussion (1889), gave him an international reputation. He lectured in various capacities at the Art Institute, School of Pharmacy, and Law School, but never held a chair in
Clewells

a medical college, although he received offers from eastern institutions. In 1893 Gov. Altgeld appointed him superintendent of the Illinois Eastern Hospital for the Insane at Kankakee and he planned great reforms in the treatment of the insane, based on the belief that insanity is often due to or aggravated by physical ailments. He gave up his private practise and hospital appointments for this work, but, as he would not adjust himself to political exigencies, he was soon forced to resign and return once more to private life. He wrote much and testified in many cases involving medical jurisprudence, also maintained a large correspondence with Eastern psychiatrists and brain specialists, and published the following works: Medical Jurisprudence of Insanity (2 vols., 1898); The Evolution of Man and His Mind (1903); Therapeutics, Materia Medica and the Practice of Medicine (1905), and the autobiographical Fun in a Doctor's Life (1909).

Tiring of the city, he lived for many years at Park Ridge, Ill. When finally he sought to resume his practise it was without success, and his last days were spent in narrow circumstances. His wife died in the autumn of 1910 and he married an orphan whom the Clewengers had taken into their home. He died of cerebral hemorrhage on his seventy-seventh birthday.

Clewenger had the usual defects of versatility. Numerous patented inventions brought him but little money, the best known being his booktypewriter and his brain model for teaching. As a psychiatrist he was ahead of his time and popularized new concepts of mental disease such as paranoia and katatonia. As a biologist he ranked high and added to the conception of evolution, especially in connection with the difficulty of man in adapting himself to the upright position. In his hatred of sham he sometimes went too far, as when he condemned certain neurologists for belief in the efficacy of electrotherapy. He was often inconsistent, for he testified in court cases while deploring the principle of factional expert testimony and fought the spoils system of which he was the beneficiary. His reform efforts were always single-handed and hence foredoomed to failure.

E. P.

CLEWELL, JOHN HENRY (Sept. 19, 1855–Feb. 20, 1922), Moravian clergyman, educator, was born in Salem, N. C. His father, John David Clewell, was of Huguenot ancestry; his mother was Dorothea Shultz. John Henry passed through the elementary schools of Salem and entered the Moravian College and Theological Seminary in Bethlehem, Pa., from which he graduated, receiving the degrees of A.B. and B.D. in 1875 and 1877 respectively. He planned to enter the Moravian ministry but before doing so he spent two years at Union Theological Seminary in New York. Upon his ordination as a deacon of the Moravian church in 1879 he went to Ohio to take charge of the Uhrichsville church. While serving here he also founded the Port Washington (Ohio) church in 1880, and became a presbyter in the Moravian church. In June 1882 he married Alice Cornelia Wolle of Bethlehem, Pa., by whom he had five sons. In 1884 he was called to the place of his birth to become the assistant principal of Winston-Salem Academy and College, a Moravian institution for girls; in 1888 he became principal, and later president. For twenty-five years he labored in this institution, traveling extensively in the West and the South in the interest of the school. In 1899 he went to Europe to attend the General Synod of the Moravian church. In 1900 he received the degree of Ph.D. from his alma mater. Among his outstanding achievements in the South was the organization of the Association of Presidents of Women's Colleges in the South. That he was effectively assisted by Mrs. Clewell is testified by the beautiful Alice Clewell Memorial dormitory on the Winston-Salem campus. He was so successful in raising the academic standards of Winston-Salem and in building it up generally that he was offered the presidency of the Moravian Seminary and College for Women at Bethlehem, Pa., and accepted the position in 1909. His problem at Bethlehem was to develop a strong institution in spite of restricted financial resources. This he succeeded in doing through a working arrangement with Lehigh University whereby certain members of its faculty were able to give a portion of their time to teaching in the Moravian College for Women. He remained president of the school to the time of his death. In 1902 he published his History of Wachovia in North Carolina, which is an account of the Moravian church in this region for a period of 150 years. Though not a great scholar or one of the country's foremost educators, Clewell played a rather important rôle in the education of women in the United States for almost forty years.

[Files of the Moravian, the official publication of the Moravian church; Clewell's own Hist. of Wachovia (1902), which gives a sketch of his activities at Winston-Salem; the bulletins of the two colleges; and an unprinted memoir by his son, Clarence E. Clewell of the Univ. of Pa.; Who's Who in America, 1922–23; obituaries in the Moravian, Mar. 1, 1922, the Globe (Bethlehem, Pa.), and Evening Bull. (Phila.), of Feb. 21, and the Public Ledger (Phila.) of Feb. 22, 1922.]
Clews

CLEWS, HENRY (Aug. 14, 1834–Jan. 31, 1923), financier, author, was one of the seven children of James Clews, a Staffordshire potter, who chanced to visit the United States about the year 1850. He had been intended from birth for the ministry. His father’s visit, on which Henry accompanied him, was designed for the purpose of obtaining data for the manufacture of his china and of establishing a plant in the United States. This china bore, on various of the graceful pieces, now much sought by collectors, early colonial scenes. It was of a beautiful delit blue. To-day it is held principally by connoisseurs and museums. Henry Clews, however, was interested neither in china nor in the ministry. Becoming attached to the conditions of life in New York, he persuaded his father to place him in business in that city. His education, obtained in English public schools, had been better than the average; and it was not difficult for him to obtain an immediate start as a clerk with the firm of Wilson G. Hunt & Company, which at that time was one of the largest firms of woolen importers in New York. The experience proved to be all that he had expected, and he remained engaged in it some eight years; but long before the end of that period, it became obvious that he was more interested in the financial side of the establishment than in its merchandising activities. He acquired a thorough knowledge of credits, discounts and commercial paper and became so well-known in this field that he eventually left the woolen business, and opened an office in Wall Street as a note broker and private banker in a firm organized as Stout, Clews & Mason. Before the opening of the Civil War he had become well-known both in that business and in ancillary branches of banking and investment, and his reputation had gained some foothold in Europe.

Civil War finance offered to Clews, as it did to many other investment bankers of the day, a great opportunity for large turnover and substantial profits. Secretary Chase, the war head of the Treasury Department, gave a substantial part of the public business to the firm, which had become Livermore, Clews & Mason (later Livermore, Clews & Company), located at 32 Wall St., now the site of the United States Assay Office. By the close of the war, this firm ranked second only to the house of Cooke & Company, in the amount of government bonds taken and disposed of to investors. The prestige obtained in this way, and the new clientele which appeared with the fresh industrial growth after the close of the war, still further enlarged the business of the house of Clews. In 1877 the firm name became Henry Clews & Company. In 1882 the establishment was transferred to the Mills Building just opposite the Stock Exchange on Broad St., where it remained for forty-one years. The outstanding characteristic of the firm’s policy was abstention from commitment to new promotions, flotations and the like, the business being steadily conducted along rather limited lines, though on a large scale, as a stock-trading and banking establishment, with emphasis upon the customer’s margin phase of the business. In furtherance of his position as a student of, and leading dealer in, stocks, Clews published a weekly circular which for years was widely known as an authoritative interpretation and forecast of market conditions.

Partly as a result of his youthful education and partly as a matter of business development, Clews early interested himself in public questions, chiefly of a financial nature, and at one time acted as currency adviser to the Government of Japan, later receiving a decoration for his service. His Twenty-eight Years in Wall Street (1887, revised and enlarged as Fifty Years of Wall Street, 1908), is a collection of connected reminiscences, sketches, and discussions on various matters which attracted his attention in the course of his business and his Wall Street Point of View (1900) was an exposition of the financial attitude of New York toward public questions. A volume of Speeches and Essays Financial, Economic and Miscellaneous (1910) was also issued under his name. Owing to his increasing prominence in the community he was, during the life of President Grant, close to the administration and was offered an appointment in it, and, although he never accepted public office, he continued to play a part behind the scenes in connection with the affairs of the Republican party. He became associated with numerous charitable and civic societies and was at one time president of the Peace and Arbitration Society, the forerunner of later and better-known efforts to promote the causes indicated. He married, during his early years, Lucy Madison Worthington of Kentucky. Of about average height, he possessed a gravity and sobriety of mien which gave the impression of membership in the ministerial profession, for which he had been intended, rather than the more mundane occupation of a broker.

[See, in addition to the writings of Clews himself, Chas. Morris, Makers of N. Y. (1895), p. 113; Men of Affairs in N. Y. (1906), p. 55; Jour. of Commerce (N. Y.), Feb. 1, 1923; N. Y. Times, Feb. 1, 1923.]

H. P. W.

CLIFFORD, JOHN HENRY (Jan. 16, 1809–Jan. 2, 1876), lawyer, railroad president, was born in Providence, R. I., the son of Benjamin and Achsah (Wade) Clifford. After graduating
Clifford

in 1827 from Brown University, he studied law with Timothy G. Coffin of New Bedford, Mass. In 1830 he was admitted to the bar of Bristol County, and became an attorney in New Bedford, with which city he was closely identified during the remainder of his career and in which he built up an extensive practice. In 1835 he made his entry into politics, being chosen as a representative to the General Court, and consequently made the acquaintance of Gov. Edward Everett. In 1839 Everett appointed him district attorney for southern Massachusetts, an office which he held for ten years. Gov. Briggs named him in 1849 as attorney-general of the Commonwealth, and Clifford won a reputation a year later for his clever prosecution of Prof. Webster of Harvard College, for the murder of Dr. Parkman.

In 1853 Clifford ran for governor on the Whig ticket, and, although he did not receive a majority of the popular vote, he was afterward elected by the legislature and served one term. Declining a renomination, he was reappointed by Gov. Emory Washburn as attorney-general and continued in that office until 1858. During the Civil War he vigorously supported Lincoln's policies. In 1862, when he was elected to the state Senate, he was at once made president of that body. He retired in 1867 from his profession and became president of the Boston & Providence Railroad, a position which he retained until his death. It was under his administration that a new terminal was erected in Boston.

Clifford declined appointments from President Grant as minister to Turkey and minister to Russia, but consented to be a member of the United States Commission on the Fisheries under the Arbitration Treaty with Great Britain. He was an Overseer of Harvard College, 1854-59 and 1865-68, and president of the Board of Overseers, 1869-74. As governor, he officiated at the induction of President Walker in 1853, and, as president of the Board of Overseers, at the inauguration of President Eliot in 1860, giving an address on each occasion. He was a trustee of the Peabody Education Fund and an intimate friend of its founder, George Peabody.

His long experience in public affairs eventually broke his health. A trip to Florida in 1873 and another to Europe in 1875 brought him relief, but on Thanksgiving Day 1875, he had a sudden attack of heart trouble, and died in New Bedford, Jan. 2, 1876. He was married on Jan. 16, 1832, to Sarah Parker Allen, daughter of William Howland Allen of New Bedford, and a lineal descendant of Myles Standish. Naturally genial and urbane, he possessed a high degree of personal magnetism which drew friends to him.

Clifford

Although he was not in any sense a hard worker, he had rare facility in acquiring knowledge and was a man of broad interests and culture.

C.M.F.

CLIFFORD, NATHAN (Aug. 18, 1803–July 25, 1881), jurist, was born in Rumney, N. H., where the Clifords had been settled for three generations. His father, Deacon Nathaniel Clifford, remembered as a serious man even by the standards of that serious part of the country, was a small farmer; his mother, whose maiden name was Lydia Simpson, possessed the enterprise and energy which her son is said to have inherited from her. At fourteen Nathan, the oldest child and only son of a family of seven, having finished the village school course, was permitted, after some opposition from his family, to attend Harvard (N. H.) Academy, where he earned his living by teaching district school and giving singing lessons. His father's death in 1820 ended his hopes of entering Dartmouth College, but he found means to spend a year at the "Literary Institution" at New Hampton, N. H. He then studied law in his native village in the office of a local practitioner, Josiah Quincy. Admitted to the bar in 1827, he determined to commence practice in Maine and he selected as a permanent place of settlement Newfield, a village of about a thousand inhabitants in the southwestern corner of the state. During his first year of residence he married Hannah, the seventeen-year-old daughter of Capt. James Ayer, one of the leading citizens.

In 1830 Clifford entered politics as a successful candidate on the Democratic ticket for the lower house of the Maine legislature. In an Assembly largely composed of new men, Clifford, with his huge physique, robust health and aggressive willingness to work, forced his way rapidly to the front. Consciousness of his lack of higher education made him a painstaking student, and he developed marked ability for formulating and defending the philosophy of Jacksonian democracy. He was thrice relected to the Assembly, serving during his last two terms as speaker, and in 1832 was a delegate to the National Democratic Convention in Baltimore. In 1834 the office of attorney-general of the state becoming vacant, Clifford successfully sought it as a reward for his party services. In 1837 he was an unsuccessful candidate in the party caucus for the nomination for United States senator. In 1838 he was elected to the national House of Representatives where he served two
Clifford terms. Here he displayed the same activity and devotion to duty as in the legislature. Many of his speeches on economic questions were prepared with great care and showed far more than the usual grasp of principles and statistical data. In 1843 when Maine was redistricted he failed of renomination and retired to Newfield, somewhat disgruntled at his treatment by his party. Three years later President Polk appointed him attorney-general of the United States at the instance of the Maine senators.

When Clifford came to Washington at forty-three, he was still a New England countryman. His interests centered in his Newfield home where his wife and family remained because the smallness of his means would not permit their living in Washington. Several days before the opening of the Supreme Court term at which he was to make his first appearance as attorney-general, he surprised the President by tendering his resignation. "I told him," wrote Polk, "if he resigned now it would be assumed by his political opponents that he was not qualified and would ruin him as a public man" (Diary, Dec. 13, 1846). Clifford accordingly withdrew his resignation and in a few days regained his self-confidence by winning his first case before the Supreme Court. In addition to his legal duties, Clifford found himself involved in delicate political tasks. Polk and his secretary of state, Buchanan, were at variance over the conduct of the Mexican War. Clifford enjoyed Buchanan's confidence, but agreed with the President's policy, so that he became a helpful intermediary between the two. Polk showed appreciation of his tact and fidelity by entrusting him at the close of the war with a diplomatic mission to Mexico. The treaty of peace which had been concluded by Commissioner Trist had been amended by the Senate, and it became necessary to secure the Mexican government's consent to the amendments. A. H. Sevier, chairman of the Foreign Relations Committee of the Senate, was designated to conduct the negotiations, and Clifford was joined with him in the commission and ordered to proceed at once to Mexico. After ratifications of the amended treaty were exchanged, Clifford was commissioned to remain in Mexico as minister plenipotentiary to inaugurate the relations between the two countries on a peaceful footing. With the defeat of the Democrats at the presidential election of 1848 and the coming of the Whigs into power, he was recalled.

On his return, Clifford moved to Portland, Me., where he practised law for the next eight years. His practise does not seem to have brought him financial independence and his means continued small, but he was retained in a number of important cases, including Luther vs. Borden (7 Howard 1), in which he made an argument before the United States Supreme Court for the losing side. In 1850 and in 1853 he was an unsuccessful candidate for the United States Senate, long the object of his ambition. His close connection with Buchanan made it natural that when the New England seat on the Supreme Court became vacant during Buchanan's presidency through the resignation of B. R. Curtis, Clifford should have been named as his successor. But since his affiliations were with the pro-slavery wing of the Democrats, the nomination aroused bitter opposition. In the end it was confirmed by the Senate by the narrow margin of 26 votes to 23, and on Jan. 21, 1858, he took his seat on the Court of which he was to be a member for the remaining twenty-three years of his life. He set about his new duties with the same thoughtful and studious industry which he had displayed in his previous offices, and from the beginning most of his opinions were elaborate legal essays which because of their comprehensiveness and learning were widely cited as authorities by other courts.

In all, Mr. Justice Clifford wrote the opinion of the Supreme Court in 398 cases. He also wrote 8 concurring and 49 dissenting opinions and dissented without opinion in 42 cases, an unusual proportion of dissents which indicates the hard-headedness of his character. He wrote no opinion for the Court on a question of foremost constitutional importance, his specialities being commercial and maritime law, Mexican land grants and procedure and practise. Some of his dissenting opinions, however, express decided constitutional views, and in one case he established on circuit a major constitutional precedent affirmed on appeal by the Supreme Court in Collector vs. Day (11 Wallace 113), holding that the national government may not tax the salary of a state officer. He was unwilling, however, to extend this principle as far as the Court and dissented from the holding in U. S. vs. B. & O. R. R. Co. (17 Wallace 322) that railroad bonds owned by a municipality are exempt from federal taxes; and in the Franchise Tax Cases (6 Wallace 594, 611, 632), following Marshall's view that the subject of a tax is the criterion of its constitutionality, he upheld the validity of a state tax laid upon franchises although the measure of the tax was assets which included United States bonds. This tendency to seek sharp dividing lines of power between federal and state authority led him to differ from his colleagues in taking the position, likewise inspired by Mar-
Clifford

shall, that federal power over interstate and foreign commerce absolutely excludes regulation by the states (Hall vs. De Cuir, 95 U. S. 485). The same tendency toward definiteness inspired his dissent in Loan Association vs. Topeka (20 Wallace 655), perhaps his major constitutional contribution, in which he denied the power of the courts to set aside legislative acts as contrary to “natural justice” or on any other ground than clear-cut constitutional provision. From the same point of view his dissent in the Legal Tender Cases (12 Wallace 457) was based not on the ground that Congress was prevented from making greenbacks legal tender by any vague projection of the “obligations of contracts” clause, but that the power could not be deduced from any definite constitutional grant. On the great constitutional issues growing out of the Civil War and Reconstruction he voted naturally with the “conservative” majority of the court which after 1870 became a minority. He concurred without opinion in ex parte Milligan (4 Wallace 2), ex parte Garland (4 Wallace 333), and Hepburn vs. Griswold (8 Wallace 603), and dissented without opinion in the cases like ex parte Virginia (100 U. S. 371) allowing federal interference with state authorities to protect the political rights of negroes. Although attacked by Blaine in a political speech in 1876 as “an ingrained hungry Democrat, double-dyed and dyed-in-the-wool, and coarse wool at that,” his judgments were never regarded by competent members of the profession as marred by party bias, and even the New York Tribune referred to him as “a jurist of learning and integrity.”

After the death of Chief Justice Chase on May 7, 1873, a long wrangle ensued over the selection of a successor, during which Clifford presided over the Supreme Court as senior associate justice until Chief Justice Waite took his seat on Mar. 4 of the following year. In 1877 he was again called upon as senior associate justice to preside over the Electoral Commission which canvassed the votes in the disputed Hayes-Tilden election. On the first question submitted to the Commission, that involving the vote of Florida, Clifford wrote a careful dissenting opinion in favor of the view that it was within the province of the Commission to examine extrinsic evidence to determine the validity of the returns. The decision of the Commission to the contrary by a strict partisan vote apparently convinced him of the hopelessness of what he regarded as a fair outcome, and he wrote no more opinions. He considered Hayes a usurper of the presidential office and refused to enter the White House during his administration. While

Clifton

free from bias in his judicial duties, Clifford always remained a loyal party man, and hoped for the election of a Democratic president who might appoint his successor. For this reason he refused to avail himself of his legal right to retire, and went on carrying the burden of his heavy duties, the last link between the Court and the days of Democratic ascendancy before the Civil War. Even after he had been incapacitated by an apoplectic stroke in 1880 he refused to resign. He lingered as an invalid for a year and died July 25, 1881.

[Philip Q. Clifford, Nathan Clifford, Democrat (N. Y., 1922), includes many of Clifford’s letters, and an adequate account of his political career and private life. His judicial career can be traced only through the contemporary Supreme Court Reports and the three volumes of Clifford’s Reports, containing his opinions delivered on circuit.]

J. Di.

CLIFFTON, WILLIAM (1772-December 1799), poet, was born of Quaker stock at Philadelphia. His father was a “wealthy mechanic” of Southwark who perhaps had an interest in shipbuilding. The boy was well educated, but of delicate frame, and the rupture of a blood-vessel at the age of nineteen caused him to abandon hopes of an active commercial career. Possessed of a competency, he seems to have devoted the rest of his brief life to literary and social pursuits. His favorite pleasure was shooting, which probably contributed to prolong his life. He was a skilled musician, and an accomplished painter. We are told that he was of medium height, well-proportioned, that his eye was animated, and his face handsome. These last details are certainly confirmed by a portrait painted by Robert Field, of which D. Edwin’s engraving (D. M. Stauffer, American Engravers, 1907, no. 729) is given as the frontispiece to Clifton’s Poems (N. Y., 1800) and in the Analectic Magazine, June 1814—and of which the woodcut in Duyckinck’s Cyclopedia is a bad reversed copy. Though living a retired life, Clifton could not escape the political excitement of his times, and sided naturally enough with the more conservative party in Pennsylvania, which supported Washington, and favored the mother-country England in her struggle with regicide, Jacobin, and freethinking France. When the more radical politicians were urging the United States to join France against Great Britain, Clifton was a member of the Anchor Club, a small band of literary gentlemen who met for social purposes and to advocate war with France. For this body he wrote some prose papers upon the necessity of an established American navy and “Some Account of a Manuscript . . . entitled Talleyrand’s Descent into Hell”—a mixture of prose and
verse, which pictures the pains of the revolutionary leaders in the next world, and the happiness of the martyr Louis XVI in Elysium. The Anchor Club soon dissolved. But Clifton wrote other poems—chief among them The Group, which was published as a pamphlet at Philadelphia (1796). It is a savage attack on Gallatin, containing much of the wit and coarseness to be expected in a follower of Pope and Churchill. "Rhapsody on the Times" recounts the adventures of an Irish ne'er-do-well agitator who is kicked into the water for his pains in pointing out the faults of America to some citizens—all showing the influence of Peter Pindar's Odes and the poetry of the Anti-Jacobin. "The Chimera" is a satire on the ideal republics, so pleasing in the books of philosophers, that they have been happily left there. "The Address of the Devil to the United Irishmen," and their "Reply," poems first printed in the Philadelphia Gazette of the United States, wittily parody the style of councils with the Indians—instead of belts of wampum the chieftain of Hell and his earthly followers exchange halters, and "strings of lies and blasphemies." Upon Lord Nelson's victory of the Nile, Clifton wrote a "Song" to the "hearts of oak," to be sung at a Philadelphia festival. It shows considerable lyric gift, as does the warlike "Soul of Columbia." In gentler vein are his "Il Penseroso," which reminds one of Gray and Collins, "The Flight of Fancy," which has a foretaste of Joseph Rodman Drake, the song, "Mary will smile," written for Miss Broadhurst to sing at the theatre, and the lyrical "To a Robin," "To Fancy," "To Sleep," and the song on "Friendship, Love, Wine, and Song." For the Philadelphia edition of William Gifford's Baviad and Maviad, Clifton wrote an introductory "Epistle" to the critic author, a piece showing his poetic gifts of smooth and forceful verse at their best. It is dated May 13, 1799. In December Clifton died at the age of twenty-seven. A collected volume of Poems, Chiefly Occasional, was printed at New York the next year. Clifton had perhaps more feeling, more quality, than any other American writer of his day save Freneau, and though inferior in genius to Drake and E. C. Pinkney, he ranks with them among the chief losses to American literature by early death.

The source of most of our knowledge of Clifton is the anonymous introduction to the edition of 1800. See also G. C. Verplanck's article in the Anteacuteletic Mag., June 1814; E. P. Oberholtzer's Lit. Hist. of Phila. (1906), and Wm. Abbatt's edition of The Group published as Mag. of Hist., Extra No. 92 (1923).

T.O.M.

CLIFTON, JOSEPHINE (1813–Nov. 21, 1847), actress, was born in New York. She was the daughter of a Mrs. Miller, but was reared in the home of Thomas Hamblin, manager of the Bowery Theatre, where she made her début on Sept. 21, 1831, as Belvidera in Otway's Venice Preserved. This was followed by appearances in the same rôle at the Chestnut Street Theatre, Philadelphia, and as Lady Macbeth at the Walnut Street Theatre in the same city. In 1834, after a successful tour of the United States, she set out for London, the first American actress to attempt to star in England. She appeared as Belvidera at Drury Lane, thus breaking the ground for Charlotte Cushman a decade later, and then for Mrs. Mowatt. In 1837, Nathaniel P. Willis wrote a tragedy for her, Bianca Viscotti, which she produced at the Park Theatre, New York City. H. P. Phelps (post) records her season in Albany in 1837, and lists her parts as Bianca, Mrs. Haller, Clari, Juliet, Lady Free-love, and Jane Shore. He also records that "she seemed likely at one time to rival Charlotte Cushman," but that as she grew older, "she became so lymphatic as almost to preclude study." Possibly her physical condition in later years was brought on by the revival of a long-dead scandal concerning her mother which was dug up by a scurrilous sheet called the Polyanthus,—the revelations so preying on the mind of Miss Clifton's younger sister, Louisa Missouri, as to cause her death at the age of seventeen in 1838. From this time the scattered records of Miss Clifton's appearances grow fewer and fewer. In July 1846, she married Robert Place, manager of the American Theatre in New Orleans, and died suddenly the following year. Her body was taken to Philadelphia and laid in the same grave with that of her sister. There was no reference to her in either the New York or Philadelphia papers at the time of her death. The New Orleans Picayune (Nov. 22, 1847), had a short editorial notice, in which it remarked on the fact that she had not acted "in late years," but added that no player had enjoyed a career "less chequered by the vacillation of public taste," and that she was popularly styled "the magnificent Josephine." This appellation, and the fact that she was once regarded as a rival of Charlotte Cushman, suggest a woman of beauty, talent, and forceful personality. But no adequate critical descriptions of her acting are available, and she remains a forgotten and faintly tragic figure.

W. P. E.

CLINCH, CHARLES POWELL (Oct. 20, 1797–Dec. 16, 1880), author, was the son of
Clinch

James Clinch, a wealthy ship-chandler of New York City. After a public school education, he obtained a post as secretary to Henry Eckford [q.v.], prominent marine architect and father-in-law of Joseph Rodman Drake [q.v.], the poet. Through his employer he met Drake, Fitz-Greene Halleck [q.v.], and other New York writers with whom he formed warm friendships. In 1835 he was elected a member of the state legislature, and his absences in Albany on this duty made the only break in his life-long residence in New York City and its environs. In that same year, fire plagued the city, and Clinch, who had invested heavily in insurance stocks, lost a fortune. In 1838 he obtained a place as inspector in the New York Custom House, becoming deputy collector and then assistant collector. He rendered indefatigable and faithful service for forty years, refusing on principle to act upon cases arising out of the importations of A. T. Stewart [q.v.], his brother-in-law. In 1876 he retired and moved from Staten Island back to New York City, where he died on Dec. 16, 1880. A likeness, taken late in life, pictures an exceedingly handsome man with bushy white hair, a clear eye, and a determined mouth.

During the long years of a busy life, Clinch acted as literary and dramatic critic and editorial writer for the press, prepared public addresses, and wrote plays, including The Spy (1822), a dramatic romance based on Cooper's novel of that name; The Expelled Collegians; and The First of May, which was produced at the Broadway Theatre. The manuscript of The Spy bears the marks of practical use, but it is uncertain that the play was professionally produced. The stiffness of its dialogue and its use of formal soliloquies sufficiently account for any want of marked appeal to the public taste. Clinch's critical prose possesses ease of manner, and his public addresses must have had a certain rhetorical force in delivery. On July 4, 1823, he delivered before the Fire Department of the City of New York an Oration on the 47th Anniversary of American Independence, which was subsequently published.

When in 1819 Drake and Halleck were writing the clever series of verse satires, known under the collective name of The Croakers, upon the political and social life of New York City, Clinch, with four other friends, assisted in preserving the anonymity of the two poets by copying the verses before they were sent to the New York Evening Post in which they received publication. He especially admired the poetry of Halleck and Bryant and dedicated a poem to the memory of the latter. The Knickerbockers, in turn, apparently considered him a clever and worthy member of their group. Clinch's relationship to them did not prohibit, now and then, a certain rivalry, as when both Halleck and Clinch submitted manuscripts, published in 1821, in competition for the prize address on the occasion of the opening of the Park Theatre in New York City.

[References to Clinch occur in Jas. Grant Wilson, Life and Letters of Fitz-Greene Halleck (1869), and, at greater length, in his Bryant and His Friends (1886). See also Hamilton W. Mabie, The Writers of Knickerbocker N. Y. (1912); Evening Post (N. Y.), Dec. 16, 1880; N. Y. Times, Herald, Tribune, World, Sun, all of Dec. 17, 1880.]

A. L. B.

CLINGMAN, THOMAS LANIER (July 27, 1812-Nov. 3, 1897), political leader in North Carolina during the ante bellum period, was born in Huntersville, Surry (now a part of Yadkin County, N. C. His ancestry represents various racial strains. His father, Jacob Clingman, was of German stock; his mother, Jane, was the daughter of Capt. Francis Poindexter, of French descent, and Jane (Patillo) Lanier, daughter of Rev. Henry Patillo, Scotch Presbyterian clergyman of North Carolina and widow of Col. Robert Lanier. There was also Indian blood in the Poindexter family, Thomas Poindexter, father of Capt. Francis Poindexter, having married Elizabeth Pledge, daughter of a Cherokee chieftain. When Thomas Clingman was four years old his father died, and his early training was directed by his mother and uncle, Francis Alexander Poindexter. In 1832 he graduated at the University of North Carolina, leading his class. He then studied law at Hillsboro under William A. Graham [q.v.]. Returning to his native county, he represented Surry in the legislature of 1835, but soon after removed to Asheville, Buncombe County, where he resided for sixty years. He devoted his life to politics and the development of the mountain region of North Carolina. In 1840 he was a member of the state Senate from Buncombe and in 1843 was a member of the Twenty-eighth Congress from the mountain district. In the following Congress he did not appear but from the Thirtieth to the Thirty-fifth (1847-58) he continuously represented his district and from 1858 until the opening of the Civil War was in the Senate.

In the earlier part of his career he was a staunch Whig, inclined to independent action. Thus he was one of the few Southern Whigs who voted against the exclusion of abolition petitions. At various times he denounced the Democratic party and John C. Calhoun in strong language. As a result of one of these outbursts he fought a duel with William L. Yancey in 1845,
Clinton

Yancey missing fire and Clingman firing over his opponent's head. In the discussion on the Wilmot Proviso, Clingman upheld the theoretical right of Congress to regulate slave property in the territories and also the practical necessity of making half the new territories slave and half free. In 1848 he began to distrust the attitude of the Northern Whigs toward the slavery question and his distrust was confirmed on a visit to the Northern states in the autumn of 1849. On his return to Washington in December of that year he undertook to arouse Southern sentiment by a letter to Senator Foote of Mississippi, a Democrat, urging preparation for resistance "in a manner commensurate with the violence of the attack." He did not, however, support Calhoun in the effort to form a Southern bloc in Congress, but was instrumental in the filibustering which resulted in the election of Howell Cobb [q.v.] as speaker of the Thirty-first Congress. As an adjustment of the slavery controversy he favored the extension of the northern boundary of Missouri to the Pacific as the dividing line between free and slave territories, and did not support any of the compromise measures of 1850, except the fugitive-slave law. In the next election, his failure to vote for the compromise measures and his inclination to support the right of secession cost him many votes, and he was reelected by a reduced majority. In 1852 he definitely left the Whig party, carrying his district with him into the ranks of the Democracy. In 1861 he was a delegate from North Carolina to the Confederate States convention at Montgomery, Ala. In August 1861 he was appointed colonel of the 25th North Carolina Volunteers, and in 1862 he became a brigadier-general. After the close of the Civil War he attempted to resume his seat in the Senate, from which he had been expelled after the opening of hostilities, but he was not allowed to do so. Thereafter he served in no political capacity save as member of the North Carolina constitutional convention of 1875. He devoted much of his energy in his later years to exploiting the resources of western North Carolina. He never married.

CLINTON, DeWITT (Mar. 2, 1769-Feb. 11, 1828), statesman, philanthropist, savant, was born at Little Britain, Orange County, N. Y. Charles Clinton, a scion of an English family long domiciled at Longford, Ireland, had led a party of immigrants to America in 1729 and to this region of New York in 1731, where he set up as a surveyor, farmer and land speculator. Two of his sons were destined to fame: George [q.v.], as the first governor of New York State and his elder brother James [q.v.], a major-general in the Revolutionary War. The latter was father of DeWitt Clinton, second son of his marriage with Mary DeWitt, daughter of an old Dutch family. DeWitt was educated at Rev. John Moffat's grammar school, then for two years at the Kingston Academy which, under John Addison, was the leading school of that grade in the state, and finally at Columbia College, where he graduated A.B. at the head of his class in 1786. The college as he knew it is described in his address delivered in 1827 before the alumni (W. W. Campbell, post, pp. 1–19). He studied law with Samuel Jones, Jr., and was admitted to the bar, but made little immediate use of his legal learning except in his private land transactions in western New York. Acustomed from earliest youth to the discussion of public affairs, while still a law student he enlisted actively in the interest of his uncle, the Governor; in November 1787 he published through the New York Journal a series of letters over the signature "A Countryman" opposing the proposed United States Constitution, and wrote a report of the ratifying convention at Poughkeepsie with a strong Anti-Federalist bias. Shortly after he had completed his three years of legal study, he accepted the post of private secretary to his uncle, and soon to these duties were added those of secretary of the board of regents and of the board of fortification. Thus at about the age of twenty he had arrived at a position of considerable political influence without having been obliged to serve an apprenticeship in the humble ranks of party workers, a circumstance which may account for certain defects as a tactician which he showed in later life.

With the fall of his party in 1795 he lost his offices and thereupon carried forward a program of study in natural science under the impulse and guidance of Professors S. L. Mitchell and David Hosack of Columbia, but still found time actively to oppose the administrations of President Adams and Gov. Jay. In 1797 he was elected to the Assembly and the following year to a four-year term in the state Senate. Under the constitution of 1777 the Assembly chose annually four senators to sit with the governor as a
Clinton

Courn of appointnent, having at its disposal some fifteen thousand offices, civil and military. To this Clinton was elected in 1801. It had been customary for the governor to propose appointments and for the other members of the council to advise, ratify, or reject. Clinton vigorously disputed this interpretation of the constitution, claiming that any member could introduce names, and he and Gov. Jay debated their respective positions in written argument before the Assembly. The matter was left to a constitutional convention which, controlled by the governor’s opponents, sustained Clinton’s interpretation, he having made the principal speech before it on that side. Now virtually in control of the council, he took the lead in supplanting Federalists with Republicans, on principle, and thus has been blamed by historians as the father of the spoils system in the United States. As a matter of fact such practises in the government of New York date from a hundred years earlier; under Clinton’s direction the system was doubtless more radical, and yet even this was partially justified by the exclusive policy which had been pursued by the retiring Federalists (H. L. McBain, DeWitt Clinton and the Origin of the Spoils System in New York, 1907, p. 158). “The meekness of Quakerism,” he remarked, “will do in religion, but not in politics” (letter quoted in S. P. Orth, Five American politicians, 1906, p. 90).

On the resignation of John Armstrong from the United States Senate, Clinton was appointed (Feb. 19, 1802) to be his successor. He served through two annual sessions, making a long and creditable speech against the proposal introduced by the Federalists to seize New Orleans, whose Spanish governor had lately denied to Americans of the Mississippi Valley the necessary right to land goods on those wharves preparatory to ocean shipping (Annals of Congress, 7 Cong., 2 Sess., pp. 105-56), and introducing the Twelfth Amendment providing for the present method of electing president and vice-president (Ibid., 8 Cong., 1 Sess., p. 16). Though he had made an excellent beginning as a senator he resigned his office in October 1803 to accept that of mayor of the City of New York. He was moved to do this, apparently, by the feeling that he could be of use to his uncle, that the office was one of dignity and importance, proportionately greater then than now, and possibly because the emoluments, which through accumulation of fees then amounted to about $15,000 annually (D. R. Fox, Decline of Aristocracy in the Politics of New York, 1918, p. 111), would restore his finances then, as frequently, disordered by generosity and neglect. At any rate it removed him from national politics when he might have played a great rôle, and made New York the theatre of his effort. It was, as his contemporaries came to realize, the turning point in his career (J. D. Hammond, History of Political Parties in the State of New York, 1842, I, 197-200; W. H. Seward, Works, 1884, IV, 211).

He was mayor of New York from 1803 to 1815 with the exception of two annual terms (1807-08 and 1810-11); no mayor since has served so long; probably no mayor has done more for the city. Just as when an assemblyman he had concerned himself with better laws on sanitation, the relief of prisoners for debt, the abolition of slavery, the promotion of steam navigation, the encouragement of agriculture, etc., so now he was the chief organizer of the Public School Society (1805), the chief patron of the New York Orphan Asylum, and of the New York City Hospital (Hosack, post, pp. 46-50). He was faithful in attendance upon fires, a requirement of his office, fearless in quelling mobs, and indefatigable in inspecting markets, docks, etc. (Renwick, post, pp. 73-74). He obtained $100,000 as an appropriation for defense and supervised the erection of fortifications on Governor’s Island and elsewhere about the city. He adopted a firm tone in dealing with officers of British warships who attempted to impress sailors in the harbor (on the Leander affair of 1805, see manuscript letters to Clinton) and to blockade the Narrows in order to prevent the escape of French ships. It was during his administration that the city adopted the plan followed in its subsequent development over Manhattan Island. He was the last mayor to preside in the mayor’s court, subsequently made into the court of common pleas (New York Civil List, 1884, p. 258). While mayor he was also a state senator (1806-11) and then lieutenant-governor (1811-13).

After his return to New York in 1803 Clinton was considered the most powerful political leader in the state. He virtually dictated the nomination of Morgan Lewis for governor in 1804. In 1800 the three factions of the Republican party, the Clintonian, the Livingstonian, and the Burrite, had united behind Jefferson. To DeWitt Clinton, indeed, is attributed a pamphlet then published by “Grotius,” A Vindication of Thomas Jefferson from charges of infidelity. But the Burrites had been read out in 1804, and before Lewis’s three-year term was finished Clinton had broken with the Livingston faction which the Governor represented, and in 1807 he succeeded in electing his candidate, Daniel
Clinton

D. Tompkins, over Lewis. He was now considered somewhat of a heretic by the national administration. Influenced by the New York merchants, he at first opposed the embargo, but retreated from this position before a definite break with Jefferson had been forced. In 1809, fearing the influence of the Tammany Society, always in harmony with Virginia leadership, he attempted to win over the old Burrites and approached their leader, John Swartwout—albeit he had once fought a duel with him (Clinton-Post letters; Harper’s Magazine, Mar. 1875)—but again drew back, because of the jeers of the Tammany “Martling,” or “Bucktail,” faction which quoted his utterances on Burr in 1804. He was thus earning a reputation as a political trader (D. S. Alexander, A Political History of the State of New York, 1906-09, I, chaps. XIV-XVI).

This impression was deepened in the presidential campaign of 1812. Clinton was enough of an insurgent to have attracted the attention of certain Federalists. His strong dislike of “mob rule,” expressed in a charge in his mayor’s court during the Columbia College riot case (D. R. Fox, Decline of Aristocracy, pp. 162-66), had pleased such observers, as well as his supposed favor of a Federalist project, the Merchants’ Bank. About seventy Federalist leaders from many states gathered in New York, Sept. 15, 1812, for consultation as to a candidate; they were not strictly delegates and they kept the privacy of a caucus, yet they more closely resembled a modern nomination convention than any gathering before (J. S. Murdock, American Historical Review, July 1896). Led by H. G. Otis, the meeting passed resolutions favorable to Clinton as a candidate, though they did not formally nominate him, owing to the opposition of Rufus King and others. He had already been nominated by the Republicans of the New York legislature, the first important challenge to the mode of nomination by congressional caucus. His position seemed equivocal; his agents recommended him among New England Federalists as a man who would stop the war with England which had begun in June, while with Republicans they maintained that he would fight it more vigorously than his rival, Madison (J. D. Hammond, History of Political Parties in the State of New York, 1842, I, 353, 390-450). He was defeated by an electoral vote of 128 to 89, getting all votes east of the Delaware except the eight from Vermont, together with five of Maryland’s eleven. Had Pennsylvania voted with her northern neighbors, Clinton would have been president. His consortation with Federalists seemed to ruin his prestige with his own party in New York. He was not renominated for lieutenant-governor; in 1815 he was removed from his office of mayor.

The politician being rebuked, the statesman emerged. Clinton now devoted himself to promoting the project of a state canal from the Great Lakes to the Hudson. The advantages of some such scheme had been apparent to many minds, but it was Clinton who by calculation and by effective presentation established its practicability. He had been appointed one of the canal commissioners in 1810 and with some of his colleagues had journeyed across the state to Buffalo when they satisfied themselves that a canal could be built to Lake Erie, a safer route in case of war with Great Britain than would be one which included Lake Ontario. In 1811 with Gouverneur Morris he tried unsuccessfully to gain federal aid for the project; the War of 1812 necessitated postponing its serious consideration either at Washington or at Albany. Now in 1816, however, Clinton believed the time propitious and, aiding in the organization of public meetings throughout the state, he presented a memorial to be sent to the legislature favoring the enterprise as a state work.

After obtaining many signatures he went personally to Albany to urge the acceptance of his plan, which outlined not only the main features of the engineering process, but the commercial benefits to be expected and the method by which it might be financed, all the result of long study. On Apr. 17, 1816, the legislature adopted the plan, and a new canal commission, of which Clinton was also a member, set to work to survey in detail the ways and means by which Lakes Erie and Champlain might be connected with the Hudson. Clinton and Stephen Van Rensselaer, though like the others giving full time to these duties, would accept no compensation. Gov. Tompkins resigning in March 1817 to become vice-president, Clinton was nominated as his successor by the first state convention, made up of Republican legislators supplemented by delegates from districts not so represented by Republicans, and, despite the opposition of the Tammany Society, he was elected by a vote of 43,310 against Peter B. Porter with 14,79.

As governor he prosecuted the building of the canal both by his writing, as in the “Tacitus” papers published in 1821, and by constant personal contact with the work. He stood here for constructive leadership and active government, thus drawing many old Federalists to his support; inevitably he acknowledged this in official favor. Martin Van Buren, now leading the Tam-

Tompkins soon in Ohio. Clinton's
built American. Though Clinton had
commissioner in 1824, he was hardly
American for a native American wheat, and a new fish, the Salmo Otsego, and publishing papers on pigeons, swallows, rice, etc., and he was a member of many scientific societies in this country and abroad. His Introductory Discourse (1814) was certainly one of the best summaries of the state of scientific knowledge in America that appeared in the early years of the century. He was the second president of the American Academy of Art, pronouncing an "elegant" discourse before it in 1816. In 1817 he was elected president of the New York Historical Society of which he had been a founder, and in 1811 delivered before it an address on the Six Nations. He had secured its charter in 1809 and five years later a grant of a lottery fund from the state. While governor he inaugurated the work of translating the state's Dutch archives. He was co-founder of the Literary and Philosophical Society in 1816, New York's first attempt to rival the American Philosophical Society in Philadelphia, and continued as its president until his death. He was also actively identified with the Lyceum of National History, the Humane Society, the Society for the Promotion of Useful Arts, etc. In 1820 he published a Memoir on the Antiquities of the Western Parts of the State of New York. He was vice-president of the American Bible Society (Address in Campbell, 297–308), where he several times presided in the absence of the president John Jay, and held the same office in the Education Society of the Presbyterian Church. Yet he was no bigot; in 1806 he succeeded in having removed the political disabilities of Roman Catholics in New York, and while mayor set a precedent by respecting the secrets of the confessional when a priest was on the witness stand (Renwick, p. 91).

His sudden death, Feb. 11, 1828, at his resi-
Clinton

dence in Albany simplified political alignments in New York, restoring the clear distinction of a dozen years before, but it removed a great leader. He was inept in intrigue, overbearing in manner, demanding support but indifferent to supporters, cynical as to the virtue of others, and hence personally unpopular. At the same time he was generally admired and respected as a man of liberal ideas and administrative competence. His principles associated him with democrats, his tastes with aristocrats. He expressed himself on all occasions as the friend of state rights, yet other interests that he cherished, such as internal improvements and the growth of manufacturing, demanded another theory of government. Having long disliked Virginia, he could not easily gain great influence in the Democratic party; even had his principles allowed him he could not have risen to leadership among the National Republicans since that would have meant cooperation with Adams, of whom he was inordinately jealous. Death came, perhaps, when he had done what he was fitted best to do.

After some partisan wrangling the legislature voted $10,000 for his minor children. He had been married twice, first on Feb. 13, 1796, to Maria Franklin, daughter of the prominent New York Quaker merchant, Walter Franklin, by whom he had ten children, four sons and three daughters surviving at the time of her death in 1818. On May 8, 1819, he married Catharine Jones, daughter of a New York physician, Thomas Jones, who survived him. In appearance he was impressive, being six feet tall and of such proportions as to give him the sobriquet "Magnus Apollo."

David Hosack, Memoir of DeWitt Clinton (N. Y., 1829), the first biography published, is a mere memorial discourse, but the Appendix, pp. 156–159, has much indispensable material. Jas. Renwick, Life of DeWitt Clinton (N. Y., 1840), is the best narrative. W. W. Campbell, Life and Writings of DeWitt Clinton (N. Y., 1849), devotes but ten pages to the life, being valuable chiefly for the Private Journal of 1810, pp. 27–204, not published elsewhere. Cuyler Staats, Tribute to the Memory of DeWitt Clinton (Albany, 1828) contains a collection of editorial comments upon his death. Clinton’s writings, mentioned in the sketch, are published separately and in Campbell. His communications to the legislature are printed in C. Z. Lincoln, ed., Messages from the Governors (Albany, 1909), vols. II, III. His manuscript correspondence is largely in the Columbia Univ. Lib. and the N. Y. Puh. Lib. His diary is in the N. Y. Hist. Soc. E. A. Fitzpatrick, Educational Views of DeWitt Clinton (1911), analyzes his cultural contribution in general.

D. R. F.

CLINTON, GEORGE (c. 1686–July 10, 1761), colonial governor, came of a family long distinguished for public service. He was a younger son of Francis Clinton, sixth earl of Lincoln, and of Susan, daughter of Anthony Penniston of Oxfordshire. Through his brother, the seventh earl of Lincoln, and his nephew, the ninth earl, he was connected by marriage with the Pelham family, the most prominent members of which, Thomas Pelham-Holles, Duke of Newcastle, and Henry Pelham, were leaders of the Whig aristocracy of the eighteenth century. It was through this connection with Newcastle that Clinton secured most of the important appointments of his career. He entered the navy in 1708 (British Museum, Additional MSS., 32,693, fos. 245–48) and attained his captaincy in 1716. During the next twenty-five years he received various naval assignments, the most important of which were those of commodore of the convoy to Newfoundland and governor of that island in 1731 and of commodore and commander-in-chief of the squadron in the Mediterranean in 1737. On Dec. 10, 1743, Clinton was promoted to be rear admiral of the red squadron and on the following June 23 was advanced to be vice admiral of the white. On Apr. 23, 1745, he rose to be vice admiral of the red, and on July 15, 1747, he received his final promotion to the rank of admiral of the white. From 1757 until his death he was the senior flag officer of the navy. As a naval officer he had almost no opportunities to distinguish himself, and apparently his abilities in this direction were little above the ordinary. After attaining the rank of rear admiral he never served at sea.

During the latter years of his captaincy, he had become increasingly dissatisfied with his prospects and especially with his meager income. Although he had expressed a desire to "live by the sea," he began, about 1730, to press Newcastle for the governorship of New York, a post in which he believed he might live at ease on shore while ridding himself of the heavy debts which he had incurred. At first Newcastle was inclined to put him off, but Clinton’s financial situation grew steadily worse and his fear of his creditors increased until he wrote that he was "obliged to a way I never knew before, of going out very early in a morning and not returning till dark night, afraid what may happen" (Additional MSS., 32,693, fo. 268). Finally Newcastle yielded, and on July 3, 1741, Clinton’s commission as governor passed the seals. After an unusually long delay in departure, he arrived in the province on Sept. 20, 1743, and at once assumed the administration. One of the greatest weaknesses of his character—his entire dependence on others for advice and support—immediately displayed itself. Largely through the influence of James De Lancey [q. v.], chief justice of the province and its leading politician, he endeavored to conciliate the Assembly by permitting the passage
Clinton

of an annual revenue law, instead of one of perpetual duration or for a term of years as his instructions directed. The outbreak of war with France in the following year and the exigencies of civil administration, enabled the Assembly to gain further advantages, especially in financial matters. A personal quarrel with De Lancey in the spring of 1746 threw the Governor into the hands of Cadwallader Colden [q.v.], the senior councillor and a bitter enemy of the chief justice. For the next four years Colden controlled the Governor’s policy and drafted most of his messages to the Assembly with unfortunate results to Clinton’s popularity. Always more interested in military than in civil affairs, Clinton permitted the legislature to assume entire control of all appropriations, contrary to his instructions, and even to dictate the appointment of officers. On the other hand, the Assembly’s refusal to advance the money necessary for the pay of the troops raised for the abortive expedition to Canada in 1746 and 1747 or for gifts needed to secure the cooperation of the Iroquois, gave the Governor an excuse to draw upon the home government for about £84,000, a large part of which, according to his opponents, found its way into his own private fortune. The truth of this charge cannot now be fully determined, but it seems certain that Clinton was not entirely scrupulous in the methods he employed to gain that financial profit which was his chief incentive in securing the governorship. At the close of the war in 1748 he made a gallant attempt to regain the authority which he had lost. Fortified by the advice of Gov. Shirley of Massachusetts, he put aside his naturally indolent and easy-going ways and refused to approve the Assembly’s money bills unless it would surrender the executive powers which it had seized. But his frantic appeals for help from home went unanswered, due to the incompetence of the Board of Trade and its concern with other matters. After two years of deadlock, without salary from the province or encouragement from England, Clinton gave way and conceded all the advances which the Assembly had made. The last three years of his administration were passed in comparative quiet. But, meanwhile, the Board of Trade had revived under the leadership of the Earl of Halifax and had determined upon a vigorous effort to restore the prerogative in New York. For this purpose a new governor was deemed necessary. Clinton was therefore superseded on Oct. 10, 1753, by Sir Danvers Osburn, a brother-in-law of Halifax. Subsequent governors, however, never recovered more than a small part of the authority which Clinton had lost, and his administration of the province has been without the initiative and efficiency which marked his of the royal government in the province and a corresponding increase in popular control. His failure was due in part to conditions brought by the war, but more particularly to his own dependence on ill-chosen advisers, to his reluctance to exert himself in a struggle with the Assembly, and to the absence from his character of those qualities which make a successful politician. “Easy in his temper but uncapable of business,” wrote a son of a member of his council, “he was always obliged to rely upon some favorite. In a province given to hospitality, he erred by immuring himself in the fort, or retiring to a grotto in the country, where his time was spent with his bottle and a little trifling circle, who played billiards with his lady and lived upon his bounty” (Smith, post, II, 158). He returned to England with £80,000, was made governor of Greenwich Hospital and sat in parliament from 1754 to 1760 as a member for the borough of Saltash. He died July 10, 1761, survived by his wife, Anne, daughter of Major-General Peter Carle, by one daughter, and by a son, later distinguished as Major-General Sir Henry Clinton, K.B., commander-in-chief of the British forces during a large part of the American Revolution.

[The most important body of material on Clinton’s administration in New York is in Docs. Relative to the Colonial Hist. of the State of N. Y., ed. by E. B. O’Callaghan, vol. VI (1855), which contains his correspondence with the English officials as well as other documents, including an exhaustive report by the Board of Trade on his relations with the Assembly. Other letters relating to his governorship are printed in “The Letters and Papers of Cadwallader Colden,” N. Y. Hist. Soc., Colls., vols. L–LVI (1917–23), and in The Papers of Sir Wm. Johnson, vol. I (1921). The records of the Clinton family are located at the William L. Clements Lib., Ann Arbor, Mich. Clinton’s letters to Newcastle regarding his appointment as governor are in the Brit. Mus., Additional MSS., 32,662–32,699 (Newcastle Papers VII–XIV). Extended notice of Clinton’s family and of himself is given in Arthur Collins’s Peerage, of which the best editions for this purpose are those of 1756 (II, 128–68) and 1779 (pp. 243–79), and a generally accurate sketch of his naval career appears in John Carwool’s Biographia Navalis (1796), IV, 59–62. Wm. Smith’s “Hist. of N. Y.” N. Y. Hist. Soc., Colls., 1829–30, contains a vivid and, on the whole, fair account of Clinton’s administration. Since Smith was the son of a contemporary political leader and was in many years himself a member of the provincial council, his work is especially valuable. The best recent account of part of Clinton’s administration is in H. L. Osborn, Am. Colonies in the Eighteenth Century, vol. IV (1924), Chap. XI.]

L. W. L.

CLINTON, GEORGE (July 26, 1739–Apr. 20, 1812), Revolutionary soldier, statesman, served seven times as governor of the State of New York and was twice elected vice-president of the United States. His father, Charles, born in 1690 in the county of Longford, Ireland, organized a group of colonists, came to America, and finally, in 1731, settled at Little Britain in Ulster
Clinton

County, N. Y. Here, eight years later, George was born. During a short period in 1758 he served on the Defiance, a privateer sailing from New York. As a subaltern in his father's regiment he was a member of the successful expedition led by Col. John Bradstreet against Fort Frontenac on Lake Ontario. After having studied law under William Smith in New York he returned to Ulster County where he practised with reputation if not with distinction. Elected to the Provincial Assembly in 1768, he became the rival of Philip Schuyler in the leadership of a revolutionary minority. His ostentatious defense of Alexander McDougall, who posed as the John Wilkes of America, augmented his reputation as a fiery young radical and defender of freedom of speech and of the press. By his marriage to Cornelia Tappen on Feb. 7, 1770, he allied himself with the Wynkoops, a family politically powerful in Ulster County.

Having been a member of the corresponding committee appointed by the Assembly, Clinton was elected a delegate to the Second Continental Congress, and in December 1775 he became brigadier-general of militia. He voted for separation from Great Britain, but military duties in New York caused his absence at the signing of the Declaration of Independence. At the beginning of the war he was one of the few leaders in the colonies who possessed military experience, and he was entrusted with measures necessary to the defense of the Hudson River. He was a man of vigor and courage, but he proved to be deficient in military ability. His defense of Fort Montgomery was so unskilful that its capture was easily accomplished by the British; nor did he make any serious efforts to prevent the burning of Esopus by the enemy in the fall of 1777. In March of that year he had written the New York Convention that he contemplated resigning his military command because “from fatal Experience I find that I am not able to render my Country that Service which they may have Reason to expect of me” (Public Papers, I, 643). In the same month he was commissioned brigadier-general in the Continental Army. In the elections to state office in June 1777, Clinton, despite the plans of political leaders, defeated Philip Schuyler and was elected both governor and lieutenant-governor. The election was a surprise to the ruling class; John Jay wrote that “Clinton's family and connections do not entitle him to so distinguished a pre-eminence.” He resigned the lieutenant-governorship and, after a series of delays incident to his military duties, he was inaugurated governor at Kingston on July 30, 1777.

This was the beginning of a series of six successive terms as governor. Although he had failed to win renown on the battle-field he had been able to inspire the people with confidence and to urge them on to significant efforts in the revolutionary struggle. He managed the difficult finances of the state adroitly and dealt with the troublesome Indian situation in western New York with considerable success. He was also popular because he dealt severely with the Loyalists in New York.

Clinton is chiefly remembered as a great war governor and as the father of his state; but he was also one of the most vigorous of the opponents of the adoption of the Federal Constitution. As early as 1781 he had disapproved of the legislative grant to Congress of the import duties collected in the port of New York and in 1783 he secured the passage of a law providing that, although the duties were to be given to Congress, they were to be collected by officials of the state. This unfriendliness to a national revenue was later to become a determined opposition to a national government. Many facts contributed to his advocacy of state sovereignty. He well understood the commercial advantage of New York state's geographical situation and believed that it made too great a sacrifice for the few advantages it would gain from union. Nor did he wish to diminish the state's and his own political power. Clinton had used the immense patronage that the constitution conferred upon the governor to build up a powerful political machine. He "preferred to remain the most powerful citizen of New York rather than occupy a subordinate place under a national government in which his own state was not foremost" (John Fiske, Essays Historical and Literary, 1902, I, 118). In September 1787 Congress submitted a draft of the proposed federal constitution to the legislatures of the various states. Writing under the name of “Cato,” Clinton published seven letters against adoption in the New York Journal from September until the following January. The author of these letters was attacked by Hamilton in two letters written by “Cæsar” to the Daily Advertiser in October. In his opening address to the legislature Clinton did not even mention the ratification of the constitution, the important question for legislative consideration. It was under the leadership of Egbert Benson that a resolution providing for a convention was finally passed. Of this convention, held at Poughkeepsie the following June, Clinton was president. It was not until the constitution had been ratified by the necessary number of states and he had lost the support of Melancthon Smith that he acquiesced in the ratification by the New York convention.

With the possible exception of that offered by
Clinton

Jay in 1786, there had been no considerable opposition to the various elections of Clinton to the governorship. In 1789, however, the contest between Robert Yates [q.v.] and Clinton was sharp and bitter. A large majority in Ulster County, whose vote he controlled, gave Clinton a total majority of over four hundred votes, but he was alone in surviving the close election. Preparations were at once begun for the next election; here Clinton displayed the abilities of a master politician. He appointed his late opponent chief justice; and in his attempt to attach brilliant and promising young men to the ranks of the Anti-Federalists he made Aaron Burr attorney-general. In 1791 he was able to obtain the election of Burr as United States senator, and it was partly through Burr that he was able to secure the support of the powerful Livingston family. The 1792 election was the most bitter that the state had yet experienced. Jay was again the opponent of Clinton and received a majority of the votes cast for the governorship; but through a notoriously unjust and partisan decision, the state canvassers ruled out the ballots of three counties on technicalities and awarded the election to Clinton. If Clinton had thus established a vicious precedent in usurping the governorship, it was the conversion of the Council of Appointment into a great political machine by his opponents under the leadership of Philip Schuyler that led to twenty years of political corruption and scandal. Clinton was quickly shorn of his great powers as governor by the Federalist Assembly. In 1795, when defeat would have been inevitable, he declined to become a candidate for governor again. He sensed the changes that were about to come in the politics of New York; and he dreamed of offices of greater honor and prestige.

He did not again participate actively in politics until 1800, when political control of the state passed from the Federalists to the Republicans. This was brought about partly by the election of Jefferson to the presidency and partly by the strength of the coalition ticket that Burr had selected against Hamilton. Clinton was elected to his seventh term as governor. As early as 1804 his friends began to work for his election as vice-president and in February 1804 he replaced Burr on the Republican ticket; while in the state elections Morgan Lewis, supported by the Clinton and Livingston factions, defeated Burr for the governorship. Clinton was elected vice-president and went into comfortable retirement until 1808 when he definitely entered the presidential contest, as an insurgent Democrat with a policy highly acceptable to the Federalists, for whose support on a coalition ticket he was bidding. This alliance the Federalists seriously considered, but with the reestablishment of Democratic harmony in Pennsylvania the strength of Clinton outside of New York vanished and there was little that the Federalists could gain by a coalition (see S. E. Morison in American Historical Review, XVII, 744-58). Clinton was returned to the vice-presidency on the Republican ticket with James Madison, whom he held in contempt and toward whom, in 1809, he was openly hostile. His last conspicuous act was to break the tie in the Senate (Feb. 20, 1811) by casting his vote against the bill to re-charter the Bank of the United States (Henry Adams, post, V, 336-37). He died in office, Apr. 20, 1812.

[No adequate biographical treatment of Clinton exists. Hugh Hastings's introduction in vol. I of the Public Papers of George Clinton is discursive and incompetent, as are the twenty-one papers on Clinton 1899-1914. Meyer Brink in Olde Ulster, vols. IV-VI (1908-10), Vol. X of the Public Papers contains a list of biographical articles and of Clinton Mss.; to the former should be added scattered references in Papers and Annual Reports of the American Historical Association, and to the latter, MSS. in the Henry E. Huntington Library and in the Lib. of Cong. The Public Papers of George Clinton (10 vols., printed by the State of N. Y., 1899-1914) print many MSS., since destroyed by the fire of 1911. Valuable are Henry Adams, Hist. of the U. S. (1889-91); J. D. Hammond, Hist. of Political Parties in the State of N. Y. (2 vols., 1846 ed.) and D. S. Alexander's Political Hist. of the State of N. Y. (2 vols., 1906); see also Essays on the Constitution of the U. S. (1892), ed. by P. L. Ford and the Works of Alexander Hamilton (1888-90), ed. by H. C. Lodge.]

F.M.

CLINTON, GEORGE WYLIE (Mar. 28, 1859-May 12, 1921), negro bishop, was born in Cedar Creek Township, Lancaster County, S. C. In the midst of the Black Belt where negroes were reduced to a lower plane than in the case of those better circumstances in the border states, he had little opportunity for mental development. Having an intelligent father, however, he learned some of the fundamentals before the Civil War. Immediately after freedom, his mother, having also the same interest in the thorough education of her son, engaged in hard labor that he might be properly equipped for life. Desiring more thorough training than that which he had obtained immediately after freedom, he was among the first to become a student at the University of South Carolina when its doors were thrown open to negroes. He remained there from 1874 until 1877 when the negroes were ejected as a result of legislation restricting the use of the university to the whites. Interrupted thus in his studies, Clinton entered upon teaching and continued in this work for twelve years. Believing that he would have to perform other duties of importance, he always had the impression that he should have a professional career. While engaged in teaching, therefore, he read law for some months in the of-
Clinton

vice of Allison & Connors of Lancaster County. Uniting with the study of Blackstone that of the Bible, he became more deeply interested in the latter. While he learned sufficient law to be useful in drafting papers in one or more cases, he tended to restrict himself to the study of the Scriptures. Experiencing a call to the ministry, he was licensed as the local preacher of the A. M. E. Zion Church in 1879, and was admitted to the Traveling Association, Nov. 21, 1881. As a minister, he held some of the most important appointments in the South Carolina Conference, and served also with distinction in Pittsburgh. Meanwhile, he was also making a number of literary contributions to various newspapers and magazines. In connection with his pastorate in Pittsburgh, he edited the Afro-American Spokesman, a paper devoted to all matters of interest to the negro. In this capacity he impressed upon the public opinions which were helpful to negroes throughout the nation in shaping a new program for their future. He was, therefore, able to induce his denomination to establish in 1890 the homiletic publication, the Quarterly Review of the A. M. E. Zion Church. After developing this magazine to the extent that it was recognized as important in filling a distinct place in the religious life of the denomination, he was made editor of the Star of Zion, a weekly organ. Becoming a stronger factor in his church as a result of his increasing influence, he was elected and consecrated bishop in 1896. In this commanding position among his people he became a national figure with influence extending far beyond the limits of his denomination. Educators and social uplift workers of both races sought his opinion on matters of policy and procedure. His simplicity, his common sense, and his sympathy for humanity endeared him to those who knew him. He participated in the Southern Sociological Congress, and was conspicuous in the work of the Interracial Commission of the South and in that of the Federal Council of the Churches of Christ in America.

C.G.W.

CLINTON, JAMES (Aug. 9, 1733-Dec. 22, 1812), Revolutionary soldier, was born in Ulster (now Orange) County, N. Y. He was the sixth child of Charles and Elizabeth (Denniston) Clinton, and the brother of George Clinton [g.v.], Revolutionary governor of New York. At the time of the French and Indian War he was a captain in the militia and accompanied Bradstreet's expedition against Fort Frontenac. By 1775 he was a lieutenant-colonel. He was elected deputy to the Provincial Congress of New York from Ulster County in May 1775. On Oct. 25, 1775, he was commissioned colonel in the New York state troops and was assigned in command of the 3rd Regiment. During the preceding summer he had accompanied Gen. Montgomery's expedition to Quebec, leading six badly equipped companies. He participated in the disastrous attack on Quebec in December 1775. When the American troops withdrew from Canada in the following spring, Clinton returned to New York, and was commissioned brigadier-general in the Continental Army in October. He was stationed at Fort Clinton in the highlands of the Hudson, where he remained superintending the erection of defensive works until the following summer. In Oct. 1777, the British under Sir Henry Clinton made a desperate effort to cooperate with Burgoyne's expedition which was marching south from Canada. Sir Henry with three thousand British attacked and captured Forts Clinton and Montgomery which were defended by James Clinton with six hundred Americans. James Clinton was wounded by a bayonet during the assault, but escaped capture, drawing off most of his troops. In November 1778, he was ordered to Albany to act against the Tories and Indians harrying the frontier. He remained at that post until June 1779, when, the activities of the Indians and Tories having culminated in the massacres at Cherry Valley, N. Y., and Wyoming, Pa., Washington determined to take action against them. Gen. Sullivan was detached from headquarters with a force which marched across Pennsylvania, and Gen. Clinton was directed to march a similar force across New York. By July Clinton had his troops and baggage intact at Otsego at the foot of the lake which he dammed. Washington expressed some concern at Clinton's elaborate preparations, but when the word came from Sullivan, Clinton broke the dam and on the force of the accumulated waters floated his whole force down-stream into Pennsylvania and effected a junction with Sullivan's troops. Together the two completely defeated the Indians under Brant and the Tories under Butler near Newton, Pa. (probably the present Elmira, N. Y.), devastated the Indian country and destroyed the Indian crops as far north as the Finger Lakes. In the next year Clinton was placed in command of the Northern Department with headquarters again at Albany. Here he remained until Washington and Rochambeau completed their plans for the great coup of the summer of 1781. As they started south, Clinton and his brigade joined the main army and participated in the siege of Yorktown. Clinton's force was attached to Lincoln's divi-
Clpton

sion, and, according to the newly discovered Register of the Continental Army, counted at this time over 1,110, a much larger number than heretofore has been allowed by historians. Clinton's brigade received the surrendered British colors at Yorktown. In 1785, he was appointed a member of the Commission to settle the boundary between New York and Pennsylvania. Clinton married, first, Mary DeWitt in 1764, by whom he became the father of DeWitt Clinton [q.v.]; and, second, Mrs. Mary Gray. He was a member of the New York convention called to ratify the Federal Constitution, and voted against the ratification because the constitution contained no bill of rights. He died and was buried at Little Britain, Orange County, N. Y.

[Sources for Clinton's military career are: letters in the Calendar of Hist. MSS. Relating to the Revolution, Office Secretary of State N. Y. (1868); The Writings of Geo. Washington, ed. by Jared Sparks (1834); Writings of Geo. Washington, ed. by W. C. Ford (1886-93); Am. Archives (4 and 5 ser., 1837-51); Manuscript Reg. of the Strength of Forces of the Continental Army in the Wm. L. Clements Lib.; Public Papers of Geo. Clinton (1899-1914); Corres. Am. Rev., ed. by Jared Sparks (1853). Additional biographical information is contained in John Frost, The Am. Generals (1852); Wm. W. Campbell, Lecture on the Life and Military Services of Gen. Jas. Clinton (1839; read before N. Y. Hist. Soc. in February of that year); and in works on DeWitt Clinton.]

R.G.A.—s.

CLOPTON, DAVID (Sept. 29, 1820-Feb. 5, 1892), jurist, was a member of a well-known Virginian planter family. Dr. Alford Clopton, a physician and a member of the Georgia legislature, married Sarah Kendrick, and their son David was born in Putnam County, Ga., where his father was practising. His early education was obtained at the county schools, and at Eaton- ton and Vineville, Macon County, to which latter place his father moved in 1831. He entered Randolph-Macon College in 1836 and graduated with honors in 1840. Taking up the study of law at Macon, he was admitted to the Georgia bar in 1841 and commenced practising in Griffin, Ga. In 1844 he removed to Tuskegee, Ala., where he practised for a period of twenty-two years. Few details of his professional labors at this period have been preserved; but he was active in political circles. In 1859 he was, despite his written protest, nominated by the Democratic party to represent Montgomery district in Congress, and was elected after a spectacular contest. He sat in the House till Jan. 21, 1861, when, Alabama having passed the ordinance of secession, he retired together with the other Alabama members. On the outbreak of war he enlisted as a private in the 12th Alabama Infantry, subsequently becoming assistant quartermaster and captain. That autumn he was elected as representative of his district in the Confederate Congress, was relected in 1863, and continued in that body till the collapse of the Confederacy. In March 1866 he moved from Tuskegee and made his home in Montgomery. In 1874, he took a vigorous part in the anti-carpet-bag campaign of that year, addressing meetings in every quarter of the state. In 1878, he was, without his knowledge, nominated by the Montgomery County Democrats for the state House of Representatives and elected by a phenomenal majority. He was chosen speaker of the House but at the conclusion of his term declined relection. This was in accord with the life-long distaste for legislative honors which had been expressed on several occasions in his reluctance to accept nomination for office. In 1884 he was appointed associate justice of the supreme court of Alabama by Gov. O'Neil, and at the end of his term in 1886, being nominated by the Democratic party, was elected without opposition, continuing to hold office till his death. Judicial office was the measure of the only ambition he ever felt, and on the bench he displayed qualities of mind which commanded confidence. A finished speaker, he was careful, patient, receptive, eminently fair, and an indefatigable worker. He died in Montgomery. He was married first, to Martha E. Ligon, sister of Robert F. Ligon, lieutenant-governor of Alabama; second, to Mrs. Mary F. Chambers; and third, to Mrs. Virginia Clay, widow of Judge C. C. Clay.

H. W. H. K.

CLOPTON, JOHN (Feb. 7, 1756-Sept. 11, 1816), congressman, was born in St. Peter's Parish, New Kent County, Va. He was son, grandson, and great-grandson of three generations of William Clontons, the first of whom came as an immigrant into the colony and settled in York County, where he was constable in 1682. John Clopton entered the University of Pennsylvania in 1773, graduating in 1776. During the Revolution he served as captain of Virginia militia and became a member of the Cincinnati. He married Sarah Bacon, a descendant of Nathaniel Bacon, the rebel (William and Mary Quarterly, X, 268-70). Representing New Kent County in the Virginia House of Delegates for three sessions, 1789, 1790, 1791, he was elected to the national House of Representatives in 1795 from the district including Richmond, though the election was contested and the committee declared him elected by only six votes.
Closson.

over Burwell Bassett, in an election in which 854 votes were cast—70 of which were defective. Beginning in 1795 he sat in Congress until his death, with the exception of the Sixth Congress, when John Marshall defeated him by 108 votes. The campaign between Clopton, Republican, and Marshall, who at the earnest solicitation of Washington became the Federalist candidate, is considered by many Virginians to have been the most stirring congressional election ever held in the state (Virginia Magazine of History and Biography, XXIX, 176-77). In December 1798 Clopton was elected a member of the privy council of Virginia. As a member of Congress he consistently supported the Jeffersonian program. He advocated the revision of the Federalist judiciary act and denied the existence of judicial vested rights, held out to the last for the embargo "until a majority of the great body of the people . . . should prefer war itself to a longer continuance of it," reversed his position of 1798 by voting for an army in 1808 upon Jefferson's recommendation, denied the power of the federal government to charter banks, and strongly supported the War of 1812. Fearing the tendency toward enlargement of federal powers, he proposed in 1806 an amendment to the "necessary and proper" clause to the effect that it "shall be construed so as to comprehend only such laws as shall have a natural connection with and immediate relation to the powers enumerated in the said section, or to such other powers as are expressly vested by the Constitution in the Government of the United States or in any department or office thereof" (H. V. Ames, Proposed Amendments to the Constitution of the United States, pp. 167-68). He also transmitted from the Virginia General Assembly a proposed amendment providing for the recall of senators by their state legislature (Ibid., pp. 64, 328). The personal property and land tax records of Clopton's county indicate that in 1810 he owned 18 slaves and 450 acres of land, and that he paid a tax of $18.59.

(In addition to references above, see short sketch in Encyc. of Va. Biog., ed. by L. G. Tyler, vol. II (1915).) E. L. F.

CLOSSON, WILLIAM BAXTER (Oct. 13, 1848-May 31, 1926), painter, engraver, was born at Thetford, Vt., a son of David Wood and Abigail (Palmer) Closson. As a youth he was clerk in a Vermont railroad office when, during a visit to Boston, he saw some wood-engravers' tools which he borrowed, and with which in the early morning before going to work he taught himself to engrave. Having sent some proofs to a Boston engraver he was invited to become an apprentice at three dollars a week—one-third of the salary he was already earning in Vermont. Closson accepted the offer and lived on his stipend until it was considerably increased. He studied in the evening drawing classes of the Lowell Institute and gained facility in portraiture. His employer S. G. Kilburn sent him to New York to solicit work. At the Century Company's office young Closson's engravings were highly approved, but he learned that the company dealt only with individual artists, not with firms. Returning to Boston he opened a studio and began engraving independently for the Century Company, Harpers, and Boston book publishers. A friendship formed with George Fuller led to Closson's engraving "Winifred Dysart," a very popular work. In 1882 Harper & Brothers sent him to engrave masterpieces in European galleries. This employment lasted several years. Closson in each case familiarized himself with his subject by making at the gallery a painted copy from which he engraved at his studio. In 1886 appeared L. Prang & Company's Homes and Haunts of the Poets, with etched portraits by Closson. He also engraved many of his own compositions, such as "The Water Nymph," "Night Moths," and "Evening in the Woods." About 1888 he devised a method of printing from intaglio plates, examples of which were exhibited at the Keppel Gallery, New York, in 1890. Two circumstances caused Closson rather abruptly to give up his burin: the close application required of the engraver had affected his eyesight, and the development of the half-tone practically ended in this country opportunities for artistic engraving on wood. The artist, who had been awarded medals for his engravings at the Paris Exposition, 1889, and the World's Columbian Exposition, 1893, and who as a member of the Society of American Wood Engravers participated in the award of a Grand Diploma of Honor for a joint exhibition at Vienna, began to devote himself to painting in pastel and oil. He married in 1907 Grace W. Gallaudet of Washington, D. C. Of quiet unassertive personality, he was liked by fellow artists. His style of painting, usually festive and somewhat reminiscent of Watteau and Monticelli, found general appreciation. An important exhibition of his paintings and wood engravings was hung at the Worcester Art Museum, July 10-Aug. 10, 1914. A Closson Memorial Exhibition was held at the Robert C. Vose Galleries, Boston, May 9, 1924.

(The best appreciation of Closson as a painter is by his friend Wm. Howe Downes in The Catalogue Closson Memorial Exhibition, 1927. He is evaluated as engraver by Geo. Howes Whittle, The Printing Art, Apr. 1918.)

CLOUD, NOAH BARTLETT (Jan. 26, 1809–Nov. 5, 1875), planter, politician, was born at Edgefield, S. C., the son of Noah and Margaret (Sweringen) Cloud. He prepared himself at Philadelphia for the practise of medicine, and at the age of twenty-six married Mary M. Barton, also of Edgefield. His father having died in 1838, he set out for Alabama in 1846. He made his new home at La Place, Macon County, and became a cotton planter of the Black Belt. He immediately took an active interest in the Chunnamugga Horticultural Society of Macon County, one of the oldest organizations of its kind in the Southwest. In 1852, at a convention in Macon, Ga., held for the purpose of forming an agricultural society for the Cotton States, Cloud and a group of Alabama friends decided to establish an agricultural monthly at Montgomery. The first number of the American Cotton Planter accordingly appeared in January 1853. In 1857 the magazine was combined with the Soil of the South and continued its career until the war put an end to its existence in 1861. Cloud’s work as editor was of primary importance in the agricultural history of Alabama. An agricultural society for the state was organized, and the formation of county societies and the holding of county fairs was urged upon the people. The importance of raising more stock and of using more fertilizer upon cotton plantations was stressed. The question of education also engaged the editor’s attention, and he advocated more practical instruction for the agricultural part of the population than was afforded by the colleges and academies of the time.

Cloud opposed secession, but served as a surgeon in the Confederate army (Records Division, Adjutant General’s Office, Washington, D. C.). In 1868 he was elected superintendent of public instruction in Alabama under the carpet-bag government. In this capacity, he became his duty to establish a system of free schools for the state, including schools for the negroes. It is not surprising that Cloud was the object of much local hostility, for the carpet-bag administration was thoroughly honeycombed with corruption. That his work was not on a higher level than that of his associates is shown by the fact that the judiciary committee of the carpet-bag Senate accused him of malfeasance in office (Alabama Senate Journal, 1869–70, p. 419). Failing of re-election in 1870, he passed from the public view, and died at Montgomery in 1875, unnoticed by the community in which he had spent the active years of his life.

[Cloud’s political activities in the Reconstruction period have caused him to be neglected by local historians, and no previous biographical notice of his life has appeared. The principal sources for this sketch are the files of the Am. Cotton Planter (1853–61), Walter L. Fleming’s Civil War and Reconstruction in Ala. (1905), and the Cloud family Bible in the possession of Mr. S. R. Cloud of Montgomery.] T. P. A.

Clough

Clough, John Everett (July 16, 1836–Nov. 24, 1910), Baptist missionary, was born near Frewsburg, Chautauqua County, N. Y. His father, Cyrus Clough, was of Welsh descent, and his mother, Mariah Sturgeon, Scotch-English. They were both pioneers by disposition, and in 1844 the family moved westward and settled for two or three years in Winnebago County, Ill., where they suffered hardship and poverty. Moving on to Strawberry Point, a claim staked by them in Iowa, they found better fortune. There John acquired a little schooling and a taste for more. From 1853 to 1857 he worked with a party of surveyors in Minnesota and Dakota and saved money for further education. In the fall of 1857 he entered the Burlington (Iowa) Institute, but owing to the loss of his savings in the financial crisis of that winter, he was soon “working his way.” An interest in religion developed in him and he joined the Baptist Church in February 1858. The Civil War interrupted the work of the Institute. Clough was not drafted, however, nor did he wish to enlist. On Aug. 15, 1861 he married Harriet Sunderland, with nothing very definite in mind as to a career. His family persuaded him to finish his college course at the newly founded Upper Iowa University. Entering the senior class there in the fall of 1861, he graduated the following June with the B.A. degree. For a year he taught at Colesburg, Iowa, public school, and then took up the work of colporteurage with definitely religious service in mind. In quest of theological training he attended a “Ministers’ Institute” in Chicago, and while there offered himself for foreign missionary work. He was accepted and assigned to the Telugu Mission, India. After ordination on Nov. 20, 1864 in Burlington, Iowa, he started at once with his wife for the East, sailing from Boston Nov. 30 on the James Guthrie, and arriving at Nellore, Madras Presidency, Apr. 22, 1865.

At Nellore, Clough began at once the study of the vernacular and early set about the writing of tracts, such as Where are You Going? and Messages for All. In the midst of this work there came to Nellore a letter from one Yerraguntla Periah, a Madiga leather-worker, of a
Clough

village near Ongole, asking for Christian teaching. It was decided that the Cloughs should accept the invitation. Thus was his own life-work determined as a missionary among the outcasts, and a large body of converts made possible for the Mission. On Sept. 17, 1866 Mr. and Mrs. Clough arrived to take up residence in Ongole. Within a month he organized a Baptist church and began to receive numerous members into it. A "mass movement" was soon under way. The converts came at first by tens, then, in 1869, by hundreds, and after that by thousands. The terrible famine of 1876–78 spread its distress over the Telugu area, affecting the lower classes most of all, but Clough was able to enrol his Madigas in Government famine-relief projects. During this period he deemed it wise to refuse baptism to many thousands who sought admission to the Church. In June 1878, however, he began again to exercise the rite, and within six weeks 9,000 converts were baptized. At the close of the year the total membership of the Ongole Church was nearly 13,000, representing some four hundred villages, and in 1883 there were 21,000 members over a field so large that division became necessary.

Clough's service in India was interrupted by several furloughs in America. In 1873 he raised $50,000 for the founding of a Telugu theological institution; in 1883 he secured $10,000 to build the Ongole mission high school, and $15,000 for mission houses in Ongole and Madras; and in 1890 he raised $50,000 for sending out new missionaries to new stations, and $50,000 to establish Ongole College. His first wife died in 1893, leaving two sons and three daughters, and in 1894 he married Emma Rauschenbusch, of the Mission. Until 1902 he continued active missionary service but during 1901 and 1902 he suffered painful accidents which led to the curtailment of his work and a visit to America. In 1905 he was forced to retire from India altogether. He died in Rochester, N. Y., and was buried in Newton Center, Mass.

[Clough's autobiography entitled Social Christianity in the Orient (1914), ed. by his second wife; Emma R. Clough, John E. Clough (1902); C. C. Creegan, Pioneer Missionaries of the Ch. (1903); H. C. Mahie, in Missionary Rev. of the World, Feb. 1911.] J. C. A.

Clough, William Pitt (Mar. 20, 1845–Aug. 17, 1916), lawyer, railroad executive, was descended from John Clough of Watertown, Mass., who came from England in the ship Elizabeth in 1635. He was born at Freetown, Cortland County, N. Y., the son of William Parks Clough and Sabrina (Vunk) Clough, a member of an old Dutch family. In 1848 the family moved to Erie County, Pa., where his early education was received. He later entered the Northwestern State Normal School at Edinboro, Pa., taking a classical course, and graduating in 1862. He then became a school-teacher, reading law at intervals, following which he went to Oil Creek, Venango County, Pa., in 1865 and spent two years in that region. He was married on May 19, 1867 to Dacia Althea Green of Erie County, Pa. In June of the same year he removed to Minnesota, settling at Rochester, where he entered a law office. Admitted to the bar of Olmstead County, Minn., July 3, 1868, he practised in Rochester till June 1872, when he moved to St. Paul, and, in association with John M. Gillman, acquired an influential legal connection. In 1873 he was an unsuccessful Democratic candidate for the office of state attorney-general, but the nomination was made in his absence and without his acquiescence. In 1880 he became western counsel for the Northern Pacific Railway. In this position his outstanding ability attracted the attention of James J. Hill [q.v.], then president of the St. Paul, Minneapolis & Manitoba Railway, who induced him to join the executive of the latter as assistant to the president, June 1, 1887. From that time he continued a close associate with Hill in all his enterprises, and was one of his most trusted legal advisers. He became second vice-president Jan. 1, 1888, remaining with the company until its absorption early in 1890 by the Great Northern Railway Company, of which he was then elected vice-president. For some years Hill and J. Pierpoint Morgan were considering means whereby the Great Northern, Northern Pacific, and Chicago, Burlington & Quincy railroads might be brought under a unified control. Finally with that object in view the Northern Securities Company was formed in November 1901, and Clough, who had taken a leading part in the formulation and working out of the plans, became its fourth vice-president and general counsel, with headquarters in New York City. On the dissolution of the Northern Securities Company he continued in New York City as Hill's personal representative, and, when the latter resigned the vice-presidency of the Northern Pacific Railway in July 1912, was elected to that office, becoming two years later chairman of the board of directors. Of a retiring disposition, he avoided publicity, and in later life was little known outside his immediate circle of business associates.

233
CLYMAN, JAMES (Feb. 1, 1792–Dec. 27, 1881), trapper, pioneer settler, and chronicler, was born in Fauquier County, Va. He grew up a farm 'boy, acquiring little education but becoming an adept in woodcraft and marksmanship. About 1806 the family moved to Pennsylvania and then to Stark County, Ohio. Young Clyman served as a mounted ranger throughout the Indian campaigns of the War of 1812, returning to farm work at its close. In 1818 he left home, drifting westward and working at various occupations. Early in 1823 he went to St. Louis, where, as a clerk, he joined Ashley's second expedition to ascend the Missouri. He was in the battle with the Arikaras, June 2, when barely escaped with his life, and also in the second battle, Aug. 11. In September he left the Missouri with the Smith-Fitzpatrick party that reached Green River in February or March 1824—probably the first whites to traverse South Pass and certainly the first to traverse it from the east. Returning by the pass, and becoming separated from his companions on the Sweetwater, he walked the 600 miles through a hostile and unknown region back to the Missouri, arriving at Fort Atkinson in September. Here he seems to have met Ashley's first overland expedition, with which he again went to the mountains. He was one of the four men who in the early spring of 1826 circumnavigated Great Salt Lake.

In October 1827 he returned to St. Louis. With the proceeds from the sale of his furs he bought a farm near Danville, Ill., and with a partner started one of the first stores in the town. He was a soldier in the Black Hawk War of 1832, for a time with Abraham Lincoln in Jacob Earley's company, and continued in the service until 1834. His roving disposition led him next to the Wisconsin frontier, where he acquired his title of colonel at the hands of Gen. Henry Dodge and where he was severely wounded in an encounter with an Indian. He returned to the Milwaukee settlements alternately claimed him until after the winter of 1842-43, when he started on a horseback trip for his health. At Independence, Mo., in the spring of 1844, he decided to try the West again and accordingly set out with one of the emigrant trains. Arriving at the Willamette in October, he remained in Oregon for a time, but in the following year went to California. In the spring of 1846, learning of Frémont's difficult position, he offered to raise for the Pathfinder a company of mounted men, but on the decline of the offer started east with a party of disappointed emigrants.

Clyman

Arriving at Independence in July, he spent the next eighteen months in visiting friends. But in 1848 he again headed west, this time as guide to an emigrant party which included the Mecon family. Arriving in California in September, the Mecon family settled at the town of Napa, and Clyman remained with them. On Aug. 22, 1849, in the first marriage performed in the town, he was united to Hannah Mecon, thirty years his junior. His thirty-seven years of roving, trapping, and fighting were done. In 1850 he acquired the land on which he established his own ranch, and his subsequent life was uneventful. He died at his Napa home.

Clyman was more than six feet tall, raw-boned and angular, with stooping shoulders and a long, narrow head. His hair was dark brown, his complexion ruddy, and his eyes were small, dark blue, and piercing. In manner he was dignified and courteous, and his disposition was exceptionally generous and helpful. Except at the hands of H. H. Bancroft he had received little attention from historians until Mr. C. L. Camp assembled and annotated his manuscripts, which have proved one of the richest sources of early Western history.

W. J. G—t.

CLYMER, GEORGE (Mar. 16, 1739–Jan. 24, 1813), signer of the Declaration of Independence and of the Constitution, was a prosperous and well-connected Philadelphia merchant of indefatigable energy in the service of his state and nation in the early formative period. Descended from a Bristol, England, immigrant grandfather (Richard Clymer) and father (Christopher Clymer) and a Philadelphia mother (Deborah Fitzwater Clymer), he lost both parents in 1740, and came under the guardianship and educational direction of an uncle, William Coleman, a friend of Franklin and prosperous merchant. Living in Coleman's house with access to his large library, he acquired an early taste for reading. He began a business career first as clerk, then partner, then successor and legatee of his uncle's business. After association with Robert Ritchie, he was later taken into partnership by Reese Meredith and his son, establishing the firm of Merediths & Clymer, and continuing as partner, after the death of the elder Meredith, until 1782. He had married Reese Meredith's daughter Elizabeth in 1765, and at the Meredith home had become acquainted with the young George Washington who was a frequent visitor there. A contact was thus established that
Clymer lasted through the Revolution and Clymer’s subsequent career in public service. An early and ardent patriot, Clymer attended all revolutionary meetings, becoming captain of volunteers in Gen. Cadwalader’s brigade, and, as chairman of a committee of the “Philadelphia Tea Party” (1773), forcing the resignation of the merchants appointed by the British to sell the tea. He became a member of the Pennsylvania Council of Safety, was one of the two first continental treasurers (July 29, 1775-Aug. 6, 1776), and then entered Congress as a Pennsylvania delegate. He supported the continental loan, was one of the first subscribers and solicitors for it, exchanged all his specie for continental currency, and paid a special visit to Boston to gain further revolutionary information and inspiration. Appointed with Rush, Wilson, Ross, and Taylor (July 20, 1776) to replace Pennsylvania delegates who refused to sign the Declaration of Independence, Clymer, though not present when it was adopted, realized “his dearest wish” when he signed the document, for he had been among the first to advocate complete independence from Britain. His valuable business acumen was utilized on varied special and standing committees in both the Continental and the first United States congresses. Commissioned (Sept. 26, 1776) with Stockton to inspect the Northern Army at Ticonderoga he advocated expansion of Washington’s powers. Left with Robert Morris and George Walton as a committee for congressional business in Philadelphia when the advance of the British drove the government to Baltimore (December 1776), he worked so incessantly that if he visited his family, twenty-five miles distant in Chester County, it was only for a night and he was back at his desk the next morning. After his reelection to Congress (Mar. 12, 1777), his service on the boards of war and of the treasury and on the committee to protect Philadelphia was so strenuous that after three months he was obliged, temporarily, to retire. He was again on duty with Livingston and Gerry as a commissioner to investigate and remedy the difficulties in Washington’s commissariat (July 11, 1777), and he continued to serve in Congress until after Sept. 14, 1777, although then not reelected. As commissioner of prisoners he received the Hessian captives and sent to Allentown those able to travel. The British after their victory at Brandywine ransacked his house, on a detour from their march to Philadelphia, for the purpose of terrorizing his family and destroying his furniture and store of liquors. The expedition organized by Congress to reduce Detroit and prevent an Indian war was the result of a report made by Clymer and two fellow commissioners sent, Dec. 11, 1777, to Fort Pitt to investigate disturbances inspired by the British. From Nov. 24, 1780 to Nov. 12, 1782 he was for the third time in Congress, laboring almost continuously as chairman or member of special or standing committees, such as those of commerce or finance. Called from a brief retirement at Princeton, whither he had gone to educate his children, as a legislator of Pennsylvania he wrote the report for mitigating the penal code, lessening capital crimes, and restricting public employment of convicts. He was one of the petitioners for a bicameral legislature and a supporter of the old constitution of the Confederation. As a Pennsylvania delegate to the Federal Convention he spoke little but to the point, served upon important financial committees, and signed the Constitution. He carried his rigid republicanism into the first United States Congress (November 1788), supporting Washington, but favoring liberal naturalization, and a pro-French and Jeffersonian economic policy. Declining reelection, he fulfilled two successive commissions to which Washington appointed him and retired from public life July 31, 1796, after an almost unbroken service of over twenty years, and preferment which he had never solicited. Subsequently he promoted community interests as first president respectively of the Philadelphia Bank and of the Academy of Fine Arts, and in 1805 as vice-president of the Philadelphia Agricultural Society, retaining these offices till his death in 1813. Diffident, retiring, no orator, speaking seldom and briefly but with deep reasoning, he never sought nor bought office, and “was never heard to speak ill of any one.”

J. C. B.

Clymer, George E. (1754–Aug. 27, 1834), inventor, was born on his father’s farm in Bucks County, Pa., of a Swiss family which had emigrated from Geneva early in the eighteenth century. He attended the district schools and at the same time assisted with the farm work
in which he showed a particular skill in the maintenance of the mechanical equipment. When sixteen years old he took up carpentry and joining, and within a short time devised a unique plow especially adapted to the local soils. He continued at his chosen trade in his home neighborhood for at least twenty-five years, during which time he applied his ingenuity and inventive skill in numerous ways. About 1800 he moved to Philadelphia and became much interested in the erection of the first permanent bridge across the Schuylkill River, particularly in the construction of the piers. To clear the coffer-dams he devised a pump superior to any then available. It had a capacity of 500 gallons of water per minute and was capable of transporting sand, gravel, and stone. For this he received a United States patent Dec. 22, 1801, and later obtained a British patent. He then turned his attention to the improvement of the printing-press, particularly the iron hand-press devised by the Earl of Stanhope. After sixteen years of concentrated effort he introduced his improved press, which he called the “Columbian,” and which exhibited the greatest amount of improvement ever attained in any one instance in hand-printing machines. It was also the first real American invention in printing. Its elbowed pulling bar and diagonal connecting rod which changed a horizontal movement into a perpendicular one, combined with its main lever, applying its force directly to the form, commanded it to all pressmen as it required considerably less strength and effort on their part to obtain perfect work. Another unusual feature of Clymer’s press and one that made it always recognized was its ornamentation, all of cast-iron—a Hermes on each pillar, alligators and other reptiles on the levers, and, surmounting the whole, an American spread eagle. The eagle, however, was more than an ornament for it acted as a counterweight to lift the platen after printing. Much as the press was desired by American printers they were too poor at this early date to pay the price ($400), so Clymer took it to England in 1817 where it was immediately taken up by experienced printers and was in great favor for many years. For this invention Clymer received from the King of the Netherlands a gold medal valued at one hundred golden ducats and a present from the Czar of Russia following the introduction of the Columbian press in that country. Somewhat later, a few of the presses were used in the United States. For business reasons, presumably, Clymer spent most of his time after 1818 in Europe, particularly England, and died in London in his eightieth year. He was married to Margaret Backhouse, daughter of Judge Backhouse of the Durham Iron Works in Pennsylvania and was survived by three daughters.

C.W.M.

COALTER, JOHN. [See Colter, John, c. 1775-1813.]

COAN, TITUS (Feb. 1, 1801-Dec. 1, 1882), missionary to Hawaii, was the youngest child of Gaylord Coan, a farmer of Killingworth, Conn., and of Tamza (Nettleton) Coan, an aunt of Asahel Nettleton [q.v.], a distinguished evangelical preacher. From the age of four until twelve he attended district school, and was later among the pupils of the local pastor, the Rev. Asa King. In time he went to the academy at East Guilford (now Madison), Conn. After graduation from the academy and until the spring of 1826 he taught school in his own and neighboring towns. He then went to western New York and took charge of the school at Riga, where on Mar. 2, 1828, he was received into the fellowship of the Presbyterian Church, then under the pastoral care of his oldest brother, George. Coming under the influence of the evangelist Charles G. Finney [q.v.], he decided upon the ministry as his life-work and entered, in June 1831, the middle class of Auburn Theological Seminary. On Apr. 17, 1833 he was licensed by the Cayuga County Presbytery as a minister of the Gospel. On Aug. 4 he was ordained as a missionary of the American Board and was dispatched on an expedition to Patagonia, sailing Aug. 16, 1833. He returned on May 7, 1834 and reported the futility of missionary endeavor there. He was married on Nov. 3 to Fidelia Church, and on Dec. 5 he and his wife sailed from Boston on the ship Hellespont for service in the Sandwich Islands. They landed at Honolulu on June 6, 1835, and were entertained at the home of the Rev. Hiram Bingham [q.v.]. During the meeting of the Hawaiian mission which was then in session at Honolulu the Coans were assigned to Hilo on the east coast of the island of Hawaii. Thither they proceeded at once.

Coan's work in Hilo and in Puna, the district contiguous on the south, was mainly evangelistic and pastoral. He was soon master of the new language and able to give himself to preaching. On Nov. 29, 1836 he set off on his first tour of the island. His thirty-day trip kindled a move-
Lyrics

The

ment similar in many ways to the work of Net-
tleton and Finney in America. Succeeding tours added impetus. Shortly the natives began flock-
ing into Hilo, and throughout the island a great revival took hold. At Hilo in particular the situa-
tion took on in 1837–38 the character of a huge camp meeting with daily services, prayer meet-
ings, classes, and the like. Coan himself reports "men praying, confessing, and breaking off their sins by righteousness . . . thieves brought back what they had stolen . . . quarrels were reon-
ciled . . . The lazy became industrious. Drunk-
ards stopped drinking . . . Adulteries ceased, and
murderers confessed." The largest number of converst was gathered in during 1838–39. All
told, from April to April, 5,244 were admitted
to baptism. Reckoning up to 1880, however, the net total for the Hilo Church was only some 1,200, for dismissals, death, and a general re-
action took a heavy toll. Coan seemed to some of his colleagues to exercise less caution than
circumstances required in the reception of new
members. He was among the first to advocate
a native mission to the Marquesas Islands, and
as a delegate of the Hawaiian Missionary Society
made two voyages thither (1860, 1867). He took
an interest also in the natural phenomena about
him. His observations recorded in his Adven-
tures in Patagonia (1880) and Life in Hawaii
(1882) were written in a "lucid, direct, and vir-
ile" style, somewhat in contrast with his frequent-
ly conventional and exclamatory treatment of re-
ligious subjects (W. F. Blackman, The Making
of Hawaii, 1899, p. 80). He returned but once to
America, and then (1870) in the interest of his
wife's health. She died in 1872 on their return to
Hilo, and in 1873 he married Lydia, the young-
est daughter of the elder Hiram Bingham. Nine
years later he died, smitten with paralysis toward
the close of his eighty-second year.

[R. Anderson, Sandwich Islands Mission (1870);
Lydia Bingham Coan, Titus Coan (1884).] J.C.A.

COATES, FLORENCE EARLE (July 1,
1850–April 6, 1927), poet, was born in Phila-
delphia, the daughter of George H. and Ellen Fran-
ces (Van Leer) Earle. Her father, a noted law-
ner, was the son of Thomas Earle, a philanthro-
pist descended from a Rhode Island family dating
from the migration of Ralph Earle in 1634. Flo-
rence was educated at private schools in New
England and at the Convent of the Sacred Heart
in Paris. For over a year she studied music in
Brussels with the tenor Dupré, intending to de-
vote herself to music and art. In 1872 she was
married to William Nicholson, who died in 1877.
Her interest in poetry began several years after
her marriage on Jan. 7, 1879, to Edward Horner
Coates (1846–1921), financier and publicist, who
from 1890 to 1906 was president of the Pennsyl-
vania Academy of the Fine Arts. They both took
an active interest in local literary affairs, enter-
tained Matthew Arnold at their Germantown
home, and were among the founders of the Con-
temporary Club (1886). Mrs. Coates was presi-
dent of the Browning Society of Philadelphia
from 1895 to 1903, and again in 1907–08. Eager
to promote Anglo-American friendship, she par-
ticipated in the activities of the Transatlantic
Society of America, the Society of Mayflower
Descendants, and the Colonial Dames of Amer-

ica. She wrote an Ode on the Coronation of King
George V (1911). In 1915 she was elected poet
laureate of Pennsylvania by the state Federation
of Women's Clubs. For many years she contrib-
uted short poems to leading American magazines
and, to the London Athenaeum. Her only prose
works of interest were two essays on Matthew
Arnold, one appearing in the Century Magazine
for April 1894, the other in Lippincott's Maga-

azine for December 1909. The poems appeared
in collected editions in 1898 and (two volumes) in
1916, many early poems being omitted from the
latter edition. Other volumes of verse were:
Mine and Thine (1904); Lyrics of Life (1909);
The Unconquered Air and Other Poems (1912);
and Pro Patria (1917). Some of her best poetry
is found in the fine nature poems inspired by her
Adirondack summer home, "Elsinore," at St.
Regis Lake, and among the patriotic poems writ-
ten during the Great War. Her work was essen-
tially lyrical in quality. She took her literary
life rather seriously. "The business of art," she
held, "is to enlarge and correct the heart and to
lift our ideals out of the ugly and the mean
through love of the ideal . . . The business of
art is to appeal to the soul" (New York Times,
Magazine Section, Dec. 10, 1916). With her
finished workmanship and careful technique,
there was also an element of restraint, charac-
teristic of a lyric talent that develops relatively
late in life. Her occasional poems were usually
most felicitous and justified her state laureate-
ship, but her appeal was to the understanding
minority. In other days Mrs. Coates, with her
distinctive social standing, her keenness of mind,
her sense of humor, and her stately suavity of
manner, would have presided as a grande dame
over a literary salon. Her portrait by Violet
Oakley, entitled "The Tragic Muse," won the
gold medal of honor at the San Francisco Exposi-
tion. During her later years, Mrs. Coates en-
tertained Mrs. Humphry Ward and other noted
visitors at her town home on Spruce St., Phila-

237
Coates

Coates

Philadelphia. She died in Philadelphia in her seventy-seventh year.

J. L. H.

COATES, GEORGE HENRY (June 23, 1849—Oct. 18, 1921), inventor, manufacturer, was born in Windsor, Vt., the only son of Henry Moss and Orra Natalia (Cone) Coates. After attending the local public schools and Windsor Academy, during which time he developed a marked mechanical bent (his father being the village blacksmith), Coates left home at the age of eighteen to secure a better education and experience in the mechanical arts. He went to Worcester, Mass., found employment with the Ethan Allen Firearms Company, and because of his aptitude quickly rose to the position of shop foreman. From the very beginning, too, of his residence in Worcester he attended night school at Worcester Polytechnic Institute, studying machine design and mechanical drawing. His ability in the latter is evidenced by the fact that he won several prizes for his drawings at public exhibitions in Boston, receiving on one occasion the highest award for a colored drawing of a Corliss engine. Upon completing eight years' service with the Ethan Allen company, Coates resigned about 1875 and went into business for himself as an expert machinist. One of his first jobs was that of repairing hair-clippers then imported from England and France, and so skilful was his work that his fame spread, his jobs multiplied, and he made clipper-repairing his specialty. Coates soon saw that there were opportunities for making improvements on the imported clipper and from the extent of his repair business realized that a market existed for such a product. He had some slight experience in invention and in securing patents in that in 1874 he was a co-patentee of a fire kindler. Accordingly in 1876 he devised and received his first patent for an adjustable hair-clipper, which was so much better than the imported variety that one of his New York repair customers immediately ordered five hundred. This marked the beginning of Coates's clipper business which he immediately established in Worcester and which under his direct administration developed from a basement shop to a modern manufacturing plant of well over an acre of floor space and with established markets all over the world. In addition to managing the plant Coates continued active in experimental and inventive work. Between 1880 and 1905 he obtained eight patents for clipper improvements. He devised an animal hair shears in 1885 and a fingernail cutter in 1886, but his most important invention was that of a flexible shaft. This he patented in 1892, but he made numerous improvements on it in the succeeding years. The device made it possible to transmit power to a machine tool to do work in difficult places such as drilling holes under water or grinding the inside of a complicated steel casting. Through Coates's several improvements of his flexible shaft as much as 150 horse-power have been transmitted, while shifting to transmit power to clippers as well as to delicate dental machinery became available also. The last patent, issued to him in 1920, when he was seventy-one years old, was an improvement on this device. He also perfected and patented a number of unique tools all of which found a waiting market. Amongst these were a breast drill, drill press, mechanical hammer, and screw-driver. The latter is power-driven at high speed through a flexible shaft and is used by chair builders and others having to insert large numbers of screws. Coates was much interested in civic matters in Worcester and served for five years on the board of aldermen, one year as president. He married Adelaide Long of Biddeford, Me., on June 23, 1872, who with a son survived him.

C. M.

COATES, SAMUEL (Aug. 24, 1748—June 4, 1830), merchant, philanthropist, was more successful as a citizen than as a merchant. He was born in Philadelphia of an old Quaker family descended from Thomas Coates who emigrated from England probably after the year 1680. His father, also Samuel Coates, died when Samuel, Jr., was nine weeks old, and his mother, Mary Langdale Coates, allowed his uncle, John Reynell, to adopt him. He was given a good classical and business education and at nineteen was put in charge of a small commercial business which he handled so well that at the end of three years it was terminated so that he might enter into partnership with his uncle as a member of the firm of Reynell & Coates. His first wife, Lydia Saunders, whom he had married in 1775, died in 1789; and in 1791 he married Amy Hornor.

After the withdrawal of his uncle from active business life, Samuel Coates formed a partnership with his brother, Josiah Langdale Coates; but the brother withdrew to establish himself as a grocer, and after 1785 Samuel Coates was in business for himself. He prospered, but after he became interested in philanthropic enterprises
Cobb

he neglected his business and it dwindled away. When he finally paid all his debts and gave up his business he had but a small competence instead of a fortune.

One of his chief interests was the Pennsylvania Hospital. He was elected a member in 1785 and president of the board of directors in 1812. He gave forty-one years of unremitting attention to the affairs of this hospital and during the fearful yellow-fever epidemic of 1793 was one of the few citizens of means who remained in the city to gather together the forces with which to combat the scourge. His portrait, by Sully, is still in the possession of this institution. For a period almost as long, 1786–1823, he gave his services to the body entitled “The Overseers of the Public Schools, founded by charter in the town and county of Philadelphia,” which was the ruling authority managing what were called “the Quaker Schools.” In 1800 he was elected a director of the first Bank of the United States and was still a director at the time its affairs were wound up in 1812. He was under the average size, but of an athletic figure, with a large chest and head, and heavy hair. He was cheerful and sociable, genial and entertaining, fond of children, who were also fond of him. His death occurred in the house at the corner of Walnut and South Front Sts., which had been his place of business since 1791.

[Mary Costes, Family Memorials and Recollections (1885); Stephen N. Winslow, Biogs. of Phila. Merchants (1864); Henry Simpson, Lives of Eminent Philadelphians (1859).]

E.Y.

Cobb, Andrew Jackson (Apr. 12, 1857–Mar. 27, 1925), jurist and teacher of law, was born at Athens, Ga., at a time when his father, Howell Cobb [q.v.], was a member of the cabinet of President Buchanan. His mother, Mary Ann Lamar, was a cultured member of a distinguished family. In his youth Andrew acquired a taste for study and graduated from the University of Georgia with honors (Phi Beta Kappa) at nineteen; within the following year he completed the law course of the same institution and, soon after, began the practise of law in Athens. On Mar. 3, 1880, he was married to Stark Campbell, a daughter of Col. Jesse Campbell of Griffin, Ga. She died in 1901.

At twenty-seven Cobb became a professor of law at the University of Georgia where he remained until 1893, when he moved to Atlanta to practise law and also to become dean of the Atlanta Law School. At thirty-nine he was made an associate justice of the supreme court of Georgia, and almost at once became conspicuous for the lucidity of his opinions. He was especially capable in clarifying adjective law and did much to simplify and systematize the rules of pleading and practise. His decisions have been cited and followed more often, within a similar period of time, than those of any other Georgia jurist. Outside of his state he is perhaps best known for his opinion in the case of Pavesich vs. New Eng. Life Insurance Company (122 Ga. 190), which established for the first time in America the principle that an individual has “a right of privacy” for the invasion of which he may recover damages without proof of any special loss.

After serving twelve years upon the supreme bench Cobb returned to Athens and resumed the practise of law. In 1917, however, he again accepted judicial appointment, this time as judge of the superior courts for the western circuit of Georgia. His judicial temperament, ripe experience, and great learning were ideal qualities for a trial judge, and he served with distinction, but the western circuit then was the most populous in the state and the task proved too great a burden for his waning strength, so he resigned in January 1921 and resumed his work as a teacher of law at his alma mater.

He was a slender man of medium height and with classical features. His manners were gentle, his nature tranquil, but at times he could become aroused to impetuous action. During the World War, when opposition appeared in Georgia to the selective service act and other administrative measures, he vigorously denounced all who opposed the policies of President Wilson and contributed no little to the defeat of a Georgia senator who had allied himself with the “irreconcilables” in the Senate. It is perhaps not too much to say that his words carried more weight with the people during the critical years 1917 and 1918 than those of any other person in Georgia. He died suddenly in his sixty-ninth year.

[Memorial to Judge Cobb, 162 Ga. 843; Atlanta Constitution, Mar. 28, 1925; private information. Cobb's opinions are to be found in 100–128 Ga. Reports.]

B.F.

Cobb, David (Sept. 14, 1748–Apr. 17, 1830), Revolutionary officer, judge, politician, was born at Attleborough, Mass. His parents were Thomas and Lydia (Leonard) Cobb. Graduating at Harvard in 1766, he studied medicine in Boston, and practised his profession at Taunton. In the opening scenes of the Revolution, he was secretary of the Bristol County convention, member of the General Court, and of the provincial congress. Serving for a while as surgeon of a Massachusetts regiment, he became, Jan. 12, 1777, lieutenant-colonel of Henry Jackson's regiment
Cobb

(later the 16th Massachusetts); he was promoted to be colonel, was appointed to the 5th Massachusetts, Jan. 7, 1783, and was made brevet brigadier-general, Sept. 30, 1783. He took part in the battles of Monmouth, Quaker Hill, and Springfield, and during the last two years of the war he was one of Washington's aides. In this capacity he had the honor of going to meet Rochambeau with letters from the Commander-in-Chief in June 1781, and of treating with Sir Guy Carleton in regard to the evacuation of New York in 1783. His active service ended in November of that year, though he was made major-general of militia in 1786. After the war he held a number of public offices. During his term as judge of the court of common pleas in Bristol County, 1784-96, Shays's Rebellion broke out. Attacks on court-houses were made by mobs, in Taunton as in other towns, and Cobb's attitude was pronounced. It is reported that he said, "I will hold this court if I hold it in blood; I will sit as a judge, or I will die as a general"; and again, drawing a line as he placed a field-piece in front of the court-house, he said, "If you want these papers you must come and take them, but I will fire on the first man that crosses the line" (quoted in Proceedings of the Massachusetts Senate, post). Cobb was speaker of the Massachusetts House of Representatives, 1789-93, and a Federalist member of Congress, 1793-95. Removing to Maine (then a part of Massachusetts), he settled as a farmer in Gouldsboro, and promoted the opening of lands for colonists from Massachusetts. He continued to be active in politics; president of the state Senate, 1802-05; member of the council; lieutenant-governor 1809; and member of the Board of Military Defence in 1812. His last judicial office was that of chief justice of Hancock County. He died at Boston in 1830.

E. K. A.

COBB, ELIJAH (July 4, 1768–Nov. 2, 1848), sea captain, took an active part in the events which made American commerce at once exciting and lucrative during the first three decades after the Revolution. He was born on Cape Cod in the part of Harwich which later became Brewster, Mass., the son of Capt. Scottow and Mary Freeman Cobb. His father died at sea in 1774, leaving his mother nearly destitute with six small children. In 1783, Elijah packed his wardrobe in a gin case and set out for Boston, where he signed as cook and cabin boy on a ship to Surinam. He continued at sea and by 1794 he was captain of a ship bound for Cadiz. After dodging the Algerine pirates, he was captured by a French ship and taken into Brest. With his characteristic determination and acumen, he hurried to Paris and secured the release of the ship from Robespierre, whom he later saw guillotined. He returned to France again with a cargo of grain and then engaged in rum-running off the Irish coast, dropping hogheads of rum into the Cove of Cork and hoisting aboard a bag of guineas in return. Loading at Malaga, in 1808, he first heard of the Orders in Council and his ship was held up by the British at Gibraltar, but he escaped by bribing an official. In 1812 he arrived at Norfolk, Va., to learn that the Embargo was to go into effect in thirty-six hours. Hastily unloading his ship in a storm, he rushed aboard a cargo of flour and secured a last-minute clearance from the collector of customs who vainly pursued him into Hampton Roads on the hour when the act went into effect. The flour sold at Cadiz at a very high price. On a return voyage he received his first news of the War of 1812 off Newfoundland, when his ship was seized by the British and he was carried into St. John's, later being released on a cartel. After this he remained ashore at Brewster until the end of the war, when he resumed trade with Europe and then made two trips to the African coast in 1818 and 1819. His cargo seems to have been oil and ivory, with no trace of rum or slaves. In 1820, he retired from the sea and settled at Brewster where he became one of the leaders of the community, serving as town clerk, state representative and senator and inspector-general, with the rank of brigadier-general. He was a devoted Universalist. His memoirs bear the laconic entry that in 1793 he "went to the Cape & got married," but the records give no further details of his wife than that her name was Mary and that she bore him four children. A pastel drawn in France in 1794 tallies with the description of Cobb's "tall, straight fine figure." He was credited with sturdy integrity in addition to the unusual shrewdness and determination which he showed.

[The principal source for Cobb's life is his interesting, matter-of-fact autobiography to 1812, edited with a foreword by Ralph D. Paine under the title Elijah Cobb, 1768-1838, a Cape Cod Skipper (1925). The book includes a sketch of the remainder of his life, written by his grandson, and numerous original letters. The pastel portrait serves as a frontispiece and also appears in J. Henry Sears, Brewer Ship Masters (1906), with abridged extracts from the autobiography, pp. 10-20. Genealogical details will be found in Vital Records Brewster, Mass. (1904), pp. 25, 87, 236, and in Mayflower Descendant, Jan., 1910, p. 156, Apr. 1911, p. 98.]

R. G. A.—n.
COBB, FRANK IRVING (Aug. 6, 1869–Dec. 21, 1923), newspaper editor, was the son of Minor H. Cobb and his wife Mathilda, who left a farm in New York State to settle in Shawnee County, Kansas, the birthplace of their son, Frank. Unable to make the new farm pay because of a plague of grasshoppers, the Cobb family moved to a new settlement in the wilds of Michigan where the son grew up amid the rough men of a lumber camp. His education came from rural schools—supplemented by a course at the Michigan State Normal. Pedagogue for a term or two at Martin, Mich., he sought and secured a position as school superintendent. Under twenty-one when he presented himself, he was greeted with, “We expected a man of at least thirty.” His reply was, “If I were thirty I wouldn’t work for you at fifteen hundred a year.” With these words he turned on his heel, walked out, and accepted a position as reporter on the Grand Rapids Herald at a salary of six dollars a week—later becoming a political correspondent and finally city editor. After working on a rival newspaper, the Grand Rapids Daily Eagle, he went to the Evening News of Detroit where his first job was that of political correspondent. At twenty-seven an editorial writer, he was scarcely past thirty when appointed its chief editorial writer—a position held for four years. His editorials were so terse that they attracted the attention of Joseph Pulitzer of the New York World, who, suffering from an affliction of the eyes, was seeking some one to take charge of the editorial department. Coming to New York in 1904, Cobb became the confidential adviser to Pulitzer, who soon put him in control of the editorial page, though the title of editor-in-chief was not his until after Pulitzer’s death (Oct. 29, 1911). The World, being a fighting organ or campaign sheet, was exposing corruption in the insurance world as well as in municipal affairs. Into these conflicts Cobb thrust his pen with telling effect—often at the risk of libel suits. The Democratic convention at Baltimore in 1912 found Cobb fighting against odds, local and national, to make Woodrow Wilson the Democratic nominee for president. Editorials printed in the World at this time made Wilson a life-long friend. About eight years later (Mar. 4, 1920), Cobb broke his office rules of short editorials to print “Woodrow Wilson—An Interpretation.” The editorial, which later appeared in pamphlet form, was considered by many Democratic leaders an exceptionally able pen portrait of the war president. This pamphlet and editorials in the World were about all that came from Cobb’s pen except two magazine articles. To the Atlantic Monthly for November 1921 he contributed an article dealing with the military expenditures still made though the Great War had ended, and in Harper’s Magazine for June 1923 he printed an article which showed that the self-governing nations, emerging from the World War, were rejecting congressional government in favor of parliamentary government. Offered a cabinet position by President Wilson, he declined it but did go with Colonel House to report the situation overseas. Asked by his wife whether the cabinet offer had not tempted him, he replied, “That kind of power is merely temporary anyhow and I have as much as I want on the World.” He declined many honorary positions which were offered to him. He was, however, a Chevalier of the French Legion of Honor and the Belgian Order of Leopold, but never displayed their ribbons on the lapel of his coat. Interested in promoting higher journalistic standards, he was active in the American Society of Newspaper Editors of which he was a director and the first vice-president. To his editorial room, always open, came great political leaders but his most cordial welcome was saved for the ordinary man of the street. To put the latter at ease he wore a shabby office coat. He was married first in 1897 to Delia S. Bailey, and second, on Oct. 2, 1913, to the well-known newspaper woman, Margaret Hubbard Ayer. Living and working in New York City, his heart was always at the little farm which he owned near Westport, Conn.

(Lindsay Denison contributes to Cobb of “The World”—A Leader in Liberalism (1924) an opening chapter, “Cobb, The Man.” The book is a collection of editorials selected by John L. Heaton with a foreword by Woodrow Wilson. Obituaries may be found in the leading newspapers of New York City and of Detroit for Dec. 22, 1923, see especially the World (N. Y.) and the Detroit Free Press. There are many references to Cobb in Don C. Seitz, Jos. Pulitzer, His Life and Letters (1924).) J. M. L.

COBB, HOWELL (Sept. 7, 1815–Oct. 9, 1868), senator, was the son of John A. and Sarah (Rootes) Cobb. The elder Cobb was an extensive planter in Jefferson County, in the cotton belt of middle Georgia, and it was there that Howell was born. While he was yet a small boy the family removed to Athens, Clarke County, the seat of the University of Georgia. The Cobbs, therefore, while retaining their farming interests in Jefferson and other counties, became identified with northeast Georgia. Howell Cobb was born into a family which, by reason of its wealth, social prestige and the ability of its members, occupied a secure position in the small group of planters who dominated the political life of the South throughout the ante bellum period. His formative years were spent in an atmosphere of culture and among people in whom there was a
Cobb

long tradition of public service. His grandfather (John Cobbs) came to Georgia from Virginia in 1783 and immediately assumed a position of importance in politics, serving six years in the House of Representatives, being a member of the Executive Council of the state and a delegate to the Constitutional Convention of 1795. John Cobbs's sons (John A. and Howell) dropped the "s" from the name. John A. (the father of the subject of this biography) served several terms in the state legislature; Howell, the elder, was a member of Congress (1807-13) and his son, Thomas W., was a United States Senator (1824-28). Furthermore, Howell Cobb's kinspeople, the Jacksons, Lamars and others, had long been among the leading families in the state, socially and politically. His early marriage (1834), immediately after graduating from the University of Georgia, to Mary Ann Lamar, daughter of another wealthy middle Georgia planter, materially strengthened his resources. Leisure and comparative freedom from financial worries enabled him to devote his life to public affairs. After two years' private study he was admitted to the bar in 1836. His opportunity to enter public life came in 1837. In that year the legislature elected him to the office of solicitor-general of the Western Circuit. This circuit lay in the northeastern portion of Georgia. It was economically a poor section, occupied by the small white farmer element, but these sturdy people were politically well educated. They took a keen interest in national and state politics, and, though removed from the politically dominant plantation areas, they kept informed of the trend of affairs. They were strongly Unionist in feeling and had little economic interest in slavery. During Cobb's three years as solicitor he came constantly before the people. On the expiration of his last term as solicitor-general, he entered the race for Congress in the last election on a general ticket, and was successful (1842). Congress during the same year established the district system and at the 1844 election Cobb was returned for the sixth district, which was practically coterminous with the judicial circuit in which he had been solicitor. He was not yet twenty-seven years of age when first elected, and he represented this district at various times until he became a member of Buchanan's cabinet in 1857. His freedom from rancorous sectional outbursts, the broad national spirit that he showed on all occasions, coupled with his thorough knowledge of constitutional questions, and his ability as a debater, quickly established him in Congress, and, on the death of Drumgoole of Virginia, he was elected (1848) as parliamentary leader of his party in the House.

Cobb

During the entire period of Cobb's service in Congress territorial expansion and the sectional struggle over the extension of slavery was the dominating issue. He upheld the constitutionality of the annexation of Texas; he defended Polk's administration for the declaration of war against Mexico; and as soon as it became apparent that the United States would defeat Mexico and demand a huge cession of territory, he urged that the slavery question be settled by the extension of the Missouri Compromise line to the Pacific. Calhoun, meanwhile, was urging the Southern members of Congress to dissociate themselves from the Northern wings of the two parties and form a Southern bloc for the protection of their interests. At a meeting of Southern senators and representatives in January 1849, he produced his well-known "Southern Address," calling for united action of all Southerners. But the Whig members refused to cooperate, only two of them signing the Address. Cobb and three other Democrats also declined to fall in with Calhoun's plan, and issued another address, written by Cobb. The gist of it was that the united national Democracy was a far better guarantee of justice to the South than any sectional party could be. The position thus taken alienated large numbers of Cobb's Southern Democratic colleagues, but increased his popularity with the Northern wing of the party. So much so, indeed, that, after one of the most spectacular fights ever seen in Congress, Cobb was elected speaker of the House in December 1849, on the sixty-third ballot. He was, therefore, presiding officer of the House during the critical debates on Clay's compromise measures. Shortly after the passage (in September 1850) of the various measures, Cobb, alone of Southern Democrats, signed a paper circulated among members pledging its signatories not to support any candidate for office who was not opposed to the renewal in any form of the slavery agitation. When news of the passage of the compromise measures reached Georgia, Governor Towns immediately summoned a state convention to meet in December 1850 to deliberate on Georgia's course. The campaign which followed was as stirring as any in Georgia history. Whigs and Union (or Cobb) Democrats, were arrayed against the Southern Rights wing of the Democratic party. Cobb took the stump along with notable Whig leaders, such as Toombs and Stephens, for the Union and compromise. The result was an overwhelming Unionist victory. It is significant to note that, while the Whig leaders in this movement were following the natural tendencies of their party and, therefore, risked nothing, Cobb staked his entire political future.
Cobb

The popularity thus lost was never regained. He was pursued by the relentless hatred of the Southern Rights Democrats for many years.

During the convention the Unionists organized themselves into a new party, taking the name "Constitutional Union." It was composed of Whigs and Cobb Democrats. The bulk of the Democratic party likewise reorganized under the name of "Southern Rights Party." The next year, 1851, was an election year in Georgia. The Southern Rights Democrats named Charles J. McDonald, an extremist, as their candidate for governor, and in their state convention (in May) declared for the sovereign (i.e., constitutional) right of a state to secede from the Union. The Union Party held its convention in June and was immediately confronted by this question of the abstract right of secession. The convention declined to commit itself on the issue, because there was a serious difference of opinion among the leaders. Some upheld the constitutional right to secede; others thought that such a right was merely revolutionary in its nature and not constitutional. Cobb was nominated for governor. The ensuing campaign was quite as heated as that for the election of the delegates to the convention in the preceding year. The same ground was fought over anew, that is to say, secession and the "finality" of the compromise were the issues. Cobb was constantly heckled about the secession question and his position has generally been regarded as a straddle. Though he spoke all over Georgia for the Union cause, he yet could not bring himself to the point of avowing that, if elected governor, he would use force to put down a secession movement. Nevertheless he was elected by the greatest majority that had ever been given a candidate up to that time, and the result of the election was taken to mean that Georgia had spoken emphatically against disunion and secession. This is the high point of Cobb's career. Some of the leaders, in organizing the Union Party in the state convention of 1850, had hoped to make the new party a national organization. Cobb, however, regarded the Georgia Union Party as a temporary organization to meet the emergency presented by the compromise measures, and after Georgia had been brought to accept the compromise he preferred to resume the old alliance with the national Democracy. For this and other reasons the idea of a national Union Party failed. The Southern Rights wing of the Georgia Democracy had arrogated to itself the position of sole Democratic regularity. They had control of the machinery and read Cobb out of the party. The Whig element in the Union Party returned to their normal affiliation and Cobb was thus left stranded with few followers except the North Georgia Union Democrats. It so chanced that at the expiration of his term as governor the legislature was called upon to elect a successor to Senator Dawson, the Whig incumbent, and a candidate for reelection. Cobb entered the contest, but was overwhelmingly defeated by the Whigs and the Southern Rights Democrats (1854).

The following year Cobb was returned to Congress by the 6th District. He was instrumental in the nomination and election of Buchanan, his close personal friend, and the President named him secretary of the treasury. During his incumbency the crisis of 1857 occurred and Cobb's handling of treasury matters received high praise from the New York papers. After the election of Lincoln to the Presidency in 1860, Cobb, in a letter to the people of Georgia (Dec. 6, 1860, "Toombs, Stephens and Cobb Correspondence," pp. 505 ff.) advocated immediate secession; and he was one of the most prominent supporters of secession in the campaign preceding the Secession Convention, which met in January 1861, though he was not a member of the Convention. When the seceding states met in convention in Montgomery to organize the Southern Confederacy, Cobb was made its chairman. Many thought he would have been a better choice for the presidency than Jefferson Davis. Want of military training and the enmity which had been engendered against him because of his former Unionist principles stood in the way of his election. During the following summer he organized the 16th Georgia Regiment, and went to the front as a colonel. Though temperamentally and by training unfitted for the life of a soldier, he yet served with distinction, was promoted to a brigadiership, and in 1863 became a major-general. He was at that time assigned to the command of the District of Georgia. Political motives seem to have determined this step. Conflict between Gov. Joseph E. Brown [q.v.] and President Davis made it necessary that a strong supporter of the government should be on the ground. When the Confederacy collapsed Cobb surrendered at Macon to Gen. Wilson. After the war he formed a law partnership at Macon with James Jackson, a relative and close friend, and resumed the practise of his profession, practically abandoned for politics twenty-five years before. He was an uncompromising opponent of the Congressional Reconstruction policies. During this period, while on a visit to New York, he died suddenly on Oct. 9, 1868.

Cobb left a great collection of letters and papers now in the possession of his daughter, Mrs. A. S. Erwin of Athens, Ga. This collection has been twice gone
Cobb

tion and Frontier,” Doc. Hist. Am. Industrial Soc., vol. I (1910), Prof. Phillips incorporated many letters bearing on plantation and slavery conditions, written to or by Cobb and taken principally from the Erwin Col-
lection. Files of the Southern Banner, a weekly pub-
lished in Athens, and commonly regarded as Cobb’s or-
gan, are available for part of the ante bellum period.
The best sketch of Cobb is that written by his kinsman, Jos. R. Lamar. Associate Justice of the United States Supreme Court, for Men of Mark in Ga., III (1911), 566 ff. Judge Lamar in a footnote (p. 569) gives a list of biographical sketches of Cobb preceding his own. R. P. Brooks in “Howell Cobb and the Crisis of 1850,” Miss. Valley Hist. Rev., IV, 279-98, has made a study of Cobb’s part in the compromise agitation. J. R. P. B.

COBB, JONATHAN HOLMES (July 8, 1799-Mar. 12, 1882), lawyer and silk manufactur-
er, was born at Sharon, Mass., the eldest of the ten children of Jonathan and Sibbel (Holmes) Cobb. His father was a prosperous innkeeper and farmer and the eldest son had the advantage of an excellent preparation at Milton Academy and a college course at Harvard. He gradu-
ated from that institution in 1817 in a class which included George Bancroft, Caleb Cushing, and Stephen H. Tyng. After graduation he com-
menced the study of law in the office of William Dunbar of Canton, Mass., where he remained about a year, when he went to Charleston, S. C. In that city he pursued his studies in the office of Benjamin S. Dunkin and at the same time opened a classical and English school. An outbreak of yellow fever in 1819 led him to return to Massa-
chusetts and enter the law office of Jabez Chick-
ering. From there he was admitted in 1820 to the Norfolk County bar, the commencement of a dis-
tinguished legal career. In addition to a legal prac-
tise in Dedham and Boston, Cobb was reg-
ister of probate for Norfolk County, 1833-79, and town clerk of Dedham for thirty consecutive years, declining a reelection in 1875. For forty years he was an active magistrate in Norfolk County. He was widely known in his own day as an expert in the production and manufacture of silk. When the morus multivalvis, a new form of the mulberry tree, was introduced into the United States in the decade of the twenties, he was among the earliest and most enthusiastic ex-
perimenters. After a period of intensive experi-
mentation he so convinced the state legislature of the practicability of silk production in Massa-
chusetts that they commissioned him to write a manual on the subject and appropriated $600 to cover publication. The result was A Manual Containing Information Respecting the Growth of the Mulberry Tree with Suitable Directions for the Culture of Silk (1831). This little book came out at the height of the morus multivalvis boom and was widely read. The Congress of the United States ordered the printing of 2,000 copies for distribution, and the book went through four editions by 1839. Before the last edition was printed Cobb was in a position to give directions as to the production of silk from the tree to the finished product for he had successfully accom-
plished the whole process in Dedham. In 1837 he established a silk-mill which in the following year operated sixteen throwing machines of one hundred spindles each and turned out $35,000 worth of sewing silk as well as a “considerable quantity of narrow goods” (Manual, 4th ed., p. 152). This factory, which was destroyed by fire in 1844, was one of the earliest in the United States, and to Cobb as much as to any single in-
dividual must go the credit of arousing an inter-
est in the manufacture of silk. Cobb was active in many local projects. He was a founder and treasurer (1831-34) of the Dedham Institution for Savings, editor for some years of the Village Register and for forty years a deacon in the First Church of Dedham. He was married on Sept. 26, 1822, to Sophia Dog-
gett of Roxbury.

COBB, LYMAN (Sept. 18, 1800-Oct. 26 [?], 1864), educator and author, the son of Elijah William and Sally (Whitney) Cobb, was born in Len-
ox, Mass., but lived chiefly in New York State. Little is known of his early life and education, but in some of his publications Cobb mentions himself as “Master of Arts.” He was author of numerous texts, chiefly in spelling, reading, and arithmetic, millions of copies of which are said to have been sold. His spelling-books created the greatest stir. The first of these appeared about 1821 (American Journal, Ithaca, Oct. 17, 1821), and was followed at intervals by revisions, intro-
ductions, and sequels. He published a Critical Review of Noah Webster’s Spelling Book, which many held was inspired by malice and a desire to increase his own sales. This he stoutly denied. The Critical Review was answered by Webster in an eight-page pamphlet, To the Friends of American Literature. Each side was able to point out numerous errors in the other, though Cobb’s agents defied “anyone to show a variation from the true dictionary of Walker,” an abridg-
ment of which, by Cobb, was published at Ithaca in 1829. In the early forties Cobb had another

244
Cobb controversy over spelling-books, this time with Charles W. Sanders [q.v.].

Among his most significant books was *The Evil Tendencies of Corporal Punishment* (1847), wherein he discussed thirty “objections” to, and offered forty “substitutes for and preventives of, the use of the rod.” This work was warmly commended by Gallaudet, Mann, Russell, and Griscom; and Cobb’s views were reechoed in hundreds of articles opposing the old practise. His Pestalozzian bias is also seen in a statement that he did not want pupils to “become disgusted or fatigued” with monotonous reading. The *Juvenile Reader No. 1* (1830) was recommended as “interesting, moral and instructive”; illustrations were used in some of his books; but it must be admitted that by the time the *New Sequel or Fourth Reading Book* (1843) was reached, an excessive aridity and formality had crept in, despite the author’s ambitious efforts. In the *North American Reader* (1835) he made a patriotic appeal, the “pieces” being “chiefly American.” Most readers, he said, do not include “a single piece or paragraph written by an American citizen. Is this good policy? Is it patriotism?” Though his books were widely used and received favorable comment, as in the *American Journal of Education*, their merits were perhaps exaggerated and excessively advertised (e.g., *Maine Palladium*, May 16, 1827, p. 4). Cobb married Harriet Chambers of Caroline, Tompkins County, N. Y., in 1822. He died at Colesburg, Pa., where he lies in an unmarked grave. His books are the most reliable evidence of his life, and his only monument.

[Am. Annual Cyc., 1864; J. T. Schart, Hist. Westchester County (1886); Chas. E. Allison, Hist. of Youkers (1896); Hist. Genealogy of the Lawrence Family (1888); numerous letters from members of the family to the writer; obituary in the *Ithaca Jour.*, Mar. 1, 1865.]

**COBB, SYLVANUS** (July 17, 1798-Oct. 31, 1866), Universalist clergyman, was the son of Ebenezer and Elizabeth Cobb, both descendants of Elder Henry Cobb who came to Plymouth on the second voyage of the *Mayflower*. The year before Sylvanus was born his parents went in an ox-wagon as pioneers to Norway, Me. As a boy he cut hoop-poles at a cent each to provide himself with books and stationery. During the War of 1812 he early exhibited his journalistic and political tendencies by writing poetry and prose in support of the Republican or War party. The first Universalist Church in Maine was built in Norway and in his sixteenth year he espoused that faith. It was a controversial era when hostility to Universalist doctrine was strong and vigorous. When Cobb received his first certifi- cate to teach school the “orthodox” preacher wrote a “P. S.” that the young man was legally qualified but he could not consistently commit a child to the care of one of his religious sentiments. In 1820 the young man went to Portsmouth, N. H., to study with Rev. Sebastian Streeter preparatory to entering the Universalist ministry, to which he was ordained in Winthrop, Me., June 28, 1821. While pastor at Winthrop and Waterville, he became the chief pioneer and missionary of Universalism in the state of Maine. The first Parish Church of Malden, Mass., became Universalist instead of Unitarian by calling Cobb to its ministry in 1828. All the time he was at heart a journalist and he began to publish in Waltham, Mass., *The Christian Freeman and Family Visitor* in 1839. In religion it stood for the Universalist faith and also for total abstinence and anti-slavery. Both were unpopular causes. He was accused of mixing politics and religion, as he had been accused in his pulpit. Already he had served two terms each in the Maine and Massachusetts legislatures, and in politics and reform he was always found with the advanced liberals. He became champion and confessor of the Universalist faith, and carried on his polemics with earnestness and ability. He reviewed in his paper Dr. Edward Beecher’s *Conflict of the Ages*. Two great debates were also conducted in the *Freeman*, one with the orthodox Calvinist, Dr. Nehemiah Adams, on “The Scripturahness of Future Endless Punishment,” and the other on “Human Destiny” with Rev. C. F. Hudson who supported the annihilationist theory. These were re-published in book form. After twenty-three years he sold out the *Freeman*, which soon became the property of the Universalist Publishing House. While editing the paper he had also preached in Universalist churches in Waltham and East Boston. One of his constructive contributions was his *Compend of Divinity* (1846), a thorough and concise epitome of the Universalist doctrine, while his *New Testament of Our Lord and Savior Jesus Christ: with explanatory notes and practical observations* (1864) shows his ability as a theologian. Standing well over six feet in height, broad shouldered, full chested, he had a commanding presence and a massive head. He had not the characteristics of a popular preacher, but rather strength and solidity of thought. closely knit and logical. Weight of argument was his chief weapon instead of brilliance or elegance of style. Severe in denunciation and condemnation of error or evil, he was kind of heart and of large charity. The last years of his life were spent in Boston where he died. He was
married on Sept. 10, 1822 to Eunice Hale Waite of Hallowell, Me., by whom he had nine children, one of whom, Sylvanus Cobb [q.v.], was his father's biographer.

[The chief source is The Autobiography of the First Forty-One Years of the Life of Sylvanus Cobb, D.D.; to which is added a Memoir by his eldest son, Sylvanus Cobb, Jr. (1857). The Christian Freeman and Family Visitor also has much autobiographical material.]

T. C. R.

COBB, SYLVANUS (June 5, 1823—July 20, 1887), novelist, the eldest of the nine children of the Rev. Sylvanus Cobb [q.v.] and his wife, Eunice Hale Waite, was born in Waterville, Me. From his parents, who were of deep-rooted New England stock, he acquired certain Yankee and Puritan traits—resourcefulness, thrift, uprightness, and piety—that, softened by the sentimentality of the period and undisciplined by any intellectual or aesthetic training, shaped his character and colored his writing. His boyhood and youth were spent in Malden, Mass. He was scribbling fiction at the age of eleven and displayed his lifelong regard for grammar and the mechanics of style almost equally early by getting himself expelled from high school for disputing with the teacher over a nice problem in parsing. His father had him learn the printer’s trade, but at seventeen the boy ran away from home and enlisted at Boston (February 1841) in the navy. Service on the United States frigates Brandywine and Fairfield gave him glimpses of various Mediterranean ports and a nautical vocabulary that later was a useful part of his literary paraphernalia. Discharged from the navy at Hampton Roads (March 1844), he returned home and on June 29, 1845, was married to Jane Head of Waltham, Mass.

In May 1846, with his brother Samuel he started the Rechabite, a paper devoted—apparently in the order of decreasing intensity—to “temperance, moral elevation, literature, and general intelligence.” Although Cobb’s fiction began to appear in the second number, the real feature of the Rechabite was its amazingly vituperative attack, in the name of temperance, on innumerable prominent New Englanders and on such national figures as Henry Clay, Daniel Webster, and President Polk, who was accused of turning the executive mansion at Washington into “a free tipping house.”

From 1850 on Cobb devoted himself assiduously to the manufacture of popular fiction. His stories invariably contained the maximum amount of excitement compatible with strict morality. A facile style, an unflagging knack for simple characterization and for devising melo-

dramatic incident against romantic backgrounds, and complete harmony in sentiment and ideas between the author and his enormous—and enormously naïve—audience, made his work immediately and continuously popular. From 1850 to 1856 he was on the staff of Gleason’s Flag of Our Union and Pictorial Drawing Room, writing 36 novelettes and 200 short stories for the two magazines, besides doing much work for other publications. From March 1856 till his death (July 20, 1887) he wrote for Robert Bonner’s New York Ledger. To the Ledger he contributed 130 novelettes, 30 Forest Sketches, 72 Forest Adventures, 102 Sketches of Adventure, 57 Scraps of Adventure from an Old Sailor’s Logbook, 573 other short stories, and 2,305 shorter items. Not content with writing for a living, for thirty-five years he kept a diary, in which he never failed to note the state of the weather. He was almost six feet tall and weighed almost two hundred pounds. With his broad, smooth forehead, long hair, and flowing beard, he was an impressive figure. From 1860 till his death he made his home in Hyde Park, Mass.; previously he had lived at Norway, Me. As literature his work is of no value, but as the first American to apply quantitative methods to the production of fiction, he has his place in the general history of American printed matter.

[The only account of Cobb’s life is a Memoir of Sylvanus Cobb, Jr. (1891), by Ella Waite Cobb (his daughter).]

G. H. G.

COBB, THOMAS READE ROOTES (Apr. 10, 1823—Dec. 13, 1862), lawyer, soldier, was the son of John A. and Sarah (Rootes) Cobb and was born in Jefferson County, Ga. Like his elder brother, Howell Cobb [q.v.], after being graduated from the University of Georgia he studied law and was admitted to the bar (1842). His reputation as an advocate and constitutional lawyer was high. To talent he added a truly prodigious capacity for work. Few men of his age made so many books. From 1849 to 1857 as a supreme court reporter he edited twenty volumes. His Digest of Georgia Laws (1851) was in fact a codification of the laws of the state. It was unique in America both by reason of its method, its comprehensiveness, and the clearness of its language. In addition he wrote An Inquiry into the Law of Negro Slavery (1858) and A Historical Sketch of Slavery from the Earliest Periods (1859). He was a regular contributor to newspapers in Georgia and the North.

In November 1860, after the election of Lincoln was definitely known, Cobb addressed the General Assembly of Georgia advocating immediate secession. It is said that, because of his
force and eloquence, he was the most potent influence in taking Georgia out of the Union (Alexander H. Stephens, *A Constitutional View of the Late War Between the States*, 1870, II, 321). The legislature declined to take upon itself the responsibility for so momentous a step in the absence of any expression of popular opinion, but passed an act requiring the governor to summon a special convention in January following. Thereupon Cobb went about preaching a crusade for secession. He was elected to membership in the convention and took an active part in its proceedings. After the convention had adopted the ordinance of secession, it proceeded to revise the constitution of Georgia. Cobb was made chairman of the committee for that purpose, and internal evidence in the proceedings of the convention indicates that he practically controlled the work of revision. The convention elected both the Cobbs as delegates to represent Georgia in the Montgomery convention of the seceding states. There Thomas Cobb was made a member of the committee on the permanent constitution, and contributed his wide knowledge of constitutional law to the making of the constitution. But, though without military training, he felt a call to the active service of the Confederacy. He retired from the Montgomery convention, receiving a commission as colonel (August 1861) and organized "Cobb's Legion." In November 1862, he was promoted to brigadier-general, and was killed at the battle of Fredericksburg in December of that year. Gen. Lee spoke in terms of high praise of his character, accomplishments, and ability as an officer. He was married to Marion, the daughter of Chief Justice Joseph Henry Lumpkin of the Georgia supreme court. The Lucy Cobb Institute, founded by Cobb, was named for a daughter who died when fourteen years of age. Only three of Cobb's children reached maturity, all daughters—Calendar, married to A. L. Hull of Athens; Belle, married to Harry Jackson of Atlanta, and Marion, married to Hoke Smith, senator and member of Cleveland's cabinet.

[The Southern Hist. Assoc. Pubs., vol. II, 1907, Nos. 3–4, contain numerous Cobb letters edited by his son-in-law, A. L. Hull. R. P. Brooks, of the Univ. of Ga., has a much larger mass of Cobb papers in typed form. The originals having in some way been lost. There is not in print any life of Cobb beyond inadequate sketches in various biographical dictionaries. The most ambitious of these is that of A. L. Hull in *Men of Mark in Ga.*, vol. III (1911). Cobb’s famous speech of Nov. 12, 1860, was printed by the state in *Confed. Records State of Ga.*, 1 (1909), p. 157–82. This volume also contains the full proceedings of the secession convention in which Cobb played a leading part. Cobb’s *Digest of Statute Laws State of Ga.* (1851) is in all large law libraries. His other works are hard to locate.]  

R. P. B.

---

Cobb, William Henry (Apr. 2, 1846–May 1, 1923), clergyman, librarian, was the descendant of Massachusetts Puritan and Pilgrim ancestors, and the son and grandson of Congregational clergymen. His parents were Rev. Leander and Julia Ann (Scribner) Cobb. He was born and received his early education in Marion, Mass., but completed his preparation for college at Rochester Academy, Rochester, Mass. He graduated from Amherst in 1867. After teaching for two years in Wilmington, Del., he studied at Princeton Theological Seminary, 1869-70, and graduated at Andover in 1872. He was pastor of Congregational churches at Chiltonville, Mass., 1872-76; Medfield, Mass., 1876-78; Uxbridge, Mass., 1878-87. From 1887 to his death he was librarian of the Congregational Library in Boston. Cobb was master of many languages including Hebrew, which was his specialty. As an Old Testament scholar he had an international standing, his special field being the book of Isaiah, upon which he left an unfinished work at the time of his death. He was an authority on the history of Congregationalism and an indefatigable collector of the literature of the Puritan and Pilgrim movements, in which department the Congregational Library became under his headship one of the most complete collections in existence. He was a member of the Society of Biblical Literature and Exegesis, 1890-1915, and its recording secretary for the same period. On his retirement he declined an election to the presidency of the society. He was an editor of the *Journal of Biblical Literature*, 1889-1915. His publications include: *A Criticism of Systems of Hebrew Metre* (1905), which was awarded a prize by Manchester College, Oxford; *The Meaning of Christian Unity* (1915); and *Seven Centuries Illustrated in the Congregational Library* (1921). He also published many articles in the *Bibliotheca Sacra* and the *Journal of Biblical Literature*, as well as the article "Metre in the Bible," in the *Jewish Encyclopedia*.

Cobb was slight in stature, below the medium height, with reddish hair and beard which became gray in his latter years. His portrait painted toward the close of his life may be seen in the Congregational Library. His memory was remarkable, and his habits were those of the methodical and painstaking scholar. He was mild and modest in demeanor, had a fine sense of humor, and qualities that secured for him warm and enduring friendships. On Oct. 30, 1872, he married Emily W. Wiggins of Philadelphia, who survived him with two sons and two daughters.

F. T. P.

**Cobbett, William** (Mar. 9, 1763–June 18, 1835), journalist, publicist, was born at Farnham, Surrey, the third of the four sons of George and Ann (Vincent) Cobbett. His career as a whole belongs to English history, but from October 1792 till June 1800 and again from May 1817 till the end of October 1819 he lived as a political refugee in the United States. He is one of the founders of American party journalism. The United States occupied a large place in his imagination though not in his affection; he had friends there; and his interest in the country was life-long.

On his first arrival in America he settled with his bride, Ann Reid, at Wilmington, Del., but soon moved to Philadelphia, where he lived in decent obscurity by teaching English to French émigrés. The ovations and oratory attendant on Joseph Priestley's landing at New York ignited his British patriotism. The *Observations on the Emigration of Dr. Joseph Priestley* (Philadelphia, Thomas Bradford, 1794) created a furore the greater because the author of the pamphlet remained anonymous. Republicans were aghast; Federalists applauded; and Cobbett bounded gleefully into vituperative journalism. His partisan rivals retaliated and he was blackguarded in pamphlet after pamphlet, but he was pleased rather than abashed by such attentions and inundated his enemies in his own incomparable Billingsgate. *A Bone to Gnaw for the Democrats* (2 pts., 1795), *A Kick for a Bite* (1795), *A Little Plain English Addressed to the People of the United States* (1795), *A New Year's Gift for the Democrats* (1796), *The Life and Adventures of Peter Porcupine* (1796)—he had adopted the name, on an opponent's suggestion, in 1795—and *The Gros Mousqueton Diplomatique or Diplomatic Blunderbuss* (1796) exemplify in their titles the spirit of his writing but do not exhaust the list of his publications. Having quarreled with the grasping Bradford, he opened on July 11, 1796, a bookseller's shop of his own and advertised the occasion by filling his window with portraits of George III, Lord Howe, and other obnoxious personages. The mob threatened to tar and feather him and to burn the house over his head, but his effrontery was unconquerable. On Mar. 4, 1797, he launched *Porcupine's Gazette* and Daily Advertiser to advocate alliance with England, war against France, and perdition for Republicans. The savage, sarcastic humor of the paper exceeded anything that Philip Freneau had done or that Benjamin Franklin Bache could do. It attained a large circulation but made little money. Meanwhile he had several narrow escapes from prosecution; such powerful men as Thomas McKean [q. v.] and Edward Shippen were among his enemies; and President John Adams thought seriously of deporting him. Catastrophe finally came. During the yellow-fever epidemic of 1797 Dr. Benjamin Rush treated his patients to violent purges and copious bleeding, and Cobbett on politico-medical grounds made a terrific onslaught upon him. Rush sued for libel, and after a delay of two years the case came to trial and Cobbett was mulcted of $5,000. It is clear that Rush was libeled and deserved to be libeled, but the trial was unfair. Anticipating the worst, Cobbett had already retreated to New York, whence he issued a new paper, *The Rush-Light*, which the philosophical Priestley found very amusing. Cobbett, however, was tired of the game, homesick, and uncertain about his future. Assured of a friendly reception, he returned in June 1800 to England.

He was driven from England again by the suspension on Mar. 4, 1817, of the *Habeas Corpus Act*. Landing at New York on May 5, he retired the next day to an inn on Long Island, rented a small farm at Hyde Park in North Hempstead, and settled down to his favorite routine of agriculture and authorship. He had little appetite now for American affairs. He did try, however, to get the Pennsylvania legislature to reimburse him for the losses he had suffered in the courts; and he disputed vehemently with Morris Birkbeck [q. v.] over the feasibility of colonizing Englishmen on the prairie lands of the West. Birkbeck's accusation, repeated by certain historians (E. E. Sparks, *The English Settlement in the Illinois*, 1907, p. x; T. C. Pease, *The Frontier State 1818–48*, 1918, p. 14), that he was in the pay of eastern land dealers, rests only on hearsay. Cobbett himself was happy only when his feet were planted on English soil; he could not conscientiously urge any Englishman to seek liberty and happiness in the States. During these two years of comparatively undisturbed work he came to his full stature as a writer. *A Journal of a Year's Residence in the United States* (pt. I, 1818; pts. II and III, 1819) records some of his experiences. On May 20, 1819, his house burned; and the next autumn, with the unblessed bones of Thomas Paine [q. v.] in his baggage, he returned home.

(E. I. Carlyle, *Wm. Cobbett: A Study of his Life as Shown in his Writings* (1904), and G. D. H. Cole, *The Life of Wm. Cobbett* (1925), are excellent and indispensable and between them furnish ample guidance

G. H. G.

COBURN, ABNER (Mar. 22, 1803-Jan. 4, 1885), business man, governor, philanthropist, was born in that part of the town of Canaan, Me., now a part of Skowhegan. His father, Eleazar Coburn, was a skilled land-surveyor and an owner of large tracts of timberland. He also took considerable interest in politics, was a Federalist and a Whig, and served several terms in the legislature. He married Mary Weston, a grand-daughter of one of the earliest settlers of Somerset County, Me. Of their fourteen children, Abner was the second. He spent most of his youth on his father's farm but attended the common schools, studied for a few terms at Bloomfield Academy and taught a winter school before he was twenty. For a few years he assisted his father in surveying and thus acquired a good knowledge of the art and also of the timberlands of central Maine. In 1825 he set up for himself but in 1830 joined his father and a younger brother, Philander, in forming the firm of E. Coburn & Sons, for buying lands and dealing in lumber on the Kennebec River. In 1845 Eleazar Coburn died and the firm was reorganized under the name of A. & P. Coburn. The firm became the largest landowner in the state. It also acquired large timber holdings in Wisconsin, and Abner Coburn obtained fifty thousand acres of timberland by virtue of connection with the Northern Pacific Railroad. The Coburn brothers were held in the highest regard by the vigorous, independent woodsmen in their employ, whom they always treated fairly and many of whom they helped to go into business for themselves and then by timely aid in periods of financial stringency, saved from ruin. In 1854 the Coburns began to interest themselves actively in the railroad development of central Maine, by their personal influence and business prestige turning failure into success. Abner Coburn is said to have instantly granted a request for a loan of $200,000 to save the Maine Central Railroad from bankruptcy. When a Boston interest obtained control of the Maine Central it made Coburn president of the new subsidiary, probably expecting him to be little more than a rubber stamp whose use would conciliate local feeling. Coburn, however, not only managed the Maine Central with great efficiency and economy but firmly resisted attempts to sacrifice the interests or the dignity of his road.

Like his father, he took considerable interest in politics. He served three terms in the state legislature as a Whig, helped found the Republican party of Maine, and was twice a member of the Executive Council. In 1860 he was a formidable candidate for the Republican nomination for governor, having the special support of the friends of James G. Blaine, but he was defeated by Congressman Israel Washburn. In 1863 Gov. Washburn declined to run again and Coburn received the Republican nomination on the first ballot and was elected. It was, however, a year of Democratic reaction throughout the country and Coburn's majority was much smaller than that received by Washburn at either of his elections. As governor Coburn gave Maine a clean, honest, business-like administration, making appointments and awarding contracts with regard to the interest of the state rather than that of the politicians. This helped to deprive him of the renomination usually given to governors; even some men who admired his independence believed that it would be unwise to present as a candidate a man who had aroused such opposition. More important was the fact that the Republican party gave way to a "Union" convention and that the chairman of their state committee, James G. Blaine, strongly favored the choice of a worthy War Democrat, Samuel Cony, who was nominated and elected. Coburn held no other important political office but was chosen presidential elector in 1884 and while attending the meeting of the Maine electors was seized with an illness from which he did not recover.

Among Coburn's chief characteristics were calmness, self-reliance, and generosity. He once received news of the loss of hundreds of thousands of dollars, without giving the slightest sign of agitation. His closest friend, whom he made an executor of his will, knew no more of his affairs than did a mere acquaintance and was not even informed of his appointment as executor until after Coburn's death. Coburn was generous to a fault in helping individuals in distress but he never spoke of the aid which he gave. By his will he left over a million dollars to religious, educational, and charitable institutions, much the greater share going to Baptist foundations. Three institutions in which Coburn took great interest during his life and which he remembered generously in his will have given special evidence of their gratitude. Colby College and the University of Maine have each a

Coburn Hall and the Waterville Classical Institute changed its name to that of the Coburn Classical Institute.

L. C. H.

COBURN, FOSTER DWIGHT (May 7, 1846–May 11, 1924), agricultural editor, author, and administrator, was born at Cold Springs, Jefferson County, Wis., the son of Ephraim W. and Mary (Mulks) Coburn. His early life was spent on the farm and his formal education was such as his home town supplied. At the age of eighteen he served in the Civil War as corporal in an Illinois regiment and soon after, in 1867, moved to Kansas and became a farm laborer and farmer in Franklin County. But as his character and ability were soon widely recognized, his engagement in farming was largely superseded by other work as a writer, adviser, and administrator. Thus from 1882 to 1887 he was editor-in-chief of the Livestock Indicator, published at Kansas City, Mo. Later he became an editorial writer on the Kansas City Gazette and one of the editors of Country Life in America. He prepared and published some thirty volumes of the reports of the Kansas State Board of Agriculture with special papers on certain subjects.

He was the author of Swine Husbandry (1877); Alfalfa (1901); The Book of Alfalfa (1906); Swine in America (1906); Uncle Sam’s Farm Book (1911), a manual; Coburn’s Manual; a Complete Guide to the Farmer’s Encyclopedia (1915); and How to Make Money with Hogs (1915). His Swine in America was translated into Portuguese in 1913, by the ministry of agriculture of Brazil. His official positions, too, were many. Thus from 1894 to 1914 he was secretary of the Kansas State Board of Agriculture; for a time he was a member of the Board of Regents of the State Agricultural College and president of the Board. He was also a member of various state commissions, agricultural societies, and philanthropic organizations. He was a director of various financial institutions, the Prudential Trust Company, Prudential State Bank, and the Bank of Topeka. Believing that he could be of greater service in his chosen field for which he was admirably equipped, he refused to be a candidate for the governorship in 1898 and declined the appoint-
Cochran

scripts of Persian poetry, which he presented to the Metropolitan Museum of Art. His library of rare editions in the field of English literature of the sixteenth and seventeenth centuries was one of the finest in the world. Distinction as a sportsman often brought his name before the public. In 1910 he sailed his schooner yacht Westward across the Atlantic, raced her at Cowes, and defeated the Kaiser's Meteor for the Jubilee prize at Kiel. His yacht Vanity, built to defend the America's cup in 1914, did not race against the Shamrock, as he had hoped, for the war prevented the meeting. Late in 1914, he volunteered to carry dispatches between the American embassies at London and Berlin, but on his first trip he was arrested at Bentheim and spent a night on the guard-room floor (J. W. Gerard, My Four Years in Germany, 1917, p. 424). Subsequently he turned his steam yacht Warrior over to the British navy, was commissioned commander in the Royal Naval Reserve (February 1916), and served as captain of the Warrior in West Indian waters and the North Atlantic. At the close of the war, he received the decoration of Commander of the Order of the British Empire. He died at Saranac Lake, N. Y., of pulmonary tuberculosis, which had threatened his life for many years. One of his classmates has described him as "a reserved, unassuming sort of chap, with a face that may strike you as cold until you see his smile . . . generous but not to be imposed upon; very pleasant; conscientious; decisive; only moderately social; only moderately happy" (Clarence Day, Jr., The '96 Half-Way Book, 1915, p. 86).

He gave large sums for the founding of the Spray Ridge Memorial Hospital, the Sherman Memorial Dispensary of Saint John's Riverside Hospital, and the College of Preachers of the Washington Cathedral, to which he left a bequest of $1,000,000. His will provided for gifts of from $1,000 to $10,000 to employees of the Alexander Smith & Sons Carpet Company; and he left a quarter of a million to Saint Paul's School, Concord. Perhaps his most interesting monument is the Elizabethan Club at Yale, established in 1911 in accordance with ideas formulated by Cochran himself. He provided the club with a house, a generous endowment, and a library consisting of his own magnificent collection of rare editions in the field of Elizabethan and Jacobean literature. The club has been an unqualified success, and on every afternoon the portrait of Queen Elizabeth, which was part of the founder's gift, looks down upon an animated company of undergraduate and faculty members, enjoying the sort of conversation that Alexander Cochran had missed in his own college days.

Cochran

[Accounts of Cochran's activities, with photographs and personal impressions, are to be found in the unusually well edited publications of the Class of 1896 at Yale, particularly in the volume cited above and in the Quarter-Century Record (1924). His talents as a collector are reflected in the list of rare editions in the club library, included in The Book of the Yale Elizabethan Museum by Alexander Smith Cochran (1914), prepared by A. V. Williams Jackson and Abraham Yohannan. The collections are described, in some detail, in the Yale Alumni Weekly, Dec. 8, 1911, and in the Nation (N. Y.), June 19, 1913. Obituary notices appeared in the leading New York newspapers on June 21, and in the Yale Alumni Weekly on July 5, 1929.]

R. D. F.

COCHRAN, JOHN (Sept. 1, 1730–Apr. 6, 1807), physician, was born in Sadsbury, Pa., of Scotch-Irish ancestry. His father, James, and his mother, Isabella, were akin, both Cochrans who had emigrated from Ireland. John was fortunate in having his early schooling under that remarkable classical scholar and Presbyterian divine, Dr. Francis Allison (q.v.); his study of "physic and surgery" was under Dr. Thompson at Lancaster, Pa. During the French and Indian War (1754–63), he entered the British service as surgeon's mate in the hospital department, and was with Bradstreet when he marched against Fort Frontenac. Acquaintance with Maj. Philip Schuyler in this campaign led him to settle at Albany and to marry (Dec. 4, 1760) Mrs. Gertrude Schuyler, widow of Peter Schuyler. He soon moved to New Brunswick, N. J., where he became one of the founders of the New Jersey Medical Society and later (1769) its president. A devout Presbyterian and a zealous Whig he could not remain an idle spectator of the American Revolution, and volunteered his assistance in the hospital service. He collaborated with Dr. Shippen in preparing a plan for establishing military hospitals (Papers of the Continental Congress, in the Library of Congress, No. 22, folio 9) that was submitted to Congress Feb. 14, 1777. Washington observed his diligence and fidelity particularly in the case of smallpox patients and wounded soldiers, and recommended him to Congress as "highly deserving of notice, not only on account of his abilities, but for the very great assistance which he has afforded . . . merely in the nature of a volunteer." He was appointed physician and surgeon-general in the middle department, Apr. 10, 1777, and subsequently chief physician and surgeon. He was vehement in his denunciation of the inefficiency which at first characterized the hospital department. "It grieves my soul," he wrote (letter to Jonathan Potts, dated Mar. 18, 1780, in Chronicles of the Cochrans, 1915, p. 97), "to see the poor, worthy, brave fellows pine away for want of a few comforts, which they have dearly earned. I shall wait on
Cochrane

the Commander-in-Chief, and represent our situation, but I am persuaded it can have little effect, for what can he do? He may refer the matter to Congress; they to the Medical Committee, who will probably pow-wow it awhile and nothing more be heard of it.” Director-General of the hospitals of the United States was the final responsibility (Jan. 17, 1781) given to him by Congress. His experience in British service enabled him to make great improvements in the army hospitals.

The war over, he removed to New York. When Washington became president “a cheerful recollection of his (Cochran’s) past services” suggested his appointment (1790) as commissioner of loans, and he was provided with office space in Federal Hall for this work (Minutes of the Common Council of the City of New York, May 27, June 3, 1793, II, 10-11, 13). Finally compelled by a paralytic stroke to resign the office, he retired to Palatine, N. Y., where he died.

COCHRANE, ELIZABETH. [See Seaman, Elizabeth Cochrane, 1867-1922.]

COCHRANE, HENRY CLAY (Nov. 7, 1842-Apr. 27, 1913), officer of the United States Marine Corps, was born at Chester, Pa., the son of James L. and Sarah Jane (Gillespie) Cochrane. He was educated in the Upland Normal School and the Friends' Central High School at Philadelphia. Appointed to the Naval Service and sworn in as a second lieutenant in the late summer of 1861, because of his youth he was not formally commissioned until Mar. 10, 1863. He was in almost constant action, however, and in January 1863 was officially commended for coolness and courage. He continued in active duty throughout the Civil War and received several official commendations for meritorious services. He was commissioned first lieutenant on Aug. 20, 1865.

As with all marines, his duty included tasks in times of peace as well as war, and in October 1867 he rendered exceptional service during an epidemic of Asiatic cholera. The Commandant of the Marine Corps, Gen. Zeilin, commended him in the following words: “The moral courage displayed by yourself and command is as praiseworthy as the most conspicuous gallantry on the field of battle” (L. R. Hamersly, Records of Living Officers of the U. S. Navy and Marine Corps, 7th ed., 1902, p. 483). During the following decade, Cochrane performed his work faithfully in various parts of the world and in July 1877 had command of the United States Arsenal at Washington, D. C., during the labor riots. He received his captaincy on Mar. 16, 1879, and about the same time published “The Naval Brigade and the Marine Battalions in the Labor Strikes of 1877” (United Service, January and October 1879). From 1881 to 1884 he was Fleet Marine Officer in the European Station, and in July 1882 he was present at the British bombardment of Alexandria, Egypt, where he later aided in the reestablishment of the United States consulate.

Cochrane had command of the Marine detachment sent by the United States to the Paris Exposition in 1889, receiving the order of Chevalier of the Legion of Honor and an official compliment from the Secretary of the Navy. The end of the century found him a major (promoted Feb. 1, 1898) and in active and meritorious service in the Spanish-American war. On Jan. 11, 1900, he was commissioned colonel and the same year was appointed governor of the Peninsula of Capitve. So beloved was he by the natives that one of the cities requested permission to name a street for him. After service in the Boxer trouble in China and routine duties in this country, he was retired with the rank of brigadier-general on Mar. 10, 1905. After returning to his native city, he became actively identified with many civic enterprises and for several years was president of the board of trade. He was a member of many societies, both civilian and military, the latter including the Military Order of Foreign Wars. He was also a noted lecturer and orator. On June 30, 1887, he married Elizabeth F. Lull, daughter of Capt. E. P. Lull, U. S. N., and they had a daughter and a son, the latter becoming an officer in the United States Navy.

COCHRANE, JOHN (Aug. 27, 1813-Feb. 7, 1898), politician, was born in Palatine, Montgomery County, N. Y., the son of Walter Livingston Cochrane and Cornelia Wynchie (Smith) Cochrane and grandson of John Cochrane [q. v.], surgeon-general in the Revolutionary War. Walter Livingston Cochrane added the final “e” to the family name. John was educated in the New York schools, and in Union and Hamilton Colleges, graduating from the latter in 1831. He was admitted to the bar in 1834, and after 1846

Cocke

practised law in New York City. Beginning his political life as a Democrat, he belonged to the Barnburner wing of New York Democracy and with that faction favored the Free-Soil movement in the late 1840's. Within the next few years, however, he returned to the regular Democratic ranks, campaigning in 1852 for the election of Pierce. For this service he was appointed surveyor of the port of New York. As a state-rights Democrat he was elected to the House of Representatives of the Thirty-fifth and Thirty-sixth Congresses (Mar. 4, 1857-Mar. 3, 1861). Here he was at one time chairman of the Democratic Caucus. He spoke frequently on routine matters as well as on matters of public interest, was especially concerned with the burning questions of slavery, and national versus state sovereignty, and on these issues always upheld the Southern view-point.

In 1860, he was a delegate to the Charleston-Baltimore Convention of the Democratic party, a member of the Cagger-Cassidy Delegation which that convention seated. Though personally opposed to the nomination of Douglas, Cochran voted for him, forced to do so by the unit rule governing the delegation. After the nomination, as a loyal Democrat he promised to support the nominee, hoping, he said, to "compensate the reluctance of the past by the cordiality of the future." Believing that the North was responsible for the discontent of the South, he favored conciliatory measures to heal the breach between the two sections of the country. As late as Mar. 14, 1861, while speaking in Richmond, Va., he promised that if Virginia "would present her ultimatum to New York" that state would "sustain her" (New York Tribune, Mar. 15, 1861). He did not favor secession, however, and when the war came he supported the Union. At the great Union Square meeting on Apr. 20, 1861, he stated his views in words that gave great offense to his Southern admirers (New York Herald, Apr. 21, 1861). He joined the army, raising a regiment of which he was made colonel. In 1862 he was made a brigadier-general of volunteers but was forced by ill health to retire on Feb. 25, 1863. Shortly after this, a war Democrat, he was elected attorney-general of New York on the ticket of the Republican-Union party, whose platform indorsed the administration of Lincoln. But he became dissatisfied with many of Lincoln's policies, and in 1864 joined some equally dissatisfied Republicans in the movement that resulted in the Cleveland Convention of May 31, 1864. By this convention he was nominated for vice-president with John C. Frémont for president. Their nomination and platform met with little response from the country, so in September both withdrew. Cochran immediately campaigned for Lincoln, speaking in Philadelphia and attacking the Chicago platform (New York Tribune, Oct. 11 and 12, 1864). In 1872, he joined the Liberal Republican party and went as a delegate to the Cincinnati Convention where he was largely responsible for the nomination of Horace Greeley.

Cochran held city offices, and in 1869 was collector of Internal Revenue in the sixth New York district. He was a member of Tammany Hall and in 1889 its Sachem. He belonged to various patriotic societies, among them the Society of the Cincinnati of which he was president at the time of his death.

[De Alva Stanwood Alexander, Political Hist. of N. Y. (3 vols., 1906-09), shows his connection with N. Y. politics. The obituary notice in the N. Y. Times, Feb. 9, 1888, gives a complete account of Cochran's life. See also Gustavus Myers, Hist. of Tammany Hall (1901); and M. Halstead, Hist. of the National Political Conventions of the Current Presidential Campaign (1860); J. G. Nicolay and John Hay, Abraham Lincoln (1890), IX, 42-44; E. McPherson, Political Hist. of the U. S. A. During the Great Rebellion (1864); Biog. Dir. Am. Cong. (1928); Ida Cochrane Haughton, Chronicles of the Cochrans, II (1928), 80.] A.B.M.—r.

COCKE, JOHN HARTWELL (Sept. 19, 1780—July 1, 1866), planter, publicist, was born in Surry County, Va., son of John Hartwell and Elizabeth (Kennon) Cocke, and sixth in descent from Richard Cocke, who first appeared in Virginia from southern England in 1628. He inherited a fortune as well as refinement and native ability from his forebears, and after attending William and Mary College (1794-99), he chose the life of a country gentleman at "Bremo" in Fluvanna County, to which he removed about 1803. He married on Dec. 25, 1802, Ann Blaus Barraud of Norfolk, by whom he had several children, among them Philip St. George Cocke [q.v.]. Progressive and prescient in all things, he promoted new agricultural methods, the founding of agricultural societies, the developing of waterways and steam navigation, and various public improvements. He attacked the practice of making tobacco the principal crop and published a monograph, Tobacco (1866), to prove it ethically and economically "the bane of Virginia husbandry." During the War of 1812 he rose in eighteen months from captain to brigadier-general, commanding the Virginia military guarding Richmond, 1814-15, at Camps Carter and Holley on the Chickahominy River.

"I find Gen. Cocke universally respected," wrote his secretary, "and looked up to by the officers under his command—a striking instance of the triumph of talents and perseverance in the cause of duty." (A. C. Gordon, William Fitzhugh Gor-
Cocke
don, 1909, p. 82). His conduct as a soldier brought him such reputation that his name was canvassed for governor in the General Assembly of 1814 until Cocke positively forbade its use (Bruce, post, I, 158). In religious and social movements his activities were unceasing and influential. He abetted Bible, Tract, and Sunday-school societies, and served on the American Board of Commissioners for Foreign Missions. Slavery he denounced as a curse to commonwealth and nation, predicting that Virginia would make no progress toward prosperity until it and tobacco tillage should be ended. From its organization in 1819 until his death he was senior vice-president of the American Colonization Society, formed to settle the slavery problem peaceably by colonizing the negroes of the South in Africa. He favored federal intervention and a constitutional amendment providing funds for this purpose; and in 1831 wrote of slavery as “the great cause of all the great evils of our land.” Dueling and intemperance he likewise detested and warred against with cogent reasoning or acid satire. In a drinking age, his was the most insistent voice in his state demanding nation-wide prohibition; and when the American Temperance Union succeeded the United States Temperance Union in 1836, Cocke was elected president of the new society. A friend to popular education, he sponsored sounder primary and secondary school systems, but his greatest service lay in his efforts toward a state university, his share in its physical development, and his thirty-three years (1819-52) on its Board of Visitors. Without playing so conspicuous a part in founding the University of Virginia as did Jefferson and Joseph C. Cabell, Cocke’s contribution was subordinate only to theirs. He cooperated with Jefferson on the important building committee, and, though disapproving of various particulars of Jefferson’s architectural plan which contravened his economical and conservative bent, never interposed his objections; his suggestions were uniformly constructive, and his experience and practical counsel during the institution’s infancy proved invaluable. His inordinate modesty and refusal to hold political office have helped undeservedly to obliterate his name from public memory. Although in his day he was widely known and though his erect figure and impressively determined countenance compelled respectful consideration, few realized the solidity of his talents and even enlightened contemporaries considered his attitude toward slavery, tobacco, and temperance extreme. Conscientious, tenacious of opinion, boldly independent, and devoid of partisanship, sectarian or sectional, he was impervious to the derision and contempt which his convictions occasionally provoked: he formed conclusions deliberately, and before his death saw established many of the causes which he had upheld against incisive opposition. Without being either a prig or a Puritan, he was a zealous reformer; yet even those who impugned his principles admired his sincerity, catholic benevolence, and alertness to civic responsibility. The causes which he supported indicate him to have been one of the most remarkable Virginians of his generation in power of foresight, a pioneer of modern social reform.

[Cocke, Philip St. George (Apr. 17, 1809—Dec. 26, 1861), soldier, planter, writer on agriculture, was born at "Bremo," Fluvanna County, Va., third child of John Hartwell Cocke [q. v.] and his wife Ann Blaus Barraud. Inheriting the military and agricultural aptitude without the reforming instinct of his father, after attending the University of Virginia he entered the United States Military Academy, where he graduated with distinction in 1832; served as second lieutenant and as adjutant in the 2nd Artillery at Charleston, S. C., 1832-33; and resigned, Apr. 1, 1834, to manage his extensive plantation interests in Virginia and Mississippi. To this occupation he devoted his energies until the outbreak of the Civil War, but conducted his seven plantations so systematically that he found opportunity to advance Southern agriculture by precept as well as practise. He had an elevated conception of agriculture as a profession, and while indorsing sound technical training insisted that general culture was scarcely less desirable for the planter. As president of the Virginia Agricultural Society (1853-56) he stimulated interest in progressive farming, and pointed out the opportunity of such a body not only for collecting and disseminating useful farming knowledge but also for serving as a farmers’ protective association. Besides publishing one volume, Plantation and Farm Instruction (1852), and his Address to the Virginia Farmers’ Assembly (pamphlet, 1856), he contributed numerous short articles to

Cocke
Cocke

the press. From its beginnings he gave freely of time and money to the welfare of the Virginia Military Institute, served for nine years on its board, and founded there the first school of scientific agriculture in the state. When Virginia seceded he was appointed brigadier-general in the state service and was assigned, Apr. 21, 1861, the command of the important military district along the Potomac. Commissioned a colonel in the Confederate provisional army, after having charge of the mustering of volunteer forces throughout Piedmont Virginia, on May 9 he began the concentration of troops at Manassas Junction. He commanded the 5th Brigade of Beauregard’s army in the Manassas Campaign, and was thanked by Beauregard for strategic skill at Blackburn’s Ford. At First Manassas, with Evans’s demi-brigade and unattached companies also under his command, he was assigned to the Confederate left, along Bull Run. Although his projected advance upon Centreville was abandoned because of the Federal flank movement, he sustained Schenck’s attack on the Stone Bridge and Lewis’s Ford, sent regiment after regiment to the support of Johnston, and in the afternoon “led his brigade into action on the left with alacrity and effect” (“Confederate Military History,” III, 586). After eight months’ active service, during which he was appointed brigadier-general in the Confederate provisional army, he returned in shattered health to his home, “Belmead,” in Powhatan County, where, overwrought and naturally impetuous, he took his own life. His untimely death evoked widespread regret, official and personal, for he was known as a skilful and chivalrous soldier, a modest and benevolent citizen. He married, June 4, 1834, Sally Elizabeth Courtney Bowdoin, by whom he had four sons and seven daughters.

A. C. G. Jr.

Cocke

who had come to Virginia from England as early as 1628. William Cocke studied law but never learned the rules of English grammar and his spelling was his own. He was twice married; to Sarah Maclin and to the widow Kissiah Sims.

About the year 1774 he moved to the frontier of settlement in the Holston Valley near the present boundary between Virginia and Tennessee. As captain of militiamen he helped guard the frontier during Lord Dunmore’s War. He fought the Indians and the Tories during the Revolution but was charged with cowardice. In 1775 he had followed Daniel Boone into Kentucky and was there a member of the House of Delegates of the abortive colony of Transylvania. Two years later he served with his “Dear Old & ever admired friend,” Thomas Jefferson, in the Virginia Assembly. In 1778 and on several subsequent occasions he sat in the legislature of North Carolina. When some of the western counties of North Carolina (the present East Tennessee), attempted during the years 1784-88 to establish themselves as the State of Franklin, Cocke was a leader in this movement for separate statehood. He helped form the constitution for the short-lived state; he was a member of its legislature; he served on its Council of State; he was one of its brigadier-generals; he negotiated in its name with the Cherokee Indians; he was its unseated delegate to the Congress of the United States, where unsuccessfully he presented its memorial for recognition; and he was also its commissioner to North Carolina in a futile attempt to persuade the mother state to recognize its existence. When the State of Franklin had ceased to exist, he returned as a member to the North Carolina legislature. When his western counties became the Southwest Territory, Cocke was a member of the territorial legislature and sponsored the bill for the creation of Blount College (the present University of Tennessee). In 1796 he was a member of the convention that transformed the territory into the State of Tennessee, and was sent by this state to Congress as one of its first senators. In 1809 he was defeated by Willie Blount for governor of Tennessee, but the legislature immediately chose him to be a judge of the circuit court. For this office he was temperamentally unfit. He was emotional, passionate, quick-tempered, intolerant. He loved his friends and hated his enemies and quarreled with both. He was an able orator but a poor judge. He was charged with showing partiality to his friends, impeached, and in 1812 removed from office. Nothing daunted, he volunteered for the campaign in East Florida, returned to take a seat in the Tennessee legislature, and from this rushed
Cockerill

off at the age of sixty-five to fight as a private in the Creek War with such bravery as to win the praise of Andrew Jackson. In 1814 he was appointed United States Agent to the Chickasaw Indians, but he failed to gain their confidence and was soon superseded. He spent his remaining years in Mississippi, and to round out his experience as a law-maker, he served in 1822 in the legislature of that state.

COCKERILL, JOHN ALBERT (Dec. 4, 1845-Apr. 10, 1896), journalist, was born in Adams County, Ohio, the son of Joseph Randolph and Ruth (Eylar) Cockerill. During the Civil War his father was colonel of the 70th Ohio Volunteers. Enlisting at fifteen, John saw service as a drummer boy with the 24th Ohio Regiment, 1861-63, and upon being mustered out by the War Department, reenlisted as a bugler in the artillery. Before the war he had played “devil” in a small printing office and after he left the army he went to the Scion of Temperance, published at West Union, Ohio. His first practical work as a printer was with C. L. Vallandigham [q.v.], publisher of the Empire (later the Ledger) at Dayton, Ohio, and his first reportorial work was in 1870 in Cincinnati on the Cincinnati Enquirer of which, in 1872, he became managing editor. Four years later he left the editorial desk to become a correspondent for the Enquirer in the Russo-Turkish War. On his return to the United States he joined the staff of the Washington Post before going to Baltimore to become managing editor of the Gazette in 1878. From that city he was taken to St. Louis by Joseph Pulitzer to aid in publishing the St. Louis Post-Dispatch. In editorial charge while Pulitzer was in New York, Cockerill had, in 1882, criticized editorially the conduct of the law firm of Broadhead, Slayback, & Haeussler for accepting a retainer of $10,000 from St. Louis in a suit against the Laclede Gas Company only to abandon the city and defend the corporation. On Oct. 5, he shot and killed Col. A. W. Slayback after a fist fight started by the latter to force an editorial retraction. Cockerill insisted that he had shot in self-defense, but because of the bitter feeling the affair aroused left on an extended trip. In the spring of 1883 he resumed work with Pulitzer who, after the purchase of the New York World, wanted his former associate to take charge of the news end. Fertile in suggestions, Cockerill rose to be editor-in-charge—a position he resigned in 1891 when his request for a controlling share in the World was refused. Then he purchased an interest in the New York Commercial Advertiser with which he remained until Sept. 28, 1894. He joined the staff of the New York Herald early in 1895, and was assigned to the Far East as a special correspondent in China and Japan. Homeward bound by way of Egypt, he was stricken with apoplexy in Cairo where he died. Fearless and fiery, a typical Southwesterner “upon whom the wear and tear of newspaper management made no abrasion,” he was a great fighting editor in the period of the sensational press.

[Cockerill is given in Encyc. of the Hist. of St. Louis (1899), ed. by Wm. Hyde and Howard L. Conard, while eastern chapters are found in Jos. Pulitzer’s His Life and Letters (1924), by Don C. Seitz. This Is the Life! (1926), by Walter H. McDougall, pp. 203 ff., contains the financial arrangement between Pulitzer and Cockerill. See also Elizabeth Bisdak, Life and Letters of Lofscadio Hearn (1906); Bill Nye, His Own Life Story (1926); obituaries in the N. Y. Herald and the World (N. Y.), Apr. 11 and 12, 1896; sketch in Mid. Order of the Loyal Legion, Ohio Commandery, Circular No. 20, series of 1897.]

Cockran

COCKRAN, WILLIAM BOURKE (Feb. 28, 1854-Mar. 1, 1923), lawyer, congressman, was born in County Sligo, Ireland, the son of Martin and Harriet (Knight) Cockran. He was educated in the schools of Ireland and later studied in France. Although his parents intended him to enter the Church, he was not so disposed, and at the age of seventeen he came to New York to live his own life. He first worked as a clerk in a department store, then became principal of a public school in Tuckahoe, N. Y., and devoted his nights to the study of law. He was admitted to the bar in 1876, practised for two years in Mount Vernon, and then moved to New York. Leaders of the Irving Hall Democracy, a faction opposed to Tammany, made him their spokesman at the Democratic State Convention at Albany in 1881. Two years later, John Kelly, leader of Tammany, invited him to join the Wigwam, and he was made counsel to the sheriff of New York County.

In the Democratic National Convention of 1884, Cockran, a Tammany delegate, forced a hostile convention to listen to his speech attacking the nomination of Grover Cleveland. His greatest dramatic triumph occurred during the turbulent convention of 1892, when he was forced to place David B. Hill in nomination at two o’clock in the morning. Outside a terrible storm was raging. Rain was pouring through the leaking roof. Above the thunder and the jeers of the impatient Cleveland majority was heard the bold defiance of Cockran: “If New York’s candidate
Cockran and his supporters cannot receive fair treatment, New York will withdraw from this convention." Thereafter the Hill speakers were heard (Arthur Wallace Dunn, *From Harrison to Harding*, 1922, vol. I, 95–96).

Cockran was first elected to the House of Representatives in 1886, and again in 1890 and in 1892. In the following year he delivered an eloquent address against the free coinage of silver (*Congressional Record*, 53 Cong., 1 Sess., App., p. 113), which was a forerunner of his break with Bryan and the Democratic party on the silver issue in the campaign of 1896. In that year he campaigned for William McKinley. His "Sound Money" speech in Madison Square Garden is regarded by many as the peak of his oratorical efforts. His switch to McKinley and his return to the Democratic fold in 1900 were made the target for charges by the press that he was paid well for his speeches (*New York Journal*, Oct. 26, 1897). Cockran denied the charges on the floor of the House emphatically and with dignity (*Congressional Record*, 58 Cong., 2 Sess., pp. 5460, 5646, 5750).

In 1900 he returned to the Democratic party and supported Bryan for president, making "the brutal imperialism of McKinley" the issue. He was elected to Congress again in 1904 and served until the end of 1909. He had, in the meantime, broken with Charles F. Murphy, who had become leader of Tammany Hall, and he once more found himself outside the party. He then embraced the cause of Roosevelt, whom he had frequently denounced in unsparing terms (see e.g., *Congressional Record*, 58 Cong., 2 Sess., pp. 5654, 5656). He campaigned effectively for the Progressive ticket in 1912, although he himself was unsuccessful in seeking election to Congress. After a period of comparative political inactivity, he returned to the Democratic party once more, and, at the National Convention at San Francisco in 1920 delivered a ringing oration nominating Gov. Alfred Smith of New York for the presidency (*New York Times*, July 1, 1920). Later in the year he was returned to Congress, where he served until his sudden death, which occurred on Mar. 1, 1923, the morning after his sixty-ninth birthday dinner. He was married three times; first, to ——— Jackson, sister of the Rev. Father Jackson of St. Anne's Church, New York; second, to Rhoda E. Mack, daughter of Jonathan Mack; third, to Anne L. Ide, daughter of Gen. Henry C. Ide.

Cockran was a friend of organized labor and opposed compulsory arbitration and labor injunctions ("The Law's Delays," *Ohio Law Reports*, VI, 381–416). Himself an immigrant, he fought against any restrictions on immigration or naturalization (*Congressional Record*, 59 Cong., 1 Sess., p. 9192, 1906; 67 Cong., 1 Sess., p. 518, 1921). He was outspoken in his condemnation of the Eighteenth Amendment and the Volstead Act, and led an unsuccessful attempt to place a plank in the Democratic platform at the 1920 convention permitting the manufacture in homes of cider, light wines, and beer (*New York Times*, July 3, 1920; see also last public statement in *New York Times*, Feb. 11, 1923).

He was a picturesque and commanding figure. Tall, burly in his later years, with a leonine head, deep-set eyes, a thoughtful forehead, a mobile face, described as containing "something Spanish, Celtiberian as well as Celtic," he possessed in addition a deep and resonant voice. An Irish brogue gave an exotic quality to his speech. He was a lawyer of ability. The most celebrated case with which he was associated was that of Thomas J. Mooney, in whose behalf in 1918 he successfully besought the intervention of President Wilson to prevent execution of the death sentence by the state of California.

[In addition to sources mentioned above, see W. Bourke Cockran, *Memorial Addresses Delivered in the House of Representatives*, 68 Cong., May 4, 1924 (1925); *N. Y. Times*, *N. Y. Herald*, Mar. 2, 1923. Cockran papers, sixty-two portfolios and four bundles of MSS, in the N. Y. Pub. Lib., comprise chiefly his speeches and a collection of newspaper clippings relative to his death.]

R. B. M.

COCKRELL, FRANCIS MARION (Oct. 1, 1834–Dec. 13, 1915), Confederate soldier, senator, son of Joseph and Nancy (Ellis) Cockrell, was born near the little village of Columbus, fifteen miles from Warrensburg, Mo. His father came from Kentucky to Missouri in 1831 and was the first sheriff of Johnson County. Francis was reared on a farm, attended the rural log school-house, entered Chapel Hill College, Lafayette County, Mo., and graduated with honor in 1853. He then studied law, was admitted to the bar in 1855, and began the practise of his profession at Warrensburg. At the outbreak of the Civil War he allied himself with the Southern cause and enlisted. In a single year he rose from the rank of private to that of brigadier-general. He took part in many of the important battles of the Civil War from Carthage to Vicksburg and from Vicksburg to Mobile, was five times wounded, and was three times taken prisoner. When not in battle, he drilled his troops so well that "Cockrell's Brigade" of fighting Missourians was said to be one of the best-drilled and most courageous brigades in the Southern army. After the war, he returned to Missouri and again began the practise of his
Cockrell

profession in partnership with Gov. Thomas T. Crittenden [q.v.], but his ambition soon led him into politics. In 1872 he became a candidate for governor of Missouri and although he was defeated in the Democratic state convention by Charles H. Hardin it was only by one-sixth of a vote. He made such an earnest campaign for his successful rival that in 1874 he was chosen United States senator to succeed Carl Schurz. He served in this capacity from 1875 to 1905.

In the latter year, a Republican legislature, after a factional deadlock, elected William Warner to succeed him. President Roosevelt's comment on this change was that the people of Missouri had lost a faithful servant but that the government would not lose him. On the day Cockrell left the Senate, he was appointed by Roosevelt a member of the Interstate Commerce Commission and remained a member until Dec. 31, 1910.

He was appointed United States commissioner to adjust the boundary between Texas and New Mexico in March 1910. Later he served as a civilian member of the Board of Ordnance and Fortifications. In the Democratic National Convention in St. Louis in 1904 he was nominated for the presidency by Champ Clark and William J. Bryan.

While the greater part of Cockrell's service in Congress was as a minority member his opinion was valued as much by his Republican colleagues as by those of his own party. There was something about the man that drew people to him and made them repose confidence in his integrity, honesty, and ability. His political opponents in Washington were glad to grant him any personal favor, while in Missouri he was idolized. He was intelligent and far-seeing and his indorsement of any enterprise was evidence of its merit. An uncompromising Democrat, he held positions of honor and trust under two Republican administrations. He was commanding in appearance, being over six feet tall and weighing two hundred pounds. He usually wore a linen duster and preferred a corn-cob pipe. He had a remarkable memory and could call his acquaintances by their first names without hesitating. Simple in manner and dress, his figure was a familiar one in every county in his state. He was married three times: first, in 1853 to Arethusa D. Stapp; second, in 1866 to Anna E. Mann; third, to Anna Ewing.

F.C.S. 7.

Coddington

Coddington, William (1601-Nov. 1, 1678), governor of Aquidneck, was born in Boston, England. By his thirtieth year he had achieved substance and position. At about the same time as John Winthrop (1630), he came to Massachusetts as an Assistant (director) in the Bay Company. He himself relates that he built in Boston the first good (brick) house. On Aug. 6, 1633 he was chosen with others to oversee the building of a sufficient cart bridge over Muddy River and another over Stony River. On Mar. 14, 1635 he was appointed to the committee on military affairs. During 1634-36 he was the Bay Company's treasurer, and in 1636-37 was a deputy. In a secular way he was of the John Winthrop order, shrewd and conservative; but in the way of religion he differed therefrom, being touched with the new spirit—a spirit found rather among the poor and lowly than among the rich and mighty: the spirit of Antinomianism or salvation by grace. A devotee of this spirit in the Bay Company was Mistress Anne Hutchinson [q.v.], and when in 1637 she was haled before the Massachusetts General Court for "trading the ministers and their ministry in this country," Coddington was bold enough to enter protest in her behalf. Anne Hutchinson was banished. As for Coddington, banishment did not at once overtake him, but in 1638 he, together with Dr. John Clarke and other liberals, withdrew to the island of Aquidneck (Rhode Island) which by help of Roger Williams had been purchased from the Narragansett Indian chiefs Canonicus and Miantonomo. Here at Pocasset (Portsmouth) they set up an Old Testament government of Judges and Elders, electing Coddington judge. But hither straightway came Anne Hutchinson and that arch-heretic of early New England, Samuel Gorton [q.v.]; whereupon in 1639 the Coddington party in some dismay betook themselves to the south side of Aquidneck and on May 16 founded Newport.

For a time Portsmouth and Newport maintained a divided life, but in 1639-40 they combined, formally declaring the new commonwealth a "Democracie or Popular Government" under the "Powre of the Body of Freemen orderly assembled, or the major part of them"; and "none [was to] be accounted a delinquent for Doctrine." Coddington was then elected governor. His steadfast aim thenceforward was to keep his colony of Aquidneck an independent factor, and of that factor to keep himself the head. In 1644 Roger Williams secured from Parliament a patent uniting Aquidneck, or Rhode Island, to his own mainland settlement of
Codman

Providence Plantations. This patent Coddington in 1651 succeeded in having set aside, so far as Aquidneck was concerned, by obtaining a patent creating Aquidneck a distinct colony with himself as governor in perpetuity. In consequence, not only were Williams and Providence Plantations alienated, but in large degree Coddington's own followers, and, in October 1652, Parliament annulled the grant. Coddington thereupon fled to Boston and temporized; but at length in 1656, during the régime of Oliver Cromwell, resigned in toto his high pretensions. "I, William Coddington," he wrote, "doe freely submit to ye authoritie of his Highness in this colonie as it is now united and that with all my heart."

As a would-be autocrat, Coddington tried every shift and failed. He made divers overtures to be taken, with his colony, under the shelter of the New England Confederation, and he sought the support of the Dutch of New Netherland under Peter Stuyvesant. Failure, however, did not attend him as a merchant. At Newport, prior to 1651, he built a "towne house," and he conducted a large Newport estate on which he bred sheep, cattle, and horses; the latter for shipment to Barbados. Late in life he espoused Quakerism, and thus having clarified himself anew, was, in 1674, 1675, and 1678, honored with the chief magistracy of Rhode Island and Providence Plantations as constituted under Charles II in 1663. He was thrice married: (1) to Mary Mosely, who died in 1630; (2) to Mary ——, who died in 1647; (3) to Anne Brinley, who died in 1708. He had thirteen children. In 1678 he died. Roger Williams (ever to Quakers little charitable) says of him during King Philip's War: "A poor man came to Mr. Coddington in these late bloody distresses and offers to buy a bushel of corn for his poor Wife and Children in great want. Mr. Coddington, though abounding, would not let this poor soul have a bushel except he would pay him a week's work for it. . . . Alas why doth the Pope, Cardinals, Bishops, Doctors, Presbyters, Independents, Baptists, Foxians prate of the Christian's name, and new and old New England talk of Religion?"

CODMAN, JOHN (Oct. 16, 1814—Apr. 6, 1900), sea captain, author, was born in Dorchester, Mass., the son of John and Mary (Wheelwright) Codman. His father, son of a prosperous Boston merchant of the same name, was pastor of the Second Parish in Dorchester from 1808 till his death in 1847 and a sturdy upholder of the old orthodoxy against Unitarians and other schismatics. His hospitable mansion was a favorite gathering place for clergymen, who would stop there on their way to Boston and furnish the children of the family with an extensive though disorderly theological education by asking doctrinal questions hot and heavy from dinner till bedtime, while the making devastating inroads into their host's supplies of rum and smoking tobacco. To them young Codman listened with interest, but with even more interest to the reminiscences of his maternal grandfather, a Newburyport sea captain. After two years (1832-34) at Amherst College he went to sea in a clipper ship. His nautical career lasted till the close of the Civil War. He made numerous trips to China and the East Indies, during the Crimean War commanded the William Penn, which carried troops from Constantinople to the Crimea, and during the Civil War was captain of the Quaker City, which transported stores to Port Royal, S. C. Once, when his ship had been run down in mid-ocean by a larger vessel, he nevertheless succeeded in bringing his command safely to New York; for this feat the underwriters presented him with a silver service. In December 1864 he took the steamer Cotopaxi to Rio de Janeiro and sold her to the Brazilian government. The next year he returned to Brazil and for a few months engaged in the coastwise trade. On many of his voyages he was accompanied by his wife, Anna G. Day of New York, whom he had married Nov. 3, 1847. Throughout his active life he was an enthusiastic horseman, sometimes traveling from Boston to New York on horseback. At one time he owned a ranch in Idaho. He wrote vigorous English, his books being Sailors' Life and Sailors' Yarns (1847), "By Captain Ringbolt," Ten Months in Brazil (1867), The Round Trip (1879), describing a tour of the western states, Winter Sketches from the Saddle (1888), and An American Transport in the Crimean War (1896). He was also the author of numerous pamphlets in favor of free ships and shipbuilders' materials and against subsidies for the merchant marine. He died at his daughter's home in Boston after a short illness.

G. H. G.
Cody

CODY, WILLIAM FREDERICK (Feb. 26, 1846–Jan. 10, 1917), scout, showman, better known as “Buffalo Bill,” was born on a farm in Scott County, Iowa, the son of Isaac and Mary Ann (Leacock) Cody. The parents were from Ohio. The father, abandoning his farm, turned to stage-driving for a time, afterward (1854) moving with his family to Salt Creek Valley, in the vicinity of Fort Leavenworth, Kan. On his death, in the spring of 1857, the eleven-year-old son undertook to fill his place as breadwinner. He got work as a “cavy boy” to one of the supply trains of the expedition against the Mormons, and later as a mounted messenger with the freighting firm of Russell, Majors & Waddell. Until his twelfth year he had resisted all efforts to induce him to learn his letters, but in the winter of 1857–58 he entered school, where he acquired the art of writing his name and of reading simple words. In the following spring he again found employment. The gold fever drew him to Denver in 1859, but he came back penniless. In April 1860, he was hired as a rider for the Pony Express, but it is uncertain how long he continued. In the summer of 1861 he joined a local organization of Jayhawkers, and in 1863 he served as a scout with the 9th Kansas Cavalry in operations against the Kiowas and Comanches. In the winter of the same year his mother died. In the following February he enlisted in the army, serving as a scout for Gen. A. J. Smith in Tennessee, and later as a trooper in the operations against Price in Missouri and as a scout on the plains.

On Mar. 6, 1866, he was married to Louisa Frederici in St. Louis. From some time in 1867 to May 1868, he was employed by Goddard Brothers, food contractors to the Kansas Pacific railway construction camps, to furnish buffalo meat, and by his remarkable exploits with the rifle earned the nickname which he adopted and by which he was ever afterward known. For the next four years he did further service with the army, becoming chief of scouts of the 5th Cavalry. He had a nominal residence at Omaha, and in the fall of 1872 was elected to the lower house of the Nebraska legislature, but he declined to serve. His friend, Col. Judson, “Ned Buntline,” who had already glorified some of his adventures in popular fiction, now wrote a play, Scouts of the Prairies (or Plains, as it was sometimes billed), and Cody produced it, taking the leading rôle for himself. During the first season, which opened in Chicago, Dec. 16, 1872, he had with him in the cast “Texas Jack” Omohundro, and in the next season “Wild Bill” Hickok. In this play and in its two or three successors, he kept to the stage, except for an interval of scouting in 1874, until the close of the season of 1875–76. The Sioux War brought him back to the frontier, and he again became chief of scouts of the 5th Cavalry. On July 17, 1876, at War Bonnet Creek, west of the Red Cloud agency, occurred the famous duel between Cody and Yellow Hand, son of the Cheyenne chief Cut-Nose. On the junction of Merritt with Crook and, later, of the combined force with Terry and Miles, Cody continued for a short time to scout, performing some of the most daring exploits of his career. In the fall he was again on the stage, playing to large audiences in various parts of the country.

He had in the meantime formed a partnership in the cattle business with Maj. Frank North, and a large ranch was established sixty-five miles north of North Platte, Nebr. About the same time he bought a farm on the outskirts of North Platte, and there for many years he made his home. He continued on the stage until 1883, when, in association with Maj. John M. Burke and Dr. W. F. Carver, he started his “Wild West” exhibition. In the following year Carver withdrew, and Nate Salsbury became a partner with whom Cody was to remain more or less continuously for the rest of his life. In 1894 he acted as guide to Prof. O. C. Marsh’s fossil-hunting expedition to the Big Horn Basin. Here Cody determined to settle. He received a large land grant from the state, on which a town was laid out which his friends insisted on naming Cody, and he began soon afterward the development of his famous ranch. His subsequent years were divided between the ranch and the show, which was frequently in financial difficulties. At the close of the season of 1916 he and his wife went to Denver. His health broke in December, and in January the end came suddenly. His body was carried to the capitol, and after being viewed by immense throngs, was placed in a temporary vault. On June 3, in accordance with his expressed wish, it was buried on the top of Lookout Mountain, near Golden. His wife died in 1921 and was buried beside him.

Much of the material for a biography of Cody is found only in his own statements. It is no derogation of his many substantial qualities to say that he was an untrustworthy chronicler of events. He dealt with facts in a large, free way, and he had a tendency after he became famous to make himself the central figure in the episodes he recounted. Most of his statements are inaccurate; many are preposterous; and he sanctioned on the part of his publicity agents

260
Coe

a gross indulgence in fiction. He was better in action than in narration. His merits as a scout have been widely attested, perhaps by no one more authoritatively than by Gen. Eugene A. Carr, onetime commander of the 5th Cavalry. In a letter of July 3, 1878, Carr wrote that the eyesight of Cody was better than a good field-glass; that he was the best trailer within the writer's knowledge—a perfect judge of distance and of the "lay" of a country—and that he never tired, but was always ready to go. He was conspicuous in his attire, and until late in life he remained lithic and active, a masterful rider and an expert shot.

[The most dependable work on Cody is that of Richard J. Walsh, *The Making of Buffalo Bill* (1928). Other sources are *Who's Who in America*, 1916-17; *The Life of Hon. Wm. F. Cody, Known as Buffalo Bill; An Autobiography* (1879), republished in many guises; Helen Cody Wetmore and Zane Grey, *Last of the Great Scouts* (1899); Louisa Frederici Cody and Courtney Ryley Cooper, *Memories of Buffalo Bill* (1919); Jos. Mills Hanson, *Conquest of the Missouri* (1909); Homer W. Wheeler, *Buffalo Days* (1925); various newspaper obituaries. See also the bibliography in Walsh's work.]

W. J. G—t.

COE, GEORGE SIMMONS (Mar. 27, 1817—May 3, 1896), banker, son of Adam Simmons and Ann (Pease) Coe, was a descendant in the sixth generation from John and Priscilla Alden, and was born at Newport, R. I. His father was a cabinetmaker, and could afford only a common school education for his son. At fourteen the latter began working in a general country store; in 1835 he transferred to a local bank and there became a "general clerk," whose duties involved sweeping out the establishment and acting as messenger as well as keeping books. Throughout these early years, however, the boy maintained the habit of study and was able to educate himself much beyond the point at which he had been obliged to leave school. In 1838 he was offered a place in the private banking house of Prime, Ward & King in New York City. There he remained until 1846, at which time his firm sent him to Cincinnati as their representative in the development of new business. Returning to the East after a comparatively short stay, he became cashier of the Ohio Life Insurance & Trust Company in New York City, an enterprise with which he had been acquainted during his residence in Ohio. This connection, however, did not continue long, for he found himself less interested in general finance than he was in actual banking. After a venture as partner in the private banking house of Gilbert, Coe & Johnson which failed in 1854, in 1856 Coe was elected cashier of the American Exchange Bank, at last finding himself in a connection which enlisted his full interest and enthusiasm. Within a few months he became vice-president, and in 1860 was elected president, continuing to hold that office for thirty-four years. In this capacity he was prominent among those New York bankers who came to the aid of the government in the disposal of bonds at the critical period after the battle of Bull Run.

During the years after Coe's return to New York from Cincinnati, he was greatly interested in the project then under discussion for the organization of a clearing house in New York. It is often stated that the idea originated with Coe, but the various plans for organization of a clearing house which have been carefully collected by the New York Clearing House Association do not include any by him. This fact probably indicates that he acted in company with others to develop and round out a notion which was, in a certain sense, common property. He served the organization in various important phases of committee work and eventually became president of it, and encouraged the steady expansion of its service.

Besides this major interest and an active membership for thirty-seven years in the Chamber of Commerce, he was a trustee or a director of a number of New York corporations, president of the American Bankers Association in 1881, and a member of the Presbyterian Board of Foreign Missions. On June 15, 1843, he was married to Almira Stanley of New Britain, Conn., who died in 1880; his second wife was Mary E. Bigelow of Englewood, N. J. It was in Englewood that he died.

H. P. W.

COE, ISRAEL (Dec. 14, 1794—Dec. 18, 1891), brass manufacturer, was born at Goshen, Conn., the eldest son of Abijah and Sibyl (Baldwin) Coe, and a descendant in the eighth generation from Robert Coe, Puritan, who came to America in 1634, and settled with the first colony at Wethersfield, Conn., in 1635. Abijah Coe, a blacksmith, was successful enough to afford his oldest son (who was seriously handicapped by the loss of his right arm through a hunting accident) an education in the district school at Winsted, Conn., with two additional years (1811-12) at Winsted Academy. In 1813 Israel made his first venture in business as a clerk in
Coerne

The office of the Torrington Cotton Factory. When this firm failed, the new proprietors, Wadham & Thompson, made Coe their resident manager in charge of the factory. In this position Coe became rather prominent in the affairs of the town and served as constable and collector. On Sept. 17, 1817, he married Nancy Wetmore, daughter of Ebenezer and Elizabeth (Miller) Wetmore of Torrington. Wadham & Thompson failed in 1821, and Coe moved to Waterbury, Conn., where he kept a public-house and took an active part in local politics, representing Waterbury in the Connecticut House in 1824 and 1825. In this latter year he also made his first connection with the brass industry as a bookkeeper in the firm of "A. [Aaron] Benedict," manufacturer of gilt buttons. In 1829 he purchased the interest of one of the partners, and a new partnership was formed under the name of Benedict & Coe, with a capital of $20,000. This partnership expired in 1834, and Coe withdrew to organize a business under his own name, with Anson Phelps, John Hungerford, and Israel Holmes as partners. The firm which was soon called the Wolcottville Brass Company, was one of the earliest to roll brass for its own use and for sale. It was also the first in the country (1834) to make brass-ware by the "battery" process. In this process kettles were hammered into shape by repeated blows of a trip-hammer under which the workman held the cast brass blank in a concave anvil. Many pieces were spoiled by cracking, and after workmen brought from England by Holmes proved no better than the native workers, Coe decided that the trouble lay in the metal used. He accordingly, in 1842, visited the two European establishments using this process and obtained the proper mixtures and annealing methods. Applying this information to the battery process he made it the most satisfactory method of manufacture until it was superseded by the spinning process in 1851. In 1843 Coe again entered politics and represented the Wolcottville district in the Connecticut Senate. In 1845 he sold his interest in the brass business and moved to Detroit where he engaged in banking and the lumber business. While in Detroit (1850) he was instrumental in interesting Waterbury manufacturers in the establishment of a copper smelter there. To this end the Waterbury & Detroit Copper Company was formed, and built the first smelter to handle copper from the Lake Superior mines. In 1853 Coe moved to New York where he engaged in other business and lost his fortune. He then (1867) went to live in Bloomfield, N. J., where he remained twenty years, serving most of that time as a justice of the peace and commissioner of deeds for Essex County. About 1887 he returned to Waterbury, Conn., where he died at the age of ninety-seven. Coe's first wife by whom he had seven children, died on Aug. 30, 1838, and on Oct. 16, 1839, he married Huldah DeForest.

F. A. T.

COERNE, LOUIS ADOLPHE (Feb. 27, 1870–Sept. 11, 1922), composer, teacher, the son of Adolphe M. and Elizabeth (Homan) Coerne, was born in Newark, N. J. His father, of Dutch and Swedish extraction, was a man of brilliant mind and an accomplished linguist. After receiving his early education in Germany and France, young Coerne moved with his family to Boston, where he graduated from the Latin School in 1888. He then spent two years at Harvard studying harmony and counterpoint with John Knowles Paine, and violin, outside, with Franz Kneisel. In 1890 he went to the Royal Academy of Music at Munich, where he took organ and composition with Rheinberger, and violin and conducting with Abel. In 1893 he graduated with highest honors. Returning to Boston, he led a concert performance of his symphonic poem "Hiawatha." He was then called to Buffalo, as musical director of the Vocal Society, the Liedertafel, and the Church of the Messiah. From 1897 to 1899 he filled similar positions at Columbus, Ohio. On Dec. 14, 1897, he was married to Adele Turton. From 1899 to 1902 he was abroad, composing various works, and completing and editing Rheinberger's posthumous Mass in A Minor. Returning late in 1902, he headed the music department at the next Harvard summer school, and became associate professor at Smith College (1903–04). During the years 1904–05 he did research work at Harvard and in New York, as preparation for his book, The Evolution of Modern Orchestration (1908)—a subject for which he was well fitted by his own orchestral technique and modern style. This research won its author a Ph.D. degree (1905), the first given at Harvard for special work in music. Another sojourn abroad (1905–07) enabled him to hear his opera Zenobia, which was given at Bremen five times. This is said to have been the first American grand opera to be performed in Germany. Coerne returned to Troy, N. Y., being an active leader there for two years. He then became director of the conservatory at Olivet College, where he received the degree of Mus. Doc.
Coerne

His later wanderings took him to the University of Wisconsin, as professor and director of the music school, with outside work as church organist and chorus leader. A last change, in 1915, led him to New London, as professor in the Connecticut College for Women. For the final three years of his life he was also editor of the school and college department of the Oliver Ditson Company. His death took place in Boston.

As a composer, Coerne was very active, with 150 opus numbers to his credit, and many other works in manuscript. His melodic line is always well defined, and his harmonic settings rich in character, though they have something of the sameness of style that goes with a constant attempt at modernist effects. His best work was Zenobia, showing that queen first presiding at a celebration of victories won by her generals, then defeated by Aurelian, and finally spurning his love, to die, rather unhistorically, with her chancellor Selenos, the real object of her affections. The first act, which includes priestly rites, military display, dances of rejoicing, and triumph over prisoners and tribute-bearers, contains many clearly effective and beautiful numbers, and has been classed with the tonal pageantry of L'Africaine and Aïda. The second and third acts, however, show a lack of characterization, the modernist chords creeping in throughout, where a contrast of emotional styles would have been preferable. Coerne's earlier opera, A Woman of Marblehead, like his cantata Skipper Ireson's Ride, owes its inspiration to the history and literature of the old colonial town. The Maiden Queen and The Bells of Beaujolais are operettes. Another ambitious work was the ballet Evadne, a concert suite from it consisting of a melodious introductory march, a droll "Clowns' Dance" in bolero rhythm, a varied and well-contrasted introduction to Act II, a "Valse de Salon," a spicy "Devils' Dance," and a strong waltz finale, working up to a great climax with the sudden introduction of voices. The melodrama Sakuntala was a success in a field that deserves more attention from composers, the spoken text against a musical background being not only effective, but well suited to concert performance. Coerne's incidental music to The Trojan Women deserves mention also. For orchestra, besides "Hiawatha," there are two overtures, a "Fantaisie," a "Tone Picture," a "Tone Poem," and "On Mountain Crests." A "Jubilee March" for military band became well known. For violin Coerne wrote the "Romantic" concerto, a "Swedish Sonata," and a "Concertino" with piano. Other chamber works include various trios, concertos for small forces, a string quartet, and a striking set of three piano trios in canon. Among vocal works, his cantatas (mostly with orchestra) include Beloved America, Until the Day Break, The Landing of the Pilgrims, a Dedication Ode, A Song of Victory, etc. The Man of Galilee and The First Christmas are in the sacred field, as are the Morning and Communion Services, and a six-voiced Mass. Many songs and piano pieces, with some anthems, part-songs, organ pieces, and violin works, complete a long and worthy list.

A. E.

COFER, MARTIN HARDIN (Apr. 1, 1832-Mar. 22, 1881), Confederate soldier, jurist, the son of Thomas and Mary Cofer, was born at Elizabethtown in Hardin County, Ky. His mother was a daughter of Martin Hardin, for whom he was named and from whom the county took its name. His grandfather, William Cofer, came from Virginia and settled in Bullitt County, Ky., in 1781. Martin's boyhood was spent upon a farm and what little education he received at this time came largely through his own efforts. When twenty years of age he began teaching in the common schools and at the same time commenced the study of law. The next year he married Mary E. Bush and removed to Illinois where he remained three years, not returning however before he had been admitted to the Illinois bar. In 1856 he began to practise his profession in Elizabethtown and continued there until the beginning of the Civil War.

Being a Democrat and a Southern sympathizer of pronounced views, he began to take an active part in the heated controversy in 1860. In this year he became the editor of the Elizabethtown Democrat and after the election of Lincoln tried to bring about the secession of Kentucky. He ran for the legislature in the August (1861) election on the Southern Rights ticket and was defeated. Seeing no possibility now of forcing the secession of the state, he took the short cut of raising volunteers for the Confederacy. He helped to organize the 6th Kentucky Infantry, C. S. A., became its lieutenant-colonel, and fought with it in every engagement except Murfreesboro up to Aug. 30, 1864, being severely wounded at Shiloh in 1862. He was promoted to a colonelcy in 1863 and the next year, when Hood's army retreated from Atlanta into Tennessee, he was made provost-marshal of the Army of Tennessee. He showed great skill in re-
Coffey

organizing the scattered remnants of Hood's army after the disastrous defeat before Nashville. He then helped to lead them into North Carolina, there to join Gen. Joseph E. Johnston in time for the surrender near Durham.

After the war Cofer returned to Kentucky and took up his practise of law at Elizabethtown. In 1867 he published A Supplemental Digest of Decisions of the Court of Appeals of Kentucky, 1853-67, which became the standard authority for the state. After serving as judge of the circuit court (1870-74), in August 1874 he was elected associate justice of the state court of appeals and held this position until 1881 when he became the chief justice. Cofer was broad in his sympathies and attitudes and exact in his information. Not until March 1871 were his federal disabilities removed, by an act of Congress, yet two months later he violated Kentucky laws and court decisions by admitting negro testimony against white persons, holding that the Fourteenth Amendment so required. He died in Frankfort while yet in office.

E. M. C.

COFFEY, JAMES VINCENT (Dec. 14, 1846–Jan. 15, 1919), jurist, was born in New York City, the son of James and Catherine Coffey. His father was an Irish Nationalist and his mother a devout Catholic. Her Catholicism permeated and influenced Coffey's entire career. He had some ten years of formal schooling, in New York, Bridgeport, Conn., and Nevada City, Cal. His legal education he received in law offices in New York City, Virginia City, Nev., and San Francisco, being admitted to the bar of California in 1869. Despite his brief formal education he became a master of Latin classics. He never married.

Coincident with the commencement of his legal career, Coffey engaged in journalism, being for six years the leading editorial writer on the San Francisco Examiner. His editorials won recognition from many Eastern journals. He had a quality of rightness and of fair judgment that showed itself in this field of his labors as it later did in his legal career. His early editorials, like his later legal papers, were ably written in pure English.

He was a staunch Democrat, spending two sessions in the California legislature (1875-78) where he was notable as a fighter against special privilege. He sponsored many important mea-

sures during these sessions, such as those which placed the police and fire departments on a civil service basis, which reduced the car-fare from ten cents to five cents, and which subjected the rates of common carriers to state regulation. Few better speeches have been made on the question of protecting the public from corporate greed than that by Coffey in resisting the attempted "grab" of the San Francisco waterfront by railroads. His party never forgot his record in the legislature and proffered him many favors, among others: the Democratic nomination for the California constitutional convention; the nomination for attorney-general in 1879, which he declined; the judgeship of the superior court of San Francisco; the nomination for justice of the supreme court in 1890; and the nomination for Congress in the 4th California district in 1900, which he declined. He was also the choice of Democratic members of the legislature for United States senator in 1899, but failed of election. In 1882 he was elected judge of the superior court of San Francisco County and was assigned to the probate department. He held this position continuously for thirty-six years and was responsible for many new features of probate administration. He established the practise of setting attorney's fees by using a regular schedule based upon the value of the estate. Over $600,000,000 in estates was administered in his court during his career on the bench. Among these estates were those of Spreckles, Sharon, DeLaveaga, Leland Stanford, and Mark Hopkins. Coffey wrote several articles urging reforms—many of them since adopted—to decrease the cost and complexity of legal procedure. His opinions and as trial judge were published in six volumes known as Coffey's Probate Reports (Reports of Decisions in Probate, 1894-1916). Had it not been for their partial destruction in the San Francisco fire of 1906, these decisions would have filled twenty volumes. They are extensively used as authority in California courts to-day. They reflect a noble and generous nature combined with a mastery of English diction and law.

[An outline of Coffey's career may be found in Who's Who in America, 1918-19; the Recorder, a San Francisco legal newspaper, contains several short sketches of him. The Bar Asso. of San Francisco published in 1920 a memorial pamphlet dealing with his life. The Nation, a San Francisco Catholic newspaper, contains in the issue for Feb. 1919, a ten-column résumé of his career and character. See also San Francisco Examiner, Jan. 16, 1919.]

J. V. L.

COFFIN, CHARLES ALBERT (Dec. 30, 1844–July 14, 1926), president of the General Electric Company, son of Albert and Anstrus (Varney) Coffin, was born in Somerset County, Me. He graduated from the Bloomfield (Me.)
Coffin

Academy, and began his business career in Boston. His interest centered in the shoe and leather industry, and he soon helped to found the firm of Coffin & Clough, a shoe-manufacturing establishment at Lynn. He was married in 1872 to Caroline Russel of Holbrook, Mass. In 1883 he became one of the Lynn Syndicate, formed for the purchase of the American Electric Company of New Britain, Conn., the head of which was Elihu Thomson. The plant was moved to Lynn and the name of the Company changed to the Thomson-Houston Electric Company. Coffin himself knew little about electrical matters at this time, but he had a genius for organization and the ability to surround himself with the very best men in the technical field. He interested himself keenly in the work of such men as Elihu Thomson, Edwin J. Houston, and E. W. Rice. In 1892 the Thomson-Houston Company was consolidated with the Edison General Electric Company of New York in which all the activities and interests of Edison's incandescent lamp development had been merged. Coffin was elected president of the new firm, which took the name of the General Electric Company, and he held this office until 1913. From 1913 to 1922 he was chairman of the board of directors. The growth of the General Electric Company under Coffin's leadership was phenomenal. In 1873 the Company's gross business was twelve million dollars a year; in 1920 it was almost a million dollars a day. Coffin supported the work of the Company's engineers in developing the Curtis Steam Turbine which revolutionized the primary power sources in electric light and power stations. He indorsed the movement in 1901 to establish the research laboratory which has contributed not only to electrical development but to the advancement of pure science. T. C. Martin and S. L. Coles say: "Coffin stands supreme in contributing more to create the magnitude of the whole electrical industry than any one or many men, by his encouragement of invention along useful lines, by his financial powers, by his talent for organization, by his tireless energy, by his course in introducing and his abilities in selling new apparatus" (Story of Electricity, 1910, I, 82).

During the World War (1915) Coffin created the War Relief Clearing House. After this was consolidated with the Red Cross, he transferred his tireless energy to the latter. In recognition of his war work he was made an officer of the Legion of Honor (France); commander of the Order of Leopold II of Belgium; and a member of the Order of St. Sava of Serbia. He aided in the establishment of American scholarships for France and was generous in assisting young people, both in America and abroad, in their efforts toward an education. The Charles A. Coffin Foundation, created by the Board of the General Electric Company at the time of his retirement from active participation in its affairs, carries on some of his educational work through the award of fellowships to college graduates interested in continuing their research activities. He was a modest man who shunned publicity always and who found joy in his domestic life, his books, and his flowers.

[Electrical Record, Aug. 1926; Eng. News-Record, July 22, 29, 1926; the Link (Gen. Electric Co.)] E. Y.

COFFIN, CHARLES CARLETON (July 26, 1823–Mar. 2, 1896), war correspondent, writer, gained fame under his pen-name, Carleton, and found a direction for his later writing by his success as a correspondent in the Civil War. He was born in Boscawen, N. H., son of Thomas Coffin and Hannah Kilburn, grew up on a farm, and had only the education of village school and academy. After his marriage to Sallie Russell Farmar, Feb. 18, 1846, he worked at farming and surveying for a time. In 1852, in association with his brother-in-law, Moses Gerrish Farmer [q.v.], he installed in Boston the first electric fire-alarm system. He had already tried his hand at writing, and in 1853 definitely took up newspaper work, serving as assistant editor of the Boston Atlas, 1856–57, and as correspondent of the Boston Journal in the Middle West in 1854 and again in 1857 and 1860. He was in Washington at the outbreak of war, made his first great success by his eye-witness account of Bull Run, and from then until the close of the war was almost constantly at the front, with Grant in the West from December 1861 to June 1862, with the ironclads off Charleston in April 1863, and with the Army of the Potomac in almost all the important engagements from the Wilderness to the fall of Richmond. More than once, as at the capture of Fort Donelson, at Gettysburg, and at the occupation of Charleston, his telegraphic dispatches to the Journal gave the first definite news. Nearly six feet in height, an abstainer from liquor and tobacco, with handsome, open face, and a reputation for courage and absolute trustworthiness, he had also the assurance essential to his profession. "He was the cheekiest man on earth for the sake of the Journal and the people of New England. . . He would talk to the commander as no civilian could or would . . . and Grant always welcomed it" (soldier's statement, Griffis, p. 94). "Carleton" exploited his war experience in many volumes: My Days and Nights on the Battlefield (1864), Following the Flag (1865), Four Years of Fighting (1866, republished, 1881 and 1896, 265
as The Boys of '61, and a series entitled Drumbeat of the Nation, Marching to Victory, Redeeming the Republic, Freedom Triumphant (1888-91). He was in Europe for sixteen months, 1866-67, and thence went eastward through India, China, and Japan to San Francisco and thus home, describing his journey in Our New Way Round the World (1869). A popular book, The Seat of Empire (1870) was the outcome of a subsequent tour in the West. Turning to books for youth, Coffin employed his vigorous, graphic style and familiarity with New England life in The Boys of '76 (1876), The Story of Liberty (1879), Old Times in the Colonies (1881), Building the Nation (1883), and Daughters of the Revolution (1895). He wrote also lives of Garfield (1880) and Lincoln (1892); two novels, Winning His Way (1866) and Caleb Krinkle (1875); and a History of Boscawen and Webster (1878). His children's books, especially The Boys of '76, had a tremendous and deserved popularity; several have been reissued in recent years. Genial and warm-hearted, Coffin had a host of distinguished friends, and was in great demand as a popular lecturer, giving in his lifetime some 2,000 public addresses. From Boston he was elected to the Assembly, 1884-85, and to the state Senate, 1890. He was a gifted organist and musician, a devoted worker in the Shawsheen Congregational Church, Boston. In February 1896 friends gathered in his newly built home in Brookline to celebrate the fiftieth anniversary of his happy though childless marriage. His death from apoplexy came a fortnight later.

[W. E. Griffis, Chas. Carleton Coffin (1888); shorter sketches in the Granite Mo., Apr. 1885; Book News (Phila.), Feb. 1891; and in F. L. Bullard, Famous War Correspondents (1914), pp. 380-86. In Memoriam: Chas. Carleton Coffin (1896) contains addresses and biographical memoirs at the time of his death.] A.W.

COFFIN, CHARLES FISHER (Apr. 3, 1823-Sept. 9, 1916). Quaker minister, was descended from Tristram Coffyn, Massachusetts colonist (1642) and one of the original settlers of Nantucket. Tristram's grandson, Samuel, was the first of the family to join the Society of Friends, from which date onward this branch of the Coffin family produced many notable Quaker leaders. William, son of Samuel, removed to North Carolina in 1773. His grandson Elijah Coffin (1798-1862) was a man of distinction and influence. He was a school-teacher in his youth in North Carolina, where he married Naomi Hiatt, a highly gifted woman of an important Quaker family. With her and his one-year-old son, Charles Fisher Coffin, he migrated to Indiana in 1824, where he was a pioneer school-teacher. He was later a banker in Cincinnati (for one year, 1833), and in Richmond, Ind.; and for thirty-one years was clerk of Indiana Yearly Meeting of Friends. Charles Fisher Coffin was educated at first by his father and later in the early Quaker schools of the pioneer period. He began his career in the Richmond Bank, a branch of the State Bank of Indiana, when he was twelve years old, continuing his education during the evenings. When he was twenty-one he took an extensive journey of great educational value through the Eastern states, becoming acquainted with many distinguished persons, especially with the spiritual leaders in the Society of Friends. In 1847, he was married to Rhoda M. Johnson of Waynesville, Ohio, a woman of grace and talent, who, like her husband, made a large contribution to the moral and spiritual causes of their time. Charles succeeded his father in the Richmond Bank in 1859, in which position he had a distinguished business career until 1885, when he retired and removed to Chicago. He was clerk (presiding officer) of Indiana Yearly Meeting of Friends (succeeding his father in this position also) from 1857 to 1885, and during this period he came to be recognized as one of the leading Quakers in America. He was recorded a minister of the Gospel in the Society of Friends in 1866, and continued to preach, with effect and charm and power, until his death at the age of ninety-three. He had a large part in the development of the Sunday-schools in Indiana, and took a foremost place in the early evangelical movement in the Society of Friends. He and his wife were leaders in the creation of the Indiana Reformatory School and he was first president of the board of control of the Indiana House of Refuge for Juvenile Offenders, a position which he held from 1867 to 1880. He spent the last thirty years of his life in Chicago with the exception of two years in London, England. At his death he left many valuable papers and reminiscences about western pioneer life, as well as extensive correspondence with public men. These are in the library of Earlham College, Richmond, Ind.

[Life of Elijah Coffin (1863), ed. by his daughter, Mary C. Johnson; Rhoda M. Coffin, Her Reminiscences and Addresses (1910); Chas. F. Coffin, A Quaker Pioneer (1923), comp. by Mary C. Johnson and Percival B. Coffin; the files of the Friends Rev. and the Am. Friend.]

R. M. J.

COFFIN, Sir ISAAC (May 16, 1759-July 23, 1839). British admiral, born in Boston, Mass., was a son of Nathaniel and Elizabeth (Barnes) Coffin. He was a descendant in the fifth generation from Tristram Coffyn who emigrated to Massachusetts in 1642 and settled in Nantucket in 1660. When eight years old he was sent to the Boston Latin School where he excelled in nauti-
Coffin

Coffin but was later opened to the children of Nantucket.

P. M.

COFFIN, JAMES HENRY (Sept. 6, 1806–Feb. 6, 1873), mathematician, meteorologist, was the third child of Matthew and Betsy (Allen) Coffin, both of Martha's Vineyard, and sixth in descent from Tristram Coffyn who came from England in 1642. Matthew Coffin died in 1820 and the family, being destitute, soon was scattered among relatives. James, who during his earlier years had been feeble and sickly, had now become strong enough to work on a farm, which he did at times, though he planned soon to enter the trade of musical-instrument and cabinet-maker. In September 1821, however, while visiting his uncle, the Rev. Moses Hallock of Plainfield, Mass., his cousin, William Hallock, persuaded him to come and live with them and get an education. He entered Amherst College in September 1823, but an attack of the measles during the first session injured his eyes for several years and prevented his graduation until Aug. 27, 1828. During this period he supported himself mainly by tutoring at college and by teaching during vacations. In 1829 he opened at Greenfield, Mass., a select school for boys and the next spring added to it a manual labor department for which he rented some 200 acres of land and hired a farmer-superintendent. This was the beginning of the Fellenberg Manual Labor Institution, probably the first of its kind in the United States. The results were excellent in every particular save in respect to his own remuneration. This was so meager that in 1837 he accepted the headship of an academy in Ogdensburg, N. Y., which he retained until Aug. 10, 1839. From 1840 to 1843 he was a tutor in Williams College. Here he installed on the peak of Mt. Greylock an apparatus for automatically recording the direction and velocity of the wind, and continued his meteorological studies begun in 1838 at Ogdenburg. In October 1843, he became principal of the academy at South Norwalk, Conn., where he remained until Oct. 16, 1846, when he moved to Lafayette College to take the chair of mathematics and natural philosophy, where he remained for the rest of his life.

In that year he became a collaborator in the work of the Smithsonian Institution, which published the two works: Winds of the Northern Hemisphere (1853); and Winds of the Globe (1875), on which his scientific reputation chiefly

...
rests. The second of these studies, a large quarto volume involving years of work, was by far the most exhaustive collection and the fullest analysis of wind data that had been made, and its main conclusions are good for all time. Coffin was a highly respected and successful teacher, and always, as from childhood, exceptionally pious. He was twice married: to Aurelia Medici Jennings in 1833; and to Abby Elizabeth Young in 1851.

COFFIN, JOHN (1756–June 12, 1838), Massachusetts Loyalist, was born in Boston, a son of Nathaniel and Elizabeth (Barnes) Coffin. He went to sea as a small boy and by the time he was eighteen had been given command of a ship. In 1775, while in an English port, his ship was engaged by the British government to carry troops to Massachusetts, and arrived at Boston, with nearly a whole regiment in command of Gen. Howe, on June 15. Two days later the troops were landed directly at Bunker Hill and Coffin himself took part in the fight. For gallant conduct he was made an ensign on the field and after the battle was presented to Gen. Gage, being made a lieutenant shortly afterward. Howe promised him the command of 400 men if he could raise them in New York. Coffin went to that town upon the evacuation of Boston in March 1776, and there succeeded in raising the required number among the Loyalists. He was thereupon made commander of the "Orange Rangers," a mounted rifle corps. With these he took part in the battle of Long Island. In 1778 he exchanged into the New York Volunteers and the same year transferred to the South where he raised a corps of cavalry in Georgia. He distinguished himself in the battles of Savannah, Hobkirk's Hill, and Eutaw Springs, in which last his gallantry and good judgment won the praise of his Continental opponent, Gen. Greene. He was of assistance to Cornwallis at Yorktown and at the close of the war that officer gave him a handsome sword. It is said that the Colonials had offered $10,000 for his head. At any rate, failing to secure what he considered protection when Cornwallis surrendered, he cut his way through to Charleston, where, during the war, he had already met the girl who was to become his wife, Ann Mathews, the daughter of William Mathews of St. John's Island. On his first stay there, he was almost caught by the Colonials and there is a story that he escaped only by hiding under a hoop-skirt.

When Charleston was evacuated by the British, Coffin succeeded in getting to New York where he met old comrades and on Dec. 25, 1782, was made major in the King's American Regiment by Sir Guy Carleton. Before the evacuation of New York he went to New Brunswick, Canada, where he was joined by his young wife and four negro slaves. Here at twenty-seven he started a new life as a pioneer, clearing his farm himself. In 1783 he bought a considerable tract of land and the next year was settled about twelve miles from St. John on his estate, which he called Alwington Manor, after the family home in England. This comprised about 6,000 acres and became a valuable property. He remained in the army on half-pay, being made lieutenant-colonel, Oct. 12, 1793; colonel, Jan. 26, 1797; major-general, Sept. 25, 1803; lieutenant-general, Oct. 25, 1809; and general Aug. 12, 1819. In the War of 1812 he raised 600 men. He also served as member of the Assembly, chief magistrate of King's County, and member of the Council. He alternated his residence between New Brunswick and England and at his death, which occurred in New Brunswick, was the oldest general in the British army. His widow died at Bath, England, in 1839.

COFFIN, LEVI (Oct. 28, 1789–Sept. 16, 1877), a leader in operations of the "Underground Railroad," was descended from Tristram Coffyn, who came to New England in 1642 and was one of the nine original purchasers from the Indians of the Island of Nantucket. Levi was born on a farm at New Garden, N. C., the youngest of the seven children of Levi and Prudence (Williams) Coffin. His mother's family was of Welsh descent. Both of his parents were Quakers. The boy, who was the only son, could not be spared from necessary work on the farm except for short intervals at the district school. He was mainly taught by his father at home. When he was twenty-one, he left for a session at a distant school. He then taught for a winter, attended school the following year, and taught at intervals for several years thereafter. In 1821, together with his cousin Vestal Coffin, he organized at New Garden a Sunday-school for negroes. This succeeded for a time but eventually the masters, becoming alarmed at Coffin's methods, kept their slaves at home, and the school was closed. On Oct. 28, 1824, Coffin was married to Catharine White, a Quaker. Two years later, he moved to Newport (now Fountain City), Wayne County, Ind.—a village of about twenty families.
Coffin

—where he was to live for more than twenty years. Here Coffin opened a store. Very soon after he came to Newport, he found that he was on a line of the Underground Railroad through which slaves often passed. Coffin let it be known that his house would be a depot and immediately fugitives began to arrive. When his neighbors saw his fearlessness and success, they began to help in clothing and sending the negroes on their way, but they would not take the risk of sheltering them. The Railroad was attended with heavy expenses. These Coffin could not have borne had he not been prosperous. He kept a team and wagon always ready to carry slaves. Sometimes one or two other wagons and teams were required. Journeys had to be made at night, often through deep mud and bad roads and along seldom traveled by-ways. A week seldom passed without his receiving passengers. Coffin was also at this time a member of a Committee on Concerns of People of Color to look after their educational interests, treasurer of a fund raised to sustain schools and aid the poor and destitute, and an active participant in the temperance movement. Almost twenty years after he had gone to Newport to live, he became interested in the free labor question. In 1847, he agreed to go experimentally to Cincinnati for five years and open a wholesale free-labor goods store. A Quaker Convention at Salem, Ind., had voted in 1846 to raise $3,000 to begin such a project. A year after the outbreak of the Civil War, Coffin began his work for the freedmen and devoted his entire time to this for the rest of his life. In May 1864 he went to England for this purpose, and an English Freedmen's Aid Society was formed. Over $100,-000 in money, clothing, and other articles was forwarded in one year from England and the Continent. In 1867, Coffin was appointed delegate to the International Anti-Slavery Conference in Paris, which was held on Aug. 26 and 27. The last ten years of his life were passed in retirement.

M. A. K.

COFFIN, LORENZO S. (Apr. 9, 1823-Jan. 17, 1915), philanthropist, was born on a farm near Alton, N. H., the son of the Rev. Stephen and Deborah (Philbrook) Coffin. His father was a Baptist clergyman and farmer. Lorenzo attended Wolfboro Academy, Wolfboro, N. H., and then studied for two years in the preparatory department of Oberlin Collegiate Institute (later Oberlin College). For a year he taught at Geauga Seminary, a Free-will Baptist institution in Chester, Ohio, where James A. Garfield and Lucretia (Randolph) Garfield were among his pupils. He married Cynthia T. Curtis in 1848, moved to Iowa in 1855, and bought government land near Fort Dodge. His first wife died on Apr. 20, 1856 and in February 1857 he married Mary C. Chase. On Sept. 8, 1862, he enlisted in the 32nd Regiment of Iowa Volunteer Infantry and within two months was promoted from quartermaster-sergeant to chaplain. He left the service in July 1863. Soon after his return to Fort Dodge he was elected superintendent of schools in which position he had the opportunity to develop ideas of improvement in educational methods and in farming. He contributed often to the agricultural journals, conducting in one of them a column of advice on farm problems. Gov. Sherman appointed him railroad commissioner in 1883, a position he filled for five years. His interest in railroad men had been awakened two years before his appointment, when he was instrumental in securing the right of way for the Fort Dodge & Des Moines Railroad to Guthrie. His position as commissioner made frequent trips necessary, and these he took, by preference, on freight trains. He learned much of the lives of railroad men and the hazards to which they were exposed. The accident rate was very high at that time, and he determined to do what he could to lessen what seemed an unpardonable loss of life. He found that the majority of fatal accidents on freight trains were due to the hazards involved in coupling the cars or in applying the brakes. Self-couplers and air-brakes had been installed on passenger cars, and he felt that they should be established on freight trains as well. He wrote articles on the subject, spoke from many platforms, and sent letters to every religious and family periodical in the country, until at last tests were made in 1886 and again in the following year. Westinghouse became interested and devised a brake sufficiently strong to hold fifty freight cars. These brakes were required by an act of the Iowa legislature passed in 1890, and Coffin turned his attention to national legislation. With the aid of D. B. Henderson and W. B. Allson of Iowa, he had bills introduced in Congress which were eventually passed. Accidents to railroad employees had averaged from 20,000 to 30,000 annually. This number was reduced by sixty per cent after the safety devices were installed. Coffin started a Temperance As
association among railroad men in 1893, was its president after it was founded, and helped found near Chicago, a Home for Aged and Disabled Railroad Men of which he was president for twelve years. On his farm near Fort Dodge he built Hope Hall, No. 3, modeled on the Hope Halls of Chicago and Flushing, N. Y., established originally for discharged convicts by Mrs. Maud Ballington Booth. He was the candidate of the Prohibition party for governor in 1907, and of the United Christian party for vice-president of the United States in 1908.

IV; Annals of Iowa, 1901-03; Roster and Records Iowa Soldiers in the War of the Rebellion (1908-11); Chicago Daily Tribune, Jan. 5, 1864; Reg. and Leader (Des Moines), Oct. 25, 1905, Dec. 6, 1908, Jan. 18, 1915; Who’s Who in America, 1914-15]. M. A. K.

COFFIN, WILLIAM ANDERSON (Jan. 31, 1855-Oct. 26, 1925), painter, art critic, was the son of James Gardiner and Isabella Catharine (Anderson) Coffin of Allegheny, Pa., where William was born. He was graduated from Yale in 1874 when, as he told F. W. Coburn (American University Magazine, May 1895), “finding the business life to which his father had destined him intensely disagreeable, he could think of nothing more pleasant than to return to New Haven.” Not knowing just what he wanted to do, Coffin registered at the Yale Art School, and became fascinated by the allurements of the painter’s profession. In 1877 he went to Paris where he was a pupil of Léon Bonnat. In 1882 he opened a studio in New York, intending to be a portrait painter. His devotion to landscape, in which he attained his special distinction, resulted from some successful exhibition pieces which he painted in 1886 and 1887. His honors and prizes were numerous, beginning with a Hallgarten prize of the National Academy of Design in 1886. He won a medal at the Paris Exposition in 1889; the Webb prize of the Society of American Artists, 1891; the gold medal of the Art Club of Philadelphia, 1898; silver medals of the Charleston Exposition, 1902; and the Louisiana Purchase Exposition, 1904. In 1901 Coffin served as director of fine arts at the Buffalo Exposition. He was a member of the advisory board of the art department, Panama-Pacific Exposition, 1915. During the World War he was president of the American Artists’ Committee of One Hundred to raise relief funds for the families of artist-soldiers of France. He became a Chevalier of the Legion of Honor in 1917. He was appointed by the French government in 1919 president of a committee to arrange an exhibition of American paintings and sculptures at the Luxembourg Museum. Coffin’s influence as lecturer and writer was considerable. He served as art critic of the New York Evening Post and the Nation, 1886—91, and of the New York Sun, 1896—1900. His landscapes, many of them painted in Pennsylvania, were made intelligently and artistically; his experiments with formal and decorative landscape were not uniformly successful. Examples of his work may be seen at the Metropolitan Museum of Art, New York City; Brooklyn Museum of Arts and Sciences; National Museum, Washington; Albright Art Gallery, Buffalo; Brooks Memorial Art Gallery, Memphis; and in other public collections. He was never married.

[The Art News, Oct. 31, 1925; Biog. Record of the Class of 1874 in Yale Coll. (1912); Yale Univ. Obit. Record (1926); Who’s Who in America, 1924-25].

F. W. C.

COGDELL, JOHN STEVENS (Sept. 19, 1778-Feb. 25, 1847), sculptor, painter, and lawyer, was born in Charleston (or Georgetown), S. C. The son of George Cogdell, a captain in a South Carolina regiment, and Elizabeth Stevens, mistress of a girls’ school, he received his grounding in English from his mother and later was graduated from the College of Charleston. When about seventeen, he entered the law office of William Johnson, Jr., and in 1799 was admitted to the bar. In June of the following year, for the sake of his health, he made with his brother Richard an eight months’ voyage to the Mediterranean. Prior to this trip he had shown no great inclination for art although he had at times found amusement in making copies of prints in watercolor. In Italy, however, his ambition was fired by the paintings he saw, and by a visit to Calonova. Though handicapped by ill health, he took up oil painting and drawing from plaster casts and soon tried painting from life, doing portraits of many of his friends as gifts. On his return to Charleston from Europe he began the practise of law. He was successful and, in 1806, he married Maria Gilchrist. In spite of his profession he found time to paint. As a gift to a former instructor, the Rev. Simon Gallagher, he painted a “Crucifixion” which the latter placed in St. Mary’s Church. He likewise did a picture for the orphanage and numerous heads and landscapes for his friends. He made several visits to northern cities and on one of his trips to Boston, in 1825, he was persuaded by Washington Allston to attempt modeling in clay. In the following year he studied anatomy and made a clay head of his professor. A number of his earliest busts were exhibited at the Athenæum in Boston—Dr. Holbrook, Stephen Elliott, Lafayette, Gen. Moultrie (one cast given to Congress, one also in the National Academy of De-

270
Coggeshall

sign), Scott (cast, dated 1834, owned by Charleston Library Society), and Washington. He also made busts from memory of Judge DeSaussure, Judge Elihu H. Bay, and Bishop England. Greatly desirous of visiting Europe with his wife, he had nearly accumulated the necessary funds when a prominent New York banker induced him to invest in his bank, which failed and left Cogdell ruined. Fortunately he could fall back on his profession and his position in the customs. He had been elected to the state House of Representatives in 1810, 1814, 1816, and 1818. In this last year he was made comptroller general of South Carolina but resigned during his second term to become naval officer of the custom-house in 1821. From 1832 until his death he was president of the Bank of South Carolina. He seems not to have given up his art, however, for he made a tablet to the memory of his mother in St. Phillip's Church. The National Academy of Design, besides the bust already mentioned, has one of Gen. Ruckney and the Pennsylvania Academy has two. Failing health compelled Cogdell to give up active employment some time before his death which took place in Charleston. As a sculptor he is interesting in that he belongs to an early epoch of American art and in that, coming from a section where sculpture was little known, he acquired through his own effort a certain proficiency in that art.

E.G.N.

COGGE SHALL, GEORGE (Nov. 2, 1784—Aug. 6, 1861), sea captain, author, was born in Milford, Conn., the son of William and Eunice (Mallett) Coggeshall. His father, an ardent Revolutionary patriot, suffered on land and sea the privations of the common soldier, was captured by the enemy, and endured the winter of 1779-80 in the prison ship Jersey, where, famished and half-frozen, he nearly succumbed to smallpox. After the war he threw for a while as a shipmaster; but, for trading with Martinique one of his schooners with its cargo was seized and sold by the British, for trading with a British island another was taken and sold by the French, and William Coggeshall was reduced to poverty. His son, therefore, came naturally by his patriotism and his hatred of foreign oppression, and equally so by his democratic principles, his piety, his pride and skill in his calling. Too poor to go to school, he began his seafaring as soon as he was old enough to carry a message from the quarter-deck to the forecastle; at fifteen he made his first long voyage—to Cadiz as cabin-boy in a schooner built at Milford and commanded by a Milford captain; in 1809 he received his first command. For almost sixty years he followed the sea. During the War of 1812 he distinguished himself as captain of the privateers David Porter and Leo. The Leo was captured off Lisbon by the frigate Granicus, whose commandeer, Capt. William Furlong Wise (see article on Wise in Dictionary of National Biography) treated him courteously and delivered him a prisoner to the authorities at Gibraltar. By good luck and mother wit Coggeshall made his escape from the fortress within two days and got back safely to New York on May 9, 1815. The career of an American sea captain, though hardly less strenuous in peace than in war, had its domestic side: Coggeshall was able to return to Milford from time to time to visit his widowed mother; he gave employment as mates or captains under him to several of his brothers; and on some of his voyages he was accompanied by his wife. He was twice married; his first wife, Sarah, died Oct. 3, 1822, his second, Elizabeth, Mar. 6, 1851. In the long hours of inactivity at sea he read diligently and kept a careful journal, and on his retirement from the sea he turned author. His books are: Voyages to Various Parts of the World (1851); Second Series of Voyages to Various Parts of the World (1852); Voyages to Various Parts of the World (2nd ed., 1853, in two volumes, but only one volume ever issued); Thirty-Six Voyages to Various Parts of the World (3rd ed., 1858, revised, corrected, and enlarged, the best edition); History of the American Privateers and Letters-of-Marque (1856; 3rd ed., 1861); and An Historical Sketch of Commerce and Navigation from the Birth of the Saviour down to the Present Date (1860). A volume of Religious and Miscellaneous Poetry has also been ascribed to him. Coggeshall wrote a clear, terse, seamanly English flavored with a dash of quaint elegance. His strength lies in his details, which he drew in abundance from his journals and records; his best writing, in fact, can stand comparison with the novels of Daniel Defoe. His History of American Privateers is still useful to students of naval history and contains two stirring chapters on his own exploits. As a compiler, however, he is generally tedious. His last book, by its sanctimonious tone and hodge-podge arrangement, shows that the captain's health was failing. He died soon after its publication and was buried in his native town.

[Coggeshall's own writings are the only accessible source of information about him. Mr. Clarence S. Brigham of the Am. Antiq. Soc., and Coggeshall's cousin,
Coggeshall

Miss Martha Coggeshall of Milford, Conn., have collected some additional facts for this article. E. S. Maclay, A History of Am. Privateers (1899) retells the story of the David Porter and the Lee.

G. H.

COGGESHALL, WILLIAM TURNER (Sept. 6, 1824-Aug. 2, 1867), journalist, author, seems to have been a direct descendant of that John Coggeshall who came to America in the Lyon in 1632, suffered some persecution in Massachusetts Bay because of his support of Anne Hutchinson, and later became first president of Rhode Island (Rhode Island Historical Magazine, October 1884, and W. T. Coggeshall, Record of Facts, post, p. 14). William Turner was born at Lewistown, Pa., the third of the twelve children of William C. Coggeshall, a coachsmith, and Eliza Groetz, whose father had come from Germany (Record of Facts, pp. 25-28). On Oct. 6, 1842, he left Lewistown for Ohio, arriving at Akron in November. Here he became (1844-46) an editor and part owner of a temperance paper, which underwent rapid changes of name (Samuel A. Lane, Fifty Years and Over of Akron and Summit County, 1892, p. 225). Meantime on Oct. 28, 1845 he married Mary Maria Carpenter; and in the spring of 1847 (Coggeshall, Stories of Frontier Adventure, “Dedicatory Letter”) he removed to Cincinnati, where he was connected with a number of newspapers and magazines, the most important of which was the monthly Genius of the West (1853-56). During this Cincinnati period he also published his earliest books; and in 1854 he accompanied Kossuth from Cincinnati on the remainder of his American tour, reporting his speeches for the press (Kossuth to Coggeshall, June 17, 1852). From May 31, 1856 (13th Annual Report of the library) to Mar. 24, 1862, he was librarian of the Ohio State Library at Columbus, and in 1858-59, editor of the Ohio Educational Monthly. During the first year of the Civil War he also acted as military secretary to Gov. Dennison, and was assigned for a time to secret service. Removing to Springfield, Ohio, he was owner and editor of the Republic, 1862-65 but was at Columbus as editor of the Ohio State Journal during the greater part of the latter year. Early in 1866 he served as private secretary to Gov. Jacob D. Cox.

On May 4, 1866, he was appointed American minister to Ecuador, and officially announced his arrival at Guayaquil on Aug. 2 and at Quito on Sept. 8. The only notable event of his ministry was his successful appeal to the government of Ecuador, in opposition to the papal nuncio and other authorities of the church, for the right of Protestant burial for foreigners. Coggeshall himself was already so ill of consumption that his daughter Jessie (1851-68), who had accompanied him from the United States and served as interpreter and secretary, was practically in charge of the legation; and on Aug. 2, 1867, he died at a country place near Quito. His body was at first buried in consecrated ground, but when the clerical revolution occurred soon afterward, was disinterred and placed in a public warehouse. Later the remains of both Coggeshall and his daughter, who had died at Guayaquil on her way home, were returned to the United States at the public expense, and buried at Columbus, Ohio.

As a writer, Coggeshall addressed himself generally to the young, and fell naturally into a strain of conventional moralizing. In his controversial speaking and writing, however, he was often vigorous: he argued effectively in support of Lincoln in his political pamphlets and appealed skilfully to popular interest in his tract, Need and Availability of the Writing and Spelling Reform (1857). Other works, like his Lincoln Memorial (1865), were mere compilations. His fiction, as in Oakshaw (1855), was awkward and too intent on moralizing, but made some attempt to avoid the easy appeal of blood and tears popular in that day, and was concerned to a considerable extent with character. The Protective Policy in Literature (1859), a plea for sectionalism as a fruitful motive in literature, was, in effect, an announcement of what was by far his most important work, The Poets and Poetry of the West (1860), a comprehensive anthology for the years 1789-1860, with brief biographical sketches. His estimates of Western verse writers are not critical, but the book is nevertheless a valuable record. It was designed as the first of a series of volumes, never continued, which should constitute a survey of Western literature and so offset the neglect which, as he thought, the West had suffered at the hands of Griswold and the Duyckincks. Both this work and The Protective Policy mark Coggeshall as a disciple of William D. Gallagher [q.v.], who, with James Hall and Timothy Flint [q.v.], was a pioneer partisan of a distinctly sectional literature for what in those days was called the West.

[Perhaps the best, as well as the most detailed, notice is that in W. H. Venable's Beginnings of Literary Culture in the Ohio Valley (1891), based, to a considerable extent, upon information furnished by Coggeshall's widow. A portrait is to be found in Ohio Arch and Hist. Quart., Jan. 1919, p. 104. Coggeshall's papers and diaries, including his Record of Facts Pertaining to Coggeshall Family, are in the possession of his son-in-law, Mr. T. A. Bushey of South Vienna, Ohio, who has supplied some of the dates given above. For the events of 1866-69, see N. Y. Times, Jan. 25 and Sept. 9, 1867; Cincinnati Daily Gazette, Sept. 6, 1867; Ladies' Repository, Nov. 1867; House Ex. Doc. No. 1, 39 Cong. 2 Sess., pt. 11, p. 477; and especially Cong. Globe, 40

272
professor of mineralogy and geology. He reclassified the library, following Göttingen as a model, and was eager to introduce further improvements (Life as Sketched in Letters, pp. 133–35), but, discouraged by lack of support and understanding on the part of the College government, he resigned in 1823, and with George Bancroft [q.v.] established the Round Hill School in Northampton, Mass., a school well known for its strict but kindly discipline, its thorough instruction on the plan of the German gymnasium, and the vigorous outdoor life and manly spirit it fostered. Financial difficulties brought the school to an end in 1834. Hoping to free himself from debt, Cogswell took charge of a boys' school in Raleigh, N. C., but ill health and lack of sympathy with Southern habits and standards turned him again to the North after two years.

From 1836 to 1838 he lived in the family of his friend Samuel Ward in New York and tutored his children. At the former's suggestion he bought an interest in the quarterly New York Review to which he had already contributed a long anonymous article on "National Education" (July 1838). He partly edited the number for January 1839, soon after became sole proprietor, and conducted the Review until it was discontinued with the number for April 1842. While with the Wards he formed an acquaintance with John Jacob Astor [q.v.], and, gaining his respect and confidence, became his adviser with regard to the public library which Astor proposed to establish in New York. Until Astor's death in 1848 Cogswell continued in close association with the old man, who kept him occupied in buying books and making plans but never succeeded in arriving at final decisions and in establishing the library. In 1848, the trustees having organized, Cogswell was appointed superintendent and devoted himself to the purchase of books (involving four visits to Europe), to the erection of the building (opened in January 1854, with a stock of 90,000 volumes), and to the preparation of printed catalogues, the latter a task which he performed almost entirely by himself. The preliminary Alphabetical Index to the Astor Library...and of the Proposed Accessions (1851), was not only compiled entirely by Cogswell, but was also printed privately at his personal expense. He occupied rooms in the Library and his labors were unceasing. In December 1861, at the age of seventy-five, he resigned, being unable longer to perform his duties to his own satisfaction, yet within a year he undertook the compilation of a supplement to the catalogue, which demanded long days of persis-
Coggswell

tent work and was not completed until October 1866. On his trips abroad in the interests of the library he had gratified a taste for art by accumulating for himself a collection of drawings of the old masters (see Original Drawings by the Old Masters: The Collection formed by Joseph Green Cogswell 1786–1877; with Introduction and notes by George S. Hellman, 1915).

Having built a house in Cambridge for a beloved niece of his wife (Mrs. David G. Haskins), he made his home there when not visiting his friends. In June 1871 he went for the last time to New York to advise the trustees of the Astor Library on the selection of a new librarian. He died in Cambridge, in November of that year, and was buried in Ipswich, his birthplace. His later years were made happy by the loyalty and affection of his former Round Hill pupils and other old-time friends, who appreciated his intellectual hospitality, his quick and keen perceptions, his wide attainments in literature and bibliography, and his firm principles of duty.

W. C. L.

COGGSWELL, WILLIAM BROWNE (Sept. 22, 1834–June 7, 1921), mining engineer, was born at Oswego, N. Y., the son of David and Mary (Barnes) Cogswell. His parents moved to Syracuse when he was four years old. His early education was acquired in private schools at Syracuse and Seneca Falls and at Hamilton Academy. When he was about twelve years old he took some lessons in architecture under Luther Gifford of Syracuse and plans drawn by Cogswell were used for the Globe Hotel, erected in Syracuse in 1846-47. His fourteenth year was spent with a railroad surveyor's party. He studied civil engineering at the Rensselaer Polytechnic Institute for three years, but left in 1852 without a degree. In 1884, however, the Institute conferred upon him the degree of C.E. After his work at Rensselaer he spent three years as an apprentice in machine-shops at Lawrence, Mass., and from then until 1860 he was actively engaged in responsible positions in foundries or machine-shops where his mechanical engineering abilities were marked. During the Civil War he held an appointment as civil engineer in the United States navy. He fitted out five repair shops for stations on the Atlantic seaboard, assembled equipment, and then converted an old whaler into a floating machine-shop, of which he took command. This enabled warships to be repaired without leaving the spots where they were participating in blockades of Southern ports. In 1862 Cogswell was transferred to the Brooklyn Navy Yard where he remained until 1866. After the war, supervisor of the construction and operation of the blast furnaces of the Franklin Iron Works in Oneida County and the completion of the Clifton Suspension Bridge at Niagara Falls occupied him until 1873.

It is because of his share in the introduction into this country of the Solvay Process of manufacturing soda, however, that Cogswell is best known. His interest in "things under the earth" was awakened in 1874, when he was placed in charge of some lead mines at Mine La Motte, Mo. In 1879, at a meeting of the American Institute of Mining Engineers, he heard a paper by Oswald J. Heinrich on "The Manufacture of Soda by the Ammonia Process" (Transactions, VII, 294 ff.). He conceived the idea of applying the process patented by the Solvay brothers of Brussels to the exploitation of the salt lands of Onondaga County, N. Y. Going to Europe, he succeeded in persuading Ernest and Alfred Solvay of the soundness of his plan, and became treasurer and general manager of the Solvay Process Company formed in 1881. Later he became its vice-president and managing director. His company became the largest manufacturer in the United States of soda ash and its derivatives, and the production of soda became one of the major industries of Onondaga County. It was largely due to Cogswell's personal effort (and in the face of much opposition) that the vein of rock salt, fifty to a hundred feet in thickness, and 1,200 feet below the surface, was located twenty-two miles south of Syracuse at Tully. He was interested also in other local enterprises, especially in the development of the Hannawa Falls Power Company.

Cogswell built the Hospital of the Good Shep-
Cohen

herd in Syracuse, and did much charitable work in a quiet way. He had a deep interest in astronomy, and found recreation and pleasure in gathering together a remarkable collection of precious stones. He was married twice: in 1856 to Mary N. Johnson, who died in 1877, and on Apr. 29, 1902, to Cora Louise Brown of New York City.

COHEN, JACOB DA SILVA SOLIS (Feb. 28, 1838–Dec. 22, 1927), physician and physicist, was born in New York City, the eldest son of Myer David Cohen and his wife Judith Simiah da Silva Solis. His maternal grandmother was Charity Hayes, daughter of David Hayes, Jr., of Mount Pleasant, N. Y., and of his wife Esther Etting, of Baltimore, so that Cohen was descended from an old Jewish family and from an old colonial family. In 1840 his parents moved to Philadelphia, where he received his early education, graduating from the Philadelphia Central High School. During the session of 1857–58 he attended the Jefferson Medical College. In 1858–59 he spent a year in Memphis, Tenn., returning to Philadelphia in 1859 and resuming his medical studies at the University of Pennsylvania, from which institution he graduated in 1860. After graduation he was appointed one of the resident physicians of the Philadelphia Hospital, but resigned on the outbreak of the Civil War to enlist in the United States army as a private, soon being commissioned assistant surgeon in the 26th Pennsylvania Regiment. He served with this regiment in Hooker's brigade, but resigned in September 1861 to accept an appointment as acting assistant surgeon in the United States navy. He accompanied Du Pont's expedition to Port Royal and served in the South Atlantic Blockade Squadron, for a time as acting fleet surgeon. He resigned from the navy in January 1864 and was requested by the surgeon general of the United States to act as visiting surgeon to the two military hospitals in Philadelphia. The Medical and Surgical History of the War of the Rebellion, part III, vol. II (1882), indicates that he successfully carried out this work. He resigned in 1865, and, after a brief residence in New York, returned to Philadelphia in 1866 and entered private practise. On Feb. 10, 1875, he was married to Miriam Binswanger, by whom he had nine children.

Among his first patients was a young girl with an obscure disease of the throat, and this led him to make a study of the use of the laryngoscope, then just becoming known to the medical profession. He soon gained recognition as an expert in this work. In 1867 he was appointed by the American Medical Association chairman of a committee to investigate the value of treatment by inhalation. He accumulated so much material on the subject that he decided to publish it in book form, which he did, as Inhalation; Its Therapeutics and Practice (1867). In 1872 he published his well-known work Diseases of the Throat, for a time the only work of its scope in English, which he revised in 1879, under the title, Diseases of the Throat and Nasal Passages. Subsequent to this he published a small monograph on croup. During the remainder of his life he contributed a number of articles to medical literature, the best known being his articles on the operative treatment of cancer of the larynx (Medical News, vol. XLIII, 1883; New York Medical Journal, vol. XLV, 1887, p. 682). He also contributed chapters to various medical encyclopedias and systems. During this period he taught in the Jefferson Medical College and in the Philadelphia Polyclinic, of which he was one of the founders. Cohen had two interests outside of his professional work, the scientific aspect of acoustics and the religious life of his sect. He gave many popular lectures on acoustics and taught that subject for many years at the Stevens Institute of Technology in Hoboken. He was greatly interested in the traditional melodies of the Sephardic and Minhag, and for many years took part in the services of the Philadelphia synagogue which he attended.

COHEN, MENDES (May 4, 1831–Aug. 13, 1915), civil and railway engineer, was born in Baltimore, his home throughout his life. His first American ancestor settled in Lancaster, Pa., in 1773. The close of the Revolution found the family in Richmond, Va., and it was from that city that David I. Cohen went to Baltimore to enter the banking business. He was one of seven persons who founded in 1844 the (second) Baltimore Stock Board, which later became the Baltimore Stock Exchange. He married Harriet Rahmah Cohen, of Swansea, Wales, and Mendes was their eldest son. Upon the death of his father in 1847, Mendes, who had been under the instruction of a private tutor, entered the works of Ross Winans [q.v.], builder of locomotives. In 1851 he was made assistant to the engineer of the
Cohen

Baltimore & Ohio Railroad, and while there worked out the method adopted for handling traffic on the ten per cent temporary grade over the Kingwood Tunnel, a remarkable achievement in railroad operation. Another task assigned him at that time was that of studying the alteration of wood-burning locomotives to coal-burning, and on Aug. 29, 1854, he presented a most comprehensive report on that subject. When only twenty-four years old, he had already become known as an especially capable railroad official, and was appointed assistant superintendent of the Hudson River Railroad. He was with that company until 1861, when he succeeded Gen. George B. McClellan as operating head of the Ohio & Mississippi Railroad, first as superintendent and later as president and superintendent. Soon after the close of the Civil War he was engaged for a short time on special work for the Philadelphia & Reading Railway. From 1868 to 1871 he was comptroller and assistant to the president of the Lehigh Coal & Navigation Company, and from 1872 to 1875 was president of the Pittsburgh & Connellsville Railroad, which was subsequently consolidated with the Baltimore & Ohio system. He retired in 1875 from official connections with any companies, but continued his practice in Baltimore as consulting engineer. The standard of ethics which he maintained in all his work is illustrated by his resignation from the presidency of one road when figures which he had furnished were altered before being presented to the stockholders of the company.

A prominent figure among civil engineers, Cohen was elected president of the American Society of Civil Engineers in 1881, an honor which he greatly appreciated. Nor in after years did he ever lose interest in the many problems arising in its affairs as a growing institution. He was a member of the board appointed in 1894 by President Cleveland to report on a route for the Chesapeake and Delaware Ship Canal. From 1893 to 1904 he was chairman of the Baltimore Sewerage Commission. He was a member of the Municipal Art Commission of Baltimore for thirty-three years, and for many years also an active member of the board of trustees of the Peabody Institute. His acquaintance with history, especially that of Maryland, was remarkable. For twenty-one years he was secretary of the Maryland Historical Society, serving for nine years as its president. He was also vice-president of the American Jewish Historical Society from 1897 to 1902. Cohen was a serious, religious man; socially of the best, and a strong and influential citizen in Baltimore. He was consulted in all matters of great importance, and his judgment, always given after deliberate consideration, had great weight. He was survived by his wife, Justina Nathan Cohen, who died in 1918.

COIT, HENRY AUGUSTUS (Jan. 20, 1830- Feb. 5, 1895), Episcopal clergyman, schoolmaster, was born in Wilmington, Del., the second of the nine children of Joseph Howland and Harriet Jane (Hard) Coit, and the seventh in descent from John Coite, a Welshman, who landed at Salem, Mass., in 1636 and established a shipyard at New London, Conn., in 1650. His father, a graduate of Columbia College, was converted to Episcopalianism while a student in Princeton Theological Seminary and served as pastor of churches in Wilmington, Del., Plattsburg, N. Y., and Harrisburg, Pa. By a happy choice Henry Coit was sent at fifteen to St. Paul's College at College Point, Flushing, L. I., where he felt to the full the moral and religious power of William Augustus Muhlenberg [q.v.]. No other man so influenced his life and thought. He matriculated at the University of Pennsylvania in 1847 but was soon compelled to leave because of illness. To recruit his health he went to Georgia as tutor in the family of Bishop Stephen Elliott. Subsequently he taught under John Barrett Kerfoot in St. James College at Hagers- town, Md., and in a parish school at Lancaster, Pa. He was ordained deacon by Alonzo Potter at Lancaster Jan. 22, 1854, and priest in Phila- delphia Dec. 3, 1854, and began home missionary work at Ellenburg, Clinton County, N. Y. Meanwhile George Cheyne Shattuck the younger and some associates projected a church school for boys to be opened in Concord, N. H. Their first choice having declined, they offered the rectorship of the school to Coit, who accepted it. On Mar. 27, 1856, he was married in Philadelphia to Mary Bowman Wheeler, and one week later he entered on his duties as the first rector of St. Paul's School in Concord, N. H. He held the rectorship until his death thirty-nine years later. His school, which on its opening day consisted of the rector and his bride with three pupils in a lonely farmhouse, became one of the most successful and most often imitated of American boys' schools. Coit gave himself to the work with complete singleness of purpose and with the energy and resources of a man of genius. St. Paul's School was his lengthened shadow; without striving to do so or even intending to do so,
he dominated the pupils, the masters, and the board of trustees. To him the purpose of education was the formation of character, and character that Miltonic union of true virtue and the heavenly grace of faith which make up the highest perfection. What he actually accomplished was, he knew, inexpressibly below his aims and ideals, but it was sufficient to rank him with Arnold of Rugby, Fellenberg of Hofwyl, and his own teacher, Muhlenberg. He had a profound understanding of boys, and a rich gift of humor; and his strong, exquisite, unselfish, deeply religious personality left an enduring impress on their minds. He made no innovations in the course of study or the methods of instruction; it was his moral and religious influence over those in immediate contact with him that made him a great educator.

Coit had few intimate friends, lived much within himself, and avoided the world. Calls to various influential parishes and to the presidency of Hobart and Trinity Colleges he declined. Once he wrote a letter to a newspaper, and once he was persuaded to contribute to The Forum an article on boys' schools. The death in 1888 of his wife was a grievous loss to him; his own health visibly declined during 1894, and on Feb. 5, 1895, he died after a brief illness. He was buried in Concord. A volume of his School Sermons was published in 1909. Joseph Howard Coit, his brother, succeeded him as rector of the School; another brother, James Milnor Coit, was for years one of the masters of the School and later conducted the Coit School for American Boys in Munich.

J. H. Coit, Memorials of St. Paul's School (1891); Univ. of Pa. Biog. Cat. of the Matriculants of the Coll. 1749-1893 (1894); obituary in Church Eclectic, Mar. 1895; J. P. Conover, Memories of a Great Schoolmaster (1906); J. J. Chapman, "The Influence of Schools" in Learning and Other Essays (1910); J. C. Knox, Henry Augustus Coit (1915); O. Wister, "Dr. Coit of St. Paul's" in the Atlantic Monthly, Dec. 1928.]

G.H.G.

COIT, HENRY LEBER (Mar. 16, 1854–Mar. 12, 1917), physician, was born at Peapack, N. J., the son of John Summerfield and Ellen (Neahe) Coit. His father, a Methodist minister, died while Henry was still a boy, and his mother moved to Newark to bring up her children. There Coit attended the public schools and went from them to the New York College of Pharmacy, from which he graduated valedictorian with the class of 1876. After working for a few years as a chemist with Tarrant & Company, he entered the College of Physicians and Surgeons, and upon his graduation in 1883 began his practice of medicine in Newark. In 1886 he married Emma Gwinnell of that city. Pediatrics had already become his chief interest when in 1889 the difficulty of obtaining cows' milk of a uniform high standard was forcibly brought home to him. In seeking clean milk for his own dying baby he saw the forty-quart cans from which the city's milk was being casually ladled. The experience indicated to him his life-work. He lost his own son, but his unremitting efforts to raise the standards of cleanliness for milk and to impress on the public and on the medical profession the relation between milk and infant mortality have saved the lives of countless children. Failing, after persistent appeals, to obtain help from the New Jersey legislature, he enlisted the voluntary aid of physicians and dairymen. In a paper read before the Practitioners' Club of Newark on Dec. 5, 1896, he coined the term "certified milk" and outlined the method by which the initial cleanliness of milk might be insured. His plan "provided for a commission of medical men who, with the support of physicians generally, should, by voluntary supervision, paid expert inspection, and final certification, endeavor to influence a supply of milk produced under regulations imposed by themselves."

He formulated minute-regulations for securing clean hands, clean udders, clean pails, sterile containers, healthy cows, safe workingmen, good feed and fodder, suitable bedding, and proper housing. In 1893 his plan was put into effect on a dairy farm near Fairfield, N. J., and was shown to be practicable, in spite of the greatly increased cost of production. To the dairyman the principal danger came from the unscrupulous opposition of large milk distributing companies. The example of the Essex County Medical Milk Commission was imitated in New York in 1896 and in Philadelphia in 1897; at the time of Coit's death there were sixty such commissions in the United States, and the movement had spread to Canada, Europe, and Asia. An American Association of Medical Milk Commissions, of which Coit was twice president, kept the commissions in touch with one another. The indirect effect of these commissions in raising the general standard of cleanliness among dairymen has been enormous. Coit was also vice-president of the International Society of Milk Dispensaries, with headquarters in Brussels, and visited Europe four times as a delegate to medical congresses.

The other great work of his life began in 1896 with the opening in Newark of the Babies' Hospital, the second institution of its kind in the United States. He had done much to make the hospital possible, and to its welfare he gave time and attention without stint, his last visit to it as
attending physician being made on the day before his death from pneumonia. His death was undoubtedly hastened by overwork. An epidemic of infantile paralysis had visited Newark and its vicinity the previous summer. Sacrificing his vacation, Coit had taken active charge of the medical relief work and had accomplished a task that alone would entitle him to the gratitude of his fellow citizens. His published papers are: The Feeding of Infants (1890); The Care of the Baby (1804); Causation of Disease by Milk (1804); Clean Milk in its Economic and Medical Relations with Special Reference to Certified Milk (1908); The Public School as a Factor in Preventing Infant and Child Mortality (1912); and Certified Milk (1912).

G.H.G.

COIT, THOMAS WINTHROP (June 28, 1803–June 21, 1885), Episcopal clergyman, theologian, was born in New London, Conn., the son of Thomas and Mary Wanton (Saltonstall) Coit. On both sides of the family he was of early New England stock. His father and his father's father were physicians in New London. Coit graduated from Yale College in 1821, taught school for several years, attended Andover Theological Seminary 1823–24 and Princeton Seminary 1824–25, was led by his studies to withdraw from the Congregational Church and to join the Episcopalian, was ordained a deacon by Bishop Brownell at Newton, Conn., June 7, 1826, and a priest by Bishop Griswold at Salem, Mass., Nov. 15, 1827. On June 28, 1828, he married a widow, Eleanor (Forrester) Carlile of Salem, Mass. He was rector of St. Peter's, Salem, until 1829 and of Christ Church, Cambridge, until 1835. In 1834 he began his career as a theologian by measuring himself against no less an antagonist than Andrews Norton; his Remarks on Mr. Norton's "Statement of Reasons" was, however, a belated rejoinder, for Norton's Statement of Reasons for Not Believing the Doctrine of Trinitarians had appeared in 1819, when Coit was still a student in college. In 1834 he also published his _Holy Bible . . . Arranged in Paragraphs and Parallelisms with Philological and Explanatory Annotations_, which was long prized by students for the trustworthiness of its text. In October 1834 he was called to the presidency of Transylvania University at Lexington, Ky., on a salary of $2,000 a year; he was inaugurated July 1, 1835, and resigned in September 1837—presumably with relief, for the institution was dying of inanition and of denominational squabbles among its trustees, and Coit had been unable to ameliorate the situation. He edited in 1837 an American edition of Townsend's _New Testament Arranged in Historical and Chronological Order_ and followed it in 1838 with a similar edition of Townsend's _Old Testament_. Subsequently he was rector of Trinity Church, New Rochelle, N. Y., 1839–49, professor of church history in Trinity College, Hartford, Conn., 1849–54, rector of St. Paul's, Troy, N. Y., and lecturer in the Berkeley Divinity School, Middletown, Conn., 1854–72, and professor of church history in the Divinity School from 1872 until his death in 1885. In that year he was able to report to his bishop that he had performed all his teaching duties punctually and had also preached regularly in neighboring churches. In 1844 he submitted to the joint committee which the General Convention had appointed to prepare a standard _Prayerbook_ a report (reprinted in _Jour. of the Gen. Convention of the P. E. Church in the U. S._ 1868) that displays minute liturgical scholarship and excellent taste. His _Puritanism, or a Churchman's Defence against its Aspersions by an Appeal to its own History_ (1845) was his best-known work. The book combined sarcasm and solid, well-documented learning in a way difficult to answer; it had its day of fame and is still readable. Coit also published lectures on the _Early History of Christianity in England_ (1859) and various sermons. He was an able student of the Bible, of liturgies, and of church history, a zealous churchman, and the master of a dignified, vigorous English. His theological library of 14,000 volumes now belongs to the Berkeley Divinity School.

G.H.G.

COKE, RICHARD (Mar. 13, 1829–May 14, 1897), governor of Texas, United States senator, was born in Williamsburg, Va. Descended from John Coke who emigrated from England to Virginia in 1724, he was the son of another John and Eliza (Hawkins) Coke. He received his early education in the common schools of Williamsburg, entered William and Mary College in 1845, and graduated in 1849 with honors. He studied law and was admitted to the bar. In 1850 he removed to Waco, Texas, then a new village on the frontier. Here his personality,
Coke

ability, and industry speedily won him recognition and he became known as one of the leading lawyers of his section of the state before he was thirty years old. In 1852 he married Mary Elizabeth Horne of Waco. In 1858 difficulties arose between the settlers on the frontier and the reservation Indians on the upper Brazos and a general war was threatened. In 1859 Coke was a member of a commission, appointed by Gov. Runnels, which induced the Indians to remove to the Indian Territory, and restored peace. When the great crisis of 1860 arose, Coke favored secession and was a member of the Texas secession convention of 1861. In 1862 he raised for the Confederate service an infantry company which became a part of the 15th Texas Regiment, and as captain of this company he served throughout the rest of the war in Arkansas, Louisiana and Texas. When the war ended, he returned to the practise of law at Waco. Soon afterward he was appointed by Provisional Governor A. J. Hamilton judge of the district court. When the government of Texas had been reorganized in 1866 under President Johnson's policy, he was elected an associate justice of the state supreme court on the conservative ticket. He served only one year, for in the summer of 1867, after the passage of the Reconstruction acts, he was included in the wholesale removal of state officials by Gen. Sheridan, the military commander, as "an impediment to reconstruction."  During the next six years he added to his reputation as a lawyer and became one of the leaders of the reorganized Democratic party which was seeking to recover control of the state from the radical Republicans. In 1873, as the Democratic nominee for the governorship, he defeated the Republican candidate, Gov. E. J. Davis, by a vote of two to one. The Republicans sought to retain control by contesting the legality of the election, and the Republican state supreme court in the case ex parte Rodriguez actually declared the election void. The newly-elected state legislature assembled, and Gov. Davis stationed negro militia in the state-house and appealed to President Grant for military support. Grant refused to interfere, and Davis, to avoid armed conflict, vacated his office. Coke was inaugurated on Jan. 15, 1874. His administration was beset with many difficulties. The retiring heads of departments had made no reports; the state government was in debt and without funds; the frontiers were unprotected; Indians ravaged the western settlements; and Mexican bandits raided the valley of the lower Rio Grande. The whole state was suffering from lawlessness, the product of years of war and civil disturbances during the Reconstruction period.

Coke

Coke set himself to remedy these evils. By appealing to the United States military authorities and by the judicious use of rangers and state militia he obtained protection against the Indians and broke up the bands of outlaws. By encouraging rigid economy he reduced the expenses of the government and made a new beginning of the public-school system. Reelected governor, he was inaugurated in April 1876, and in the following month he was elected United States senator. As senator he endeavored to obtain federal protection for the Rio Grande frontier against Mexican bandits and to assist in deepening the harbors of Texas ports. He supported the free-coingage silver bill of 1878 and advocated the repeal of the Resumption Act. He seconded the efforts of John H. Reagan to bring interstate railways under federal control, and worked for the Interstate Commerce Act of 1887. He opposed the Blair Bill for federal aid to local schools on the score of constitutionality; and fought the protective tariff, the suspension of silver coingage, and the Force Bill. In all these matters he had the confidence and support of the great majority of his Texas constituents. He was re-elected without opposition in 1882 and again in 1888. In 1894 he declined re-election and spent the short remainder of his life at his home in Waco, near which he had an extensive plantation. Coke was a man of spotless integrity, strong common sense, and unwavering fidelity to every trust reposed in him.

C.W.R.

COKE, THOMAS (Sept. 9, 1747–May 3, 1814), Methodist bishop, was the only surviving child of Bartholomew and Anne Phillips Coke. He was born in Brecon, Wales, where his father was a prosperous apothecary and small officeholder. He looked back upon his youth as a period of indiscretion, for he had been gay and handsome and fond of dancing, cards, and liquor. A troubled conscience at times caused him to wrestle with the prevalent infidelity at Oxford, but when he graduated from Jesus College in 1768 he was merely an academic Christian. When his patient hopes of church preferment were dashed, he obtained a small curacy at Road, Somersetshire, in 1770, and later at South Petherton in the same county. There, from the eloquence and vehemence of his preaching, his parishioners suspected that he was tainted with Methodism. Meetings with Thomas Maxfield, one of Wesley’s lay preachers, and with Hull, a dissenting minister of South Petherton, further attracted
Coke

him to the Methodist group. In August 1776 he
met Wesley. His preaching became more fervent
and evangelical, and he was dismissed from his
church by the ancient ceremony of chaming. He
then joined Wesley and attended the Bristol con-
ference in 1777. During his ministry in London,
he assisted Wesley in his vast correspondence.
In 1782 he became the first president of the Irish
conference, an office which he held for many
years. Two years later he outlined the first Meth-
odist scheme for the establishment of missions
among the heathen, a work in which he was later
to become preeminent.

After long deliberation, Wesley drew up a plan
for the necessary organization of the Methodist
church in America, which he revealed to Coke
in February 1784. So unprecedented a measure
startled Coke and two months of reflection were
necessary to overcome his doubts. At Bristol, on
Sept. 2, Wesley ordained Richard Whatcoat and
Thomas Vasey as presbyters for America and
appointed Coke the first superintendent; several
weeks later these three sailed from England “to
go and serve the desolate sheep in America.” Ar-
rriving in New York on Nov. 3, Coke preached
several times before proceeding to Philadelphia
where he was entertained by the governor. He
traveled southward into Delaware and at Bar-
ratt’s Chapel in Kent County he was met by
Francis Asbury [q.v.]. When he had explained
the instructions of Wesley, Asbury professed to
be shocked and for a time refused to be ordained.
With his astute political sense, Asbury realized
what Coke hardly suspected: that the trend of
Methodism in America was away from Wesley.
Hence Asbury refused to exercise the duties of
his office unless elected by a majority of the
American itinerants. A general conference to be
held in Baltimore during Christmas week was
determined upon, and Coke went on a thousand-
mile preaching tour in Maryland and Virginia.
On Dec. 17 the leaders assembled near Balti-
more to prepare for the work of the conference,
and a week later, in Baltimore, the conference,
presided over by Coke but dominated by Asbury,
was opened. Coke and the two presbyters or-
dained Asbury on successive days a deacon, an
elder, and general superintendent, a title that
Asbury himself changed to bishop.

From 1784 to 1803 Coke made nine voyages
to America. He was tireless in his labors for
American Methodism; and his lengthy and ar-
duous preaching tours were fruitful. Yet his
career in America was a series of conflicts and
misunderstandings. In his numerous disputes
with Asbury he was inevitably unsuccessful. His
solitary triumph over Asbury, who desired mere-
Coker

ly a Methodist school, was Cokesbury College,
found at Abingdon, Md., in 1787; but even this
was not lasting, for in December 1795 the college
was completely destroyed by fire. When, during
the third conference, Coke suggested that the
continent be divided between himself and Asbury
as bishops, Asbury secured the passage of a res-
olution “consenting” that Coke remain in Eng-
land until recalled and limiting the exercise of his
duties as bishop. Although the control of Coke
in American Methodism was merely nominal,
Asbury remained jealous of the empty priority
of consecration that he enjoyed. A storm of
criticism broke upon both Asbury and Coke when
they, with considerable courage, took a firm stand
against slavery. In 1785 they presented an anti-
slavery petition to George Washington at Mount
Vernon. In June of 1789 Coke committed a se-
rious indiscretion when he assisted Asbury in
preparing a congratulatory address to Washing-
ton as president of the United States; for this the
English conference at Bristol formally rebuked
him. His efforts to unite the Methodist and Epis-
copal churches in America in 1791 produced
great indignation and were as fruitless as were
his similar efforts in England eight years later.
He did not return to America after 1803. In 1790
the first Methodist missionary committee had
been formed in England with Coke as its head:
when the missionary organization was revised
in 1804 Coke was made its president. His con-
spicuous success in the work of the foreign mis-
sions gained him a high and enduring place in
the history of Methodism.

COKER, JAMES LIDE (Jan. 3, 1837–June
25, 1918), manufacturer, philanthropist, was born
on a large plantation near Society Hill, S. C., an
old Welsh settlement, the son of Caleb and Han-
nah (Lide) Coker. He early manifested fond-
ness for agriculture, which remained one of the
primary interests of his life. After preliminary
training at a local academy and at the South
Carolina Military Institute of Charleston, he en-
tered Harvard in 1857 for special work in soil
analysis and plant development. His courses un-
der Agassiz and Asa Gray delighted him, but
when he was given by his father a substantial
estate near Hartsville, he returned the following
year to undertake actual farming. He organized
at once an agricultural society for the dissemina-
Coker

Colburn

tion of scientific ideas. On Mar. 28, 1860, he married Susan Stout of Alabama. At the outbreak of the war he volunteered and was commissioned captain of Company E, 6th South Carolina Infantry. After two years of hard fighting in Virginia, he was transferred to Tennessee, wounded at Lookout Mountain, promoted major, and at Missionary Ridge was captured. Paroled in July 1864, he returned to his ruined plantation.

A brief experience in the legislature, 1864-66, taught him that he had no desire for public life. He thereupon devoted himself to business. His ventures were varied and uniformly successful. He continued to farm for fifty years after his return and never once had an unprofitable season. In 1866 he opened a small country store at Hartsville which grew in time into one of the largest department stores of the state. From 1874 until 1881 he was a member of Norwood & Coker, dealers at Charleston in cotton and naval supplies. In 1884 he organized the Darlington National Bank. Five years later he built a small railroad from Darlington to Hartsville, subsequently purchased by the Atlantic Coast Line. In the same year he organized, with the aid of his son, James L. Coker, Jr., the Carolina Fiber Company, first corporation to make on a practical scale wood pulp from the pine wood so common in that section. A few years later he promoted the Southern Novelty Company, manufacturing from paper the cones and parallel tubes used by yarn mills for shipping the yarn. In the nineties he organized the Hartsville Cotton Mill, the Hartsville Cotton-Seed Oil Mill, and the Bank of Hartsville. Meantime, cooperating with his son, David R. Coker, he developed on his farm one of the South's principal experimental agencies for seed-testing and plant development. With the exception of four years spent in Charleston from 1877, he lived at Hartsville.

Deeply though tolerantly religious, Coker was interested in all phases of social welfare, particularly in education. In 1908 he made an initial subscription of $85,000 in land and $150,000 in cash for the establishment of a college for women in Hartsville. He added further donations; and it was due almost exclusively to his efforts that this institution, now called Coker College, was able to meet the requirements for standard colleges for women. Virtually bankrupt at the close of the war, he accumulated one of the largest private fortunes in the history of South Carolina. He was the state's most versatile business man, one of its most cultivated gentlemen, and the foremost South Carolina philanthropist of his generation.

F. P. G.

COLBURN, DANA POND (Sept. 29, 1823-Dec. 15, 1859), educator and author of numerous school books, was born in West Dedham, Mass. He was the youngest of a family of fifteen born to Isaac and Mary Colburn (Dedham Records of Births, Marriages and Deaths, vols. I and II, 147) both hardy New Englanders who reared their children "to subsist by honest toil." His early annals are brief. He obtained "a good English education" in the town school, showing an early marked preference for mathematics and exhibiting a philosophical turn of mind. The neighborhood Lyceum, the school of Joseph Underwood, and the Bridgewater (Mass.) Normal School, where he came under the powerful influence of Nicholas Tillinghast [q.v.], furnished the rest of his formal education.

Fresh from the discipline of the normal school, he plunged into teaching, a profession he never relinquished. First at Dover and Sharon, Mass., then at East Greenwich, R. I., and, finally, at Brookline, Mass., he exhibited such a mastery of common-school problems and such skill as a teacher that he drew the attention of Horace Mann. He was invited in 1847 to begin institute work, which he carried on with the greatest success till his death. He gave lessons in orthography and geography, but in arithmetic he excelled as a teacher. The path soon opened which led him to become a teacher of teachers. After 1848, when he became assistant in the Bridgewater institution, his work centered in normal schools. After 1852, he taught in a private normal school at Providence, becoming its principal in 1854, when it was changed to the Rhode Island Normal School. Three years later he transferred, with the State Normal School, to Bristol, where, in 1859, at the height of his success, he was accidentally killed, a few days before he was to have been married.

Colburn's popularity as a teacher owed much to his keen imagination, boundless enthusiasm for his subject, and love for those whom he taught. His chief contribution to teaching was in his emphasis on the rational rather than the memory method. With him study was to be a pleasure. As a true Pestalozzian, he surveyed the Hill of Knowledge and sought to lay out new approaches, avoiding unnecessary crags which impeded the progress of beginners. In his textbooks illustrations relieved the usually tedious pages. He published First Steps in Numbers (1845), Decimal System (1852), Interest and
Colburn

Discount (1853), Arithmetic and Its Applications (1855), Common School Arithmetic (1858), Child's Book of Arithmetic (1859), and Intellectual Arithmetic (1859). Numerous articles and accounts of demonstration lessons by Colburn appeared in the Rhode Island Schoolmaster (1855–59) and other educational periodicals. In his brief life he outstripped the accomplishments of most contemporaries. His elaborate plans for the improvement of the teaching of mathematics, which included more advanced arithmetics, a geometry, and an algebra, were frustrated by his death.

T.W.

COLBURN, IRVING WIGHTMAN (May 16, 1861–Sept. 4, 1917), manufacturer, inventor, was born in Fitchburg, Mass., the eldest son of Henry Joseph and Eliza Ann (Siner) Colburn, both of English ancestry. The early history of Massachusetts records the pioneer activities of three Colburn brothers in textile manufacture and their mathematical and inventive abilities. Early in Irving's life these inherent characteristics were revealed. His father, manager of a machine works and an inventor of wood-working machinery, had a well-equipped mechanical shop in his home, and here Colburn after school spent all of his time. Electrical experimentation especially attracted him, even before graduating from high school, and after spending a few years in the machine works with his father, he established at the age of twenty-two Fitchburg's first agency for the sale of electrical equipment. Within a year or two he began in a small way and as a side issue, the manufacture of dynamos and motors of his own design and, using one of his machines, made the first electric lighting installation in Fitchburg. He also installed the city's first telephone system. In 1891 Colburn organized the Colburn Electric Company in Fitchburg to engage in electrical equipment manufacture. The business thrived so well that four years later a new and larger plant was built. Difficulties then arose in securing working capital, chiefly because Colburn was financially unknown, his manufactured products having been sold under the name of his distributor; and after three years of unsuccessful effort to correct this error, the business was discontinued. Colburn then went to Toledo, Ohio, and like his father who had preceded him there, became interested in glass manufacture. His innate inventive turn led him to experimentation in the fashioning of glass by mechanical means and eventually to drawing continuous sheets; and for the succeeding nineteen years until his death, he was engrossed in the solution of these problems. His work attracted to him world-wide attention and was crowned with success just a year before he died, when his process became the basis of the commercially successful Libbey-Owens Sheet Glass Company. While his headquarters were in Toledo, Colburn conducted his preliminary work from 1899 to 1907 in Frankford, Pa., patenting a number of glass-working machines as they were developed. For the next four years he was at work in Franklin, Pa., chiefly on a process for blowing tumblers and lamp chimneys, and it was while thus engaged that he began his experiment of mechanically drawing continuous sheets of glass. His basic patent, No. 876,267, was granted Jan. 7, 1908 and assigned to the Colburn Machine Glass Company. After several years of experimentation and the expenditure of much money with no appreciable financial return to his backers, Colburn sold his patents in 1912 to large financial glass interests in Toledo. With his assistance the process was brought to perfection in 1916 and a $2,000,000 plant was built near Charleston, W. Va. Colburn was married to Ida E. Hamlin of Toledo, who survived him.

C.W.M.

COLBURN, WARREN (Mar. 1, 1793–Sept. 13, 1833), author, was the firstborn of Richard Colburn, a farmer of Dedham, Mass., and Joanna Eaton, his wife. At the age of four he began summer district school, and at seven or eight, winter school at Milford, whither by that time his parents had moved. About 1806 they moved again to Uxbridge where he continued to attend the winter terms of the district school. In the course of this schooling he had revealed his interest and expertness in arithmetic, and his father to encourage this bent took into his family an infirm schoolmaster, who was known as a "good cipherer." The instruction Warren got from him and at the district school constituted all the book-learning he had until 1815. By that time he had mastered the trades of weaver and machinist and had been employed for five years at the latter occupation. In the summer of that year he began to prepare for Harvard College which he entered in 1816. Here, too, he showed a strong interest in mathematics along with physical science. His graduation thesis was "On the
Colburn

Benefit Accruing to an Individual from a Knowledge of the Physical Sciences." He included in his mathematical study calculus and the recently published works of Laplace. During his college course he taught winter terms of school at Boston, Leominster, and Canton, and on graduation in 1820 opened a private school in Boston. It was while he was teaching there that he wrote his text-books in arithmetic. The earliest of these bore the title, First Lessons in Arithmetic, on the Plan of Pestalozzi, with some improvements (1821). This remained the title till 1826 when it was changed to Colburn's First Lessons. Intellectual Arithmetic upon the Inductive Method of Instruction. This title was retained thereafter. In 1822 his second arithmetic appeared, Arithmetic; Being a Sequel to the First Lessons in Arithmetic. In 1825 he published An Introduction to Algebra upon the Inductive Method of Instruction. His arithmetics, which almost immediately leaped into public favor and came to be used very widely both in this country and abroad, are still being published. Though he profited by Pestalozzi's theories, these books were the product of his own experience as a teacher and of his own genius. They transformed the school study of arithmetic from a blind following of rules to a reasoned solution of problems excellently adapted to the stages of development of the child's power, and marked the beginning of a new epoch in the teaching of this study. In 1823 Colburn gave up teaching to accept the superintendency of a cotton-mill at Waltham and in the following year became superintendent of the mill of the Merrimack Manufacturing Company at Lowell, Mass., remaining in this position until his death. In the last years of his life, 1830-33, he published a graded series of Lessons in Reading and Grammar. In 1826 he was elected to the first school-board of Lowell and was twice relected. He was one of the founders of the American Institute of Instruction in Boston and made before them many addresses, that of 1830 on "The Teaching of Arithmetic" being especially memorable. He was elected a fellow of the American Academy of Arts and Sciences and a member of the examining committee for mathematics at Harvard. From year to year he delivered before local lyceums and mechanics' associations, which he helped much to promote, lectures upon scientific subjects. From 1827 on he was a communicant in the Episcopal Church which he served as warden. On Aug. 28, 1823, he married Temperance C. Horton, whom he had had as a pupil while as college student he was teaching in Canton. By her he had four sons and three daughters. His disposition was characterized by its unvarying cheerfulness and serenity. Rather tall and well-proportioned, he was attractive in appearance, suggesting intelligence, refinement, and benevolence.

W.J.C.

COLBURN, ZERAH (Sept. 1, 1804-Mar. 2, 1839), mathematical prodigy, son of Abiah and Elizabeth (Hall) Colburn, was born in Cabot and died in Norwich, Vt. When he was less than six years old, it was discovered that he could solve rapidly in his head any problem of arithmetic that was assigned to him. His father, a poor man already nearing fifty, recognized in the child's unique ability a means of gaining a livelihood for his wife and nine children. He exhibited the prodigy throughout New England, and as far south as Richmond, and in April 1812, leaving only a small debt-incumbered farm as support for the family, set out with him for England. In London, erudition, nobility, and even royalty acclaimed the marvel of Zerah's faculty; but Paris, "owing," Zerah thought, "to the native frivolity and lightness of the people" (Memoir, post, p. 74) received him without enthusiasm. His schooling was spasmodic, and no more than moderately effective even in mathematics. His French residence of eighteen months, beginning July 1814, was financially disastrous, but half of it was spent under regular instruction at the Lycée Napoléon.

During 1816-19, public interest in mathematical prodigies having ceased, the boy attended Westminster School, under the patronage of an earl, a period in which he distinguished himself chiefly by his rebellion against "fagging." Angered because funds which he thought properly destined for himself were being diverted elsewhere, the father quarreled with the Earl of Bristol who had favored him. Soon, plagued by poverty, he urged his son to redeem their fortunes by a career on the stage. Zerah complied as usual, but poverty still followed them, and in his extremity the boy turned school-master. The father died in 1824 and soon afterward the son returned to America. Here he gave his attention so earnestly to religion that to his surprise he was early pronounced "a child of grace" and received into the Congregational Church (Ibid., pp. 155-56). Doctrinal questions of free-will and foreordination continued unanswered, and he could not feel spiritually at home, until, affiliating himself with the Methodists and becoming a minister, he set out on a nine years' itinerary in

283
Colby

Vermont. In 1833, he published *A Memoir of Zerah Colburn Written by Himself*, and in 1835, he ended his official career as a minister to become professor of languages in Norwich University. His prowess in mental arithmetic, though somewhat impaired, remained with him always. He was married on Jan. 13, 1829 to Mary Hoyt, by whom he had six children. He died from tuberculosis.

[In addition to Colburn’s Memoir, see G. A. Gordon and S. A. Colburn, *General of the Descendants of Edward Colburn-Colburn* (1913); P. C. Dodge, *Encyc. Vi. Biol.* (1912).]

J. D. W.

**COLBY, FRANK MOORE** (Feb. 10, 1865–Mar. 3, 1925), editor, author, was born in Washington, D. C., of New England stock, the son of Stoddard Benham and Ellen Cornelia (Hunt) Colby. He graduated from Columbia University in 1888; took his master’s degree the next year in political science; was Seligman Fellow at Columbia, 1889–90, and acting professor of history in Amherst College, 1890–91; returned to Columbia as lecturer in history in the College and instructor in Barnard College, 1892–95; and then went to New York University as professor of economics. Meanwhile, to eke out his salary as a teacher, he had begun to write for encyclopedias and so drifted into what proved to be his life-work. His first staff position was as editor, 1893–95, of the history and political science department of Johnson’s *Encyclopaedia*. He married Harriet Wood Fowler of Amherst, Mass., Dec. 30, 1896, and in 1898 became editor of the *International Year Book*, later named the *New International Year Book*, of which he remained editor until his death. In 1899 appeared his *Outlines of General History*, a succinct, well-devised text-book, which in 1921 went into a fourth edition. In 1900 he gave up his academic post in order to give all his attention to editing and writing. He was an editorial writer for the *New York Commercial Advertiser*, 1900–02, was on the staff of the *International Encyclopaedia*, and was American editor of *Nelson’s Encyclopaedia*. With Daniel Coit Gilman and Harry Thurston Peck he was editor of the *New International Encyclopaedia*, 1900–03, and with Talcott Williams supervised the publication of the second edition, 1913–15. He also edited the two supplementary volumes of 1924 besides doing his annual work on the *Year Book*. The bulk of the editorial responsibility was in each case his. The merits of the *New International* were largely due to his genius for planning and organization and to the high standards of literary expression to which he held his contributors. Through his editorial labors he exercised a salutary influence on popular educa-

**Colby**

tion in America. Though he once maintained that it would be no homicide to shoot a man with an “encyclopaedic mind” and was fond of comparing himself to a chute down which tons of general information plunged annually in a long, deafening roar, leaving only a trail of dust behind, he was a man of broad and accurate learning. That learning came as a surprise at times to readers of certain popular magazines who never guessed that the author of witty, pungent brief essays on books, plays, and manners was anything besides a literary journalist. At one time or another Colby wrote either as regular contributor or as member of the staff for the *Bookman, Harper’s Weekly, the New Republic, Vanity Fair, the North American Review, and Harper’s Magazine*. He collected some of his magazine work in several volumes of essays: *Imaginary Obligations* (1904), *Constrained Attitudes* (1910), and *The Margin of Hesitation* (1921). His literary work is best represented, however, in a two-volume collection of excerpts and whole essays, gleaned from the entire range of his magazine writing, which appeared after his death. In his personal essays he is revealed as an original, masculine mind expressing itself with remarkable vigor and precision. He was consciously a stylist, often rewriting his ideas to bring them nearer to perfection. He was reserved almost to the point of shyness, though an excellent talker with those he knew well.

**COLBY, GARDNER** (Sept. 3, 1810–Apr. 2, 1879), merchant, railway-president, philanthropist, was the son of Josiah C. Colby, of Bowdoinham, Me. His fortune and ship-building business swept away by the *War of 1812*, the elder Colby died, leaving his widow, Sarah Davidson of Charlestown, Mass., with four children to support, of whom Gardner was the second. At the age of twelve the latter was at work in a potash factory at Waterville, Me. Lacking time for school, he looked up at the Waterville Literary and Theological College with longing. After failing in her small store ventures at Bath and Waterbury the mother removed her children to Boston, where Gardner was sheltered and boarded by a Mr. Stafford in exchange for such work as he could do. After a year or so his mother managed to establish a home once more. Gardner had a few months at school and worked for Phelps & Thompson, grocers, after school hours. At fourteen his school days ended and for three years he was a clerk in a dry-goods store at $150
Colby

a year and his board. His interest in education for others was demonstrated by his successful solicitation of two scholarships of $75 each on one Thanksgiving Day, while he was still a clerk. With his savings and a small loan he rented a store in Boston and immediately prospered in the retail dry-goods business. Soon Gardner Colby & Company were wholesale jobbers and importers, interested in navigation and trade with China. In 1850 Colby became a manufacturer of woolens by the purchase of a half-interest in the Maverick Mills at Dedham, Mass. During the Civil War he was successful bidder on many government contracts for clothing. He retired from business and established his home at Newton, but becoming restless in retirement, undertook the presidency of the Wisconsin Central Railroad. His own money and that of many friends went heavily into this venture. Troubles times came upon the country and he encountered great difficulties, but lived to see the 340 miles of road completed to Lake Superior. When urged by friends to give up, his reply was, "if I'm good for anything, I'm good in a storm." The road being completed in 1878 Colby returned to Newton, where he died in the following April. In 1836 he had married Mary Low Roberts of Gloucester, Mass. Four sons and two daughters survived him.

As treasurer of the Baptist Education Society, treasurer of the Newton Theological Institute, trustee of Brown University at Providence, he rendered valuable personal service and contributed to these institutions constantly and progressively as his wealth increased. The Waterville Literary College was in desperate circumstances in 1864, with the student body either at war or kept on the farms. Colby contributed $50,000 upon condition that a total of $200,000 be raised. This timely act enabled the college to continue, and in 1867 its name was changed by the legislature of Maine to Colby University (now Colby College).

[ *A tribute to the Memory of Gardner Colby* (Boston, 1879), containing a sketch of his "Life and Characteristics" by his son the Rev. Henry F. Colby; *Boston Herald*, Apr. 3, 1879; E. C. Whittemore, *Centennial Hist. of Waterville* (1902), pp. 78, 86, 302–33.] B.C.

**Colby, Luther** (Oct. 12, 1814–Oct. 7, 1894), spiritualist, was born at Amesbury, Mass., the son of Capt. William Colby, a shipmaster, and of Mary Colby, who survived her husband many years. From boyhood he was the intimate friend of his fellow townsman John Greenleaf Whittier. At the age of fifteen he completed his education in the common schools of his native town and went to Exeter, N. H., to learn the printing trade. In the light of his subsequent interests, it is worth noting that his first work in printing was done on an edition of Scott's Family Bible. In 1836 he moved to Boston and began his twenty years' connection with the *Boston Daily Post*, during which time he advanced from journeyman printer to night editor.

Through a fellow printer, William Berry, with whom he became familiar while in the service of the *Post*, he was introduced to Charles Crowell, Mrs. J. H. Conant, and other spiritualist mediums. As a result of noting the reports of manifestations of the spirit world and of attending séances where he received what appeared to him indubitable testimony to the truthfulness of spiritualism, Colby joined with Berry and in 1857, "in obedience to a company on high, unfurled the *Banner of Light*," a weekly spiritualist paper, "devoted to the advocacy of the Spiritual Philosophy and Phenomena." The avowed purpose of the paper was the publication of spirit messages through the mediumship of Charles Crowell. Colby firmly believed that truth could best be served by a careful publication of all alleged communications from the "sphere of light" to the "mortal state," together with the supposed evidence for them, and that thereby man could come to know himself truly as a spiritual being in his eternal relations, instead of confining himself to sense knowledge of his temporary material bonds. He had a fervent conviction that the revelation of spiritual truth by the *Banner of Light* would revolutionize the world. Berry was killed in the Civil War; Colby continued to serve as editor of the *Banner of Light* until his death.

The whole life of "Luther the veteran," was centered in this paper and in his defense of the unpopular cause of spiritualism. Though not personally a prominent man or a writer of books, his influence as editor of the *Banner of Light* was widespread. The paper was his pride both as to its high moral tone and as to its attempt to serve nothing but the truth. Its typographical form received his close attention, and the paper was a model of neatness and accuracy. Personally, Colby was genial, honest, upright to the core, and, though excitable and impetuous, extremely generous. He was of large stature, robust physique, and temperate habits. Of his sincere belief in spiritualism there can be no doubt. He possessed a mind comparatively free from conventional dogmatism and narrowness, and was given neither to theological speculation nor to church practices. Throughout his editorship he followed the liberal policy enunciated in his first statement, that we "shall not believe
Colden

everything but shall not refuse to listen to what is said.” The Banner of Light, through Colby’s instrumentality, was the foremost organ of spiritualism until its discontinuance in 1907.

[John W. Day, A Biographic Memorial of Luther Colby (1895); The Banner of Light, esp. for Oct. 13, 20, 1894, in which memorial articles on Colby appeared; personal letter from Mary T. Longley, associated with Colby in editorial and spirit message service 1879–93.]

H.W.S.
R.R.

COLDEN, CADWALLADER (Feb. 7, 1688 n.s.–Sept. 28, 1776), Loyalist, lieutenant-governor of New York, philosopher and scientist, was born in Ireland, while his mother was visiting there, though he was of Scotch ancestry and the son of Alexander Colden, a minister of Duns, Berwickshire, Scotland. He was destined for the church, but after he had received the degree of A.B. from the University of Edinburgh in 1705, he followed his stronger inclinations and went to London to study medicine. From there, at the suggestion of an aunt, he made his way to Philadelphia in 1710, where he practised medicine and carried on a mercantile business. Except for short business trips and a return to his native country in 1715, when he married Alice Christie (daughter of David Christie of Kelso, Scotland) on Nov. 11 of that year, his stay in Philadelphia was uninterrupted until 1718, when he moved his family to New York. The Governor of that province had met him, been well impressed, and promised to make him the next surveyor-general of the colony if he would make his home there—a promise which was accordingly fulfilled in 1720. This proved to be only the beginning of Colden’s long public career. In 1721 he was appointed to the Governor’s Council and in 1761 he became the lieutenant-governor of the colony, offices which he held until his death in 1776. Whether straightening out with industrious skill the tangle of the colony lands; demonstrating the ease with which huge patents could be automatically reduced by the exaction of legal quit-rents, which, in turn, could be used as a salary fund to insure the independence of crown officials; formulating an Indian policy; or, discredited, living in watchful retirement at his Orange County manor, Coldengham, he never ceased to fight colonial aggression with the same indomitable resolution which characterized everything he did.

His official duties, however, did not smother his other interests, for the scope of his attainments displays a remarkable versatility of mind. He not only wrote treatises which embraced history, applied mathematics, botany, medicine, and philosophy, but he carried on a correspondence which included Linnaeus, Gronovius, Benjamin Franklin, Peter Collinson, Alexander Garden, and Samuel Johnson. Of his writings, The History of the Five Indian Nations Depending on the Province of New York was his first important work, published originally in 1727, but enlarged and reprinted in later editions. Strange enough, though Colden was closely associated with the Indian tribes of New York, the book was based on French sources, and is both dull and confused. It was widely read, however, and is still an authority on the subject. He was also impressed with the great superiority of the French in their knowledge of the country, due to their superior instruments for map-making. He devoted much time, therefore, though without success, to the improvement of his own map-making instruments and compiled a set of astronomical tables from his own observation. He also invented, though others had probably preceded him, the process now known as stereotyping, an explanation of which is contained in “An original paper of the late Lieut. Gov. Colden, on a new method of Printing discovered by him; together with an original letter from the late Dr. Franklin, on the same subject; and some account of Stereotyping, as now practised in Europe, &c. by the Editors of the Register” (American Medical and Philosophical Register, vol. 1, April 1811, pp. 439–50).

Colden

medical properties of tar-water, which gained him much local reputation.

In mental and moral philosophy he found further outlet for his mind. "The First Principles of Morality or the Actions of Intelligent Beings," "An Introduction to the Study of Philosophy wrote in America for the use of a young Gentleman" (Peter De Lancey), and his translation of Cicero's letters were all worthy products of his pen. But it was in physics that he found his chief joy. His pamphlets: *Light and Colors, An Inquiry into the Principles of Vital Motion, The Cohesion of the parts of Bodies, and An Introduction to the Doctrine of Fluxions or the Arithmetic of Infinites,* show the catholicity of his mind, but to him his *magnus opus* was *An Expiration of the First Causes of Action in Matter, And, of the Cause of Gravitation* (New York, 1745; London, 1746). The theorem had been promulgated by James Bernonilli toward the close of the preceding century, but Colden seems, as Franklin believed, to have been quite unaware of that fact. In 1748 an edition with notes was printed at Leipzig and Hamburg. In 1751 a revised edition, *The Principles of Action in Matter, the Gravitation of Bodies, and the Motion of the Planets explained from those Principles,* was published in London. The edition was well-launched, but its implied criticism of Newton was resented and there was much counter criticism which Franklin attributed to the reluctance of Europeans to learn from "us Americans." Once more revising and enlarging the *Principles,* he sent the manuscript in 1762 to Robert Whyte, professor of medicine at the University of Edinburgh, asking him to deposit it in the university library if he thought it unworthy of publication. Dr. Whyte advised against immediate publication and there our knowledge of this revision rests. The old edition, however, continued to be read, Buffon in 1778 asking Thomas Jefferson to replace his own lost copy.

In August 1760, the death of Colden's keenest opponent, James De Lancey, who had been made lieutenant-governor despite Colden's many requests for the office, called the latter to take command of the government, a summons eagerly obeyed by this indomitable man of seventy-three. Because he immediately undertook to enforce the laws against smuggling merchants and grasping landowners, and was determined to hold the judiciary under some restraint, he was soon fighting as he had never fought before. Meanwhile, his commission as lieutenant-governor had come, under which he ruled the province for fourteen years save for the brief ad-

ministrations of several governors. Late in 1764 came the news of the Stamp Act and Colden was asked by a most restrained assembly to join it in requesting a repeal. He replied evasively, and later refused to sign addresses to King, Lords, and Commons, for, notwithstanding the precedent set by the other colonies and the disrespect shown him in public, he proposed to enforce the law. The result was that on Nov. 1, 1765, a mob burned Colden's effigy along with one of the devil and destroyed some property. Urged by prominent citizens, Colden then promised to leave the stamps alone and later under some pressure yielded them to the mayor, an action promptly censured by the home government. The Stamp Act was shortly after repealed, but no reply came to Colden's claim for damages for nearly three years. Yet, despite his difficulty in getting his financial claim satisfied, the excitement caused by further taxation and the quartering of the regulars, Colden succeeded in keeping a fair balance between radicals and conservatives until the Boston Port Act led to the Continental Congress at Philadelphia. The next Assembly was controlled by the Loyalists, but they were defeated by the popular demonstration which elected the delegates to the second Congress. Soon after, the battle of Lexington virtually ended British government in the colonies, and Colden retired to his Long Island estate, "Spring Hill," where he died. He was devoted to his family, and attributed his labors to a desire to give his children leisure for scholarly pursuits. His daughter Jane [*q.v.*] achieved unusual distinction for a woman of her time, and his son David was a scholar of recognized standing. His daughter Elizabeth married Peter De Lancey with whose brother, James De Lancey [*q.v.*], Colden had contented for the office of lieutenant-governor.

A. M. K.

COLDEN, CADWALLADER DAVID (Apr. 4, 1760–Feb. 7, 1834), lawyer, mayor of New York City, was the grandson of Cadwalader Colden [*q.v.*], Loyalist lieutenant-governor of New York on the eve of the Revolution.
He was born at Flushing, N. Y., the son of David and Ann (Willett) Colden. He received his early education at Jamaica, N. Y., and, in the year 1784, at a classical school near London. Upon the death of his father in that year, he returned to New York City and began the study of law, which he subsequently pursued intensively at St. John, N. B., under the expert guidance of the crown counsel, William Wyly, Loyalist émigré (Colden letters; Edward A. Jones, American Members of the Inns of Court, 1924, p. 227), and again, on his return to New York, at Kinderhook. Colden was admitted to the bar in 1791, and two years later he married Maria, daughter of Rev. Samuel Provost, first Protestant Episcopal bishop of New York. Down to the War of 1812 he practised law in Poughkeepsie, N. Y., and in New York City; and served in the capacity of district attorney of New York City in 1798 and 1810 (Hugh Hastings, ed., Military Minutes of the Council of Appointment of the State of New York, 1783–1821, 1901, pp. 1109 ff.). The New York law reports (see, for example, 1 Caines, 9 Johnson, passim) bear tribute to his ability and growing reputation in the stalwart age of Emmet, Wells, and Ogden. As a member of the committee on the judiciary in the state Senate in 1825, Colden made a vigorous plea for the simplification of procedure and the codification of the law. Although in his earlier years he had manifested a reverence for the English system of jurisprudence, he now assailed its “useless and antiquated” formalities and fictions (Journal, 48 Senate, 1825, pp. 320–21). The report of the committee foreshadowed the legal revolution of the next decade.

Though a Federalist, Colden supported the War of 1812, and served as colonel in the state militia, subsequently (1819) being raised to the rank of major-general (Council of Appointment, pp. 1748, 2013). Elected to the state Assembly in 1818 with the indorsement of Tammany Hall, he openly supported Gov. DeWitt Clinton, who, as head of the council of appointment, was wreaking political vengeance on that organization. Colden was rewarded by being appointed mayor of New York City to succeed Jacob Ratcliffe (Council of Appointment, pp. 1858–59). In this capacity he served from 1818 to 1820. In 1821 he successfully contested the election of Peter Sharpe to Congress (Annals of Congress, 17 Cong., 1 Sess., p. 520). During his term he seldom departed from his “usual course of silence,” but in 1822 he made a vigorous address in the House attacking the fugitive-slave law (Ibid., p. 1379), in line with his earlier indorsement of the plan of Gov. Tompkins for the emancipation of slaves in New York (Journal, Colden letters, 40 Assembly, pp. 126, 137, 235). In his term in the New York state Senate, 1825–27, Colden actively sponsored relief for the poor, and juvenile welfare, and his expert knowledge was marshalled in attacks on fanciful canal projects, and in urging further development of the port of New York (see, for example, Journal, 48 Senate, pp. 64, 75, 93: 50 Senate, 1 Sess., pp. 33, 490).

Colden was intensely interested in navigation and internal improvements. In 1825 he drew up for the city of New York a Memoir on the completion of the New York canals. In this (p. 51) he expressed his conviction that the Erie Canal would make New York the greatest commercial metropolis in the world. His Life of Robert Fulton (1817), is an uncritical but detailed survey of the inventor’s career, which minimizes the contributions of earlier pioneers in the field of steam navigation. During the years 1817–19, Colden was engaged in the production of a number of polemical tracts supporting the patent rights of Fulton and the steamboat monopoly. He died in Jersey City, N. J.

R. B. M.
mother. She early showed a love of botany and shared with her father an enthusiasm for the great Swedish botanist, Linnaeus, and a mastery of his system which is recorded with admiration in many contemporary letters. Peter Collinson wrote to Linnaeus (May 12, 1756), "I but lately heard from Mr. Colden. He is well; but, what is marvellous, his daughter is perhaps the first lady that has so perfectly studied your system. She deserves to be celebrated." And Dr. Alexander Garden wrote to John Ellis (Mar. 25, 1755), "not only the doctor himself is a great botanist, but his lovely daughter is greatly master of the Linnean method, and cultivates it with assiduity." John Ellis hinted to Linnaeus (Apr. 25, 1758) that, as he had named a plant Coldenia after the father, it would be a compliment to call Fibraurea or Yellow Root for the daughter. He suggested "Coldenella cr any other name that might distinguish her among your genera." Linnaeus had already named the plant in question Helleborus Trifolius, but apparently said "civil things" about Jane Colden in a letter to Ellis.

Gov. Colden taught his daughter to take the impression of the leaves of plants in printers' ink, and she seems also to have made drawings. Ellis wrote to Linnaeus (Apr. 25, 1758) that "she has drawn and described 400 plants in your method only," and she may have been the author of other articles. Peter Collinson notes that in the second volume of Edinburgh Essays "is published a Latin botanic dissertation by Miss Colden," and mentions in another letter to Linnaeus "a curious botanic dissertation by Miss Jane Colden" which may refer to the same work. The records of her life are fragmentary; on Mar. 12, 1759, she married Dr. William Farquhar, described by her brother as "An old widower, but very worthy good Scotchman," by whom she had a child who died in 1766. Her husband practised medicine in New York City and long survived her.

COLE, CHESTER CICERO (June 4, 1824-Oct. 4, 1913), jurist, teacher of law, was born in Oxford, N. Y., the youngest of the eleven children of Samuel and Alice (Pullman) Cole. He attended the public schools and academy at Oxford until he was thirteen, and for five years was a clerk in a general store. He read law in the office of a local lawyer for two years, then entered the Harvard Law School, from which he graduated in June 1848. The same month he was married to Amanda M. Bennett of Oxford, by whom he had seven children. After his graduation he went to Marion, Ky., was admitted to the bar, and during a period of nine years gained a high reputation in criminal law. The campaign of 1856 and the controversies that followed led Cole to move to Des Moines, Iowa, where he lived until his death. He associated himself with the Democratic party in Iowa and continued with that party throughout the campaign of 1860. In 1859 he was a candidate for the state supreme court and in 1866 for Congress, but was defeated in both contests. At the outbreak of the Civil War he allied himself with the Union men in support of the government and left the Democratic party, which was dominated by Southern sympathizers. He supported William M. Stone for governor on the Republican ticket in 1864, and in recognition of his labors in behalf of the Union, he was appointed a judge of the supreme court. He was twice re-elected and served for twelve years. In 1876 he returned to the practise of law.

With Judge George G. Wright, his associate in the supreme court, he organized the Iowa Law School in Des Moines in September 1865. The school was conducted with marked success for three years, after which it was merged with the law department of the State University at Iowa City. Cole served as professor for seven years. Upon his return to Des Moines in 1875, leading citizens urged upon him the organization of a law school in the capital city, pointing out that every consideration of convenience and advantage to students required the establishment of such a school. It was opened in September 1875. In 1881 Drake University was established in Des Moines and at the request of its founders the law school was affiliated with it. For all but about five or six years from 1875 to 1907 Cole was dean of the school. During all of this time he was actively engaged in the practise of law. In 1907 after a service of forty-two years, he was awarded a retiring allowance by the Carnegie Foundation, in recognition of his work as a teacher of law, and was made dean emeritus of the law school. He continued his practise until he was eighty-seven years of age. Cole was one of the most widely known lawyers in Iowa. At his best he had few equals and no superiors as a trier lawyer. As a judge his opinions were models—terse, well phrased, pointed and strong.
Cole

He was remarkable for his talents, and for his unceasing industry, not only in his prime, but in his old age. When he received the announcement of the Carnegie award in 1907, he described himself as "only eighty-three years of age" and as not feeling "any necessity of retiring."

COLE, FRANK NELSON (Sept. 20, 1861-May 26, 1926), mathematician, the son of Otis and Frances Maria (Pond) Cole, was born at Ashland, Mass., of old New England stock. His father was a farmer, an expert judge of standing timber, and for a time interested in manufacturing. Moreover, he had a taste for mathematics and was a lover of flowers and trees. From both parents Cole inherited a taste for learning and a stability of character which showed themselves all through his life. After graduating from the high school he was tutor for a short time by a clergyman and then, with financial assistance from a friend, he entered Harvard in 1878. Here he was soon recognized as a man of unusual ability and was granted scholarships which not only made it possible to secure the A.B. degree with highest honors (1882), but to go to Leipzig for the purpose of pursuing his studies in the seminar of Prof. Felix Klein (1883-85), and to return to Harvard where he received the degrees of M.A. and Ph.D. in 1886. He was married in Germany on July 26, 1888, to Martha Marie Streiff.

Cole lectured at Harvard from 1885 to 1887, from 1888 to 1895 was instructor and then assistant professor at the University of Michigan, and was professor of mathematics at Columbia from 1895 to the time of his death. From 1908 to 1923 he was secretary of the Faculty of Pure Science at Columbia. He was secretary of the American Mathematical Society for more than twenty years, and was editor-in-chief of its Bulletin from 1897 until shortly before his death. His published contributions to mathematics began with an essay on the general equation of the sixth degree (1885), and included memoirs on Klein's Ika- sader (1889); the linear functions of a complex variable (1890); the theory of groups (1891-1924); number theory (the factoring of \(2^{67} - 1\) by the aid of quadratic remainders); and triad systems. He also translated Eugen Netto's work on the theory of substitutions ('The Theory of Substitutions and Its Applications to Algebra, 1892). As a man Cole was admired by all who penetrated a certain reserve that was natural to him; as an executive he was faithful to every duty; as a teacher he was lavish of the time that he would give to those who proved their worth; and as a friend he was loyal to the last. He loved to take long walks in the country, studying trees and wild flowers, and at the time of his death was planning to retire from his university work and lead a rural life.

COLE, JOSEPH FOXCROFT (Nov. 9, 1837-May 2, 1892), painter, was, "after Hunt, the first Boston artist who studied in Paris." When he returned from Paris, Hunt bought four of Cole's paintings and helped him to a career that was eminently successful (Knowlton, post, p. 33). While Hunt's priority as "the first Boston artist to study in Paris" may be denied, it is unquestionable that he and Cole were pioneers in calling the attention of New England people to the merits of French painting. Cole's part in this service has had, perhaps, less general recognition than it deserves. He was born at Jay, Me., a son of Samuel and Selinda (Allen) Cole. His parents moved to Boston when he was seven years old. After public-school education Cole served an apprenticeship at the Bufford Lithograph establishment, where he had as associates Joseph P. Baker and Winslow Homer (William Howe Downes, Winslow Homer, 1911, p. 27). While he worked at lithography Cole saw in Boston many English and German paintings but "had no desire to become an artist" (Robinson, post, p. 45). Once, however, he saw a landscape by Constant Troyon which aroused in him an intense desire to paint after the French formula. In 1880 his savings permitted him to go to Paris where he enrolled himself as a pupil of Lambient. After a sketching tour in Italy he returned to Boston where he sold enough pictures to enable him to continue his studies. In 1885 Charles Jacques received him as an advanced student and assistant, employing him to paint from pencil sketches pictures which the master finished and signed. Cole exhibited pictures of his own at the 1866 Salon and the International Exposition of 1867. His summers were spent in Normandy and Belgium. In the latter country he married Irma de Palgrom, a singer of international celebrity. Returning to the United States he occupied a studio in the Century Building, Boston, and a house at Melrose.
In 1873 the family went to Paris where they remained four years. During this time Cole exhibited paintings in the Salons of 1873, 1874, and 1875. He sent to the Philadelphia Centennial three pictures: "Cows Ruminating," "Scene in Normandy," and "Melrose Twilight." Returning home, in 1877 he built a house and a studio on Mystic Lake, Winchester, Mass., where, except for brief trips to Europe and to California, he passed the rest of his life. Here he painted his serious, low-toned landscapes, and advocated among his professional associates and friends the formation of collections of nineteenth-century French art. "One can hardly estimate," says F. T. Robinson, "the influence which Cole, in connection with Hunt, 'Tom' Robinson, A. H. Bicknell and Henry Sayles, has had on the arts of the two continents." Among those whom Cole instructed was his daughter, Adelaide Cole Chase, a distinguished portrait-painter of Boston. He belonged to the Society of American Artists and was well represented in public and private collections when he died in middle life. He was buried in Wildwood Cemetery, Winchester. The Winchester library owns two of his most successful landscapes: "Coast of Normandy" and "The Aberjona."

(Frank T. Robinson, Living New England Artists (1888); Helen M. Knowlton, Art Life of Wm. Morris Hunt (1890); obituaries in Boston Evening Transcript and Boston Daily Globe, May 3, 1892.) F.W.C.

COLE, THOMAS (Feb. 1, 1801-Feb. 11, 1848), artist and poet, one of the first painters to interpret the romantic beauty of American landscape, and a pioneer of the "Hudson River School," was born in England at Bolton-le-Moor, Lancashire, the seventh of eight children of James and Mary Cole. His father, aadden manufacturer, was a man of fine tastes but poor business ability, born at Haynford, Norfolk. Failing in business, he moved to Chorley, and Thomas was sent to school at Chester. His father wished to make him a lawyer or iron manufacturer, but he preferred to enter a calico factory as an engraver of simple designs, where association with an old Scotsman developed his romantic tastes. Accompanied by his youngest sister Sarah, Thomas enjoyed wandering about the parks and old ivy-mantled halls in his leisure moments, playing his flute in picturesque solitudes, while Sarah added the charm of song. An omnivorous reader, he came upon a book which awakened his interest in the beauties of the North American states. Influenced by the boy's enthusiasm and thinking that he might repair his shattered fortunes, the elder Cole sailed with his family for Philadelphia, arriving July 3, 1819. Here, with a stock brought with him, he opened a small dry-goods shop, while Thomas took up wood-engraving which he had already practised at Liverpool. In the fall, the family moved by way of Pittsburgh to Steubenville, Ohio, while Thomas remained at Philadelphia enjoying the brilliant colors of his first American autumn along the banks of the Schuylkill and Delaware rivers. On Jan. 4, 1820, with a companion, he sailed for St. Eustatius in the West Indies. In this mountain island of the tropics, which appeared to him a dream of paradise, he made a number of sketches. He returned home in May to join his family at Steubenville, making the entire journey from Philadelphia on foot. For two years he aided his father in the manufacture of wall-paper, engraving the blocks and relieving these tasks by wanderings in the then primeval wilderness along the Ohio.

Although addicted to literary and poetic composition, he now decided to make the brush rather than the pen his chosen means of expression. With materials procured from a chair-maker whose wares he decorated, he made several experimental portraits of his father and friends. His real delight was in landscape, but portraiture then offered the only means of gaining a livelihood. When twenty-one, in February 1822, with a green baize bag containing a few clothes, colors, brushes, and a stone muller for grinding paint, slung over his shoulder, and not forgetting his beloved flute, he started on foot for St. Clairsville, thirty miles away. Here his experiences lacked financial success, and another walk of three days brought him to Zanesville, whence, after an even more discouraging sequel, he went on seventy-five miles to Chillicothe. An encouraging beginning here ended in disappointment, and, hearing of his family's intended removal to Pittsburgh, he joined them at Steubenville, where he painted some scenery for a local dramatic club. The following spring found him in Pittsburgh helping his father in the manufacture of oilcloth, and sketching along the banks of the Monongahela. In November 1823 he went to Philadelphia and there passed what he called "the winter of my discontent," working meanwhile at the Pennsylvania Academy of the Fine Arts, and writing, besides poems, a story, "Emma Moreton," which appeared in the Saturday Evening Post. His family had moved to New York and he joined them, painting in the garret of his father's house in Greenwich St. Several paintings placed in a shop kept by a Mr. Dixey were sold, and three others, the results of excursions up the Hudson to Weehawken, the Palisades, and the Highlands, found notable purchasers in the artists Col. John Trumbull, A. B. Durand, and William Dunlap; and the
Cole

poet William Cullen Bryant added his appreciation and patronage. Durand said, "His fame spread like wildfire." He took rooms at Catskill, painting from nature in the mountains beside the Hudson. His poetic bent found expression in two Miltonic landscapes, "The Garden of Eden," and "Expulsion from Paradise," which he exhibited at the National Academy Exhibition of 1828.

The generosity of Thomas Gilmor of Baltimore enabled him to visit England in 1829. There he met the poet, Samuel Rogers, and the painters, Sir Thomas Lawrence and Turner, who received him kindly, and his pictures were exhibited at the Royal Academy and British Institution. Otherwise, however, his English visit, which lasted nearly two years, was somewhat depressing. He went on to Paris, and from Marseilles to Genoa and Leghorn (1831–32). Florence he found "a painter's paradise," and at Rome he took a studio on the Pincian Hill formerly occupied by Claude Lorrain. From Naples he went to Paestum, sketching its ancient temples. Sailing from Leghorn, he returned to New York in November 1832. He exhibited his works in rooms at the corner of Wall St. and Broadway, and Luman Reed commissioned him to paint "The Course of Empire": five canvases depicting growth from "Primeval Nature" through "Pastoral Life" to "Wealth and Glory," and decline through "War" and "Desolation." These pictures, which Bryant considered "the most remarkable and characteristic of his works," and which Fenimore Cooper said, "ought to assure the reputation of any man," were completed in October 1836. They are now in the museum of the New York Historical Society. He married Maria Bartow on Nov. 22, 1836, and settled at Catskill, painting from nature and occupied with his allegorical works. For Samuel Ward, in 1839, he began "The Voyage of Life," four subjects: "Childhood," "Youth," "Manhood" and "Old Age," afterward in possession of John Taylor Johnson. These became well known through engravings by Smillie, and are still found in many American homes. Of simpler and less elaborate design than the "Course of Empire," they are more purely imaginative.

In 1841 Cole again visited England, thence going to France, Switzerland, Rome, and Sicily, where he painted studies of Mount Etna. He returned to America by way of the Rhine and Rotterdam in 1842. He visited the Adirondacks in 1846 and Niagara in 1847, dividing his time between the direct study of nature and the composition of pictures which became more abstractly religious in character. A series, "The Cross and the World," was begun, but while painting "The Pilgrim of the Cross" he was seized with inflammation of the lungs and died at Catskill. Cole holds an important place in the development of American art. He was the master of F. E. Church [q.v.]. William Cullen Bryant, in an oration delivered before the National Academy of Design in New York, May 4, 1848, eulogized him not only as a successful painter of actual landscapes, but also as giving evidence of "an ardent imagination" in the more symbolic productions of his brush.

R. J. W.

COLEMAN, CHARLES CARYL (Apr. 25, 1840-Dec. 4, 1928), painter, was born in Buffalo, N. Y., the son of John Hull and Charlotte Augusta Coleman. He early evinced talent as an artist and began his study with William H. Beard [q.v.], who had a studio in Buffalo. When he was nineteen years old, he went abroad for further study in Paris, but returned to America after three years to serve in the Union army during the Civil War. He was badly wounded and suffered intensely, but he returned to Europe in 1866 and worked in Paris and Rome with William Hunt and Elihu Vedder [q.v.], the latter a close friend. They made a trip together into Brittany stopping first at Dinan and at Vitré on their way back to Paris. Although Paris had become the favorite place for study for young Americans, Eugene Benson [q.v.], Vedder, and Coleman found charm in the classic dignity of Rome. Here Coleman lived with George Simmonds, occupying the Keats apartment which has now become a shrine, sacred to the two poets Shelley and Keats. Though keeping his apartment in Rome, Coleman made his home finally on the Island of Capri. Vedder lived near by, each choosing for his home an old villa snuggled against steep hills, with terraces vine-clad, orange trees on the slopes, wide windows that swept the Bay, where to "see Naples and die, means to live in God's Paradise." Coleman was particularly interested in Vesuvius. Whenever the old volcano burst forth, he was ready with canvas and brush to record the various atmospheric effects and changes made by the volcano on the clouds and the surface of the Bay of Naples. His picture of the last great eruption which continued for several days is a historic record of real value. It is owned by the Brooklyn Museum. His "Vesuvius from Pompeii" is in the Detroit Institute of Arts. One of his earliest pictures was a study of Vedder in Coleman's studio. He painted a portrait of Walter Savage Landor, through the influence of Kate Field. Elihu Vedder in his Di-
gessions, told many interesting stories of sketching with him. On one occasion at Bordighera, Coleman had put a "chalk mark" on some particularly attractive view. They apparently respected each other's "chalk marks," but when he began his sketch Vedder sat down behind him to paint the same scene. Vedder said: "I made one of my best sketches and had finished it before Coleman had hardly begun to draw his. Whereupon Coleman was enraged, shut up his box and left, but he claimed my picture as his own, since he had discovered the place." His work, not only in oil but in water-color and pastel, covers a wide range of subjects. Portraits and figure pieces occupied him in the early part of his career; later, landscapes and architectural subjects. He also painted flowers very successfully, understanding color and mass arrangement, and he became famous for his religious pictures and picturesque views throughout Italy. One of his most charming paintings, bought by the Buffalo Fine Arts Academy, is a moonlight view of the village of Capri. He was an associate of the National Academy of Design, New York; a member of the National Arts Club and the Players, New York; and an associate member of the Newspaper Artists Association. He received a Bronze Medal at the Columbian Exposition at Chicago in 1893, and the Silver Medal at the Pan-American Exposition in Buffalo in 1901. Soon after his death the Brooklyn Museum gave a special memorial exhibition of his work for which they assembled a large collection. His funeral at Capri, where he died in his villa "Narcissus," was attended by the public officials and the American colony at Capri.

H.W.

COLEMAN, LEIGHTON (May 3, 1837-Dec. 14, 1907), Episcopal bishop, son of the Rev. John and Louisa Margareta (Thomas) Coleman, was born in Philadelphia where his father was rector of Trinity Church. After attending St. James's Grammar School and the Episcopal Academy of Philadelphia, he spent five years in business, and then entered the General Theological Seminary in New York where he graduated in 1861. From 1860 to 1862 he was missionary at Randall's and Blackwell's Islands, N. Y. Being ordained priest in the latter year, he was for the next seven years successively rector at St. Luke's, Bustleton, Pa.; St. John's, Wilmington, Del.; St. Mark's, Mauch Chunk, Pa.; and Trinity, Toledo, Ohio. Going abroad in 1879 on account of his wife's health, he remained for nearly seven years, residing chiefly at Oxford, engaging in clerical work, and serving for three years as organizing secretary of the Church of England Temperance Society. Returning to the United States, after a brief pastorate at Sayre, Pa., he was elected bishop of Delaware and was consecrated Oct. 18, 1888. He was the first incumbent of the office who was not at the same time rector of a church, and consequently he was able to devote all his energies to diocesan and other public interests. With a strongly-developed journalistic instinct he wrote much for the daily press. He was also the author of the following books: History of the Lehigh Valley (1872); The Church in America (1895); A History of the American Church (1902). A staunch upholder of temperance and law and order, he was a prominent Mason and a member of numerous historical, patriotic, educational, and social organizations within and outside of the Episcopal Church. He was a stiff churchman of the Oxford type and outspoken in the expression of his views. But his genial humanity put him on a friendly footing with all schools and classes, making for him a large place in the hearts of the people of Delaware. In his latter years, on account of his flowing white beard and venerable appearance, he was affectionately called "Santa Claus" by the children of Wilmington. He was a confirmed pedestrian, making long walking trips in the states of Maryland and Virginia, on which he concealed his identity and made friends among all classes of people. His portrait in oil may be seen at "Bishopstead," the Episcopal Residence in Wilmington. He was married in 1861 to Frances Elizabeth du Pont of Wilmington, who died Mar. 17, 1902. One son survived his parents.

[The entire number of the Delaware Churchman for Jan. 1908 is devoted to Bishop Coleman. An outline of his life is also found in Who's Who in America, 1906-07. The Outlook for Dec. 28, 1907, has an appreciative editorial, and large space is devoted to his life and services by the Churchman of Dec. 21, and the Living Church for Dec. 21 and 28 of the same year.] F.T.P.

COLEMAN, LYMAN (June 14, 1796-Mar. 16, 1882), educator, writer of theological works, was born in Middlefield, Mass., the son of Dr. William Coleman and his wife Achsah Lyman. With only a common-school foundation he prepared himself for college while working on his father's farm, entered Yale against strong paternal opposition, maintained himself there largely by his own exertions, and graduated in 1817. For three years he was principal of the Latin Grammar School in Hartford, and for the next four years tutor and student of theology at Yale.
Coleman

His contact during these years with eminent scholars and theologians did much to overcome his shyness and to shape his life purposes. On Oct. 19, 1825, he was ordained at the Congregational Church at Belchertown, Mass., where he remained till Sept. 4, 1832. This, his only pastorate, under which the church prospered greatly, was marked by activities on behalf of the Sunday-school (then a new institution), the cause of missions, and temperance reform. Returning to what he considered his true vocation, Coleman was for five years principal of Burr Seminary, Manchester, Vt., and for five years the head of the English department, Phillips Academy, Andover, Mass. In 1842-43 he spent nearly two years in Europe, studying for seven months under Neander in Berlin. He then became instructor in the classics at Amherst for three years, professor of German in the College of New Jersey (now Princeton) for two years, and then principal of the Presbyterian Academy in Philadelphia for nine. In 1856 he paid his second visit to Palestine and Egypt, and in 1861 he became professor of the classics at Lafayette College, Easton, Pa., where he remained till his death. He was married twice: on Sept. 21, 1826, to Maria Flynt of Monson, Mass., who died on Jan. 11, 1871; and in October 1873 to Marion B. Phillee, who survived him.

His principal publications are: The Antiquities of the Christian Church, largely translated from the German (1841); The Apostolic and Primitive Church, with a preface by Neander under whose inspiration it was written (1844); An Historical Geography of the Bible (1849); Ancient Christianity Exemplified (1852); Historic Text-Book and Atlas of Biblical Geography (1854); Prelacy and Ritualism (1865); Genealogy of the Lyman Family (1872). He also wrote many articles on miscellaneous subjects and his Wall Map of Palestine issued in the latter fifties was long a standard authority. For some years the oldest active college professor in the United States, he was a man of commanding presence, courteous demeanor, warm sympathies, and strong convictions. Firmly grounded in the old faith, he was nevertheless hospitable to new ideas in theology.

COLEMAN, WILLIAM (Feb. 14, 1766-July 14, 1829), the most effective Federalist journalist of the period of Hamilton's leadership, was born in Boston in poverty and, according to Jeremiah Mason, in the poorhouse. His unusual promise attracted the attention of people of means who made it possible for him to enter Andover Academy, where he acquired a taste for standard authors, and a love for Sterne and Junius. He then studied law under Robert Treat Paine at Worcester, interrupting his studies to march with the militia in Shays's Rebellion, and began the practise of his profession at Greenfield, Mass. His tastes being literary and political, he wrote much for the Impartial Intelligencer, which he established, and served in the Massachusetts House in 1795 and 1796. Financially ruined through speculations in the Yazoo land frauds, he moved to New York City, with no other recommendation than an honorary degree from Dartmouth College, a letter from Robert Treat Paine, and a slight personal acquaintance with Hamilton. A partnership of short duration with Aaron Burr was followed by a more advantageous one with John Wells, who introduced him into literary and political circles. A vacancy occurring in the clerkship of the circuit court, at the instance of Hamilton he was appointed over an applicant with superior claims. Thenceforth until Hamilton's death he was intimately identified with the political fortunes of his benefactor. Swept out of office by the Democrat victory of 1800, he was made editor and proprietor of the Evening Post, established for political purposes by Hamilton and his friends. It immediately began to fashion the thought of the Federalist press, particularly through its semi-weekly edition, the New York Herald, which had a national circulation. Coleman had made promises to abstain from scurrility in his prospectus, but he was soon assailing Jefferson and his policies with as much abandon as had characterized Duane's attacks on Adams, and his insinuations against Jefferson's private morals were as indecent as they were false. He persevered in the pro-English policy of his party, advocated a strong navy, ridiculed Galatin as a financier, but supported Jefferson in the Louisiana Purchase, while seeking to deprive him of the credit. During the first Jefferson administration, Coleman was under the direct influence of Hamilton, who frequently met him by appointment at late hours in the night to dictate editorials; and Hamilton contributed anonymous articles, such as the series of Lucius Crassus on Jefferson's first message to Congress. However, after Hamilton's death there was no marked deterioration in the editorial discussions of the Post.

During Jefferson's second administration, Coleman bitterly denounced his foreign policy as anti-English; fought the embargo; attacked Clay,
Coleman

the leader of the war party, as "a liar and demagogu"; and sought to discredit and prevent the floating of the Gallatin loan. With war declared, he editorially discouraged the recruiting of federal regiments and called the war "unjust." He did not, however, participate in the Hartford Convention, albeit charged by Theodore Dwight, secretary of the convention, with having sought admission. After 1816 he ceased to be an uncompromising partisan. He had supported the state administration of DeWitt Clinton and favored him for the presidency in 1812. Four years later he was persuaded that the Jeffersonian policies were too popular to make war upon them wise, and he was soon defending Monroe as one "more generally acceptable to all classes . . . than any other man . . . since . . . Washington." Coming under the spell of the personality of Vice-President Tompkins in 1819, his antipathy for Democrats faded, and he supported William H. Crawford for president in 1824, largely because of a dislike for John Quincy Adams, and in 1828 he supported Jackson against Adams because of the more moderate tariff views of the former. His death occurred in the first year of the Jackson régime.

A ready writer, much given to literary allusions, trained by the law to an intelligent discussion of legislative and constitutional questions, Coleman made his influence widely felt. An excellent conversationalist, jovial, naturally kindly, and easily moved to pity, he was much loved by his associates. Despite his opposition to dueling, he was forced to fight Capt. Thompson, harbor-master of New York, in 1803 and the encounter at the foot of Twenty-first St. resulted in the death of the Captain. After Hamilton's death, Coleman, at Mrs. Hamilton's request, published a compilation of tributes, Facts and Documents Relative to the Death of Major General Hamilton; and in 1810 he published a pamphlet of 123 pages attacking Madison for refusing further communications from the British minister.

C.G.B. COLEMAN, WILLIAM TELL (Feb. 29, 1824–Nov. 22, 1893), merchant, San Francisco Vigilante, was born near Cynthiana, Harrison County, Ky. His father was Napoleon B. Coleman, a lawyer and at one time a member of the legislature. Of his mother little is recorded. The boy was but nine when his father died, a bankrupt; and thereafter, with few opportunities for schooling, he had to work for the support of the family. At fifteen he went to Jacksonville, Ill., where he was employed by an uncle, one of the chief engineers for a system of railroads projected by the State; but the collapse of the State's program the following year threw him adrift. At St. Louis he found work in the lumber trade, leaving it two years later to enter St. Louis University as a preparation for the career of a lawyer. His health failing, he went to Louisiana in 1844, but shortly afterward returned and then went to Wisconsin. Regaining his health after several years, he decided on an overland journey to California. With his brother he arrived at Sutter's Mill, Aug. 4, 1849, and at once engaged in the buying and selling of cattle, making also some ventures in real estate. For several months he kept a store at Placerville, and later, with two partners, at Sacramento. In June 1850 he closed the Sacramento store and with one of his partners started the merchandising firm of William T. Coleman & Company in San Francisco. He was for a time a member, and sometimes the presiding officer, of the executive committee of the Committee of Vigilance of 1851, where he opposed the extremism of Sam Brannan and others. Though resigning from the executive committee after two months' service, he continued to be a member of the general organization and also of its mysterious and shadowy Committee of Thirteen which five years later was to bring another vigilance movement into being. In August 1852, in Boston, he married Carrie M. Page, and thereafter for about three years made his home in New York, where he established an eastern branch of his firm.

He returned to San Francisco in January 1856, to find that social conditions had relapsed into a state similar to that which preceded the citizens' uprising of 1851. The assassination of James King of William, editor of the Bulletin, by a New York ruffian, James Casey, on May 14, brought on a new crisis. A call from the old Committee of Thirteen was published, and on the following day a new Committee of Vigilance was formed, and Coleman was made president of its executive committee. In an article in the Century Magazine, published thirty-five years later, he makes the doubtful statement that absolute authority was given him and that without this grant of power he would not have accepted the place. The Committee began work promptly. On May 18 the sheriff, realizing the popular strength of the movement, surrendered Casey and another mur-

W. J. G.—

COLES, EDWARD (Dec. 15, 1786—July 7, 1868), abolitionist, governor of Illinois, was born on a plantation, "Ennisworthy," in Albermarle County, Va. His father, Col. John Coles, who was a slaveholder and of good family, had served in the Revolution and enjoyed the friendship of many of the foremost Virginia statesmen of the time. Edward was given an exceptional education and training, even for an aristocratic Virginian of that period. After being prepared by private tutors, he first attended Hampden-Sidney College, and later William and Mary, where he failed to graduate, however, owing to a physical injury. From 1809 to 1815 he served as private secretary to President Madison and in 1816 he was sent by the President to Russia on a diplomatic mission. His European journey also afforded him opportunity for travel in Germany, France, and the British Isles. The trend of Coles's later career was determined by a strain of idealism in his character which led him early in life to champion the anti-slavery cause, on moral and humanitarian grounds. Upon the death of his father in 1808, he had fallen heir to a plantation and a number of slaves, but this did not alter his attitude. In 1814 he corresponded with Jefferson on the subject of slavery and a letter of Jefferson's, dated Aug. 25, 1814, has become famous as one statement of the anti-slavery view-point (Washburne, Coles, Alvord ed., pp. 24-27). Being, as one of his friends expressed it, "an experimental philosopher," Coles determined to remove to free soil and emancipate his slaves. He had made two preliminary journeys to the Northwest, first in 1815 and again in 1818, and had decided to settle at Edwardsville, Ill., the state having been admitted to the Union in 1818.

He set out in the spring of 1819, carrying his negroes with him. With an instinct for the dramatic, he informed them of their emancipation during the journey down the Ohio River. Upon arriving in Illinois, he executed formal deeds of emancipation and assisted his former slaves to make a new start in life. On Mar. 5, 1819, he was appointed register of the Land Office at Edwardsville, a position which enabled him to extend his acquaintance among the people of the state. He is described at this time as "a young man of handsome, but somewhat awkward personal appearance, genteelly dressed, and of kind and agreeable manners" (Ibid., p. 49). In 1822, only three years after his arrival in the state,

derer, Charles Cora, to the Committee. They were put on trial on the 20th, found guilty on the 21st, and publicly hanged on the 22nd. For three months the Committee, with every evidence of general approval, though facing the proclamation of Gov. Johnson, who on June 3 declared San Francisco County in a state of insurrection, continued its work of trying criminals. On Aug. 18, after having hanged four of them, exiled twenty-three, and frightened many others into leaving the city—a record curiously similar to that of 1851, it held a great parade and then disbanded.

Coleman again became a resident of New York City, remaining there for several years. At the conclusion of the Civil War he returned. On Dec. 16, 1865, he received the complimentary vote of 26 legislators for the United States senatorship. He was frequently besought to accept public office, but always declined. During the anti-Chinese agitation of 1877, which brought on rioting and some destruction of property, he came to the front as the head of a Committee of Safety. Armimg his volunteers at first with weapons from the War Department, but immediately thereafter discarding these arms and substituting hickory pick-handles, he organized a large force for the preservation of order. It was a brief episode, for the danger, which had become acute on July 23, had passed by the 26th, and by the 28th the Pick-Handle Brigade was dissolved. Coleman's various activities had brought him into national prominence. In the months immediately preceding the national campaign of 1884 he was enthusiastically supported for nomination as a presidential candidate by Charles A. Dana in the New York Sun. In 1886 his house failed with large liabilities. Though by a temporary adjustment the creditors were paid at forty cents on the dollar, Coleman declared that he would in time pay every one in full, a promise he fulfilled in the year before his death. He died in San Francisco, survived by his widow and two sons. Coleman is described by Bancroft as "tall, large, symmetrical in form, with a high intellectual forehead and eyes of illimitable depth and clearness" and of a presence "always imposing." The dedication of the second volume of the historian's Popular Tribunals (1890) addresses the Vigilante as "the chief of the greatest popular tribunal the world has ever witnessed"; and the work praises him in high terms.

[H. H. Bancroft, Popular Tribunals (1890); G. W. Sullivan, Early Days in Col. (1869); S. S. Eldridge, ed., Hist. of Cal. (1911); Wm. Tell Coleman, "San Francisco Vigilance Committees," Century Mag., Nov. 1891; "Sherman and the San Francisco Vigilantes," Century Mag., Dec. 1891; T. H. Hittell, Hist. of Cal. (1897); Mary Floyd Williams, ed., "Papers of the San
Coles

Coles was elected governor, though by a very narrow margin. His success may be attributed in part to the appearance of slavery in Illinois politics. Though nominally free territory, slavery virtually existed, and there was evidence of a desire to extend the institution. Coles naturally represented the forces opposed to this movement. In his first message to the Assembly, he urged the adoption of measures which would abolish slavery in fact as well as in name. The challenge was taken up by the pro-slavery faction, which passed a resolution calling for a referendum upon the question of holding a convention to amend the constitution. It was understood that one purpose of this move was to legalize slavery. A bitter struggle ensued, with Coles leading the anti-convention forces.

In a letter to a friend he wrote at this time, “I assure you, I never before felt so deep an interest in any political question. It preys upon me to such a degree, that I shall not be happy or feel at ease until it is settled” (Ibid., p. 122).

The convention project was decisively defeated at the polls in August of 1824, and the menace of slavery was averted. As governor, Coles was greatly interested in the furthering of internal improvements and in the promotion of agriculture. As early as 1819 he had taken the initiative in organizing the first state agricultural society. In national politics he was at first a Republican. In 1824 he favored Crawford for the presidency, but later he became an opponent of Jackson.

Aside from his career as governor he met with little success in state politics, being defeated for the United States Senate in 1824 and for Congress in 1831. Apparently he did not find life in a frontier state congenial, for a few years after retiring from the governorship in 1826, he removed to Philadelphia, probably in the fall of 1832. There he passed the remainder of his life, years which were happy, prosperous, but uneventful from a political standpoint. On Nov. 28, 1833, he was married to Sally Logan Roberts. He died in 1868 at the age of eighty-two, having witnessed the fulfillment of his life-long hope, though at the cost of civil war. In helping to prevent the extension of slavery into the Northwest, it is evident that he himself played no small part in the emancipation movement.

The best account of Coles’s life is Elihu B. Washburne’s Sketch of Edward Coles (1882). It includes a full history of the convention struggle of 1824 and is valuable for the documents which it contains. This Sketch has been reprinted, along with additional documentary material, under the title “Gov. Edward Coles," as vol. XV (1920) of the Colls. of the Ill. State Hist. Lib., edited by C. W. Alvord. Some of Coles’s correspondence as governor is contained in E. B. Greene and C. W. Alvord, Governors’ Letter Books, 1818-1834 (1909), vol. IV of the Ill. Hist. Colls. See also Solon J. Buck, Illinois in 1818 (1917), and Theodore C. Pease, The Frontier State, 1818-1848 (1918), the latter being vol. II of the Centennial History of Illinois. In the absence of any considerable body of manuscript material, early Illinois newspapers constitute one of the most valuable sources regarding his political activities.

W. E. S.—s.

Colfax

Colfax, Schuyler (Mar. 23, 1823-Jan. 13, 1885), vice-president of the United States, was born in New York City. His paternal grandfather, William Colfax, was commander of Washington’s body-guard during the Revolutionary War (William Nelson, in the Proceedings of the New Jersey Historical Society, 2 ser., IV, 145-52). His maternal grandmother, Hester Schuyler, was a cousin of Gen. Philip Schuyler [q.v.]. His father, Schuyler Colfax, who married (Apr. 15, 1829) Hannah Stryker of New York, died Oct. 30, 1822, and in 1834 his mother married George W. Matthews of Baltimore. In 1836 the family removed to New Carlisle, Ind., where Matthews, who became auditor of St. Joseph County in 1841, appointed his stepson deputy auditor at South Bend, an office which he held for eight years. Colfax found time to serve as assistant enrolling clerk of the state Senate (1842-44) and as correspondent of the Indiana State Journal (Indianapolis), and also studied law, but was never admitted to the bar. Having bought an interest in the South Bend Free Press in 1845, he changed the name of the paper to St. Joseph Valley Register, made it the Whig organ of northern Indiana, and retained his interest in it until shortly after he became speaker of the House of Representatives. His political activities began early. He made campaign speeches for Clay in 1844, was secretary of the Chicago Rivers and Harbors Convention in 1847, delegate to the Whig national convention of 1848, and sat in the state constitutional convention of 1850. In 1851 he was defeated as a Whig candidate for Congress, notwithstanding a unanimous nomination, but was a delegate to the Whig national convention of 1852. When the Republican party was formed he joined it, and took an active part in organizing the new party in Indiana. In December 1855, he entered the House of Representatives of the Thirty-fourth Congress (1855-57) as a Republican, and served continuously until the end of the Fortieth Congress (Mar. 3, 1869). From the Thirty-eighth to the Fortieth Congress, inclusive (1863-69), he was speaker of the House. On June 21, 1856, he made a speech, of which more than a million copies were said to have been circulated, opposing the use of the army in Kansas until the laws of the Territory should have received
Colfax

congressional approval. His longest and most important service, prior to the speakership, was as chairman of the Committee on Post Offices and Post Roads, in which capacity he directed the reorganization and extension of the overland mail service to California. He was strongly urged for postmaster-general under Lincoln, but was passed over on the ground, as Lincoln wrote, that he was "a young man, is already in position, is running a brilliant career, and is sure of a bright future in any event" (Hollister, post, p. 175). On Apr. 8, 1864, he left the speaker's chair to move the expulsion of Alexander Long of Ohio, who had spoken in favor of recognizing the Confederacy. The resolution was later changed to one of censure.

His position as speaker, together with his "advanced ideas on Negro suffrage" (W. A. Dunning, Reconstruction Political and Economic, 1907, p. 129), commended Colfax as a candidate for vice-president in 1868, and at the Chicago convention, after the fifth ballot, when he received 541 votes, his nomination was made unanimous (E. Stanwood, History of the Presidency, I, 321), and he was later elected. An offer of the secretariaship of state in August 1871 was declined. Consideration of his availability as a presidential candidate by the Liberal Republicans in 1872 aroused the opposition of administration leaders, and at the Philadelphia convention he was defeated for renomination on the first ballot, the vote standing 321½ for Colfax and 364½ for Henry Wilson (Ibid., I, 348). Shortly thereafter he declined an offer of the editorship of the New York Tribune. He was implicated in the Crédit Mobilier scandal, the investigation showing that he had agreed to accept twenty shares of stock in the company and had received a considerable sum in dividends. His denial of the charge was not convincing, and in his examination before the committee "it is impossible to believe that he told the truth" (Rhodes, VII, 13–15). He escaped formal censure on the ground that his misconduct, if any, had been committed before he became vice-president, but although he claimed to have been "fully exonerated" (Biographical Directory of the American Congress, 1928, p. 834), his political standing was ruined. His part in the Crédit Mobilier affair was somewhat overshadowed by the disclosure that he had received in 1868 a campaign gift of $4,000 from a contractor who had supplied envelopes to the government while Colfax was chairman of the Committee on Post Offices and Post Roads. He continued after his retirement to be in demand as a lecturer, and devoted much time to the Odd Fellows, of which order he had been a member since 1846. He died suddenly at Mankato, Minn., and was buried at South Bend. His first wife, Evelyn Clark of New York, whom he married Oct. 10, 1844, died at Newport, R. I., July 19, 1863. On Nov. 18, 1868, he married Ellen W. Wade, a niece of Benjamin F. Wade of Ohio [q.v.].

The chief authority, aside from the Jour. of the House of Representatives, the Cong. Globe, and the reports of House committees, is O. J. Hollister, Life of Schuyler Colfax (1886), able and thorough but over-friendly. A. Y. Moore, The Life of Schuyler Colfax (1868), a campaign biography, is valuable for the texts of speeches, letters, newspaper comment, etc. The Poland and Wilson reports on the Crédit Mobilier scandal form House Report No. 77, 42 Cong., 3 Sess.: their facts and findings are judiciously summarized and appraised in J. P. Rhodes, Hist. of the U. S., VII (1906), ch. 46.)

Colgate, James Boorman (Mar. 4, 1818–Feb. 7, 1904), stock-broker, philanthropist, was the son of William [q.v.] and Mary (Gilbert) Colgate and was born in New York City. He attended school in the city and in Connecticut until he was about sixteen, when he began work in the commission house of Boorman, Johnson & Company. He went to Europe in 1841, and on his return the following year was employed by a wholesale dry-goods house. In 1852 he formed a stock-brokerage partnership with John B. Trevor, under the firm name of Trevor & Colgate. Five years later the firm added a bullion department, to which Colgate gave most of his time. During the Civil War the firm served in some degree to regulate the ratio of value between gold and paper, thus preventing the hoarding of specie, and in various ways helped to sustain the credit of the government. In 1873 the name was changed to James B. Colgate & Company, which is still retained. During the earlier stages of the resumption of specie payments the firm conducted the largest specie and bullion business of any house in the United States. Colgate was one of the founders, and for a number of years the president, of the New York Gold Exchange and in his last years vice-president and a director of the Bank of the State of New York. He was an advocate of the recoinage of silver during the years 1890–97, and despite the adverse sentiment of nearly all his business colleagues, vigorously maintained his position with tongue and pen. He was married twice: first, about 1847 to Miss Hoyt of Utica, N. Y., who died a few years later, and, in 1857 to Susan F. Colby, who, with a daughter and a son, survived him. Like his father, he was a Baptist. Becoming prosperous at an early period of his business career, he followed his father's example of contributing generously to educational and religious institutions.

Colgate
Colgate

With his partner Trevor he built the Warburton Avenue Baptist Church in Yonkers. He made many gifts to Madison University in Hamilton, N. Y., and in 1873, with the assistance of his brother Samuel, built and endowed in the same village Colgate Academy, thereafter serving for a number of years as the president of its board of trustees. On the combining, in 1890, of the University and the Academy, the institution was named, in honor of his father, Colgate University. He is said to have made a substantial gift to it every year, and during the period of thirty years to have given to it and to its predecessors more than a million dollars, as well as a substantial donation to Colby Academy, at New London, N. H., the home of his wife. He had a wide range of interests and was a member and supporter of several societies for the furtherance of knowledge and art.

[Who's Who in America, 1903-05; N. Y. Times, N. Y. Tribune, and N. Y. Herald, Feb. 8, 1904; information as to certain facts from Jas. C. Colgate.]

W. J. G—t.

COLGATE, WILLIAM (Jan. 25, 1783—Mar. 25, 1857), manufacturer of soaps and toilet preparations, was born in the parish of Hollingsbourn, Kent, England, the son of Robert and Sarah (Bowles) Colgate. In March 1795, the father, threatened with arrest for his too ardent advocacy of the French Revolution, sailed with his family for Baltimore. He bought and cultivated a farm near Baltimore, but lost it through a defect in the title. His son William had some schooling both in England and in America. At fifteen he went to work, probably for a tallow-chandler, and in 1804 he left Baltimore for New York, finding employment with Slidell & Company, then the largest tallow-chandlers in the city. Before long he became business manager of the firm. In 1806 he started his own establishment in Dutch St., which from the first was successful. He was married, in 1811, to Mary Gilbert, a woman highly praised for her cultivation, charm, and benevolence. By 1812, worth $5,000, he considered himself wealthy, and his after-years are said to have been of uninterrupted prosperity. About this time he began the manufacture of starch, subsequently abandoned, and for many years his establishment included one of the largest starch plants in America. Though the manufacture of soap in this country was then in its crude beginnings, the finer qualities being made by secret process in England and France, the industry grew enormously during the first four decades of the century, and Colgate’s business shared in this expansion. The discoveries of Chevreul in 1841, revealing the true principles of saponification, were quickly utilized by Colgate and others, greatly transforming the industry and prompting the manufacture of many new varieties of toilet and shaving soaps. In 1847 the factory was moved to Jersey City, and three years later the making of “fancy” soaps was established on a large scale, to be followed in later years by a wide range of toilet preparations.

Out of his first profits Colgate bought a farm in Delaware County, N. Y., for his father. When he began business he resolved to devote ten per cent of each year’s net earnings to benevolence—a resolve adhered to throughout the remainder of his life, though the percentage was often doubled and even trebled. His main interests were education, religion, and temperance. He was a liberal supporter of the Hamilton Literary and Theological Seminary, at Hamilton, N. Y., and its successor (1846), Madison University, which in 1890 became Colgate University. In his twenty-fifth year he joined the Baptist Church. He aided in organizing the first Bible society formed in New York and in 1816 in organizing the American Bible Society. In 1836, however, objecting to some of the methods of the latter society, he resigned and helped to organize the American and Foreign Bible Society, of which for thirteen years he was the treasurer. By 1838 he had come to regard sectarianism as an obstacle to the progress of Christianity. Withdrawing from his church, he joined with others in organizing the society which built the Tabernacle, a society which adopted no creed, but only a simple covenant. In the same year he admitted to partnership his son Samuel. Until about a year before his death he continued actively in business. He died at his home in New York City, leaving three sons: Samuel (1822–97), who succeeded to the business and greatly extended it, James Boorman [q.v.], and Robert.

In the manufacture of soaps and toilet preparations in the United States Colgate was a pioneer. He combined shrewd judgment with clear vision, and he seems never to have made a serious commercial blunder. Even during the ruinous times of the War of 1812 he prospered. He was noted, among other things, as the possessor of an exceptionally sunny temperament. He was just in his dealings; to his employees he was liberal, and he was known as a friend of the workingman. His hospitality was lavish, and to the causes he had at heart he was a generous contributor.

[Samuel Colgate, “Am. Soap Factories,” in One Hundred Years of Am. Commerce (1895), ed. by C. M. Depew; N. Y. Tribune, Mar. 26, 1857; W. W. Everts, Wm. Colgate, the Christian Layman (1881); information as to certain facts from Jas. C. Colgate.]

W. J. G—t.
Collamer

COLLAMER, JACOB (Jan. 8, 1791—Nov. 9, 1865), judge, United States senator, postmaster-general, was born in Troy, N. Y., third of the eight children of Samuel Collamer, member of an early Massachusetts family, and Elizabeth Van Ornun, of colonial Dutch descent. The family moved to Burlington, Vt., when Jacob was about four. Here he prepared for college under members of the faculty, and graduated from the University of Vermont in 1810. At once he began the study of law at St. Albans, Vt., under Mr. Langworthy and later under Benjamin Swift, afterward senator. His studies were interrupted by his being drafted into the detailed militia service in 1812. He served as lieutenant of artillery and as aide to Gen. French, with whom he went to Plattsburg, arriving in the evening after the battle was over. Admitted to the bar in 1813 he practised at Randolph Center until he removed to Royalton in 1816. He married Mary N. Stone of St. Albans, daughter of Abijah Stone, on July 15, 1817. He served four terms in the legislature as representative of Royalton, and was one of the assistant judges of the supreme court of Vermont from 1833 until 1842 when he declined re-election. As delegate to the Vermont constitutional convention (1836) he actively supported the movement to substitute a state Senate for the old Governor’s Council. “That amendment has been largely attributed to the ability and zeal with which he urged it” (Barrett, post). This year he moved to Woodstock, Vt., his home for the rest of his life. His national career began in 1842 when, after a close and hotly contested election, he was chosen member of the House of Representatives for the 2nd Congressional District. Reelected in 1844 and 1846, he declined a fourth election. As representative he made speeches on the annexation of Texas, the Mexican War, and the tariff, his address on “Wools and Woolens” attracting most attention. Recommended for a cabinet position by a legislative caucus, he became postmaster-general in the cabinet of President Taylor (1849). His service was short, for upon the death of President Taylor in July 1850 he resigned with the rest of the cabinet.

A few months after his return home, the Vermont legislature elected him, under the recently remodeled judicial system, circuit judge for the 2nd judicial circuit. In 1854, a candidate of the young Republican party as an anti-slavery Whig, he was elected senator. As a Republican he belonged to the conservative wing. In the Thirty-fourth Congress he served on the Committee on Territories under the chairmanship of Senator Douglas, and on Mar. 12, 1856 made a vigorous minority report on the disorders in Kansas, defending the character of the free-state leaders. He was one of three New England senators to vote against the tariff bill of 1857. In 1860 Vermont presented his name to the Republican convention for the presidential nomination, but after the first ballot, on which he received ten votes, his name was withdrawn. In the same year he was re-elected to the Senate “with almost unprecedented unanimity.” He and Fessenden refused to vote against the Crittenden compromise of the winter of 1861, though they did not vote for it. He drafted the bill, enacted July 13, 1861, which, according to Senator Sumner, “gave to the war for the suppression of the rebellion its first congressional sanction and invested the President with new powers” (Address of Senator Charles Sumner, Dec. 14, 1865). On the problems of Reconstruction he held that Congress should control. While not an orator, and rarely speaking in the Senate, he was always listened to with attention, the logic of his arguments commanding respect. From June 1855 to October 1862 he was president—the last—of the Vermont Medical College at Woodstock, in which he had lectured on medical law. He died at his home in Woodstock after a brief illness. Judge James Barrett, long his law partner, said of Collamer, “His mind was made up of a clear and ready perception, acuteness of discrimination, a facile faculty of analysis, an aptness and ease in rigid and simple logic, excellent commonsense, and withal a most tenacious memory of facts.”

[The chief source is the Memorial Address read by Judge Jas. Barrett before the Vt. Hist. Soc., Oct. 20, 1868 (Rutland, 1868; Woodstock, 1868). Consult also Addresses on the Death of Hon. Jacob Collamer delivered in the Senate and House of Representatives, Dec. 14, 1861 (1866) and Addresses on the Presentation of the Statue of Jacob Collamer of Vermont, by Jas. M. Tyler, Geo. B. Long, and Alexander H. Stephens, delivered in the House of Representatives Feb. 15, 1881 (1881); and Henry Swan Dana, Hist. of Woodstock, Vt. (1889).]

C. R. W.

COLLENS, THOMAS WHARTON (June 23, 1812—Nov. 3, 1879), jurist, writer, known to his contemporaries as T. Wharton Collens, was born in New Orleans, the son of John Wharton Collens and Marie Louise de Tabiteau. For a while he was employed as a printer. As a young man he contributed to the city papers a number of articles dealing with social problems in which he had become interested. Some of these appeared in the True American, edited during the thirties by his kinsman, John Gibson, “the faithful and bold.” At this time Collens was a follower of Robert Dale Owen in his peculiar deistical doctrines and social theories. The philoso-
Collens

phy of Fourier also made a deep appeal to him. Turning to the study of law, young Collens was admitted to the bar in 1833. His rise to prominence in the courts of his native city was rapid. The following year (1834) he held the position of clerk and reporter of the state Senate. He further served as chief deputy clerk of the federal circuit court (1836-38), and as district attorney for the Parish of Orleans (1840-42). As a result of his ability, industry, and fidelity, criminal law was administered during this time with marked vigor. His reward came in being designated as presiding judge of the city court of New Orleans (1842-46). Later he served as judge of the first district court (1856), and after the Civil War he was twice elected judge of the seventh district court (1867-73). He then resumed the practice of his profession. He was also a member of the convention which framed the constitution of 1852. Though opposed to secession, Collens cast in his lot with the Confederacy. A close student, with quick and penetrating faculties, and habits of unusual methodical industry, his decisions while judge were accepted by the bar with marked respect. As a writer Collens is remembered by his “Lines to the Memory of Father Turgis,” printed among other places in the Living Writers of the South (1860). At the age of twenty-four he brought out a historical tragedy in five acts entitled The Martyr Patriots; or Louisiana in 1769 (see The Louisiana Book: Selections from the Literature of the State, 1894, ed. by Thomas McCabe). This drama was performed in the old St. Charles Theatre in 1836. In addition to “Humanities” and the “History of Charity,” his most pretentious work is The Eden of Labor; or the Christian Utopia (1876). In the introduction to this volume the author states that his intention is “to carry to legitimate and ultimate consequences, the fundamental principles admitted by all economists, viz., ‘Labor is the real measure of the exchangeable value of all commodities and services,’ and to show that the principle and its application rest still deeper upon the rights of God, and the law of neighborly love propounded by our Lord Jesus Christ.” From this it is seen the author had left far behind the theories of his youth. At one time he had attained the rank of grand master in masonry, but for a number of years before his death he was a devout Catholic. His wife, Amaenade Milbrou, by whom he had eight children, died before him. In person Collens was a man of courtly manners and address, making himself an agreeable social companion. He spoke French by choice, saying that it was impossible to converse well in any other lan-
guage. A little above medium height in stature, with dark hair and eyes, indicative of his Creole origin, his features were prepossessing, if not handsome.

There is a brief sketch in McCabe’s book referred to above. The bare facts of Collens’s career are listed in The South in the Building of the Nation (12 vols., 1900-10), VII, 323; XI, 221, where his name is misspelled Collins. See obituaries in the Daily Democrat (New Orleans), and New Orleans Times, Nov. 9, 1879.

J. E. W.—n.

COLLES, CHRISTOPHER (1738—Oct. 4, 1816), engineer, inventor, and promoter of internal improvements, was born in Ireland probably in 1738. His education, which appears to have been thorough, was directed by Richard Pococke, Anglican bishop and distinguished oriental traveler. After the bishop’s death in 1765 Colles, who early manifested an interest in science, came to America. In 1772 he lectured in Philadelphia on pneumatics and the following year in New York on inland navigation. Always planning new devices and new ways of doing things, he suggested in 1774 that New York City replace its wells and springs with a water system. To this end he proposed the erection of reservoirs and the piping of the city’s streets. All his proposals in this connection were seriously considered but the state of the city’s finances and the disturbances occasioned by the Revolution resulted in their indefinite postponement. From 1775 to 1777, when Baron von Steuben arrived, Colles was an instructor in the artillary department of the Continental Army and taught the principles of projectiles. He was one of the first persons in America to design a steam-engine and was also one of the first to attempt to build one; although the undertaking failed for want of adequate funds, the design was heartily approved by David Rittenhouse and the American Philosophical Society.

From early manhood Colles was deeply interested in internal improvements, particularly canals. He seems to have been the first to propose linking the Great Lakes with the Hudson River by means of natural and artificial waterways and to point out the great social, economic, and political advantages that would accrue from such an improvement. The scheme received wide publicity. In 1785 its author memorialized the legislature in its behalf, and shortly afterward the project was enthusiastically indorsed by the New York Chamber of Commerce. This indorsement, together with the support which the proposal received in other quarters, resulted in the introduction in both Houses of the state legislature of a bill “for improving the navigation of the Mohawk River, Wood Creek and Onondaga
Colles

River, with a view to opening an inland navigation to Oswego and for extending the same if practicable to Lake Erie." Many were in favor of passing the bill and putting Colles in charge of the work. Incidentally, he had already traversed much of the territory through which the proposed waterways would extend and had surveyed a portion of the Mohawk River. Many years later (1808) he proposed construction of a canal between New York and Philadelphia which would be built entirely of timber and would be above ground. He was also deeply interested in roads and road-building and during the late eighties made an extensive personal survey of the roads of New York and Pennsylvania. In 1796 he went into business in New York City where he manufactured such articles as rat and mouse-traps, paper hangings, fireworks, band-boxes, and colors. He also dealt in furs and Indian goods. But he was too much interested in invention and science to make a success of either merchandising or manufacturing. During these years he supplied Blanchard & Brown, publishers of the Mathematical Correspondent, with astronomical calculations, made proof glasses, and invented a number of useful devices. During the War of 1812 he constructed and operated a semaphoric telegraph on Castle Clinton.

A man of lovable character, pleasing personality, and absolute honesty, Colles stood in high esteem. Unfortunately, he was usually in pecuniary difficulties, and was, therefore, compelled to rely on the assistance of friends. An appointment in the customs service, where he was assigned the duty of testing the specific gravity of imported liquors, helped to relieve the financial strain; and eventually, through John Pintard, one of his closest and most influential friends, he was made superintendent of the American Academy of Fine Arts. As a publisher of scientific and semi-scientific essays and pamphlets Colles was fairly prolific. His chief works were: Syllabus of Lectures on Natural Philosophy (1773); Proposals for the Settlement of Western New York and for the Improvement of Inland Navigation between Albany and Oswego (1785); A Survey of the Roads of the United States of America (1789); The Geographical Ledger and Systematized Atlas; Being a United Collection of the Topographical Maps Projected by One Universal Principle and Laid Down by One Scale (1794); Proposals of a Design for Inland Communication of a New Construction (1802); and Description of the Universal Telegraph (1813).

[Little biographical material regarding Colles is to be had other than that found in his own writings and in the newspaper publicity which his numerous inventions and proposals received. Brief mention is made of him and his work in histories of New York City, the more important of which are Mrs. Martha J. Lamb's Hist. of the City of N. Y.: Its Origin, Rise and Progress (1827-80), II. 577, and The Memorial Hist. of the City of N. Y. from Its First Settlement to the Year 1892 (1893), ed. by Jas. Grant Wilson, scattered references in vols. III and IV. New York City newspapers of the time also contain brief obituaries, of which that in the N. Y. Evening Post, Oct. 5, 1816, is typical.]

H. J. C.

COLLIER, HENRY WATKINS (Jan. 17, 1801-Feb. 28, 1855), jurist, governor of Alabama, was the son of James and Elizabeth (Boul- din) Collier, both members of prominent Virginia families. He was born on the ancestral plantation in Lunenburg County, but when he was a year old his parents removed to the Abbeville District of South Carolina, and, in 1818, to the newly opened cotton lands of the Tennessee Valley, in Madison County, Ala. Henry received his basic education in the famous school of Dr. Moses Waddell [q.v.] at Willington, S. C., where Calhoun, McDuffie, Petigru, and Longstreet also were instructed. After the removal to Huntsville, Ala., he took up the study of law at Nashville under the tutelage of Judge John Haywood of the supreme court of Tennessee. He was admitted to the Huntsville bar in 1822, and the following year went to Tuscaloosa, Ala., to practise law. Here, in 1826, he married Mary Ann Bat- tle of North Carolina, a sister of one of his Tuscaloosa colleagues. Collier was at this time a well-knit young man with ample brow and kindly gray eyes. His bearing was dignified, his manner reserved, and his temperament judicial. Though apparently lacking in the qualifications of a Western politician, he espoused the Demo- cratic cause, and was elected to the legislature in 1827. During the next year he was elected by that body to membership in the highest court of the state. When the supreme court was sepa- rately organized for the first time in 1832, Collier was retained on the circuit bench. In 1836 the governor gave him an appointment ad inter- rim to the supreme court, and at its next session the legislature confirmed the governor's choice and elected him to the place. He was elected the following year to the chief justiceship and served in that capacity for twelve years. Lack- ing brilliant mental qualifications, he performed his judicial duties with laborious care and left himself little time to look after his private interests as a planter (Garrett, post, p. 718). He was a faithful Methodist, and became one of the lead- ing supporters of his denomination in Tuscaloosa.

That a man lacking in oratorical or political gifts should be nominated for the governorship in 1849 and elected by a vote of 36,350 to 364 indicates not only the dominance of the Demo-
Collier

cratic party in the state at that time, but also the power within the party of its conservative leaders. This was not the brand of democracy which Andrew Johnson represented during the same period in Tennessee. As governor, Collier retained the placid dignity which had characterized him as judge. When he was renominated in 1851, he refused to take the stump, saying that he would stand on his record alone. The question of the compromise measures of 1850 was the leading issue in the campaign. William L. Yancey represented the extreme Southern faction which opposed compromise, while B. G. Shields stood for unconditional submission to the Union. Collier stood for the compromise and the Georgia platform, refusing to go to either extreme represented by the other two men. He was elected by a large majority. In matters of state policy, Collier stood for the free banking system, and for educational and judicial reforms. He took a keen interest in the humanitarian movement which was in progress at the time, and, visited by Dorothea L. Dix [q.v.], used his influence to secure in the state penitentiary system some of the reforms which she advocated. On his retirement from the governorship he was offered a seat in the Senate of the United States, but his health had been undermined by hard work and he died while seeking to regain his strength at Bailey Springs, Ala., in 1855.

T.P.A.

COLLIER, HIRAM PRICE (May 25, 1860–Nov. 3, 1913), author, was the son of Robert Laird Collier, a distinguished Unitarian clergyman of Maryland stock, and Mary Price. He dropped his first name and was generally known as Price Collier. He was born in Davenport, Iowa, at the home of his mother’s parents. After the death of his mother in 1872, his father took him to Europe, where he spent five years at school in Geneva and Leipzig and became proficient in French and German. After graduation from the Harvard Divinity School in 1882, he was for nine years a Unitarian minister at Hingham and elsewhere in Massachusetts. In 1891 he left the ministry to take up writing. Of slender but athletic build, five feet eleven inches in height, he was a good shot, played all games well, and loved outdoor life. For a time after 1891 he was in the West, and his first book, Mr. Picket Pin and His Friends (London, 1894), was an account of the Sioux Indians and reservation life. On Aug. 8, 1893, he married Katharine D. Robbins and sailed for England, where he was European editor of the Forum. Returning to America in 1895 he made his permanent home in Tuxedo Park, N. Y., and devoted himself to writing and study. A sharply critical volume purporting to be written by a Frenchman, America and the Americans from the French Point of View, was published, at first anonymously, in 1897; A Parish of Two, a story told in letters and written in collaboration with Henry G. McVickar, appeared in 1903. Collier also contributed the chapters on riding to a book on Driving and Riding (1905) for Macmillan’s Sportsman’s Library. During the Spanish War he was in active service as an ensign in the navy. Afterward he was secretary of the Outing Publishing Company. His book England and the English from an American Point of View, published serially and in book form in 1909, was the first to gain him a wide audience, and suggested the direction of his later writing. His subsequent years were spent largely in travel with Mrs. Collier in Europe, South America, India, China, and Japan. In 1911 appeared The West in the East from an American Point of View, followed in 1913 by Germany and the Germans from an American Point of View. At the time of his death he had spent the summer with his wife and two daughters in Scandinavian countries, contributing articles to Scribner’s. He died suddenly of heart failure while shooting on the estate of Count Wedell on the island of Fünen, Denmark. Appearing just before the World War, his book on Germany attracted general attention. Though not unfriendly or intentionally unfair, it was, like all his other writing, plain-spoken, incisive, a trifle over-positive. In his earlier book on England he had declared that “the Germans since 1870 have taken the place of the English as the boors of Europe,” and he also predicted their defeat in a war against England. Hence there was a furor when he was received with special favor by the Kaiser. He had a faculty for presenting a wealth of information in popular, attractive style, spiced with sharp observation and comment. His zest for fact appears in his own statement that he got more keen enjoyment out of a census report than from a novel (Germany and the Germans, p. 185). He stated his beliefs vigorously, and some of his characteristic beliefs were in capital punishment, athletics, war, the Kaiser, and the House of Lords. He attacked socialism, and though intensely patriotic, was critical of much in modern American life.

[Obituaries in the N. Y. Times, Nov. 4 and Nov. 9]
COLLI O R, PETER (Aug. 17, 1835—June 29, 1866), agricultural chemist, a son of Jacob and Mary Elizabeth Collier, was born at Chittenango, N. Y., where he passed his childhood and youth. Between the ages of fourteen and nineteen he was engaged for some portion of his time, first in a drug store and then in selling merchandise. Fitted for college at late's Polytechnic Institute in his home town, he entered Yale College and graduated in the class of 1861. He then took graduate work in chemistry at Yale and became a special student under Prof. S. W. Johnson. Here he acquired his interest in the applications of chemistry to agriculture. He was made an assistant in chemistry and took the degree of Ph.D. in 1866. In the following year he was appointed professor of chemistry, mineralogy, and metallurgy in the University of Vermont, and of toxicology and chemistry in the medical school. In 1870 he received the degree of M.D. and became the dean of the medical faculty. His special interest in agriculture and knowledge of the relations of chemistry to this and other commercial interests was recognized by his election the next year as secretary of the state board of agriculture, mining, and manufacture. He became more and more engaged in the problems of the farm and in promoting agricultural education; and with all his other duties found time to conduct a series of farm institutes throughout the state. In 1873 he visited the International Exposition at Vienna as one of the United States commissioners and made an extended report on the fertilizer materials in the exposition.

He resigned his positions in Vermont in 1877 to become chief chemist in the United States Department of Agriculture. His chief work here, besides a study of grasses and forage crops made jointly with the department botanist, was an elaborate and careful investigation of sorghum, the problems of its growth and the commercial production of sugar from it, which was the first really important chemical research work done in the department. In 1883, with a change in the administration, he left the agricultural department and devoted his time to writing a work embodying the results of his investigations: Sorghum, Its Culture and Manufacture, economical ly considered as a Source of Sugar, Syrup and Fodder (1884). After four years of residence in Washington, D. C., he was chosen in 1887 director of the New York Agricultural Experiment Station at Geneva, N. Y., succeeding Dr. E. Lewis Sturtevant. His management of the station directed investigation along lines which, without impairing its scientific character and value, made very direct appeal to the farmers of the state because of its practical applications. His labors resulted in finally fixing the character and great practical value of the institution in the minds of its patrons and supporters. During his administration the equipment of the station was much increased, its staff increased three-fold, and work on special projects was begun in different parts of the state. Attacked by a fatal and lingering illness, he resigned in 1895 and went to Ann Arbor, Mich., where he died. On Oct. 18, 1871 he had married Caroline Frances, daughter of Hon. Andrew A. Angell of Scituate, R. I. His wife and a daughter survived him. An excellent portrait of Collier, the gift of a classmate, is owned by Yale University. In private life he was a man of personal charm, ready wit, and prized either as a casual acquaintance or as a familiar friend.

[Records of Yale Class of 1861, especially Second Supp. to the Twenty-five Years' Record (1897); Reports of the U. S. Commissioner of Agriculture, 1877—83; Reports of the N. Y. Agric. Station, 1888—95; sketch by W. H. Jordan in L. H. Bailey, Cyc. Am. Agriculture, vol. IV (1900), pp. 563—64.]

E. H. J. COU xER, PETER FENEL O N (Dec. 12, 1849—Apr. 24, 1909), publisher, son of Robert C. and Catherine (Fenelon) Collier of Myshall, County Carlow, Ireland, came to America at the age of seventeen. He had studied in Irish schools, and his parents had wished him to prepare for the priesthood. Arriving in the United States shortly after the close of the Civil War, he went to Ohio and in the course of time entered St. Mary’s Seminary at Cincinnati, maintaining himself meanwhile by doing carpentry work at Dayton. Before he became of age, however, he had given up the idea of following the priesthood as a career. Early in the seventies he went to New York City and engaged himself to a firm of publishers of Catholic books as a salesman. While in that employment he developed a plan of selling on instalment payments, but as this did not commend itself to his employers he went into business independently and as a publisher of Catholic books was notably successful. He then, with a limited capital, undertook the publication of standard works of popular appeal at low prices, with instalment payments. Himself a man of literary taste, he was not content to purvey books of inferior quality. He began in 1877 with sets of Dickens and Shakespeare. These were manufactured under contracts with New York printers and binders, but about 1880
Collier

Collier began to assemble a plant of his own and this shortly grew into one of the most complete and best-equipped printeries in the country. During the last thirty years of his life, his firm printed and sold more than 50,000,000 books. Many standard works sold at an average price of from fifty to sixty cents a volume. More than seventeen per cent of the total sales were histories. Among novelists, Dickens alone accounted for nearly 6,000,000 volumes and Cooper for 1,500,000. Of encyclopedias, nearly 2,000,000 volumes were printed and circulated. Branch offices in thirty-two of the chief cities controlled ninety-six sub-branches, with managers, salesmen, deliverers, collectors, and clerical force. The manufacturing plant in New York employed over 700 persons and had a capacity of 20,000 volumes a day. The presses were equipped with new improvements as fast as they could be installed. To the end of his life, Collier was the driving force in this huge establishment. In 1888 he founded a periodical called Once a Week, which was replaced in 1896 by Collier's Weekly, a journal that quickly attained, through able editorship, a commanding rank among publications of its class. It "discovered" a number of short-story writers of distinct merit and by its independent attitude in politics won a constituency of serious readers throughout the country. It refused advertisements of beer, whiskey, or alcoholic liquors, as well as of patent medicines and articles making claims to medicinal effects, and investments promising extraordinary returns. For its comment on the course of a "society" publication in New York the publisher and editors of Collier's were sued for libel. In the case against the writer of the offending article the jury found for the defendant. The other actions were dropped.

Collier was always known as an "out-of-doors" man. For years he was master of the Meadowbrook Hunt on Long Island and later was active in a New Jersey hunting club, the owner of noted horses, and a polo enthusiast. It was often said of him that he played as hard as he worked. It was his pride to be the circulator of meritorious books in humble homes, and hardly less was it his ambition to live as a true sportsman. Collier was married in 1873 to Katherine Dunn, of County Carlow. Their son, Robert, was responsible editor of Collier's Weekly in its early years.

[In Memoriam: Peter Fenelon Collier (privately printed, 1910); editorial, Collier's Weekly, May 8, 1909; data supplied by George J. Kennedy, of Peter F. Collier & Son.]

W. B. S.

COLLIER, PRICE. [See Collier, Hiram Price, 1860-1913.]

Collins

COLLINS, EDWARD KNIGHT (Aug. 5, 1802-Jan. 22, 1878), ship-owner, was descended from Joseph Collins, son of a starch maker, who in 1635 came from Ireland with his family and settled in Lynn, Mass. One of Joseph's sons moved to Cape Cod where for several generations his descendants followed the sea. About 1800, Capt. Israel Gross Collins on a trip to England married Mary Ann Knight and brought her back to Truro. There she died five months after the birth of her only son, Edward Knight Collins, who was to become the leader of the most ambitious and spectacular attempt of the American merchant marine to challenge British supremacy (Shebah Rich, Truro-Cape Cod, 1883, pp. 391, 522). At fifteen, Edward went to New York where he was to reside for the rest of his life. After serving as a clerk for the house of McCrea & Slidell, he went to the West Indies as supercargo in a joint venture. For a while, he and his father conducted a general commission business before he entered on his important life-work, the management of packet lines. He took over and improved the line to Vera Cruz and in 1831 secured control of the New Orleans line. Five years later, he started the "Dramatic Line" from New York to England, so called because the ships were named after famous actors. His continued success in these ventures gave him a high reputation for ability and made him one of the wealthiest men in New York.

Foreseeing that steam would soon replace sails, Collins began to study its possibilities. When England made its subsidy mail contract with Samuel Cunard in 1838, he is reported to have urged upon Van Buren the need of a steam navy of subsidized mail steamers. The President is said to have replied curtly that this country needed no navy at all, much less a steam navy (New York Herald, Jan. 23, 1878). The Cunard Line prospered from its very first trip to Boston in 1840. Congress, convinced that American subsidies were necessary to combat this "monopoly," in 1845 authorized government aid through mail contracts to lines which would build potential warships (Statutes at Large, V, 748-50). Contracts were soon made for lines to Bremen and Havre and to the Pacific coast via Panama, but the most important effort to "drive the Cunarders out of business" developed from a proposal made by Collins on Mar. 6, 1846 (Senate Document 237, 29 Cong., 1 Sess., p. 6). On Nov. 1, 1847, Collins and his associates, James and Stewart Brown, made a contract with the postmaster general. They were to build, under naval supervision, five steamships of specified size, which
were to make twenty round trips annually, carrying mails between New York and Liverpool. For this, they were to receive $385,000 annually for ten years, dating from the first trip (Statutes at Large, IX, 187, 378; House Executive Document 91, 32 Cong., 1 Sess., p. 36). Five weeks later, they organized the United States Mail Steamship Company, generally known as the "Collins Line" (Ibid., p. 76). Collins spent more than two years building four ships which were to surpass in size, speed, and splendor anything then afloat. Sparing no expense and exceeding the government requirements, he gave them hulls of oak and pine averaging nearly 2,800 tons and engines of 1,500 horse-power (C. B. Stuart, On Naval and Mail Steamers, 1853, passim). Service began on Apr. 27, 1850 when the Atlantic sailed from New York, followed in the course of the year by the Pacific, Arctic, and Baltic. Their superior speed was at once apparent, and American periodicals proudly published records, showing that their average runs were shorter than the Cunarders' by a full day (Hunt's Merchant's Magazine, September 1851, p. 380; March 1852, pp. 379-81; April 1853, p. 506). They attracted the cream of the passenger trade and their competition forced a radical reduction of the British freight rates. Such speed and service were expensive, and in 1852 Congress increased the Collins subsidy to $33,000 a round trip for fortnightly service, a total of $858,000 annually (Statutes at Large, X, 21). During their first four years, the Collins ships outstripped all rivals and were the pride of the American merchant marine, which was then at its peak and nearly equal to that of Great Britain.

Then came a series of disasters, caused perhaps by the emphasis on speed. On Sept. 27, 1854, the Arctic collided in the fog with a small French steamer off Cape Race. The liner soon sank with nearly all on board, the victims including the wife, son, and daughter of Collins. In spite of this blow, he continued his service and in 1855 launched the Adriatic of 4,114 tons. Then came the second disaster. The Pacific sailed from Liverpool in January 1856 and was never heard from again. Seven months later, Congress gave Collins the coup de grâce. On the motion of Representative Norton of Illinois, the extra subsidy granted in 1852 was withdrawn with six months' notice, and the same motion stipulated that a contract he made with Cornelius Vanderbilt to run a rival line at about the original rate (Congressional Globe, 34 Cong., 1 Sess., pp. 2162-66, 2210-22; Statutes at Large, XI, 102). Crippled by the heavy loss in ships and subsidy, Collins struggled to maintain the service but missed several sailings. The panic of 1857 hastened the end of the company, which had never paid a dividend, and on Apr. 1, 1858, the three remaining ships were sold at auction for $50,000 to satisfy creditors (Hunt's Merchant's Magazine, May 1858, p. 630). Collins survived this failure twenty years, living in somewhat reduced circumstances and turning his attention to the development of coal and iron properties in Ohio. Scoville described him in 1860 as "rosy, hearty and not careworn as when he had those mighty American steamships resting on his single shoulders" (Old Merchants of New York, 1863, p. 140). In 1876 he sold his country seat at Larchmont and bought the house on Madison Avenue where he died. His first wife, lost on the Arctic, was Mary Ann Woodruff. He later married a widow, Mrs. Sarah Browne, who survived him with three sons.

R.G.A.—n.

COLLINS, FRANK SHIPLEY (Feb. 6, 1848—May 25, 1920), botanist, unlike most Americans of his calling did not gain his love of the natural sciences through direct and intimate contact with nature, but had an urban upbringing into which a certain amount of botanical training entered as a formal part of his education. Born in Boston of an old New England family, the son of Joshua Cobb and Elizabeth (Carter) Collins, he was largely educated at home, his health being very delicate, by two aunts who added to their knowledge of literature and languages a distinct interest in botany. The boy attended high school, graduating in 1863, and tried several mercantile positions, but from 1864 he was practically an invalid because of violent asthma, and occupied himself in studying harmony and musical classics. Then, to quote his wife, Anna Lendrum Holmes, whom he married in 1875, "at twenty-five, and out of a job, he borrowed a thousand dollars from a scandalized grandfather and took a seven months' vacation in Europe," principally to attend concerts in the chief musical centers. Shortly after his return he entered the Malden Rubber Shoe Company as a bookkeeper, and rapidly rose to the position of manager, a post which he held till 1913, when he retired, only to be recalled to it in the wartime pressure of 1918 as an efficiency expert.
Collins

About 1875, on a visit to Magnolia, Mass., his attention was attracted by some "sea mosses" or marine algae, which were being sold on postal cards as souvenirs of the seaside resort, and which bore scientific names so palpably wrong that Collins amused himself by trying to set them right. This led rapidly to an intensive study of the algae, a subject which had engaged no prominent specialists in America for more than a generation. His first note-books record the species found in the tidal pools no farther away than Lynn Beach. In the next forty-five years his interests broadened and intensified, so that he became the authority upon the algae of the New England coast. His personal knowledge of the flora of the Bermudas and his studies upon the collections of other workers from all the North American coasts brought him greater fame in his avocation than he ever achieved in his business life. He began to lecture and write on the algae in 1879. His series of New England algological studies appeared in Rhodora from 1899 to 1911. The Green Algae of North America, with its subsequent supplements, first issued in 1909 by Tufts College, was a notable work which opened the most neglected branch of algology, while his Working Key to the Genera of North American Algae, published by Tufts College in 1918, went far toward popularizing the whole subject.

Collins achieved recognition in Europe as the foremost American algologist of his time; he completely revised the algological collections of Harvard, the Missouri Botanical Garden, and the Boston Society of Natural History; and he issued, at great labor and expense, many complete sets of typical specimens of all the American marine algae. His works upon the life histories of algae, a subject fraught with especial importance in the biological theories of sex, were pioneering studies of great value. He never possessed college training himself, but his instinct for languages and his natural scientific ability made him as valued a member of the marine biological stations at Woods Hole, Mass., and South Harpswell, Me., as the most academic of students. In person he was urbane, cultivated, and courteous. He died at New Haven, while still in the service of his business house. The names Collinsella tuberculata, Setchell and Gardener, a genus of green algae, and Phaeosaccion Collinsii, Farlow, a species of brown algae, commemorate his many years of scientific devotion.

Collins

COLLINS, JOHN (Nov. 1, 1717–Mar. 4, 1795), third governor of the State of Rhode Island, was born at Newport, the son of Samuel and Elizabeth Collins. He stood forth as a staunch advocate of the independence of the British colonies in America. An admirer of George Washington, he was selected by the governor of Rhode Island in 1776 to carry a letter to Washington soliciting counsel. Later (1782) he was made bearer to the President of Congress of a statement of Rhode Island's reasons for rejecting the Impost Act. During the American Revolution, Rhode Island was for the most part an agricultural community and as such opposed the restrictions of a national government. Within the state the agriculturists contended vigorously for a paper currency. Collins espoused their cause and in 1786 was elected governor. During his encumbrance the issuance of paper money, which had been intermitted since 1750, was resumed. It was provided by law that should any creditor refuse to accept the bills of the state the debtor might secure a discharge by depositing the amount of his debt with one of the judges of the state superior court or the court of common pleas. This law led to the suit of Trevett vs. Weeden, one of the most remarkable cases in the history of American jurisprudence, which resulted in a decision looking toward the right of courts to declare legislative enactments unconstitutional (I. B. Richman, Rhode Island, A Study in Separatism, 1905, pp. 78–81). Collins represented Rhode Island in the Continental Congress in 1778 where he served until May 1781, when he was superseded by William Ellery. He was, however, reelected in 1782 and held the position until 1783. Rhode Island, up to 1790, vigorously fought against the calling of a convention to decide upon entering the Federal Union, but in that year (Jan. 17) gave its sanction to such a call by a majority of one vote in the Senate. This vote was cast by Collins, who had come to realize the importance of a Federal connection. The vote cost him his popularity and the governorship. Later, however, he was elected to Congress but did not take his seat. He was married to Mary, daughter of John Avery of Boston.

COLLINS, JOHN ANDERSON (fl. 1810–1879), abolitionist and social reformer, was born at Manchester, Vt., attended Middlebury Col-
Collins

gle in his twenty-fifth year, and left it, without graduating, to enter Andover Theological Seminary. This was the period of the rising tide of sentiment against slavery. Feeling, both bitter and warm, with regard to the question ran high at Andover. Collins is said to have played a leading part in revealing the so-called "Clerical Plot" to the abolitionists. This incident probably had an influence in his ensuing abrupt departure from the seminary and his installation as general agent of the Massachusetts Anti-Slavery Society. The Society sent him abroad to try to rouse sympathy for its work in England and to try to raise funds for carrying on propaganda. He carried letters of introduction from William Lloyd Garrison, commending him as "a free spirit, a zealous advocate" who had made large sacrifices for the cause. But his lot was no more easy than that of the other abolitionists. A group that included one particularly virulent clergyman went to great lengths to discredit him abroad, and on his return, accused him of importing "foreign gold to destroy the government" and of "disloyal and subversive propaganda."

From July 1840 to November 1841, Collins edited the Monthly Garland, a small magazine dealing with slavery, for which he wrote most of the material. Like many others of his enthusiastic temperament he was particularly attracted to the various Utopian doctrines newly imported from Europe, and he came to feel that the abolition of physical slavery was only a small part of a greater social reformation that was to free mankind. In 1843 he planned a series of "picnics" and the "hundred conventions" that were designed to rouse the country to the cause of the abolitionists. To the dismay of his backers, he began to follow the anti-slavery meetings with "constructive meetings" at which he preached a kind of Fourieristic doctrine. For reasons both diplomatic and conservative, he was reprimanded. He then decided to resign in order to devote himself to the founding of a commune. Garrison parted from him with regret. Collins, with two or three other enthusiasts, selected a farm at Skaneateles, N. Y., for the experiment, and he made a large part of the cash payment on the farm, giving his note for the rest. He then issued a call in the newspapers to others "of like mind" to join him, announcing a creed in which he denied all religious doctrines, denounced individual property, and advocated a social system founded on the negation of all force, admitting marriage only if accompanied by the right of easy divorce, and prescribing universal education and vegetarianism. This creed, which was some-

what modified later, aroused the usual stormy discussion far and wide. A group gathered about Collins, composed chiefly of those who saw an opportunity for free maintenance. The colony did not prosper, and Collins's disillusionment and disappointment were keen. In May 1846, he decided to liquidate. He next appears in California in 1849. In 1852, with John Wilson, he organized a company to mine the sands of the Klamath River. Many unfortunate investors lost all they had in the scheme. J. S. Hittell (History of City of San Francisco, 1878, p. 273) gives Collins credit for honestly believing in the plan. He was living in California as late as 1879 but he seems to have abandoned his schemes of philanthropy and social improvement (Noyes, History of American Socialisms).

[See the files of the Liberator; F. J. and W. P. Garrison, William Lloyd Garrison: the Story of His Life Told by His Children, 4 vols., 1885-89; Edmund N. Leslie, Hist. of Skaneateles and Vicinity (1882).]

K.H.A.

COLLINS, NAPOLEON (Mar. 4, 1814-Aug. 9, 1875), naval officer, was born in Pennsylvania, and appointed midshipman from Iowa on Jan. 2, 1834. Promoted lieutenant, Nov. 6, 1846, he was on the sloop Decatur in the Mexican War, taking part in the attacks on Tuxpan and Tabasco. In the Civil War he commanded the gunboat Anacostia in the Potomac, May 28-Aug. 30, 1861, and then the gunboat Unadilla in the south Atlantic blockading squadron, participating in the capture of Port Royal and subsequent operations on the southeastern coast until the summer of 1862. He was promoted commander July 16, 1862, and afterward cruised in the Bahamas in the Octorara. In this service he was notably energetic, making twelve captures from November 1862 to June 1863. One of these, the British schooner Mont Blanc, taken near the tiny British possession Sand Key, brought protests from England and a reprimand, in Secretary Welles's opinion unjustified, for Collins (Diary of Gideon Welles, 1911, 1, 417-23). Sent to Brazilian waters in the steam-sloop Wachusett in January 1864, Collins there performed the exploit for which he is chiefly remembered, the capture of the Confederate raider Florida. The Florida entered Bahia, where the Wachusett was lying, Oct. 5, 1864. While her captain and many of her crew were ashore, Collins at dawn of the 7th attempted to ram her, and after striking only a glancing blow, fired several volleys of small arms and forced her surrender. Then, despite remonstrances from a Brazilian corvette anchored near-by, he towed her out of the harbor and brought her to Hampton Roads. On Brazil's protests Collins was ordered to take the Florida.
Collins

back to Bahia, but she was leaking, and after collision with an army transport she sank on Nov. 28, the sinking being declared accidental by a court of inquiry. Collins's action was what his government wanted, and he found some excuse in privileges permitted the Alabama in Brazilian waters. Apologies, however, were necessary, and Collins on Apr. 7, 1865, was sentenced to dismissal. This sentence was not approved by the secretary, and in July 1866, he was made captain. In June 1867, while cruising in Eastern waters, his vessel, the Sacramento, was wrecked without loss of life on a shoal in the Bay of Bengal. Collins was suspended, but was reinstated Mar. 13, 1869, Secretary Welles commenting that he was "an honest, straightforward, patriotic man," though without, in his opinion, "particular love or aptitude for the service" (Ibid., III, 120, 554). Collins was commissioned commodore Jan. 16, 1871, and was lighthouse inspector until August 1874, when he became rear admiral and took command of the South Pacific Squadron. He died of malignant pustula at Callao, Peru. During his last cruise Admiral Collins made himself very popular in Latin-American countries, a Panaman paper remarking that "no visitor ever produced such a feeling of fondness." He was buried in Callao, but in 1876 his body was brought home.

[Official Records (Navy), esp. I ser., vols. I-III, and see general index; obituary notes in Army and Navy Jour., Aug. 28, Sept. 11, 18, 1875, June 17, 1876.]

A.W.

COLLINS, PATRICK ANDREW (Mar. 12, 1844—Sept. 14, 1905), politician, was born at Ballinafarna, near Fermoy, County Cork, Ireland. His mother was the second wife of Bartholomew Collins, a "strong farmer," who leased two hundred acres. Among the more opulent members of the Irish peasantry, Bartholomew Collins was a man of some education and was active in local Nationalist and Catholic politics. He died in 1847 and in March 1848 Mrs. Collins landed in Boston, having disposed of her rights in the lease. Patrick was then too young to remember his native land but his knowledge of it, gained from his elders, must have been colored by the catastrophe of the famine in the midst of which his father died. Mrs. Collins settled in Chelsea, Mass., and there Patrick went to school. His first school days were unhappy: his schoolmates and their elders were affected by the prejudices of the "Know-Nothing" period and the boy suffered verbal and physical assaults on his faith and race. Thenceforward, intolerance ranked with English tyranny in Collins's mind.

In 1857 Mrs. Collins moved to Ohio and for two years Patrick worked in the fields and around the coal-mines. In 1859 he returned to Boston and became apprenticed to an upholsterer. He quickly became a capable and highly paid workman, and, as a charter member of the local union, acquired a reputation for loyalty to his fellows that later stood him in good stead when labor troubles threatened Democratic unity. He became a Fenian in 1864 and soon attained some prominence, but the collapse of the movement convinced him Ireland had little to hope from violent conspiracy. His ability as a speaker becoming known, Collins was chosen delegate to the Democratic State Committee and elected to the General Court in 1867. He served in the lower house in 1868 and 1869, and in the Senate 1870 and 1871, where he strove to abolish the special "Catholic Oath" and to secure Catholic chaplains for jails and hospitals. In 1867 he entered the law office of a Boston Democrat, James A. Keith, and began to attend the Harvard Law School. He graduated LL.B. in 1871 and opened his own office that year. In 1874 his services in the election of Gov. William Gaston were rewarded by the rank of judge-advocate-general, from which office came the title "General" which Collins had too much sense to like. He was a delegate to the convention which nominated Tilden for the presidency, but his chief services to his party were on behalf of Charles Francis Adams, Democratic candidate for governor, who was distrusted by the Irish because of his alleged neglect, while minister to London, of Irish-American prisoners detained as Fenians by the British government. Collins, in an able speech at Marlboro, recanted his own previous utterances and declared that Irish-Americans should vote on American issues only. When, in 1880, Parnell toured the United States on behalf of the Irish Nationalist Party, Collins actively associated himself with the appeal for funds. As president of the American Land League, he was a conservative influence, setting himself against all incitement to crime or palliation of it (J. J. Roche, Life of John Boyle O'Reilly, 1891, p. 218).

Rather against his will Collins was elected to Congress in 1882. He found Washington expensive and his work in the House futile, rendered more so by the loose procedure. He served three terms but escaped in 1888. In the election of 1884 Collins at first shared the dislike of many Irish Democrats for Cleveland, but won over in a personal interview, campaigned for the party's candidate in speeches at Albany and elsewhere, taking the same position he had at Marlboro, eight years before. His services in staying the desertion were very great and his friends expect-
ed for him a place in the cabinet, which was not offered. There was no breach, however, and Collins had abundant minor patronage to distribute. He was chosen to preside over the convention which renominated Cleveland in 1888. After the latter's defeat, Collins was active in Massachusetts politics in the election of Gov. Russell. In 1892 he again helped to nominate and elect Cleveland (Michael E. Henessy, Twenty-Five Years of Massachusetts Politics, 1917, p. 31). The consul-generalship in London was the only reward Collins could afford to accept and, after assurances that the ex-Fenian would be persona grata to the British government, he was appointed. His office enabled him to save a little and kept him out of the election of 1896 fortunately, as he had little sympathy with the silver doctrines of Bryan. He entered heartily into the anti-imperialist campaign of 1900, and in 1904, put Olney's name before the Democratic convention.

By this time, however, his interests were chiefly in Boston politics. Defeated in his first mayoral campaign in 1899 by a split in the Democratic ranks, he was elected in 1901 and in 1903, the support of many independents offsetting disaffection bred in some members of his own party by his strict notions of public duty. As mayor, he stood for economy, probity, and home rule. He resisted all attempts to plunder the public, whether engineered by city workers or by corporations, and opposed the imposition by the legislature of special burdens on the city. Failing health limited his activities but his sudden death, at Virginia Hot Springs, was a surprise and shock even to his intimate friends. He was survived by his wife, Mary Carey of Boston, whom he had married in 1873. Though Collins was neither a great lawyer nor statesman his probity of character and his loyalty to his church, his party, his native and adopted countries, gained him general esteem. A monument was erected to him in Boston by public subscription in 1908.

[Collins's friend and secretary, M. P. Curran, published The Life of Patrick A. Collins with Some of His Most Notable Public Addresses (1906). It is uncritical but honest. Collins wrote a brief autobiography for the Boston Globe in 1893, which was first published on Sept. 15, 1905. All the Boston newspapers devoted much space to his career on the days immediately following his death. The Globe and the Herald articles are the best of these. Some of Collins's speeches, e.g., those at Marlboro (1876) and Albany (1884), were printed as campaign leaflets. Others are to be found in the Proceedings of the Democratic Conventions of 1888, 1892, 1904.]

D.W.B.

COLLYER, ROBERT (Dec. 8, 1823-Nov. 30, 1912), clergyman, was born in Keighley, England. He was the son of Samuel and Harriett

(Norman) Collyer, originally workhouse children from London and Norwich respectively, bound out till their majority in a cotton-mill at Blubberhouses in Yorkshire. Robert was brought up in Blubberhouses, where he went to school about two years in all, and at the age of eight was set to work in the cotton-mill where he remained until fourteen. He was then apprenticed to a blacksmith at Ilkley, seven miles distant, and for many years followed blacksmithing as an occupation. In June 1846 he married Harriet Watson of Ilkley, who died on Feb. 1, 1849, leaving one son. Her death turned his thoughts toward religion. He had been reared in the Church of England; but he now became a Methodist, and soon discovered that he had a talent for preaching which he exercised constantly, meanwhile continuing to work at the forge. On Apr. 9, 1850 he married Ann Armitage of Ilkley and the same day set sail for America, where he obtained work as a blacksmith at Shoemakertown, seven miles from Philadelphia. There he worked constantly at his trade, read incessantly, and ridding himself of his Yorkshire dialect, became widely acceptable as a Methodist lay-preacher. During these years he became a strong abolitionist. He also began to find himself out of line with the current orthodox doctrines of Hell, Total Depravity and the Atonement, and under the influence of Lucretia Mott and Dr. William H. Furness of Philadelphia, moved toward Unitarianism. His Methodist license was withdrawn in January 1859 and in February he was called to Chicago to be minister-at-large to the First Unitarian Church. He was ordained to the Unitarian ministry in May and became pastor of the new Unity Church on the North Side. Here his success was immediate. The earlier buildings were outgrown and an elaborate stone structure, one of the largest Protestant churches in Chicago, was dedicated in 1869. This was destroyed in the great fire and rebuilt on a larger scale. All the different social classes of Chicago were represented in the congregation. In 1860 Collyer was appointed to administer relief to the victims of the Iowa cyclone. During the Civil War he was a staunch upholder of the Union and prominent in the work of the Sanitary Commission, visiting many southern battlefields. After the great Chicago fire of 1871 he was an outstanding leader in the work of relief and reconstruction. He was a prime mover in establishing the Liberal Christian League in 1866, to promote the welfare of the masses and to provide for them popular religious services. In 1862 and 1863 he received calls from Theodore Parker's congregation in Boston, and in 1864 from the
Colman

Second Unitarian Church in Brooklyn and the Church of the Messiah in New York City. All these he declined but in 1870 accepted the second call of the latter church, where he was pastor until 1903 and then pastor emeritus until his death. He always preached on the simple themes of the personal religious life, reading his sermons from manuscript in English of Anglo-Saxon purity. As a lecturer he was very active, among his well-known lectures being "The True George Washington," "From Anvil to Pulpit," and "Clear Grit." Besides several volumes of sermons, his works include: Life of A. H. Conant (1868); Ilkley; Ancient and Modern (1885); Father Taylor (1906), and his lecture, Clear Grit (1913). Large and tall, he had a massive head crowned with an abundance of gray hair, and his ruddy face of almost classic symmetry expressed the strength, sweetness, and light of his character.

[Dr. Collyer published an autobiography, Some Memories (1905). Other biographical works are, John H. Holmes, The Life and Letters of Robt. Collyer (1917); Robt. Collyer; A Memorial (pub. by Unity Church, Chicago, 1914), and a pamphlet with the same title (pub. by the Church of the Messiah, N. Y., 1914).] F. T. P.

COLMAN, BENJAMIN (Oct. 19, 1673-Aug. 29, 1747), Boston clergyman, was the second son of William and Elizabeth Colman who emigrated from England and settled in Boston shortly before his birth. He attended school under Ezekiel Cheever [g.v.], entered Harvard in 1688, and graduated with high honors in 1692. After having supplied the pulpit at Medford for six months, he returned to Harvard to continue his theological studies and remained there until he received his degree of A.M. in 1695. In July of that year he sailed for England, having en route the diverting experiences of capture by a French privateer and incarceration for a short time in a French prison. In England he became acquainted with many prominent non-conformist divines and preached regularly at Bath.

Meanwhile at home in Boston a somewhat radical religious movement had been begun under the leadership of certain laymen such as the Brattles. They decided to organize a new church differing from the three already in existence in certain points of worship. Among other points, they advocated doing away with the public relation of personal religious experience, and instituting the reading of the Bible and the reciting of the Lord's Prayer. William Brattle, John Leverett, Simon Bradstreet [g.g.v.], and others in the movement sent urgent letters to Colman in England inviting him to become the minister of the new Brattle Street Church. He accepted, and, knowing that the ministers of the other three churches in Boston would not welcome him into fellowship, he had himself ordained by the London Presbytery (Aug. 4, 1699), as suggested by his Boston correspondents. He sailed soon after and by Nov. 1 was in Boston, a clergyman in good standing according to Presbyterian ideas but not in the eyes of the stricter Congregationalists. On Nov. 17 the associates of the Brattle Street Church issued a manifesto proclaiming their firm adherence to the doctrines of the Westminster Confession and stating that they were desirous of fellowship with the other Boston churches. The Mathers and others of the conservative group were bitterly opposed to the innovators, but by Jan. 31, 1700 a partial reconciliation was effected and Colman himself soon became a conservative, though the controversy continued. In itself the episode amounted to little and the various churches became indistinguishable in doctrine but the later effects were important, for the movement was the apparent cause of the attempt on the part of the Mathers and others to secure a stricter ecclesiastical government in Massachusetts, an attempt later checked by John Wise [g.v.].

Colman was one of the most prominent clergymen of his day and place, active in civil as in religious affairs. He was a Fellow of Harvard from 1717 to 1728 and an Overseer until his death, was offered and refused the presidency in 1724, and was the main instrument in securing for the college the Hollis, Holden, and other benefactions. He also assisted Yale College, was much interested in the mission among the Housatonic Indians and other charities, was a defender of inoculation, and a strong believer in the evangelical movement known as the Great Awakening. He was well known in England where his correspondents included such men as Isaac Watts, and in 1731 he was given the degree of D.D. by Glasgow University. His writings were prolific and number over ninety separate titles. On June 5, 1700 he married Jane, daughter of Thomas and Jane Clark, who died Oct. 26, 1731; on May 6, 1732 he married the thrice widowed Sarah (Crisp) Clark who died Apr. 24, 1744; and on Aug. 12, 1745, he married another widow, Mary Frost, who survived him.

Colman

COLMAN, HENRY (Sept. 12, 1785–Aug. 17, 1849), Unitarian minister and agricultural writer, was born in Boston, Mass., the son of Dudley and Mary (Jones) Colman. He graduated from Dartmouth College in 1805, studied theology under the Rev. James Freeman of Boston and the Rev. John Pierce of Brookline, Mass., and on June 17, 1807, was ordained pastor of the Congregational Church in Dedham, Mass. He resigned in 1820, and the same year published a volume of sermons, *Sermons on Various Occasions*, widely circulated in this country and reprinted in England. Until 1825 he taught a school in Boston. He gave vigorous expression to his Unitarian views in controversy with Trinitarians. An attempt to place him over a church in Salem, Mass., creating a dissension, his followers withdrew and organized the Independent Congregational Church in Barton Square. A church edifice was built, where he was installed pastor in February 1825. Here he served until 1831 when, partly because of impaired health, he resigned. In 1833 he published a second volume of sermons, *Sermons on Various Subjects Preached at the Church in Barton Square, Salem.*

Having a decided taste for farming, Colman took a farm in Deerfield, Mass., and proceeded to give practically his entire attention to agriculture. His published articles and addresses on that subject soon attracted attention. Appointed commissioner by Gov. Edward Everett in 1837 to make an agricultural survey, he visited all parts of the state and extended his inquiries into neighboring states. Much valuable material was secured, presented in four reports covering over 1,100 pages, printed by the state from 1838 to 1841. In 1843 Colman published a treatise on raising swine which is included in H. L. Ellsworth's *Improvements in Agricultural Arts . . . of the United States.* His experience in the survey of Massachusetts had admirably equipped him for a larger project. In April 1843 he went to England and spent three and one-half years in studying the agricultural conditions of Great Britain. In November 1846 he went to the Continent and made similar studies in France, Holland, Switzerland, and Italy, returning to England in 1848, and to America in the fall of that year. The report of the agricultural survey is partly contained in his *European Agriculture and Rural Economy from Personal Observation.* The first edition appeared in 1844, a second in 1849, a third in 1850 in two volumes containing 972 pages, and three further editions were issued, the sixth in 1857. There was, also, separately printed, *Agriculture and Rural Economy in France, Belgium, Holland, and Switzerland* (London, 1848). After his return Colman published *European Life and Manners in Familiar Letters to Friends* (2 vols. 1st ed. 1849, 2nd ed. 1850). His health now failed and his eyesight became impaired. Hoping to improve his physical condition, he went to England, but without benefit. He died in Islington, now a part of London. He was tall and well proportioned, of commanding presence, active mind, and keen intelligence. Although not without faults of temper, he displayed great kindness of heart. He was married on Aug. 11, 1807, to Mary, daughter of Thomas Harris of Charlestown, Mass.

E.H.J.

COLMAN, JOHN (Jan. 3, 1670–c. 1753), merchant, in Boston, Mass., was the son of William and Elizabeth Colman of London, and the grandson of Matthew and Grace of Satterly, Suffolk, England. The father, William, migrated to the Bay Colony in 1671 in the ship *Arabella*. John early engaged in mercantile pursuits and apparently was a merchant of some standing, though not pre-eminent. In 1698 Colman was one of a group of twenty to whom Thomas Brattle conveyed Brattle's Close, upon which was built in 1699 the Brattle Street Church. He was also a member of the committee of proprietors who, in the same year, invited his brother, Benjamin Colman [*q.v.*], to become their minister. He was active in town affairs, served as selectman, as a member of various town committees, and was justice of the peace. In the second decade of the century the currency disorder in Massachusetts overshadowed all other public questions, with sharp division of opinion as to methods of reform. Colman identified himself with those who would permit private banks to be organized with power to issue and loan bills on real-estate mortgages. In 1714 he was one of the eight signers of *A Vindication of the Bank of Credit Projected in Boston from the Aspersions of Paul Dudley, Esqr.* in a Letter by him Directed to John Burri, Esqr., Late Speaker to the House of Representatives for the Province of the Massachusetts Bay in New England. In 1720 he published *The Distressed State of the Town of Boston, etc.* Considered In a Letter from a Gentleman in the Town, to his Friend in the Country. He recognized the evils of a fluctuating currency, but opposed any severe restriction of credit. He favored a private bank, and if this were not feasible, the emission of bills of public credit for the construction of public works and encouragement of industries. In particular he criticized a recent
Colman

law giving creditors the right to charge interest on book debts, and designed to break up the practise of trusting debtors for long periods of time. This pamphlet was advertised in the News-Letter, Apr. 11, 1720. The Council of the province held that the pamphlet reflected upon the government and had a tendency to disturb the public peace. Colman was arrested and gave bonds. On July 5 his recognizance was discharged. This pamphlet provoked several replies. Colman again entered the controversy in July 1720, with a second brochure, The Distressed State of the Town of Boston Once More Considered—With a Scheme for a Bank Laid Down; and Methods for Bringing in Silver Money Proposed. In it he recommended the establishment of a land bank open to partnership by all in the province who owned land; and that, on pledge of land or mortgage, notes be given equal to two-thirds of the land value, for which six per cent interest in notes be charged. The profits from the loans were to be devoted to the purchase of silver which in turn was to be held as a fund until it equaled the original value of the notes. This would be accomplished, it was estimated, in twenty years. The proposal, however, made no headway. In 1739 the plan of a land bank was revived. Several hundred persons formed a partnership to issue notes to be loaned to the shareholders at three per cent interest and annual payment of one-twentieth of the principal, either in notes or commodities at fixed prices, and the project received the approval of the provincial legislature. It was quickly suppressed by the English government, but not until 150,000 or more of notes had been issued. It is not clear how large a part Colman had in the administration of the bank. He was one of the partners, and his name was intimately associated with its brief career. On July 19, 1694, Colman was married by the Rev. Cotton Mather to Judith Hobbey, daughter of William Hobbey, a merchant, and sister of Sir Charles Hobbey (Boston Births, Baptisms, Marriages, and Deaths, 1630-99, 1908, p. 217). He died at the age of eighty-three (New England Historical and Genealogical Register, XXXVII, 58).

D.R.D.

COLMAN, LUCY NEWHALL (July 26, 1817—Jan. 18, 1906), abolitionist, lecturer, descended from Nicholas Danforth, an Englishman emigrating to New England in 1634, was born at Sturbridge, Mass., the second of four daughters of Erastus and Hannah (Newhall) Danforth. Her mother was a descendant of John and Priscilla Alden. Her father, a fur-trader and blacksmith, was a prominent Universalist layman and she early entered that church; later, dissatisfied with the dogmas of all Christian churches, she became a Spiritualist. Her education in public schools was scanty; at the age of twelve, thrown on her own resources, she became a teacher. When eighteen she married John Mabrey Davis, who died of tuberculosis six years later. They lived in Boston, where Mrs. Davis supplemented her education through the cultural advantages there available. After her husband’s death she taught in a girls’ school in Philadelphia. In 1843 she married a railroad engineer, Luther N. Colman (he apparently spelled his name thus although his widow later used the name Colman). In 1852 Colman was killed in a railroad accident; the circumstances following upon this tragedy were such as to embitter his widow and intensify her sympathies with the cause of woman’s rights. After much effort she secured a position as teacher of “the colored school” of Rochester, N. Y., at a meager salary. A year later, unaided, she accomplished its abolition, thereby removing educational discrimination against the negroes of Rochester. In another position she publicly used her influence against corporal punishment in schools. A long-standing desire to strike at slavery led her to abandon teaching and to secure through friends appointments as an anti-slavery lecturer. She spoke in New York, Pennsylvania, Michigan, Illinois, Indiana, and Ohio; endured various hardships in the crude homes and country hotels of ante-bellum days; attacked slavery always in vigorous, even violent language; defied social and religious conventions; exposed shame. Though encountering determined opposition—misrepresentation, insults, and grave perils—she escaped actual physical harm. She adopted a young colored woman for a time as a fellow traveler. Sometimes she mingled in her protests the wrongs of blacks and the wrongs suffered by woman. After the outbreak of the Civil War she became matron of the National Colored Orphan Asylum at Washington, where she substituted kind treatment and sanitation for mismanagement. She served as superintendent of certain colored schools supported by the New York Aid Society in the District of Columbia, instructing the pupils in morals and cleanliness. She secured interesting interviews for Sojourner Truth with Presidents Lincoln and Johnson. Later she re-
Colman

turned to New York State, making her home after 1873 in Syracuse, where she was active in the Spiritualist Society and as a Freethinker. She joined the J. S. Mill Liberal League, becoming a contributor to the Truth Seeker. In appearance she was a small woman, whose face gave evidence of intelligence, independence, and determination. She died in Syracuse after a five years' illness, and was buried in Rochester.

[Sources for Mrs. Colman's career are her own Reminiscences (1891); John J. May, Danforth Genealogy (1902); Frances E. Willard and Mary A. Livermore, Am. Women (1897); Syracuse (N. Y.) directories, 1873–1906.]

R. S. B.

COLMAN, NORMAN JAY (May 16, 1827–Nov. 3, 1911), agricultural journalist, first secretary of agriculture, was born near Richfield Springs, N. Y., the son of Hamilton and Nancy (Sprague) Colman. He attended an academy in a neighboring town, and then went to Louisville, Ky., where he taught school. While he also studied law and received the degree of LL.B. from the law department of the University of Louisville. After graduating from law school he went to New Albany, Ind., and began the practice of his profession. Within three years he was elected to the office of district attorney, but as he had never intended to follow the law as a permanent profession, he resigned his office and removed to St. Louis. He was a Unionist during the Civil War, serving as lieutenant-colonel of the 85th Missouri Militia. As a boy Colman had read the old Albany Cultivator to which his father was a subscriber and had made up his mind that some time he would publish such a paper. He purchased a country house, and in 1865 began the publication of an agriculture paper, Colman's Rural World. In the same year he was elected to the Missouri legislature, and after serving with distinction in that body received the Democratic nomination for lieutenant-governor of Missouri in 1868. He was defeated in the election as was the entire Democratic ticket, but in 1874 he was again nominated for the same office and elected. Colman interested himself in the welfare of the Missouri state university at Columbia, and was for sixteen years a member of the board of curators of that institution. At the same time he served as the head of many agricultural organizations, some of state, some of Middle Western, and some of national character. He was a member of the Missouri state board of agriculture from the time of its organization in 1865 until his death in 1911. Because of his broad and practical knowledge he was appointed United States commissioner of agriculture by President Cleveland in 1885. As commissioner he so improved the work of the bureau and so enlarged its scope that on Feb. 11, 1889, it was elevated in dignity and power to an executive department, with its secretary as a member of the president's cabinet. During his term of office Colman was author of the Hatch Bill, creating experiment stations in states and territories, supported by federal aid, and thus has sometimes been called the "Father of the Experiment Station." After his retirement as secretary of agriculture he lived at his country home and devoted his time to the editorial management of his journal. His election as president of the National Editorial Association and of the Missouri Press Association is evidence of the esteem in which he was held by the profession of journalism.

COLMAN, SAMUEL (Mar. 4, 1832–Mar. 26, 1920), painter, was born in Portland, Me., the son of Samuel and Pamela Atkins (Chandler) Colman. His father, a bookseller and publisher in Portland in comfortable circumstances, moved to New York and opened a publishing house on Broadway, where he published, among others, the poems of Willis and Longfellow, well printed and illustrated with engravings which aroused interest in this form of art. The place was a popular resort of authors and artists and may have had the effect of directing the dawning talents of the boy who often spent his time there after school. He early became a pupil of Asher B. Durand [q.v.], one of the successful landscape painters, and he made rapid progress, when only eighteen exhibiting at the New York Academy of Design a painting which was highly commended. At twenty-seven he was elected an associate of the National Academy. He painted Hudson River and Lake George scenery, and was a close friend of many painters belonging to the Hudson River school. In 1860 he went abroad for two years, studying in Paris and Spain.

When he returned to the United States he was made a full Academician and in 1866 was elected first president of the American Water-color Society, of which he was one of the founders. He went again to Europe in 1871, visiting Holland, Normandy, Brittany, Switzerland, and England, and remaining four years. On his return he exhibited forty-five sketches from nature. At one time he lived at Irvington-on-Hudson, where he painted some charming river views, impressed by the effect of veils of fog and smoke and long masses of boats. His "Tow-boats in the Highlands, Hudson River" has a Turneresque quality. His style both in oil and water-color was broad
and effective, and his coloring was brilliant. He made many contributions to the exhibitions of the National Academy and the Water-color Society, and three of his pictures were exhibited at the Paris Exhibition of 1878. He was one of the original members of the Society of American Artists. His studio in New York was in the building on the corner of Twenty-fifth St., and Fourth Ave. It is described as richly decorated with rare tapestries, Chinese pottery, and Japanese armor. He was a collector and connoisseur of Oriental art. In his later years he lived and painted at Newport, R. I. Publications by Colman include *Nature's Harmonic Unity* (1912), edited by C. A. Coan, and in collaboration with Coan, *Proportional Form* (1920). He is represented in the Metropolitan Museum, New York Public Library, Union League Club, Chicago Art Institute, and in many notable private collections. In 1862 he was married to Anne Lawrence Dunham, and in 1903 to Lillie Margaret Goffney. He died in New York City.

H. W.

**COLQUITT, ALFRED HOLT** (Apr. 20, 1824—Mar. 26, 1894), statesman, soldier, was the eldest son of Walter T. Colquitt [q.v.] and Nancy (Lane) Colquitt. He was born in Walton County, in the north central section of Georgia. He graduated from the College of New Jersey (Princeton) in 1844, studied law, and was admitted to the bar. On the outbreak of the Mexican War he entered the army and served throughout as a staff officer with the rank of major. Returning to Georgia at the conclusion of the war he settled in Macon and entered upon the practise of his profession. He was married in May (1848) to Dorothy Tarver, daughter of Hartwell Tarver, his father's step-brother. She died in 1855 and he then married Sarah, the widow of Fred Tarver. The first Mrs. Colquitt received from her father a plantation in Baker County. The Colquitts removed there and Alfred H. Colquitt was identified with Baker County throughout the remainder of his life. Like many another Georgian of the ante bellum period, Colquitt was at once lawyer, politician, and farmer. His father, Senator Walter T. Colquitt, had just finished his political career with an effort to bring about secession in connection with the struggle over the compromise measures of 1850. The father was always an extreme pro-Southern Democrat and the son took the same position. With a reputation already established as a brilliant orator, he entered politics in 1853 as a Democratic candidate for Congress from the 2nd District, opposing the incumbent, James Johnson, who was a Unionist. Colquitt defeated Johnson easily and took his seat in the thirty-third Congress. During his term in Congress Colquitt made one set speech, on the Kansas situation, in which he presented a historical account of the long struggle over the extension of slavery (*Congressional Globe*, 33 Cong., 1 Sess., App., pp. 749 ff.). On account of his wife's poor health he did not offer himself for re-election. In 1859 he was again in the political arena as a member of the Georgia legislature. He became an elector on the Breckinridge and Lane ticket in the presidential campaign of 1860. Elected to membership in the secession convention, he helped carry the state out of the Union and when the war broke he immediately entered the Confederate army as a captain of infantry. He developed considerable military ability and was promoted to colonel, then to brigadier-general, and finally to the rank of major-general. His most noteworthy service was in command of the Confederate forces at the battle of Olustee in Florida in 1864, in which he won a signal victory.

On the return of peace Colquitt resumed his vocations of law and farming. He was a bitter opponent of the congressional Reconstruction policies and of ex-Gov. Joseph E. Brown [q.v.]. He continued active in state politics, serving as president of the Democratic state convention in 1870. During the same year he was elected president of the state agricultural society, strong evidence of his popularity. In 1876 he received the Democratic nomination for governor and was elected by the greatest majority ever given a gubernatorial candidate up to that time. His four-year term of office was characterized by able reorganization of the state finances, large reduction in the floating debt and the bonded debt, economy in administration and reduction in the tax rate. Colquitt made many enemies during his incumbency of the governorship. Few public officials have been subjected to more scandalous misrepresentation. Largely for the purpose of obtaining public vindication of his policies, he again became a candidate for the governorship in 1880. The ensuing campaign is memorable in Georgia history for its rancor. The public excitement was much heightened by an incident that occurred in May 1880. Gen. John B. Gordon suddenly resigned from the United States Senate and immediately Colquitt appointed ex-Gov. Joseph E. Brown, who at that time was held in general detestation by thousands of Georgians. The cry of bargain and corruption was raised. The allegation was that Gen. Gor-
Colquitt

Stephen Colquitt resigned in return for a promise of the presidency of the state-owned Western & Atlantic Railroad, then under the control of Brown, and that Colquitt won ex-Gov. Brown's political support by appointing the latter as senator. These charges seem to have been groundless. After a hard fight in the Democratic state convention, Colquitt secured the nomination and was later elected. On the expiration of his second term (1882) he was appointed to fill the unexpired term of United States Senator Benjamin H. Hill, who died in office, and he served from 1883 to his death in 1894. A contemporary historian who knew intimately nearly all the public men of his time, says that Colquitt was an unusually astute politician, true to his friends, and governed by a strong sense of duty. Like his father, he was a licensed Methodist preacher. He was an early champion of temperance, and took keen interest in all religious and moral issues. He was president at one time of the International Sunday School convention.

[Wm. J. Northen, Men of Mark in Ga. (1911), vol. III; Memoirs of Judge Richard H. Clarke (1898), ed. by L. B. Wylie. I. W. Avery, Hist. of the State of Ga. from 1850 to 1881 (1881), is an account of the period by a Colquitt partisan; Mrs. Wm. H. Felton, in My Memoirs of Georgia Politics (1911), gives a view unfavorable to Colquitt. See also Atlanta Constitution, Mar. 26, 27, 1894.] R. P. B.

Colquitt, Walter Terry (Dec. 27, 1799–May 7, 1855), lawyer, statesman, was born in Halifax County, Va., the son of Henry and Nancy S. (Holt) Colquitt. While he was still a small boy he was taken by his father to Georgia, where they settled in Hancock County, later moving to Walton County. After attending the College of New Jersey (Princeton) for a time, Walter Colquitt studied law in Milledgeville, Ga., then the state capital, and was admitted to the bar. After a brief residence in Sparta, Ga., he removed to Cowpens in Walton County. His entrance into politics was as a candidate for Congress (1826) on a "Troup Party" ticket; he was defeated by a plurality of thirty-two votes. In the same year he was appointed judge of the Chattahoochee superior court circuit, was re-elected in 1829, and returned to the private practice of law in 1832. After two terms (1834 and 1837) in the state Senate, Colquitt was elected (1838) to the Twenty-sixth Congress as a state-rights Whig. The Troup party was a state-rights organization controlled by the planter aristocrats. In the early thirties it was merged with the national Whig party, which, in its inception, was a coalition of Andrew Jackson's enemies. When Calhoun in 1840 returned to the Democratic party, he was followed by Colquitt, who became a leader of the radical wing of the Georgia Democracy, the Union wing being led by Howell Cobb. The Democrats returned Colquitt to Congress in 1842 and shortly thereafter he was elected to the United States Senate. In the House Colquitt made "an exceedingly eloquent speech of great length" in opposition to the reception of Abolition petitions. He favored the establishment of the Independent Treasury system, incidentally taking occasion to denounce the Second Bank of the United States as "a great moneymaking institution for the support of men who were too idle to earn their bread by industry and too proud to work." He opposed as an infringement on state rights the bill to district states for the purpose of choosing congressmen. As a senator he favored the annexation of Texas, the Mexican War, and the acquisition of territory from Mexico. He advocated congressional non-interference with slavery in the territories.

In January 1848, for some reason now unknown, Colquitt resigned his seat in the Senate. Two years later he was one of a dozen eminent Georgians who participated in the Nashville Convention, in opposition to the pending territorial settlement. Thoroughgoing resolutions were adopted against Clay's Omnibus Bill, and Colquitt advised the Southern states to prepare for war. After the adjournment of the Nashville Convention the Georgia campaign of 1850 occurred for the election of members to the important convention of that year. It was this convention that was called upon to decide whether Georgia would or would not support the compromise measures. In the campaign Colquitt was a crusader for the Southern rights position. He advocated secession ("Correspondence of Robert Toombs, Alexander H. Stephens, and Howell Cobb," House Document No. 968, 62 Cong., 3 Sess., pp. 207, 214), but after this campaign took no further part in the turbulent politics of the period. A contemporary historian regarded him as the most versatile and brilliant public man the state had produced. In addition to his political activities, he was a local Methodist preacher and a very impressive speaker. Three times married, on Feb. 3, 1823, to Nancy H. Lane; in 1841 to Mrs. Alphiba B. (Todd) Fauntleroy, who died a few months later; and in 1842 to Harriet W. Ross, Colquitt had twelve children. Among the six of the first union was Alfred H. Colquitt [q.v.], governor and United States senator.

[I. W. Avery, Hist. of the State of Ga. from 1850 to 1881 (1881), is the most important source; Memoirs of Judge Richard H. Clarke (1898), ed. by Lollie Belle Wylie, contains a brief account of the Colquitts, father and son; Stephen F. Miller, Bench and Bar of Ga. (1838), contains a sketch based on family information.] R. P. B.
Colston

COLSTON, RALEIGH EDWARD (Oct. 31, 1825—July 29, 1896), Confederate general, was born and received his early education in Paris, where Dr. Raleigh Colston, Sr., a former resident of Berkeley County, W. Va. (then in Virginia), lived for many years with his wife, Elizabeth Marshall. In 1842 young Colston was sent to the United States, and the next year entered the Virginia Military Institute, where he graduated in 1846. While still a student he acted as an instructor in French, and upon his graduation he was immediately appointed assistant professor. In the same year he married Louise Meriwether Gardiner, widowed daughter of John Bowyer of “Thorn Hill,” near Lexington, Va. He was advanced to a full professorship in 1854. At the outbreak of the Civil War he was appointed colonel of the 16th Virginia Infantry, and on Dec. 24, 1861, was made brigadier-general. He commanded a brigade in the Peninsula campaign from April to June 1862, when he was disabled by illness from which he did not recover until December. In April 1863, on the application of his former fellow professor, he was assigned to a brigade in Stonewall Jackson’s corps. He commanded the division at Chancellorsville. He afterward served under Beauregard in the defense of Petersburg in 1864, and then commanded at Lynchburg. Left without resources upon the return of peace, he established a military school at Wilmington, N. C., and conducted it successfully until offered an appointment as colonel in the Egyptian army, in which several veterans of the late war, both Union and Confederate, held commissions. He served for six years in Egypt. Twice during that period he conducted extensive exploring expeditions in the Soudan. On the second of these, while in the heart of the desert, he was injured by a fall from his camel, and paralyzed from the waist down. He refused to return to Cairo, however, for he was the only American with the command, and knew that if he abandoned it the expedition would fail. For days he was carried forward in a litter, until he reached El Obeid, where he connected with another force sent out from lower Egypt, to whose leader, Maj. Henry G. Prout, afterward distinguished as an engineer, he turned over his command. After six months’ rest at El Obeid he started back, and reached Khartoum after a three-hundred-mile journey, in a litter as before. He returned to the United States in 1879, when the American officers were discharged. His savings, unwisely invested on the advice of friends, were soon completely lost. Impoverished and crippled, he secured a clerkship in the War Department in Washington, which he held until complete disability overcame him in 1894. There was no pension system for civil servants in those days, and he spent the last two years of his life in the Confederate Soldiers’ Home in Richmond, suffering greatly, but always patient, cheerful, and companionable. A man of wide culture, kindly nature, and high character, he had the faculty of winning the ardent devotion of those who knew him. He was revered alike by his college students, his brother officers and soldiers of the Confederate army, and his Arab followers in Egypt.

Colt

COLT, LEBARON BRADFORD (June 25, 1846—Aug. 18, 1924), jurist, senator, was born at Dedham, Mass., the son of Christopher and Theodora Goujand (DeWolf) Colt. He traced his ancestry to John Colt of England, who came to America with Rev. Thomas Hooker in 1636 and settled in Hartford, Conn., in 1638. On his mother’s side he was descended from the DeWolf family of Bristol, R. I. His maternal grandfather was Gen. George DeWolf, who in 1810 built the beautiful mansion, “Linden Place,” at Bristol, where the grandson lived many years, and where he died. His father was engaged in the silk business at Dedham, Mass., and afterward at Paterson, N. J. Later the household was moved to Hartford, where LeBaron and his younger brother Samuel Pomeroy, between whom and himself there existed a life-long devotion, grew up. LeBaron attended the public schools in Hartford, prepared for college at Williston, and was graduated from Yale in 1868 with the degree of A.B. He was graduated in law at Columbia in 1870, spent a year abroad, and began the practise of law in Chicago as a member of the firm of Palmer & Colt. On Dec. 17, 1873, he married Mary Louise Ledyard, daughter of Guy Carlton and Elizabeth (Morris) Ledyard of Chicago. In 1875 he moved to Bristol, R. I., and from that time to 1891 was a law partner of Francis Colwell at Providence. He was elected as a Republican to the lower branch of the General Assembly in 1879 and again in 1880, and on Mar. 21, 1881, though not yet thirty-five, was appointed by President Garfield judge of the United States district court for the district of Rhode Island. On July 5, 1884, President Arthur made him judge of the United States circuit court for the 1st judicial district (Maine, New Hampshire, Massachu-
H. HEARST, based on the evidence, voted that the Covenant over the telephone suits. He remained on the bench till 1913. He made an extraordinary impression upon his legal contemporaries by his judicial mind, broad knowledge of the law, fondness for his work, and intellectual clarity.

Elected to the United States Senate from Rhode Island, as a Republican, by the General Assembly in 1913 and by the people in 1918, he served from Mar. 4, 1913, to the day of his death. He immediately took rank in the Senate as an authority on legal and constitutional questions. He did not often address the Senate, but was an eloquent and impressive speaker, as a published volume, \textit{Addresses} (1906), testifies. As chairman of the Committee on Immigration he was in charge of a new immigration bill, but refusing to acquiesce in its provision for Japanese exclusion, which he considered to be in violation of the “gentleman’s agreement” between Japan and the United States, he turned over the direction of the bill to Senator Reed of Pennsylvania, and with one other senator, voted against the exclusion provision. He favored the acceptance of the League of Nations Covenant with the Senate reservations and opposed the Panama Canal Toll bill as an attempt to settle a judicial matter by statute. When it was proposed to appropriate $20,000,000 for Russian relief, he answered the argument that the proposal was unconstitutional by declaring that the Constitution must be elastic enough to supply the great fundamental wants of society. A confirmed student of history and the science of government, Colt believed that “America’s solution of the great problem of government is based upon the realization of the common sense of the average man, or the collective sense of the multitude of average men, as the active, controlling force,” and was confident of the future prosperity of the Republic. Possessed of a remarkable combination of humor and charm, he was tall, spare, dignified in bearing, and looked the part of a judge and a senator.

[Information as to certain facts from the family; personal acquaintance and talks with friends; \textit{Providence Journal}, Bristol \textit{Phantix} and other papers, August 1923; memorial addresses in Congress in \textit{Cong. Record}, 68 Cong., 2 Sess., pp. 2979, 3782; H. P. Wright, \textit{Hist. of the Class of 1868, Yale Coll.} (1914); \textit{Yale Univ. Obit. Record}, 1925.] H. R. P.

**COLT, SAMUEL** (July 19, 1814–Jan. 10, 1862), inventor, manufacturer, the third child of Christopher and Sarah Caldwell Colt, was born in Hartford, Conn., where his father, a manu-
Colter

it. His business failed in 1842, and he lost his patent rights to others. Following this he turned his attention to the development of the submarine battery upon which he had been working. During the next five years, with the aid of government funds, he successfully demonstrated his system of destroying vessels even when under sail. He introduced electricity as the agent for igniting the powder, and advanced the submarine a step forward. At this time, too, he engaged in submarine telegraphy and put into operation a system from New York to Coney Island and Fire Island Light in 1843. At the outbreak of the Mexican War, Colter received an order for one thousand pistols from the Federal Government. He immediately began their manufacture at Whitneyville, near New Haven, and bought back his patent rights as quickly as possible. Following his initial invention he obtained further patents for improvements on Aug. 29, 1839, and on Sept. 3 and 10, 1850. In 1848, after a year at Whitneyville, he returned to Hartford and began to manufacture his revolver there, renting a three-story building for the purpose. The business grew rapidly and between 1854 and 1855 he built his own immense armory at Hartford and continued to direct its affairs until his death. On June 5, 1856, he married Elizabeth H. Jarvis, the oldest daughter of Rev. William Jarvis of Middletown, Conn.

C. W. M.

COLTER, JOHN (c. 1775–November 1813), trapper, explorer, was born in or near Staunton, Va., the son of Joseph and Ellen (Shields) Colter. His grandfather Michael and great-grandfather Micajah seem to have spelled the name Coalter. The earliest record of him is that of his formal enlistment in Lewis and Clark’s company, Oct. 15, 1803, at Louisville. The captains mention him frequently in the journals, and he was repeatedly chosen for especially hazardous services. On the return journey, at the Mandan villages, he asked to be released in order to join two trappers; and the captains, as a token of appreciation, consented, Aug. 16, 1806. In the following summer he was met at the mouth of the Platte by Manuel Lisa’s trapping party and was persuaded to return with them.

On their arrival at the mouth of the Big Horn, Nov. 21, where Lisa began the building of a trading post, Fort Raymond, Colter was dispatched on a mission to the Crows and other tribes south of the Yellowstone. Afoot and alone, “with a pack of thirty pounds weight, his gun and some ammunition” (Brackenridge), he set out on this daring venture, through a region wholly unknown to white men. The tracing lettered “Colter’s route in 1807,” on Clark’s map in the Biddle-Allen edition of the journals, credits Colter with penetrating to a point southwest of Jackson Lake and with traversing Yellowstone Park. Defects of the map have prompted considerable speculation regarding this journey, but it seems safe to conclude that since the charting is based upon information not only from Colter, but from Lisa, Drewyer, and Maj. Andrew Henry (the last-named of whom had wintered to the west of Jackson Lake in 1810–11), the route traced is approximately correct. How much of the journey was motivated in a passion for discovery and how much in mere obedience to Lisa’s orders cannot be said, but Chittenden chooses to stress Colter’s merit as an explorer (American Fur Trade of the Far West, 1902, p. 717).

From Fort Raymond, in the spring of 1808, Colter journeyed to the Three Forks of the Missouri, a region rich in beaver. It was guarded from intrusion, however, by hostile Blackfeet, and in a battle between these Indians and a party of Crows and Flatheads, on whose side he fought, Colter was badly wounded. The encounter in this locality by which he is most widely known and in which his companion, John Potts, was butchered, occurred in the fall of the same year. Dangers, however, according to Thomas James the trapper and trader, “had for him a kind of fascination”; he had no sooner recovered from his injuries than he again ventured to the place, and again he had a narrow escape. Later he descended the Yellowstone and the Missouri to the Hidatsa village, at the mouth of the Knife, to recuperate. Here the great expedition of the St. Louis Missouri Fur Company found him in September 1809, and he was engaged to guide the party of Menard and Henry, which James joined at Fort Raymond, to the Three Forks. It arrived Apr. 3, 1810, and began the erection of a stockade. An escape, nine days later, from an attack in which five men were killed, at last decided Colter to quit. With two companions he started for St. Louis about the 21st, arriving there before the end of May.

He was not again to see the wilderness. After reporting to Clark and telling his story to Bradbury, Brackenridge, and others, he took up a farm, probably on his bounty land, near the present village of Dundee, on the Missouri
Colton

River. He married a young woman whose first name was Sally but whose surname has not been discovered. His death, which according to James was due to jaundice, probably occurred at the farm. Colter, says James, "was about . . . five feet ten inches in height and wore an open, ingenuous [ingenious] and pleasing countenance of the Daniel Boone'stamp. Nature had formed him, like Boone, for hardy endurance of fatigue, privations and perils." James says further that "his veracity was never questioned among us," and that "his character was that of a true American backwoodsman."

[Researches of the writer, 1922-23, in collaboration with Miss Stella M. Drumm; Thomas James, Three Years Among the Indians and Mexicans (1846, republished in 1916); John Bradbury, Travels in the Interior of America, etc. (1817); H. M. Brackenridge, Views of Louisiana (1814); information from Colter's great-grands niece, Mrs. Janet Logan of Salt Lake City, and Dr. E. B. Trail of Berger, Mo. H. M. Chittenden, both in his history of the fur trade and in The Yellowstone National Park (1920 ed.), devotes considerable space to Colter. See also John Colter, by Stallow Vinton (1926).]

W. J. G—t.

COLTON, CALVIN (Sept. 14, 1789—Mar. 13, 1857), journalist, politician, author, was a member of a family of some distinction in colonial Massachusetts. Quatermaster George Colton had represented Springfield in the General Court (1677) and his son married the sister of Roger Wolcott, governor of Connecticut, 1750-54. Capt. Simon Colton, grandson of the Quarter master and grandfather of Calvin Colton, served as an officer in the French and Indian War. Luther Colton (1756-1803) was a major in the American army during the Revolution. He married Thankful Woolworth, and Calvin Colton, their son, was born at Longmeadow, Mass. He prepared for college at Monson Academy and was graduated from Yale in 1812. Entering Andover Theological Seminary, he completed the three-year course in two years. He served as missionary in western New York and then held Presbyterian pastorates at LeRoy and Batavia. The death of his wife, Abby North (Ray mond) Colton (Feb. 1, 1826) and the failure of his voice led him to give up the ministry. Later, having taken orders in the Episcopal Church (1836), he served for one year, 1837-38, as rector of the Church of the Messiah in New York City. His numerous religious writings, which include History and Character of American Revivals of Religion (1832), Church and State in America (1834), Protestant Jesuitism (1836), The Genius and Mission of the Protestant Episcopal Church in the United States (1853), are of small value either as history or as theology. In 1831 he went to England where he remained four years as corre spondent for the New York Observer. His descriptive narratives of travel are of much real value. He wrote a Manual for Emigrants to America (1832); The Americans (1833), a defense of his country against the criticisms of Capt. Basil Hall and Mrs. Trollope; Tour of the American Lakes, and Among the Indians of the North-West Territory, in 1830 (1833), personal observations on aboriginal life accompanied by facts relative to the origins of the Indians, details of their wars, and of their treaties with Great Britain and the United States; and Four Years in Great Britain (1835).

Next Colton played with political pamphlet eering. He wrote much under the nom-de-plume "Junius," in support of Whig policies, and was editor of the True Whig in Washington, 1842-43. Among his pamphlets, some of which appeared over his pseudonym "Junius," are: Ab olition a Sedition (1839); Colonization and Ab olition Contrast ed (1839); Reply to Webster (1840); One Presidential Term (1840); The Crisis of the Country (1840); and The Junius Tracts (1843-44), a series of ten essays on public lands, the currency, the tariff, expansion, etc. Summoned to Ashland, Ky., in 1844 he became the official biographer of Henry Clay, and editor of his works. The Private Correspondence of Henry Clay (1855), and The Works of Henry Clay (1856-57) are still standard. His Life and Times of Henry Clay (1846), and The Last Seven Years of the Life of Henry Clay (1853) are superseded by later biographies. Already known as an advocate of protection, in 1848 he published a protectionist work, Public Economy for the United States. It was a strange mixture of views gained through earlier experiences—religious, editorial, and political—but was favorably received and resulted in the establishment of a chair of Public Economy at Trinity College, Hartford, which was offered to Colton and which he held from 1852 until his death. Here his main endeavor was to "give form to" the various phases of the protective system. In A Lecture on the Railroad to the Pacific (1850), delivered at the Smithsonian Institution, Aug. 12, 1850, he advocated a transcontinental rail road on the religious ground that through it the human family, dispersed at the Tower of Babel, might be reunited. Yankee acquisitive ness and a facile pen made Calvin Colton a prodigious writer—prolific, rather than profound. A protagonist of the Anglican Church, the protective tariff, slavery, and the Whig party, he was a man of moment in the "Fabulous Forties" of American history. Colton died in Savannah, Ga.
which won intense personal devotion, she added unbending devotion to principle as she saw it, and a keen relish for a fight in a righteous cause. In 1910 she became chairman of the committee on college standards of the Southern Association of College Women, and for the next eight years was a recognized leader in the campaign. She became secretary in 1912, and president in 1914. In a series of incisive pamphlets she exposed the pretensions of the many so-called colleges for women in the South, insisting upon standards of equipment, faculty scholarship and recording, and fully recognizing such merit as she found. Her chief papers were on "The Approximate Value of Recent Degrees of Southern Colleges" (Meredith College Bulletin, 1914), and one which largely superseded it, "The Various Types of Southern Colleges for Women" (Bulletin 2 of the 1916 Publications of the Southern Association of College Women). These evoked a storm of criticism and "more than one presidential threat of a libel suit" (Journal of the American Association of University Women, January 1925). The opposition alleged that her findings were based on inadequate data, were contradicted by the results of official inspection, were unfairly discriminatory, and were prompted by personal motives (Letters of H. E. Stout, R. R. Thompson and J. C. Guilds). Even in her own school a faction thought her a fanatic and a pedant. Time has, however, largely justified her. In 1919 her health broke down and she resigned her public leadership. Two years later she gave up teaching and spent the rest of her life in a vain search for health. Before her death she had the satisfaction of knowing that her campaign was on the road to success.

[The only important published sources for the life of Elizabeth Avery Colton are obituary notices. One in the Jour. of the A. A. U. W., Jan. 1925, is reprinted, with supplementary eulogies, in the Meredith Coll. Quart. Bull., June 1925. It appears also in the Mount Holyoke Alumnae Quart., Apr. 1925. The notice in the Biblical Recorder, Sept. 3, 1925, is independent. The official records of Columbia University, of Teachers College, and of the Mount Holyoke Alumnae Assn. furnish a partial chronology. Certain personal data are from letters of her brother, H. C. Colton of Nashville, and of her associates, Emily H. Dutton, Dean of Sweetbriar College, and Sophie C. Hart of Wellesley.]

W. J. G.—d.

COLTON, GARDNER QUINCY (Feb. 7, 1814—Aug. 9, 1868), anaesthetist, younger brother of Walter Colton [q.v.], was the tenth son and twelfth child of Walter and Thankful (Cobb) Colton. The father, a poverty-stricken weaver of Georgia, Vt., was descended from George Colton, who came from England about 1650 and settled in Springfield, Mass., and from his son, Capt. Thomas Colton, the Indian fighter. Owing
to eye trouble Gardner Colton received a scanty education and, at sixteen, he was apprenticed for five years to a chairmaker of St. Albans, Vt., at five dollars a year, after which he went to New York City as journeyman maker of cane-seated chairs. With his brother’s financial assistance he later (1842) studied medicine under Dr. Willard Parker of New York but did not take a degree. During his studies he learned of the exhilarating effects of nitrous oxide inhalation, and in 1844, with borrowed money, he gave in New York a public demonstration of its effects at which the gate receipts were $535. With this encouragement he set out to give demonstrations in other cities. On Dec. 10, 1844, at Hartford, Conn., a similar demonstration aroused the interest of a dentist, Horace Wells [q.v.], who, after Colton had extracted one of his teeth “under” nitrous oxide, used the anæsthetic in his dental practise and thus became one of the claimants in the subsequent controversy on anesthesia (see sketch of W. T. G. Morton). Colton always gave Wells the credit of first suggesting the practical use of nitrous oxide. He gave many other public demonstrations, and in 1863, lectured again in New Haven. On this occasion Dr. J. H. Smith, a dentist, became interested, and together he and Colton extracted 1,785 teeth in twenty-three days, with the use of nitrous oxide. Colton then removed to New York (July 1863), where he established, with John Allen, the “Colton Dental Association,” which had for its sole object painless extraction of teeth under nitrous oxide. No records were kept during the first six months, but from Feb. 4, 1864, to Jan. 1, 1867, 17,601 individuals registered, and two or three teeth were extracted from each. In 1866 branch associations were opened in Philadelphia, Baltimore, St. Louis, Cincinnati, Brooklyn, and Boston. Colton probably administered nitrous oxide gas, or caused it to be given, at least 25,000 times, without a fatality. While lecturing on the telegraph for its inventor, S. F. B. Morse [q.v.], Colton devised an electric motor which was exhibited at Pittsburgh in 1847. The model is fully described in G. B. Prescott’s Dynamo-Electricity (1885) and is now preserved in the Smithsonian Institution but was never patented. Though the idea of using electricity for propulsion was probably original with Colton, it was not new, for Thomas Davenport [q.v.] had patented an electric railway motor in 1837. In February 1849 Colton joined his brother in the gold fields of California and for a few months practised medicine there. Later he was appointed by Gov. Riley justice of the peace at San Francisco. He accumulated a small fortune while in California, but on his return to the East he soon lost it by a bad investment and had to support himself by reporting sermons for the Boston Transcript. In 1860 he published a series of war maps, which bore his name. He died in Rotterdam, Holland. Though a wide reader, he wrote only a few ephemeral pamphlets, and he is to be remembered chiefly for his services in perfecting the use of anesthesia.

J. F. F.

**COLTON, GEORGE RADCLIFFE** (Apr. 10, 1865–Apr. 6, 1916), governor of Porto Rico, customs expert, was a son of Francis and Frances A. (Garey) Colton and was born in Galesburg, Ill. He was a descendant in the eighth generation of Quartermaster George Colton who emigrated from England before the middle of the seventeenth century, served in King Philip’s War, and lived to become a trusted and prominent citizen of Massachusetts. At an early age young Colton went West where he worked as a ranchman in New Mexico; then, when about twenty years old, he moved to Nebraska and entered the banking business, eventually becoming cashier and manager of the Central Nebraska National Bank of David City, Nebr. He served a term as a member of the state House of Representatives from David City and in 1897 was a national bank examiner. In October 1889 he was married to Jessie T. McLeod. He had affiliated himself with the National Guard of his state and at the outbreak of the Spanish-American War was one of those instrumental in organizing the 1st Regiment of Nebraska Volunteer Infantry. He saw service in the Philippine Islands as lieutenant-colonel of his regiment and, upon the American occupation of the Islands, organized the customs service at Manila and remained in this work until 1905 when he was sent to Santo Domingo to organize a customs receivership under the modus vivendi between the United States and the Dominican Republic. In 1907 he was reassigned to the Philippines where for two years he acted as Insular Collector of Customs. While in this position he drafted and presented to Congress a new tariff for the Philippines. This was enacted at a special session of Congress in 1909. In November of that year Colton went to Porto Rico as governor of the Island. He held
Colton

this post for four years, returning to the United States in November 1913. He then became connected with banking interests in this country. He was regarded as an authority on matters relating to customs duties and tariffs. He rendered valuable service to his country at the time when tariff revision was a pressing need, and brought his expert information to the problems of tariff protection or free trade, especially as they pertained to the insular possessions of the United States, and the Pan-American countries.

E. Y.

COLTON, WALTER (May 9, 1797–Jan. 22, 1851), theologian, journalist, author, was born in Rutland County, Vt., the third of twelve children of Deacon Walter Colton and Thankful (Cobb) Colton, and brother of Gardner Quincy Colton [q.v.]. He was descended in the fourth generation from Quartermaster George Colton, a prominent citizen of colonial Massachusetts, who came from England before 1650. When Walter was an infant, his father, a weaver by trade, moved his family to Georgia, a village on Lake Champlain. As a lad, young Colton was sent to an uncle in Hartford, Conn., to learn cabinetmaking. Here, in 1816, he was received into the church and soon thereafter entered the Hartford Grammar School to prepare for college and the ministry. He pursued his studies in Yale College with credit from 1818 to 1822, winning the Berkeleyan Prize in Latin and delivering the valedictory poem at graduation. He then entered Andover Theological Seminary, where he devoted much time to literature, writing a sacred drama and a "News Carriers' Address" for which a Boston newspaper gave him a two-hundred-dollar prize. Graduating in 1825, he was ordained an evangelist in the Congregational Church and then made professor of moral philosophy and belles-lettres in the Scientific and Military Academy at Middletown, Conn. As chaplain, he often preached to the students; his eulogy, delivered at the Academy after the funeral of Commodore Macdonough, is particularly noteworthy. Meanwhile, he wrote several articles for the Middletown Gazette, thus becoming initiated into journalism. Resigning his professorship in 1830, he went, at the request of friends of the American Board of Commissioners for Foreign Missions, to Washington to edit the American Spectator and Washington City Chronicle. This paper had been established to prevent President Jackson from removing the Indians from Georgia, where the Board had a mission. Jackson prevailed, however, and the newspaper came to an end. Colton sometimes preached at the church where Jackson worshiped. A friendship developed notwithstanding their political differences, and Colton was frequently a White House guest. The President, learning that Colton's health had been impaired, offered him a naval chaplaincy. This was accepted, and on Jan. 29, 1831, he began his first cruise, on the Vincennes to the West Indies. Early in 1832 he went to the Mediterranean in the Constellation, Commodore George C. Read. The experiences and observations of this three-year's cruise Colton recorded in his Ship and Shore; or Leaves from the Journal of a Cruise to the Levant (1835), and A Visit to Constantinople and Athens (1836). In the spring of 1835 he was assigned to the naval station at Charlestown, Mass., where he prepared his manuscripts for publication, ministered to seamen, and often preached in the pulpits of Charlestown and Boston. He was appointed, in 1837, historiographer and chaplain of the South Sea Surveying and Exploring Squadron, and while in Washington preparing for his new duties he edited the Colonization Herald for several months. The personnel of the exploring expedition had to be reorganized and Colton resigned his post largely on the score of health. Then, early in 1838, he became chaplain of the naval station at Philadelphia, where with the consent of the Navy Department he was also co-editor of the Independent North American. But the change of politics at Washington incident to President Harrison's death prevented his editing a paper hostile to the new administration, and he then devoted himself exclusively to his chaplaincy. On June 26, 1844, he married a distant relative, Cornelia B. Colton of Philadelphia. In the late summer of 1845, he was ordered to sea in the Congress, Commodore Robert F. Stockton, bound for the Pacific. This voyage in the Pacific Squadron flagship afforded Colton material for another book, Deck and Port; or Incidents of a Cruise in the United States Frigate Congress to California (1850). Though a chaplain, he was appointed, July 28, 1846, alcalde, or chief judge, of Monterey and neighboring territory, by the military authorities; and on Sept. 15, the citizens confirmed his appointment with their votes. During his tenure of office, he established The Californian, the first newspaper to be published in California; built its first school-house, and a public building, which was named "Colton Hall" in his honor; and in a letter to the Philadelphia North American and United States Gazette, first publicly an-
Colver

nounced to the East the discovery of gold in the Sacramento Valley. On his return home in the summer of 1849, he prepared for the press his *Three Years in California, 1846–1849* (1850), and tried to regain his health, but after a long period of severe illness, he died in Philadelphia. Colton wrote numerous sermons and other addresses, newspaper articles, and pamphlets; but his travel books on Constantinople, Greece, and California constitute his most important writings.

(The chief sources of information concerning Colton are, in addition to his books of travel, the "Memoir" by Henry Theodore Cheever in his edition of Colton's *The Sea and the Sailor, Notes on France and Italy*, and Other Literary Remains (1851); George Woolworth Colton, _A General Record of the Descendants of Quartermaster George Colton (1912)_; and obituary in the _North American and United States Gazette_ (Phila.), Jan. 23, 1851; the _United States Navy Register_; Laura B. Everett, "A Judge Lindsey of the Idle Forties," in the _Survey_ for Apr. 5, 1913.)

C.L.L.

**COLVER, NATHANIEL** (May 10, 1794–Sept. 25, 1870), Baptist clergyman, reformer, was born in Orwell, Vt. His father and grandfather both bore the same name, and both were Baptist preachers and pioneer farmers, descendants of Edward Colver, who came to Massachusetts from England in 1635. His mother, Esther Dean, daughter of John and Thankful Dean, was also of early Colonial stock. When he was a year old his parents moved to northeastern New York, near what is now Champlain, and in 1810, to West Stockbridge, Mass. The family was large and the boy was brought up under the toughening conditions of frontier life. Two winters' schooling comprised his education, and the only books in his home were the Bible, Psalm-book, and speller. He learned the tanner's trade, joined the troops assembled to defend New York against the British in 1814, and, on Aug. 27, 1815, married Sally Clark. Soon after he was converted and became a preacher. He was ordained in West Clarendon, Vt., his first regular parish, in 1819, and for the next twenty years served small churches in Vermont and New York. His first wife died Jan. 27, 1824, and Jan. 26, 1825, at Plattsburg, N. Y., he married Mrs. Sarah A. Carter.

He had natural oratorical ability, derived probably from his mother whose family was noted for its public speakers, herself, it is said, a woman of unusual intellectual qualities. His mind was vigorous, and quick to acquire, and he possessed a ready wit and platform resourcefulness. From the start he drew large audiences. Inheriting through his paternal ancestors a restless, independent, fighting spirit, he naturally became a vigorous champion of reform. Having joined the Masons and finding that he disapproved of some of their principles and requirements, he repudiated the order in 1829, and thereafter opposed secret societies as wrong morally and dangerous politically. He was also active in the cause of temperance, and especially in behalf of abolition, to which he gave practically all his time in 1838 and a part of 1839, serving for a period as an agent of the American Anti-Slavery Society.

Addresses delivered in New England brought him to the attention of certain Boston Baptists who desired to establish a church with free seats, and particularly opposed to slavery and intemperance. Such a church, the First Free Baptist, later known as Tremont Temple, was organized, with Colver as minister. Here from 1839 to 1852 he had a notable pastorate, and acquired an enviable reputation as a preacher, being regarded as one of the attractions of the city. He was recognized also as one of the ablest advocates of abolition. John Quincy Adams said he was the best off-hand speaker he had ever heard. A delegate to the World Anti-Slavery Convention at London in 1840, he attracted favorable attention there. In a sermon published in 1850, _The Fugitive Slave Bill, or God's Laws Paramount to the Laws of Men_, he urged disobedience to the law as a sacred duty.

Pastorates in South Abington (Whitman), Mass.; Detroit; Cincinnati; and Chicago followed. He kept up his attacks upon slavery, and a sermon, preached in Cincinnati, Dec. 11, 1859, "Slavery or Freedom Must Die." _The Harper's Ferry Tragedy a Symptom of Disease in the Heart of the Nation_, was published in 1860. Appreciating the need of theological education in the West, both in Cincinnati and Chicago, he gathered together groups of young men contemplating the ministry and instructed them. He was active in the establishment of the Chicago Baptist Theological Institute in 1865, the object of which was the creation of a theological seminary in connection with the first University of Chicago, and pending its opening he was appointed to give instruction in doctrinal and practical theology at the University. In 1867 he established at Richmond, Va., the Colver Institute for the training of colored ministers, which survives in the theological department of the Virginia Union University. An oil painting of Colver hangs in one of the halls in Tremont Temple, Boston; another in the Divinity School of the University of Chicago, bearing the inscription "A Founder of the Divinity School."
Colver

where, are taken; J. L. Rosenberger, Through Three Centuries (1922); T. W. Goodspeed, Univ. of Chi. Biog. Sketches, vol. I (1922).] H.E.S.

COLVER, WILLIAM BYRON (Sept. 26, 1870-May 28, 1926), editor, chairman of the Federal Trade Commission, was the son of Byron Henry and Josephine (Noble) Colver and was born at Wellington, Ohio. He attended the public schools of Cleveland and later studied law at Ohio State University. He practised law for only a short time, however, before he became reporter on the Cleveland Plain Dealer in 1894. In 1897 he was married to Pauline Simmons of Cleveland. From the Plain Dealer he went to the Cleveland Press and in 1898 became New York and Washington correspondent for the old Scripps-McRae League. When Tom L. Johnson [q.v.], a close personal and political friend, launched his famous three-cent-fare fight, Colver withdrew from journalism for a few years to devote his energy to the civic cause in Cleveland. He was one of a group of a half-dozen men who, under Johnson's leadership, fought for the public control of street-car lines. He served for a year of this period as tax inquisitor for Cuyahoga County, and for another year as secretary of the Municipal Traction Company of Cleveland. In 1907 he returned to newspaper work as editor of the Newspaper Enterprise Association. Five years later he resigned to become editor-in-chief of the "Clover Leaf" publications of the Northwest. In 1917 he was appointed by President Wilson to the Federal Trade Commission of which he was a member for three and a half years, serving for one year as chairman. This position developed into a war-time post of grave responsibility and his associates gave him great credit for his practical vision in setting up principles to govern competition and prevent unfair practices in trade. Concerning his work here the New York Times said (May 29, 1926) : "Outstanding in Mr. Colver's incumbency of the Federal Trade Commissionership were his fight against the excess profits tax which he believed to be uneconomical, and his opposition to the great packing interests which he felt had an unwholesome control of the meat industry." He served also as a member of the Price Fixing Committee of the War Industries Board. In 1919 he organized the Scripps-Howard Newspaper Alliance, the Washington editorial bureau for all Scripps-Howard papers, and until his retirement from active work in 1924 he served as general editorial director of the Scripps-Howard newspapers, in which position he assisted in starting or inspiring many of the policies of these papers.

It was in newspaper work rather than in public office that Colver achieved his greatest success. As a writer of editorials which bristled with purpose and were packed with solid and accurate information, he waged many a campaign for public causes. During the Taft administration his editorial skill exposed the celebrated power-site and forest exploitation. He wrote stirring editorials on the Teapot Dome exposures and chided the newspapers that they had done so little to expose the unfair practices for which the public continually suffered and which every newspaper man in Washington knew existed. He was of the firm belief that the publisher and the editor had different functions, and that it was the editor's duty to get all the news and then really serve the public by giving it all the news in the most readable and interesting way. He preached the gospel of terse, bright newswriting and saw vast possibilities for the tabloid sheets. These, he believed, need not be sensational papers but should offer an attractive economical form in which brevity could be conserved and displays made without waste of material.

[Information from Mr. Lowell Mellett, editor, the Scripps-Howard Newspaper Alliance, Washington, D. C.; article by Marlen Pew in The Editor and Publisher, June 5, 1926; Who's Who in America, 1926-27; Evening Star (Washington), and Washington Daily News, May 29, 1926. For his connection with Tom Johnson see Tom L. Johnson, My Story (1911), ed. by E. J. Hauser.] E.Y.

COLVIN, STEPHEN SHELDON (Mar. 29, 1869-July 15, 1923), educator, author, was the son of Stephen Colvin, a loom manufacturer, and Clara Turner Colvin. He was born in Phenix, R. I., and received his early education in private schools, completing his preparation for college in Worcester Academy. He graduated from Brown University with the degrees of Ph.B. (1891) and A.M. (1894). During a part of the period of his graduate work at Brown he was engaged in reporting for the Providence Journal and the Evening Bulletin. He became instructor in rhetoric at Brown in 1892, serving in this position until 1895. He was married in 1891 to Edna F. Boothman of Riverpoint, R. I. She died in 1893. He was married again in 1895 to Eva M. Collins of Providence. During the next two years he studied philosophy at the universities of Berlin and Strasbourg and prepared a thesis on Schopenhauer's Doctrine of the Thing-in-Itself and his Attempt to Relate it to the World of Phenomena (published 1897). He received the degree of Ph.D. at Strasbourg in 1897.

After his study in Germany, he filled the position of instructor in English in the Worcester high schools for four years, from 1897 to 1901. During this period he attended the seminars of G. Stanley Hall [q.v.] at Clark University, where he became absorbed in the applications
Colvin
of psychology to education. His later interest in high-school education is to be traced to his studies with Hall. In 1901 he became assistant professor of psychology at the University of Illinois and remained in this position until 1903. After a year (1903-04), during which he served as assistant professor of philosophy at Brown University, he returned to the University of Illinois as associate professor of psychology. He was later promoted to a professorship and to the headship of the department, which position he held until 1912. At the University of Illinois he was associated intimately with William C. Bagley, in collaboration with whom he prepared a book entitled Human Behavior (1913). Much of his writing during this period dealt with problems in the field of educational psychology, the most important being The Learning Process (1911). In this book he stated his position on the subject of formal discipline, which was at that time much discussed. He vigorously defended the position that there are general mental habits and that through these transfer of training takes place.

In 1912 he was called back to Brown as professor of educational psychology. He continued in this position until 1923, assuming in 1919 the duties of director of the School of Education in addition to those of his professorship. At Brown University he inaugurated the plan of administering intelligence tests to all students and of following these tests with personal guidance on an extended scale. He also assisted the State Department of Education of Rhode Island as inspector of high schools in developing the secondary schools of the state. He published a book entitled Introduction to High School Teaching (1917), which is extensively used as a text-book in teacher-training institutions in all parts of the country. In 1923 he went as professor of education to Teachers College, Columbia University, where he had for a number of years given courses during the summer. He had suffered from a heart lesion for some time, and during his first year at Teachers College he died suddenly of a severe angina. In addition to the books mentioned, Colvin published a number of important papers, especially on mental tests of college students and high-school seniors. All his writings are characterized by careful attention to details and by a strict empiricism. He exercised a strong influence in the direction of a conservative use of mental tests as substitutes for the conventional college-entrance examinations. His contributions to the literature of methods of teaching have done much to systematize and improve instruction in American high schools.

Colvocoreses

COLVOCORESES, GEORGE MUSALAS
(Oct. 22, 1816–June 3, 1872), naval officer, was born in Chios, Greek Archipelago, son of Constantine and Franka (Grimaldi) Colvocoreses. Brought to Smyrna by the Turks after a massacre on the island in 1822, he was ransomed by relatives and sent with nine other boys in the American brig Margarita to Baltimore. Through the Greek Relief Committee, Capt. Alden Partridge, head of Norwich (Vt.) Academy, took the lad and entered him in his school, where he gained a good education, remaining until his appointment as midshipman, Feb. 21, 1832. As a passed midshipman he accompanied the Wilkes Exploring Expedition (1838-42) in the South Seas and Antarctic, making also an overland journey from Oregon to San Francisco in connection with the expedition, September–October 1841, and returning by the East Indies. These experiences are described in his Four Years in a Government Exploring Expedition (1852), a popular book at the time, which went to five editions. Commissioned lieutenant, Dec. 7, 1843, he was in the Pacific Squadron during the Mexican War; in the Mediterranean, 1847-49; on the African Coast, 1851-52; and then, after two years' duty in New York, executive of the Levant in the East India Squadron, where he led a landing force in the capture, Nov. 20-22, 1856, of the barrier forts below Canton. In the Civil War, with the rank of commander (July 1, 1861), he commanded the storeship Supply until 1863, and then the sail-sloop Saratoga.

Though the Saratoga was of little value for blockading, Colvocoreses drilled his large crew thoroughly, and when sent to the Georgia coast in the spring of 1864 he led three landing parties, Aug. 3, 16, and 25, breaking up a coast-guard organization meeting on the 3rd and taking twenty-six prisoners, and on the 16th capturing twenty-nine cavalymen. For these exploits he was thanked in general orders by Admiral Dahlgren (Official Records, Navy, XV, 637), who also protested to the department upon the withdrawal of Colvocoreses in September. In 1865-66 he commanded the St. Mary's on the west coast of South America, and on one occasion by a sharp warning against injury to American property protected Valparaiso from bombardment by a Spanish squadron. He was retired as captain Jan. 11, 1867. Five years later he was shot and killed by thieves on a street in Bridgeport, Conn., while about to take a steamer on a business trip from his home in Litchfield, Conn., to New York. Colvocoreses had a quick mind
Colwell

and attractive personality and in later years often gave lectures on his voyages and subjects from natural history. On May 17, 1846, he married Eliza Halsey, niece of Commander T. Freelon, U. S. N., by whom he had three daughters and a son, George Partridge, born at Norwich, Vt., who entered the navy and rose to rear admiral. On July 19, 1863, after his first wife’s death, he married Adeline Swasey, a sister of Mrs. Alden Partridge.

An account of Captain Colvocoresses appears in G. M. Dodge and W. A. Ellis, *Norwich Unite., 1810-1911* (1911), 11, 85; *Official Records (Navy); Navy Registers 1833-69*; N. Y. Herald and other papers, June 5–9, 1872; letter describing his coming to America, by his son, Portsmouth (Va.) *Star, May 2, 1823.*

**COLWELL, STEPHEN** (Mar. 25, 1800–Jan. 15, 1871), political economist, was born in Brooke County, Va. (now W. Va.), and graduated from Jefferson College, Pa., at the age of nineteen. He studied law under Judge Halleck, in Steubenville, Ohio, was admitted to the bar, and practised for seven years in St. Clairsville, Ohio, and then in Pittsburgh until 1836. In that year he gave up the practise of law and became an iron manufacturer, first at Weymouth, N. J., and later at Conshohocken on the outskirts of Philadelphia. For twenty-five years he had particular occasion to weigh the results of the tariff policy as it affected iron manufacturers, and this practical experience vitalized much of the writing on economics to which his legal training gave precision of thought and expression. In his studies pertaining to the technical side of the science, especially the treatment of the subject of money and exchanges, Colwell’s view-point was that of the school of Henry C. Carey [*q.v.*]; he set forth always the advantage of protection to industry, and assailed the quantity theory of money. With him, however, economics was also a theory of benevolence. He was an active Presbyterian, and the close interrelation of his economics and his religion was signalized by his attacks upon current orthodoxy in both fields. His religion was infused with the guiding principle of human helpfulness; his strictures on the merely pious (in such works, for instance, as *New Themes for the Protestant Clergy, 1851*) drew sharp comment from his critics, though the course of years brought general acceptance of his contentions.

He was a trustee of the University of Pennsylvania and of Princeton Theological Seminary. To the former institution he bequeathed his library of political economy, composed of upward of 6,000 items, almost half of them pamphlets separately bound. He coupled with this gift the condition that the University should found a chair of social science, but his family waived the condition. He secured the establishment at Princeton of a chair of Christian ethics; and was hopeful that this chair should develop and popularize the social implications of Christianity. His interests were many, and increased with his marked success in business. He was a director of the Camden and Atlantic, the Reading, and the Pennsylvania Central railroads. An active member of the Colonization Society, he strove to persuade the South that slavery was an unwise and unprofitable institution. During the Civil War he did his best to support the Union cause; he was active in the work of the Sanitary Commission and the Christian Commission, guaranteeing funds for the relief of the wounded and sick, and himself visiting the battle-fields and hospitals. He presided over the first formal meeting which led to the organization of the Union League. Afterward he gave generously of time and money to the Freedmen’s Aid Society. His life was probably shortened by intensive work on the preparation in 1865 of six reports on the subjects of trade and taxes for the United States Revenue Commission, of which he was a member. He died in Philadelphia.

**COMAN, CHARLOTTE BUELL** (1833–Nov. 11, 1924), artist, was born in Waterville, N. Y., the daughter of Chauncey Buell. She early evinced great artistic talent and began her studies in America with James R. Brevort [*q.v.*], a successful landscape painter and a member of the National Academy. She went abroad and studied in Paris with Émile Vernier and Harry Thompson, later going to Holland. She devoted herself chiefly to painting landscapes, after the manner of the great landscapists, Corot, Daubigny, and others, but was not imitative, having her own distinct manner in color and conception. She sent to the Centennial Exposition in Philadelphia in 1876 a picture entitled “A French Village,” which received loud praise and to the Paris Exposition in 1878 another landscape, “Near Fontainebleau.” She remained abroad six years. Many awards and prizes came to her, among them a medal at the Midwinter Exposition in San Francisco in 1894, the Shaw Memorial Prize at the exhibition of the Society of American Artists in 1905, the second prize at the exhibition of the Society of Washington Artists in 1906, the Burgess Prize from the New York Woman’s Art Club in 1907. She was made an Associate Academician in 1910 and was a member of the New York Watercolor Club.
COMBS, LESTIE (Nov. 29, 1793-Aug. 22, 1881), soldier, politician, was the son of Capt. Benjamin Combs of Stafford County, Va., and of Sarah Richardson of Annapolis, Md. His father first went to Kentucky in 1775, returned to Virginia to fight in the Revolution, and going again to Kentucky in 1782 settled in Clarke County across the Kentucky River from Booneborough (Biographical Encyclopedia of Kentucky, 1878, p. 79). Leslie was educated by Rev. John Lyle, a well-known Presbyterian minister and teacher. He was serving as deputy county clerk of Jessamine County when the War of 1812 began. He joined the Kentucky troops and was a scout in the River Raisin campaign (A. C. Quisenberry, Kentucky in the War of 1812, 1915, p. 53). On the expedition to relieve Fort Meigs in May 1813 he was captain of a company of scouts, was severely wounded, and taken prisoner (L. and R. H. Collins, History of Kentucky, 1874, II, 196). After the war he read law in a private office in Lexington and was admitted to the bar in 1818 (Robert Peter and Wm. H. Perrin, History of Fayette County, Kentucky, 1882, p. 349). After practising law for a short period, he was elected to the lower house of the Kentucky legislature in 1827 and remained a member through 1829. He was later a member of the House in 1833, 1845-47, and 1857-59 (Collins, II, 170). In 1846 he was speaker of the Kentucky House of Representatives. He was a candidate for congressman in 1851 but was defeated by John C. Breckinridge [q.v.]. In 1836 he was appointed colonel of the ten companies of Kentucky militia raised to protect the Sabine frontier, but the troops were ordered discharged before they began their march (Niles' Weekly Register, Aug. 27, 1836, 431). Combs was a Whig in politics as long as that party existed in Kentucky. In Aug. 1860 he was a candidate, on the Bell-Everett ticket, for clerk of the court of appeals and was elected by an overwhelming majority. This position he held for six years. He was a pronounced Unionist at the beginning of the Civil War and exerted himself to prevent the secession of Kentucky. He was not an extremist, however, and as the war went on he became very bitter in his protests against military rule in Kentucky (Official Records, Army, 1 ser., vol. XXXIX, pt. 2, p. 240). After the war he lived in retirement at Lexington until his death. Combs was an able lawyer of rather wide reputation. His service in the Kentucky legislature was without special incident although he was active in internal-improvement measures. He was a useful legislator though not a brilliant one, and his popularity was attested by his huge majority for clerk of the court of appeals in 1860. In 1881 he was married to Margaret Trotter of Fayette County and after her death married (1849) Mary Elizabeth Brownell of Connecticut. There were eleven children of the first marriage and three of the second.

[In addition to references given above see "Narrative of the Life of Gen. Leslie Combs of Ky." in Am. Whig Rev., Jan., Feb. 1852, repr. in pamphlet form; obituary in the Courier-Journal (Louisville), Aug. 23, 1881; Robt. B. McAfee, Hist. of the Late War in the Western Country (1816). The Official Records spell his name "Coombs."]

R. S. C.

COMBS, MOSES NEWELL (1753-Apr. 12, 1834), manufacturer, philanthropist, was a native of Morris County, N. J. Toward the end of the Revolutionary War, a veteran of "several severe engagements," he took up his residence in the village of Newark. As a tanner and shoemaker, he quickly attained success, and with a shipment in 1790 of 200 sealskin shoes from his shop to Georgia the export trade of the city of Newark may be said to have started. Although not the first tanner or shoemaker in the community, Combs has been called the "Father of Newark industries," for "it was through him that the town's industrial system was formed" (Urquhart, post, I, 516). In later years he received as high as $9,000 for a single order of shoes, and "silver was showered on him so plentifully," he said, that he did not know what to do with it (W. H. Shaw, post, I, 572). The shoe and leather business has always been a basic Newark industry, and many men, such as Luther Goble, later prominent in Newark business life, served their apprenticeship under Combs. In addition to his leather interests Combs was treasurer of the Springfield-Newark Turnpike Company (1866) and one of the founders and directors of the Newark Fire Insurance Company. Of a philanthropic turn of mind, Combs "strenuously advocated three things many years ahead of his
time: emancipation of slaves, temperance and universal education" (Urqhart, post, I, 517). In 1794 he opened an evening school for his own and other apprentices, the tuition fee being $2.50 for each scholar from November to March. This nominal tuition fee was soon abolished and for years Combs supported the institution as a free school. It was in existence as late as 1818 when announcement was made of a "School for Educating the Children of the Poor in Newark," with Moses N. Combs as president, one of his sons, David, as treasurer, and another son, Isaac, as a trustee. It is stated (Urqhart, post, I, 518) that this school "was probably the first night school in the United States, and was one of the first free schools in the country, (and possibly the first)."

The religious interests of Combs were very deep. Differing with Dr. Alexander MacWorter and the majority of the First Presbyterian Church of Newark because of their willingness to accept the "half-way covenant," Combs led an exodus from the Newark church to the Presbyterian Church of Orange. Finding the distance to Orange too great, Combs and his associates after several years held services in one of the buildings attached to his tanning plant, and here Combs preached to them. During 1707 he issued a few numbers of a magazine containing a variety of essays on the Bible. His church after some years disintegrated, the members returning to their original Newark communion. Combs was a man of strong personality and extreme individuality bordering on eccentricity, but was conceded to have been one of the most valuable citizens of his community in his day. Soon after his arrival in Newark, he fell in love with Mary Haynes, daughter of one of the leading men of the village and married her against her father's will. She bore him thirteen children.

[Frank J. Urquhart, A Hist. of the City of Newark, N. J. (1913), I, 514-20 and Wm. H. Shaw, Hist. of Essex and Hudson Counties, N. J. (1884), I, 571-72, contain material on Combs. See also the Newark Evening News, Nov. 24, 1914, and the Newark Sunday Call, Oct. 24, 1915. The Newark Daily Advertiser for Apr. 16, 1834, notes his death.]

H. U. F.

COMER, BRAXTON BRAGG (Nov. 7, 1848-Aug. 15, 1927), business man, governor of Alabama, was the fourth son of John Fletcher Comer, judge of the superior court of Georgia, and Catherine Drewry. The Comers came of English and Irish stock, said to have been supporters of the Cromwelian régime. They settled in Virginia in colonial times and moved to Georgia in the early part of the nineteenth century, and thence to Barbour County, Ala., where they engaged in planting, lumbering, and grist-milling, achieving marked business success. Braxton received his early education in a private school, and attended the University of Alabama during the last year of the war, taking part in the student defense of the University against Gen. Croxton's invasion. After the burning of the University, he returned to his father's plantation. The following year he entered the University of Georgia, but was soon forced to retire because of ill health. After recovering his health, he entered Emory and Henry College, Va., where he received the A.B. and A.M. degrees with distinction in natural science. From college he returned to Barbour County and engaged in planting and merchandising at Comer Station. There he demonstrated his business capacity by developing large and successful farming and country-store interests, during the difficult years immediately following the Reconstruction régime. He was married on Oct. 4, 1872, to Eva Jane Harris, member of a prominent family of Cuthbert, Ga. In 1890 he moved to Birmingham from Anniston where he had for five years been engaged in the wholesale grocery and commission business. He became president of the City National Bank and engaged in corn and flour milling and in farming. As the cotton-manufacturing industry grew, and Comer's alert mind envisaged the possibilities of it, he abandoned banking and concentrated upon cotton-milling.

As merchant, manufacturer, and shipper, Comer had first-hand knowledge of the deleterious results of railroad rate discriminations. In 1904 he plunged into politics with a view to removing this abuse, being elected president of the railroad commission upon a platform of railroad rate regulation. Not contented with the work he was able to do as commissioner, he entered the race for governor in 1906 and won, after a heated and colorful campaign. In a manner that was typical of his blunt business methods and his implacable spirit, he called upon the legislature to abolish the "debauching lobby" maintained by the railroads at Montgomery and to pass laws for a thorough regulation of the railroads in the interest of equity as between them and the people. In compliance with his instructions, the legislature passed a series of acts, known as the "railway code," and taxed the property of railroads and other public-service corporations on the same principle that other property was taxed. He also secured the adoption of a tax-adjusting system in order to obtain a fairer assessment of property values. A state-wide prohibition law and a child-labor law were passed; and large appropriations were made to the state schools and to eleemosynary institutions. His
Comstock

most enduring achievement however was in the field of public education. Operating upon the principle that the future citizens of the state must be considered as well as the contemporary tax-payers, he led the legislature into making unprecedentedly large appropriations for colleges and schools. A system of county high schools was established which constitutes the backbone of the state's secondary-school system. In recognition of his services to education, some of the college buildings, erected out of funds provided by his administration, were named for him and he is known in Alabama as the "educational governor."

At the end of his term, in 1911, Comer retired from politics, devoting his time to his large business interests. He sought the governorship again in 1914, but in a second, or "run off," primary his conservative enemies combined against him and defeated him. He gave the remainder of his life, save the year 1920 when he served by appointment in the United States Senate in a vacancy caused by the death of Senator J. H. Bankhead, to business, earning a fortune from his cotton-mills. He was born a fighter, a man of incorrigible independence and individuality, and possessed of an imposing figure and a vivid personality. He threw on contest, and at the time of his death was pronounced by an opposition paper (Montgomery Advertiser) as "easily the most audacious executive who ever ruled Alabama."

[A. B. Moore, Hist. of Ala. and Her People, vols. I, II (1927); T. M. Owen, Hist. of Ala. and Dict. of Ala. Biog. (1921), vol. III; manuscript prepared by Gov. Comer a few months before his death.] A. B. M.-e.

COMSTOCK, ANTHONY (Mar. 7, 1844-Sept. 21, 1915), reformer, born in New Canaan, Conn., was the son of Thomas Anthony Comstock and Polly (Lockwood) Comstock. His father was a farmer and owner of a sawmill in New Canaan. His mother bore ten children and died when he was ten years old, being always thereafter the chief object and image of his devotion. He was brought up under strict Congregational discipline, and attended the public schools until his eighteenth year. In that year he became a clerk in a general store at Winnipauk, Conn., where an incident occurred which in his later life he liked to consider prophetic of his whole career. He shot and killed a mad dog which was running the streets; and shortly afterward he conducted a solitary crusade against the owner of the dog, who illegally took groceries in exchange for whiskey. Comstock broke into the premises one night and emptied all the liquor on the floor. He often referred to the persons he subsequently prosecuted as mad dogs endangering the community. On Dec. 31, 1863, he enlisted as a volunteer in the Union army, taking the place of his brother Samuel who had been killed at Gettysburg. He served a year and a half quietly in Florida, where in his intervals of leisure he kept a diary which has been preserved. He kept a similar record of his thoughts and deeds in later years, but this early document (frequently quoted in the biography by Broun and Leech) is particularly interesting as showing him possessed of a curious, vague sense of sin. A photograph of Comstock dating from this period (Broun and Leech, p. 30) reveals a set of severely contracted facial muscles of the sort associated with acute conscience and the determination to exorcise sin from the whole of the subject's environment. After Comstock was mustered out in the summer of 1865 he returned home to New Canaan, but soon became clerk in a store at New Haven. Satisfied neither with this position nor with one which he held for a few months at Lookout Mountain, Tenn., he finally found his way to New York, where he worked as shipping clerk and salesman for various dry-goods houses until in 1873 he abandoned business for the profession of reforming. He was married in January 1871 to Margaret Hamilton, ten years his senior, whom he likened to his mother and who bore him one daughter, Lillie, in December 1871. The child died the following summer; an adopted daughter, Adele, took her place. The family lived first in Brooklyn and later in Summit, N. J.

As early as 1868, Comstock, inspired by a campaign of the Young Men's Christian Association against obscene literature, had secured the arrest of two publishers, one of whom, Charles Conroy, he pursued for many years. He wore to his grave, under his famous divided whiskers, a scar inflicted by Conroy's knife in 1874. In 1871 he offered his services as crusader to the Y. M. C. A. and helped form a committee for the Suppression of Vice which subsidized him in his many operations against publishers and booksellers. In 1873 he went to Washington, forced the passage of new postal legislation preventing the communication of obscene matter through the mails, received an appointment as special agent of the Post Office Department, returned to New York, and was made secretary of the newly created Society for the Suppression of Vice. He remained agent and secretary until his death, taking no pay from the government until 1906, when he was required to accept $1,500 a year. Utterly incorruptible and tirelessly zealous in the pursuit of what he considered his duty, he spent the rest of his years in furious raids upon pub-

330
Comstock
lishers of obscene and fraudulent literature, quacks, abortionists, gamblers, managers of lotteries, dishonest advertisers, patent-medicine venders, and artists in the nude. It is clear that he did not know how to distinguish between good art and bad, or indeed between art and morals. He was a notably unsubtle man, and has been rightly called an enemy of much that is valuable in literature and life. But as a prosecutor of frauds and quacks he did useful work, and as a censor of books and post-cards he removed from circulation many items which have not been missed.

His fame grew rapidly until he was a national figure, generally lauded for his work but in certain quarters ridiculed and reviled. His first conspicuous drive was against Victoria C. Woodhull [q.v.] and Tennessee Claffin, two gifted and emancipated sisters of New York who in 1872 used their Weekly to attack Henry Ward Beecher, then in the limelight of the Tilton scandal. Comstock had them arrested and angrily pursued their defender, George Francis Train [q.v.], a wealthy and eccentric New Yorker. The case won him notoriety mingled with derision; but he was never daunted. His labors against what he defined as vice took him over the country as far as St. Paul and St. Louis; he inspired the founding of the Watch and Ward Society in Boston in 1876; he made New York the headquarters of all effort in the nation to exterminate the forces believed to be undermining American youth; and when necessary he wrote books to vindicate his calling. His methods of attack were direct and ruthless. When Madam Restell, a wealthy abortionist and contraceptionist of New York whom he had tricked into a confession of her trade and imprisoned, took her own life in 1878, she was the fifteenth suicide he was willing to place to his credit; and there were several others. He encountered effective opposition first in the eighties, when his persecution of such men as Ezra Heywood and De Robigné M. Bennett [q.v.] for their advanced opinions as expressed in certain pamphlets aroused the articulate ire of freethinkers in the National Liberal League and the National Defense Association. The word “liberal” was always synonymous for him with “quack” and “libertine,” and although the opposition from this source gained a certain popular strength he was not deterred in 1905 from proceedings against Bernard Shaw’s Mrs. Warren’s Profession, partly perhaps in pique because the author of the play had coined in his honor the opprobrious word “comstockery.” He was ever an active enemy of Col. Robert G. Ingersoll. In 1887 he raided Knoedler’s Art Gallery in New York in order to suppress certain paintings he had decided were indecent; and in 1906, this time in the face of widespread criticism, he took action against the Art Students’ League. His death occurred soon after his return from California, where he had been the United States delegate, appointed by President Wilson, to the International Purity Congress. His personal features—a thick, powerful trunk, short legs, bald head, whiskered chin, and uncompromising eyes—are preserved in countless cartoons. He ate heavily, collected stamps, and loved children.

[Comstock published two books, Frauds Exposed (1880) and Traps for the Young (1883), and several pamphlets, of which Morals Versus Art (1888) is the most interesting. His activities are fully described in the Annual Reports of the Society for the Suppression of Vice (1874–1916). Charles Gallaudet Trumbull’s Anthony Comstock, Fighter (1913) is mostly adulation: Anthony Comstock, Roundman of the Lord (1927), by Heywood Broun and Margaret Leech, is informing and critical.]

M. V.-D.

COMSTOCK, ELIZABETH L. (Oct. 30, 1815–Aug. 3, 1891), Quaker minister, philanthropist, was born at Maidenhead, Berkshire, England, daughter of William and Mary Rous. It was a gifted family, with a long line of Quaker ancestors. One of Elizabeth Comstock’s sisters, Lydia Rous, was a prominent educator in the English Quaker schools and for many years governess in John Bright’s home in Rochdale. Elizabeth Rous was educated in a Quaker school in Croydon and afterward taught both in Ackworth School and in her old school in Croydon. She was married in 1847 to Leslie Wright, who died two years later, leaving one daughter, Caroline. In 1854, the mother and daughter emigrated to Canada and settled in Belleville, Province of Ontario, where there was a meeting of the Society of Friends, and it was in this community that Elizabeth Wright (as she then was) began her public ministry. In 1858 she was married to John T. Comstock. They moved that year to the United States and settled in Rollin, Mich., where there was a pioneer Quaker community. Here Elizabeth Comstock’s striking gifts of speech and spiritual leadership were quickly recognized and she was recorded a minister of the Society of Friends. Rollin was on one of the lines of the famous Underground Railroad for the transmission of fugitive slaves from the South to Canada, and Mrs. Comstock threw herself with passionate zeal and moral fervor into the work of helping slaves to gain their freedom. She became from this date, a devoted Abolitionist and life-long helper of the colored race. Meanwhile, she was developing her powers as a public speaker. In the Quaker gatherings in the western states, she was learning to hold and move

331
large audiences. She threw herself in this period of development into the "causes" of the day and became a vigorous advocate of peace, of temperance, of prison reform, and of enlarged rights and privileges for women. She early discovered that she had a peculiar gift for working effectively with prisoners. She traveled extensively, carrying on this work of kindness and friendship and she influenced many lives in the jails and prisons of the country.

She proved to be even more effective during the Civil War in the hospitals and in the prison camps, where she comforted and brought mental relief to thousands of distressed soldiers. As the progress of the war liberated the slaves, Mrs. Comstock spent much of her time visiting the "contraband" camps, alleviating the distress of the destitute, and helping to organize the extensive work of relief undertaken by the Society of Friends. In 1864, she had a remarkable visit at the White House, ending in a favored season of divine worship with President Lincoln, conducted after the manner of the Quakers (see Life and Letters, ch. XI).

Elizabeth Comstock was regarded at the close of the war as one of the foremost of the noble women of the country who had dedicated themselves to the work of spiritual ministration, both among the wounded soldiers and among the vast throngs of "contrabands." She had become also a powerful platform speaker in behalf of great causes and reform movements. When the great migration of negroes into Kansas occurred in 1879-80, Elizabeth Comstock, under Gov. St. John of that state, took a very important part in organizing the temporary relief and in providing for the permanent care of the refugees. Her work takes a high rank in the long story of Quaker contribution to the welfare of the colored race. In 1885, she settled in Union Springs, N. Y., where she had her home until her death in 1891. She traveled extensively in the United States and in England in her service of preaching and she continued her spiritual work with prisoners well on into old age.

The chief sources are Life and Letters of Elizabeth L. Comstock, comp. by C. Hare (1865); Files of Friends Review, 1855-91; R. M. Jones, Later Periods of Quakerism (1921).

R. M. J.

COMSTOCK, GEORGE FRANKLIN (Aug. 24, 1811—Sept. 27, 1892), jurist, was the son of Serajah Comstock, a native of Litchfield, Conn., who, after serving through the Revolutionary War, settled on a farm near Williamstown, Oswego County, N. Y. Here George Franklin was born. His early education at the district school was scanty and at the age of fourteen when his father died, he had to earn his own living. He taught school, attended Ellisburg Academy in Jefferson County for a short time, and by heroic measures saved sufficient money to enter Union College, Schenectady, Apr. 28, 1832, where he graduated with high honors in 1834. He then obtained a position as classical instructor in a private school at Utica, studying law at the same time, but shortly after moved to Syracuse, N. Y., where he entered the law office of Noxon and Leavenworth, also engaging in private tuition in order to pay his way. On his admission to the bar in 1837, he was taken into partnership by his principals. In 1847 he was appointed reporter of the New York court of appeals—being the first to occupy that position—and acted as such for three years, publishing Reports of Cases Argued and Determined in the Court of Appeals of the State of New York (vols. 1-4, 1849-51). In 1850 President Fillmore nominated him solicitor for the treasury, but he held the position only a few months, retiring with the change of administration. He had always been a consistent Whig and was nominated by that party and elected a judge of the state court of appeals, Nov. 6, 1855. He held office till Dec. 31, 1861, being chief justice during the last two years of his term, but on seeking reflection lost in the Republican sweep of that time. Though only on the bench six years "he left an indelible impress upon the jurisprudence of the State." His professional contemporaries pronounced him a great judge and posterity has confirmed the verdict. He was not "safe" in the sense of adhering to formula and he was original inasmuch as he evinced no reverence for precedent, but his judgments were always luminous, framed with a logical precision which carried conviction, constructed with the utmost care, and distinguished on occasion by an unusual research. It is said that he devoted an entire vacation to preparing his masterly opinion in Bissell vs. Michigan, etc. R. Co. (22 N. Y. 258) re the liability of a corporation for an act ultra vires causing personal injury. He resumed active practise at Syracuse, where for the ensuing thirty years he had an undisputed monopoly of the important legal business. Such was his reputation that, though he never had an office in New York, he was frequently retained in that city in cases involving big interests in vital issues. Not an advocate in the popular sense, he did not show to great advantage in jury causes, perhaps because, as he said, "as a general thing I have no faith in juries." He was, however, a profound equity lawyer, particularly on the subject of trusts and was retained in all the big testamentary litigation of the period, including the contest involving Commodore Vanderbilt's
Comstock

will. Perhaps the most spectacular of his legal triumphs was in connection with William M. Tweed, whose cumulative sentence to the penitentiary for one year on each of twelve counts of the indictment was reduced on habeas corpus to one year only with a corresponding diminution of the fine which had accompanied the sentence. He was a delegate-at-large to the state constitutional convention of 1868 and took an outstanding part in the proceedings, being largely responsible, with Folger and Andrews, for the new judiciary article as it subsists to-day. Always intensely interested in educational matters, in 1869 he initiated the movement which resulted in the removal of Genesee College to Syracuse and its re-organization as Syracuse University. He contributed munificently to its endowment and was a member of the Board of Trustees for over twenty years. He also actively cooperated in many commercial enterprises in Syracuse, the ill success of some causing him serious embarrassment in his later years. He died at Syracuse, Sept. 27, 1892. His wife was Cornelia, daughter of his partner, B. D. Noxon of Syracuse. His only excursion into the realm of letters was an edition of Kent's *Commentaries on American Law* (1867), undertaken at the request of the Chancellor's heirs.

[The best commentary on his life and career is that by Prof. Thaddeus David Kennerson in W. D. Lewis, ed., *Great Am. Lawyers*, vol. VI (1909). An intimate personal sketch, perhaps too eulogistic, is contained in *Landmarks of a Lawyer's Lifetime* (1914), by Theron G. Strong, pp. 228-40. See also *N. Y. State Bar Ass. Report*, 1893, p. 130; *Green Bag*, II, 286, IV, 548, and *Memorial Hist. of Syracuse*, N. Y., by Dwight H. Bruce (1891), pp. 79 and 438.]

H. W. H. K.

**COMSTOCK, HENRY TOMPKINS PAIGE** (1820–Sept. 27, 1870), for whom the Comstock Lode at Virginia City, Nev., was named, was born in Trenton, Ont., Canada, the fifth and youngest child of Noah and Catherine (Tompkins) Comstock. Contrary to statements usually made about him, he came from one of the best families in Connecticut and had good blood on both sides of his family. His father was born in Warren, Conn., about 1790, the son of a Congregational minister at that place, a descendant of William Comstock who came from England in 1635 and was the founder of all the Comstock lines in America. This ancestor was in the Pequot War (1637), being one of the twenty-six from Wethersfield, Conn., in Capt. John Mason's company, which took the Indian fort at Mystic, Conn., May 1, 1637. The old New London mill which is still in operation was built in 1650 by Comstock and others. Noah Comstock went in early life to Cooperstown, N. Y., then to Trenton in Ontario, and thence to Cleveland, Ohio, and to Blissfield, Mich. He was engaged in the lumber and hotel business. Thus Henry grew up amidst constantly renewed pioneer surroundings and inherited a desire for frequent removals ever farther and farther to the West. He first went to Nevada from Santa Fé in 1856, having been previously engaged in trapping for the American Fur Company and having served in the Black Hawk, Patriot, and Mexican wars. He was drawn into the mad rush of fortune hunters on the Pacific Coast which resulted from the discovery of gold at Sutter's Mill in California. Early in the fifties prospectors found gold near Dayton in the "Washoe" mining area and in search of more precious metal they followed up the wash of Mount Davidson. The Grosch Brothers of Philadelphia are commonly credited with the first discovery of silver, but they met an untimely death before the world had become acquainted with these happenings. Possibly Comstock learned of the ledge from them. At any rate, after their death he claimed by right of discovery and previous location the ground where the Comstock lode was found. He soon sold his holdings for small sums, the Burning Moscow going for only forty dollars. He left Nevada in 1862 and seems to have followed the life of a prospector and road-builder in eastern Oregon, Idaho, and Montana. He accompanied the Big Horn expedition in 1870 and in the same year testified as a witness for the Ophir Company in a law suit in Nevada. For this latter service he was well paid. As he was going back to Bozeman, Mont., on horseback he met his death. The report was circulated that he had committed suicide, but those who knew him best have always believed that he was murdered for the money he carried. He was buried at Bozeman, Mont.

J. E. W—r.

**CONANT, ALBAN JASPER** (Sept. 24, 1821–Feb. 3, 1915), artist, archeologist, second of the five children of Caleb and Sarah (Barnes) Conant, was born in Chelsea, Vt. His ancestor, Roger Conant, came over from England in 1623, and became an important functionary in the government of colonial Massachusetts. As a child, Alban helped his father both on his farm and—at sign painting—in his trade as carpenter. Later, by teaching in a country school he accumulated a little money and "attended a first-class institution in St. Lawrence County, where he took
Conant

an eclectic course" (Barns, p. 704). He was given to writing poems and drawing little sketches, and in June 1844, fired by the talk of a rusticating landscape artist, he went down to New York. Then, having studied art for about a year, he went to Troy, N.Y., in order to practise it and teach it to others—or, if the client preferred, to teach either vocal or instrumental music. In 1845 he was married to Sarah M. Howes of Chelsea, Vt., and in 1857, he and his wife, having gone West for the benefit of her health, determined to settle in St. Louis. He found plenty of work to do, and a rising interest in art which needed only some one like himself as a leader. Largely through his influence the Western Academy of Art was established in 1860. Aside from acting as a promoter of such interests, he made himself valuable in Missouri as a curator of the state university, especially in connection with its courses in agriculture and mining. During the Civil War, largely in Springfield and Washington, he did several portraits of distinguished people—Lincoln, Stanton, and, perhaps at this time also, Henry Ward Beecher. His wife died in 1867, and in 1869 he married Brianna Constance Bryan of San Francisco. He was for many years interested in archaeology. In 1876 he published The Archaeology of Missouri, and in 1879 Footprints of Vanished Races in the Mississippi Valley, carefully written essays which, in spite of his lack of scientific training, have yet a value as among the first investigations along these lines undertaken in America. At the time of their publication they were widely read and even translated in Europe. In 1893 he contributed to a sort of "album," Liber Scriptorum, a reminiscent but not especially unique section called "My Acquaintance with Abraham Lincoln." Toward 1885 he transferred his residence to New York, where he lived for the remainder of his life. His last picture, "The First Gun at Fort Sumter," was completed in 1910. In religious matters he was a devout Baptist, but so "catholic" withal, says an old account, "so much of a Presbyterian, so much of a Methodist, and so much of a Christian [i.e. Campbellite], that all good Christians recognize his brotherhood and bid him Godspeed" (Barns, p. 706).

J.D.W.

CONANT, CHARLES ARTHUR (July 2, 1861-July 5, 1915), journalist, author, economic adviser, was born in Winchester, Mass., son of Charles E. and Marion (Wallace) Conant, and direct descendant in the ninth generation of Roger Conant, acting governor of the Massachusetts Bay Colony, 1632. Educated in the public schools and by private study, he early entered journalism on the Boston Post and from 1889 to 1901 was Washington correspondent of the New York Journal of Commerce, Springfield Republican, and other newspapers, specializing in finance and banking. He was also early interested in politics and in 1893 was the Democratic candidate in his district for Congress and in 1896 delegate to the Gold Democratic Convention. Throughout his journalistic career he was an earnest advocate of "sound currency" and in opposition to the silver wing of his party. He enjoyed the acquaintanceship and confidence of treasury officials and international bankers and was recognized as an expert on topics relating to banking and currency, and a staunch upholder of the gold standard. In 1901 he was selected by Elihu Root, secretary of war, and appointed by President McKinley to investigate and report upon the monetary system of the Philippines, recently acquired from Spain. His recommendations were adopted by Congress and the system so established is still in effect. The new silver pesos of the Philippines were long called "Conants," and at one time the paper currency issued carried his vignette. His interest in the Islands was further seen in his service on the Board of Directors of the Manila Railway, and a journey in financial diplomacy brought him into relations with the Vatican and a personal interview with Pope Pius X with reference to compensation for the friars' lands in the Philippines. From 1902 to 1906 he served as treasurer of the Morton Trust Company, New York, but he was constantly being called upon for service in public affairs. In 1903 he went to Mexico as an adviser in changing the monetary system from a silver to a gold basis. In the same year he was made member of the Commission on International Exchange which was constituted, at the request of the governments of Mexico and China, for the cooperation of the United States in an effort to bring about a fixed relationship between the moneys of the gold-standard and silver-standard countries. The report of this Commission was published as House Document No. 144, 58 Cong., 2 Sess. Three years later, in 1906, he was chosen a member of the special committee of the Chamber of Commerce of New York on currency reform which made a report advocating the establishment of a central bank. His active interest in sound monetary practise was again shown when he was an official delegate of the United States to the International Conference on Bills of Exchange held at The Hague
Conant

in 1910 and 1912. His report of the conference of 1910 was published as *House Document No. 768, 61 Cong., 3 Sess.* In 1911-12 he assisted Nicaragua in reforming its currency, and a similar service for the Republic of Cuba occupied his energy for several months before his death.

For many years he was editor of the department devoted to foreign banking and finance of the *Bankers Magazine*, and in addition to a continuous flow of articles in magazines and proceedings of conventions and associations, he wrote *A History of Modern Banks of Issue* (1896), one of the earliest histories in this field, which passed through five editions; *The United States in the Orient* (1900); *The Nature of the Economic Problem* (1900); *Alexander Hamilton* (1901); *Wall Street and the Country* (1904); *Principles of Money and Banking* (2 vols., 1905), translated into French by Dr. Georges-Levy; *Banking System of Mexico* (1910), published by the National Monetary Commission; *National Bank of Belgium* (1910), also published by the National Monetary Commission. Conant was unmarried. He had a strong personality, was modest, very diligent in application to his duties, enterprising, a devoted public spirit, and witty. His independence was shown in bolting the Democratic Bryan ticket in 1896. Besides membership in numerous societies in the United States he was a member of the Société d’Économie Politique de France. He died in Havana, and was buried at Winchester, Mass.

[Published data are found in *Who’s Who in America*, 1903-05, in the obituaries in *Jour. of Commerce* (N.Y.), and *N. Y. Times*, July 7, 1915; *Bankers Mag.*, Sept. 1915; and in F. O. Conant, *Hist. and Geneal. of the Conant Family* (1887). The date of Conant’s death is given variously as July 4, 5, and 6.]

D.R.D.

**CONANT, HANNAH O’BRIEN CHAPLIN** (Sept. 5, 1809-Feb. 18, 1865), writer, translator, was the eldest daughter of the Rev. Jeremiah Chaplin, D.D., first president of Waterville (now Colby) College, Waterville, Me., and his wife, Marcia S. O’Brien. She was born in Danvers, Mass., where her father was pastor of the Baptist church before his removal to Waterville. On July 12, 1830 she was married in Waterville to Rev. Thomas Jefferson Conant [q.v.]. Her education was obtained in the public schools and through private study with her father, under whose tuition she became a proficient scholar in the oriental languages. After her marriage she assisted her husband in his work, besides doing a vast amount of writing for the papers and periodicals. In 1839, while the family was living at Hamilton, N. Y., she became editor of the *Mother’s Monthly Journal* of Utica, which she continued for practically the remainder of her life. She was the author of *The Earnest Man; a Sketch of the Character and Labors of Dr. A. Judson*, the First Missionary to Bumnah (1855) and *The English Bible; a Popular History of the Translation of the Holy Scriptures into the English Tongue* (1856). In addition, she translated a number of works from the German, the more important of which are: *Lea; or, The Baptist in Jordan* (1844), by G. F. A. Strauss; *The Epistle of Paul to the Philippians Practically Explained* (1851), by A. Neander; *The First Epistle of John Practically Explained* (1852), by A. Neander; *Erna, the Forest Princess; or Pilgrimage of the Three Wise Men to Bethlehem* (1855), by G. Nieritz; *The New England Theocracy; a History of the Congregationalists in New England to the Revivals of 1740* (1859), by F. H. Uhden. Mrs. Conant was a woman of strong intellectual powers and a well-trained classical scholar who used the French and German languages with almost the familiarity of a native. In matters of art she had wide knowledge, sound judgment, and excellent taste. She was a lover of nature and had a deep sense of the moral meanings of the natural world. But she was modest and sensitive and made no display of her learning. She had a great capacity for friendship and the family home in Brooklyn was the center of a choice social circle. In spite of her scholarly occupations, she was a woman of domestic tastes, and was the mother of ten children.

[Materials for the life of Mrs. Conant are in part the same as those for her husband. The best bibliography of her writings is found in *Allibone’s Dictionary of Authors*, suppl. vol. I (1891). Articles on her life and character are found in the *Watchman* (Boston), Mar. 2, 9, 1865. In the latter number is an excellent and informing tribute by Henry Ward Beecher. There is also an article in the *Examiner* (N. Y.), Feb. 23, 1865.]

F. T. P.

**CONANT, HEZEKIAH** (July 28, 1827-Jan. 22, 1902), inventor, manufacturer, was the son of Hervey and Dolly (Healy) Conant and was born on his father’s farm in Dudley, Mass. He was descended from Roger Conant who came to America in 1623, founded Salem, Mass., and was the first governor of that colony. Up to the age of seventeen Conant’s life was divided between school and farm work. He left his home in 1844, went to Worcester, Mass., and entered a newspaper office where in the course of the succeeding two years he learned the printer’s trade. Finding this not entirely to his liking, Conant next entered a machine-shop in Worcester and in two years learned the machinist’s trade. He had saved a little money during this time and with his savings reentered his former school, Nichols
Conant

Academy, for a year's additional study. He then returned to the machine-shop and devoted his evenings to the study of mechanical engineering, acquiring by the time he was twenty-five a local reputation as a professional mechanical expert. On Aug. 24, 1852, he took out his first patent, a pair of "lasting pinchers" for the use of shoemakers. Following this he became a journeyman machinist, working in shops in Boston and Worcester, and finally, about 1855, in Hartford, where he entered the Colt Firearm manufactory. Here he assisted Christian Sharp, the rifle inventor, and devised an improvement in projectile molds. The following year Conant invented and patented the "gas check" for breech-loading firearms which was immediately adopted by the United States and British governments. That same year, too, he devised a machine for Samuel Slater & Sons for sewing the selvage on doe-skins. In 1857 Conant became interested in thread manufacturing, devising and patenting in 1856-60 one machine for dressing sewing-thread and another automatic machine for winding thread on spools. Within two months after securing these patents, about Feb. 1, 1860, he succeeded in selling a half-interest to the Willimantic Linen Company in Willimantic, Conn., which concern engaged him as its mechanical expert. Here he remained nine years, in the course of which time he instituted many improvements in the plant of his company and went abroad to study thread-manufacturing methods, especially in England and Scotland. In 1868 he moved to Pawtucket, R. I., and organized the Conant Thread Company. Less than a year later he succeeded in effecting a combination with the leading thread manufacturers of Europe, the J. & P. Coats Company of Paisley, Scotland, by which that firm became a partner in his Pawtucket enterprise. With the additional capital thus made available, Conant's plant was immediately enlarged to manufacture the Coats thread, and between 1870 and 1881 five additional mill buildings were erected. Until 1893 the establishment was known as the Conant Thread Company, but thereafter it was operated as one of the branches of the J. & P. Coats Company, Ltd. At the time of Conant's death the works covered forty acres, employed 2,400 persons, and represented a capital investment of close to $5,000,000. While much of the machinery in the plant was of English manufacture, Conant devised many improvements, some of which he patented. He was largely interested in a variety of Rhode Island enterprises, being a prominent director of industries allied to his as well as of banks. He was married three times: first, on Oct. 4, 1853, to Sarah Williams Learned; second, in November 1859, to Harriet Knight Learned, to whom were born a son and daughter; and third, on Dec. 6, 1865, to Mary Eaton Knight. He was survived by his widow and two children and was buried in Dudley, Mass.

C.W.M.

CONANT, ROGER (c. 1592–Nov. 19, 1679), early settler of New England, was the youngest of the eight children of Richard and Agnes (Clarke) Conant of East Budleigh, Devonshire, England. He was baptized on Apr. 9, 1592 in All Saints' Church in East Budleigh. The family seems to have been of the lower middle class, in fairly comfortable circumstances. Roger appears to have gone to London when about eighteen years old, and there he became a salter. On Nov. 11, 1618 he married a certain Sarah Horton of whose family nothing has been ascertained. By her he had at least nine children, the youngest being named Exercise. In 1623 he emigrated to Massachusetts with his wife and his son Caleb, the latter subsequently returning to England and dying there. It is probable that they sailed for America on the Ann, which carried Roger's brother Christopher and which arrived at Plymouth Colony, with John Oldham, as "particulars," that is as independent of the "common stock" system of the first settlers. Before long, there was trouble between some of the newcomers and the original group. Oldham and Lyford were ordered out of the community, and Conant soon followed voluntarily. In religion he was not a Separatist but merely a Non-Conformist and he seems not to have been altogether happy with the Pilgrims. In 1624 he settled at Nantasket and it was probably while there that he used the island in Boston Harbor which long bore his name. Becoming acquainted with the Rev. John White and other members of the Dorchester Company who had been trying to establish a settlement on Cape Ann, late in the autumn of 1625, at their request, he removed to their fishing settlement as manager or governor. He did not like the location and in the next autumn about forty of the settlers joined him in settling at Naumkeag (Salem). Conant continued as governor. In 1627 the colonists sent an agent to England to solicit a patent. It was obtained, however, in March 1628, by an English group with more ambitious ideas, and John Endicott [q.v.] came over with about fifty settlers, superseding Conant as governor. There was much ill-feeling at first but Conant submitted and became a loyal member.
of the new organization. In 1634 he was elected to represent Salem in the General Court. Two years later he moved to Beverly. He acquired a moderate amount of land, tried various adventures, such as trading with the Indians, and besides being for a while justice of the quarter court, occupied many minor public offices, indicative of the deserved confidence and esteem of his neighbors. He was an honest, conscientious man who did useful work in the seedling days of the colony, and his self-control when Endicott arrived saved the colony from what might have been a ruinous struggle.

J. T. A.

**CONANT, THOMAS JEFFERSON** (Dec. 13, 1802—Apr. 30, 1891), philologist, translator of the Bible, was descended from Roger Conant who came to Massachusetts in 1623 and became one of the founders of Salem. A descendant of the sixth generation was John, a Vermont pioneer and leading citizen of Brandon, whose wife was Charity Waite Broughton. Their son Thomas Jefferson was born in Brandon, educated at Brandon Academy and graduated at Middlebury College in 1823. After two years spent in the study of philosophy with Prof. R. B. Patton in New York, he became tutor in the classics at Columbian College, Washington, D. C. From 1827 to 1833 he was professor of languages at Colby College, Waterville, Me. He spent the period 1833-35 in the neighborhood of Boston engaged in the study of Hebrew and other oriental languages, and it was during this period (May 1834) that he was ordained to the Baptist ministry. From 1835 to 1841 he was professor of Hebrew and Biblical Criticism at the Hamilton Literary and Theological Institution at Hamilton, N. Y. During this period (1841-42) he spent more than a year in Europe investigating methods of university teaching and in philological study. From 1850 to 1857 he was professor of Biblical Literature and Criticism at Rochester Theological Seminary. In the latter year he moved to Brooklyn, N. Y., where he resided till his death. Here he engaged in the revision of the English Bible for the American Bible Union. In 1873 he was chosen a member of the American Revision Committee, cooperating with the Old Testament Company of the Convocation of Canterbury, which produced the Revised Version of 1881. His first elaborate production, The Laws of Translation, was the keynote of his whole career. His translation of Roediger's edition of the Hebrew Grammar of Gesenius first appeared in 1839, and, enlarged and revised in subsequent editions, became for many years the standard in Europe and America. His great work was the translation of the Bible, upon which all his scholarly energies were spent. As an interpreter of the text in pure, simple, and forceful English, he has no equal. In addition to those mentioned, his principal works are as follows: The Book of Job (1857); The Gospel of Matthew (1860); The Entire New Testament (1867); The Book of Genesis (1868); The Book of Psalms (1868); The Book of Proverbs (1872); The First Thirteen Chapters of Isaiah (1874); The Historical Books of the Old Testament, Joshua to II Kings (1884). He was a thorough and inspiring teacher, a man of unaffected piety, genial, tender and affectionate in his family circle, and loyal to his friends. On July 12, 1830 he married Hannah O'Brien, eldest daughter of Rev. Jeremiah Chaplin, D.D. [q.v.], first president of Waterville (now Colby) College, Waterville, Me.

[Material for the life of Conant is found in the Catalogue of the Officers and Students of Middlebury College 1800-1900 (1901); Laureo (Middlebury College, 1900), containing portrait; Watchman (N. Y.), May 7, 1891; F. O. Conant, Hist. and Genealogy of the Conant Family (1887).]

F. T. P.

**CONATY, THOMAS JAMES** (Aug. 1, 1847—Sept. 18, 1915), Roman Catholic prelate and educator, the son of Patrick Conaty and Alice (Lynch) Conaty, was born in Kilnalec, Ireland, the eldest of eight children. When he was three years of age his family emigrated to the United States and settled in Taunton, Mass. He attended the public schools there and entered Montreal College in 1863 where his high-school education was completed. He qualified as a student of Holy Cross College, Worcester, in 1866 and was graduated in 1869. He made his theological studies immediately thereafter in the Sulpician Seminary of Montreal and was ordained to the priesthood for the diocese of Springfield in 1872. After seven years of service in the ministry he was appointed pastor of the Sacred Heart parish of Worcester where he served until 1897. During this period he displayed an active interest in civic as well as ecclesiastical life. His gifts as an orator attracted wide attention. He became a leader in his community and exerted far-reaching influence in movements that dealt with educational, moral, and social problems. He was particularly active in the work of total abstinence and was president of the Catholic Total Abstinence Union of America from 1888 to 1890. He was an ardent supporter of constitutional efforts for the freedom of Ireland. Conaty served on the Board of Education of Worcester for fourteen years.
Conboy

and on its Library Board for six years. He was one of the founders and president, 1893-97, of the Catholic Summer School of America established originally at New London, Conn., and later permanently located at Cliff Haven, N. Y. He was active in founding the association of Catholic colleges later known as the National Catholic Education Association, and was its president, 1899-1903. He established in 1892 and edited until 1897, the Catholic Home and School Magazine and he published a volume, New Testament Studies (1898), for secondary schools. Appointed Rector of the Catholic University of Washington in 1897, Conaty was made Domestic Prelate in 1898 and was consecrated Titular Bishop of Samos by Cardinal Gibbons in 1901. At the expiration of his term as Rector of the Catholic University he was appointed to the See of Monterey and Los Angeles. During his twelve years as Bishop there, Los Angeles developed with great rapidity. The traditions of broadmindedness and civic activity which had characterized Conaty’s earlier life were continued with notable effect throughout the entire period of his incumbency of the See of Monterey and Los Angeles. At the same time he multiplied parishes, developed Catholic secondary schools, created a Catholic Teachers’ Institute, and multiplied agencies of social service in keeping with the rapid growth of the city. In addition to these local activities, Conaty took particular interest in the preservation of the Old Missions and other historical Catholic landmarks of California. He personally aided much in the restoration work to which popular interest led, and cooperated heartily with other agencies in the state that aimed to develop an interest in its history and its monuments of Christian civilization. His death called forth notable tributes to his character and his work from all sides.

W. J. K.

CONBOY, SARA AGNES MCLAUGHLIN (Apr. 3, 1870—Jan. 7, 1928), the first woman to be admitted to the inner councils of the American labor movement, was born in Boston, Mass., to Michael and Sara (Mellyn) McLaughlin. At the age of eleven she went to work in a candy factory to help her widowed mother support her smaller brothers and sisters. There for sixty hours of work a week she received $2.50. Thence she went into a button factory where wages were slightly higher and work steadier, and, after that, into a carpet mill. As a highly skilled weaver she eventually received eighteen dollars for a sixty-hour week that might, as the law then stood, call for night as well as day work. She was in the mill when she married Joseph P. Conboy, a Boston letter carrier. Within two years she was a widow, working at a loom in a Roxbury mill to support herself and her infant daughter. Shortly thereafter under her leadership the poorly-organized operatives struck for recognition of the United Textile Workers and higher wages. The strike was bitterly fought, but ended in victory for the strikers and Mrs. Conboy was started on what was to win for her international recognition as a labor leader and a proponent of legislation to protect child life and women in industry. Following the strike she became first an organizer of the United Textile Workers and later secretary-treasurer. In the latter capacity most of her time was spent raising money for an organization usually in need of funds. Just how much she raised herself could not tell, but it is no exaggeration to say that the total was well in excess of $1,000,000. Between times she pleaded with legislators, and more than any other woman was responsible for legislation limiting the hours of labor for women and prohibiting their employment at night. To the American Federation of Labor, in whose conventions she was a prominent figure for more than twenty years, Mrs. Conboy brought the view-point of the woman. In it she early gained the confidence of men like Samuel Gompers, John Mitchell, and James Duncan [qq.v.], who depended much upon her judgment. From her there were no secrets. In token of its appreciation of her service the Federation in 1920 gave her the highest honor ever extended a woman—that of delegate to the British Trades Union Congress—an honor for which heads of the most powerful unions contest year in and year out. At the beginning of her career as a labor leader Mrs. Conboy was in her early thirties, a trim, upstanding, blue-eyed woman, full of energy and enthusiasm. With the years came weight and gray hair, but to the end she was handsome. With the years also came polish and a knowledge of practical economics of which many a university man might be proud. “Aunt Sara,” as she was affectionately termed by men years older than she, was always essentially feminine, soft-voiced, and smiling. Perhaps it was as a conciliator of warring groups of hard-fisted and harder-headed men that she was of greatest value to organized labor.

[Who’s Who in America, 1926-27; World (N. Y.), Jan. 8, Brooklyn Eagle, N. Y. Times, Jan. 9, 1928.]

J. J. L.

CONDIT, JOHN (July 8, 1755—May 4, 1834), surgeon, congressman, was descended from one John Condit, Condict, Conduit, or Cunditt, who
left Wales and came, about 1678, to Newark, N. J., where later he bought land from the Lawrences on the Mill Brook Plain. His descendants were active in New Jersey politics, jail reform, medicine, and constitution-making. One of them, Samuel, married in 1754 Mary, daughter of Joseph Smith of Orange, N. J., and became the father of John Condit, born in 1755. Educated in local schools, he studied medicine privately with Dr. Jonathan Dayton of Springfield. On June 29, 1776, the New Jersey Provincial Congress "Ordered That Dr. John Condit be Surgeon" in Van Cortlandt's regiment of Heard's Brigade (American Archives, 4 Ser., VI, 1633). He soon resigned, having married Abigail, daughter of Joseph Halsey, by whom he had four sons and one daughter. She died in 1784 and in 1785 he wed her sister Rhoda, by whom he had two sons and one daughter. Being of "sterling integrity and of amiable disposition, fearless, energetic and thorough in everything he undertook" (Shaw, post, I, 304), he attained "a large success as a physician" (Wickes, post), though he did not join his fellow practitioners in the New Jersey Medical Society until 1830, when he was made an honorary member. He was also something of a sportsman, raised fine horses and "was perpetually on the road" (Ibid.). In 1785 he was influential in founding the Orange Academy of which he became a trustee. Condit entered politics after the Revolution, serving as assemblyman in the New Jersey legislature 1788-89, as Council member 1790-98, in the United States House of Representatives 1799-1803, in the United States Senate 1803-17, and in the House again, 1819-20. Few men have served twenty years in Congress so inconspicuously, the normal entry being, "Mr. John Condit of New Jersey appeared and took his seat." His politics were consistently anti-Federalist and Republican (Democratic), favoring strict administration and less government but opposed to popular excitement or mob rule in affairs of state. Nevertheless, in opposition to the stand of his party, in 1811 he favored the re-charter of the United States Bank. In the New Jersey legislature Condit usually came late to sessions but served on road and boundary committees and had charge (1791-95) of counting and burning cancelled loan-office certificates and old State money in the treasury. His twenty-four line report (Nov. 2, 1795) on "the prerogative and secretary's office" (Journal of the New Jersey Council, 1794-99, 1st and 2nd sitting of 20th session, p. 7) shows the quality of the man and the quiet methods of work which inspired such long confidence. A typical eighteenth-century legislator he outlived his age. Public service having broken up his practise, he was appointed assistant collector of the port of New York, in Jersey City, but was removed from office in 1830 because of his criticism of President Jackson's financial policies. Long a skeptic, he "cordially embraced the truths of the Gospel" as paralysis ended his days in peace.

Jotham H. and Eben Condit, Geneal. Record of the Condit Family (rev. ed. 1916); Wm. Shaw, Hist. of Essex and Hudson Counties, N. J. (1884), I, 504; Stephen Wickes, Hist. of Medicine in N. J. and of its Medics. Men from the Settlement of the Province to A. D. 1800 (1879); David L. Pierson, Hist. of the Oranges to 1921 (1922), II, 112, 249, 284 f.] W. L. W.

**CONDON, THOMAS** (Mar. 3, 1822-Feb. 11, 1907), Congregational clergyman, geologist, was born at Ballinatana, near Fermoy, Ireland, the son of John and Mary (Roach) Condon. His father was a stone-cutter. When Thomas was eleven years old, the Condons emigrated to the United States, settling first in New York City and later on a farm in Michigan. At one time the boy worked for a florist whose gardens occupied the present site of the New York Public Library. Later he attended Cazenovia Seminary, taught school at Camillus and at Skaneateles, made a collection of paleozoic fossils, and in 1849 entered Auburn Theological Seminary. He helped support himself in Auburn by teaching inmates of the state penitentiary. Owing to his Irish origin he was unable to secure a call to a congregation. Upon his graduation in 1852 he offered himself therefore to the Home Mission Board of the Congregational Church and was assigned to Oregon Territory. On Oct. 31, 1852, he married Cornelia J. Holt of Colden, Erie County, and that same autumn he and his bride sailed from New York on the clipper Trade Wind. In spite of storms and a fire in the hold the Trade Wind carried them safely round Cape Horn and north again to San Francisco, whence they proceeded by steamer to Portland. The rest of their lives was spent in Oregon. Condon was ordained immediately and entered on twenty years of missionary and pastoral labor: at St. Helen's 1853-54, Forest Grove 1854-57, Albany 1857-62, and The Dalles 1862-73. Gentle, earnest, simple, resourceful, friendly, he won the regard of every one, even of the gamblers and saloon-keepers of The Dalles, and his wife proved an able helper in his work. Meanwhile, however, a Bible was no more essential to his kit than a geologist's hammer. Accompanying parties of soldiers, he made excursions into the Indian country and succeeded in recording, though not with complete accuracy, the geology of a large part of eastern Oregon. He was made
Condon

professor of geology and natural history in Pacific University of Forest Grove in 1873 and in the University of Oregon at Eugene in 1876. He was a beloved and influential teacher. At first he was obliged to give instruction in a variety of subjects, but as the University grew he was able to devote himself more and more to his favorite subject of paleontology. His first important discovery was made in 1867, when a well-digger brought him a fossil bone which he recognized as the distal end of the humerus of a horse; his last was in 1906, when he found a fossil sea-lion which he named desmatophoca oreoncus. He was the first paleontologist to explore the rich fossil-bearing formations of the John Day Valley. To railroad builders, landowners, the state legislature, and visiting geologists he gave freely of his time and knowledge, never expecting compensation and seldom getting it. Several well-known scientists imported him for fossils, failed to return specimens that had been entrusted to them as loans, and even neglected in their publications to give him proper credit for his discoveries. Condon, on the other hand, was unfailingly generous to them and either ignored or never noticed their attempt to deprive him of his due. Apparently he found it an effort to write: he contributed a few articles to the Overland Monthly and to the Portland Morning Oregonian, as state geologist presented a Preliminary Report to the Legislative Assembly (Salem, 1874), and gathered these few writings into his one book, The Two Islands and What Came of Them (Portland, 1902; revised as Oregon Geology, 1910). In him the scientist, the teacher, and the lover of men were blended. What he learned through patient and minute study of the rocks, he taught with an enthusiasm and sweep of general knowledge that kindled the minds of his students. But the wider public, he believed, also had claims upon him. He delivered lectures up and down the coast, in which the new scientific knowledge centering in the doctrine of evolution was winningly presented to audiences that dreaded the effect of such theories upon established beliefs. More than any other man, he was to the Pacific Northwest the interpreter of the fruits of Darwinism and the conservator of the best in revealed religion. In his later years he was venerated as one of the grand old men of the state. His wife died in September 1901; in 1905 he was made professor emeritus; he died two years later at the home of his daughter. Condon Butte, in Lane County, is named for him.

CONE, MOSES HERMAN (June 29, 1857-Dec. 8, 1908), merchant, manufacturer, was the son of Herman Cone, who was born in 1828 at Altenstadt-on-the-Ille, Bavaria, and came to America as a youth, settling at Richmond, Va. Here he married Helen Guggenheimer, who as a child had come with her parents from Huerben, Württemburg, and settled near Natural Bridge, Va., where her father was a merchant. Herman Cone later engaged in the retail general merchandise business at Jonesboro, Tenn., where his son Moses, eldest of thirteen children, was born. Herman Cone moved to Baltimore in 1870 and, after two partnerships in the wholesale grocery business, he bought a business of his own and associated his four oldest sons with him in the firm of H. Cone & Sons. Moses, who had attended the public schools of Baltimore, entered his father's business at an auspicious time for his later career. Baltimore then enjoyed the bulk of the Southern wholesale trade, and the South was on the eve of the industrial development which has since become conspicuous. Among the customers of H. Cone & Sons were many Southern cotton-mills which maintained mill villages and company-owned stores for trade with the operatives. The connection between the Cones in Baltimore and the Southern cotton-factories began in the incidental acceptance of bale goods by the wholesale grocers in payment of accounts of mill stores. Gradually mills came to ask the Baltimore firm to sell their product through the South on commission, and this increased the intimacy of Moses Cone with the cotton manufactures of the section. He was struck with the lack of standardization and the difficulties attending the marketing of "negro plaid," a favorite product of the Southern mills. He spent the year 1890—a year of marked depression in the cotton-goods trade—in the first significant attempt to combine Southern mills in a selling organization intended to control the product to the extent of making the goods more uniform and improving the styles. The Cone Export & Commission Company was consequently formed in 1891, establishing its office in New York City. After much organizing work and many disappointments on the part of
Moses Cone, about forty mills in the Carolinas and Georgia and other Southern states joined the venture. The wholesale grocery firm in Baltimore was dissolved, Herman Cone joining his sons in the new undertaking. The selling agency did not succeed in the completeness with which it was planned, but the Cones soon began to acquire interests in Southern cotton-mills, the first being at Asheville, N. C. In 1863 the main office of the Cone Export & Commission Company was established at Greensboro, N. C., and two years later Moses Cone, particularly in association with his brother Cesar, began the erection of denim-mills on a large tract on the edge of the town. These are now the largest denim-plants in the world. The company has been conspicuous for the extent and completeness of its welfare work in the villages established for its operatives. Cone married Bertha M. Lindau of Baltimore in 1888. In 1901 he acquired an estate of 3,750 acres at Blowing Rock, N. C., and was one of the pioneers in the western part of the state in the growing of apples on a large scale.

CONE, ORELLO (Nov. 16, 1835–June 23, 1905), New Testament scholar, author, was born in Lincklaen, Chenango County, N. Y. His parents, Daniel Newton and Emily (Sadd) Cone, early recognized that he was a natural student, and sent him for his schooling to the academy at New Woodstock, and later to Cazenovia Seminary in Madison County. His intellectual appetite thus whetted, young Cone undertook to pursue college studies by himself, while teaching in private schools. Later he was enabled to supplement this study by a partial course at St. Paul's College at Palmyra, Mo. In this institution he was also for three years (1858–61) an instructor. After further study he entered in 1864 the Universalist ministry and became pastor of the Universalist Church of Little Falls, N. Y. While serving here, he met and married (Oct. 4, 1864) Marianne Pepper, daughter of Luke Pepper, one of his parishioners. In 1865 he became professor of Biblical Languages and Literature in the Theological School of St. Lawrence University, Canton, N. Y. This appointment determined his career. In this new and agreeable relation he soon established within his own denomination a reputation for accurate and critical scholarship. For many years no volume of the Universalist Quarterly appeared that did not contain one or more articles from his pen. Within his own communion Cone was considered as belonging to the progressive wing. He edited a volume entitled Essays Doctrinal and Practical by Fifteen Clergymen (1880) which was supposed to present the views of the more liberal scholars of his church. Higher Criticism was far from popular, even in a so-called liberal communion. He was frequently assailed as a "destructive" critic but he refused to be involved in controversy or to be deterred from his studies and research. In 1880 he became the president of Buchtel College, Akron, Ohio (now the Municipal University of Akron). Here he remained until 1897, as president and professor of philosophical subjects. His heart, however, was still with his New Testament studies. While at Buchtel he commenced bringing out the series of books that gave him a reputation, internationally, as a thorough scholar and critic of rare acumen. His first work in this field, Gospel Criticism and Historical Christianity (1891), was dedicated "To the believers who fear criticism and to the unbelievers who appeal to it." This was repeatedly declared by competent scholars to be the ablest work in its field that had, up to that time, appeared on this side of the Atlantic. It was followed by The Gospel and its Earliest Interpretations (1893). During 1897–98 Cone pursued his studies in Berlin, Paris, and London. While in London he published his chief work, Paul, the Man, the Missionary, and the Teacher (1898). This was pronounced by Dr. H. J. Holtzmann of Strasburg, himself a foremost New Testament scholar, to be the ablest monograph on Paul and his teaching that had ever appeared in any language—an unusual encomium.

After a brief pastorate at the Unitarian Church of Lawrence, Kan. (1898–99), he returned in 1900 to the Theological School of St. Lawrence University as Richardson Professor of Biblical Theology. During the remaining six years of his life he published Rich and Poor in the New Testament (1902), was editor of the International Handbooks of the New Testament, and himself contributed one volume to the series (Epistles to the Hebrews, Colossians, Ephesians and Philemon, 1901). He also collected and translated, in part, essays by his friend Dr. Otto Pfleiderer of the University of Berlin and published them under the title Evolution and Theology and Other Essays (1900). He was a constant contributor to various periodicals. In conjunction with progressive scholars in this country, he helped in 1892 to launch
Cone

a religious quarterly called The New World and was one of its editors. During the seven years of existence of this journal, he wrote frequently for its pages. In 1902 he was a professor at the Harvard Summer School of Theology. Cone was a man of dignified bearing and urbane manners. "He loved the quiet and serious tasks of learning," and was not so much a teacher as a remarkable scholar and a keen, discriminating critic. At home in many languages, especially the German, he was "a theologian of wide reading and rational conviction" (Forbes, post).

(Forbes, post)"

CONE, SPENCER Houghton (Apr. 30, 1785-Aug. 28, 1855), Baptist clergyman, noted as a preacher, and long a leader in his denomination, was born in Princeton, N. J., a descendant of Daniel Cone who settled in Haddam, Conn., in 1662, and son of Conant and Alice (Houghton) Cone. As a boy he displayed a liking for poetry and could recite long passages from Shakespeare, Milton, and Dryden. At Princeton, which he entered when he was twelve, President Smith told him his voice would be his fortune. After he had been two years in college, his father, a Revolutionary soldier, respectable but improvident, found himself reduced to poverty and went mad. As the eldest son young Spencer undertook to support the family by teaching, finally becoming assistant to Dr. James Abercrombie at his academy in Philadelphia. He also studied law, but his eloquency finally led him to go upon the stage, and he made his début at the Chestnut Street Theatre as Achmet in the tragedy of Mahomet. During the next seven years, he played regularly in Philadelphia, Baltimore, and Alexandria, where he enjoyed considerable popularity. In 1812 he turned to journalism, first entering the office of the Baltimore American as treasurer and bookkeeper, and later joining with his brother-in-law, John Norvell, in conducting the Baltimore Whig. In this capacity he was a vigorous supporter of President Madison's administration and the War of 1812. He also served under arms, being with Pinckney's rifle in the battle of Bladensburg, and acting captain of the company by whose fire Gen. Ross was killed in the advance upon Baltimore.

The end of the war found him with a wife, Sally, daughter of Robert and Mary Price Morrell of Philadelphia, whom he had married May 10, 1813, and in financial difficulties. Friends secured him a position in the Treasury Department, Washington. A lively interest in religion had taken possession of him in 1814, when he had been converted to the Baptist faith, and immersed in the Patapsco River through a hole cut in the ice. He began to preach in a small Baptist church at the Navy Yard, and soon attracted such attention that in 1815 he was licensed and made chaplain of Congress. In 1816 he became pastor of the Baptist Church in Alexandria, where in spite of calls to much larger places he remained seven years. From 1823 to 1841 he was associated with the Oliver Street Church, New York, first as co-pastor and later as pastor, and from 1841 till his death, was pastor of the First Baptist Church of that city. Besides being popular and effective as a preacher, he took a leading part in the administrative work of his denomination. From 1832 to 1841 he was president of the Baptist General Convention, a representative body which shaped the denominational activities at home and abroad. He was prominent among those who in 1836 protested against the action of the American Bible Society in refusing a grant for the publication of the Bengali New Testament, which translated baptizo according to Baptist usage, from which action resulted the American and Foreign Bible Society of which he was a founder, and the head from 1837 to 1859, when he became president of the American Bible Union. In 1824 he brought out an edition of William Jones's The History of the Christian Church. He published The Backslider (1827); and was joint author with William H. Wyckoff of The Bible Translated (1850); The Bible, Its Excellence, and The New Testament... According to the Commonly Received Version... with Several Hundred Emendations (1850).

(Coney, post)"

CONEY, Jabez (Oct. 21, 1804-Jan. 23, 1872), millwright and engineer, was born in Dedham, Mass. One of the sixth generation of Coney's descended from John Coney of Boston, Lincolnshire, who settled in Boston, Mass., prior to 1628, he was the second of eight children of Jabez and Irene (Gay) Coney. His father was a carpenter and builder ("housewright") and the boy not only came to be an expert in his father's trade but a machinist as well. He commenced business on his own account in Dedham at an early age and before he was twenty-

342
Coney

one had established a high reputation as a millwright. Later he removed his shop to South Boston where he set up as a machinist, developed a large business, and performed heavy contracts for his day. The two largest contracts of his concern were the building for the United States government of the iron steamer McLean in 1843 and five years later the machinery for the warship Saranac, the first vessel to which the navy applied steam. He is believed to have constructed the first iron vessel ever built in New England, the first large marine engine, and the first gravel excavator. Overwork brought a physical collapse and a paralytic stroke in 1850, which forced him to suspend his business at the height of its prosperity. Although confined to his house as a cripple for twenty-two years, he established a school for mechanics where he fitted many for the navy and for other positions. Harrison Loring, who built up a foundry for marine engines and iron ships after Coney’s retirement, had served his apprenticeship in Coney’s shop. In 1847 and 1850 Coney represented Ward 10 (South Boston) in the Boston City Council. His wife was Mary Whiting (July 4, 1807–Feb. 20, 1847), whom he married Oct. 25, 1827, and by whom he had three children.

H. U. F.

CONEY, JOHN (Jan. 5, 1655–Aug. 20, 1722), silversmith, was the first child of John Coney [sic] and Elizabeth Nash, the daughter of the butcher Robert Nash, who were married on June 20, 1654, in Boston. It is thought that John Coney learned his trade from Jeremiah Dummer [q.v.], whose wife’s sister, Mary Atwater, became Coney’s second wife. His first wife, Sarah, died in 1694. Coney’s silver displayed fine workmanship and his house had a number of apprentices, among them Apollos Rivoire, lately arrived from France, David Jesse, and Thomas Millner. The remaining records of his life are few. He engraved the first plates for paper money issued by Massachusetts Colony. He was a member of the Second Church of Boston. In 1677 he signed a petition with his fellow “Handycraftsmen, a very considerable part of the town of Boston,” praying trade protection in their several callings “whose outward substance doth depend on God’s blessings, and many of us not having estates any other way to advantage us.” In September 1689 he was one of the number of “Hogg-Reeves” of whom it was recorded in the proceedings of the Town Meet-
years from 1857 to 1863. At the close of his college days he published a poetical volume with the sophomoric title, *Flowers Plucked by a Traveler on the Journey of Life* (1840). During his editorial years on the Tribune, from which he resigned in 1882, he brought together a somewhat remarkable library which attracted considerable attention for its Americana when it was sold in 1891. Associates on the Tribune said that Congdon wrote from the head while Greeley wrote from the heart. On his arrival in New York he became a constant contributor to the periodicals of the day. His published articles ranged from those in *Vanity Fair*, the great humorous weekly edited by Artemus Ward, to those printed in the serious, dignified *North American Review*. A kinsman of William Cullen Bryant, he was naturally a contributor to the *Knickerbocker Magazine* then edited by Lewis Gaylord Clark [q.v.]. For many years he was the New York correspondent of the *Boston Courier* in which his contributions were signed with the *nom de plume* "Paul Potter." Possibly the most meritorious of all his poems was *The Warning of War* (1862), which he delivered before the United Societies of Dartmouth College on July 30, 1862. While engaged in newspaper work in New Bedford he married Charlotte M. Bayliss who died at the birth of their only child, Alice B. Congdon. Beloved by all newspapermen, he spent his declining years in a New York hotel near Washington Square. After his death from heart failure his body was taken to his old home, New Bedford.

Congron’s own *Reminiscences of a Journalist* (1880); obituary in the *N. Y. Tribune*, Jan. 19, 1891. Rare and unusual volumes in his library are described in the catalogue printed just before its sale (1891). See also *Hist. of New Bedford* (3 vols., 1918), ed. by Z. W. Pease; L. B. Ellis, *Hist. of New Bedford and its Vicinity* (1892); Jas. M. Hartt, *Gen. Hist. of Samuel Hartt ... and Descendants* (1903). J. M. L.

**CONGER, EDWIN HURD** (Mar. 7, 1833-May 18, 1907), soldier, congressman, diplomat, was the son of pioneering parents, born near Galesburg, Ill. Both his father, Lorentius E. Conger, and his mother, Mary Hurd Conger, were of thrifty American stock, endowed with the ambition and common sense of a long line of New York and Vermont ancestors. Having prospered at farming and banking, they sent Edwin to Lombard College, a Universalist school in Galesburg, where he graduated from the classical course in 1862. Reared as a Universalist, he never departed from that faith (*Progressive Men of Iowa*, 1899, vol. II, p. 93). As soon as he was out of college he hastened to enlist, and on Sept. 2, 1862, was mustered into the United States service as a first lieutenant of Company I, 102nd Illinois Infantry. In October 1863 he was promoted to the rank of captain and served in that capacity until the end of the war. Although he was regarded as "an intelligent officer" (*Official Records, Army, 1 ser., XXII*, pt. 1, p. 323) and marched with Sherman to the sea, the records credit him with no particularly notable military achievements (*Records in Adjutant General’s office, War Department*). Having graduated from the Albany Law School, he married Sarah Pike on June 21, 1866, and straightway opened a law office in Galesburg. Two years later he moved to Madison County, Iowa, where he operated a large stock farm and engaged in banking so successfully that he accumulated a modest fortune, most of which was lost, however, through the failure of friends and relatives whose notes he had endorsed (*Register and Leader*, Des Moines, May 19, 1907).

The same traits of character which made him successful in business—a genial disposition, honest dealing, and a knack for remembering people, together with a wide personal acquaintance—were essential factors in his political career. Beginning as a Madison County supervisor (1870-73), he afterward served two terms as treasurer of Dallas County and held the office of state treasurer for two terms. Meanwhile, in 1884, he was elected to the Forty-ninth Congress from the 7th district of Iowa, and was twice reelected (*Iowa Official Register*). Like most members of the Grand Army, he devoted much of his energy to securing pensions for old soldiers, but in the Fifty-first Congress, when the Republicans resumed control, he became chairman of the Committee of Coinage, Weights and Measures, and ranked second on the committees on agriculture and banking and currency (*Congressional Directory*, 51 Cong., 1 Sess., pp. 137, 138). As a member of the conference committee on the Silver Purchase Act of 1890 he agreed to the elimination of the free coinage provision. In harmony with his constituents he favored the suppression of trusts and advocated the taxation of "compound lard" (*Congressional Record*, 51 Cong., 1 Sess., pp. 235, 7167, 9077). On Sept. 27, 1890, Conger resigned from Congress, his appointment as minister to Brazil being that day confirmed by the Senate (*Ibid.*, pp. 10573, 10794). After three pleasant and rather eventful years at Rio, he was displaced by a deserving Democrat, but in May 1897, he was reappointed by his friend, President McKinley. Then, in less than a year, he was unexpectedly transferred to China (*Ibid.*, 55 Cong., 1 Sess., p. 1304; 2 Sess., p. 758). Arriving in Pekin in the early summer of 1898,
he observed the development of the anti-foreign feeling and, during the terrible weeks from June 20 to Aug. 14, 1900, when the Boxers besieged the legations, he conducted himself with the courage and firmness of a veteran soldier. After the uprising, as before, Conger steadfastly refused to demand concessions or aid other schemes for the exploitation of the Chinese, with the result that he won their confidence, respect, and high esteem. For a few months he served as ambassador to Mexico, but the expense of that post and his need for rest caused him to quit the diplomatic service on Oct. 18, 1905. “In zeal, efficiency and single-minded devotion to public duty,” wrote President Roosevelt, “you have been the kind of official of whom Americans have a right to feel proud, and I congratulate the country on having had your services” (Register and Leader, May 19, 1907).

The most intimate biographical sketch of Edwin Hurd Conger was printed in the Des Moines Repoter and Leader, May 19, 1907, on the occasion of his death. Letters from China (1909), written by his wife, Sarah P. Conger, presents a vivid account of his activities as minister to China. For a survey of his diplomatic career, see John E. Briggs, “Iowa and the Diplomatic Service,” Iowa Jour. of Hist. and Politics, XIX, 347–52.

J. E. B.

CONKLIN, JENNIE MARIA DRINKWATER. [See Drinkwater, Jennie Maria, 1841–1900.]

CONKLING, ALFRED (Oct. 12, 1789-Feb. 5, 1874), congressman, judge, author, was born at Amagansett, two and a half miles from Easthampton, Suffolk County, Long Island. His ancestor, John Conkling of Nottinghamshire, England, married Elizabeth Allsebrook in 1625 and ten years later emigrated to Salem, Mass., thence removing to Long Island. Here a descendant, Benjamin Conkling, married Esther Hand and Alfred was their second child. He had a normal, healthy, happy childhood with his two brothers and two sisters. The district schoolmaster is said to have exclaimed, when very angry with a culprit, “You are as bad as Alfred Conkling!” From the district school Alfred went to the village clergyman to be tutored for college. He was graduated from Union College in 1810, and after graduation entered the law office of Daniel Cady [q.v.] of Johnstown, Fulton County. Two years later he was admitted to the bar and married Eliza, the daughter of James Cockburn, a civil engineer. Of this union there were three children and four sons were born, the most noted of whom was Roscoe [q.v.]. In 1813 the Conklings removed to Canajoharie in the adjoining county of Montgomery. Five years afterward Conkling was elected district attorney for this county. It is related that as he was prosecuting a man for murder the defendant made the Masonic signal of distress. This debasing of the principles of the order so disgusted Conkling that he resigned forthwith from his lodge. Elected to Congress in 1820 as an anti-Jackson Democrat, he served but one term, after which he settled in Albany and resumed the practise of his profession. When the “Albany regency” removed DeWitt Clinton from the canal commission in 1824, Conkling wrote the vigorous resolutions denouncing this outrage which were adopted by an indignant mass-meeting. In 1825 Conkling was appointed by President Adams federal judge for the district of northern New York and discharged the duties of this office with ability and justice for twenty-seven years. His opinion in the case of Bradstreet vs. Huntington (1834) so impressed the Utica bar that sixteen members petitioned for leave to print it, which was granted. At the suggestion of William H. Seward, Conkling moved in 1839 from Albany to Auburn, where he received visits from many eminent persons, including Chancellor Kent, Ex-Presidents Adams and Van Buren, Governors Throop and Seward, and Thurlow Weed. This last described Conkling as “a tall, handsome man with graceful manners.” He varied his judicial duties with social pleasures, with addresses before colleges and literary societies, and with the composition of works on legal and political subjects. His publications include a eulogy on DeWitt Clinton (1828); The Young Citizen’s Manual (1836); Treatise on the Organization and Jurisdiction of the Supreme Circuit and District Courts of the United States (1842); Jurisdiction Law and Practise in Admiralty and Maritime Causes (1848); Powers of the Executive Department of the United States (1866). The last three were revised and republished at later dates, the Powers of the Executive going through five editions. Roscoe Conkling studied law under his father, was admitted to the bar in 1850, and argued his first case in his father’s court that same year. His brother said: “Although the Judge was a very Brutus in his utter want of partiality toward his son under the circumstances, young Conkling won his case.” President Fillmore appointed Conkling minister to Mexico in 1852. Upon his return in August 1853, he went to Omaha, Nebr., where he practised law for eight years. Returning to his native state he lived first at Rochester, whence he moved to Genesee in the adjacent county of Livingston. Literary pursuits occupied most of his time. He had the gratification of seeing his son Frederick win a colonel’s commission in the Union army and Roscoe become United States senator. The last years of Alfred Conkling were spent in Utica.
which was also Roscoe's home. Here he died in his eighty-fourth year. A man of considerable ability and high character, he also possessed unusual personal charm.

[There are a few letters to and from Conkling in the N. Y. Hist. Soc. Other sources are the Autobiography of Thurlow Weed (1881); A. R. Conkling, Life and Letters of Roscoe Conkling (1889); I. B. Conkling, Conklings in America (1913). Consult also the following: D. McAdam, Hist. of the Beach and Bar of N. Y. (1897–99); Bio. Encyc. of the State of N. Y. (1916); W. F. Johnson, Hist. of the State of N. Y. Political and Governmental (1922).]

M. L. B.

CONKLING, ROSCOE (Oct. 30, 1829–Apr. 18, 1888), senator, was born at Albany, N. Y., but lived most of his life in Utica, N. Y. His father was Alfred Conkling [q.v.]; his mother, Eliza Cockburn, was of Scotch extraction and was noted for her beauty. His older brother, Frederick, was congressman for a single term, and a colonel in the Civil War. The family removed to Auburn, N. Y., in 1839 and in 1842 Roscoe entered the Mount Washington Collegiate Institute in New York City. He went to Utica in 1846 to study law in the office of Spencer & Kurnan, was admitted to the bar in 1850, and was immediately appointed district attorney of Albany. At the close of the term he entered into partnership with Thomas H. Walker of Utica. One of the great “spread eagle” orators of his day, before he was thirty years of age he was a familiar and valued figure at the Whig conventions of his county and state. He became mayor of Utica in 1858, was elected to Congress in the autumn of the same year, and represented his district at Washington, 1859–67, except for the single term 1863–65. He married in 1855 Julia, a sister of Horatio Seymour, Democratic governor of New York in 1853 and 1863. He remained temperate in a day when strong drink was a pervasive enemy of American men, he detested tobacco, and he built up his body by systematic exercise and boxing, so that he enhanced the dignity and impressiveness of a figure of which he was inordinately proud, and which his jocose critics described as the “finest torso” in public life. On a notable occasion soon after his entry into Congress, and not long after the attack on Sumner in the Senate, he stood up beside the crippled and sharp-tongued Thaddeus Stevens as a body-guard, and discouraged interference. He not only protected Stevens, but he agreed with him, becoming a sturdy War-Republican, and an advocate of vigorous repressive measures in the Reconstruction period. His ambitions in Congress and in the Republican party collided more than once with those of James G. Blaine, and produced a biting description by the latter, who jeered at Conkling’s “haughty disdain, his gran-

dilouquent swell, his majestic, super-eminent, overpowering, turkey-gobbler strut” (Congressional Globe, Apr. 30, 1866, p. 2299). The words could not be forgotten.

The decision of William H. Seward, leader of the New York Republicans, to remain loyal to President Andrew Johnson, and to support the latter in his Reconstruction policy, caused a break in the party and gave opportunity for the appearance of a leader among the radical Republicans of the state. Conkling was elected senator in 1867, and in the following autumn dominated the Republican convention, establishing an ascendancy over Gov. Reuben E. Fenton. In the next ten years, with the support of the federal patronage and the New York City “custom-house crowd,” he became the almost undisputed leader of his party in the state, and an aspirant to greater things. He was reelected to the Senate in 1873 and 1879. In 1876 he was the favorite son of New York as a candidate for the Republican presidential nomination, in rivalry to James G. Blaine, but met with disappointment when Gov. Rutherford B. Hayes of Ohio secured the nomination and became president in 1877. Conkling’s intimacy with and support of President U. S. Grant, to which he owed much of his strength as leader of New York, had procured for him in 1873 an offer of the post of chief justice of the United States, to succeed Salmon P. Chase. He had declined the honor, recognizing that his talents were those of a partisan rather than of a judge. He was again later to be offered an appointment to the Supreme Court by his friend Chester A. Arthur, and was again to decline.

Conkling was a bitter opponent of President Hayes. He claimed to believe that the latter had no right to his position, he had reason to fear that the power of the Grant dynasty was broken, and he was outraged by Hayes’s selection of a New Yorker whom he hated, William M. Evarts, as secretary of state. He regarded the New York patronage as his special preserve, and fought to defend it when the treasury department under John Sherman began to inquire into the management of the custom-house and the services therein of Chester A. Arthur and Alonzo B. Cornell [q.v.], who were Conkling’s chief assistants in the control of the party organization. He led the opposition to the desires of Hayes to separate civil service officials from the direction of party affairs, and his presence and spirit pervaded the New York Republican convention of September 1877, where the President was openly flouted. In substance he asserted the privilege of a senator to control the federal administration in his own state; and he denied to a president the right to
Conkling

select and direct his subordinates. The Tenure of Office Act, passed in 1867 to restrain Andrew Johnson, made it harder for the President to win his point; but eventually in 1879 Hayes had his way and got rid of Conkling's friends. New York, however, remained loyal to its leader. Cor- nell was made governor, Conkling was triumphantly reelected to the Senate, and another of his lieutenants, Thomas C. Platt [q.v.], was chosen as the other senator in 1881. Arthur had meanwhile risen to greater rewards.

Disgusted with Hayes, and anxious for the return of the old order of politics, Conkling was a leader in the movement for the renomination of Grant in 1880. His success went only far enough to deadlock the Republican convention, and prevent the nomination of either Blaine or Sherman. Garfield, who was chosen after a long and destructive fight, represented the anti-Conkling or "Half-Breed" wing of the Republicans; and the selection of the "Stalwart," Arthur, for vice-president failed to heal the breach. It was only after much persuasion that Conkling ceased to sulk in the canvass of 1880, and gave any support to the ticket of Garfield and Arthur. His friends and he believed, that as the price of his final and lukewarm support, Garfield had made him sweeping promises of presidential patronage; but to this belief the selection of Blaine as secretary of state gave contradiction. Within a few days after the organization of the new administration, Conkling was again in opposition, and again over the right to control the jobs in the New York custom-house. He fought the confirmation of Garfield's appointees until defeat came to him in May 1881. He then resigned his Senate seat in protest, May 14, 1881, and induced his colleague to resign with him. He turned to the usually pliant legislature at Albany for vindication and reelection, but discovered that his power to dominate it had departed. Even the open support of Arthur, now vice-president, was in vain. For the remainder of his life, Conkling was outside of politics. He removed to New York City, and entered into the practise of his profession, where he made a large fortune and a great name. He died in the spring of 1888, as the result of over-exertion during a severe snow-storm. His personal character and integrity were never challenged; he was, said the New York Times (Jan. 18, 1879), on the occasion of his third election to the senate, "a typical American statesman—a man by whose career and character the future will judge of the political standards of the present."

[Robt. G. Ingersoll, Memorial Address on Roscoe Conkling (1888), includes many obituary notices. There is a family biography by Conkling's nephew, Alfred R. Conkling, The Life and Letters of Roscoe Conkling,
land, under the direction of Bishop Wiseman, and founded the first House of the Order there, later transferring it to St. Leonards-on-Sea, Sussex. The rest of her life was dedicated to insuring the permanence and extension of the Order. Trying obstacles arose, among them the attempt of her husband to obtain control of the Society through her, and later, after he had apostatized, to compel her by legal process to live with him. Her faith, persistence, and unselfishness overcame all difficulties, however, and the Society prospered and received the approval of Rome. Much to her satisfaction, it was established in the United States in 1862, and in 1867 she visited its convents there.

[A detailed account of her career is given in The Life of Cornelia Connelly (1922), by a member of the Society. See also sketch in Records of the Am. Cath. Hist. Soc., vol. XXXI, pp. 1-42 (Mar. 1920)]

H.E.S.

CONNELLY, HENRY (1800–July 1866), governor of the Territory of New Mexico, pioneer trader, was the son of John Donaldson and Frances (Brent) Connelly, and was born in Nelson (now Spencer) County, Ky. He was a descendant of Thomas Connelly of County Armagh, Ireland, who settled near Charleston, S. C., in 1689. He was trained in a school kept by a locally noted teacher, James Dozier, and later attended Transylvania University, from which he graduated as a doctor of medicine in 1828. In the same year he began practice in Liberty, Mo., then one of the outermost towns of the frontier, but in a few months closed his office and left with a trading party for Santa Fé and Chihuahua. In the latter city he became a clerk in the store of a Mr. Powell, whom subsequently he bought out. He seems to have been naturalized as a Mexican citizen about 1832. He is said to have made many trips between Chihuahua and Independence, Mo., at first with pack mules and later with his own wagon trains, and to have been the first merchant to take a wagon train (Apr. 1839–Aug. 1840) from Chihuahua to Fort Towson and back. He was married in Chihuahua about 1836 to a Mexican woman, by whom he had three sons. She died, probably in 1843, and Connelly took the two surviving sons to the east to be educated. He was in Santa Fé Aug. 12, 1846, when Capt. Philip St. George Cooke entered the city in advance of Kearny’s army, and he was chosen by Gov. Armijo as his emissary to return with Cooke and negotiate with the general. After the flight of Armijo and the establishment of American rule he proceeded south. Arrested by the Mexican authorities as the bearer of a letter from Kearny to James Magoffin, he was taken to Chihuahua, but was soon released. He then moved to Peralta, in the present Valencia Coun-

Connelly

ty, N. Mex., resuming his American citizenship. There he married Dolores Perea Chavez, a widow, by whom three children were born to him. In the period following the conquest he induced the Mexican inhabitants, in spite of the ugly mood evidenced by the Taos uprising in 1847, to accept and cooperate with the American rule. In the movement to establish a state government he was elected governor, June 20, 1850, but as Congress ignored the action and made New Mexico a territory, he did not serve. During the following ten years he and Edward J. Glasgow, his partner since 1843, built up the largest business in New Mexico. In 1861 he was appointed governor of the territory, and at the outbreak of the Civil War his influence was decisive in moulding public opinion against the maneuvers of the Confederates. During the panic caused by the Confederate invasion, under Gen. H. H. Sibley, and the Union disaster at Valverde, Feb. 21, 1862, he acted with coolness and determination, and his indefatigable efforts in support of the army of defense contributed greatly to the rout of the invaders. At the close of his four-year term, President Lincoln reappointed him. For some time his health had been failing, and in 1863 he had visited the east for medical treatment. Believing himself cured, he resumed his duties, but before long his illness returned. He died in office, at Santa Fé, from an overdose of an opiate. H. H. Bancroft regards him as “a man of good intentions, of somewhat visionary and poetic temperament, of moderate abilities and not much force.” W. E. Connelly, on the other hand, praises him warmly, and his general estimate is supported by R. E. Twitchell. As a pioneer trader Connelly was, according to the former, “to this commercial new world what Kit Carson, Frémond and others were in their spheres of action.” He was, moreover, “a gentleman of refinement and intelligence, honorable and upright in all the relations of life.”

(1907); Ralph Emerson Twitchell, The Leading Facts of New Mexican Hist. (1917); Stella M. Drum, ed., Down the Santa Fé Trail and into Mexico; the Diary of Susan Shelby Magoffin, 1846–47 (1926).]

W.J.G.—T.

CONNELLY, PIERCE FRANCIS (b. Mar. 29, 1841), sculptor, was born at Grand Coteau, La., the son of Pierce Connelly and Cornelia Peacock; the latter, as “Mother Cornelia Connelly” [q.v.], later became the foundress of the Order of the Holy Child Jesus. A few months prior to Frank’s birth his father, formerly an Episcopal clergyman, had announced his desire to enter the Catholic priesthood. The little boy
Connelly

lived with his mother in a convent; then with his father in Italy where the Prince Borghese became interested in him, and at five he was placed in a school for boys at Hampstead, England. In 1850 his father renounced the Catholic faith and reentered the Protestant Episcopal ministry, taking his three children to Italy with him and settling in Florence, where for some years he was rector of the American Protestant Episcopal Church. Frank's artistic talent manifested itself early and he was sent to Paris to study painting; there he was a medalist of l'Ecole des Beaux-Arts. He later went to Rome to study and then returned to Florence where, at the age of twenty, he was so profoundly impressed by the sculpture of Hiram Powers [q.v.] that he turned to that medium. After working in Florence for a number of years he settled for a while in England where he seems to have enjoyed somewhat of a vogue, for he did numerous portraits of members of the aristocracy. To the Royal Academy Exhibition of 1871 he sent busts of Henry George, Earl Percy, and Algernon George, sixth duke of Northumberland. Besides these he did a full-length statue of the Duchess of Northumberland; a bust of Princess Louise; and a bust of the Marchioness of Lorne, a replica of which is preserved in the Inner Temple in London. Busts of the Duke of Northumberland and Lady Percy are said to be in Alnwick Castle.

During the Centennial year, 1876, Connelly came to America and was largely represented at the exhibition in Philadelphia, where he was greeted as one of the most significant of American sculptors. The most important of his works there was a bronze group, "Honor Arresting the Triumph of Death," a reference to the fallen soldiers of the Civil War, which he had worked on from 1865 to 1869 and which had been exhibited in his studio in Florence the year of its completion. It is now in the Pennsylvania Academy. "Ophelia" was a romantically treated and elaborately detailed figure. Among his other works were "St. Martin and the Beggar," "Thetis" (1874, now in the Metropolitan Museum, New York), "Queen Philippa," "Lady Clare," "Diana Transforming Actaeon," "Viola," and "The Thread of Life." At this period also he made busts of the Countess Von Rosen, Mr. Lippincott, and Mr. McKean. Most of his works are done in marble with high finish and often with minute detail. The very subject of the majority of them illustrates his romantic tendency. After a few months in America Connelly went to New Zealand where he reverted to painting again, and made many sketches of the craters, lakes, and glaciers of the country. An exhibition of his paintings was held in Auckland in 1877. He likewise took up mountain climbing and explored some hitherto almost unknown mountains. In the early eighties he returned once more to Florence where his father died in 1883. Little of the sculptor's later career is recorded; he was in Florence in January 1900, at the deathbed of his sister Adeline who had turned Catholic again, after their mother's death, and died praying for her brother's conversion.

E.R.D.

CONNER, CHARLOTTE MARY SANFORD BARNES. [See Barnes, Charlotte Mary Sanford, 1818-63.]

CONNER, DAVID (1792–Mar. 20, 1856), naval officer, was born in Harrisburg, Pa., son of David Conner, an Irishman who came to the Wyoming Valley about 1750, and Abigail Rhodes, of longer-settled English stock. At fourteen the boy found employment with his brother in a Philadelphia counting-house, while still continuing his studies. Appointed midshipman, Jan. 16, 1809, he took one or two merchant voyages and then served from August 1811 to May 1817, in the famous sloop Hornet. Upon the capture of the privateer Dolphin, July 9, 1812, Conner entered her as prize-master, but the ship was soon afterward retaken by the British. Exchanged and back in the Hornet, he was third lieutenant in her victory over the Peacock, Feb. 24, 1813, being sent to the captured ship to rescue her crew and if possible keep her afloat, and narrowly escaping when she sank. He was first lieutenant in the victory over the Penguin, Jan. 22, 1815, suffering a grapeshot wound through the hip which necessitated crutches for nearly two years. His conduct in both actions won particular commendation from his commanders, Lawrence and Biddle, and he was awarded two Congressional Medals. During 1817–18 he was first lieutenant in the Ontario, which took formal possession of Oregon. After two years' duty in Philadelphia he rounded the Horn in the little brig Dolphin, and had later commands in the West Indies and Mediterranean. Made captain Mar. 3, 1835, he was Navy Commissioner, 1841–42, and then until May 30, 1843, head of the newly created Bureau of Construction, Equipment, and Repair. From December 1843 to March 1847, he commanded American naval forces in the Gulf and Caribbean. The
Conner

soul of courtesy, Commodore Conner was excellently suited for the diplomatic problems preceding hostilities with Mexico, and, though broken in health by the climate, he gave himself unrestrainedly to the greatly increased administrative tasks created by the war. A blockade was established, and in the summer and autumn of 1846 expeditions were undertaken against Alvarado, Tampico, and other Mexican ports. Hammered, however, by lack of light-draft steamers and other means, he operated with a caution which aroused great dissatisfaction in the fleet and at home. What the navy could do was little, but the weak opposition doubtless justified soldier measures. The verdict of his subordinate, W. H. Parker, will probably stand, that Conner was "an educated man and a brave officer . . . but would not take the responsibilities that his position imposed upon him" (Recollections of a Naval Officer, 1883, p. 53). Credit is due him for the admirably managed landing of Scott's army, Mar. 9, 1847, in which the navy put ashore over 10,000 men in five hours, and for the plan of naval cooperation in the capture of Vera Cruz; but on Mar. 21, the day before the final attack, he turned over the squadron to his former second-in-command, M. C. Perry [q.v.], in accordance with orders brought by Perry from home. This change was explicable as routine procedure, for Conner was ill and had been at sea beyond the usual period, but it was prompted also by desire for more aggressive leadership. Upon the fall of Vera Cruz, Mar. 29, Conner returned home, where he declined a position as bureau chief, and was made honorary member of the Cincinnati. After recuperation in Florida he was commandant of the Philadelphia Navy Yard, October 1849-June 1850. He was put on the Reserved List in 1855 and died shortly afterward at his home in Philadelphia. Conner is described as slightly above medium height, erect and active, with a presence commanding respect. He was survived by his wife, a daughter of the celebrated Philadelphia surgeon Philip Syng Physick, whom he married in 1828, and by two sons.

[An account of Conner's life and the chief documents of his Mexican War service appear in his son P. S. P. Conner's The Home Squadron under Commodore Conner in the War with Mexico (1866). See also R. Semmes, Service Afloat and Ashore in the Mexican War (1851); H. Simpson, Lives of Eminent Philadelphians (1850); an excellent biographical sketch in the National Intelligencer, Apr. 25, 1856; and controversial notes on his work in the Mexican War in Army and Navy Jour., Feb. 2, Feb. 23, Apr. 19, 1884. Three vols. of M.S. letters to Conner, chiefly 1842-47, are in the Lib. of Cong.]

A.W.

CONNER, JAMES (Sept. 1, 1829—June 26, 1883), lawyer, Confederate soldier, attorney-general of South Carolina, was a grandson of James Conner, who came from the north of Ireland to America about 1776, fought in the Revolutionary War, and subsequently settled in Mecklenburg County, N. C., where he rose to considerable prominence, and a son of Henry Workman and Juliana (Courtney) Conner. He was born in Charleston, S. C., where his father had established himself as a successful banker in the early nineteenth century (see letters of H. W. Conner to J. C. Calhoun in "Calhoun Correspondence," American Historical Association Report for the Year 1899, vol. II). Having chosen to follow the legal profession in a commercial community, he spent several months in a counting house before entering college, and after graduation from the South Carolina College (1849) studied law under James L. Petigrue [q.v.]. Admitted to the bar in 1851 he soon acquired a large practise. In these early years he published three legal works: A Digest of the Cases Decided in the Law Court of Appeals of the State of South Carolina, 1835-54 (1855); A Digest of Equity Reports of the State of South Carolina, from the Revolution to December, 1856 (1857) in collaboration with C. H. Simonton; and The History of a Suit at Law (1857), a manual for the guidance of students. In 1856 he was appointed United States attorney for the district of South Carolina. In this office he drew national attention by his vigorous prosecution of the operators of the Echo, a vessel which had violated the slave-trade law (The Case of the Slaver Echo, reported by D. A. Levein, 1859).

Believing that the time had come for South Carolina to secede, Conner resigned the attorneyship early in December 1860. Though for a time he occupied a seat in the secession convention and consented to become titular district attorney under the Confederate government, he devoted himself chiefly to preparation for military service. Having been elected captain of the Washington Light Infantry when that company was made a part of Hampton's Legion, he distinguished himself at the first battle of Manassas and was soon afterward promoted major (Official Records, Army, I ser., II, 507). Because he was not willing to be advanced in the Legion at the expense of a superior officer he withdrew (June 1862) to become colonel of the 22nd North Carolina Regiment. Except for a short period when he was convalescing from a severe wound, he served with this command until June 1, 1864 when he was commissioned brigadier-general. He was assigned temporarily first to McGowan's, then to McGowan's and Lane's brigades, and finally as acting major-general to McGowan's, Lane's, and Bushrod Johnson's brigades. In
August 1864 he assumed permanent command of Kershaw's brigade. In one of the actions at Cedar Creek, Oct. 12, 1864 (Ibid., XLIII, pt. 1, p. 579), he suffered the loss of one of his legs and in consequence was incapacitated for further active duty.

After the war he married Sallie Enders (1866) and resumed the practise of law. He was solicitor for the South Carolina Railroad and receiver for the Greenville and Columbia Railroad Company. Except for the campaign of 1870 when he supported the Union Reform party, he deliberately abstained from politics until 1876 when, although he opposed the "Straightout Movement," he was a candidate for the office of attorney-general on the successful Hampton ticket. During the heated campaign which followed, his prudence averted serious trouble with the negroes in Charleston. As attorney-general he performed his most outstanding public service. It fell to him to establish the legality of the Hampton government. This having been accomplished and his health failing, he resigned in December 1877. His death occurred in 1883 in Richmond, Va.

[IA volume of obituary articles from leading Southern newspapers, memorial addresses, etc., was published shortly after Conner's death under the title James Conner, In Memoriam. Permission to consult a quantity of private papers was generously granted by his son, Henry W. Conner, and a daughter, Mrs. Geo. H. Moffett, both of Charleston, S. C. See also J. B. O'Neill, Biog. Sketches of the Bench and Bar of S. C. (1859); J. F. J. Caldwell, Hist. of a Brigade of South Carolinians Known First as "Gregg's" and Subsequently as "Me-Gowan's Brigade" (1866); D. A. Dickert, Hist. of Kershaw's Brigade (1899); Confed. Mil. Hist. (1899), vol. V.]

J. H. E.

CONNEY, JOHN. [See Coney, John, 1655-1722.]

CONNOLLY, JOHN (1750–Feb. 6, 1825), Roman Catholic bishop, was born at Slane, Ireland. Nothing seems to be known of his parents; yet the fact that he began his education at an early age indicates that they were in good circumstances. He entered the Dominican Order in youth and was sent to Rome, where, after brilliant studies and ordination (about 1775), he remained until 1814. The first years of his priesthood were spent in teaching. Later he held various posts of importance in his Order—among them that of assistant to its General. He was also a director of the Casanate Library, established by Cardinal Jerome Casanate, which now belongs to the government and is one of the most noted in the Italian capital. Many of the Roman Catholic hierarchy, especially those in English-speaking countries, made him their agent at the papal curia. Every charge entrusted to him he executed with a prudence, fidelity, and success which not only won confidence and made friends, but also caused him to be an outstanding character among the clergy of Rome. His letters reveal a clear, trained, and orderly mind. More than once Father Connolly was mentioned for a bishopric in his native land. In 1808, when four new dioceses were erected in the United States, Rome seriously considered him for that of New York. His confrère, Richard Luke Concanen, who received the appointment, was held in Europe by the French embargo, and died there two years later. Meanwhile Pius VII was exiled. One of his first acts on regaining his freedom, however, was to nominate Connolly the second bishop of New York. Although consecrated on Nov. 6, 1814, he could not, because of the war with England, reach his diocese for a twelve-month.

The aged prelate set about his new task with characteristic courage and vigor. His diocese embraced all New York State and half of New Jersey. He was pastor, missionary, and bishop all in one. Racial antagonism combined with lay trusteeism to give him considerable trouble in New York City. The French and the Irish were especially arrayed in hostile parties. Those who held that the management of the temporalities of the Church should rest with laymen, allied themselves with the French, and even sought to interfere in matters purely spiritual. Despite the opposition, acrimony, and unjust accusations of the malcontents, Connolly maintained the even tenor of his ways, defended his Episcopal rights, accomplished much good for religion, and left a name that is still cherished. One of his early acts was to establish an orphan asylum and introduce Sisters of Charity. The sick and poor were special objects of his goodness. Particularly did he show himself a father to all during several epidemics of yellow fever. He was the first Roman Catholic prelate to urge the erection of a diocese in each state and the promotion to the miter only of clergymen adept in the English language. Some historians, following the misrepresentations of Connolly's enemies, have been unfair to him. Yet even these writers not only admit that he was without personal blemish, but also say that he was a man of great virtue. He was held in high esteem by all classes and creeds (New York Gazette and General Advertiser, Feb. 10, 1825).

CONNOR, HENRY GROVES (July 3, 1852–Nov. 23, 1924), judge, the sixth child of David and Mary Catherine (Groves) Connor, was born in Wilmington, N. C. His parents, the one of Irish and the other of English descent, were both natives of Florida. Three years after his birth the family moved to Wilson, N. C. There he began his education in a private school, but the death of his father cut short his formal schooling, and at fifteen he began to aid in the support of his family. Entering a law office as clerk, he began preparation for the bar and secured his license in 1871. In the same year he married Kate Whitfield of Wilson, by whom he had twelve children. He was quickly successful in practise and in 1884 was elected to the state Senate where he was chairman of the judiciary committee and secured the passage of the Connor Act, requiring registration of deeds, which, more than any statute in the history of the state, has brought security of land titles. In 1885 he was appointed superior court judge and served with distinction, resigning in 1895 to return to practise. The following year the Republican and Populist parties which had fused nominated him for associate justice of the supreme court, but he declined to take any part in a movement to which he was politically opposed. In 1899 he was a member and speaker of the lower house of the legislature where he was a leader in formulating the suffrage amendment to the constitution, which, by imposing an educational qualification coupled with the “grandfather clause” was designed to eliminate the negro vote. In the succeeding legislature he was again a member, and as chairman of the committee on education he fought boldly and successfully to aid Governor Aycock in carrying out the party pledge that educational opportunity would be given to all. He opposed the majority of his party on the question of impeaching three justices of the supreme court. All were later acquitted by the Senate. Party feeling was strong, but he lost no strength, for his party nominated him in 1902 for associate justice. Elected, he served until 1909 when President Taft, disregarding politics, appointed him federal district judge, a position which he filled until his death.

Connor was a man of striking charm of personality combined with much strength. Warmly human and cordial in personal intercourse, his quiet and genial humor, mental alertness, wide information, and breadth of interest, made association with him an experience to be prized. His varied contacts, extensive reading, and eager intellectual curiosity combined to keep him essentially youthful. He looked, picturesquely, every inch a judge, and though full of natural dignity, there was about him no hint of aloofness. As a trial judge he gained the confidence and affection of the state. As an appellate judge, by his poise and balance, his humanity, and his well-reasoned opinions, progressive, yet untouched by radicalism, he confirmed the popular estimate of him. As federal judge he performed undoubtedly his greatest judicial service. Federal courts, since Reconstruction, had been viewed with dislike and distrust in North Carolina, as alien and hostile agencies of government. But so great was the confidence felt in him by all classes and parties that during his service prejudice rapidly disappeared. In addition to his numerous opinions Connor wrote many valuable historical monographs. He was the author of John Archibald Campbell, Associate Justice of the United States Supreme Court (1920) which is an excellent piece of biographical and historical work. He also collaborated with J. B. Cheshire, Jr., in preparing The Constitution of North Carolina, Annotated (1911). All his writings were marked by an easy, graceful style and by clarity of thought and expression.

[Frank A. Daniels, Henry Groves Connor: An Address (1926); Reports of the N. C. Bar Assn., vol. XXVII, 135–50; N. C. Reports; N. C. newspapers, esp. News and Observer (Raleigh), Nov. 24, 1924.]

J.G.de R.H.

CONNOR, PATRICK EDWARD (Mar. 17, 1820–Dec. 17, 1891), pioneer, soldier, Indian fighter, was born in County Kerry, Ireland. His parents brought him to New York when he was a child. Beginning to work at an early age, he had few opportunities for education. At nineteen he enlisted in the army, serving in the Seminole War and in various garrisons. In 1844 he returned to New York, but early in 1846 went to Texas, where he enlisted in the Texas Volunteers. He fought in the battles of Palo Alto and Resaca de la Palma (May 8–9); was commissioned a first lieutenant on July 7, a captain on Feb. 12, 1847, and eleven days later took part in the battle of Buena Vista. He resigned from the army on May 24. In the winter of 1849–50 he moved to California, where he engaged in mining. At Redwood City, in August 1854, he married Johana Connor, a native of his own County Kerry.

On the opening of the Civil War he enlisted, and the governor appointed him colonel of the 3rd California Infantry. Directed to assume command of the Military District of Utah (including Nevada), he entered Salt Lake City.
with 700 men on Oct. 20, passing on a few miles to a commanding site, where he established Camp (afterward Fort) Douglas. The Mormons looked upon the action as an intrusion, but Connor, convinced that in the main they were unfriendly or even seditious, disregarded their protests; and in several subsequent clashes between the church and the government he compelled peace with a threat of force. Indian depredations were frequent, most of them traceable to a hostile band of Bannocks and Shoshones. Learning the location of their village, a fastness on Bear River, near the present Franklin, Idaho, Connor set out with 300 men during a spell of exceptionally severe weather and on the morning of Jan. 29, 1863, with two-thirds of his force, attacked them, capturing the village and killing most of the warriors. For this feat, which brought peace and opened to settlement a region that had been harassed for fifteen years, he was appointed (Mar. 30) a brigadier-general of volunteers. In March 1865 he was assigned to a newly created command, the District of the Plains, with instruction to cooperate, in a movement to be known as the Powder River Indian Expedition, with two columns from the Missouri River against the hostile Sioux, Cheyennes, and Arapahos. With about 900 men and with James Bridger as guide, he set out from Fort Laramie on July 30, reached the Powder near the Dry Fork, in the southeastern part of the present Johnson County, Wyo., where he established Fort Connor (later Fort Reno), and then pushed on to the Tongue. Here, on Aug. 29, he surprised a large village of Arapahos, winning a signal victory. But the other two columns, unprovided with equipment, supplies, or accurate maps, lost their way, and, after suffering terrible privations, disintegrated. On Sept. 6 Connor started to return. Before reaching Fort Connor he learned that he had been made the scapegoat for the failure of the campaign and had been relieved of his command. Incensed at this treatment, he returned to Utah without making an official report. In the general promotions dated Mar. 13, 1865, he had been brevetted a major-general of volunteers. On Apr. 30, 1866, he was honorably mustered out of the service.

Connor established the first daily newspaper in Utah, the Union Vidette; he was the owner of the first steamboat on Great Salt Lake; and he was an indefatigable promoter of the mining industry of the territory. Reverses came to him, for his business judgment was unequal to the task of conducting the many and ambitious enterprises he initiated. In territorial affairs he was steadfastly anti-Mormon. The Mormons disliked him greatly; and Mormon histories, while conceding his courage and military skill, portray him as prejudiced, bellicose, and overbearing. The Gentiles, on the other hand, made him their leader and acclaimed him with the titles, "Father of the Liberal Party," and "Liberator of Utah." He was, said the Salt Lake Tribune, the day after his death, "a mighty factor in the last twenty-five years' history of Utah."

W.J.G.—t.

CONOVER, OBADIAH MILTON (Oct. 8, 1825—Apr. 29, 1884), educator, lawyer, was born at Dayton, Ohio, of Dutch ancestry, being seventh in line of descent from Wolfert Gerretts van Kouwenhoven, who came to the first Dutch settlement with Patroon van Rensselaer. By some unknown process the name took on its present form. His mother, Sarah Miller, came from an old Kentucky family. He was graduated from the College of New Jersey at Princeton in 1844; taught Latin and Greek at Lexington, Ky., and Dayton, for two years, meanwhile studying law in the office of Gen. Robert C. Schenck, and then returned to Princeton, being graduated from the theological seminary in 1849. After graduation he removed to Madison, Wis., where the remainder of his life was spent. He became editor of a literary and educational monthly, the North-Western Journal, of which only a few numbers were issued. When the first class was organized at the University of Wisconsin, in August 1850, there were two members of the faculty, Chancellor Lathrop and Professor Sterling, but in the second term Conover was appointed general tutor, being thus the third member of the faculty in order of appointment. Two years later he was made professor of ancient languages and literature, which position he held until 1858, when he was removed with his colleagues in the revolution and reorganization which the University underwent in that year. Renewing an earlier interest in the law, he was admitted to the Dane County bar in 1859, and two years later became assistant reporter to the Supreme Court of Wisconsin. In 1864 he was appointed reporter, which office he held for twenty years. His continued interest in educational matters is indicated by the fact that he was a member of the Board of Regents of the University, 1859-65; was for some years State Librarian; and was commissioned to collect books, pictures, and busts for the University abroad. In
Conrad

the later years of his life the condition of his health did not permit him to undertake any but his routine duties as reporter to the Supreme Court. His chief interest lay in Greek literature, but his relations to it were those of enjoyment and culture. Apart from the published reports of the Supreme Court, his writings consisted of occasional papers prepared for the Madison Literary Club. Two poems, "Via Solitaria" and "Reconciliation," often quoted, and frequently attributed to Longfellow, were products of his pen. He was twice married: in 1849 to Miss Julia Darst, who died in 1863, and in 1882 to Mrs. Sarah Fairchild Dean. His death occurred in London while on his return from a two years' sojourn in Greece.

[Stephen H. Carpenter, Hist. of the Univ. of Wis. 1840-76 (1876); biographical sketches in C. W. Butterfield, Hist. of the Univ. of Wis. up to 1870 (1879), and in R. G. Thwaites, The Univ. of Wis., Its History and Alumni (1900); memorial by Wm. F. Allen in Trans. Wis. Acad. of Sciences, Arts and Letters, vol. VII (1883-87); family records kept by Conover's descendants in Madison.]

V. A. C. H.

CONRAD, CHARLES MAGILL (Dec. 24, 1804-Feb. 11, 1878), lawyer and statesman, was born in Winchester, Frederick County, Va. On the side of his father, Frederick Conrad, he was descended from German stock that had come into the Shenandoah Valley in the early eighteenth century. On the side of his mother, Frances Thruston Conrad, who was the daughter of Charles Mynn Thruston, an Episcopal minister in Virginia and a colonel in the Revolutionary army, he was descended from English stock that had settled in Virginia in the seventeenth century. While he was a boy his father's family moved to Mississippi and later to Louisiana, settling near New Iberia. Charles was educated in a school in New Orleans maintained by a Dr. Huld, said to have been the founder of the first English school in that city. He studied law in the office of Abner L. Duncan in New Orleans and began the practice of his profession in 1828. He entered politics as a supporter of Andrew Jackson but shortly withdrew from the Democratic party and became a Whig over the Bank issue. At that time the Whigs were very strong in Louisiana and Conrad soon began to take high rank among them. He was a member of the Louisiana state legislature for several terms and was serving in that capacity when he was appointed to the United States Senate in April 1842, in place of Alexander Mouton who had resigned. He was defeated by the legislature for reelection in January 1843, and hence retired in the following March. In 1844 he was sent as a delegate to the Louisiana state constitutional convention, and in 1848 he was elected to Congress from the Louisiana 2nd District. He took his seat on Dec. 3, 1849 and served until Aug. 13, 1850 when he resigned to accept appointment by President Fillmore to the office of Secretary of War. He retired from that position at the close of Fillmore's administration in March 1853.

During his brief term in Congress, the chief issue before that body was the admission of California as a free state. Conrad opposed the measure except as one of the conditions of a general compromise on the subject of slavery (Daily New Orleans Crescent, Mar. 11 and Apr. 6, 1850). He had resigned his seat, however, before the compromise measures of 1850 were agreed upon. In the memorable political campaign of 1860 he was active as a member of the Constitutional Union Party and was appointed one of the delegates from New Orleans to a state convention in June, to ratify the Bell and Everett national ticket and nominate candidates for state offices. During the Civil War he played a prominent political part in the Confederacy, serving first as a delegate from the 1st district of Louisiana to the Provisional Confederate Congress that met at Montgomery in February 1861, and later as a representative from Louisiana to the first and second Confederate Congresses, 1862-64. His large estate was confiscated but after the close of the war he resumed the practise of law in New Orleans and soon amassed a competency.

Conrad was very intense in his convictions and tenaciously persistent in support of whatever cause he espoused. In his earlier years he was somewhat belligerent in disposition and fought a duel with a Dr. Hunt of New Orleans, brother of Randall Hunt, a noted lawyer of the time, in which he killed his antagonist. He had, nevertheless, a profound reverence for the majesty of the law and the sanctity of the courts. He was a man of small stature but of abounding energy. Stricken with paralysis while testifying in the federal circuit court at New Orleans, he died a few days later. Conrad's wife was M. W. Angela Lewis of "Woodlawn," Fairfax County, Va., the grand-daughter of Fielding Lewis and Elizabeth, sister of George Washington. On her death she was buried at Mt. Vernon.

[Brief sketch in Alcée Fortier, Louisiana (1914), I, 251-52; obituaries, not altogether reliable, in newspapers of New Orleans for Feb. 12 and 13, 1878; Biog. Dir. of the Am. Congress (1928); some family data from Wm. Meade, Old Churches, Ministers, and Families of Va. (1851).]

E. M. V.

CONRAD, HOLMES (Jan. 31, 1840-Sept. 4, 1916), lawyer, was born at Winchester, Va. His father was Robert Young Conrad, a prominent lawyer of Winchester, and state attorney-general.
Conrad

from 1857 to 1862; his mother was Elizabeth Whiting, daughter of Burr Powell. Holmes Conrad's education was received at the primary schools and Virginia Military Institute, whence he proceeded in 1858 to the University of Virginia, graduating in 1860. He then became a school-teacher, but, on the outbreak of civil war, enlisted as a private in Company A, 1st Virginia Cavalry, Apr. 17, 1861, and saw active service throughout the contest. Commissioned lieutenant, he was appointed adjutant in August 1862, and in 1864 became major and assistant inspector-general of Rosser's cavalry division, serving as such until the termination of hostilities. In 1865 he commenced the study of law in his father's office at Winchester, and on his admission to the Virginia bar in January 1866, joined his father in practise. A strong Democrat, the active interest he displayed in political affairs assisted in bringing him to the front, and in 1878 he was elected to the Virginia legislature, serving till 1882. In the course of the next few years he became one of the leaders of the Virginia bar, and acquired an influential position in the councils of the Democratic party. In 1893 President Cleveland appointed him assistant attorney-general of the United States and in 1895 he became solicitor-general. On his vacant office in 1897 he was retained by President McKinley on behalf of the federal government in Morris vs. United States, the "Potomac Flats Case," which involved the title to the shore front of Washington (174 U.S. 196). In October 1901 he joined the law faculty of Georgetown University as lecturer on the history of English law, at a later date taking over in addition the lectureship on the history and development of law and comparative jurisprudence. In 1904 he was again retained on behalf of the federal government as special prosecutor in the Postal Fraud Cases. During the last twenty years of his life he was constantly engaged in appeals before the Supreme Court where his outstanding ability had wide scope. He achieved his greatest success in the last case he was engaged on, Commonwealth of Virginia vs. State of West Virginia, involving the amount of the contributive share that the latter state should pay toward the public debt of the former. Appearing as counsel for Virginia, Conrad's argument upon the demurrer in the United States Supreme Court (206 U.S. 290) was in professional circles considered remarkable. Judgment was ultimately given against West Virginia for $12,939,929.50 principal and interest up to June 14, 1915 (238 U.S. 202). For this complicated and long-drawn-out litigation he was specially retained by the bond-holding creditors. Conrad was of striking appearance, tall of stature with an erect military bearing throughout his life. Though wielding great political influence in his state, he did not care for public office. By nature somewhat of an aristocrat and reserved in manner, he was never what the politicians termed a "good mixer." As a lawyer he excelled in discussing constitutional questions, and was at his best in appellate work before the Supreme Court. He had an extreme distaste for the routine of office work. He died at Winchester. His wife was Georgia Bryan, daughter of Thomas Bryan Forman of Brunswick, Ga.

CONRAD, ROBERT TAYLOR (June 10, 1810-June 27, 1858), journalist, jurist, and dramatist, son of John and Eliza Conrad, was born in Philadelphia, Pa. His father, a prosperous publisher who printed Charles Brockden Brown's Literary Magazine and brought out Joel Barlow's Columbiad in sumptuous form, had Robert trained for a legal career. Although young Conrad was admitted to the bar in 1831, he was more interested in journalism and literature than in law. Accordingly he became associated (1831-34) with the Daily Commercial Intelligencer and wrote plays and poetry in his spare time. Before he was twenty-two he saw his first play, Conrad, King of Naples, successfully produced (Jan. 17, 1832), at the Arch Street Theatre by James E. Murdoch. It was afterward played by John R. Scott. Realizing the dramatic possibilities offered by Jack Cade's Rebellion (1450), Conrad worked on a blank-verse play with Cade as hero, which he intended to name The Captain of the Commons or The Noble Yeoman, but which was announced for production by A. A. Addams at the Walnut Street Theatre on Dec. 7, 1835 as Aylmire. Unfortunately Addams was intoxicated that evening and the première was postponed until the 9th, when David Ingersoll played the part of Cade. Addams essayed the rôle on Feb. 1, 1836, but failed. About this time Conrad was appointed judge of the court of criminal sessions in Philadelphia, which diverted his attention from literature for several years. He found time eventually to rewrite Aylmire as Aylmire, or The Kentish Rebellion, for Edwin Forrest [q.v.], who produced it at the Forrest Theatre in New York, May 24, 1841, and at the Arch St. Theatre, Philadelphia, on June 16, 1841. The clumsy title was soon changed to Jack Cade, under which
name the play had a permanent place in Forrest’s repertoire. Forrest was most successful in the rôle, which he also played in Europe (1868). After his death Jack Cade was produced by John McCullough and as late as 1888 by Edmund Collier. Others who assumed the part were Edward Eddy (1862, 1874) and Albert Roberts (1877).

The success of Jack Cade made Conrad a literary figure in Philadelphia. In 1843 he was chairman of the committee of judges that awarded to Edgar Allan Poe a prize of $100 for “The Gold Bug” as the best story submitted to the Dollar Magazine. He became (1845) an associate editor of the North American and in 1848 assisted George R. Graham in editing Graham’s Magazine. He edited (1846) a revised, abridged edition of Biography of the Signers to the Declaration of Independence, by John Sanderson and others, originally published (1820-27) in seven volumes. In 1847 Joseph Reese Fry prepared a Life of General Zachary Taylor from material collected by Conrad; that work was reprinted in 1850 as Our Battles in Mexico. During those years Conrad wrote various poems, including “The Sons of the Wilderness,” on the wrongs of the Indians, and a series of sonnets on the Lord’s Prayer. These were published (Philadelphia, 1852) with the text of Jack Cade as Aylmere, or the Bondman of Kent; and Other Poems.

In 1853 the Pennsylvania legislature passed an Act enlarging the City of Philadelphia by adding to it the twenty-nine districts, boroughs, and townships comprising the rest of Philadelphia County. Judge Conrad, as he was always called, became the candidate of the combined Whig and American parties for mayor of the newly consolidated city. At the election (June 1, 1854) he defeated Richard Vaux, the Democratic candidate, by 29,507 votes to 21,011. Conrad was sworn in as the first mayor of greater Philadelphia on the first Monday of July, 1854. He not only handled with skill the difficult problems associated with the consolidation, but enforced the rigorous Sunday laws that were now effective in all parts of the newly acquired territory. He gained some adherents by his strong support of current Know-Nothing politics, requiring even his policemen to be native-born Americans, but he aroused bitter opposition by his strict administration of the law. He served as mayor until the expiration of his term in 1856, when he was appointed to the bench of quarter sessions by Gov. Pollock and served until the following year. He died at his home in Philadelphia. His Devotional Poems (1862) were published posthumously with an introduction by George Henry Boker lauding Conrad’s character and literary achievements. Among these later verses is “Sinai,” a series of poems in Spenserian meter on the Ten Commandments. There is record of a third play by Conrad, entitled The Heretic, written for Forrest, produced at the Howard Athenæum, Boston, on June 1, 1863, and at the Broadway Theatre, New York, on Sept. 17, 1866 (T. A. Brown, A History of the New York Stage, 1903, I, 516). It was also played at the Arch Street Theatre, Philadelphia, with Mrs. John Drew in the cast. The text, like that of Conrad of Naples, has not survived. Though impulsive at times, Conrad had a gracious manner and an attractive scholarly bearing. He was an accomplished orator of the old school, fond of sonorous verbiage and rhetorical flights. His rather stilted speeches on many notable occasions are available in pamphlet form. Contemporaries hailed him as a dramatic poet of Shakespearean quality; fortunately he did not live to witness the eclipse of his fame.

CONRIED, HEINRICH (Sept. 13, 1855—Apr. 27, 1900), actor, producer, and impresario, was born at Bielitz, Austria, of Jewish parentage, the son of Joseph and Gretchen Cohn. He early exhibited talent as an actor and was enrolled with the company of the Hofburg Theatre in Vienna at the age of eighteen, later becoming a leading character actor with traveling companies. For one season he managed the Stadt Theatre in Bremen. In 1877 or 1878 he came to America to take charge of the Germania Theatre in New York City, where he used the name Heinrich Conried both on and off the stage. He soon became co-manager of the Thalia Theatre, bringing over the famous German actor, von Possart, the first of a number of German stage celebrities for whose introduction to the American public he was responsible. In 1892 he took over the Irving Place Theatre, making it the center of theatre-going activity for the German-Americans of the city, then sufficiently numerous to support an excellent German stock company. To add lustre to the regular repertory, which included German classics and modern comedy, Conried invited as guest players some of the foremost German actors of the day, among them Sonenthal, Barney, Sorma, Odilon, and Schratt.
Conried

The excellence of the productions at the Irving Place Theatre gained him a large American support for his company, and he secured country-wide recognition through performances of the classics at the larger universities, interest in which was enhanced through lectures which he delivered. During this period, he also gave occasional spirited performances of operettas by Strauss, Milloeker, Suppé, and others, and in 1898 staged an elaborate production of Humperdinck's Die Koenigskinder, in its original form as a drama with incidental music and songs. In addition to this, he found time to assist Rudolph Aronson in the production of light opera at the Casino Theatre in its best days.

In 1903 he was appointed manager of the Metropolitan Opera House (succeeding Maurice Grau), a position which he filled for five years. He inherited from his predecessor a brilliant list of singers, and added to the roster many others of equal renown, including Caruso, Chaliapin, Temima, Fremstad, and Farrar. He also brought over Motit and Mahler as conductors. His outstanding single achievement at the Opera House was the first performance, outside of Bayreuth, of Wagner's Parsifal, which took place on Dec. 24, 1903. The publicity surrounding this event was unprecedented in the annals of opera; praise and dispraise were about equally distributed. There was, moreover, some futile litigation by the Wagner heirs to restrain the production. But all of this helped to make the production a financial success of the first magnitude. There were eleven performances in all, outside of the regular season, the receipts for which are reported to have been $186,308. Next in importance was his production of Madame Butterfly by Puccini, brought out with an excellent cast under the inspiring presence of the composer, and Humperdinck's Hänsel und Gretel, to which the composer also lent the dignity of his presence. Conried's use of the Opera House for elaborate productions of light opera—Johann Strauss's Die Fledermaus (in his second season) and Zigeunerbaron (in his third)—aroused considerable criticism.

As years wore on, there appeared dissension in the ranks of the directors of the Opera, which came to a head with the production of Richard Strauss's Salomé. This was performed only once, and the directors of the real-estate company owning the Opera House put their caveat on its repetition. In the last two years of his régime, Conried encountered competition from Oscar Hammerstein who had set up a rival company in the Manhattan Opera House, near by, which threatened serious results to the monopoly theretofore enjoyed by the Metropolitan. The competition was enlivened by personal quarrels over some of the artists who were enticed away from Hammerstein. The increasing difficulties of the situation, and his own ill health, led Conried to resign his position in February 1908, leaving soon for Austria in quest of renewed health. He died there at Meran, in the Austrian Tyrol, a year later. He had married Augusta Sperling in 1884, who, with her son, brought his body back to be interred in this country. While the forces of partisanship for and against Conried were active during his régime at the Metropolitan Opera House, it now seems fair to say that his lack of background, so far as the opera world is concerned, militated against his complete artistic success as an impresario, in spite of a record of interesting events. But posterity will undoubtedly accord him unstinted praise for his years of fruitful achievement at the Irving Place Theatre and the invigorating influence of that theatre's standards on the dramatic history of the country.

L. M. I.

CONSIDÉRANT, VICTOR PROSPER

(Oct. 12, 1808—Dec. 27, 1893), Fourierist, founder of a Utopian community in Texas, was born at Salins (Jura), a remarkable son of a remarkable father. The latter, Jean-Baptiste Considérant, learned professor of the humanities and librarian at Salins, in his efforts to preserve the college buildings during a fire, deliberately permitted two houses of his own, constituting his entire fortune, to burn to the ground. His son was equally public-spirited. Educated in the École polytechnique (Paris) and the École de Metz, and quickly advanced to captain in the engineering division of the army, taking part in the war against Algiers in 1830, he sacrificed a promising military career at the call of a philanthropic ideal. On Mar. 13, 1830, he published in the Mercure de France his adherence to the unpopular communist theories of Fourier, and there with, at the age of twenty-one, began his life-work. He resigned from the army and soon made the personal acquaintance at Lyons of Fourier himself, whose trusted lieutenant he became, assisting him to establish a monthly magazine, Le Phalanstère (which became with No. 15 La Reforme Industrielle and in 1836 La Phalanstère).
In fact, Considérant was the real founder of the French cooperative movement, in a practical sense, as Fourier himself had remained a theorist with but few disciples. In a long series of works Considérant expounded the philosophy of his master, pruned of its extravagancies and patent absurdities. Of these writings the most important were: *Destinée sociale* (3 vols., 1834-44); *manifeste de l'école sociétaire* (1841); *Exposition abrégée du système Phalansterien de Fourier* (1845); *Principes du socialisme* (1847); *Théorie du droit de propriété et du droit au travail* (1848); *Socialisme devant le vieux monde* (1849). After Fourier's death in 1837 Considérant became the acknowledged leader of the movement, winning many previous followers of Saint-Simon, such as Jules Lechevalier and Abel Transon. He established a Fourierist library in Paris, and, in 1843, a Fourierist daily, *La Démocratie Pacifique*. He was much ridiculed by the conservative press, which, taking advantage of an unfortunate speculation of Fourier to the effect that human beings in a state of perfection would become endowed with tails equipped with eyes, always portrayed Considérant, really a man of much dignity, with a caudal appendage, and delighted to tell of English visitors who came desiring to witness his "perfection." Nevertheless his influence increased, and through the financial assistance of Arthur Young, an Englishman, he established short-lived phalansteries at Condé-sur-Vesgres and elsewhere. After the Revolution of 1848 he was elected to represent the Department of the Loire in the Constitutional Assembly in which he introduced an abortive measure to confer the franchise on women. In 1849 he was elected deputy of the Seine, but having taken part in Ledru-Rollin's armed demonstration, on June 13, 1849, against Louis Napoleon's Roman expedition, he was accused of treason and fled to Brussels.

In 1852 he paid a visit to America, where, in New York, he obtained the support of Albert Brisbane [*q.v.*] and subsequently journeyed, largely on horseback, as far as the western part of Texas. On his return he published *Au Texas* (1854), full of extravagant enthusiasm for the land, climate, and inhabitants of the new region. Plans for colonization, temporarily halted by Considérant's brief imprisonment in Belgium on a charge of conspiracy against a neighboring state, were completed immediately after his release, and a company was formed with a capital of $300,000, which purchased 57,000 acres in various parts of Texas. Headed by Considérant himself, the first colonists in April 1855 formed the settlement of Reunion, on the bank of the Trinity River three miles west of Dallas, Tex. Subsequent arrivals brought the number up to between 350 and 500 settlers. Most of these were artisans, with a large sprinkling of writers, musicians, and artists; there were only two farmers in the entire company. As might have been anticipated, with two successive years of drought, the cooperative community was soon in financial difficulties. The opposition of a partially Know-Nothing legislature was overcome by Considérant's eloquent *European Colonization in Texas, an Address to the American People*, but the cooperative feature was abandoned, and Considérant with his wife and mother-in-law, Mme. Clarice Vigoureux, herself a gifted Fourierist writer, withdrew in disgust to San Antonio where he became an American citizen. In 1869 he returned to Paris and died there in poverty and obscurity in 1893. His colony had perished even earlier, the company finally selling all its assets in 1875. To-day an old cemetery with crumbling headstones is the only vestige of Reunion, but many of its descendants became notable in the subsequent history of the state.

**CONVERSE, CHARLES CROZAT** (Oct. 7, 1832-Oct. 18, 1918), composer, lawyer, was born at Warren, Mass., the son of Maxey Manning and Anne (Guthrie) Converse. After student days he went abroad to take up theory and composition with Richter, Hauptmann, and Plaistly, at Leipzig, where he stayed from 1855 to 1859. He met Liszt, but was more influenced by Spohr, who was interested in his work. Returning to America, he entered the Albany Law School, graduating in 1861, with the degree of LL.B. From 1875 on he practised law at Erie, Pa., receiving a doctor's degree from Rutherford College in 1895. He was also a partner in an organ manufacturing concern. In composition, Converse began with a set of six German songs, composed abroad, which included the elegiac "Täuschung" and the expressive "Ruhe in der Geliebten." More ambitious was his "American Concert Overture," which treated the tune of "Hail, Columbia" with a full orchestral setting and development. This was performed at peace jubilees and expositions, as well as at various
Converse

concerts, but did not become a permanent classic because of the somewhat simple conventionality of the song. A "Festouvertüre" won some success in 1870. His American national hymn, "God for us," was written in rather obvious contrary motion to "God Save the King." A cantata setting of the 126th Psalm, given by Thomas in 1888 at a teachers' convention, won much notice. It is closed with a five-voiced double fugue, of such excellence that Sterndale Bennett, impressed by its mastery, persuaded Cambridge University to offer the composer the degree of Mus. Doc., which, however, Converse did not accept. His other cantatas, such as Spring Holiday, were less ambitious in style. Many of his works remained in manuscript including two symphonies, the oratorio The Captivity, several suites, some overtures, three symphonic poems, and a number of string quartets. Of these, the overtures "Im Frühling" and "Christmas" received concert performances. Most widely known was his hymn "What a friend we have in Jesus," which must have been printed many thousand times if collections are included. Converse wrote many other hymns, and made several compilations. Among his songs, such examples as "The Death of Minnehaha" and "The Virgin's Cradle Song" show expressive intensity, but such lyrics as "We miss thee at home," and "My poor lost Geraldine," are frankly popular in style. Converse published also a successful guitar method. He wrote many articles on various subjects, sometimes using the pen name Karl Redan, or anagrams such as C. O. Nevers or C. E. Revons. Among these were "A Symposium on Church Music: How can the New Music profit most from the Old?" in the Homiletic Review (April 1899); "Music's Mother-tone and Tonal Onomatopcy" (Monist, April 1895); "The Verse of the Future" (Open Court, December 1905); "Reminiscences of Some Famous Musicians" (Etude, October 1912); and an attempt to introduce a new pronoun, "thon," condensed from "that one," to take the place of "he or she" and "him or her" (see "thon" in Standard Dictionary). The idea was good, even though the article caused no linguistic change. The composer's last years were spent at Highwood, N. J., where he died.

A. E.

CONVERSE, EDMUND COGSWELL (Nov. 7, 1849—Apr. 4, 1921), inventor, capitalist, philanthropist, was born in Boston, the son of James Cogswell and Sarah Ann (Peabody) Converse. He graduated from the Boston Latin School in 1869 and went to work as an apprentice in the McKeesport, Pa., plant of the National Tube Works, of which his father was founder and president. On Jan. 10, 1882, he was granted Patent No. 252,020 for a lock-joint for tubing. During the next six or seven years he perfected his invention in its details and extended its application, taking out eleven other patents of his own and gaining possession of a number of others. His coupling was the best on the market for water and gas systems, and once it became known it brought millions of dollars of business to the company, of which he had become general manager in 1889. He now turned his attention from coupling tubes to coupling tubing companies, with even greater benefits to himself. In 1892 he consolidated various tube manufacturing companies under a New Jersey charter with a total capitalization of $11,500,000. In 1899 he and William Nelson Cromwell, acting as agents for J. P. Morgan & Company, succeeded in merging about twenty iron and steel tube companies, with others acquired later, into the National Tube Company, which was incorporated at $80,000,000. When the United States Steel Corporation was organized in 1901, Converse retired from the field and gave himself to banking and its ramifications. By this time he was a power in financial circles, doing much to make New York the banking center of the nation and responsible for the rise of such men as Henry P. Davison, Benjamin Strong, and Seward Prosser, who with others were known as "Converse boys." He was president of the Liberty National Bank 1903-07, of the Bankers' Trust Company 1903-13, and of the Astor Trust Company from its organization in 1906 till its merger with the Bankers' Trust in 1917. During the World War he again was head of the Liberty National Bank, while its regular president, Harvey D. Gibson, engaged in Red Cross activities in Europe. He was a director of many corporations (see Who's Who in America, 1920-21). His first wife, Jessie Macdonough Green of New York, whom he had married Jan. 2, 1879, died in 1912; and on Jan. 30, 1914, he married Mary Edith Dunshee of New York. In these latter years he withdrew, so far as circumstances would allow, from his financial interests, played golf, joined genealogical societies, and experimented with possibilities of life that hitherto he had left untried. Conyers Manor, his 2,000 acre estate in Greenwich, Conn., became a show place; apples from its orchards won prize after prize at pomological fairs. In 1910, when the district between Rye, N. Y., and Sound Beach, Conn., was suffering from a water famine, he proved himself a good neighbor by
turning over his large private lake at Stanwich to the use of the public. In 1912 he bought for $75,000 the Gainsborough portrait of Count Rumford, who was a member of his mother's family, and in the same year he gave $125,000 to the Harvard Graduate School of Business Administration. In 1915 he gave the Converse Memorial Library to Amherst College. In 1915, also, he made his Greenwich estate into a bird sanctuary. The winters he spent in a Pasadena hotel, where he died unexpectedly of a heart attack. His will was equally generous to public institutions and to numerous friends and employees. According to the inventory and appraisal filed in the Probate Court of Greenwich, his estate was valued at $30,769,867.

G. H. G.

CONVERSE, JAMES BOOTH (Apr. 8, 1844—Oct. 31, 1914), Presbyterian clergyman, author, was born in Philadelphia, the son of the Rev. Amasa Converse and of Flavia Booth. His father, who was of New England birth and education but had lived in the South, was proprietor of a church paper, the Christian Observer, which was suppressed by the federal government in 1861 because of Converse's vehement opposition to "the spirit of anti-slavery infidelity." After a short incarceration at Fort Delaware, Amasa Converse made his way through the Union lines and re-established his periodical in Richmond, Va. In spite of his father's difficulties James managed to graduate from the College of New Jersey (Princeton) in 1865 and in 1870 completed his preparation for the ministry at the Union Theological Seminary in Richmond. He was ordained the next year by the Presbytery of East Hanover, was pastor for a short time on the Eastern Shore of Virginia, helped to edit his father's paper, which had been removed to Louisville, Ky., 1872-79, engaged in evangelistic work, and was pastor at Blountville, Ky., 1881-87. On June 30, 1871, he married Pamela Hopkins Campbell of Paducah, Ky. In the summer of 1877 he visited the British Isles, Paris, and Switzerland, publishing his impressions the next year as A Summer Vacation—Sketches and Thoughts Abroad. His wife had died in October 1875, and on Feb. 14, 1881 (or 1882) he married Eva Almeda Dulaney of Blountville. The turning point of his life came in 1886. Confined indoors by a snow-storm he happened upon Henry George's Progress and Poverty. To him it was still a new book and more than a mere book—a revelation. His thought quickened and his enthusiasm kindled by his reading of it, he turned for further enlightenment, not to other treatises on economics, but—as habit and culture made inevitable—to his Bible. The results of his inquiry were published privately at Morristown, Tenn., in 1889 as The Bible and Land, in which he adopts as much of George's natural-rights philosophy and theory of taxation as he was able, by his exegesis, to find authority for in Holy Writ. Few people could have read the book; its only visible effect was to bring down on the author such disrepute as a subversive thinker as kept him for fifteen years from occupying a regular pulpit. Converse, however, with the support of his wife, was resolutely true to his mission. From 1890 to 1895 he published a periodical, the Christian Patriot, to advocate the authority of the Bible in civil affairs; he printed notes on Exodus in the New Era of Springfield, Ohio; in 1899 he summarized his doctrines in Uncle Sam's Bible, or Bible Teachings about Politics. The little book is written as a series of discussions among two clergymen, a lawyer, their wives, and several other characters; it contains a slight tincture of autobiography and is written with simplicity, reasonableness, and good humor. Though a man of one idea, Converse was no crank. During the last ten years of his life he labored as a missionary in the valleys of East Tennessee, where he set up schools and Bible study classes and made himself beloved by the mountaineers. His last appeal to a generation too sophisticated, or too heedless to listen, was There Shall Be No Poor (1914) published by his wife after his death.

G. H. G.

CONVERSE, JOHN HEMAN (Dec. 2, 1840—May 31, 1910), locomotive builder, was born in Burlington, Vt., the son of a Presbyterian minister, Rev. John Kendrick Converse. His mother was Sarah Allen, daughter of Hon. Heman Allen, member of Congress from Vermont. John prepared for college in the Burlington High School. In 1861 he received the degree of A.B. from the University of Vermont. In 1864 he was employed as a railway clerk by the Chicago & Northwestern Railway Company. Two years later he entered the employ of the Pennsylvania

360
Converse

Railroad Company where he made the acquaintance of Edward H. Williams, a General Superintendent. Williams took an interest in the young man and when he became one of the proprietors of the present Baldwin Locomotive Works offered Converse a desirable position in the concern. Three years later, in 1873, upon the retirement of one of the firm's members, Converse became a partner. In the same year he married Elizabeth Perkins. When on July 1, 1909 the partnership was dissolved and the Baldwin Locomotive Works was incorporated as a stock company under the laws of Pennsylvania, he was elected its first president, which office he held until the day of his death. Although he was deeply interested in every development of locomotive design and construction, from the beginning he was primarily concerned with general financial and commercial administration. Perhaps his greatest single financial coup occurred when, as president of the Baldwin Locomotive Works, he floated successfully $10,000,000 of first mortgage bonds, bearing interest at five per cent.

Converse's activities were not confined solely to locomotive construction; for he was a leader in many financial, patriotic, benevolent, religious, and educational projects. His financial contributions to many institutions, particularly the University of Vermont, were notable. He was elected president of the trustees of the General Assembly of the Presbyterian Church and vice-moderator of the Presbyterian General Assembly at the St. Louis meeting in 1901. For a long time he served as a trustee of the theological seminaries at Princeton and the University of Vermont. His educational policy was far-sighted. By his writings and lectures, during the last fifteen years of his life, he advocated widespread public intellectual guidance by the universities of the country, believing that the universities could accomplish this result through the medium of circulating libraries, extension schools, and a change in the course of studies. He was interested in educational institutions, not only for the general culture obtained from the study of the humanities but for the specialized courses dealing with the social, political, and economic problems affecting the well-being of society; he believed that the relative importance of the general-culture courses had diminished because of the increasing number of college graduates who were entering business as their life-work, and because of the changed nature of the methods of conducting business enterprises. Some of his theories are expressed in an address, The Twentieth Century University, delivered before the Associated Alumni of the University of Vermont in 1898, and in a paper "Higher Education for Business Pursuits and Manufacturing," in the Annals of the American Academy, vol. XXVIII (1906). Those who knew him well declared that Converse realized the enormous power which his great wealth conferred upon him and that he always tried to use "his splendid talents and large resources in the Service of God and man."

[History of Baldwin Locomotive Works 1831–1923 (1923); Obituary Record, University of Vermont, I, 157 (pub. 1895, Suppl., June 1910); John W. Jordan, Colonial and Revolutionary Families of Pa. (1911), II, 1099.]

H. S. P.

CONWAY, ELIAS NELSON (May 17, 1812-Feb. 28, 1892) was born in Greene County, Tenn., the youngest of seven sons of Thomas and Ann (Rector) Conway. The family traced its history back to the Conways resident upon the Conway River in north Wales during the thirteenth century. The first member of the family to come to Virginia was Thomas, who arrived about 1740. He had only one son, Henry, who was an officer in the Revolutionary War. To preserve his slaves and other property from capture and confiscation by the British, Henry put them in charge of his son Thomas and John Sevier, son of a companion in arms, and sent them into Tennessee. Here Thomas made his home and became a member of the Senate of the State of Franklin during its brief life. To him were born seven sons and three daughters. To his sons he gave all the educational advantages possible, not the least of which was association with Andrew Jackson. All who lived beyond young manhood attained some distinction. The three daughters married into the Sevier family. When Elias was only six years old his father moved with his family to St. Louis and later settled in Saline County, Mo. Here Elias was given the best educational advantages to be found in Saline, Boone, and Howard Counties. In 1833 he went to Arkansas, whither his older brothers Henry W. and James Sevier [q.v.], had gone in 1826, and at once engaged in surveying the northwestern counties. In 1835 President Jackson appointed him auditor of the territory. When the territory became a state, with his brother James as governor, he was continued in this office, which he held for fourteen years. A part of his duties as auditor was to administer the public lands of the state. The federal government was still issuing military-bounty land warrants and a good many of these were issued on lands located in Arkansas. Many of the beneficiaries never saw their grants and in course of time their lands were sold for taxes. In 1840 Conway laid before the legislature a well-prepared plan for giving these lands to actual settlers. His plan was adopted by the
Conway

legislature. It attracted a good deal of attention outside the state and probably furnished a model for the bills which finally led to the Homestead Act of 1862.

In 1852 Conway was nominated for governor by the Democrats and was elected by a majority of 3,028 over Bryan H. Smithson, Independent Democrat-Whig. He served two terms of four years each. The chief problem confronting him was to wind up the affairs of the Real Estate Bank and the State Bank, and save the credit and honor of the state. The bank had been chartered during the administration of his brother, James S. Conway. No doubt some of the men connected with the banks were honest, but contemporary investigations revealed a good deal of corruption and the historian Hallum (post, pp. 52, 57) reached the conclusion that the whole affair was a swindle from the beginning. Both banks suspended specie payments soon after opening, but they controlled some of the most influential newspapers, kept friends in the legislature, and through mortgages brought pressure to bear on officials, including a member of the supreme court, so that it was impossible to bring them to book. Soon after his inauguration Gov. Conway determined to wind up their affairs and kept at the job for eight years without fear or favor, though great efforts were made to block the way. At the close of his administration (1860) he was able to report that $1,090,000 out of $3,199,000 in state bonds issued to these banks had been retired. Conway took an active interest in internal improvements, such as good roads, levees to protect overflowed lands, and railroads. Several railroad companies received land grants and a part of the line between Little Rock and Memphis was in operation by the close of 1860. The Governor urged the legislature to improve educational conditions, but saw little accomplished beyond the organization of the state school for the blind. He worked on the principle of economy and at the close of his second term reported a handsome surplus in gold and silver. Although reared by a mother religiously austere, he never joined any church. Drinking and gambling were common in his day, but he neither drank nor gambled. His success in public life was due to his character and not to "politics," for he refused to campaign. After his term expired he took no further part in public life. He never married.

D. Y. T.

CONWAY, FREDERICK BARTLETT

(Feb. 10, 1819–Sept. 7, 1874), actor, was born at Clifton, England. His father, William A. Conway, also an actor, came to the United States in 1821, and committed suicide by leaping from a steamship off Charleston, S. C., in 1828. Frederick Bartlett had developed a "fair position" on the English stage before he came to America to try his fortunes. He opened here as Charles Surface in The School for Scandal, at the Broadway Theatre, New York, on Aug. 19, 1850. In October he appeared at the Walnut Street Theatre, Philadelphia, as Claude Melnotte. His acting attracted attention, and he was engaged by Edwin Forrest to play Iago to that star's Othello, and De Mauprat to his Richelieu (N. Y. Times, Sept. 8, 1874). His first wife having died, in 1852 he married an American actress, Sarah Crocker, the sister of Mrs. D. P. Bowers (Elizabeth Crocker) [q.v.], also well known on the stage. They were daughters of William Crocker, a Methodist preacher of Ridgefield, Conn. (D. W. Teller, History of Ridgefield, Conn., 1878, p. 134). Two years later he played Armand to the Camille of Jean Davenport Lan-
der, whose production of that play was the first in America, preceding the more famous one by Matilda Heron. Conway, not E. A. Sothern, was accordingly the original Armand in America. Thereafter Mr. and Mrs. Conway played much together, making joint starring tours, and, as was then the fashion, appearing with the local stock companies. In 1855 they played an engagement at the Boston Museum, for example, being "supported" by such actors as William Warren—a far finer player than Conway. Here they acted Morton's All That Glitters Is Not Gold. In 1859 they leased Pike's Opera House in Cincinnati, and endeavored to conduct a stock company there, but the venture failed. In 1861 they visited London, acting at Sadler's Wells. In 1864, Mrs. Conway, who appears to have been the executive member of the family, leased the Park Theatre in Brooklyn, which became known as Conway's Theatre, and was for many years thereafter a fashionable amusement resort in that city. Here they both appeared in the majority of the bills, and here their two young daughters, Lillian and Minnie, made their debuts. Programs of the theatre show that Conway played Malvolio to his wife's Viola in 1864, but that evidently Irish plays were more popular than the classics, for we find records of The
Conway

Colleen Bawn, Peep o' Day, or Savourneen Deelish (its nature indicated by such scene descriptions as "The dark valley—terrible leap for life!" or "Twine the dear green flag with the Stars and Stripes"), and Green Bushes, or the Hunter of the Mississippi—a Romantic Irish Drama. In the absence of the text, the connection between Ireland and the Mississippi is not entirely clear. There was also a "sensational drama" made from the popular American story, Cudjo's Cave, and Conway played Richelicu in The Three Guardsmen. The programs suggest rather the work of a routine stock company catering to a romantic public taste than the productions of original and creative artists. T. Allston Brown (A History of the New York Stage, vol. I, 1903, p. 384) says that Conway was "a good all-round actor. He was considered the best John Mildmay in Still Waters Run Deep ever seen on the American stage, and he was excellent as Armand in Camille." Quite evidently he was popular, too, in romantic Irish roles. But there is little in his record to indicate more than the proficient, routine leading man. A contemporary described him as "somewhat pompous in manner." He died at his summer home, Manchester, Mass. A grandson, Conway Tearle, carried the name into the moving pictures.

[T. Allston Brown, Hist. of the Am. Stage (1870); J. N. Ireland, Records of the N. Y. Stage from 1730 to 1860, vol. II (1867); Eugene Tompkins, The Hist. of the Boston Theatre, 1834–1901 (1908); Laurence Hutton, Plays and Players (1875); obituaries and other articles in Evening Post (N. Y.), Sept. 7, N. Y. Herald and N. Y. Tribune, Sept. 8, and N. Y. Times, Sept. 8, 9, 10, 11, 1874; programs of Conway's Theatre, Brooklyn]

W. P. E.

CONWAY, JAMES SEVIER (Dec. 9, 1798–Mar. 3, 1855), governor, was born in Greene County, Tenn., a son of Thomas and Ann (Recor) Conway. He went from Missouri to Arkansas in 1820 with his brother under contract to survey public lands, and became the first surveyor-general of Arkansas Territory. In 1829 he was reappointed by President Jackson and continued in office until the territory was admitted to statehood. He soon became master of a large cotton plantation and more than a hundred slaves on the Red River in Lafayette County, but continued his work in surveying, marking a part of the western boundary of the territory in 1825 and cooperating with a commission from Louisiana in 1831 in surveying the southern boundary. In both cases his work was well done. On Dec. 21, 1826, he married Mary J. Bradley, formerly of Nashville. Conway's great ambition, to become the first governor of the state, was realized in 1836. No real parties had existed in the territory, but small groups and mass conventions meeting in different counties asked him to run for office. The ticket he headed was called "Democratic-Republican," though this hyphenated form was no longer used in the East. It supported Van Buren. Absalom Fowler was nominated in the same way on the "People's" ticket, which supported Hugh L. White for president. It is interesting to note that, while Conway received 5,338 votes and Fowler 3,222, Van Buren received only 2,400, and White 1,238. The most notable event of Conway's administration was the passage of the acts chartering the State Bank and the Real Estate Bank, and the issuance of state bonds to put them on their feet. The speaker of the House became the president of the Real Estate Bank, but continued to hold his place as speaker until he was expelled for killing a member on the floor of the House. Gov. Conway has been severely criticized (John Hallum, Biographical and Pictorial History of Arkansas, 1887, p. 52) for allowing "this piratical crew of fortune seekers" to take the helm from him at the start and "scuttle the financial fame of the state," but the most pressing need of the state was capital; this was the only way the embryonic statesmen knew to get it, and other states were doing the same thing. The failure of the banks and their subsequent dark history could not be foreseen. No one has ever questioned the integrity of Conway in connection with them; he was a man of unchallenged probity. In 1836, federal funds to the amount of $25,000 were turned over to him to pay Arkansas volunteers called into federal service. These funds he, because of illness, turned over to an army officer who proved careless in his accounts, and a judgment was secured against Conway for a considerable sum unaccounted for. Congress, however, upon the recommendation of Reverdy Johnson, chairman of a committee to investigate, cancelled the debt (Senate Document No. 126, 29 Cong., 2 Sess; Statutes at Large, IX, 687). Twice Gov. Conway urged the legislature to enter upon an educational policy. Upon the expiration of his term (1840) he retired to his plantation, where he died and was buried. His brother, Elias N. Conway [q.v.] became governor in 1852 and undertook to restore the credit of his state.

D. Y. T.

CONWAY, MARTIN FRANKLIN (Nov. 19, 1827–Feb. 15, 1882), free-state leader, first congressman from Kansas, was the son of Dr.
Conway

W. D. Conway and Frances, his wife, who lived in Harford County, Md. He left school at the age of fourteen and went to Baltimore, where he learned the printer's trade. While working as a compositor he aided in founding the National Typographical Union, studied law, and was admitted to the bar. He was married to Emily Dykes in June 1851. Three years later they removed to Kansas. As correspondent for the Baltimore Sun he reported conditions in the new territory for some time after his arrival. His letters attracted attention and he soon became one of the recognized leaders of the free-state movement. He was elected a member of the first territorial legislature but resigned without taking his seat. He took an active part in the Big Springs convention, Sept. 5, 1855, which formulated the platform of the free-state party. A few weeks later he was elected a delegate to the Topeka constitutional convention and wrote the resolutions offered by that body. State officers were elected under this constitution, and Conway was chosen one of the supreme court justices of the territory. In 1858 he was elected a delegate to the Leavenworth constitutional convention of which he was made president. In 1859 he was nominated for representative in Congress by the Republicans and elected by a majority of 2,107 votes over John Halderman, his opponent. Kansas did not become a state until Jan. 29, 1861, and the Congress to which he had been elected expired on Mar. 4 following. He served during this short interval, being the first congressional delegate from Kansas, was promptly renominated, and elected again in June 1861. Conway was dubbed "the silver tongued orator of the West" and "the Patrick Henry of Kansas" (Kansas Historical Collections, V, 45; X, 186). In the Thirty-seventh Congress he was noted for his radical utterances on the slavery question. Soon after the first session began he made a speech in which he declared that the paramount object of the federal government should be immediate and unconditional emancipation. Until such a policy should be adopted, he said, he would "not vote another dollar or man for the war." "Millions for freedom but not one cent for slavery," was one of his epigrams (Congressional Globe, 37 Cong., 2 Sess., pt. 1, Kan. Hist. Coll., vols. V (1866); VI (1866); VIII (1890); X (1895); XI (1910); XIII (1912); and XVI (1923)].

T. L. H.

CONWAY, MONCURE DANIEL (Mar. 17, 1832—Nov. 15, 1907), preacher, author, was born near Falmouth, Stafford County, Va., the son of Walker Peyton and Margaret E. Daniel Conway. Through his mother he was descended from the Moncures, and he was related to other distinguished Virginia families. His father was a slave-owner, but unlike most neighbors of equal prominence in the community was a devout Methodist, and Moncure was brought up in the strict traditions of that sect. After studying at Fredericksburg Academy he entered Dickinson College, Carlisle, Pa., as a sophomore at the age of fifteen, and four months later was advanced to the junior class. Here he was converted to Methodism, somewhat deliberately, as he would have us believe, since he knew that his family wished him to have the experience. After his graduation at the age of seventeen he studied law for a time, but the reading of Emerson turned his thoughts toward the ministry. He first entered a Methodist conference in Maryland and served two circuits there, travelling about with perhaps as odd a collection of books as Methodist preacher ever carried in his saddlebags: the Bible, Emerson's Essays, Watson's Theology, Carlyle's Latter Day Pamphlets, Jeremy Taylor's Holy Living and Dying, the Methodist Discipline, and Coleridge's Aids to Reflection. The young circuit rider soon grew out of sympathy with some of the doctrines of his denomination, and at the age of twenty-one, much to the disappointment of his family, he entered Harvard Divinity School. While here he saw something of Emerson, and met most of the leaders of the Concord and Cambridge intellectual groups.

On his graduation from the Divinity School he became pastor of the Unitarian Church in Washington. His views on slavery had changed as rapidly as his theological views—in one of his
Conway

early writings he had maintained that the negro is not a man—and his outspoken anti-slavery utterances in the pulpit finally led to his dismissal from the Washington church in 1836. He was at once called to the First Congregational Church of Cincinnati. On June 1, 1838 he was married to Ellen Davis Dana, of Cincinnati, to whose influence he credits much of his accomplishment to her death in 1897. During his residence in Ohio he wrote on all sorts of subjects for all sorts of periodicals, including the Atlantic Monthly. Through the year 1860 he edited The Dial, a Monthly Magazine for Literature, Philosophy, and Religion—a journal for which he secured contributions from such diverse men as Emerson and W. D. Howells. In 1862 he removed to Concord, Mass., and edited the Commonwealth (Boston), an anti-slavery paper with more literary tendencies than Garrison’s Liberator. He had published several books and pamphlets dealing with the slavery question, and in 1863 he went to England to lecture in behalf of the North. Early the next year he accepted the pastorate of South Place Chapel, Finsbury, London, an ultra-liberal congregation; and he maintained this connection until 1884. In these years he traveled much and wrote much, even serving as correspondent from the front for the New York World during part of the Franco-Prussian War. Among other activities were researches in demonology, a subject on which he delivered a series of lectures before the Royal Institution. Conway early rejected all supernaturalism from his theology. His religious views continued to become more free and radical, and his political ideas were individual, if not erratic. He advocated a unicameral government, seeing grave evils in a president and a second chamber. He never admitted the wisdom of Lincoln’s policies, maintaining that Lincoln was something of an apostate on the slavery question, that Virginia would not have seceded if it had not been for his unwise call for troops, and that he might have ended the struggle and slavery at once, without bloodshed, if he had issued an emancipation proclamation in 1861. His Autobiography, while not written in the tone of an apologia, shows how his extreme changes of opinion and some of these erratic views came naturally to a man of his ancestry, temperament, and experiences. In 1884 he resigned his London pastorate and returned to America, though he often visited Europe, and from 1892 to 1897 was again pastor of South Chapel. His later years were spent in study, writing, and travel. He died in Paris. Perhaps his most scholarly work is his Life of Thomas Paine (2 vols., 1892) and his edition of Paine’s works

Conway (The Writings of Thomas Paine, 4 vols., 1894-96). Wherever he was Conway came in contact with the leading men of the day—a fact that has led some critics to accuse him of tuition-hunting; but published correspondence seems to indicate that those who knew him valued his acquaintance. Among his more than seventy separately published books and pamphlets are several on slavery, on oriental religions, on demonology, two novels, lives of Paine, Hawthorne, Carlyle, Edmund Randolph, and others, his Autobiography, Memories and Experiences (1904) and his last important work, My Pilgrimage to the Wise Men of the East (1906).

[The chief source of information concerning Conway is his Autobiography. Both the appearance of this work and the author’s death called out many articles in reviews and magazines. The South Place Mag., vol. XIII, no. IV (London, 1908?) is a Conway memorial number. See also Edwin C. Walker, A Sketch and an Appreciation of Moncure Daniel Conway (1908). Addresses and Reprints (1909), a collection of some of his shorter works, contains a bibliography of over seventy titles of books and pamphlets. No bibliography of his contributions to periodicals has been compiled.]

W. B. C.

CONWAY, THOMAS (Feb. 27, 1735–c. 1800), sometimes known as Count de Conway, general in the Revolutionary War, was born in Ireland. Taken to France at the age of six, he was educated in the latter country and joined the French army in 1749. In 1772 he had reached the rank of colonel in this service, having served in the campaigns in Germany, 1760-61. In 1776 Silas Deane, then representative of the United States in France, recommended Conway, with a number of other French officers, for service in America (Wharton, post, II, 202). He was said to have been a skilful disciplinarian, particularly with infantry. Conway came to the United States from Bordeaux in April of 1777, and on May 13 he was appointed brigadier-general in the Continental Army. He was present at the battles of Brandywine and Germantown. In October of 1777, Washington strongly opposed the promotion of Conway to be major-general, on the ground that it was unjust to the able and older American officers. He felt that Conway was a general of no particular distinction, and somewhat of a braggart (Washington, Writings, Ford ed., VI, 121). Upon his failure to be promoted, Conway offered his resignation. The Continental Congress refused to accept it, commissioned him major-general, and on the same day, December 14, 1777, appointed him inspector-general. Emboldened by this evidence of his influence in Congress, Conway entered into correspondence with Gates and others in which he criticized Washington. The contrast between the victories of Gates and the defeats of Wash-
Conway

Washington in the summer of 1777 caused dissatisfaction in Congress and a movement to oust the Commander-in-Chief in favor of the victor at Saratoga.

Through a leak in Gates’s official family, for which James Wilkinson was probably responsible, the affair came to Washington’s knowledge. Wilkinson apparently told a Col. McWilliams, who told Lord Stirling, who passed on to Washington, the statement that Conway had said to Gates, “Heaven has been determined to save your country, or a weak General and bad counselors would have ruined it.” Washington informed Conway in a brief letter what had been reported. In a longer letter to Gates, which Washington sent through Congress, the Commander-in-Chief apprized both Gates and Congress of what had happened (Ibid., VI, 278; see also Washington, Writings, Sparks ed., V, 516). The conspirators in Congress seem at once to have taken cover. Though the concave who desired the removal of Washington has gone down in history as the “Conway Cabal,” Conway was probably not the prime mover in the conspiracy but simply the one who was caught. The cabal failed utterly of its purpose, and did no good to either Gates or Conway. Meantime, in January of 1778, Congress proposed to send an expedition to Canada, under the command of Lafayette, with Conway as second in command. Lafayette came immediately to headquarters, and, according to Henry Laurens, “discovered a noble resentment for the affront offered to his commander Genl. Washington” (Burnett, post, III, 64). Lafayette refused to take Conway as his second, and said if the matter was pressed, he would return to France and take with him the whole French contingent. So Kalb went as second in command, superior to Conway, who finally accompanied the expedition. On arriving in New Hampshire, Conway began to intrigue for a separate command, and was directed on Mar. 23, 1778, to return to Peekskill and put himself under the command of Major-General McDougall. Meanwhile his friends in Congress turned against him, and Henry Laurens, who had at first thought highly of him, wrote that Conway’s “conduct respecting General Washington is criminal and unpardonable, severely censured by all the foreign officers” (Ibid., III, 209). On Apr. 22, 1778, Conway again threatened to resign. Congress, to his chagrin, accepted his resignation, Apr. 28.

His conduct subsequent to this still further outraged the friends of Washington, so that on July 4, 1778, he had to fight a duel with General Cadwalader. The latter’s bullet struck Conway in the mouth and passed through the upper part of his neck. It seemed at first that the wound would be fatal, and while hovering between life and death on July 23, Conway wrote Washington a complete apology for all the injury he had done (Washington, Writings, Sparks ed., V, 517). However, he recovered and returned to France, where he rejoined the army and in 1779 was stationed on the staff of the Army of Flanders. In 1781 he went out in command of a regiment to Pondicherry in India, where he became a maréchal-de-camp in 1784 and finally in 1787 governor-general of the French possessions in India. In December of 1787 he was made a Commander of the Order of St. Louis. In 1793 he was back in France where he espoused the Royalist cause, for which he was compelled to flee the country. He died in exile. He married the daughter of Maréchal Baron de Copley.

The documents on the “Conway Cabal” were gathered by Jared Sparks in his Writings of Washington, appendix, vol. V (1834). To this certain others were added by W. C. Ford in his edition of Washington’s Writings, vol. VI (1890), and by the publication of the Journals of the Continental Congress for 1777 and 1778 (Lib. of Cong., 1907–08). A more substantial addition was made by Dr. E. C. Burnett’s investigation in the Laurens Papers and his Letters of the Members of the Continental Congress, vol. II and III (1923–26). See also Francis Wharton, Revolutionary Diplomatic Correspondence of the U. S., vol. II (1886); James Wilkinson, Memoirs (1811); J. T. Austin, Life of Elbridge Gerry (1828). J.

CONWELL, HENRY (c. 1745–Apr. 22, 1842), Roman Catholic bishop, was born in Moneymore, Londonderry, Ireland. His studies for the priesthood were made in Paris. He was ordained priest in 1776, and for twenty-four years before coming to America he was vicar-general in the ancient metropolitan see of Armagh. Appointed bishop of Philadelphia by papal letters dated Nov. 26, 1819, he was consecrated in London by William Poynter, the vicar apostolic of the Southern District, on Sept. 24, 1820, and arrived in Philadelphia about the end of November in the same year. Soon after his arrival some domestic difficulties with a rebellious priest, William Hogan, opened a long-drawn-out controversy which was, unhappily, the significant episode of Conwell’s career. The lay trustees at St. Mary’s, which was then the cathedral church, claimed the right to retain Hogan in his pastoral office despite the fact that the bishop had deprived him of the exercise of faculties of the priesthood. Litigation followed in which it was shown definitely that the charter granted by the legislature of the state gave the trustees no powers to choose or name their own pastors. It was proved also that the canon-law title to “Patronage” claimed by the trustees did not exist in the churches of America. The trustees now en-
Conwell
deavored to have the charter changed, but a de-
cision of the state supreme court in January
1822 rejected the proposed amendment. After
the middle of May 1821, the Cathedral, St.
Mary's, was closed to the bishop and the Catholic
congregation, the trustees taking the stand that
they had the sole right to the control and admin-
istration of temporalities. Those who remained
loyal to the bishop were forced to recede to St.
Joseph's Chapel which was enlarged for their ac-
commodation. Later it was found that legal title
to ground and buildings was still held in the
name of the original purchasers and their suc-
cessors by will, not in the name of the corpora-
tion or its trustees. In October 1826 an en-
deavor was made to come to an understanding
and terms of peace. An agreement was drawn up
defining the rights of each of the contending par-
ties. This pact was by previous consent submit-
ted to the Propaganda at Rome to be judged ac-
cording to the rules of the general law of the
Church. The agreement was rejected by the Sa-
cred Congregation as harmful to the rights of
Church government and the sacred ministry.
Bishop Conwell was now called to Rome to give
an account of the causes of the troubles in Phila-
delphia, and discuss a remedy. In the mean-
time the first Provincial Council of Baltimore
made a request that Francis Patrick Kenrick be
appointed coadjutor to the aged prelate and ad-
ministrator of the diocese. This request was
granted. Bishop Conwell returned, retaining the
title Bishop of Philadelphia but with no powers of
administration. He lived in retirement. Dur-
ing the closing years of his life he was almost
blind and quite deaf. He died in Philadelphia at
the age of ninety-six.

lets printed during the Hogan Schism, 1821–27, a series
of about seventy; copies of unpublished correspondence
between Bishop Conwell, the Trustees at St. Mary's,
and the Congregation de Propaganda Fide, 1816–40; obituaries in Public Ledger, North American and Daily
Advertiser, and U. S. Gazette of Phila., Apr. 23, 1842.]
F. E. T.

CONWELL, RUSSELL HERMAN (Feb.
15, 1843–Dec. 6, 1925), clergyman, was the son
of Martin and Miranda Wickham Conwell of
South Worthington, Hampshire County, Mass.
The father was an Abolitionist and their farm
home was a station of the “Underground Rail-
way” and sheltered many a runaway slave. It
was a plain home of poverty and hard work, but it
had a certain intellectual atmosphere and Rus-
sell developed early into an extensive reader. At
the age of fifteen he ran away and worked his
way to Europe on a cattle ship. In 1859 he
graduated at Wilbraham Academy where he sup-
ported himself largely by his own exertions. Af-
after a year spent in teaching, he entered Yale,
taking the academic and law courses together
and earning his expenses by work in a hotel. In
the fall of 1862 he raised Company F, Massa-
chusetts Volunteer Militia in the Hampshire re-
gion of the state. This company, of which he
became captain, was known as the “Mountain
Boys.” His term of service was spent in North
Carolina and Virginia, and so great was his re-
putation as a recruiting officer that he was asked to
raise Company D, 2nd Massachusetts Heavy
Artillery, of which he was elected captain. He
became lieutenant-colonel on the staff of Gen.
McPherson, where he saw much service and was
severely wounded at Kennesaw Mountain. He
was admitted to the bar in 1865, and went to
Minneapolis where he practised law and founded
the Daily Chronicle. After three years of pro-
fessional and civic activity his health failed and
he went abroad as immigration agent for Minne-
sota. After the recovery of his health he began
a career of intense activity in Boston as lawyer,
editor, lecturer, and author. He founded the
Somerville Journal and the Boston Young Men's
Congress.

In college he had become an avowed atheist,
but after his wound at Kennesaw Mountain he
turned to religion, and after the death of his
wife in 1872, this experience deepened. Taking
up a decadent Baptist church in Lexington, Mass.,
he achieved a remarkable success. He was
ordained there in 1879, and after eighteen
months was called to the Grace Baptist Church
of Philadelphia, which was struggling with debt
and discouragement. Under his leadership this
church entered on a great career of prosperity,
and in 1891 dedicated its new home, the great
Baptist Temple, seating 3,000 people. Out of a
night school in the basement of the church, with
a corps of volunteer teachers, grew Temple Uni-
versity, a college for working people, which had
instructed more than 100,000 pupils in Con-
well's lifetime. He was also responsible for the
foundation of three hospitals. His famous lec-
ture, Acres of Diamonds, whose proceeds were
devoted to the education of more than 10,000
young men, was given more than 6,000 times. He
was prominent as a lecturer on a great variety of
subjects for more than sixty years. Among his
numerous books are campaign lives of Grant,
Hayes, Garfield, and Blaine, and biographies of
Spurgeon, Bayard Taylor, and John Wana-
maker. Other titles are: Lessons in Travel
(1870); History of the Great Fire in Boston

307
Conyngham

(1873); Woman and the Law (1876); and Why Lincoln Laughed (1922). In 1923 he was awarded the Bok Prize of $10,000 by the people of Philadelphia. Conwell had the gifts of the popular orator and his appeal was preeminently to the plainer sort of people. It has often been pointed out that his ideals of success were nothing more than the popular materialistic ideals of his day, though he always coupled philanthropy with money-getting, in precept and practise. In 1865 he married Jennie Hayden of Chicopee Falls, Mass., who died in 1872. In 1874 he married Sarah Sanborn of Newton Center, Mass., who died in 1910. The children were a son and a daughter by the first marriage and a daughter by the second.

[The authorized life of Conwell is Russell H. Conwell and his Work (1917) by Agnes Rush Burr. This book contains portraits and his famous lecture, Acres of Diamonds. Other biographies are Albert H. Smith, The Life of Russell H. Conwell (1889); Robert J. Burdette, The Modern Temple and Templars (1894); and R. Shackleton, Life and Achievements of Russell H. Conwell (1915). In addition to the above, a radically different view of Conwell and his work is presented by W. C. Crosby in "Acres of Diamonds," an article in the American Mercury for May 1928. Probably the truth about him in some important respects lies somewhere between the view of this writer and that of the more laudatory biographies.]

F. T. P.

CONYNGHAM, GUSTAVUS (c. 1744-Nov. 27, 1819), naval officer, was born in County Donegal, Ireland. He was the son of Gustavus Conyngham and his wife, a cousin, and the daughter of Gabriel Conyngham. The family was a landed one, of gentle origin, having descended from William Cunningham, fourth earl of Glencarn (d. 1547), in the peerage of Scotland. A member of this family, Redmond Conyngham, founded the shipping house of Conyngham and Nesbitt in Philadelphia. He was a cousin of the younger Gustavus, who emigrated to Philadelphia in 1763 and entered the service of his relative as an apprentice. Going to sea, he learned navigation on board one of his cousin's vessels, and within a few years was given the command of another, the ship Molly. In September 1775, he sailed from Philadelphia as master of the brig Charming Peggy, for Europe, with a cargo of flax-seed, intending to return with a ship-load of military supplies. The desired articles were purchased in Holland, but unfortunately the British consul in Ostend was informed of their character and prevailed upon the Dutch government to prevent the sailing of the Charming Peggy. Conyngham was stranded in Europe, but being of a resourceful character was not long unemployed. On Mar. 1, 1777 the American commissioners in Paris, filling out one of the blank commissions of the Continental Congress, ap-pointed him to the command of the American lugger Surprise, and two months later he sailed from Dunkirk on a cruise. Within a few days he returned to port with two valuable prizes, the British packet Prince of Orange and the brig Joseph, with a cargo of wine, lemons, and oranges. As the result of a protest made by the British ambassador in Paris, the French government seized the Surprise, released the prizes, and arrested the American commander and his crew. Conyngham soon obtained his release, however, and on July 16 sailed on another cruise, under a new commission from the American commissioners, appointing him captain and commander of the Continental cutter Revenge. He cruised in the North and Irish seas and in the Atlantic Ocean, taking many prizes, burning some, and sending others into Spanish ports. This bold adventuring into waters where British supremacy had been seldom challenged caused much excitement in London, greatly alarmed the coast towns, increased the cost of insurance, and made the name of Conyngham to be more dreaded than had been that of Thurot, the famous French corsair, in the Seven Years' War. Prints were issued in London and Paris caricaturing him. One of these represented him as a ferocious pirate of gigantic and powerful frame, with a belt full of pistols, and in the right hand a sword of great size. The legend beneath it described the American captain as "la terreur des Anglais."

During the early part of 1778 Conyngham cruised with much success out of Spanish ports. One of his cruises extended as far as the Azores and the Canary Islands. Finally, owing to British protests, the Spanish government became less hospitable and Conyngham sailed for the West Indies. Off St. Eustatius he captured two British privateers, with valuable cargoes. Turning his prow homeward, he arrived in Philadelphia on Feb. 21, 1779, with a ship-load of military supplies. In eighteen months he had taken sixty prizes (Neeser, post, p. xlvi). The Revenge was now sold to some Philadelphia merchants, fitted out as a privateer, and sent to sea with Conyngham in command. Leaving the Delaware, he sailed for a cruise off New York and soon after arriving at his cruising grounds, was captured Apr. 27, 1779, by the British naval vessel Galatea, and later imprisoned in the "condemned dungeon." In the following July he was sent to England in irons and confined first in Pendennis Castle, Falmouth, and later in Mill Prison, Plymouth. As a punishment for what the British chose to regard as piratical depredations on their commerce, his confinement was made unusually severe. At first put in irons, often lodged at night
Coode

in the "black hole," and at no time supplied with proper and sufficient food, he underwent sufferings from which he never fully recovered. The Continental Congress retaliated by subjecting an officer of the Royal Navy to close confinement in the American prison in Boston. Twice Conyngham attempted to escape. Finally, on Nov. 3, 1779, he made a third attempt and succeeded in digging his way out of Mill Prison—"committing treason through his Majesty's earth," as he expressed it. Reaching London he found friends and money, went to Holland, and at Texel embarked on the Alliance, flagship of John Paul Jones, which after a cruise put into Corunna. Here Conyngham took passage for America on board the Experiment. On Mar. 17, 1780, this vessel fell into the hands of the enemy and shortly the adventurous captain once more found himself within the confines of Mill Prison. A year elapsed before he was exchanged. He was preparing at Nantes for a cruise in the ship Lanyon when the news of peace arrived. After the Revolution Conyngham returned to the merchant service. He tried to reenter the navy, but failed. He petitioned Congress for compensation for his Revolutionary services, but his prayer was not granted. During the War of 1812 as a member of the Common Council of Philadelphia he assisted in the defense of that city. He and his wife, Ann (Hockley) Conyngham, whom he married in 1773, are buried in St. Peter's churchyard, Philadelphia.

COODE, JOHN (d. 1709), adventurer, emerged from obscurity when, in 1676, he took a seat in the Maryland Assembly as a delegate from St. Mary's County. He immediately became active in proceedings for the protection of the frontier from the Indians. Subsequently he was charged with accusing Catholics of committing murders that were usually laid to Indians. He became an associate of Josias Fendall as early as 1681. The two were arrested that year on a charge of attempting to stir up mutiny and sedition. Coode was not found guilty but was reproved for his "love to amaze the ignorant and make sport with his wit." The governor and council requested that Coode, while under indictment, be suspended from his seat in the lower house of the Assembly. In the dispute that arose from this request it was stated that at a session of the St. Marys county court in which Coode was sitting as a justice of the peace he, who had once been a clergyman, behaved so debauchedly and profanely that the court issued an order to put him under bonds to keep the peace; that he contumaciously tore and disobeyed the order; that the proprietor then vacated his commission as a justice of the peace; and that since then Coode had for revenge persisted in spreading false scandalous reports, uttering nutritious and seditious speeches, and threatening a force of ten thousand men to subvert the government. Coode's opportunity came in 1689 when a messenger's death caused delay in an official recognition of the new Protestant monarchs of England by the Catholic government of Maryland, which the preceding year had joyfully acclaimed the birth of a Catholic heir to the English throne. The failure of such recognition gave credence to an oft repeated rumor that the Catholics were in a conspiracy with the Indians to massacre the Protestants, and in July of this year Coode, as captain of the militia of a "Protestant Association" with about seven hundred men at his command, seized the government. In a series of falsehoods, mixed with some truth, he represented to the King that the proprietor had forfeited his rights and that the Association had acted only in the interest of his Majesty's service and the Protestant religion. Assuming the title of general he, in the name of the King, called for the election of an Assembly and to this body he and his associates surrendered the supreme authority which they had usurped. In August 1690 he sailed for England to prove his charges against the proprietor, saying on the way over that what he had done "was in prejudice or revenge to the Lord Baltimore." He was among those recommended by the first royal governor to a seat in his council, but was not appointed. He was elected to the Assembly in 1696 but was denied a seat, on the ground that he had once been a Roman Catholic priest and was therefore ineligible. He then hatched a plot against the governor, was indicted by grand jury, and fled to Virginia. At this time he was characterized as "so hainously flagitious and wicked scarce to be paralleled in the Province." In 1701 he was pardoned on his own abject petition. He was again elected in 1708, but, after sitting a few days, was again excluded. He died in March 1709, leaving a widow (Eliza), three sons, three daughters, and four plantations.

[The Archives of Maryland contain about all that is known of Coode. The most important secondary sources are B. C. Steiner, "Protestant Revolution in Maryland" 369]
Cook

N. D. M.

COOK, ALBERT STANBURROUGH

(Mar. 6, 1853—Sept. 1, 1927), scholar, was seventh in descent from Ellis Cook, who was settled at Southampton, L. I., by the year 1644, and whose great-grandson, Ellis, removed to Morris County, N. J., about 1747. Albert's father, Frederick Weissenfels Cook (1802-74), of Montville, Morris County, had by a second wife, Sarah Barnmore (1824-96), three children, of whom Albert, the eldest, owed qualities of heart to his mother, and intellectual powers to his grandfather, Silas Cook (d. 1852). At the age of five he had read the Bible through, and used a dictionary. At six he began an interrupted schooling, first under a Mr. Whittlesey; at twelve he had some weeks, with a little French and German, at Miss Crane's school in the neighboring Boonton. He spent a year or more of his frail boyhood working in New York City. At fifteen he taught in a country school at Towaco; at Taylortown some of his pupils were older than he. In after years he said that he would not take a million dollars for his experience of poverty. He graduated from the Latin-scientific course in Rutgers College, at the head of the class of 1872, and remained for a year as tutor in mathematics. Thereafter (1873-77) he taught at the Freehold (N. J.) Institute, continued reading poetry, privately studied Greek, and hoped to become a teacher of English at Rutgers. On his return from a year (1877-78) at Göttingen and Leipzig, the promised position was refused him because he had censured the mismanagement of the Rutgers Grammar School. Jacob Cooper [q. v.] now recommended him to the Johns Hopkins University; Cook here became associate in English, and organized the department. Again he went abroad (1881-82) to study Old English, first in London with Sweet, and then with Sievers in Jena, where in 1882 he won the doctorate with honors. He returned to a professorship in the University of California, whence he exerted a yet visible influence upon the schools of the state. In May 1889, he was called to Yale; at his request, in October he was entitled professor of the English language and literature. For thirty-two years he was active in the professorship, not lecturing, but employing an inductive dialectic that was effective in turning graduate students into scholars. He was himself indefatigable in productive scholarship. When he retired in 1921 some of his best research, in the background of Old English poetry, and in Chaucer, was yet to be done. Gradually beset by

angina pectoris, he still produced virtually to the end, taking his work for a patriotic as well as a Christian and universal duty. He was twice married: in 1886 to Emily Chamberlain (d. 1908); and in 1911 to Elizabeth Merrill. Latterly he spent his summers at Greensboro, Vt., and there did much of his constructive work—with intensive hay-farming as an avocation.

Apart from travel abroad, numerous calls to university chairs, honorary degrees, and the establishment of prizes in poetry and philosophy, the chief items in his life were his scholarly publications. Though seldom working at night, in productive capacity he was amazing; and his effect upon his pupils was catalytic. Some seventy-five Yale Studies in English (1868) partly show his stimulus in training doctors of philosophy, who have diffused his eclectic method. A bibliography of over 300 titles speaks for his own research. In Old English, besides adapting Sievers's Grammar (1885, 1903), he published an excellent First Book (1894, 1903) for beginners, and edited Indiath (1888, 1889, 1904), the Christ of Cyneguil (1900), The Dream of the Road (1905), Elegia, Panah, and Physiologus (1919). His Literary Middle English Reader (1915) was a welcome innovation. He did much for the study of the English Bible in its origins and influence; much also for the art of poetry by editing the treatises of Sidney, Shelley, Horace, Vida, Boileau, Addison, Hunt, and Newman. A sample of his scholarly method is The Date of the Ruthwell and Bewcastle Crosses (1913). His philosophy of scholarship may be seen in a presidential address to the Modern Language Association, The Province of English Philology (1898); his ideals in The Artistic Ordering of Life (1898); his style and personal quality in his tribute to Jacob Cooper (1906). A complete Bibliography of his writings up to 1923 was "printed for private circulation" at New Haven in that year. His publications from then on (some posthumous) are chiefly found in Speculum, Modern Language Notes, the Philological Quarterly, and the Transactions of the Connecticut Academy of Arts and Sciences. This list gives no hint of his many briefer articles and notes. His interests ranged from ancient to modern literature, and in English from Caedmon to Kipling. He regarded the study of language and literature as inseparable. He united contrary powers, moving patiently, yet, where possible, swiftly. Tender-hearted, he was uncompromising enough not to be popular. He had loyal friends, but was not prone to mingle with scholars of his own age, although he maintained a large and spirited correspondence. He

370
Cook

lavished himself on his accepted pupils, and, hating folly and pretense, was quick to recognize intelligent endeavor. His occasional praise was remembered. The scholar and teacher in him were at one; the affair of his life was the advancement of learning, for the enrichment of private and communal well-being.

L.C.

COOK, CLARENCE CHATHAM (Sept. 8, 1828–June 2, 1900), art critic, author, journalist, was born in Dorchester, Mass. He was the fourth son of Zebedee and Caroline (Tuttle) Cook, both of early American families. Graduating from Harvard in 1849, he studied architecture at Newburgh, N. Y., but gave it up for teaching and journalism. In September 1853, he was married in New York to Louise (De Windt) Whittemore, a widow, and great-grand-daughter of President John Adams. She was intellectual and of artistic tastes, and the marriage proved exceptionally happy. Cook first attracted attention in 1863 by a series of bold and satirical criticisms of a loan collection of paintings at the Sanitary Fair, New York. His spirited column in the New York Tribune, 1863-69, was read by every one, but so scathing, almost brutal, were his attacks on contemporary work that a delegation of his victims visited Horace Greeley to protest (to that editor’s amusement), and Cook was feared, rather than loved, by American artists. In 1869 Greeley sent him to Paris as special correspondent, but war broke out in 1870 and drove Cook home, after some months in Italy. His Tribune connection ceased in the early seventies, owing partly to his resentment that Greeley’s successor, Whitelaw Reid, had curtailed his space. In 1886 had been published his pamphlet on The New York Central Park. Now came the following: a translation of Viardot’s Wonders of Sculpture, with a chapter by Cook on American Sculpture (1873); the text for a heliotype reproduction of Dürer’s Life of the Virgin (1878); an American edition of Lübbe’s History of Art (1878); The House Beautiful (1878), his most successful book; What Shall We Do With Our Walls? (1881); Art and Artists of Our Time (3 vols., 1888); besides various contributions to art magazines and books and, in 1882, a pamphlet savagely attacking the Cypriote antiquities of the Metropolitan Museum of Art and the character of Cesnola under the title

Transformations and Migrations of Certain Statues in the Cesnola Collection. He and Feuardent, his friend and publisher, succeeded for some years in shaking the confidence of the public in the collection and the collector; but they were not archeologists and later Cypriote scholarship has sustained Cesnola (see sketch of Luigi Palma de Cesnola). Cook failed to testify in the lawsuit of Feuardent vs. Cesnola which grew out of the controversy, writing the New York Times that “he had no evidence to give as to facts within his own knowledge”—certainly a reflection upon his pamphlet—yet he continued his vindictive attacks on Cesnola and the Museum from the editorial chair of The Studio, which he occupied from 1881 to 1892, when his name disappeared as editor. The magazine was financially unsuccessful and often unable to appear, but from 1886 it was beautifully illustrated by a variety of new processes, including photo-etching, and Cook helped to introduce the use of etching as a reproductive art. Publication ceased in November 1894.

Clarence Cook ranks as a brilliant pioneer in the professional criticism of art in America. If his pen was dipped in gall, it may have been his reaction to the undiscerning praise then in vogue. He was among the first in America to appreciate the Impressionists. His style was lucid and when he was not on the war-path it was also graceful and urbane. He was much in demand as a drawing-room lecturer. Personally, he was charming. All who knew him recall his pleasant voice and manner, his gentleness and culture, the atmosphere, altogether gracious and graceful, that enveloped him.

[Internat. Studio, Nov. 1900, Supp., p. ii; N. Y. Sun, N. Y. Tribune, Evening Post (N. Y.), June 3, 1900; interviews and correspondence with neighbors and acquaintances.]

F. B. H.

COOK, FLAVIUS JOSEPHUS (Jan. 26, 1838–June 24, 1901), lecturer, was descended from Francis Cook, one of the Pilgrim fathers. He was born in Ticonderoga, N. Y., the son of William Henry and Merett (Lamb) Cook, and grandson of Warner Cook of New Milford, Conn. A farmer’s boy, he attended schools in the neighborhood of his birthplace, and read every book he could obtain. To complete his preparation for college he went to Phillips Academy, Andover, and entered Yale in 1858. In 1861 he broke down in health and was obliged to leave, but later went to Harvard, where he graduated with honors in 1865. Graduating three years later from Andover Theological Seminary, he remained there for another year of post-graduate study. For two years he preached
Cook

in the vicinity of Boston and then went abroad for another two years, studying at several German universities and traveling in Southern Europe, Egypt, and Palestine. On his return, having modified "Flavius Josephus" into plain "Joseph," he resumed preaching and also started to lecture. In 1874 he was invited to lead the Monday noon prayer-meetings in Tremont Temple. He accepted, and under his leadership they increased so amazingly in attendance that a year later they became the Monday Lectures. In 1877 he married Georgiana Hemingway of New Haven, Conn. For nearly twenty years, Cook's Boston Monday lectures were one of the striking features of that city. Year after year, on Monday noon, Tremont Temple was thronged to hear the lecturer "present the results of the freshest English, German, and American scholarship on the more important and difficult topics concerning the relation of Religion and Science," together with "Preludes on Current Reform." As their fame increased the lectures were repeated elsewhere, were published in newspapers in the United States and in England, were again published in book form, and were translated into various foreign languages. A great, burly man, with a massive head covered with reddish hair and beard, Cook spoke in an oracular manner which greatly impressed his audience. The doctrine of evolution and the philosophical theories connected with it were then disturbing the faith of many. It was a great comfort to such to listen to one who was ardentely orthodox in his sympathies, who seemed to have all knowledge at his fingers' ends, and who made so clear and plain that what the scientists and philosophers were saying was either incorrect or entirely in harmony with revealed religion. But his statements were not allowed to go unchallenged either by theologians or by scientists. The latter were especially severe, as may be inferred from the titles of two criticisms of Cook, viz., "Spread Eagle Philosophy" in The Popular Science Monthly Supplement, June 1878, and "Theological Charlatanism," by John Fiske in the North American Review, March 1881. There is no reason to doubt Cook's sincerity, but his learning was not accurate or profound, and he was often unfair to those whose views he opposed. Even his friends also acknowledged that his belief in his own learning and ability was exaggerated. He was sensational in his methods; but, in his own fashion, he helped to convince his hearers that science and philosophy are not at enmity with religion and thus helped to combat obscurantism. Of the twelve volumes of his lectures that were published in book form, the most popular was his Biology (1877). The others were Transcendentalism (1877), Orthodoxy (1877), Conscience (1878), Heredity (1878), Marriage (1878), Labor (1879), Socialism (1880), Occident (1884), Orient (1886), and Current Religious Perils (1888). Cook made a lecturing tour of the world, speaking to great crowds in the British Isles, India, Australia, and Japan. In 1895 he started on a second world tour, but in Australia he suffered a sudden stroke, from which he never fully recovered. Brought back to America, he was able after 1899 to lecture a few times, but in 1901 he died as a result of the grippe. [The chief sources for the life of Cook are articles in the Congregationalist, July 6, 1901, and Zion's Herald, June 21, 1911. Obituaries were published in the N. Y. Tribune, June 26, 1901, and various other journals of the day; but his popularity had greatly declined, so that his death did not attract widespread notice.]

T. D. B.

COOK, GEORGE CRAM (Oct. 7, 1873-Jan. 14, 1924), founder and director of the Provincetown Players, had a New England ancestry and a Middle-Western background. His father, Edward Everett Cook, was a lawyer in Davenport, Iowa; his mother, Ellen Katherine Dodge, a woman of unworldly nature and liberal sympathies. From her the son inherited qualities which were to make him part artist and part seer. Educated at the University of Iowa, Harvard, Heidelberg, and Geneva, he taught English literature at the University of Iowa and later at Leland Stanford. In 1902 he married Sara Herndon Swain of Chicago, and the following year published a quasi-Nietzschean romance, Roderick Taliiferro, a Story of Maximilian's Empire. Then, spurning the academic realm, he went to the gardener's cottage on the family estate and sought to support a literary life by chicken-raising and truck-farming, to the chagrin of his young wife and the scandal of local respectable society. The marriage did not long survive this experiment. An enthusiasm for Nietzsche had led him to an aristocratic Anarchism. Now, drawn toward the local group of Socialists, he revised upon Marxian lines his hopes of the Superman, and in 1911 produced a Socialist novel, The Chasm. A second marriage, in 1908, with Mollie A. Price of Chicago, who bore him two children, Nilla and Harl, was broken up a few years later. He went to Chicago, where he was associate literary editor of the Evening Post, and then to New York, where in 1913 he married Susan Glaspell of Davenport, a fellow writer. Their summers were spent in Provincetown, Mass., seasonally inhabited by artists and writers; and these, under Cook's leadership, organized the Provincetown Players, establishing in
Cook

1915 a tiny Playwrights' Theatre in New York, which within a few years had a profound influence upon the American stage. There had been "little theatres" in America before; the special distinction of this one was its complete break with the tradition of producing exotic European plays, and its program of discovering and encouraging vigorous American talent of a sort not welcome on Broadway. Its success was such that Broadway proceeded presently to enrich itself with many of the talents thus brought to light in the stable-theatre on MacDougal St.

What to another would have been a sufficient achievement remained for Cook a disappointment. Seer more than artist, he had never been fully articulate either in his novels or in his plays, despite the grandeur of their conceptions; meanwhile his creative energies spilled over in talk so luminous and profound, in friendships so stimulating, that they conveyed to all who knew him an impression of true greatness far exceeding his tangible achievements. The little theatre, too, fell short of his dream. "I am forced to confess," he wrote, "that the attempt to build up, by our own life and death, in an alien sea, a coral island of our own, has failed." Haunted by a sense of frustration, he left the scene of what appeared to be his triumph, and went away on his last pilgrimage. The Greece of Pericles had been the earliest, and it was to be the final, symbol of his hopes for a beautiful world to be achieved by the travail of humanity. Accordingly it was to Greece that he went, with his wife, in 1921; and in Greece the seer was instinctively recognized and honored. He fraternized with poets and scholars and peasants; he adopted the peasant costume; he built a wall of Cyclopean rock; that was all: but when he died, in 1924, the shepherds left their flocks and gave him a funeral. "He belongs to us," they said. At the petition of the poets of Greece, the government gave a stone from the sacred ruins of Delphi to mark his grave; the Pythian games were reinstated in his honor; and he has passed into the legends and songs of the Greek peasantry.

[Cook, George Hammell (Jan. 5, 1818-Sept. 22, 1889), geologist and educator, the third son of John and Sarah Munn Cook, was born at Hanover, Morris County, N. J. His paternal ancestors were English who settled in Lynn, Mass., in 1640, but soon after removed to Southampton, L. I., and later to Hanover. His early training was gained at the common country schools. At eighteen years of age, he was employed in surveying for the Morris & Essex and Catskill & Canajoharie railroads. In 1838 he entered the Rensselaer Polytechnic Institute at Troy, N. Y., where Amos Eaton [q. v.] was teaching geology as he understood it. It is a fair assumption that it was through Eaton's influence that Cook's attention was turned toward geology. On his graduation, in 1839, he was employed first as tutor at the Institute, during which time he pursued graduate studies and received the degree of B. S. and M. S. Later he became adjunct professor, and after 1842 senior professor. On Mar. 6, 1846, he married Mary Halsey Thomas. In the same year apparently in doubt as to his calling, or for lack of opportunity, he abandoned teaching and for two years was engaged in the business of glass-making in Albany. In 1848, however, he returned to his profession and was appointed professor of mathematics and natural philosophy in the Albany Academy, of which he became principal in 1851. In 1852 his geological qualifications received recognition through his being sent under state auspices to study salt deposits in Europe, with a view to the development of those of Onondaga County. In 1853, he accepted the chair of chemistry and natural science in Rutgers College, with which institution he retained connection for the remainder of his life. In 1854 he was appointed an assistant to William Kitchell on the geological survey of the state. In 1864, by act of the legislature, he was made state geologist, an office he continued to hold in connection with his professorship in the college until his death. While state agricultural colleges were being established under the Morrill Act, Cook was successful in having the New Jersey institution connected with Rutgers, and became vice-president of the combination. He was also active in the formation of a State Board of Agriculture and became permanently a member of the executive board. In 1879 he interested himself in the subject of agricultural experiment stations and brought the matter before the state legislature, succeeding, the year following, in having one established in New Jersey. He was made director of this station, and was of influence later in promoting the Act of Congress of 1887 creating like stations in all the states.

F. D.]
Cook

Among Cook’s chief geological accomplishments while on the Kittel Survey were his reports on the Greensand beds and the apparent recent subsidence of the coast which was still in progress, a fact made apparent by the buried stumps and logs in the coastal swamps. As state geologist, he worked out the structural relationships of the beds of iron ore and of the fine and potter’s clays. Both of these were matters of economic importance by means of which he might have profited financially, had he been willing to sacrifice his profession. Under his survey too, important work was done in tracing out the continuation of the great terminal moraine in the northern part of the state. The topographic and geologic maps issued under his administration were among the best of any survey up to that date. The water power and water supply of the state were made the subject of investigation and he early advocated the drainage and reclamation, for the purpose of agriculture, of the swamp lands along the Pequest and Passaic rivers. In connection with this work he was made president of the New Brunswick Board of Water Commissioners and a member of the State Board of Health.

His most important publications were his Geology of New Jersey (1872), a volume of 900 pages, and his Report on the Clay Deposits of Woodbridge, South Amboy, and other places in New Jersey (1878), the latter in collaboration with J. C. Smock. His work, with the exception of that on the glacial moraine and the sinking of the coast, was almost wholly of a practical nature. “His reports had the rare merit of plain, concise, yet clear statement of the facts which were understood by those for whom they were written” (Smock, post, pp. 325–26). As a teacher, Cook was beloved by his pupils to whom he had the faculty of imparting confidence in themselves and enthusiasm for their work. With the public at large, he was respected as a thoroughly upright and honest Christian gentleman, one who was ever helpful and humane. He won the confidence of legislatures by his earnestness and honesty of purpose. He worked hard, continuously, and faithfully with never a selfish motive and died suddenly of heart failure in the midst of his labors.

Cook

Extensive vineyards in northern Ohio were owned by the Cook interests. His name was given to a variety of wine grape developed through his selection. He was a connoisseur of wines and maintained that his vintages did not suffer by comparison with the more famous European wines. He continued in the direction of the wine interests until his death at Eureka Springs, Ark., in 1886. Cook’s wife was Harriet Norton of English parentage. They had three children, one of whom carried on the business of the American Wine Company.

W. T. U.

COOK, JAMES MERRILL (Nov. 19, 1807–Apr. 12, 1868), capitalist, politician and financial officer, was the son of James Cook, the head of an established New York family settled in Saratoga County, N. Y. The father was a lawyer and judge living in Ballston Spa, where James Merrill Cook was born. His family had the tradition of education and professional training, and a general liberal education was offered to James. As his earlier schooling drew to a close, however, a preference for business manifested itself, and resulted in a transfer to New York City, where the young man was appointed to a clerkship in a commercial house. He retained close relationship with affairs in his own town, nevertheless, and when about thirty-one years of age returned to Ballston Spa to live, where he became conspicuous in party politics, strongly advocating Whig principles. Much of his time thereafter was spent in running for, and in holding, elective offices. He was chosen a member of the constitutional convention of 1846, and his service in that connection was followed by an election to the state Senate in 1848. He served as state senator 1848–51. From that position he passed to a place as state treasurer. An election contest led to a decision in favor of his opponent, but after a brief period out of office he was named state comptroller, a place which he held from 1854 to 1855.

At this time, New York, in common with a good many other states, was passing through a period of banking disturbance. While the panics and commercial stringencies of the decade 1850–60 were not, even locally, due to the banking system of the State of New York, that system at least did not much alleviate them. Leading citizens rightly ascribed an important influence upon the financial stability of the State to the management and supervision of the banks. In these circumstances Cook was offered and accepted the position of superintendent of the state Banking Department in the year 1856. He was at that time president of a local institution, the Ballston Spa Bank, and, being a man of substantial means, was a large stockholder both in it and a number of other institutions. He was thus in a very distinct way representative of the country banking interests which have always been powerful in New York. His five years of service proved a notable period in the history of the Banking Department. He was able to restore a very substantial degree of order among the banks and to repress and punish many frauds. Moreover his annual reports showed an increasing mastery of financial theory and his last two, those of Dec. 31, 1859, and Dec. 10, 1860, were rightly viewed as documents well above the prevailing level of financial discussion. In these he furnished a thoughtful discussion of the panics of 1857 and 1859 and a keen analysis of the characteristics of the banking law of the state. His notable success in the department of banking was followed by another election to the state Senate in 1864. In 1858 he had been considered by the Republican state convention as a candidate for the governorship, for he represented the same ideas that were entertained by William H. Seward, with whom he was closely associated, but at his own suggestion the candidacy was withdrawn. He was throughout his life largely interested in the local affairs, both business and political, of his own county, and was in a real sense its leading citizen.

H. P. W.

COOK, JOHN WILLISTON (Apr. 20, 1844–July 16, 1922), educator, was born near Oneida, N. Y. His father, Harry Dewitt Cook, decided to seek his fortune in the new state of Illinois upon learning that Congress had authorized the construction of the Illinois Central Railroad. In 1851, when John was seven, the family established a home near Bloomington, and his father engaged in the building of bridges for the railroad. When the road was completed, he became a station-master and grain-dealer. Later, he served two terms in the Assembly, was a cavalry officer in the Union army, and at the time of his death in 1873 was chairman of the State Railroad and Warehouse Commission. His various interests were not without formative influence on his son who, outside of school-hours, assisted him in his office work and accompanied him to political
Cook

R. Joseph. [See Cook, Flavius Josephus, 1838–1901.]

Cook, Martha Elizabeth Duncan Walker (July 23, 1806—Sept. 15, 1874), author, editor, and translator, was born in Northumberland, Pa., the daughter of Jonathan Hoge and Mary (Duncan) Walker. Her father had been a soldier in the Revolution, and was afterward in succession, a judge of the common pleas, of the high court of errors and appeals of Pennsylvania, and of the federal district court. Robert J. Walker [q.v.], her brother, was governor of the territory of Kansas under President Buchanan, secretary of the treasury under President Polk, and, during the Civil War, a prominent supporter of the Union cause. The family moved to Pittsburgh when Martha was about fourteen. She received most of her education from her father, who had a classical as well as a legal training. From him she derived intellectual and literary tastes and a passion for justice which she was never to lose. Her marked social qualities made her an excellent conversationalist and correspondent, and enabled her to draw out the best qualities of those who came in contact with her. At the age of eighteen she married Lieut. William Cook, later chief engineer of the Philadelphia & Trenton Railroad (1836–65) and brigadier-general of New Jersey militia from 1848 until his death (G. W. Cullum, Biographical Register of the Officers and Graduates of the U. S. Military Academy, 3rd ed., 1893). Mrs. Cook, unsatisfied with a life filled solely with social duties, devoted herself to study, the instruction of her children, and literary pursuits. From 1863 to 1864 she was editor of the Continental Monthly, founded in 1862 by James R. Gilmore “to advocate emancipation as a political necessity,” and published in New York. To this periodical she contributed numerous poems, sketches, and tales of transitory interest.

Her admiration for the music and literature of Poland, her sense of outraged justice in the political sufferings of that country, and of the debt of America for the services of Polish émigrés in the Revolution made her a warm if occasionally a somewhat sentimental advocate of Poland’s cause. She was ready at all times with sympathy and with practical assistance and advice in aid of Polish emigrants, thus rendering a service which endeared her name to Poles at home and in America. In 1871 she wrote an indorsement of the Appeal to the Friends of Poland in the United States of America by Count Ladislas Plater, for

meetings. In the companionship of his father and the latter’s numerous acquaintances, John Williston Cook acquired the readiness of address and genial manner which were so characteristic of him in later life. His mother, Joanna Hall Cook, who had been a school-teacher, instilled in him early a love of books and study. After a period of elementary schooling, he entered the Illinois State Normal University. Graduating in 1865, he became principal of the public school at Brimfield, Ill. A year later he returned to his alma mater, where he remained for thirty-three years—the first two as instructor in the training department, one as instructor in geography and history, seven as instructor in reading, and fourteen as head of the department of mathematics. In 1870 he became president of the school, and remained in that office until he resigned nine years later. On Aug. 26, 1867, Cook married Lydia Farnham Spofford of North Andover, Mass. The daughter of a schoolmaster, she was quite familiar with her husband’s problems and gave him much intelligent encouragement. The period 1866–99 was crowded with plans and accomplishments. In 1874, Cook purchased an interest in the Illinois Schoolmaster, which he edited for two years in collaboration with Edwin C. Hewett. With the purchase of the Illinois School Journal in 1883, Cook again essayed the rôle of editor. At the end of the first year, he invited R. R. Reeder to collaborate with him, and this arrangement continued until 1886 when the magazine was sold. Cook was an untiring worker, and the tremendous energy for which he was noted served him in good stead during this period of engrossing activity. His frequent articles on all phases of educational theory and practice and his numerous addresses in many states won him national recognition as an educator. In 1880 he was elected president of the Illinois State Teachers Association; in 1896, president of the Normal Department of the National Education Association; and in 1904, president of the Association. When the Northern Illinois State Normal School was established at De Kalb in 1899, Cook was chosen as its organizer and first president. Here he emphasized the training department, and won his reputation as a teacher of teachers. During this period he published his Educational History of Illinois (Chicago, 1912), and collaborated with Miss N. Cropsey in the publication of a series of arithmetics. The varied activities of his earlier years were continued with unabated vigor until his resignation on Aug. 1, 1919. His death followed three years later.

aid in establishing the Polish Historical Museum at the Château of Rappeswyl, Switzerland. She translated for American readers several works, including, from the French, Franz Liszt's Life of Chopin (Boston, 1863); from the German, Guido Goerres's Life of Joan of Arc which she published as a serial in the Freeman's Journal; and, from the French and German, The Undivine Comedy and Other Poems of Count Sigismund Krasinski. This last work was published in 1875, after her death, "in accordance with her desires and as a tribute of honor to disinterested labor and love of abstract justice." With the exception of her rather desultory verse, Mrs. Cook's literary activities seem to have been founded in practical humanitarian aims rather than in the pure joy of writing. Such examples of her style as are available display a vigorous if somewhat rhetorical manner. Her work, as a whole, bears the stamp of sincerity rather than of great literary value. She died in Hoboken, nine years after the death of her husband.

[A brief character study and biographical sketch of Mrs. Cook is contained in "In Memoriam," an editorial note appended to her translation of The Undivine Comedy and Other Poems (1875). In addition to the publications mentioned above there is an eight-page pamphlet in verse Affectionately addressed to Robert J. Walker, Governor of Kansas, by his Sister, Mrs. Martha Walker Cook (1857). Family history is found in material on Robt. J. Walker. An extended obituary was published in the N. Y. Tribune, Sept. 17, 1874.]

A. L. B.

COOK, PHILIP (July 30, 1817–May 20, 1894), lawyer, Confederate soldier, congressman, was the son of Philip and Martha (Wooten) Cook. The elder Cook was born in Brunswick County, Va., in 1775, and was taken as a boy to Georgia. He served as a major in the 18th United States Infantry in the War of 1812 and at the close of that war set up as a cotton planter in Twiggs County, Ga., where he died in 1841. His son Philip received his college training at Oglethorpe University, an institution then located near Milledgeville, the capital of the state, and was subsequently graduated (1841) from the University of Virginia Law School. For a good many years after he took up his residence at Oglethorpe in Madison County, Cook's life seems to have been uneventful. On the outbreak of the Civil War he volunteered as a private with the Macon County Volunteers, his company being assigned to the 4th Georgia Regiment at Portsmouth, Va. There he was made adjutant of his regiment. After the Seven Days' battles about Richmond he was commissioned lieutenant-colonel. His regiment passed through the battles of Second Manassas and Sharpsburg, and he was promoted to colonel. He was in the brigade of Gen. George Doles, who was killed at the battle of Cold Harbor in August 1864. Cook, promoted to brigadier-general, succeeded Doles in the command of the brigade. He was several times wounded, the last time at Petersburg. He was captured there and remained in the Petersburg hospital until the close of the war. After the return of peace, Cook changed his residence to Americus, Ga., where he practised law until his retirement in 1880. He was a member of Congress from 1873 to 1883. In 1860 he became secretary of state of Georgia and was holding that position at the time of his death in 1894. In public service for twenty-three years, he had held other offices, among them those of a state senator, 1859-60, and 1863-64, member of the constitutional convention of 1865, and member of the commission which erected the present capitol of Georgia. In 1842 he married Sara, daughter of Henry H. Lumpkin, of Monroe County. His son Philip was secretary of state of Georgia from 1898 to 1918. One of Cook's contemporaries said of him: "No man in Georgia was more entirely beloved by the people of the state."

[Cook, ROBERT JOHNSON (Mar. 21, 1839–Dec. 3, 1922), publisher, rowing coach, originator of the Bob Cook stroke, was born near Cookstown, Pa., the son of John Bell and Matilda (Cunningham) Cook, both of Scotch-Irish ancestry and descendants of pioneers of Western Pennsylvania. When he was twenty years of age, inspired and encouraged by his mother, he quit his father's prosperous farm and enrolled at Phillips Academy, Andover, Mass. He entered Yale with the class of 1875, but had to drop back to the class of 1876, with which he graduated. After graduation, he read law in Greensburgh, Pa., and in Pittsburgh and was admitted to the Allegheny County bar in 1879. After two years in law, and a year abroad he became business manager of the Philadelphia Press, a position which he held until 1897, during that time changing a bankrupt paper to one of the most prosperous journals in the country. He was married on Apr. 26, 1881, in Allegheny City, Pa., to Annie Clyde Wells, daughter of Calvin Wells, then owner of the Philadelphia Press. They had three daughters but were divorced in 1897.

In the spring of his freshman year at Yale, Cook wandered down to the boat-house, and asked for a chance to row. The Yale boat club in those days was an exclusive organization, in
Cook

spite of the fact that the crew was being defeated regularly. Cook's request was curtly refused and he was told to keep away. His fighting spirit was roused and day after day he haunted the club. He had already established himself as the best wrestler and boxer in college and no one seemed eager for the job of throwing him out. Finally the captain turned to diplomacy and put Cook in a pair-oar with the strongest and best oar in Yale, hoping in this way to discourage him. In less than a quarter of an hour, Cook, who had never before had his hands on an oar, was pulling the veteran around in a circle. Two weeks later, he was in the varsity boat. That year Yale was again defeated and Cook was elected captain for 1873. All summer and all fall he brooded over the defeat. College rowing in America was then in a very crude state and what little style it possessed had been acquired from professional scullers. The sliding seat was a novelty and most of the crews were still sliding on boards greased with tallow. It was not until the Christmas vacation when Cook, too poor to afford the expense of the trip home, sat in his room reading *Tom Brown at Oxford* that he had an inspiration which still guides American college rowing. He resolved to go to England, somehow, to study English rowing, interviewed President Porter, and won the reserved and scholarly old president's consent. The boat club did not have a dollar in its treasury with which to finance the expedition, but Cook and the same undergraduates who six months before had shut the door of the boat-house in his face, pawned their watches and overcoats and sold their spare furniture, and within a week he was on his way to England. The square-jawed, broad-shouldered young American was cordially received at Cambridge, at Oxford, and by the London Rowing Club. For six weeks he rowed every day and spent the evenings with the coaches. He decided that he would have to modify the orthodox English stroke to fit American boys, that they would not be able to master the exaggerated body swing without a waste of effort and exhaustion. He therefore shortened it and counter-balanced this by emphasizing the form in-board and the finish of the stroke. He returned to New Haven and produced a victorious crew in June. The same year he won the single scull race. He was captain and stroke for four years. From 1876 to 1897, Cook coached thirteen Yale eights, twelve of which were victorious over Harvard. Including the crews he coached as an undergraduate, he won fourteen out of seventeen races against Harvard; two of these races were triangular events in which Cook's crews were de-

feated by Cornell eights coached by Charles E. Courtney [*q.v.*].

In 1896 when Yale and Harvard broke off athletic relations, Cook took the Yale crew to Henley. The Leander Boat Club, composed of former Oxford and Cambridge "Blues," called from as far as South Africa their best oars. Yale was beaten by a fraction of a boat length. The experience convinced Cook that he had refined his stroke too much and on his return he attempted to follow the English stroke more closely. About the same time new policies in his business led to his retirement. He took the change philosophically and became a traveler, spending much of his time in Paris but returning to the house at Belle Vernon, Pa., built by his great-grandfather Col. Edward Cook more than one hundred and fifty years before, to spend his last days. Cook was not only a great teacher of rowing but also of men. Industrious, courageous, and honest, he left with hundreds of boys who came under his teaching, an imprint of sturdy character which they carried through life. Many offers of generous remuneration from other colleges came to him during the years of his success, but he scorned them and gave to Yale, with no thought of reward, his time and his services for twenty-seven years.

A. H. B.

COOK, RUSSELL S. (Mar. 6, 1811–Sept. 4, 1864), clergyman, was born in New Marlboro, Mass. After a diligent childhood, he set out on the study of law. His main interests shifting to religion, he entered the theological seminary at Auburn, N. Y., and in January 1837 became pastor of the Congregational Church at Lanesboro, Mass. Trouble with his throat caused him in 1838 to abandon the ministry and engage in work for the American Tract Society. Cook brought to it a new spirit—a tireless and explosive determination not only to disseminate publications but to implant principles everywhere, and instantly. He was made corresponding secretary in 1839. During his term of office he put into circulation more than a million volumes. He visited here and there over the widest areas, encouraging sales by appeal sometimes to pure rivalry and sometimes to pure altruism. He merged (1843) the bi-monthly *Trust Magazine* with his new monthly *American Messenger*, and in twelve years increased the circulation
Cook

from 10,000 to 200,000 copies, not counting 2,500 copies in German. He instituted The Child's Paper in 1852 and in two years was printing 300,000 copies. He popularized "colportage," a system by which evangelical itinerants went about the sparsely settled country selling books where possible and giving them away if that course seemed preferable. The scheme was suited to the America of 1841 in which it originated, but it was also adopted in parts of Europe. The Tract Society was widely condemned in the fifties for its evasive attitude regarding slavery, and indeed, while from a large view-point its course may have been defensible, it was actually shown in small and tangible matters to have handled facts loosely. Cook did not find time to reply. Personally, he was moving hither and thither, like a shuttle, about America, and in 1853 and 1856 he visited Europe. During his second visit, in Switzerland, he was seized with an affection of the lungs which necessitated his resigning from his duties with the Tract Society, but, returning home, he still devoted much energy to a Committee for a Better Observation of the Sabbath, with headquarters in New York. He fought his disease stubbornly, visiting in search of relief now Florida, now Maine. He died at Pleasant Valley, N. Y. He was married four times: to Ann Maria Mills of Auburn, in 1837; to Harriet Newell Rand of Pompey Hill, N. Y., in 1841; to Harriet Ellsworth, and to a Miss Malan.

J. D. W.

COOK, TENNESSEE CELESTE CLAFFLIN, Lady (1845-1923). [See Woodhull, Victoria, 1838-1927.]

COOK, WALTER (July 23, 1846-Mar. 25, 1916), architect, was born at Buffalo, N. Y., the son of Edward and Catherine (Ireland) Cook. He entered Yale as a freshman but transferred to Harvard and there received the degree of A.B. in 1869 and A.M. in 1872. He then went to Paris and was one of the earliest Americans to take advantage of the opportunities for architectural training in the École des Beaux-Arts, where he came under the influence of the gifted Viollet-le-Duc, whose atelier was a center of inspirational instruction. His preparation was broadened by further study in the Royal Polytechnic School at Munich. Returning to New York in 1877 he became the dominating factor successively of the architectural firms of Babb, Cook & Willard; Willard, Babb, Cook & Welch; and Cook & Welch. During his long career many commissions were executed, the most notable among which, designed wholly or in part by him, were the De Vinne Press Building, the New York Life Insurance Building, the residence of Andrew Carnegie, and branch libraries for the New York Public Library in New York City, the stadium of the Pan-American Exposition in Buffalo, and many residences. The Choir School of the Cathedral of St. John the Divine characterizes his mature style. In all of his designs there is an evident fitting of the means to the conditions, an application of modern methods and their utilization in the most efficient manner. He brought to the career of architecture a great fund of collateral knowledge, administrative ability, and educational ideals. His professional performance was thorough and distinguished. It notably influenced the achievement of his time. These characteristics were recognized by his fellow architects in elevating him to the position of president of the New York Chapter of the American Institute of Architects and of the Society of Beaux-Arts Architects; of fellow in the Institute (1891); and finally of president for two terms of the American Institute of Architects (1912-14). His intimate interest in the affairs of the Institute was continued to the time of his death, as a member of the Board of Directors. The city of New York made him a member of the Municipal Art Commission (1905-07), consulting architect of the Board of Estimate and Apportionment, and of the Court House Board. As an architectural adviser he was a member of the competition juries for the selection of architects for the New York Public Library and for the University of California. He was also signaly honored by election as a member of the National Institute of Arts and Letters, and as Academician and Chevalier of the Légion d'honneur, France. Walter Cook was "a man of rare qualifications, of wide and genial culture, imbued with that kind of personal dignity and charm which well fitted him to represent the architects of this country on all occasions requiring tact and judgment, executive and administrative ability... He was always simple and 'get-attable' [sic] with a delightful sense of humor, gentle and kindly though ever ready to fight when a principle was involved" (Hastings, post). He was married in Paris on Nov. 18, 1876, to Marie Elizabeth Hugot of Fresnes, Yonne, France. She died in 1888, and on Feb. 25, 1890, he was married to
Cook

Louise Sprague Oakey. He died in New York City.

L.F.P.

COOK, ZEBEDEE (Jan. 11, 1786-Jan. 24, 1858), insurance man, horticulturist, was the son of Zebedee and Sarah (Knight) Cook. He was born in Newburyport, Mass., where his father was a mast-maker, spent most of his active business life in Boston, was a resident of New York City for some years, and after his retirement from business, returned to his native state. Cook entered the insurance business in its infancy in this country, opening a private office in Boston after his commission business had failed. From 1822 to 1827 he was president of the Eagle Insurance Company of Boston. Nearly as great as his interest in insurance, to which throughout his life he devoted a large part of his energies, was his interest in horticulture. On Jan. 9, 1829, a letter written by him appeared in the New England Farmer, calling attention to the fact that New York, Philadelphia, and other cities had horticultural societies and that Massachusetts would benefit from such an organization. The editor, as a result of this letter, called for a meeting of interested citizens at Cook's insurance office. A snow-storm filled the streets five or six feet deep, on the day appointed for the meeting, but sixteen men came in sleighs or on foot and the Society was founded with Cook as one of its vice-presidents. Later meetings were also held in his office. He became the second president of the organization, and his presidential address, delivered before the second annual festival of the Society on Sept. 10, 1830, may be found in the History of the Massachusetts Horticultural Society. It was during the period of Cook's activity in the Society that Mount Auburn was purchased and an experimental flower garden and cemetery established. His interest in horticulture found outlet in personal experiments, too. At his home in Dorchester he had a large garden where he grew successfully several kinds of foreign grapes, apricots, peaches, and pears (Justin Winsor, Memorial History of Boston, vol. IV, 1883, pp. 618-19). He was a zealous member of the Whig party and served in the Massachusetts House of Representatives from 1835 to 1838. In the latter year he went to New York to become president of the newly established Mutual Safety Insurance Company of that city, and later became president of the Astor Insur-
Cooke

seat by reason of Phips’s absence, and retained it through his administration and that of Lord Bellomont. Cooke at this time was one of the wealthiest men of Boston, and through his family connections wielded considerable influence; his home in School St. was the recognized center of a party equally opposed to clerical domination and royal prerogative. He took a leading part in thwarting Increase Mather’s efforts to obtain a new charter for Harvard College, and in forcing him to resign the presidency. When Cooke’s old adversary Dudley became royal governor (1702), he was remembered in a sense contrary to Randolph’s promise, for Dudley not only ousted him from the superior court bench where he had served capably for seven years and from the probate court to which he had been appointed the previous year, but negatived his annual election to the Council until 1715, when he was seventy-seven years old. Five months later on Oct. 31, Cooke died, leaving his son, Elisha Cooke, Jr. [q.v.] to carry on the political influence of the family.

R.G.M.

COOKE, ELISHA (Dec. 20, 1678-Aug. 24, 1737), physician and statesman, was the “great Darling of his Country” for over twenty years (Publications of the Colonial Society of Massachusetts, XVII, 93n). Born in Boston, the grandson of Gov. John Leverett and the son of Elisha Cooke [q.v.], he was placed first in his class at Harvard College in 1697. Like his father, he became a physician, but his political service began the year after his graduation when he was appointed clerk of the superior court. His marriage to Jane Middlecott, great-granddaughter of Gov. Edward Winslow [q.v.], occurred in 1703. He inherited his father’s controversy with the Dudley family and this flamed out anew in 1714 when the “private bank” was attacked by Paul Dudley [q.v.], in a pamphlet Objections to the Bank of Credit lately Projected at Boston. Cooke as one of the directors of the proposed bank signed the Vindication... from the Aspersions of Paul Dudley. Elected representative from Boston by the land-bank party in 1715, Cooke began a service of eighteen years. He was chosen to the Council five years (1717, 1724-26, 1728). In 1716 he began his controversy with Gov. Shute [q.v.], whose first official act approved the issue of £100,000 in bills of credit. After it reached the Governor’s ears that Cooke in conversation had called him a blockhead and intimated that the Governor was a tool of Dudley, he removed Cooke “from his Clark’s place” and negatived him as councillor in 1718. Meanwhile a violent quarrel had broken out between Cooke and John Bridger, Surveyor-General of the Woods, concerning the right to cut timber in Maine. Cooke maintained that no royal reservation of timber had been made when Maine was purchased from Gorges and that the acts of Parliament regarding naval stores did not bind Massachusetts under the province charter. The House, after sustaining this advanced position, chose him speaker (1720). Gov. Shute declared, “He has treated me ill and I do negative him.” When the House refused to elect another speaker, the Governor dissolved the assembly. Before the new House convened (July 1720), Cooke published a pamphlet (A Just and Seasonable Vindication) in which he insisted that the House had an “indubitable, fundamental Right to Chuse their Speaker” [sic] and denied the governor’s right of veto. Upon the departure of Gov. Shute and the presentation of his grievances before the Privy Council, Cooke was sent to England (1723) to controvert the charges. This mission was fruitless (Acts of the Privy Council of England, Colonial Series, vol. III, 1720-45, pp. 93 ff.) and the Explanatory Charter of 1726 definitely gave the governor the right to disapprove the choice of the speaker. Cooke was again chosen to the Council and when Gov. Burnet [q.v.] arrived, directed the opposition to a fixed salary. In 1731 Gov. Belcher [q.v.] appointed Cooke to the court of common pleas of Suffolk County. He remained a member of the House of Representatives but his popularity, which had kept the people “steady in the applause of his measures” (Hutchinson, post, II, 378), began to decline because he seemed to favor a fixed salary for Gov. Belcher. This inconsistency is difficult to explain, since Belcher’s confidential letters repeatedly refer to Cooke as his “inveterate enemy” and since the Governor in 1733 dismissed him from his judicial post. In his opposition to royal prerogative, Cooke was not an entirely impartial and disinterested champion of liberty, for he was involved in speculative ventures in Maine timber lands; but Belcher asserted that he had “a first enmity to all Kingly Governments.” His death in 1737 and the departure of Gov. Belcher mark the end of a political period in Massachusetts Bay. Cooke and his father inherited independent traditions of the old colony and transmitted them to the era of Adams and Otis. The younger Cooke was truly
Cooke

a leader, and the "masterly hand from School Street" directed the political events of his generation.

E. A. J. J.

**COOKE, GEORGE WILLIS** (Apr. 23, 1848–Apr. 30, 1923), Unitarian clergyman, writer and lecturer on religious, social, and literary subjects, was born in Comstock, Mich., the son of Hiram and Susan (Earl) Cooke. Although he became noted for the extent and variety of his knowledge, his scholastic training was meager. Until he was nineteen years old he attended district school and worked on his father's farm. Later he took a preparatory course at Olivet College, Mich., spent two years at the Liberal Institute, Jefferson, Wis., and studied for a time at the Meadville Theological School, Meadville, Pa. On June 20, 1872, he was ordained as a Unitarian minister, and the same year he married Lucy Nash of Rochester, Wis. He held pastorates at Sharon, Wis., Grand Haven, Mich., Indianapolis, Ind., Lexington, Mass., and at Dublin and Francestown, N. H. He died in Revere, Mass., at the home of his second wife, Rev. Mary (Leggett) Cooke, to whom he had been married but a week.

All his life he was an apostle of liberalism in religion and active in social reform. In his first parish he published a small but able paper, *The Liberal Worker*, which indirectly led to his being one of the founders and first editors of *Unity* (Chicago), started in 1878. After 1899 he devoted practically his entire time to writing and lecturing, giving courses at the Rand School of Social Science, New York, the Boston School of Social Science, and single lectures and courses throughout the country. Regarding the present industrial and economic system as unjust, and believing in what he called "collectivism" (i.e., in politics, democracy; in industry, cooperation; and in religion, brotherhood), he supported the socialist movement.

He was a keen, appreciative, widely informed literary critic, and in his day was considered the best living authority on New England Transcendentalism. In 1881 he published *Ralph Waldo Emerson, His Life, Writings, and Philosophy*, which soon became a standard work. He also prepared *A Bibliography of Ralph Waldo Emerson* (1908). His *Early Letters of George William Curtis to John S. Dwight* (1898) and his *John Sullivan Dwight* (1898) give an excellent picture of Brook Farm. He published *The Poets of Transcendentalism*, an *Anthology* (1903) and *An Historical and Biographical Introduction to Accompany the Dial*, 2 vols. (1902). Other literary works of his include *George Eliot, a Critical Study of Her Life, Writings, and Philosophy* (1883); *Poets and Problems* (1886), a critique of Tennyson, Ruskin, and Browning; and *A Guide Book to the Poetic and Dramatic Works of Robert Browning* (1891). He also wrote the notes and introduction to the Riverside edition of Browning (1899). In the theological and religious field, he edited three volumes of Theodore Parker's works, wrote *Unitarianism in America* (1902), which was generally adopted as the standard historical work on that subject, and in 1920 published *The Social Evolution of Religion*. He was a clear and vigorous writer, and his work is marked by careful scholarship, keen discernment, and good spirit. It is mainly expository and interpretative, but as such has much value. He contributed numerous articles to periodicals, among them ten to *The Chautauquan* (September 1909–May 1910) on "Woman in the Progress of Civilization," from material for an elaborate book on this subject, which he left unfinished.

[In *Unity*, June 14, 1923, there is an extensive and informing appreciation of Cooke's character and work by J. T. Sunderland. See also *Who's Who in America*, 1923–24; *Unitarian Year Book* (1923–24); *Christian Register*, May 10, 17, and July 12, 1923; and *Boston Transcript*, May 1, 1923.]

H. E. S.

**COOKE, HENRY DAVID** (Nov. 23, 1825–Feb. 24, 1881), journalist, banker, was born in Sandusky, Ohio, a son of Eleutherius and Martha (Carswell) Cooke, and a brother of Jay Cooke [q.v.]. Henry went to Allegheny College, Meadville, Pa., and then to Transylvania University, Lexington, Ky. Upon graduation (1844) he was sent to Philadelphia to study law, for which he had little liking. He contributed minor articles to various publications and in 1846 went to Valparaiso to a place in the office of his brother-in-law, William G. Moorhead, the consul. On his way to Chile he was forced to stop a month in St. Thomas and there became enthusiastic over the possibilities of connection with California by way of Panama. He wrote to newspapers on this subject, and persuaded Moorhead later to make an official report on it to Washington. His stay in Chile was brief and he went on to California. There he had some success in
returning east in 1849 he was for a time financial editor of the united states gazette in Philadelphia, and then went back to Sandusky to edit the register, which his brother Jay later helped him to buy. he made many friends, among them being Salmon P. Chase and John Sherman [q.v.]. in 1856 he went to Columbus to edit the Ohio state journal. this journal was politically powerful but financially unprofitable, and only party favors kept Cooke with it until 1861. at that time his friend Chase became secretary of the treasury. as the civil War began, Jay Cooke, feeling the need of a personal representative close to the administration, persuaded Henry to sell his paper and move to Washington. there with harris C. Fahnstock, he was placed in charge of the Washington office of Jay Cooke & Company. Soon afterward he piloted through Congress the bill authorizing the construction of the first street railway in the District of Columbia; then Jay Cooke organized the Washington and Georgetown street railway company, with Henry as first president, and by the summer of 1862 the railway was in operation. Henry Cooke resigned shortly after to organize the First national bank of the District, another Jay Cooke enterprise, and later helped to form the national Life Insurance company. More and more of the business of financing the war came to the company of Jay Cooke. Henry went into the field with much success in the placing of one bond issue and in 1864 went abroad to interest foreign investors, a move he had long urged as a means of drawing foreign sympathy to the side of the north. all through the war he was most valuable to the firm because of his Washington contacts; and his lavish entertaining of newspaper correspondents brought countrywide publicity for, and faith in, the bond issues.

After the war he strongly urged his brother to assist in the financing of the Northern Pacific Railroad, and in 1870 he conducted the Northern Pacific lobby before Congress. He had become increasingly prominent in Washington affairs, and when the District was given territorial government in 1871 he was appointed the first governor. This position he resigned in 1873 at his brother’s urging, because he was involving the firm too heavily in projects for the expansion and improvement of the District. After Jay Cooke & Company closed its doors in the panic of 1873, Henry Cooke continued to reside in Washington, participating in local affairs and assisting various charities. Grace Chapel in

Georgetown was his gift. Bryan, the District historian, described him as “an agreeable man of high personal character.” his wife was Laura Humphreys of Utica.

W. B. Bryan, Hist. of the National Capital (1916); E. P. Oberholtzer, Jay Cooke, Financier of the Civil War (1907); National Republican (Washington, D.C.), Feb. 25, 1881.

K. H. A.

COOKE, JAY (Aug. 10, 1821-Feb. 16, 1905), banker, financier, came, in the paternal line, of a family of which record is found in Salem, Mass., as early as 1638. the Cooks, or Cooke, removed to Connecticut, then to New York State, and then to the Western Reserve, where, in a place which is now Sandusky, Ohio, Jay Cooke, the third child and second son of Eleutheros and Martha (Carswell) Cooke, was born. Eleutheros Cooke was a lawyer and was sent to Congress, but life in the “West” at this time offered few favorable opportunities to youth. ambition, if not need, inclined Jay when he was but fourteen to seek employment as a clerk in a store in his native town. in 1836 he found a position in St. Louis, then little more than a French trading post. But, his employers having been ruined in the panic of 1837, he left in a few months to become a clerk on a canal packet line in Philadelphia. this move determined his career, for from this employment in 1839 he passed to the banking house of E. W. Clark & Company, and henceforward banking was his business and Philadelphia was his home. he retired from the Clark firm after the panic of 1857 and was quite at liberty in 1861 to form a partnership of his own, Jay Cooke & Company, which, until 1873, was one of the most widely known banking houses in the country.

The acquaintance which Jay Cooke’s younger brother, Henry David Cooke [q.v.], who had conducted a newspaper in Columbus, had formed at that place with Gov. Chase [q.v.] of Ohio, in 1861 appointed secretary of the treasury, led to relationships with the government which developed rapidly. Chase soon came to rely upon the kindly, open, confident, and optimistic counsel of the Philadelphia banker, as the financial problems arising out of the civil War multiplied. the credit of the government was low, and the Treasury was wanting in the funds to meet ordinary public expenses, without taking into account the extraordinary demands which were made upon it by the raising and equipment of an army. the first attempt at selling bonds and short-term notes was not very successful, but the battle of Bull Run, in July 1861, awakened the country, and, upon receipt of the news, Cooke put on his hat, left his office, and visiting the bankers of Philadelphia, in a few hours collected
Cooke

over $2,000,000 on the security of three-year treasury notes, bearing interest at the rate of 7.30 per cent, or $7.30 a year for $100. In a few days Chase, in company with Cooke, met the bankers of New York, and, as a result of their negotiations, the Associated Banks agreed to advance $50,000,000 to the government, to be repaid out of the sales of "seven-thirties." Cooke at once converted his office into an agency for advertising the loan and receiving public subscriptions, a business which he later developed to proportions attracting widespread notice.

In February 1862, Jay Cooke & Company opened an office in Washington that the firm might the better care for business growing out of its connections with the government. In October 1862, when Chase's attention was occupied with the "five-twenty" loan (a 6 per cent loan which could be paid at the expiration of five, and must be paid in twenty years) which he had not been able to sell even at a discount, he appointed Cooke a treasury agent for the disposition of the bonds at par. From this time on the "five-twenties" and their merits, said John Sherman [q.v.], were made to scare "in the face of the people in every household from Maine to California." The entire loan of $500,000,000 was distributed before Jan. 21, 1864, when, indeed, after all the orders were received through the mails, it was considerably oversubscribed. More than 600,000, perhaps a million, citizens had been persuaded to take shares in the public debt.

Chase resigning in June 1864, William P. Fessenden [q.v.] became secretary of the treasury. The pecuniary straits of the government were again severe, and necessity induced the new secretary to turn in an obvious direction for relief. He had been giving his attention to the sale of a new issue of "seven-thirties," but it proceeded slowly, and Cooke was again on Jan. 28, 1865, appointed "treasury agent" of the Treasury Department. The machinery which had been constructed for the distribution of the five-twenties was reorganized. In seven months Secretary Fessenden had, with difficulty, sold $133,000,000 of the seven-thirties; Cooke, in less than six months, sold $600,000,000 in government securities of this issue.

The war having ended and business for the government having been concluded, except for some funding operations, Cooke found himself with an organization not fully employed, and he resolved to develop a large general banking business, which, in 1866, led to the establishment of a branch in New York, and in 1870, of a house in London, where Hugh McCall [g.v.], who had been secretary of the treasury in the last months of the Lincoln and during the Johnson administrations, became the resident partner. Many of the enterprises which after the war sought the favor of bankers and capitalists, were brought to Cooke's attention. One in particular attracted him—the project for a Pacific railroad over a northern route. The Central Pacific was being advanced with government subvention from Omaha to San Francisco. Cooke's support was secured for a road having for its eastern terminus a town called Duluth, at the head of Lake Superior, for its western terminus, Tacoma, a site which was being prepared in a forest of fir trees, on a fine harbor in Puget Sound. Thus would the navigation of the Great Lakes be connected overland with navigation of the Pacific. The avidity of the nation for speculation was spent, however, before the important object in view could be realized. The road was completed to the Missouri River in the east and some miles of the way had been finished on the Pacific coast when, on Sept. 18, 1873, Jay Cooke & Company were compelled to close their doors, out of which event developed a general panic. Cooke's misfortune, in view of valuable services to the government during the war and the national character of the enterprise which bore him down, awakened general sympathy, and public gratification was not withheld when, in later life, he recovered the estates which he had surrendered to his creditors, and a substantial income, through his connection with mines in Utah and by other successful investments. On Aug. 21, 1844 Cooke married Dorothea Elizabeth Allen, a daughter of Richard Allen. Four children, two sons and two daughters, were born to them.

[The chief source is Ellis Paxson Oberholtzer, Jay Cooke, Financier of the Civil War (2 vols., 1907), based upon the papers of Jay Cooke, a large collection, carefully arranged and preserved by the financier, and now on deposit in the Library of the Hist. Soc. of Pa.]

E. P. O.

COOKE, JOHN ESTEN (Mar. 2, 1783-Oct. 19, 1853), physician, was the first of eight children born to Dr. Stephen Cooke of Philadelphia, a surgeon in the Revolutionary War, who was captured by the British and taken to the Bermudas, where he married, June 7, 1782, Catherine, daughter of John Esten, chief justice, and at one time acting governor. He was the elder brother of John Rogers and Philip St. George Cooke [q.v.]. The family continued to dwell in the Bermudas until 1791 when it moved to Alexandria, Va., and later to Leesburg, in Loudoun County in the same state. Cooke received a good education although his biographers mention no schools. He read Latin and used a Greek Tes-
Cooke

tament throughout his life. Having begun the study of medicine under his father in Loudoun County, he obtained his medical degree from the University of Pennsylvania in 1805, his graduation thesis, which was published, being devoted to an account of an epidemic of fever that prevailed in his county in 1804. He practised for years at Warrenton, Va., but in 1821 moved to Winchester. His Essays on the Autumnal and Winter Epidemics (1829) which appeared in the Medical Recorder in 1824 attracted much attention. With Dr. McGuire and others he had planned to start a medical college at Winchester, when, in 1827, he was called to the chair of theory and practise of medicine at the Transylvania University Medical School, Lexington, Ky., to succeed his old classmate, Daniel Drake. In the next year he published the first volume of his Treatise on Pathology and Therapeutics, which was later followed by the second volume. This work is said to have been the earliest American systematic text-book on medicine. With C. W. Short he began in the same year the Transylvania Journal of Medicine and the Associate Sciences, and to this journal and the Medical Recorder he contributed sufficient papers to form, had they been republished, a large volume. His design seems to have been to emancipate the United States from servile dependence on European medicine and to establish an American medical literature, but this attitude was ridiculed by the Eastern leaders of the profession. While in Lexington he changed his old creed of Methodism to Episcopaliam and defended this departure in his Essay on the Invalidity of Presbyterian Ordination (1829). In 1832, when his church established a theological seminary, he was made professor of church history and polity and he also assembled an excellent library for the seminary. In 1837 he moved to Louisville where he was co-founder of the Louisville Medical Institute, later known as the University of Louisville, and was made its professor of the theory and practise of medicine. He was never popular either with the faculty or the students. He made the liver responsible for most of human ailments and insisted that the chief remedies must be those which act upon that organ. He gave enormous doses of calomel and other purgatives, and he bled his patients freely. His colleague Drake in the chair of clinical medicine opposed such teachings, and Cooke's withdrawal, which was a foregone conclusion, took place in 1844. The rest of his life was spent on a farm near the Ohio River. He had a total disregard for the opinions of others and an intolerance toward all that he regarded as error.

He took great pains to get at the truth and his reasoning powers were unusual, but he was unable to comprehend that his premises might be at fault. He was wrapped up in clerical matters, wrote on the ailments of the clergy, and at one time contemplated publishing a popular manual on disease.

[Memor by Jas. Craik (also published in pamphlet form) was printed in the Church Rev. and Ecclesiastical Reg., July 1856, and reprinted in the Southern Literary Messenger, Apr. 1857. See also biography by L. P. Yandell in American Practitioner, July 1875; Western Tour. Med. and Surg., Oct. 1854; and Jas. Craik, Hist. Sketch of Christ Church, Louisville, Diocese of Ky. (1862).]

E. P.

Cooke, John Esten (Nov. 3, 1830–Sept. 27, 1886), novelist and historian of Virginia, was born in Winchester, Va., the son of John Rogers Cooke [q.v.], and Maria, daughter of Philip Pendleton of Berkeley County and a granddaughter of Judge Edmund Pendleton [q.v.]. After a boyhood in the Valley, chiefly at "Glengary" where he worked during his younger years, and admired the varied talents of his elder brother, Philip Pendleton [q.v.], John Esten was taken to the family's new home in Richmond. Here he attended school and was prominent in a literary society. Unable to realize his hopes of attending the University of Virginia, he studied law in his father's office and was admitted to the bar in 1851. In practice as in study law was irksome and Cooke was constantly writing and resolving not to write. The ready acceptance of his work by the Southern Literary Messenger and a check from Harper's (1852) led him definitely to adopt a literary career. In the next eight years, Cooke produced a great number of fugitive poems, essays, stories, and seven volumes of fiction. His first novel, Leather Stocking and Silk (1854), reflects his knowledge of the Valley. The Virginia Comedians (1854), a story of late Colonial Virginia, is distinguished alike by dramatic quality and charm of diction, and is probably the best work of its author. Henry St. John (1859) is a sequel. Before Cooke was thirty, his recognition was nation-wide, but his success was clouded by the deaths, within a decade, of his mother, father, and three brothers.

Cooke was an ardent secessionist, was a special friend and admirer of Stuart, and served through the entire war, surrendering with Lee at Appomattox. His advocacy of winning the war rather than defending Richmond may have cost him the majority for which he was recommended by Stuart and by Lee. In the intervals of campaigning, Cooke wrote a Life of Stonewall Jackson (1863), and after the surrender used his experiences as the basis of literature. Surry of Eagle's Nest (1866) and its sequel Mohn (1869) combine stories of
COOKE, JOHN ROGERS (1788-Dec. 15, 1854), lawyer, was the third child of Dr. Stephen Cooke and Catherine (Esten) Cooke, and brother of John Esten and Philip St. George Cooke [q.q.v.]. In 1791 he accompanied his parents to Alexandria and thence to Leesburg, Loudoun County, Va., where he received his early education. In 1807 he held a commission in the Frederick troop, which was raised in consequence of the Chesapeake incident, and in 1812 saw service in the coast defense. Having taken up the study of law, probably at William and Mary College law school, on his being admitted to the bar (c. 1812) he commenced practise at Martinsburg (now W. Va.). Esteemed "the glass of fashion of the scarcely more than border town" (J. O. Beaty, post), his marriage, Nov. 18, 1813, with Maria, daughter of Philip and Agnes (Patterson) Pendleton of Martinsburg, and granddaughter of Judge Edmund Pendleton, assured him a prominent position socially and otherwise, and he established himself at Winchester, where he practised for twenty-five years. In 1814 he represented Frederick County in the House of Delegates, but served only one term. Great intellectual endowments joined to remarkable powers of speech fortified by wide reading quickly made him the leading lawyer in transmontane Virginia. Elected a delegate from Frederick and Jefferson counties to the Virginia constitutional convention 1829-30, he was a conspicuous figure in "one of the greatest assemblies of intellect ever held on Virginia soil" (Chandler, post, p. 32). On the major question before the convention, i.e., the future basis of representation in the legislature, he and Dodridge were the leaders of the Western party and his speeches, dealing with the matter from the philosophical standpoint of the natural rights of man and displaying deep constitutional study, were among the ablest in a brilliant series of arguments (see Proceedings and Debates of the Virginia State Convention of 1829-30, pp. 53, 337, 342, 433, 549, 678, 691). A member of the select committee of seven, including Madison and Marshall, which drafted the resulting compromise constitution, he was the only western delegate who voted for it on its final submission to the convention, his action being bitterly assailed by Dodridge who accused him of betraying the West. A contemporary describes him at this juncture as "thin in stature, the full expression of a good face neutralized by green glasses; unknown in federal politics and as yet in state... his mind thoroughly imbued with the logic of the schools, and feeding on abstractions as its daily bread; versed in the minute history of the state, and famous for the provoking pertinacity with which he worried an opponent, a dog-eared Hening in his hand" (H. B. Grigsby, post). The prominent part taken by him in the convention brought a state-wide reputation and in March 1830 he moved to Richmond where he confined himself to work before the superior and appellate courts, holding retainers in almost every case of importance, including the Randolph Will litigation. His speech in the latter case before the court of appeals was said by one of the judges to have been the ablest ever delivered in that court. Of his children, Philip Pendleton Cooke [q.q.v.] and John Esten Cooke [q.q.v.] attained high distinction.

Cooke

love and adventure with an essentially authentic account of the struggle in Virginia. Wearing of the Gray (1867) and Hammer and Rapier (1870) are collections of essays on military subjects. A Life of General Robert E. Lee (1871) is a military rather than a personal biography.

After Appomattox, Cooke had returned to his boyhood surroundings in the Valley. On Sept. 18, 1867 he married Mary Francis, daughter of Dr. Robert Page of "Saratoga," Clarke County. Soon he moved to a near-by estate, "The Briars," which became his home for the remainder of his life. Here, in the happy society of his wife, his three children, and many visitors, he divided his time between farming and writing. When his Civil War vein was exhausted, he sought in many fields the material for his romances. Most interesting to-day is The Heir of Gaymount (1870) which urges intensive farming as the salvation of the post-war South. After Mrs. Cooke's death (1878) the novels strike a deeper human note, but show less of the enthusiastic dash which characterized the author's best manner. Most widely known is My Lady Pokahontas (1885), a pleasing story of the settlement of Virginia. Stories of the Old Dominion (1879) is a fascinating book for boys and Virginia (1883) is a history, chiefly of the colonial period. While his energy was still undiminished, Cooke was stricken with typhoid fever, and died, in his fifty-sixth year. He was at heart a chivalric Cavalier, who idealized the past and was unreservedly devoted to Virginia. His books are what he wished them to be—entertaining and pure. His popularity has suffered somewhat from the unwinnowed abundance of his writings, but his best romances of colonial Virginia and of the Civil War will unquestionably survive. [There is a sketch of Cooke by A. A. Link in Pioneers of Southern Literature, no. 5 (1898), and one by M. J. Preston in the Critic, Oct. 16, 1886; the only biography is John Esten Cooke, Virginian (1922).]

Cooke

H. W. H. K.

**Cooke, Josiah Parsons** (Oct. 12, 1827–Sept. 3, 1894), chemist, teacher, author, was born in Boston, Mass., and died in Newport, R. I. His early life was spent in Boston where his father, also Josiah Parsons Cooke, was a successful lawyer. When he was six years old he lost his mother, Mary (Pratt) Cooke, and was brought up by a faithful friend of the family. As a boy he was frail, reserved, and disinclined to outdoor sports. He spent his spare time in reading and in studying chemistry, in which his interest had been aroused when as a lad he heard some lectures by Benjamin Silliman before the Lowell Institute of Boston (1839–43). Like all lovers of chemistry he read Mrs. Marcey's *Conversations on Chemistry*, but the experiments performed by Silliman kindled in him such enthusiasm that he also fitted up a little laboratory in the cellar of his father's home. Here he performed many experiments, guided by Turner's *Chemistry*. In this way he studied the science by the toilsome method of individual experiment, which he rigorously followed and made his students follow during his forty-four years of association with Harvard University. He entered Harvard in 1844, pursued the regular course, and after graduation in 1848 spent a year in Europe where he attended lectures in chemistry by Dumas and Regnault. Upon his return he was appointed tutor in mathematics at Harvard. He had decided to devote his life to chemistry, however, although his knowledge of the subject was almost entirely self-acquired. Elected Erving Professor of Chemistry and Mineralogy in 1850 at the age of twenty-three, he founded the two departments, developed courses, procured teaching equipment, and won the respect of his classical colleagues and the financial support of the corporation. In 1858 Boylston Hall, the new chemistry laboratory, was completed, largely through the zealous efforts of Cooke, and chemistry started on a widened path. Assistants were appointed, the first one being Charles W. Eliot, and laboratory instruction was offered for the first time to a class of undergraduates.

During the manifold duties incident to establishing and administering the department of chemistry, Cooke found time to write and investigate, and between 1855 and 1893 to deliver eight courses of lectures before the Lowell Institute. He also taught chemistry for a few years in the Harvard Medical School. Of his eight books, the more important are: *Elements of Chemical Physics* (1860), which went through three editions; *Principles of Chemical Philosophy* (1868), four editions; *The New Chemistry* (1874), five editions and several translations; and *Laboratory Practice* (1891). Several of his other books deal with the relation between religion and science. He published over forty papers on his original investigations. Some early papers were devoted to mineralogy, and one, "The Numerical Relations between the Atomic Weights" (*American Journal of Science*, 2 ser., XVII, 1854), dealt with the classification of the elements. This was the first scientific attempt to classify the elements by their atomic weights, and foreshadowed the investigations on atomic weights which occupied Cooke in later life and prepared the way for the superior work in this field done at Harvard. The first investigation of the latter type was on the atomic weight of antimony, and it led to three fundamental papers (*Proceedings of the American Academy of Arts and Sciences*, XIII, 1; XV, 251; XVII, 1; 1877–81) and several subsidiary ones. The second (in cooperation with Theodore W. Richards, *Ibid.*, XXIII, 149, 182; 1887–89) was on the relative atomic weights of oxygen and hydrogen, and was a helpful contribution to the experimental procedure in this exacting work. Cooke wrote about thirty other papers, which include fourteen on chemical topics and nine on the biography of celebrated men. His annual reports as director of the chemistry laboratory contain helpful contributions on the construction of laboratories, arrangement of mineralogical specimens, contents of courses, and methods of teaching science.

In 1860 he married Mary Hinckley Huntington, of Lowell, Mass. They had no children, but a nephew and a niece of Mrs. Cooke were members of the family for many years. Cooke was a member of many scientific societies including the National Academy of Sciences and the American Academy of Arts and Sciences. He was active in the latter, being corresponding secretary for nineteen years (1873–92), and president for three years (1892–94). He was also a resident fellow for forty-one years and librarian.
Cooke

for eight. As a college lecturer he was luminous, and despite a tremulous hand his experiments were uniformly successful; he was especially popular with younger students. As a teacher he was convincing in the lecture room, patient in the laboratory, and persistent in making students think for themselves. He exerted a wholesome influence on American education, secondary and collegiate, by his determined and energetic championship of the study of science. As an investigator he was singularly clear in thought, undismayed by experimental difficulties, ingenious in devising apparatus and methods, and keen in his enthusiasm for research.

L.C. N.

COOKE, PHILIP PENDLETON (Oct. 26, 1816-Jan. 20, 1850), poet, story-writer, was the eldest child of John Rogers Cooke [q.v.], a distinguished Virginia lawyer, another of whose sons was John Esten Cooke [q.v.], the novelist. His mother was Maria Pendleton. Philip was born at Martinsburg, Berkeley County, Va. (now W. Va.). In his boyhood the family lived at and near Winchester ("Glengary") and at Charles Town; his later years were passed in the adjoining county of Clarke, near Millwood, at his home "The Vineyard," in the beautiful Shenandoah Valley. At fifteen he entered Princeton College, where he devoted more time to reading poetry than to the prescribed studies. Chaucer and Spenser were favorites. After his graduation (1834) at Princeton, he read law with his father. Before his twenty-first birthday he was married to Willie Anne Burwell of Clarke County, and admitted to the bar. Law was his profession but literature and hunting were his master passions. His frequent letters to his father show that he was intermittently reading Blackstone and writing verse and prose romances, frequently hunting, and daily enjoying the noble scenery of mountain and stream with a poet's fine sense for the beauty of landscape and legend. The region was lovely, society was merry, and the lawyer-poet was handsome and popular. Above the average height, with "deep hazel eyes, dark chestnut curling hair," and a musical voice, he must have looked the poet far more than the sport-loving country gentleman and village barrister. His manly and affectionate nature is reflected in his letters to his father, upon whom he relied for counsel and often for money. He was singularly happy in his own family life. For writing, however, he had little encouragement. Literature was looked upon as only an elegant pastime. Toward the law he had good intentions and for literary production he had a positive urge, but he showed no sustained diligence in the pursuit of either. If one takes into account his social nature, the demands of an uncongenial profession, his struggle to support a growing family on an uncertain income, and the lack of incentive to literary effort in the old leisurely plantation life, the slenderness of Cooke's achievement is not to be attributed mainly to lack of ambition. Under all the circumstances his accomplishment in letters is not inconsiderable for his brief span of thirty-three years. There is evidence, indeed, that he was turning more and more to literature and that, had he lived another score of years, he might have been one of the major poets and romancers of the older South.

His earliest poems, written at Princeton, were published in the Knickerbocker Magazine in 1833. From 1835 to his death in 1850 he occasionally wrote for the Southern Literary Messenger of Richmond, beginning with a series of essays on English poetry. A famous poem, "Florence Vane," which appears in most anthologies of American verse, was first published in Burton's Gentleman's Magazine, Philadelphia, for March 1840, and was soon translated into several languages. In 1847, at the suggestion of his cousin, John Pendleton Kennedy [q.v.] of Baltimore, Cooke collected some of his magazine verses into a volume, Froissart Ballads and Other Poems, which was published by Carey and Hart, Philadelphia. He called the ballads "versified transcripts from Froissart," but only three are directly from the old chronicler. The poems in this volume show a delicate sense for form and rhythm and a rare freshness of imagery in descriptions of nature. Cook's four short prose romances, "The Gregories of Hackwood," "The Two Country Houses," "John Carper the Hunter of Lost River," and "The Crime of Andrew Blair," and his satirical story of whimsical humor, "Eriscithon," appeared in the Southern Literary Messenger during 1848-49. His one novel, or historical romance, "The Chevalier Merlin" (unfinished), highly praised by Poe, was running in the Messenger at the time of his death. His stories have rapid movement, vivid delineation, and the usual romantic coloring of our earlier fiction. Both his poetry and prose reflect his acute interest in nature and outdoor sport, which he always depicts with sureness and sincerity. The one memorable lyric, "Florence Vane," and several meritorious ballads form his slight but real contribution to our literature.
Cooke

The chief sources of information on Philip Pendleton Cooke are: Letters to his father, now owned by his nephew, Dr. Roht. P. Cooke of Lexington, Va.; autobiographical fragment of John Esten Cooke, quoted in John O. Beach's John Esten Cooke, Virginian (1922); editorial tribute by John R. Thompson in Southern Literary Messenger, Feb. 1850; "Philip Pendleton Cooke," by Rufus W. Griswold, in the same for Oct. 1851 (reprinted from Internet, Mag.); "Recollections of Philip Pendleton Cooke," in Messenger for June, 1858; "Philip Pendleton Cooke," by F. V. N. Painter, Lib. of Southern Literature, vol. III (1909). J. C. M.

COOKE, PHILIP ST. GEORGE (June 13, 1809–Mar. 20, 1895), soldier, author, the son of Dr. Stephen and Catherine (Esten) Cooke, was born at Leesburg, Va. He was the younger brother of John Esten Cooke (1783–1853) and of John Rogers Cooke (1788–1854) [qq.v.]. He was named St. George in deference to his mother's nationality, but he was appointed a cadet at West Point under the name of Philip St. George, through a mistake somewhat similar to that by which Gen. Grant's name was altered when he entered that institution. Graduating in 1827, Cooke was commissioned in the 6th Infantry, joined his regiment in Missouri, and served with it for nearly six years at various western stations and on expeditions into the Indian country. He was engaged in the Black Hawk War of 1832. The next year he was appointed first lieutenant in the newly organized 1st Dragoons (now the 1st Cavalry), and two years later (May 31, 1835) became a captain. From frontier stations, generally Fort Leavenworth, he went on many expeditions into the remote West, including one in 1845 through the South Pass of the Rocky Mountains, when his command covered twenty-two hundred miles in ninety-nine days. In the war with Mexico, his service was with Kearny's Army of the West, which achieved the conquest of New Mexico and California by hard marching more than by fighting. With an escort of twelve men, Cooke preceded the army from the rendezvous at Bent's Fort, on the Arkansas River, to Santa Fé, three hundred miles distant. It was intended that he should negotiate under a flag of truce, but Mexican resistance collapsed without much negotiation. Meanwhile reinforcements for the army had been started forward, including a battalion enlisted among the Mormons who had recently been driven from Nauvoo. Cooke was assigned to its command, with the rank of lieutenant-colonel. His impression of his battalion, when it arrived at Santa Fé, was not favorable. "It was enlisted too much by families; some were too old, some feeble, and some too young; it was embarrassed by many women; it was undisciplined; it was much worn by travelling on foot" (Conquest of New Mexico and California, p. 91). When he left in California nine months later, however, he had made it into an efficient organization. He was promoted to major of the 2nd Dragoons in 1847, lieutenant-colonel in 1853, and colonel in 1858, being employed usually on the frontier as before, skirmishing occasionally with Apache and Sioux Indians, and taking part in the Utah expedition of 1857–58. He prepared a new system of cavalry tactics for the army, and was an observer of the war in Italy in 1859–60.

His family "followed the State" in 1861. His son, John R. Cooke, and his son-in-law, J. E. B. Stuart, became general officers in the Confederate army. On both sides it was supposed that he would probably do likewise, but his loyalty was unshaken, and when a letter from a Confederate general was secretly delivered to him in Washington he promptly handed it over to the War Department. He was appointed a brigadier-general in the regular army, Nov. 12, 1861, and commanded a brigade of cavalry at Washington until the Army of the Potomac entered upon the Peninsula campaign, in which he commanded the so-called Cavalry Reserve—a division of two brigades. This was his only actual field service during the war. He commanded the district of Baton Rouge for a time, and later was general superintendent of recruiting for the regular army. After the war, besides other duties, he commanded successively the departments of the Platte, the Cumberland, and the Lakes. He retired from active service in 1873. Besides his Cavalry Tactics (2 vols., 1861; many later editions) he published Scenes and Adventures in the Army (1857) and The Conquest of New Mexico and California (1878). The former is his autobiography from the time of his first commission until 1845, interspersed with curious reflections, frequently thrown into the form of dialogue, on subjects of every conceivable nature. It is useful as a picture of life in the far West during the period. The second of these books is a strictly historical narrative, the more valuable because largely made up of extracts from the diary which he kept at the time. Cooke was a stern disciplinarian, with a high sense of honor and sincere religious feeling. He did not lack a sense of humor, and was notably fond of young people. His wife was Rachel Hertzog of Philadelphia.

In addition to Cooke's own publications see G. W. Cullum, Biog. Reg. (3rd ed., 1891); Bull. Ass. Grads. U. S. Mil. Acad., 1895, pp. 79–86; Frank A. Golder, March of the Mormon Battalion (1928); Daniel Tyler, Concise Hist. of the Mormon Battalion in the Mexican War (1881); Official Records (Army), 1 ser., vols. XI (pts. 1, 2, 3), XXVI (pt. 1), XXXIV (pts. 2, 3), LI (pt. 1). T. M. S.
COOKE, ROSE TERRY (Feb. 17, 1827–July 18, 1892), story-writer, poet, was born on a farm near Hartford, Conn. Her father, Henry Wads- worth Terry, was the son of a Hartford bank president and member of Congress; her mother, Anne (Hurlbut) Terry, was the daughter of John Hurlbut, the first New England shipbuilder to sail around the world. When Rose was six, her parents removed to one of the finest houses in Hartford, owned by Henry Terry's mother, and there the girl learned to become a thorough New England housekeeper. The life and festivals in this home are described in some of her stories. Because of a serious illness, she was not a strong child and so was kept much outdoors where, through the companionship of her father, she became learned in the lore of woods, garden, and sky. She could read at the age of three, and was graduated from the Hartford Female Seminary when she was sixteen. The same year she joined the church and throughout her life was devoted to church association. Following graduation, she taught in Hartford, then in a Presbyterian school in Burlington, N. J., then as a governess in a clergyman's family. A call came for her service at home and from this time her first interest was domestic. The death of a sister threw upon her the care of the sister's children, who became like her own. At home, in her spare time, she began to write stories and verse, but her literary work was always of secondary importance in her own estimation. Charles A. Dana introduced her verses to the New York Tribune, and they were later published in one volume, Poems (1860). They show considerable variety both in subject and metrical form, and include ballads and translations as well as poems on travel, the Civil War, festival occasions, nature, religious subjects, and subjective experience. It is the work of one sensitive to beauty, both physical and spiritual, but not over-emotional. Her meters, though conventional, are free from stiffness. Perhaps the best poems are those on New England scenes, such as "My Apple Tree," "The Sheepfold," "The River," "The Snow-Filled Nest," "The Two Villages," "Trailing Arbutus." Many of her short stories, contributed to Harper's Magazine, the Atlantic Monthly, and other periodicals, were collected into the volumes Happy Dodd; or, She Hath Done What She Could (1878), Somebody's Neighbors (1881), Root-Bound and Other Sketches (1885), The Sphinx's Children and Other People's (1886), Huckleberries Gathered from New England Hills (1891). She also wrote a novel, Steadfast (1889). Her best stories are those of New England life and character, which show a keen perception of human motives and appreciation for the meaning in even a humdrum life. Her subjects are similar to those of Mary Wilkins Freeman, but her outlook is free from morbidity and full of humor. Her style is simple and spontaneous. Her characteristic humor showed in the expression of her rather large mouth and deep-set, dark eyes, and a phrenologist would have read intellect in her high forehead. Tall, with Spanish coloring and black hair, she was striking, and in her youth was considered beautiful. Her wit and interest in people and things brought her many friends. In 1873 she married Rollin H. Cooke, an iron manufacturer, and removed to Winsted, Conn. She continued writing and attempted novels, without great success. In 1887 she and her husband moved to Pittsfield, Mass. An attack of pneumonia in 1889 left her an invalid and her home was broken up. Successive attacks of influenza followed and she died at Pittsfield in 1892.

COOLBRITH, INA DONNA (Mar. 10, 1842–Feb. 29, 1928), poet, the daughter of New England parents, was born near Springfield, Ill., and died in Berkeley, Cal. Her father died when she was a child and she went with her mother to live in St. Louis. There the young widow married a newspaper man named William Pickett. In 1849 the Pickett family went to California and settled in Los Angeles. Ina attended such public schools as the place afforded, read many books, and delighted herself with the conversation of pioneering miners. About 1865 the family moved to San Francisco. Ina was by this time definitely "literary," and she accordingly went into teaching as a means of contributing to the family income. Her writings attained a local reputation, and when in 1868 Bret Harte founded the Overland Monthly, he engaged her as one of his co-editors. To the first issue of the publication she contributed the poem "Longing," restating the doctrine that one hour in a vernal wood is more instructive than all the sages. In the next issue, she published "Blossom Time," a lyric exultant over the approach of spring. This poem is typical of her work, and it remains the specimen of it which is perhaps most generally known. While associated with the Overland Monthly she gave encouragement to the young poet Cincinnatus Heine Miller, to whom she is
Cooley

said to have suggested his pseudonym, "Joaquin Miller." A volume of poems under the title, A Perfect Day and Other Poems appeared in 1881; The Singer of the Sea, a brief elegy, in 1894; and Songs from the Golden Gate, a collective edition of her work, in 1895. Her writings were from the first popular, though never, it appears, remunerative. She was acclaimed by critics in England as well as in America, and she was about to set out for New York and eventually London, when she was suddenly left with the responsibility of rearing a niece and a nephew. From 1893 to 1897 she was ill, but with that exception she worked from 1873 to 1906 as librarian in Oakland and San Francisco—for twenty-one years at the Oakland Public Library, and for two years at the San Francisco Mercantile Library, and for eight years at the San Francisco Bohemian Club. The San Francisco fire destroyed quantities of her manuscript and left her without employment. Appreciative friends, however, soon made provision for her. When the exposition was held in San Francisco in 1915, she contributed to the occasion by summoning a World Congress of Authors. In the same year, with elaborate ceremony, she was crowned poet laureate of California, pursuant to an act of the state legislature. Though not a poet of high rank she phrased beautifully some worthy and agreeable thoughts, and she exemplified throughout her life personal traits which have for a long time been held admirable.

J. D. W.

COOLEY, LYMAN EDGAR (Dec. 5, 1850—Feb. 3, 1917), civil engineer, was born in Canandaigua, N. Y., the son of Albert Blake and Achsah (Griswold) Cooley. He was graduated from the Rensselaer Polytechnic Institute in 1874 with a degree in civil engineering, and in December of the same year was married to Lucena McMillan. Making his home in Chicago, Cooley became one of the city's best-known consulting hydraulic engineers. He began his professional life as a teacher of engineering subjects at Northwestern University (1874–77) and acted as the associate editor of the Engineering News for most of that period. After a year's work as assistant engineer on the construction of a bridge over the Missouri River at Glasgow, Mo., he had his first experience on waterway problems when, from 1879 to 1884, he served as assistant engi-
ern Engineers, serving a year as its president, and in the American Waterworks Association.

[Files of the Am. Soc. of Civil Engineers; Engineering News, Feb. 8, 1917; Engineering Record, Feb. 10, 1917; Who's Who in America, 1916-17; Cooley's published books and papers.]

E. Y.

COOLEY, THOMAS McINTYRE (Jan. 6, 1824-Sept. 12, 1888), jurist, was descended from Benjamin Cooley, one of the selectmen of Springfield, Mass., in 1646. He was born on a farm near Attica, N. Y., the eighth of the thirteen children of Thomas Cooley and his second wife Rachel Hubbard. That part of New York, then being rapidly peopled, was as yet not far advanced beyond the frontier stage; comfort depended on hard work and much of it. In later life, when Cooley had won fame and pecuniary competence, he rarely spoke, and even then reluctantly, of early hardships. Still, he had the advantage of reasonably good schooling, supplemented by his own reading; he apparently read everything he could obtain, especially works of history. He attended the public schools, which were probably of a very simple character, and later the Attica Academy, from which he was graduated in 1842. There his formal education ended, but through a long and busy life he enriched his mind and spirit with books beyond the borders of his profession. It appears that for some months each year, he taught school in the neighborhood of Attica, even before leaving the academy. In 1842 he began the study of law, chiefly at Palmyra. The next year, determined to test his fortunes farther afield, he moved to Adrian, Mich., where he continued his studies, supporting himself by doing tasks of various kinds till his admission to the bar in January 1846. In December of that year, he married Mary Elizabeth Horton, a woman of unusual charm and character.

The next ten years had their share of anxiety. Cooley was ambitious and at that time restless; at all events, not content with opportunities at Adrian, he thrice tried other places, living for brief periods in Tecumseh and Coldwater, Mich., and later in Toledo, Ohio; but after each venture he returned to the town where he had begun the practise of his profession. His early connections were with the Democratic party, but soon after the formation of the Republican party he entered its ranks and was thenceforth associated with it though never as an extreme partisan. In 1855 he formed a partnership in Adrian with Charles M. Crosswell, later governor of the state. His fortunes began to brighten somewhat, his law business increased, and in 1857 he was chosen by the legislature of Michigan to compile the state statutes. This work he did with great thoroughness and skill, and his success doubtless brought his appointment (1858) as official reporter of the supreme court of the state. Though he had appeared but seldom before the supreme bench, there is probably truth in what was said later by one of the justices: "We appointed him because we had noticed in his management of cases, even in his early standing at the bar, a very great discrimination in picking out and enforcing the strong and important points in the case." Certainly that discrimination was characteristic of everything Cooley did; and in his work as reporter it was peculiarly exemplified. He held the position till 1865, and edited eight volumes (5-12 Michigan Reports, covering the years 1858-64). The impression made by his scholarship and industry won for him election to the state supreme court (1864). The years of uncertainty and of struggle were now behind him; ahead lay unceasing toil, but also reputation and notable accomplishment. He was successively re-elected till his defeat in the spring of 1885. During his more than twenty years of service, the court as a whole had a reputation for ability and vigor. Cooley's own work was of high order. At the time of his death a writer in the American Law Review (XXXII, 917) declared that his "numerous judicial opinions . . . are in every respect models; they have been rarely equaled, never surpassed by English or American judges."

When asked to select what he himself thought his best opinion, Cooley named Park Commissioners vs. Detroit, 28 Mich., 228 (1873).

Even before his judicial duties had begun, he had taken another momentous step. When the Law Department of the University of Michigan was established in 1859 Cooley was chosen one of the three professors of law, and in that year he moved with his family to Ann Arbor, to be associated with the University for the remainder of his life. For a time he was secretary, later dean of the department. His lectures were characteristically clear, thoroughly organized, and so straightforward and even apparently simple, that the art and the drudgery involved in preparation were concealed from the listener. They were commonly written and read to his classes; they were condensed, terse and telling, but doubtless because of their very merits the students often failed to realize that they were being led unerringly by a master. In 1884 he gave up his professorship in the law school, and the next year reluctantly accepted the position of professor of American history and constitutional law in the Literary Department. This title he held until his death, but after the first few years

392

He entered the Constitutional Law 1868, 8th ed. 1927. The volume is characterized by clarity of style and perfection of organization; though based on precedent and authority, it is by no means lacking in philosophic grasp or wanting in the presentation of fundamental principles of jurisprudence and of social order. His presentation of constitutional provisions designed to protect individual liberty was especially strong and influential. A much smaller work, The General Principles of Constitutional Law (1880, 3rd ed. 1898), was for years widely used as a college text-book. In 1870 he finished his edition of Blackstone's Commentaries (1871) with introduction and notes covering the main developments of English Law since the author's time and indicating the differences between American law and the English system. Next to his Limitations, Cooley's most influential work was his Treatise on the Law of Torts (1879, 3rd ed. 1960). It was long considered the authoritative American treatment. Cooley himself thought this book his best. He published an edition of Story's Commentaries on the Constitution (1873); and The Law of Taxation (1876, 4th ed. 1924). For the series of American Commonwealths he wrote Michigan, a History of Governments (1885, rev. ed. 1905), a readable and accurate state history. A considerable number of articles in periodicals and a few public addresses of importance also came from his pen. Of these and other miscellaneous writings a list is given in the Michigan Law Journal, V, 373.

The later years of Cooley's life were largely taken up with railroad affairs. He was called on several times to act as arbitrator in disputes. At the end of 1886 he was appointed receiver of the Wabash lines east of the Mississippi, and entered upon the task with characteristic energy, showing marked administrative capacity. In the spring of 1887 he was asked by President Cleveland to become a member of the Interstate Commerce Commission, then being organized. He accepted the position, became chairman of the commission, and at once devoted to the difficult task his customary labor and interest. It is plain from his letters, his diary, the reports he prepared, and the testimony of his associates, that he bore the chief burden and in great degree shaped the policy of the commission. To state in brief compass the nature and effect of his work is quite impossible; it is fair to believe that one of the Commission, writing at the time of Cooley's retirement, did not exaggerate in saying, "You have organized the National Commission, laid its foundations broad and strong and made it what its creators never contemplated, a tribunal of justice, in a field and for a class of questions where all was chaos before." Worn out with labor, he resigned in September 1891. The Reports of the Interstate Commerce Commission in its early years, all of them—except in their purely statistical portions—presumably written by Cooley, should be included among his important contributions.

In great degree Cooley's essential character was visible in his appearance; his face bore a look of earnestness and thought not uninfluenced by a certain benignity. Quiet, even retiring, very self-contained, he loved the companionship of intelligent people, was fond of children, and was interested in young men and their problems. His most marked qualities, aside from calmness and a dominating sense of justice, were his capacity for unremitting toil and the supreme care with which he performed his tasks. He died at Ann Arbor Sept. 12, 1898. His wife had died eight years before.

COOLIDGE, ARCHIBALD CARY (Mar. 6, 1866-Jan. 14, 1928), historian, was born in Boston, Mass., the son of Joseph Randolph and Julia (Gardner) Coolidge. He came of a family that included many names distinguished in the social and commercial life of Boston. His paternal grandmother was Eleonora Wayles Randolph, a grand-daughter of Thomas Jefferson. On his mother's side was a strain of French Huguenot blood which added strength to the sturdy independence of the father's Scotch-Irish inheritance. He was graduated summa cum laude from Harvard College in the class of 1887, and almost immediately decided to devote himself to the scholar's life. Ample means, which in a less resolute character might have tempted to waste of energy, were to him only a stimulus to thoroughness and persistent effort. Family connections enabled him to spend the six years follow-
Coolidge

Coolidge

graduation in a preparation of unusual breadth and variety, not, however, excluding the normal academic routine of study leading to the degree of Ph.D. in history at Freiburg in Germany in 1892. During these years he served as acting secretary of legation at St. Petersburg, 1890–91; as private secretary to his uncle, the United States minister to France, 1892; and as secretary of the American Legation at Vienna, 1893. In this period also he acquired the command of European languages which was to serve him so well in the varied activities of later life. Returning to America in 1893 he accepted an appointment as instructor in history at Harvard. As a teacher of large classes his method was formal, inclining to dryness, but revealing always a personal judgment of men and affairs and enlivened by rare touches of sedate humor. In the closer intimacy of smaller student groups he found his real opportunity and called forth here the permanent loyalty of the choicer spirits.

This long experience in making great historic periods intelligible to unprepared students bore fruit in the writings which made Coolidge’s literary reputation. He was not a prolific writer, but as in personal conversation he held himself in reserve until he could speak with decision, so he was never tempted into writing until he had something definite to say. His most important books, The United States as a World Power (1908), Origins of the Triple Alliance (1917), Ten Years of War and Peace (1927), were the outcome of lectures or the summary of previously printed articles. His style was clean-cut without ornament, almost conversational in its directness and its half-humorous allusions. In the year 1906–07 he went as Harvard Exchange Professor to France where he delivered at the Sorbonne and at other French universities the substance of his later volume, The United States as a World Power. Widely read and translated into French, German, and Japanese, this may fairly be described as a classic in its field. It was a timely reminder to Americans and foreigners alike that our traditional policy of aloofness in world affairs is no longer feasible and must give place to a larger participation in the common interests of the present day. At the same time it avoided with excellent judgment all dogmatism as to the forms which such participation should take.

Coolidge’s interest in books was not that of the “collector” in the ordinary sense of the word. He was rather concerned with the gathering of books as the tools of scholarship. He began early in his academic career to keep himself in-

formed on the activities of the Harvard library, then housed in an ancient building quite inadequate to its needs. He conceived then the ideal of a university library to which he devoted a great part of his energies as long as he lived. He would be satisfied with nothing less than a collection of books so large and so carefully chosen that scholars in every field should find there all printed material necessary for their work. To this end he worked incessantly officially and unofficially, contributing largely of his own wealth and convincing others of the importance of the object he had in view. The lack of a suitable building delayed the fulfilment of his plans until in 1913 the large-minded generosity of Mrs. Eleanor Elkins Widener came half-way to meet them. In the long and sometimes delicate negotiations necessary to combine the architectural problem with the memorial purpose of the donor, the needs of scholars, and the convenience of the library staff, his grasp of the whole situation and his unfailling tact contributed largely to the final result. The Widener Memorial Library stands as his most enduring monument. It was eminently fitting that the office of Director of the University Library, created in 1910, should be entrusted to him. From then until his death he guided with admirable judgment the work of the group of trained assistants in whose hands were placed the details of library administration.

In 1922, when the Council on Foreign Relations decided to start a new quarterly review on a higher plane than had heretofore been attempted, it selected Coolidge as editor-in-chief, and for five years he conducted Foreign Affairs with eminent success. His own articles, generally unsigned, dealt in authoritative fashion with topics of immediate interest to thoughtful readers. His gifts of learning and his personal quality found their natural expression in public service. In 1908–09 he went as delegate of the United States and of Harvard University to the Pan-American Scientific Congress at Santiago, Chile. In 1918 he served as special agent of the United States in Sweden and Northern Russia. During the Peace Conference of 1919 he acted as chief of mission in Paris and Vienna. In 1921 he was selected by Secretary Hoover as negotiator for the Red Cross with the Soviet government in Russia, to arrange for its distribution of supplies to the famine-stricken people. Dignified and friendly in manner, modest but unabashed in any society, he attached pupils and subordinates to him by the sincerity and openness of his character.

IC. K. Bolton, in the Boston Evening Transcript.
COOLIDGE, THOMAS JEFFERSON

(Aug. 26, 1831—Nov. 17, 1920), merchant, financier, diplomat, was born in Boston, the youngest child of Joseph Coolidge, Jr., and Eleanora Wayles Randolph. His father was seventh in descent from John Coolidge, the immigrant, who settled about 1630 in Watertown. His great-grandfather on his mother’s side was Thomas Jefferson, third president of the United States.

Beginning his travels at an early age, Coolidge attended boarding school in London, in Geneva, and in Dresden. At the age of sixteen he returned and entered the sophomore class at Harvard College “without difficulty.” His European ideas, formed during his early education abroad, persisted for a number of years. “I believed myself,” he later wrote, “to belong to a superior class, and that the principle that the ignorant and poor should have the same right to make laws and govern as the educated and refined was an absurdity.” Graduating seventeenth in a class of sixty-odd (1850), he decided to devote himself to the acquisition of wealth. Beginning his business career in foreign commerce, he soon showed a capacity for mercantile affairs. In 1852 he married Hetty Sullivan, daughter of William Appleton of Boston. They had three daughters and a son. Weathering the commercial crash of 1857, he was persuaded by his father-in-law to accept the treasurership of the Boot Mills, thus embarking on a life-long activity in the cotton-spinning industry of New England, holding at different times the treasurership of the Lawrence Manufacturing Company, and of the Amoskeag Mills, and directorships in other New England manufacturing companies. In touch with the banking world, he became director of the Merchants National Bank of Boston, of the New England Trust Company, and of the Bay State Trust Company, and one of the original incorporators of the Old Colony Trust Company of Boston. His business enterprise engaged him in the management of various railroads, and he served for a short time as president of the Atchison, Topeka & Santa Fé road. He also devoted himself to the public interest, serving as a member of the first Park Commission, which laid out the park system of the City of Boston. He was the donor to Manchester-by-the-Sea of a town library, and to Harvard College of the Jefferson Physical Laboratory. He also established a fund for research in physics, and served for eleven years as a member of the Board of Overseers of Harvard University. In 1889 he was appointed a member of the Pan-American Congress. In 1892 he became minister to France, where his ability to speak the language as a native, and his tact, courtesy, and sound judgment won him the high consideration of his associates. A change of administration brought him home, where in 1896 he was appointed member of a Massachusetts Taxation Commission. In 1898 he was appointed to the Joint High Commission of the United States, Great Britain, Canada, and Newfoundland, to examine the question of the Alaskan boundary, the fisheries, the destruction of fur seals, armaments upon the lakes, and transportation of goods in bond. His distinguished life of business achievement and public service closed in his ninetieth year.

COOMBE, THOMAS

(Oct. 21, 1747—Aug. 15, 1822), Anglican clergyman, Loyalist, poet, was born and educated in Philadelphia, being graduated from the College of Philadelphia in 1766. While still in college, he evinced some measure of literary ability by assisting, with others of his fellow pupils, in translating some of the Latin poems of his master, John Beveridge, which appeared in the latter’s Epistola Familiaris (1765). Two years after graduation, Coombe went to England, and one year later, in 1769, was ordained in the Church of England by the Bishop of London. In 1771 he was appointed chaplain to the Marquis of Rockingham, but he left England in 1772 to return to America. In Philadelphia, serving as assistant minister to the congregations of Christ Church and St. Peter’s, he soon distinguished himself as a preacher. His sermon delivered on July 20, 1775, a general fast-day appointed by the Continental Congress, in which he advocated the cause of the Colonies, aroused much attention and received wide circulation in several editions. Coombe’s ordination oath did not permit him conscientiously to go the whole length of the Declaration of Independence, and his deportation to Staunton, Va., was decreed in 1777, together with that of other Tories. Coombe, however, pleaded ill health, and the order, in his case, was not enforced. In 1778 he was granted permission to go to New York, and in the following year sailed for England where he passed the remainder of his life. After a period of service as chaplain to the Earl of Carlisle, Coombe was appointed chaplain in ordinary to the King and, in 1800, became prebendary of Canterbury.
Coombe

Eight years later, the Dean and Chapter of Canterbury appointed him rector to the united London parishes of St. Michael's Queenhithe and Trinity the Less. In these livings he gave respected service for fourteen years, until his death.

Both in America and in England Coombe developed considerable contemporary reputation for scholarly, eloquent, and forceful speaking. Josiah Quincy, Jr., said of one of Coombe's extemporary prayers, that "in point of sentiment, propriety of expression, and true sublimity" it excelled anything of the kind that he had ever heard. A number of his sermons and addresses were published. On Apr. 14, 1771, during his first sojourn in England, Coombe preached at St. Stephen's, Walbrook, for the benefit of the children belonging to the St. Ethelberg Society, a sermon which was published in London in 1772. After his return to America, his first publication, The Harmony between the Old and New Testaments Respecting the Messiah (Philadelphia, 1774), was a consolidation of two sermons preached before the united congregations of Christ Church and St. Peter's on Christmas Day, 1773, and "on the Sunday when the collection was made for the relief of the poor of those congregations." One other discourse was published in London in 1790, the Influence of Christianity on the Condition of the World, delivered at Trinity Chapel, Conduit St., London, on Dec. 13, 1789.

Coombe's claim to the title of poet is based primarily on The Peasant of Auburn; or, the Emigrant (London, 1783). The poem is in content and form an imitation of the Deserted Village of Goldsmith, to whom it was dedicated, and was designed to recount the unhappy fortunes of the emigrant from "sweet Auburn" when, later, on the banks of the Ohio, his bright hopes darkened to desolation, war, and death. The volume included also a number of shorter poems. He no doubt impressed his contemporaries more as an Englishman than as an American; and more as clergyman of character and ability than as a poet.

[An obituary, printed in the Gentleman's Mag. (London), Aug. 1822 gives the primary facts of Coombe's professional career and of his publications in England. See also Benj. Dorr, A Hist. Account of Christ Ch., Phila. (1841); Jas. S. M. Anderson, Hist. of the Ch. of England in the Colonies and Foreign Dependencies of the British Empire (London, 1845–56); Wm. S. Perry, Hist. of the Am. Epic, Ch. 1507–1850 (1885). In addition to the edition of The Peasant of Auburn specified in the text, there was one limited to 150 copies privately printed for the Aungervyle Society in 1887, The Peasant of Auburn and Other Poems, 'attributed to J. Coombe, D.D. circa 1786.' Copies of either edition are now rare.]

A. L. B.

Cooper

COOPER, EDWARD (Oct. 26, 1824–Feb. 25, 1905), manufacturer, public man, was born in New York City, the son of Peter Cooper [q.v.], and Sarah Bedell. He attended the New York public schools and entered Columbia University, but before taking a degree he went abroad for travel with his classmate Abram S. Hewitt [q.v.], suffered shipwreck on the return voyage, was rescued by a sailing vessel, and came back to New York resolved to enter business. Together with Hewitt, he organized Cooper, Hewitt & Company for the manufacture of iron and steel in which he became expert, rising to a high rank among the metallurgical engineers of America. From his father he inherited marked inventive talent which he cultivated by scientific study of the iron and steel industry, with fruitful results. Perhaps the most notable of these was the invention of the regenerative hot-blast stove for blast furnaces, one of the most important improvements made in iron manufacture in America up to that time, as it greatly increased the iron output of a furnace and lessened the cost. Neither for this nor for his other inventions did he apply for patents; thus many noteworthy improvements designed by him, such as the Durham double bell and hopper, are not generally known as his. Recognition, however, meant little to him. He preferred that his colleagues and the public should benefit by his ingenuity and have free use of his discoveries.

Keeping pace with the development of the iron and steel industry in the United States, the firm of Cooper, Hewitt & Company grew rapidly. It succeeded to the iron interests of Peter Cooper and added also the Trenton, Ringwood, Pequest, and Durham Iron Works. In consequence Edward Cooper was sought for places of responsibility and at various times served as a director of the United States Trust Company, American Sulphur Company, New Jersey Steel & Iron Company, New York & Greenwood Lake Railway, American Electric Elevator Company, Chrysolite Silver Mining Company, and the Metropolitan Opera House. His public career began when, in 1860, he was chosen a delegate to the National Democratic Convention held in Charleston. In 1871, he suggested to Gov. Samuel Tilden, to whom he was a valued counselor, that the accounts of "Boss" Tweed and his associates, who then dominated New York City politics, be subjected to examination. The Governor approved, and a vigorous investigation was ordered which ended in the complete downfall of the "Tweed Ring." As a member of the Committee of Seventy, Cooper played a prominent part, not only in the prosecutions but also in the re-
Cooper

form that followed. Although always a Demo-
crat, he was chosen in 1879 fusion candidate for
mayor by the Republicans and a wing of the
Democrats, and after an exciting campaign was
elected. During his administration he worked
energetically toward municipal reform. Like his
father, he devoted himself generously to the pub-
lic interests. Of Cooper Union, which was es-
established and endowed by his father, he became
a trustee and president of the board of trustees,
and labored unsparingly for its advancement.
He was married in 1863 to Cornelia Redmond,
who died in 1894. Cooper died in New York City
in his eighty-first year.

vol. 1.]

W. B. P. COOPER, ELIAS SAMUEL (Nov. 25, 1820-
Oct. 13, 1862), surgeon, was born on a farm near
Somerville, Butler County, Ohio, the son of Ja-
cob and Elizabeth (Walls) Cooper, and a brother of
Jacob Cooper [q.v.]. Following a course in
medicine at Cincinnati, which he began at the
age of sixteen, he attended St. Louis University
at St. Louis, Mo., where he obtained his M.D.
degree in 1841. He began practise at Danville,
III., and at the age of twenty-two had become the
leading surgeon of the community. In 1844 he
moved to Peoria in the same state, where he prac-
tised for ten years. Following a year spent in
European surgical clinics, he went to San Fran-
cisco in 1855. Soon after his arrival, he was in-
strumental in organizing the Medical Society of
the State of California. In 1858 Cooper founded
in San Francisco the first medical college on the
Pacific coast, known as the Medical Department
of the University of the Pacific. In 1860 he began
the publication of the San Francisco Medical
Press, a quarterly journal of medicine and sur-
gery, which was continued after his death by his
nephew, Dr. Levi Cooper Lane, who was asso-
ciated with his uncle in practise. It is in this
journal that most of Cooper's published writings
appear.

From the time of his arrival in San Francisco,
Cooper was recognized as a surgeon of skill and
originality. As professor of surgery his teaching
was marked by earnestness, without oratory. It
is noteworthy that he conducted a course in oper-
ative surgery upon animals. His claims to per-
manent recognition in surgery rest upon his use
of alcoholic dressings of wounds, the treatment
of diseased joints by free incision, the use of met-
thallic sutures for un-united fractures and free ex-
ploration of the thoracic cavity after rib resec-
tion. Such aggressive leadership could not fail
tо arouse jealousies and Cooper's later years were
somewhat embittered by a long-drawn-out suit
for malpractice in a case of Cesarian section.
The suit never came to trial. Cooper was a large,
powerful man, intensely earnest, vigorous in lan-
guage and quick to resent what he considered in-
justices. He read and wrote only medicine, he
thought only medicine and talked only medicine.
He slept little, saying that sleep was so much
time stolen from life and from his work. Such
utter neglect of the laws of health brought the
usual penalty of an early death. Soon after ar-
iving in California he had developed an obscure
nervous affection which later caused a bilateral
facial paralysis and intense neuralgic pains. In
the spring of 1862 he went to the mountains on
account of his condition; in May he went sud-
denly blind, but later recovered some vision.
He died in San Francisco in October of that year.
He was never married. His medical school lived
until 1864, two years after the death of its found-
der. It was reorganized in 1870 as the Medical
College of the Pacific; again in 1880, as Cooper
Medical College, when Dr. Levi Cooper Lane
donated a site and erected an imposing building
for the school; and in 1908 it was taken over by
Stanford University.

[Sketches of Cooper's life and works by Levi C.
Lane in the San Francisco Medic. Press, Oct. 1862; by
Washington Ayer, in the Occidental Medic. Times (Sac-
ramento), Oct. 1893; and by Emmet Rixford, in Am.
Medic. Biogs. (1920), ed. by H. A. Kelly and W. L.
Barrage; information as to parentage from Prof. Lane
Cooper. A portrait of Cooper is contained in the col-
clection of the Army Medical Library in Washington.]

J. M. P. COOPER, EZEKIEL (Feb. 22, 1763--Feb. 21,
1847), clergyman, a pioneer in the establishment of
Methodism in the United States, was born in
Caroline County, Md., the son of Richard and
Ann Cooper, whom he describes as "plain peo-
ple, in easy and plentiful circumstances." He
was brought up in the Church of England, but
when thirteen years old became interested in the
type of religion exemplified by the Methodists,
through the preaching of Freeborn Garretson
[q.v.]. It was not until several years later, how-
ever, after having experienced the inner strug-
gle which the evangelical theology of the day was
likely to engender, that he joined a Methodist so-
ciety. Garretson made him a class-leader in Tal-
bot County, but he long hesitated to become a
preacher, though, he says, "I was bold in repro-
ving, and zealous in inviting sinners in private to
turn to the Lord and seek the salvation of their
souls. My earnestness in this soon had such an
effect that it was seldom that any of my acquaint-
Cooper

ances would sin within my sight or hearing.” Finally, in 1784, he was brought to the attention of Francis Asbury who appointed him to the Caroline circuit. At the conference of 1785, held at Baltimore, he was admitted on trial, and on June 3, 1787, at John Street Church, New York, he was ordained deacon by Bishop Asbury. His ministry extended over sixty-four years, and covered a wide era, including Long Island, East Jersey, Trenton, Baltimore, Annapolis, Alexandria, the Boston district, of which he was superintendent, New York, Brooklyn, Philadelphia, and Wilmington. Throughout this long period of the church’s growth he was a recognized leader, effective as a preacher, powerful as a debater, noted for his encyclopedic knowledge, and having the confidence and warm affection of Bishop Asbury until the latter’s death. Physically he was a man to attract attention, being over six feet tall and heavy of frame, with large head, high forehead, sharp features, and a large wen suspended from his right jaw. He was extremely frugal, some said penurious, and succeeded in leaving an estate of $50,000. It was his business ability, no doubt, which in 1779 led to his being appointed agent of the Methodist Book Concern. When he took charge it had no capital, and debts equaling its assets; when he left in 1808 it was on a firm foundation with assets of $45,000. Even when in a slave-holding community he vigorously opposed slavery, publishing in the (Annapolis) Maryland Gazette in 1790–91 a series of letters in advocacy of freedom, under the signature of “A Freeman.” A letter by him on the same subject, dated Apr. 18, 1791, appeared in the Maryland Journal, another in the Virginia Gazette of Nov. 17, 1791, and one dated Nov. 28, 1791, in the same paper. His only other publications seem to have been, A Funeral Discourse on the Death of that Eminent Man the Late John Dickens (1799) and The Substance of a Funeral Discourse . . . on the Death of the Rev. Francis Asbury (1810).

Geo. A. Phæbus, Beams of Light on Early Methodism in America (1887) is based on a diary, letters, and other MSS. left by Cooper. The appendix reprints several of his letters on slavery. Standard histories of Methodism contain numerous references to him. See also Wm. B. Sprague, Annals Am. Pulpit, vol. VII (1861); and W. F. Whitlock, The Story of the Book Concerns (1903).

H.E.S.

COOPER, HENRY ERNEST (Aug. 28, 1857–May 14, 1929), lawyer, leader in the Hawaiian revolution, minister of foreign affairs of the Republic of Hawaii, was of New England ancestry, though born in New Albany, Ind., the son of William Giles Cooper and Harriet A. (Weller) Cooper. The elder Cooper having enlisted in the Union army when the Civil War came on, Mrs. Cooper took her children back to her old home in Boston. Henry was educated in the schools of that city and graduated from Boston University in 1878 with the degree of LL.B. In the same year he was admitted to the bar. His first professional employment was with a syndicate organized in Boston for the construction of a railroad in the southwestern part of the United States. Through this circumstance he became a resident of San Diego, Cal., where he was for a time attorney for the Santa Fé Railroad. During the “boom” in that section he organized an abstract and title company and made some real-estate investments. On Oct. 2, 1883, he was married to Mary E. Porter; eight children were born to them.

Cooper first visited Hawaii in 1890, returning there a year later with his family to take up his residence. During the stormy reign of Queen Liliuokalani (1891–93), he became a member of the annexation party and in the beginning of 1893 helped to organize the revolution which deposed the queen and set up a republican government. On the day of the overthrow, as chairman of the Committee of Safety, he read from the steps of the government building the proclamation of the Provisional Government. His services in this movement were rewarded by his appointment as one of the judges of the circuit court for the island of Oahu, a position which he filled with satisfaction. In November 1895 he was appointed minister of foreign affairs of the Republic of Hawaii and entered upon eight years of service in the executive branch of the government, during which period he administered, at one time or another, either regularly or ad interim, most of the important executive offices, including those of acting president of the Republic and acting governor of the territory. He held as many as three positions simultaneously. On one occasion he was minister of foreign affairs, superintendent of public instruction, and acting president; at another time he was secretary of the territory, superintendent of public works, and treasurer ad interim. He clearly demonstrated his capacity for effective administration of public office. A competent observer said of him, “He is positive and active and as a rule has progressive views on public matters.” He had some bitter enemies, however, chiefly among the native Hawaiians and those who composed the old royalist party, who disliked him not only because of his share in the overthrow of the monarchy but because he was a recent arrival thrust prominently into Hawaiian politics, being about the only important leader in the revolutionary movement who was not born in Hawaii or long resident in the country.
Cooper

After the inauguration of the territorial government a newspaper representing this faction once spoke of him as the Mark Hanna of Hawaii.

As minister of foreign affairs Cooper had to carry on a diplomatic controversy with Japan, arising mainly from the attempt of the Hawaiian government to limit the immigration of Japanese laborers into Hawaii, and to handle the somewhat delicate relations between Hawaii and the United States during the years 1896-98. In the Japanese controversy—which was never judicially settled on its merits—he maintained that Hawaii's position was correct in its entirety and only consented to the payment of an indemnity in order to clear the way for annexation to the United States. To the policy of annexation he was ardently devoted and he sought in every proper way to promote American interests. It is believed that he, more than any one else, was responsible for the decision of the Hawaiian government to disregard neutrality at the outbreak of the Spanish-American War and to place Hawaii squarely on the side of the United States. He was the first secretary of the Territory of Hawaii (1900-03) and was one of the two men most seriously considered by President Roosevelt for appointment as governor in 1903. After retirement from public office in that year, he engaged in the practise of law. He had an important part in the founding of the College (now University) of Hawaii and was the first chairman of its board of regents (1907-14). From 1910 to 1914 he was first judge of the first circuit court (Oahu) and then retired permanently to private life. The last years of his life were spent on his walnut ranch in California. He died at Long Beach, Cal.

[Men of Hawaii, vol. II (1921), ed. by J. W. Siddall; contemporary notices in Honolulu newspapers, especially obituary in Honolulu Advertiser, May 16, 1929; reports of Hawaiian government departments; correspondence in Archives of Hawaii and Dept. of State.]

R.S.K.

COOPER, JACOB (Dec. 7, 1830-Jan. 31, 1904), college professor, was born on a farm near Somerville, Butler County, Ohio, the son of Jacob and Elizabeth (Walls) Cooper, and a brother of Elias Samuel Cooper [q.v.]. Working by day and studying at night he prepared for college. After some time at other institutions he entered Yale in the Junior class and graduated with high honor in 1852. The next year he was licensed in the Presbyterian ministry. From Berlin in 1854 he received his Ph.D., and then studied theology at Halle and Edinburgh. In 1855 he became professor of Greek in Centre College, Danville, Ky. This town was then rife with anti-slavery agitation, and when the Civil War broke out it became the center of opposition to the secession of Kentucky. To uphold the Federal cause some professors of the college and of Danville Theological Seminary established the Danville Review (1861-65). Cooper was an editor, and wrote fervent outspoken articles. In 1862 he became chaplain of the 3rd Kentucky Infantry, composed chiefly of mountain men, whom he served with signal devotion. The next year he returned to the college, which had before it several years of extreme disturbance. His Kentucky experiences gave Cooper a life-long intense interest in politics, with a zealous attachment to the Republican party.

In 1866 he joined the faculty of Rutgers College. For twenty-seven years he was professor of Greek, and for eleven, till his death, professor of mental and moral philosophy. Besides teaching, he gave the service of college pastor, preaching often in the chapel, and also constantly in churches. He impressed himself deeply on generations of students, and became in a remarkable way identified with the life of the college. He had large and various learning, and contagious intellectual enthusiasms. A rare gift of personal sympathy and many kindly acts won for him the hearts of his students. His individuality of speech and manner gave spicy interest to his teaching and his other relations, and made him vivid in memories. His influence in the college was increased by his high place as a citizen of New Brunswick. While decided and indeed militant in his opinions, he was and is remembered for great Christian goodness and friendliness. For two years from 1883 he was importuned to become professor in the University of Michigan, but Rutgers would not release him. He received the degree of D.C.L. from Jena in 1873. He was an editor of Bibliotheca Sacra from 1897 to 1903. He was married in 1855 to Caroline Macdill of Oxford, Ohio, who died two years later. In 1865 he married Mary Linn of Cincinnati. Cooper's published writings were chiefly his numerous periodical articles, philosophical, theological, political, and biographical, covering forty years. Many were reprinted as pamphlets. His list of separate publications includes The Eloeianian Mysteries (Berlin Ph.D. thesis 1854, revised edition 1876, 1895), The Loyalty Demanded by the Present Crisis (reprinted from the Danville Review, 1862), The Natural Right to Make a Will (Jena D.C.L. thesis 1874, 1894), Biography of George Duffield, Jr., D.D. (1889), Biography of President Theodore Dwight Woolsey (1899), all pamphlets.

[Who's Who in America, 1903-05; Obit. Record Grads. Yale Univ., 1894; E. T. Corwin, Manual of the Reformed Ch. in America (1902), containing a partial list of Cooper's articles in periodicals; W. H. S. Dem-
Cooper

arrest, Hist. of Rutgers Coll. (1924); A. S. Cook, Address on . . . Presenting to Rutgers Coll. a Portrait of Prof. Jacob Cooper (1906); H. A. Scopin in BibliothecaSacra, Apr. 1904; The Targum (Rutgers Coll., Feb. 4 and 11, 1904; Rutgers Alumni Mo., Jan. 1928; Cooper's writings.)

R.H.N.

COOPER, JAMES (May 8, 1810–Mar. 28, 1863), lawyer, United States senator, was born in Frederick County, Md. Owing to the strained financial circumstances of his parents he was not able to go to college until 1829, when he entered Mount St. Mary's College, Emmitsburg. Three years later he was graduated from Washington and Jefferson College, after which he entered the law office of Thaddeus Stevens at Gettysburg, Pa. He was admitted to the bar in 1834. As a Whig in the federal House of Representatives, where he served from Dec. 2, 1839, to Mar. 3, 1843, he was a strong supporter of the measure providing for the distribution of the funds from the sales of public lands among the states for internal improvements and of the Preemption Act of 1841 (Congressional Globe, 27 Cong., 1 Sess., p. 143). From 1844 to 1848 he was in the state legislature and he became speaker of the Assembly in 1847. He was an aggressive candidate against Gen. Irvin for the Whig nomination for governor but was not successful. In 1848, he was appointed attorney-general of the state by Gov. Johnston, in which position he served until the legislature met in January 1849, when he appeared again as a representative from Adams County and was again chosen speaker. In this year he was elected United States senator. As senator probably his greatest claim to national distinction was his membership on the Committee of Thirteen which framed the famous compromise measures of 1850. Ill health prevented him from taking an active part in the work of the Senate during the latter half of his single term. He opposed the bill in 1853 granting federal aid for a Pacific railroad on the ground that the bill conferred too extensive powers on a corporation (Ibid., 32 Cong., 2 Sess., App., p. 183). He spoke against the Kansas-Nebraska Bill on Feb. 27, 1854 (Ibid., 33 Cong., 1 Sess., App., p. 505). At the outbreak of the Civil War he became a member of the Brengle Home Guard of Frederick, Md., where he had returned to reside at the close of his senatorial term. He was authorized by the War Department to raise and organize a regiment of infantry in Maryland (Official Records, Army, 3 ser., I, 138, 618). On May 17, 1861, he was commissioned a brigadier-general in the volunteer service and was placed in command of Camp Wallace near Columbus, Ohio, which had been established by Gen. Lew Wallace as a camp for paroled soldiers organized for service against the Indians in the Northwest. Later he was made commander of Camp Chase, near Columbus, where he died.

[In addition to references given above see some mention, not wholly favorable, of Cooper's political life in A. K. McClure, Old Time Notes of Pa. (1905), written by a contemporary of Cooper, who characterizes him as a "weak man . . . and unbalanced by the distinction he had attained. He was a fluent and adroit speaker, but he was not a man of forceful intellect and was greatly lacking in well balanced judgment." Obituaries appeared in the Ohio State Journal, Mar. 31, 1863, and the Capital City Fact, Mar. 28, 1863, both of Columbus.]

F.C.S—n.

COOPER, JAMES FENIMORE (Sept. 15, 1789—Sept. 14, 1851), novelist, was born in Burlington, N. J., the son of William Cooper [q.v.] and of Elizabeth Fenimore his wife. William Cooper was descended from a Quaker ancestor who had crossed the Atlantic in 1679 and had founded the family tradition of landowning on a large scale. Elizabeth Fenimore was of Swedish descent. The father of the novelist at the close of the Revolution had acquired a tract of land along the upper Susquehanna and had established a settlement called Cooperstown. To it in 1790 he brought his family, and there between 1796 and 1799 he built Otsego Hall, which was long the most notable private residence in that part of New York state. A man of fortune and standing, he represented his district in Congress, and in his mode of life maintained the dignity expected of a border aristocrat. His son, the eleventh of twelve children, grew up in circumstances which were as near to being manorial as the age and place could afford. At the same time, since the village of Cooperstown lay on the very edge of the forest, was indeed surrounded by it, the future romancer early became familiar with the magic of the wilderness as well as with the rough makeshifts of the frontier. The divided elements of the pioneer and of the gentleman, which were always to struggle in his mind, were equally developed by his childhood.

His formal education tended to confirm him in a kind of Federalist pride. From the village school in Cooperstown he was sent in 1800 to Albany, where he was a pupil in the household of the rector of St. Peter's and the companion of young gentlemen much like himself in upbringing and in prospects. The rector, a good scholar and a good churchman, was also a man of the world who was neither republican nor even American in his sympathies, and who cherished a special prejudice against New England. When Cooper, after two years at Albany, went to Yale to enter the class of 1806, he carried with him his own pride and, apparently, some of his late teacher's prejudice. He took college lightly, resisted its obligations, got little out of its advantages, and was dismissed in his third year. It was then
Cooper

declared that the boy, now sixteen, should go to
sea in preparation for entering the navy, which
at the time had no naval academy. Accordingly
he shipped before the mast in 1806, on board a
vessel which sailed from New York, changed
cargo in London, proceeded to the Straits of Gi-
braltar, returned to England, and reached Amer-
ica again in 1807. With this training in seaman-
ship Cooper was able to get a commission as
midshipman. He served for a brief period on the
Vesuvius in 1808, and spent the winter on Lake
Ontario with a party engaged in building a brig
for inland use against the British in Canada.
During 1809 he visited Niagara Falls with his
commanding officer, was for a short time himself
in command on Lake Champlain, and was ordered
back to the Atlantic, to the Wasp. The next year
he was granted a furlough for twelve months, at
the end of which he resigned his commission and
left the navy for good.

These years, which submitted Cooper to all the
technical discipline he was ever to have, had not
won him away from his impulse toward the life
of a country gentleman, and he seems to have felt
no regret at giving up his profession. His imme-
diate excuse was that on Jan. 1, 1811, he had been
married to Susan Augusta De Lancey at Ma-
maroneck, N. Y. Not only was the young wife
unwilling to share her husband with the sea, but
she was also, as a member of a land-holding fam-
ily, predisposed to a country life. The two set-
tled at once into a domestic serenity not easy to
match in the history of literature. Cooper man-
aged to hold the firmest principles in general re-
specting his rights over his household and yet to
yield them in the gentlest way on any special oc-
casion. That is to say, he loved and admired his
wife, who was a woman of tact, who made him
comfortable and happy, and let him work as much
as he wished, provided he did it where she chose.
After their marriage they lived until 1814 with
or near the elder De Lanceys at Heathcote Hill
in Mamaroneck. In that year they moved to
Cooperstown, where Cooper selected a farm,
"Fenimore," just outside the village and began
to build a house. In 1817, however, his wife per-
suaded him to go back to Westchester, a more
civilized county. There he lived at Scarsdale,
in a house on Angelvine Farm overlooking Long
Island Sound, until 1822, when he left the coun-
try for New York in the interest of his new ca-
reer as writer.

Up to the age of thirty Cooper had never even
thought of the literary profession. His family
and his farms had sufficiently occupied him, and
he had been content to live as did other men in
his class. There must have been, however, some
growing restlessness in him, some longing for
the life of movement and adventure which he had
given up on his marriage at twenty-one. Almost
any accident might have suggested to him that he
could combine domestic peace with heroic activ-
ity by becoming a writer of romances. The par-
ticular accident which did suggest it was one
which must have happened to many men. Read-
ing a novel aloud to his wife one day, Cooper
said he could write a better one. She challenged
him to do it. Here, in most instances, the matter
would have ended. But this restless squire was
one case in ten thousand, a man of genius whose
gifts were none the less real because they were
unsuspected by him or by anybody else. He first
tried his hand at Precaution (1820), a conven-
tional novel with its scene laid in England and
with all its action mere gentility and propriety.
The reception of the book did little to encourage
its author, but he did not need encouragement.
His gathered energy, which had to have an out-
let, had found one, and for the next thirty years
it poured itself into a powerful stream of novels,
romances, and criticism.

Having no definite literary aims of his own
when he wrote Precaution, Cooper had fallen
into a familiar mode without any sense that he
was misdirecting his talents. With his next book
he vigorously asserted himself. His setting was
to be American, his chief character the very es-
cence of native patriotism. Starting with the
story of an actual spy who during the Revolution
had served John Jay against the British, then in
possession of New York, Cooper enlarged this
somewhat shadowy figure with all the additions
of romance. Harvey Birch in The Spy (1821)
is cunning, mysterious, eloquent in both words
and silences, dedicated to his cause, driven by
patriotism as by a demon, and lonely as a hero
in a Byronic poem. The fact that Birch plays
like a shuttle of secrecy back and forth between
the British and the American lines allowed Coop-
er to exhibit both sides in the struggle and to
represent the topography and manners of West-
chester County in considerable detail. He had
already hit upon the formula of flight and pur-
suit which recurs in most of his romances, keep-
ing up the characteristic suspense and display-
ing the characteristic panorama. He had also
revealed his attitude toward characters from the
lower social classes: he thought he looked upon
them as one democrat upon another, but there
was really an element of condescension, however
generous, in his evident gratification at being
able to prove that a plain man may be as much a
hero as a gentleman. What was most important
of all, Cooper had found in himself and had

401
shown to his readers that large vigor of narrative without which no man can be a great romancer and on account of which any man can be forgiven any minor defect.

_The Spy_ met with a prompt success. New editions were called for, in England as well as in America; a dramatic version was on the New York stage within a few months; a French translation appeared in less than a year. The first outstanding American novel, it did not then suffer from its stately, not to say stilted, language and its lofty sentiments, not to say top-heavy affectations. Contemporary readers took such qualities in a romance as much for granted as they took contemporary costumes on men and women. They saw only the flesh and blood of heroic actions, set in a new world not hitherto seen under any such heroic light. Cooper, who hardly guessed he was writing in a fashion, and who believed that he was dealing with a life full of reality, was stimulated by his audience to go on as he had begun. He never used any narrative method but that of rapid improvisation, and his only concern was to hit upon some new and interesting story to tell.

This must not be taken to mean that he thought of fiction as existing for its own sake. He was a country gentleman, not a Bohemian, and he was constitutionally didactic. Literature in those days of the Republic could not easily help feeling that it had duties to perform. But Cooper, though he did lard his plots with incidental morals, had such a wilderness of life to transform into fiction that he had to work on a scale which kept him in motion. After the _Spy_ he again struck out somewhat at random. _The Pioneers_ (1823) owes more of its continued fame to its connection with the Leather-Stocking series than to its individual merits. Cooper had not yet imagined Natty Bumppo and Chingachgook to the plane of romantic elevation on which they were subsequently to move. He regarded them as picturesque figures rather than as universal symbols, and he gave them only a reasonably important part in his drama of that frontier which he remembered from his childhood in Cooperstown and which he now depicted, as he said, exclusively to please himself. Next he turned to yet another region of his youthful memories and wrote _The Pilot_ (1823), avowedly to prove that a sailor could write a better novel than the landsman Scott had written in _The Pirate_, but actually, no doubt, to make a fresh escape into a lost world of adventure. Once more Cooper used conventional, Byronic elements, in his John Paul Jones, and his flamed with patriotism as in _The Spy_. But _The Pilot_ contained another exciting pursuit and flight, another arresting simple hero, Long Tom Coffin, and another thrilling background, exhibited with such contagious magic that Cooper, though he could not know it, was setting the mode for all later stories of the sea, and more or less determining their tone.

These three successes made him a personage in the new, tentative literature of the age. He founded the Bread and Cheese Club in New York, a literary society which his reputation no less than his vigorous character enabled him to dominate. He served on the committee which welcomed Lafayette back to the United States in 1824, and he received in that year the honorary degree of Master of Arts from Columbia College. In the expansive mood which came to him with such recognition he planned to become a national romancer by writing the Legends of the Thirteen Republics, one story for each of the original states. He wrote, however, only _Lionel Lincoln_ (1825), dealing with Boston in the days of Bunker Hill. His account of the battle was admirable, but on the whole the book was dull, and it generally failed to please. The dislike which Cooper felt for the New England character, a dislike which he formed early and which he seems to have encouraged in himself, handicapped him when it came to writing a romance. The idea of satire had not occurred to him, nor was he, as his later work was to show, happy in that vein. He was obliged to create largely out of his affections, with the help of knowledge which he had picked up before he began to write. His first three experiments, after _Precaution_, had indicated most of the ground on which his imagination was at home: the New York past, the Northern frontier, the high seas. Outside of these territories he was seldom to show his capacities at their best.

Although the Natty Bumppo of _The Pioneers_ had been only a preliminary sketch, he had so interested the public that Cooper, urged by his friends, decided to go further with his most striking character. It must be borne in mind that Daniel Boone had died in 1820, and that he had been glorified by Byron in _Don Juan_ shortly after _The Pioneers_ appeared. While Boone cannot strictly be said to have been the original of Natty, they were at least alike in that each of them had chosen the wilderness in preference to the settlements. This, at a time when Americans were becoming sharply conscious of a clash between the wilderness and the settlements, seemed intensely dramatic. About Boone there was not much more to tell; at any rate, his biographers did not tell it. Natty Bumppo, bound by fewer limits of actuality, could be freely elaborated. In _The Last of the Mohicans_
Cooper
(1826), Cooper took the hero back to the deeds of his prime, during the French and Indian War. In The Prairie (1827), Leather-Stocking was made to appear in his old age, sunk from scout to trapper, beyond the Mississippi in the wilderness where Boone had taken refuge from the crowding world. In the one, the scout is endowed with all the finished competence which in Cooper's time it was already traditional to ascribe to frontiersmen. In the other, the trapper has assumed the wide benevolence which it was then traditional to think of as the result of living and reflecting in the wilderness. As Cooper had thought more and more about his childhood, the magic of the forest had grown upon him. It has become the symbol of whatever was spacious and elevated, and so naturally the breeding-ground of heroism and wisdom. The prairie he did not know from experience, but he imagined it as a sea of land, a kind of combination of the two wildestesses he did know. With as much movement and adventure as in any of the previous romances, The Last of the Mohicans and The Prairie had also a dignity and a poetry which were new. Still another enrichment came from the various Indians in the stories. They have never, even by Cooper himself, been considered realistic, nor have they needed to be. They have always stood as figures of romance, creatures of the wild, dark aborigines neither lifted nor corrupted by civilization. Conceived in that universal mood of chivalry which, when an enemy has ceased to threaten, impels the descendants of the victors to pay homage to the defeated, Cooper's Indians have been accepted in the same mood. Their craft, their nobility, their eloquence—these are the tribute and compensation given them in a sort of poetic justice. It will, however, be noted that Chingachgook and Uncas, to whom Cooper devoted his chief praise and sympathy, are the allies of Leather-Stocking.

Having touched the peak of his accomplishment and having won international fame, Cooper entered another chapter of his career. The Prairie, indeed, had been written in Paris, to which he had taken his family in 1826. He went, nominally, as United States consul at Lyons, in order not to seem an expatriate, but he soon allowed this nominal appointment, which involved no duties and no fees, to lapse, and gave himself up to travel, authorship, and controversy over the relative virtues of America and Europe. His travels included brief stays in England in 1826 and 1828, a longer visit to Switzerland in 1828, temporary resi-
romancer, able at will to lose himself in the universe of his creation, he might have endured his disappointment and his prison. But his temper was by no means so detached. A man of action, he had to take a hand when he saw things, as he thought, going badly. For the next ten years he devoted much of his strength to anger criticism, suppressing the pioneer in himself while the gentleman in him fought to reform the settlements.

The trouble started with Cooper considerably in the wrong. Always sensitive to adverse criticism, he had bitterly resented it from his countrymen while he was abroad defending them, and, little of it as he had really to endure, he came home smarting with what he believed to be many grievances. He declined the public dinner at once proposed for him in New York, thus letting slip an opportunity to learn of the esteem in which he was genuinely held by the very persons whose opinion he cared for. Stubbornly aloof, he insisted that there were no longer any Americans of the old breed. Unfortunately, in the first book after his return, *A Letter to his Countrymen* (1834), he wrote too much like a man vexed by reviewers, and, more unfortunately still, like a gentleman angry at being dealt with by mere journalists. Thereafter, even when he was less petulant in his disquisitions, he had the disadvantage of having formerly made himself ridiculous. But he did not stop with answering his reviewers.

In a rush of savage books he poured out his judgments concerning Europe, to which he had preferred his mythical America, and concerning America, to which he now preferred a mythical republic such as has never had a place on any map: *The Monikins* (1835), a leaden satire on England and America, *Sketches of Switzerland* (1836), *Gleanings in Europe* (1837), devoted to France, *Gleanings in Europe: England* (1837), *Gleanings in Europe: Italy* (1838). He tried direct exposition of his thesis in *The American Democrat* (1838), and he illustrated it at length in the two novels *Homeward Bound* (1838) and *Home as Found* (1838), in which a family of Americans, returning to their native land after a patriotic absence, suffered a disillusionment like Cooper’s. In all these works he displayed the energy which was his essential characteristic, and he produced the effect which invariably follows when a powerful man lays about him without regard to consequences. In many of his accusations of vulgarity, stupidity, dishonesty, and cruelty he was more than justified, but he was almost always wrong at least to the extent of being wrong-headed. *Homeward Bound* and *Home as Found*, for instance, offered him a fine occasion for showing high illusions in a tragic downfall. Instead, they showed a patriotism so confused with snobbishness in the returning Americans as to be beyond sympathy or respect. Gentlemen and ladies who assert their claims too volubly cannot be taken as quite authentic.

In the touchy state of American opinion which then prevailed Cooper was bound to rouse the fury of his compatriots, and he would have been overwhelmed if he had been less robust. The public took its revenge by neglecting his books for half a dozen years after his return, as indeed they more or less deserved. The newspapers replied to him in the manner of the day, increasing their violence to the point of libel. Cooper, who was a Democrat in politics, thereupon began to bring suits against the Whig papers of New York State, argued his cases himself with remarkable skill and vigor, and between 1837 and 1842 was so regularly victorious that he taught the press to speak with caution about his character and his motives. At the end of the period he stood vindicated but alone. Even in Cooperstown, where after 1834 he had made his residence in Otsego Hall, he had quarreled with his fellow townsmen over the possession of a piece of land which was his but which they believed to be theirs. Moreover, his earnings had been cut down, not only by the nature of his controversial books but by the movement of taste away from the type of romance to which his earlier books belonged. Nevertheless, he had somehow managed to keep alive those elements in his mind which were profoundly concerned with the world of adventure. Litigation or no litigation, he had written a solid work of scholarship on *The History of the Navy of the United States of America* (1839). More remarkably still, he had been able to abandon himself to his imagination long enough to write *The Pathfinder* (1840) and *The Deerslayer* (1841).

Opinions differ as to whether *The Pathfinder* and *The Deerslayer* are better than *The Last of the Mohicans* and *The Prairie*. Certainly, however, the element of poetry is not so great in the later pair as in the earlier, written before Cooper had suffered his disillusionment. Any gain must be looked for in the characterization, in the skill with which new qualities in Leather-Stocking are displayed. For this gain, which does appear, there was a reason connected with the fact that the books carried on a kind of epic. Cooper had now gone far enough from the origi-
nal conception of his hero to realize that there was still much to be brought out or explained. Though it was impossible to make the mature conception uniform throughout, it was possible to put into the series, as a whole, the same total of characteristics that it might have had if the whole could have been foreseen from the beginning. The fourth and fifth stories of the cycle have therefore rather more than their share of deliberate craft in portraiture. In The Path-finder the scout is seen falling in love, failing to win the girl of his choice, and surrendering her to another with a good grace which shows that, after all, he was properly married to his wilderness. In The Deerslayer he is seen in the fresh morning of his youth, resisting the temptations of the world with the integrity of a forest saint, and for the first time finding human blood on his blameless hands. Between them the two novels complete the outline and add the light and shade to the most truly epical figure in American fiction.

The Leather-Stocking Tales should of course be read in the order in which they take up successive episodes in their hero’s life: The Deerslayer, The Last of the Mohicans, The Path-finder, The Pioneers, The Prairie. Thus read, they reveal the unfolding character of Natty Bumppo without serious discrepancies, though The Pioneers remains the weakest link in the chain. Since Leather-Stocking’s nature was in no way complex, it could be represented only in its relation to outward events, only through the deeds with which he rose to meet the circumstances which assailed him. Cooper, consequently obliged to discover or invent a multitude of circumstances, did not hesitate to invent. He not only regarded the frontier as somewhat barren of materials for his purposes; he consciously held, as he said in discussing the work of Scott, that invention in a浪漫家 is a higher faculty than that “of creating a vraisemblance.” The amount of history in the series, indeed, should not be underestimated, for it is considerable. But the real triumph of Cooper is the variety of his invention, the power with which, isolating his few characters in the wilderness, he contrives to fill their existences, at least for the time being, with enough actions, desires, fears, victories, defeats, sentiments, thoughts to make the barren frontier seem a splendid stage. How relatively dry was his original matter may be noted in The Pioneers, which itself marks a long advance upon what any previous writer had been able to do with the frontier, and perhaps an advance upon the reality itself. The later novels in the series did more than transcribe; they transmuted.

Taking what he wanted from a region in which his imagination moved happily, Cooper did with it what he wanted, until he had added a new classic territory to the heroic world.

If, in the fresh burst of creative energy which succeeded his quarrelsome digression, he had turned again to other of his characters besides Leather-Stocking and his companions there might have been another series to stand with Cooper’s masterpiece. Instead, he ranged widely during the prodigious years from 1840 to 1846. Mercedes of Castile (1846) went back to the first voyage of Columbus. The Two Admirals (1842) concerned itself with the British navy before the American Revolution. The Wing-and-Wing (1842) told the story of a French privateer in the Mediterranean at the end of the eighteenth century. Ned Myers (1843) was the biography of an actual sailor who had served with Cooper before the mast and who long afterward had come to the famous novelist with the story of his life. Lives of Distinguished American Naval Officers (1846) made further use of the studies begun for the History of the Navy. The two parts of Afloat and Ashore (1844—now known respectively as Afloat and Ashore and Miles Wallingford) dealt with the evils of impressment but also with the charms of life in the New York of Cooper’s own youth. Wyandotte (1843) recounted the siege of a blockhouse on the upper Susquehanna. Le Mouchoir (1843) was a chronicle of fashionable life in Manhattan. Only in the three novels called, as a whole, the Littlepage Manuscripts, did Cooper try to repeat the cyclic scheme employed with Natty Bumppo. Of these the third, The Redskins (1846), which touched upon the question of anti-racism then stirring in New York, was both fantastic and dull. The second, The Chainbearer (1845), was better by only one striking character, the squatter Thousandacres. The first, Satanstoe (1845), ignored at first by the press and neglected ever since by the public, was the only novel of Cooper outside the Leather-Stocking series which had the good temper and the strong illusion of his work at its best. Tracing the history of the Littlepage family through three generations, Cooper seems to have been the less tempted to wrangle the farther off he was from his contemporaries. Satanstoe, representing the life of the New York gentry in the mid-eighteenth century, must still be considered, for both its matter and its manner, one of the most distinguished of American historical novels.

Rarely, however, during this last decade of his life was Cooper so amiable. The venom of controversy persisted in him. He grew more and
more bigoted in his theological opinions, which were both orthodox and aristocratic. He cultivated his animosity toward New England, which furnished most of his later villains. He was always ready to turn aside from his narrative to harangue the age for its shortcomings. Even the plots of his latest novels—The Crater (1848), The Oak Openings (1848), The Sea Lions (1849), The Ways of the Hour (1850)—were at the mercy of his various doctrines. He had lost all touch with the magical, philosophical wilderness which had so long been a refuge for his imagination. Yet it must be pointed out that his rages were in some respects only a literary habit into which he had slipped. In his private life he was reasonably serene. Though he reduced his fortune by unsuccessful speculations, he was never in any serious distress. He was devoted to his wife and children, one of whom, Susan Fenimore [q.v.], published an agreeable book, Rural Hours, the year before her father's death and afterward edited his collected novels with valuable prefaces. Cooper kept up relations with a few old friends, now and then left his home on matters of business, and in 1847 traveled as far west as Detroit; but for the most part he remained in Cooperstown, where he died and was buried. Irving acted as chairman of the committee which arranged a memorial meeting in New York, Bryant delivered the eulogy, and Webster presided. These were great names, and their presence on the occasion meant that Cooper's countrymen would doubtless have made peace with him if he had permitted it. He himself was responsible, through his dying injunction against any biography of him whatever, for the fact that his memory has continued to be involved with the tradition of his quarrels, instead of being lifted out of that, as it might have been, to a level on which his creative qualities would alone have seemed important.

[A Discourse on the Life and Genius of Jas. Fenimore Cooper (1852) by Wm. Cullen Bryant was published shortly after Cooper's death. This was superseded by the prefaces furnished by Susan Fenimore Cooper to the collected edition of the novels—the prefaces being later collected in Pages and Pictures from the Writing of Jas. Fenimore Cooper (1861). Thos. R. Lounsbury in his Jas. Fenimore Cooper (1883) brought together all the facts then known and produced a biographical and critical study of genuine merit. Some anecdotal information was added by Mary E. Phillips in Jas. Fenimore Cooper (1913). The most extensive source of original information about Cooper is the Correspondence of Jas. Fenimore-Couper (2 vols.; 1922), edited by his grandson Jas. Fenimore Cooper. There is a careful bibliography of the writings by and about Cooper in The Cambridge Hist. of Am. Lit. (1917), I, 539-44.]

C. V.-D.

COOPER, JAMES GRAHAM (June 19, 1830—July 19, 1902), naturalist, was born in New York City, son of William and Frances (Graham) Cooper, and was the eldest of six children. When the boy was seven years of age his father moved to New Jersey and established his home near Hoboken. On his walks to and from school the child availed himself of his ample opportunities to study natural history, and in the home he was equally fortunate. His father, having inherited a competence, devoted himself to a life of study and drew about him such friends as Lucien Bonaparte, Thomas Nuttall [q.v.], and John J. Audubon [q.v.], ornithologists, John Torrey [q.v.], the botanist, and Henry Schoolcraft, the historian. The elder Cooper was a central figure of the group which founded the Lyceum of Natural History of New York, the forerunner of the New York Academy of Sciences. In 1851 Cooper graduated from the College of Physicians and Surgeons, New York. He spent the next two years in the hospitals of the city. The active period of Cooper's life as a field naturalist began in 1853, when he signed a contract with Gov. Isaac I. Stevens [q.v.], of Washington Territory, to act as one of the physicians of the Pacific Railroad Survey Expedition, detailed to explore for two years the route along the forty-seventh and forty-ninth parallels. Government employ as contract surgeon in the army, private collecting expeditions, occupation as zoologist of the Geological Survey of California, and the writing of reports filled his time henceforth for a period of years and brought him close familiarity with the geographic and biologic features of the Pacific Coast region. As in his father's home Cooper had been surrounded by noted men of science, so here during his pioneer labors in the West he was equally fortunate, sharing his rich experiences in the field with such gifted interpreters of science as Hayden, Gibbs, and Asa Gray [qq.v.]. The writing of reports brought him into correspondence with Spencer F. Baird and Elliott Coues [qq.v.]. Baird characterized Cooper's work, published in conjunction with the Geological Survey of California, as "By far the most valuable contribution to the biography of American birds that has appeared since the time of Audubon" (S. F. Baird, T. M. Brewer, and R. Ridgway, History of North American Birds, 1874, Preface, p. v); while Coues, in 1866, referred to Cooper as "so well known as an indefatigable and accurate naturalist."

On Jan. 9, 1866, Cooper was married to Rosa M. Wells at Oakland, Cal., and during that year established himself in the practise of medicine at Santa Cruz, Cal. In 1871 he removed to Ventura County where he remained until 1875, returning then to the vicinity of Oakland, where
Cooper

he spent his declining years at Hayward. He published many articles on conchology, botany, ornithology, mammalogy, geology, and paleontology. The authoritative chapter upon zoology in T. F. Cronise's Natural History of California (1868), is by Cooper, as acknowledged in the preface of the book. A pioneer collector of scientific materials and writer on the natural history of California and Washington, Cooper left an impress for all time on the records of these Western states, by setting down painstakingly the facts of geographic distribution in the days when original conditions were untrammeled.

J. G.

COOPER, JOSEPH ALEXANDER (Nov. 25, 1823-May 20, 1910), soldier, was the son of John Cooper, a native of Maryland and a veteran of the War of 1812. The latter removed to Kentucky and settled as a farmer near Cumberland Falls in Whitley County, where his son Joseph Alexander was born. A few years later the family moved across the Tennessee line to the adjoining county of Campbell where they settled on Cove Creek and carried on farming. In September 1847 Cooper enlisted in the 4th Tennessee Infantry and served for the remainder of the war against Mexico. After the war he returned to Tennessee and engaged in farming near Jackson in Campbell County until the outbreak of the Civil War. He was a Whig in politics and in common with the great majority of his East Tennessee neighbors he opposed the secession of his state. He was a delegate to the union convention at Knoxville in 1861 and took a prominent part in its deliberations and activities. After its adjournment he busied himself with recruiting and drilling men in his county for the Union army. In August 1861 he enlisted at Whitesburg, Ky., and was mustered into service as captain of the 1st Tennessee Infantry (Temple, post, p. 105). Before the Civil War, Cooper had been little more than a poorly educated, impecunious farmer without any great significance even in his own county, but his war record was brilliant and he rapidly rose to prominence. As captain he fought in the mountains of Kentucky and Tennessee during the fall of 1861 and the spring of 1862, and in March of the latter year was made colonel of the 6th Tennessee Infantry. His command saw hard service in the battles of Murfreesboro, Chickamauga, and Chattanooga. He became involved in a quarrel with his brigade commander, Brigadier-General Spears, and finally joined with his fellow officers in having Spears court-martialed for Southern sympathies (Official Records, vol. XXXII, pt. 2, p. 34). In July 1864 Cooper was made brigadier-general and led the 2nd Division of the 23rd Corps in Sherman's attack on Atlanta. From this time to the end of the war he took part in the operations in East Tennessee. In May 1865 he was made brevet major-general. Throughout the war Cooper's services were greatly appreciated by his superior officers, not only for his ability as a fighter but even more for his influence among the East Tennesseans and his personal knowledge of East Tennessee geography.

He was mustered out of service at Nashville, Jan. 15, 1866 (F. B. Heitman, Historical Register and Dictionary of the United States Army, 1903). In 1868 he was an unsuccessful candidate for senator from Tennessee (J. T. Moore, Tennessee, the Volunteer State, 1923, I, 534). In 1869 Grant appointed him collector of Internal Revenue for the Knoxville District, in which position he continued for ten years. In 1880 he removed to Stafford County, Kan., and engaged in farming until his death. Cooper was a member of the Baptist church and for more than thirty-five years was a deacon. He helped organize the South-Central Baptist Association of Kansas in 1889 and served for many years as moderator of the Association. He was twice married: on Apr. 9, 1846, to Mary J. Hutson, who died in 1874, and on Jan. 21, 1875, to Mary J. Polston. He died in his eighty-seventh year, and was buried in the National Cemetery at Knoxville, Tenn.

[Full details of the war record of Cooper are to be found in the Official Records (Army); Oliver P. Temple, Notable Men of Tenn. (1912), deals largely with his part in the Knoxville Convention. Details of his life in Kansas have been supplied by the Kan. State Hist. Soc. See also tribute to Gen. Cooper in Daily Jour. and Tribune (Knoxville), Sept. 13, 1895; obituary in Leavenworth Times, May 21, and Chattanooga Daily Times, May 22, 1910, and extensive obituary material in Daily Jour. and Tribune (Knoxville), May 22 and 26, 1910.]

R. S. C.

COOPER, MARK ANTHONY (Apr. 20, 1800-Mar. 17, 1885), business man, politician, came of a Virginia family which migrated to Georgia and settled in Hancock County in the heart of the black belt. His father was Thomas Cooper; his mother, Sallie Cooper, a descendant of an Italian who, having been driven out of his native land, perhaps for religious reasons, settled in Holland. His son, Mark Anthony, was sent back to Italy to be educated, but ran away to sea, was captured by Algerian pirates, escaped to
an English ship, and eventually reached Virginia where he became the progenitor of an important American family.

Mark Anthony Cooper was born in Hancock County, Ga. He was prepared for college at a noted private academy in the neighborhood, attended the University of Georgia for a time, then migrated to the University of South Carolina, where he was graduated with an A.B. degree in 1819. Leaving college he studied law and was admitted to the bar at Eatonton, Ga., in 1821. Though successful in the practice of law, his real bent was toward a business career. He was one of the few who foresaw the great possibilities that lay in the state's natural resources and set to work to develop them, at a time when nearly everybody was interested primarily in farming. In 1833 he organized a cotton-mill company and erected near Eatonton the second water-driven cotton factory in the state. It was capitalized at $50,000. Two years later he sold his stock in this concern, removed to Columbus, Ga., and organized a bank, capitalized at $200,000. As a member of the state legislature in 1833 he was a warm advocate of the project to charter a railroad. The charter was granted to the Georgia Railroad & Banking Company, which built a road connecting Augusta with Atlanta. Later Cooper was an important factor in the building of the East & West Railroad in northwest Georgia. His work as a developer spread from cotton-milling, banking, and railroadng to the production of iron. Purchasing an interest in a small furnace near Etowah, in Bartow County, he renovated and extended the plant, and supplemented it by erecting a rolling mill and a nail factory. In conjunction with this enterprise he erected a flour mill. He connected his settlement by a four-mile railway with the Western & Atlantic to Chattanooga, and proceeded to develop coal mines. The entire business, occupying some 12,000 acres and embracing these various industries, in time became his sole property.

In 1836 he volunteered for the Seminole War, and was commissioned major of a battalion raised in Macon, Ga. He entered the Twenty-sixth Congress (1839) as a Whig, but when Calhoun led an important Whig group back into the Democratic party in 1840, Cooper with W. T. Colquitt [q.v.] and others, having become dissatisfied with the growing nationalistic and anti-slavery tendencies of the national Whig party, followed him. Cooper was re-elected to the next two Congresses, but resigned in 1843 to become the Democratic candidate for governor. He was defeated by George W. Crawford [q.v.], and thereafter he took no further part in politics.

Cooper was married to Mary Evalina Flourney, in 1821, but his bride lived only three or four months after the marriage. In 1826 he was again married, this time to Sophronia A. R. Randle, and to them there were born seven daughters and three sons, two of whom were killed in the Civil War. Cooper died at Etowah, Ga., in his eighty-fifth year.

[There is an account of Cooper by his grandson, W. G. Cooper, in W. F. Northen, Men of Mark in Ga., vol. II (1910), which is reproduced almost verbatim in L. L. Knight, Ga. and Georgians, IV (1917), 2097. See also L. L. Knight, Georgia's Landmarks, Memorials, and Legends (1913), I, 290; obituary in Atlanta Constitution, Mar. 20, 1885.]

R. P. B.

COOPER, MYLES (February 1737–May 20, 1785), clergyman, Loyalist, second president of King's College, N. Y., was the son of William and Elizabeth Cooper of Wha House Estate, seven miles from Millom, in Cumberland County, England. At the age of sixteen he entered Queen's College, Oxford, and received the degree of B.A. in 1756, and M.A. in 1760. In the latter year he became an usher in Tonbridge School. On Mar. 2, 1760, he was ordained a deacon; and a year later was elected chaplain of Queen's College, Oxford, and ordained priest. In this same year (1761) he published a volume of poems, written by himself and others, with the title Poems on Several Occasions. He was acting as the curate of a church near Oxford, when the Archbishop of Canterbury named him, in response to an inquiry of the governors of King's College, as a man capable of serving as vice-president and succeeding to the presidency. In the expectation of receiving this appointment he sailed for New York in 1762; but the governors, finding no authority in the charter for appointing a vice-president, made him an assistant to the president, professor of moral philosophy, and a fellow of the College. After the resignation of President Samuel Johnson [q.v.] in 1763, he was chosen president (Apr. 12, 1763). His administration was notably successful. Changes in the curriculum and the rules of discipline to conform to Oxford ideas were made; a grammar school was started as a feeder for the College; a medical school and a hospital were founded; and large grants of land were secured. It was Cooper's ambition to change the College into a royal American university. In 1771 he went to England to secure a charter and endowment for such an institution, but the most that he could accomplish at the time was a remission of quit-rents on certain tracts of land held by the College and a gift of books from Oxford for the library.

Meantime he had become one of the outstanding churchmen in the American Colonies. In 1765 he presided at the convention of Episcopal

408
Cooper
clergymen of New York and adjoining colonies. He thrice toured the southern colonies to secure the support of the clergy for an American Episcopal. He was also an active member of the Society for the Propagation of the Gospel in Foreign Parts. When the *Whip For The Whig* was started in 1768, he contributed to the paper, never losing an opportunity to promote the interests of the Church and to give vent to his intense dislike of dissenters. He thought Whitefield a "common disturber of the peace of the Church" and his disciples either "Knaves or Madmen."

Cooper was a not less ardent supporter of the royal government. As local opposition increased, he put his pen at the service of those Loyalists who believed that nothing should pass unanswered "that had a tendency to lessen the respect or affection that was due to the Mother Country." In 1772 he and John Vardill, a tutor in the College, published two pamphlets, "Causidicus" and "Causidicus Mastix," in reply to an address of President Witherspoon of Princeton in which, they asserted, he had spoken disparagingly of the English universities. He and Vardill were also the authors of "A Series of Papers Signed Poplicola." In the bitter controversy that preceded the break with England, Cooper was accused of writing nearly every Loyalist pamphlet; but none of the pamphlets usually accredited to him were his work (see correspondence of Dr. T. B. Chandler and his memorial to the Royal Commission on Loyalist Claims). It is possible that he wrote the poem entitled "The Patriots of North America" (1775). Certain it is that he became one of the most detested Loyalists in New York. When, then, news came of the bloodshed at Concord and Lexington, he fled for his life to a British frigate in the harbor; and again on May 10, 1775, while Alexander Hamilton, then a pupil, harangued the mob from the College steps. On May 25, 1775, he sailed for England never to return. Of this last experience he wrote a dramatic description in some "Stanzas" published in the *Gentleman's Magazine*, July 1776 (see also MS. diary of Dr. T. B. Chandler in General Theological Seminary, N. Y.).

For a time Cooper returned to Oxford as Fellow at Queen's College. From 1778 until his death he was senior minister of the new English Chapel at Cowgate near the University of Edinburgh. He also was given various church livings in England and a pension by the Crown for his services to state and church. Though he himself never married, he bore heavy financial burdens to aid the families of his widowed sister and of his elder brother. Cooper had a jovial and sociable nature. He always lived well, keeping his garret well stocked with liquors "of a most delicate Texture"; and he seems to have paid for his love of the table by a chronic ailment which caused his sudden death at luncheon.

[An unpublished monograph by Clarence H. Vance, Esq., of New York, based on extensive use of manuscript material, supersedes other accounts of Cooper's career. Two anonymous articles in *Apanetic Mag.,* July 1819, and *Am. Medic. and Phil. Reg.,* Jan. 1813, contain some information about his "life and character." See also Jos. Foster, *Alumni Oxonienses,* vol. I (1887).]

A. J.

COOPER, PETER (Feb. 12, 1791—Apr. 4, 1883), manufacturer, inventor, philanthropist, the son of John and Margaret (Campbell) Cooper, was born at Little Dock St., New York. The Cooper family was of English stock. Obadiah Cooper, Peter Cooper's great-great-grandfather, came to America and settled at Fishkill-on-Hudson in 1662. John Cooper, Peter's father, born about 1758, a lieutenant in the Continental Army, at the close of the war went into business, first in New York, later in Peekskill, Catskill, and Newburgh. He was successively a hatter, a brewer, a store-keeper, and a brick-maker—in all of which he was aided by his son Peter, who, by the time he was sixteen years old, was already a veteran in experience. Though the lad was lacking in formal education, for he had attended school for only a year, his varied training in affairs fitted him well for business success. At seventeen, he was apprenticed at twenty-five dollars a year and board to John Woodward, a New York coach-maker, who voluntarily paid him fifty at the end of the third year and seventy-five at the end of the fourth, and when his apprenticeship was over, offered to lend him money to start a business of his own. Peter declined the offer, and instead found employment, first in a manufactory of cloth-shearing machines, then as traveling salesman, and later as owner of a new cloth-shearing machine. He continued prosperously in this business until the close of the War of 1812, and, when peace was followed by smaller profits, he sold out and opened a retail grocery store at the corner of the Bowery and Rivington St. On Dec. 18, 1813, being then twenty-two years of age, he married Sarah Bedell of Hempstead, a Huguenot, educated by the Moravians of Pennsylvania, with whom he lived happily for fifty-six years until her death in 1869.

Deciding that manufacturing was his field, Cooper bought a glue factory, together with a twenty-one-year lease of the ground on which it stood, near the site of the old Park Avenue Hotel. With this business he found his opportunity and was soon supplying the American market with American-made glue and isinglass which bettered the foreign imports. So complete was his
Cooper

success that he won a monopoly of the trade in this line, but he continued his frugal ways, and was, for many years, his own stoker, secretary, bookkeeper, executive, and salesman. Eventually the business outgrew even his energy, and he entrusted part of the direction to his son Edward and his son-in-law, Abram S. Hewitt [qq.v.]. If the glue factory was the foundation of his fortune, the bulk of the latter came originally from the iron works which he set up at Baltimore. There, in 1828, with two partners, he bought 3,000 acres of land within the city limits and erected the Canton Iron Works. The Baltimore & Ohio Railroad upon whose success much of the value of this land depended, was on the verge of failure. The route followed by the few miles of track was so twisting and hilly that Stephenson, the English engineer, declared it impossible for an engine to run on it. Cooper was not dismayed. "I'll knock an engine together in six weeks," he said, "that will pull carriages ten miles an hour." The engine—the first steam locomotive built in America—was made, and, in spite of its diminutive size which gave it the nickname of "Tom Thumb" and the "Teakettle," actually pulled a load of over forty persons at more than ten miles an hour. On Sept. 18, 1830, it raced with a noted horse from Riley's Tavern to Baltimore and would have won but for a leak in the boiler caused by excessive pressure.

The Canton Iron Works afforded a striking example of Cooper's good judgment and good fortune in business matters. When he sold the property in 1836 he accepted in payment stock of the Baltimore & Ohio Railroad at forty-five dollars a share which he soon afterward sold for two hundred and thirty dollars. His interests now expanded rapidly, until within two decades they included a wire manufactory in Trenton, N. J., blast furnaces in Phillipsburg, Pa., a rolling mill and the old glue factory in New York, foundries at Ringwood, N. J., and Durham, Pa., and iron mines in northern New Jersey. In 1854, in his Trenton factory, the first structural iron for fireproof buildings was rolled—an achievement which contributed to the winning of the Bessemer Gold Medal awarded him in 1870 by the Iron and Steel Institute of Great Britain.

To Cooper belongs much of the credit for the final success of the New York, Newfoundland & London Telegraph Company, which he served as president for twenty years, during which he was the chief supporter of Cyrus Field [qq.v.]. His confidence in the ultimate success of the project never weakened notwithstanding repeated failures and many deficits which it fell to him to meet when every one else drew back. He became president, likewise, of the North American Telegraph Company which at one time owned or controlled more than half of the telegraph lines of the country. As an inventor, Cooper possessed genius which might have made him an earlier Edison had it been joined to the necessary technical training. His first invention was a washing machine, followed by a machine for mortising hubs, and others for propelling ferry-boats by compressed air, for utilizing the tide for power, and for moving canal barges by an endless chain run by water-power. He made use of gravity as a source of power in an endless chain of buckets in one of his mines.

It is, however, chiefly as a philanthropist that Cooper is remembered. During his service on the Board of Aldermen of New York, he was an early advocate of paid police and fire departments, sanitary water conditions and public schools. In the broader field of national politics, he supported the Greenback party and consented to run on its ticket for president in 1876, with, it would appear, little hope of election, in order to bring before the public his views on the currency. His greatest monument is the Cooper Union or Cooper Institute at Astor Place, New York City, which he founded in 1857–59 "for the advancement of science and art." It is unique in the combination it offers of the ideal and practical in education. Free courses are given in general science, chemistry, electricity, civil, mechanical, and electrical engineering as well as in art. There are also free lectures of a very high order and the Institute maintains an excellent reading-room and library service. Cooper died on Apr. 4, 1883, and was sincerely mourned by the city which he had so well served. At a reception given in his honor in 1874, he said: I have always recognized that the object of business is to make money in an honourable manner. I have endeavoured to remember that the object of life is to do good." To this creed he remained faithful.

Scott, Peter Cooper, the Good Citizen (1888); Howard Carroll, Twelve Americans, Their Lives and Times (1883); C. Edwards Lester, Life and Character of Peter Cooper (1883).) W. B. P.

COOPER, SAMUEL (Mar. 28, 1725–Dec. 23, 1783), clergyman, was a son of Rev. William and Judith Sewall Cooper and was born in Boston where he attended a grammar school and entered Harvard College from which he graduated in 1743. In December of that year he was elected to the pastorate of the Brattle Square Church in Boston which was the scene of his life-work. This, the fourth church of the Puritan order to be established in Boston, was founded in 1699.
Cooper

and was frequently called the "Manifesto" Church from the title of the document which set forth the principles of its founders. Dr. Benjamin Colman [q.v.] was the first pastor. In 1715 Rev. William Cooper was chosen as his colleague, and at his death in 1743, apparently at the earliest desire of the aged Senior Pastor, Samuel was called to succeed his father, doing part duty till his ordination, May 21, 1746. On the death of Dr. Colman, Aug. 29, 1747, he became sole pastor, and remained such till his death. He was given the degree of D.D. by the University of Edinburgh in 1767.

Cooper was an able and eloquent preacher, a sympathetic and untiring pastor, and under him Brattle Church was strong and flourishing. His orthodox Calvinism showed signs of softening at certain points, and in his pulpit style also he was accounted in advance of his time. His only literary output consists of a small number of sermons and miscellaneous pamphlets of which Palfrey rates his sermon of 1780, On the Commencement of the Constitution, as his best, and his Dudleyian Lecture of 1774, The Man of Sin, a diatribe against the Papacy, as "the most indifferent." It was during his pastorate, in 1773, that the society built its second edifice on the old site. This building, regarded at its erection as the most splendid and costly church in Boston, was used by the British as a barracks during the siege, and was struck by a cannon ball the night before the evacuation. It was restored and used as a house of worship until its removal in 1871.

Cooper was active in the cause of American freedom and intimately associated with its leaders. As early as 1754 he wrote a pamphlet, The Crisis, against a government excise, and before and during the Revolution he was a constant contributor to the newspapers and an orator on the popular side. The celebrated inflammatory Hutchinson Letters passed through his hands, but were published against his advice. He became obnoxious to the British authorities and an order was issued for his arrest along with other leaders. But being warned, he fled from Boston on Sunday, Apr. 8, 1775, and did not return until after the evacuation (W. H. Sumner, History of East Boston, 1858). It is commonly asserted that Cooper did not allow his political activities to interfere with his pastoral duties. Some doubt is thrown on this in William Tudor's Life of James Otis (1823) where it is stated that because of his neglect of his sermon preparation he became notorious in clerical circles for his frequent pulpit exchanges.

His portrait represents the typical clergyman of the period, in wig, gown, and bands. But the face indicates less austerity of character than is commonly associated with the eighteenth-century New England divines. He had polished manners, an elegant diction, and a voice of great sweetness and power. He was a fluent speaker and would probably have been a fine extemporaneous preacher had he chosen to cultivate that art. His learning was extensive rather than deep (Emerson Davis, "Sketches of Congregational Ministers in New England," manuscript in the Congregational Library). He was prominent in public affairs and had a wide circle of friends. His intimacy with Adams and Franklin brought him foreign friends and correspondents, and he was much sought after by visitors who came to New England from France and other European countries. He was the first vice-president of the Academy of Arts and Sciences, instituted by the General Court in 1780. The Society for the Promotion of the Gospel among the Indians found in him a constant patron. He declined the presidency of Harvard College in 1774, but was a member of the Corporation from 1767 and was active in raising funds for the restoration of the Library after the fire of 1764. Several portraits of Cooper were painted by Copley, the best known of which is in the possession of the Massachusetts Historical Society. He married Judith, a sister of Dr. Thomas Bulfinch [q.v.], by whom he had two daughters.

[The principal authorities for the life of Cooper are: W. B. Sprague, Annals Am. Pulpit, vol. I (1857); S. K. Lothrop, A Hist. of the Church in Brattle St., Boston (1851); J. G. Palfrey, A Sermon Preached in the Church in Brattle Square, Boston, July 18, 1824; Records of the Church in Brattle Square (1902).] F.T.P.

COOPER, SAMUEL (June 12, 1798-Dec. 3, 1876), Confederate general, was born at Hackensack, N. J., the son of Samuel and Mary (Horton) Cooper. His great-grandfather had come from Dorsetshire to Massachusetts, and his father, also a Massachusetts man, served as a major of artillery in the Continental Army. Cooper entered the Military Academy from New York on May 25, 1813, and was commissioned in the artillery, Dec. 11, 1815. He served in garrison with troops at intervals, and was promoted to first lieutenant and captain of artillery in 1821 and 1836. He was early selected for staff duty at headquarters of the army, however, and most of his service, aside from an expedition against the Seminoles in 1841-42, was in Washington. He was appointed an assistant adjutant-general, with the rank of major, in 1838, was made lieutenant-colonel in 1847, and was appointed adjutant-general of the army, with the rank of colonel, in 1852, partly in consequence of his highly efficient conduct of business in the War
Cooper

Department during the Mexican War. Having married a grand-daughter of George Mason, he acquired a country place in Fairfax County, Va., near the homes of his wife’s relatives and also convenient to his duties in Washington. These family connections, together with a close friendship with Jefferson Davis which had grown up when the latter was secretary of war, had made him wholly Southern in his feelings and sympathies, in spite of his Northern birth and ancestry, so that on the outbreak of the Civil War he resigned his commission, Mar. 7, 1861, and went to Montgomery to offer his services to the Confederacy. To a newly established government, which had to create a complete military organization while engaged in fighting a great war, Cooper’s long administrative experience was invaluable. He was at once made adjutant and inspector-general of the army, and was appointed to the full rank of general as soon as that grade was created by Congress. He was the senior officer of the Confederate Army throughout the war. When the Confederate government left Richmond in April 1865, he accompanied the President and cabinet until the party finally broke up, and then surrendered himself, turning over to his captors all of the records of the War Department which he had been able to remove and transport. The preservation of a great quantity of valuable historical material was thus due to his foresight and care. After his parole and release he returned to his estate at Cameron, near Alexandria, Va., where he resided in retirement until his death.

COOPER, SARAH BROWN INGERSOLL (Dec. 12, 1836-Dec. 11, 1896), philanthropist, founder of kindergartens, was born at Cazenovia, N. Y., the daughter of Capt. Samuel Clark Ingersoll and Laura (Case) Ingersoll. She was a cousin of Robert G. Ingersoll [q.v.], and possessed a gift of eloquence almost equal to his. She was graduated from Cazenovia Seminary, one of the earliest coeducational institutions in the country. One of her classmatess was Leland Stanford [q.v.], founder of Stanford University. At the age of fourteen she began school-teaching but soon thereafter entered the Troy Female Seminary for further study. From here she moved to Atlanta, Ga., and accepted a position as governess in the family of Gov. Schley. In Atlanta, on Sept. 4, 1855, she married Halsey Fenimore Cooper, formerly a professor at Cazenovia, sometime editor of the Chattanooga Advertiser, who held during his life various offices under the federal government. In 1869 Mr. and Mrs. Cooper, with their daughter Harriet, located in San Francisco, where Mrs. Cooper began her career of public work. Following Cooper’s death in 1885, mother and daughter became constant companions and co-workers, imbued with a devotion passing all ordinary affection. Entirely self-forgetful, no sacrifice was too great for these women. But the strain finally told on Harriet, who developed intermittent attacks of profound melancholia until her mind gave way. After several unsuccessful attempts to take her own and her mother’s life, the daughter succeeded in asphyxiating them both on the eve of her mother’s sixtieth birthday.

Mrs. Cooper’s public work was of wide scope. She was president of the Women’s Press Association, treasurer of the World’s Federation of Women’s Clubs, and a director of the Associated Charities. She was one of five eminent women elected to the Pan-Republican Congress during the Chicago World’s Fair. Returning to San Francisco, she helped to organize the Woman’s Congress, serving as president for two years preceding her death. Her title to national recognition, however, rests primarily on her organization of the Golden Gate Kindergarten Association in 1879, and her founding of some forty-four free kindergartens throughout San Francisco. For this she collected an endowment fund of $300,000. Her work marked the first attempt at kindergarten training on so large a scale and it acted as a stimulus to similar activity in a number of American cities. It was her aim “to lay the foundation for a better national character by founding free kindergartens for neglected children.” During her life the Association had conferred its benefits upon eighteen thousand children. The years 1870-95 mark the period of the introduction and extension of kindergarten education in America. Throughout the period Mrs. Cooper was an outstanding figure among five or six of the notable workers in the United States. When, in 1892, the International Kindergarten Union was organized at Saratoga, N. Y., she was elected its first president as a recognition of her leadership.

[Annual Reports, 1888-91, 1899, of the Golden Gate Kindergarten Ass., also Kindergarten Mag., Feb., 1897; Gertrude De Aguirre, “A Woman from Altruria,” in Arena, May 1897; Portraits and Biographies of Prominent Am. Women (1901), ed. by Frances E. Willard and Mary A. Livermore; Lillian Drake Avery, A Genealogy of the Ingersoll Family in America (1926) ; San Francisco Chronicle, Dec. 12, 1896.]

COOPER, SUSAN FENIMORE (Apr. 17, 1813-Dec. 31, 1894), the child of James Fenimore [q.v.] and Susan (De Lancey) Cooper, was for
Cooper

nearly half her life very closely associated with her father, accompanying him on his travels, and acting as his amanuensis for all his later books. During the last years of his life she kept a journal (1848–50), extracts from which formed her most important work, *Rural Hours* (1850). There is little of biographical interest in these notes. Their popularity rested on the freshness and pleasantness of her observations of signs and seasons. There is a natural grace and sincerity in her records of melting snow, bluejays and woodpeckers, old Dutch superstitions, housecleaning, and "fresh lettuce from the hot-beds." An observation of haymaking leads her to reflections on the position of women in America. She is chronicler of the county fair, and of the disappearing Indian. In the four years between its publication and that of Thoreau's *Walden* (1854) her book ran through six editions, and new editions appeared in 1868 and 1887. Her later volumes of nature notes, *Rhyme and Reason of Country Life* (1854), and *Rural Rambles* (1854), seem to have had only single editions. The superiority of *Rural Hours* may be ascribed to its birth from the last years of association with her father, for, she tells us, "In his own garden he took very great pleasure, passing hours at a time there during the summer months. . . . It was his great delight to watch the growth of the different plants, day by day. His hot beds were always among the earliest in the village" (J. F. Cooper, *The Crater*, Household Edition, 1880, Preface, pp. 10–11). The author of *Rural Hours* was invited to edit the American edition of *Country Rambles*, by the well-known English naturalist, John Leonard Knapp. This volume, with her notes, appeared in 1853. She published *Mount Vernon, a Letter to the Children of America* in 1859, and two years later prepared *Pages and Pictures From the Writings of James Fenimore Cooper* (1861). She also wrote prefaces for the Household Edition of her father's works (1876–84). A study of her comments and interpretations reveals the intensity of her daughterly devotion. In her old age she published *William West Skiles, a Sketch of Missionary Life in Vale Crucis in Western North Carolina, 1842–1862* (1896).

Meanwhile she had devoted herself to numerous charitable works, the most important of which was the Orphan House of the Holy Savior which she founded in 1873 in Cooperstown. This institution, beginning with five inmates, in ten years grew under her personal superintendence to a large institution with buildings for the housing and education of nearly one hundred boys and girls. It has been stated that the organization of the Girls' Friendly Society in America grew out of and was suggested by Miss Cooper's work in the Orphan House of the Holy Savior (*Evening Post*, New York, Dec. 31, 1894), but the official publications of the Girls' Friendly Society ascribe its origin in this country to other causes.

Throughout Miss Cooper's prefaces and notes to her father's works, and her comments on excerpts in *Pages and Pictures*, may be found reminiscences of her family life. See also John S. Hart, *Female Prose Writers of America* (1855), p. 413; *Correspondence of Jas. Fenimore Cooper* (1922), ed. by J. F. Cooper; *Fenimore Cooper's Grave and Christ Churchyard* (1911), pp. 70–72; *The Critic*, Jan. 5, 1895; *Harper's Monthly Mag.*, Mar. 1895; *Boston Transcript* and *Evening Post* (N. Y.), Dec. 31, 1894; *N. Y. Times* and *N. Y. Herald*, Jan. 1 1895.

J. R. T.

COOPER, THEODORE (Jan. 13, 1839–Aug. 24, 1919), civil engineer, bridge-builder, was born at Cooper's Plain, Steuben County, N. Y., where his father, John Cooper, Jr., was a physician. Both his father and his mother, Elizabeth M. (Evans) Cooper, were from Pennsylvania. Theodore attended the Rensselaer Polytechnic Institute and was graduated from it in 1858 as a civil engineer. After his graduation he acted as an assistant engineer on the Troy and Greenfield Railroad and the Hoosac Tunnel. At the outbreak of the Civil War, he enlisted in the United States navy as an assistant engineer. The gunboat, *Chocora*, on which he was stationed, took part in the siege of Yorktown and the battles of West Point and York River, and acted as a guardship in the Potomac during the Chickahominy campaign. At the cessation of hostilities, Cooper was detailed as an instructor in the department of steam engineering at the Naval Academy. He remained in the service of the navy until 1872. In that year he began his work in bridge construction, to which profession he was to contribute worthily. He was appointed by Capt. James B. Eads [q.v.] as inspector, at the Midvale Steel Works, for the steel being made for the St. Louis bridge, and afterward went to St. Louis to take charge of the erection of the bridge. After some further experience with the Delaware Bridge Company and the Keystone Bridge Company, Cooper established himself as a consulting engineer in New York City. Some of the bridges he designed were the Seekonk Bridge at Providence, the Sixth Street Bridge at Pittsburgh, the Second Avenue Bridge over the Harlem River, New York City, the Newburyport Bridge over the Merrimac River, and the Junction Bridges over the Allegheny River. He was one of five engineers appointed by President Cleveland in 1894 to determine the span of the Hudson River Bridge. He acted as a consultant for the New York Public Library.
and the Quebec Bridge, and did work for the Suburban Rapid Transit Company, the New York and Boston Rapid Transit Commissions, and the Harlem River Commission. The results of his experience were put in permanent form through his contribution of several papers on phases of bridge construction to the Transactions of the American Society of Civil Engineers. The Engineering News-Record said of Theodore Cooper: "His name became universally familiar to bridge engineers through his system of locomotive and train loading for bridge design. Composed of a wheel system, representing the heaviest locomotive of that time, followed by a uniform load whose amount in pounds per foot bore a simple relation to the driving-axle load, this system proved so convenient, and was so excellently adapted to modification for increasing weight of trains and engines by simple multiplication, that it quickly won a commanding position. . . . Theodore Cooper also exerted a strong influence toward bringing about the adoption of wheel-load analysis for railway bridges instead of uniform-load or other methods, and the moment tables which he published made it possible to carry out the analysis rapidly and conveniently."

COOPER, THOMAS (Oct. 22, 1759—May 11, 1839), agitator, scientist, educator, was born in Westminster, England, the son of Thomas Cooper, a man of means and standing. He was thoroughly grounded in the classics and sent to Oxford, where he was matriculated from University College in February 1779. His failure to take a degree was perhaps due to his unwillingness to sign the Thirty-nine Articles. But for his father's insistence upon the law, he would probably have become a physician. He attended anatomical lectures in London, took a clinical course in the Middlesex Hospital, and later at Manchester attended patients under direction. His mature life in England was spent chiefly in Lancashire, where he became a member of a firm of calico-printers which ultimately failed, traveled the northern circuit as a barrister, and dabbled in philosophy and chemistry. His scientific attainments doubtless warranted his nomination to the Royal Society by his friend Joseph Priestley [q.v.] but his radical philosophy rendered him unacceptable to that body. Certain ponderous essays of his, published at Manchester, reveal him as a materialist in philosophy, a Unitarian in theology, and a revolutionist in political theory. Temperamentally an agitator rather than a philosopher, he soon identified himself with the movements, which proved unsuccessful, for the abolition of the slave-trade and the repeal of the Corporation and Test Acts. Upon the occasion of a visit to Paris in 1792, he instituted correspondence between the Manchester Constitutional Society, in which he was prominent, and the Jacobins. Attacked in the House of Commons by Burke for this action, he replied in a vehement pamphlet which was at the same time a tirade against the "privileged orders." The conservative reaction in England against the French Revolution did not directly endanger him but convinced him that freedom of thought and speech were no longer possible in the land of his birth. Disgusted also with the Terror in France, he looked to America as the land of promise. After a preliminary visit, he removed to the United States in 1794 with his friend Priestley and settled near him at Northumberland, Pa.

Here he practised law, served unofficially as a physician, and remained for several years in relative obscurity. By 1799, however, he was definitely associated with the Jeffersonian opposition to the Federalist administration, and during 1800 was conspicuous as a pamphleteer. He attacked chiefly the Sedition Law, under which he was himself convicted in May 1800 and sentenced to serve six months in prison and pay a fine of $400. Throughout the rest of his life he sought the repayment of this fine, which, after his death, was refunded to his heirs with interest. Republican success brought him no political reward commensurate with his abilities and deserts, but he served as commissioner in Luzerne County, Pennsylvania, from 1801 to 1804, and as a state judge from 1804 to 1811. A chief feature of state politics during this period was the attack made upon the judiciary by the more radical democrats. Cooper, for the first time in his life, was identified with the conservative faction. His observation of the practical operations of democracy, indeed, had served to chill his ardor and modify his political philosophy. The hostility of the radical faction to him resulted in his removal from the judiciary by the governor in 1811 on joint address of the two houses of the legislature, following charges of arbitrary conduct for which there was some foundation.

Driven from politics and disgusted with practical democracy, he returned to science and entered upon the profession of teaching. Through his long association with Priestley, he had been afforded unusual opportunities for the study of chemistry, which appealed to him as the most useful of the sciences. Elected in 1811 to the chair of chemistry in Carlisle (now Dickinson)
Cooper

College, he remained here until 1815. The following year he became professor of applied chemistry and mineralogy in the University of Pennsylvania, where he remained until 1819. This period of his life, devoted to science and learning to the exclusion of politics, was very fruitful in publication. He was a skilful, and might have become a great, investigator, but served chiefly as a disseminator of useful scientific information. The American Philosophical Society had earlier welcomed him into its membership, and (c. 1817) a "University of New York" conferred on him the honorary degree of M.D., which he ever afterward flaunted. Jefferson, whose friendship with him had ripened with the years and who described his abilities in superlatives, was desirous that he become the "corner-stone" of the new University of Virginia, and procured his election to its faculty. Owing, however, to clerical opposition and the delay in the opening of the university, Cooper never assumed the position, greatly to the disappointment of his patron.

In January 1820 Cooper entered upon the last and most fateful period of his life, when he became professor of chemistry in South Carolina College (now University of South Carolina). Elected president shortly afterward, he maintained his connection with the college until 1834 and added greatly to its distinction. Besides chemistry and mineralogy, he taught political economy, in which he was distinctly a pioneer in America. He was a prime factor also in the establishment of the first school of medicine and the first insane asylum in the state. Throughout his tenure of office, he was the target of clerical attack, chiefly on the part of the Presbyterians. The controversy was an episode in the age-long conflict between science and theology, but was accentuated by Cooper's ill-concealed contempt for the clergy as a class. He was nominally successful in the struggle, not so much because of any general acceptance of the principles of biblical criticism and the doctrines of materialism that he championed, but because of his identification with the extreme state-rights party, to which he had rendered conspicuous service. Now a realist and a utilitarian in politics, though still a foe to tyranny, he defended slavery, repudiated the social philosophy of his old friend Jefferson, and supported with powerful economic arguments the Southern position on the tariff. He became the academic philosopher of state rights and, as a teacher and writer, exerted a profound and lasting influence. In 1827, in a speech against the tariff, he urged that South Carolina calculate the value of the Union, and aroused thereby a tempest of protest within the state and out of it. He favored nullification and regarded the outcome of the famous controversy as unsatisfactory because it was a compromise. Valuing union too little because he loved liberty too well, he was one of the first to sow the seeds of secession. After his retirement from the college in 1834, he edited the statutes of the state, supported the second Bank of the United States against Jackson, and carried on a lengthy intrigue with Nicholas Biddle looking toward the candidacy of the latter for the presidency in 1840. Vigorous almost to the end, he died May 11, 1839, and was buried in Trinity Churchyard, Columbia, where a stone was later erected to his memory by a "portion" of his fellow citizens.

The influence of Cooper on his generation was exercised chiefly by means of an extraordinarily vigorous, versatile, and prolific pen. His political pamphlets, of which his Reply to Mr. Burke's Inveotive, etc. (1792), his Political Essays (1799), Consolidation (1824), and On the Constitution (1826) have greatest significance, are distinctly controversial in tone and are of interest chiefly in connection with the specific events and circumstances which called them forth. All of them, however, have a certain permanent value in that they are characterized by a passionate hostility to tyranny in any form. His Lectures on the Elements of Political Economy (1826) served as a pioneer American text-book, but even this work emphasized contemporary questions. His various anti-clerical pamphlets are far from philosophical, but are extremely interesting as an expression of aggressive modernism. His Tracts (1789) represent the most systematic statement of his religious philosophy, which remained essentially unmodified throughout his life.

Even his controversial works attest his notable scholarship, and his Institutes of Justinian (1812) and Statutes at Large of South Carolina (5 vols., 1836-39) remain as monuments to his legal learning. His presidential addresses which have been preserved disclose a noteworthy and prophetic educational statesmanship. Most of his scientific writings were designed to extend popular scientific information on subjects of practical concern. Thus he edited the Emporium of Arts and Sciences (1813-14), published practical treatises on dyeing and calico printing, gas lights, and the tests of arsenic, and edited several European text-books in chemistry for the use of American students. The most interesting of his more theoretical writings are his description of the scientific discoveries of Priestley (in Appendix 1 of the latter's Memoirs, 1806), his Introductory Lecture on Chemistry (1812), and his
Cooper

Discourse on the Connexion between Chemistry and Medicine (1818), in which, as usual, he was forward-looking. These writings serve as a valuable index to the state of American scientific knowledge in his day and reveal his own persistent faith in salvation by enlightenment.

Cooper was twice married: first, in London, to Alice Greenwood, who before her death in 1800 bore him five children; second, about 1811, to Elizabeth Pratt Hemmings; also an Englishwoman, who bore him three children and survived him. Physically, Cooper was small but impressive. His head was so large that he is said to have resembled a wedge. Brilliant in conversation and loyal in friendship, he was terrible in controversy. Too belligerent and forward-looking to be agreeable to his age, he none the less taught it the truth as he saw it, embodied most of its noblest hopes and aspirations, shared its disillusionments, and deserves to be ranked at least among its minor prophets.

[The materials for this sketch have been drawn from Dumas Malone, The Public Life of Thos. Cooper, 1783-1839 (1926), which contains an extensive bibliography, pp. 403-16, including a list of Cooper's own voluminous writings, with comments. For a discussion of Cooper's scientific work by an eminent chemist, see Edgar F. Smith, Chemistry in America (1914), ch. VI, and Chemistry in Old Phila. (1919), pp. 62-81. For a discussion of his philosophy of materialism, see I. W. Woodbridge Riley, Am. Philosophy: the Early Schools (1907), bk. V, ch. V. The Univ. of S. C. has a portrait of Cooper and a bust, generally regarded as a caricature.]

D. M.

COOPER, THOMAS ABTHORPE (Dec. 16, 1776—Apr. 21, 1849), actor, theatrical manager, was born at Harrow-on-the-Hill, England, the son of Thomas Cooper, a prominent physician of Irish descent, and of his wife Mary Grace Cooper. He received, according to one who knew him, “an excellent English education at a principal seminary” (W. B. Wood, Personal Recollections of the Stage, 1855, p. 410). When Dr. Cooper died in 1787, leaving his family destitute, William Godwin, whose mother was Mrs. Cooper's first cousin, assumed the care and education of Thomas. At sixteen the boy resolved to be an actor. Godwin, approving this choice, sought the advice of his friend Thomas Holcroft, and on the latter's recommendation Cooper approached Stephen Kemble, then at Edinburgh. After being sent on in very minor parts, he essayed Malcolm in Macbeth, in which rôle he distinguished himself by forgetting the last speech of the play. He was summarily dismissed. For about three years he played with various provincial companies, and was then taken in hand by Holcroft, who carefully coached him and secured for him an opportunity to appear at Covent Garden as Hamlet in October 1795. The critics warmly praised his efforts, but the manager offered him an engagement for secondary characters only, which he indignantly refused. In 1796 Thomas Wignell, the Philadelphia director, engaged him for three years.

Cooper made his American début Nov. 11, 1796, at Baltimore, where the company was temporarily stationed. He first faced a Philadelphia audience, Dec. 9, as Macbeth and was favorably received. Relations with Wignell becoming strained, largely because Fennell was given more important rôles than himself, Cooper broke his contract and, after some legal complications, went over to the New York theatre in February 1798. Here he was at once recognized as the unrivalled tragic actor of America, despite a faulty memory and careless study, which sometimes caused him to appear at a disadvantage. After a temporary return to Philadelphia he was back in New York in 1801. From this time on, Cooper was a star—one of the first in this country—rather than a regular stock actor. His career was an important step in the evolution from the stock to the starring system.

When John Kemble retired from Drury Lane, Cooper was secured to succeed him. He made his first appearance Mar. 7, 1803, but he failed to attract well-filled houses and was soon released. His return to the Park Theatre, New York, in November 1804, was rapturously welcomed. After spending the season of 1805-06 largely at Boston, he became lessee of the Park Theatre. In the fall of 1808 he sold a share of his interests to Stephen Price, and, being thus partially relieved of managerial duties, contracted to play half of each week at Philadelphia, the other half to be devoted to New York. Driving his own fast horses, he was able, by a relay arrangement, to leave one town after the evening performance and be in the other in time for morning rehearsal. In June 1810 he again sailed for England, where he acted with success in some of the provincial towns, and engaged the celebrated George Frederick Cooke for a series of appearances in America, a project which proved extremely profitable to the New York managers.

Cooper's first wife, formerly Mrs. Joanna Johnson Upton, having died in 1808, he was married on June 11, 1812, to Mary Fairlie, daughter of Maj. James Fairlie. She was said to be the most brilliant and beautiful belle of New York. This marriage gave Cooper a prominent position in the society of the town, and, having made a fortune through the theatre, he took up his residence in a fashionable section of the city, where he lived and entertained in a most lavish style and associated with the leading literary and pro-
fessional people of the day. About 1815 he withdrew from the management of the Park and gave himself entirely to starring engagements. Again, in 1827, he appeared at Drury Lane, but was received with discourtesy, perhaps because of prejudice against American talent, and he refused to play a second night. By degrees enthusiasm for Cooper in the United States waned as younger actors arose and his own powers declined through advancing years and, it may be, a too great fondness for stimulants. His once large fortune having been dissipated by extravagant living, and the receipts from his profession having sadly shrunk, friends came to his aid by arranging, in 1833-34, a series of notably successful benefits in several cities to provide a fund for the support of his family. In 1834 Cooper brought his daughter Priscilla before the public, but her stage career was cut short by her marriage to Robert Tyler, son of John Tyler, later president of the United States. Cooper last appeared on the New York stage on Nov. 24, 1835, at Hamblin's benefit; his retirement from the theatre is thought to have occurred in 1838 (Odell, post. IV, 72, 74). During his final years he held several government posts, which he secured through the patronage of President Tyler, among them an inspectorship in the New York Custom House. He died at Bristol, Pa., at the home of his daughter, Mrs. Tyler, after an illness of four months. He was survived by six daughters and one son, all children of his second wife.

During a period of at least thirty years Cooper was the most conspicuous figure on the American stage. His hold is not difficult to explain. He possessed extraordinary beauty of face and form, and a magnificent voice. In his great roles, such as Macbeth and various Roman characters, he was remarkable for the majesty and grandeur of his acting. If he was at times addicted to shouting and rant, if he relied upon impulse more than art, at his best he created an impression of unforgettable power. One qualified critic said: "I still think his Macbeth was only inferior to Garrick's, and his Hamlet to Kemble's; while his Othello, I think, was equal to Barry's itself" (John Bernard, Retrospections of America, 1887, p. 268). Cooper did not confine himself wholly to tragic characters; Charles Surface in The School for Scandal was one of his most effective parts, and he even attempted Falstaff with considerable success. His energy was as great as his gifts: he is known to have appeared in at least 164 different plays and is said to have acted, prior to 1830, in every state then in the Union. Off the stage as well as on, Cooper was a favorite. His utter fearlessness, his tireless vitality, his astonishing skill with a gun and a horse, his prodigal liberality, his devotion to his family, even his reckless betting, all contributed to make him one of the most engaging of American actors.

The date of Cooper's birth is taken from his tombstone at Bristol, Pa. The names of his parents are from the baptismal record of the parish church at Harrow-on-the-Hill. Nearly all that is known about his life is found in the writings of his associates, such as A Hist. of the Am. Theatre (1832) by Wm. Dunlap, and the works of Wood and Bernard cited above. This material with additions is assembled in A Memoir of the Professional Life of Thos. Abthorpe Cooper (1888), by J. N. Ireland. See also G. C. D. Odell, Annals of the N. Y. Stage, vols. I-IV (1827-28). J O. S. C.

COOPER, WILLIAM (Dec. 2, 1754-Dec. 22, 1809), jurist and extensive landowner, was born in Byberry, Pa., where his great-grandfather, James, coming from Stratford-on-Avon in 1679, purchased a plantation in addition to other land in and around Philadelphia. After his marriage to Elizabeth Fenimore of Rancocus, N. J. (Dec. 12, 1775), he lived in Burlington, N. J., until he settled (1789) on the shores of Otsego Lake, and founded the town that bears his name. When he was ready to start for this wilderness in central New York, his wife refused to budge from the chair where she was sitting and holding her infant son, James. Picking up the chair, he placed it, with its occupants, on the waiting wagon. In securing tenants for his land he adopted the policy of installment payments instead of annual rents, on the theory that a man having a proprietary interest would stick to the soil in spite of hardships. In lean years he accepted payments in maple sugar and wood-ash; to improve the morals in a "rough and ready" community, he persuaded Trinity Church (New York) to grant $1,500 for a church in Cooperstown; through donations, headed by his own, he erected a seminary; by judicious use of a little rum he built roads and bridges; he furnished the money to buy a printing-press and type for a newspaper. An advertisement in the Otsego Herald (December 1797) showed that he was selling land not only for himself but also for the Hartwick, the Hillington, the Jew, and the Schuyler patents. He later bought land both in the northern and the western parts of the state. In his real-estate transactions Alexander Hamilton was his attorney. Defeated once but twice elected to Congress (1795-97; 1799-1801), he was the first judge of Otsego County (1791). An ardent Federalist, he always campaigned next to the ground, was said to have won votes by embracing "the toothless and the decrepit," and after the election of 1792, when votes from Otsego and other counties were, at the instigation
of Aaron Burr, rejected by the official canvassers in order to elect Clinton governor, he was charged, in a petition presented to the state legislature, with unduly influencing the voters in Otsego County, a charge later dismissed as frivolous and vexatious. Cooper died in Albany as the result of a blow struck from behind, by a political opponent; he was buried at Cooperstown. A curious mixture of silk hose and leather stockings, he made Otsego Hall the finest home west of the Hudson, but he was always willing to go to any shanty on his settlements to show his ability as a wrestler. Portraits by Gilbert Stuart, John Trumbull, and an unknown artist, show that he was unusually handsome. He failed to foresee that canals would supplant natural water routes and that streams would shrink with banks cleared of timber, but he said truthfully, "I have settled more acres than any other man in America. There are forty thousand souls holding directly or indirectly under me."

[A genealogy prepared by W. W. Cooper (c. 1885) gives interesting facts about Cooper's ancestors. The Chronicles of Cooperstown (1838), by his son, Jas. Fenimore Cooper [q.v.], record his struggles to establish his "pioneer" town. A chapter, "Some Old Letters," in The Legends and Traditions of a Northern Country (1921), by his great-grandson, Jas. Fenimore Cooper, tells about his extensive real-estate transactions. A scarce volume, A Guide in the Wilderness; or the Hist. of the First Settlements of the Western Counties of N. Y., with Useful Instructions to Future Settlers (Dublin, 1810), by himself, though published after his death to aid settlers, contains much autobiographical material told with a charm rarely surpassed by the tales of his son. The best notices about his last days are found in the December issue of the Cooperstown Federalist, the paper for which he bought the press and the type. In To Commemorate the Foundation of the Village of Cooperstown (1907) there is a sketch of Wm. Cooper by his great-grandson, J. F. Cooper.] J. M. L.

COOPER-POUCHER, MATILDA S. (Feb. 2, 1839–Apr. 5, 1900), educator, was a native of Blauveltville, N. Y. She received her education at Hardcastle's Institute at Nyack, Clinton Liberal Institute, and the Albany State Normal School. After graduating from the latter in 1856 she was immediately retained by the Oswego board of education to teach in one of the senior schools of that city. Although shortly transferred to work in the primary grades, she was recognized at once as a teacher of unusual ability. Thus, when the city training school, later to be recognized as the famous Oswego State Normal School, was organized under Dr. Sheldon, Miss Cooper was secured as one of the critic teachers. At a somewhat later date she was made teacher of language and methods. She became active in the National Education Association and her services as an institute lecturer were in demand beyond the borders of the state. She was almost a right hand to Dr. Sheldon while she was in charge of the records of scholarship and attendance and of the teacher placement work. In the latter work she distinguished herself by her uncanny ability to remember details about students past and present. Along with her other duties she undertook those of preceptress of the Normal Boarding Hall, a post most exacting in its demands on tact, sympathy, and judgment. In this office she came into very close personal contact with many of the students and through it exercised a significant influence over their characters. She contributed no small share toward the success of the Normal School. When the Quarter-Centennial Anniversary of the Oswego Movement was celebrated in 1886 her experience was of great value in furnishing biographical material. On this anniversary she resigned from active work in the school. After the conclusion of the semester of 1886 she returned to her home in Nyack, N. Y., to comfort and care for her parents in their declining years. When these both died in 1889, she returned to Oswego, as the wife of Dr. Sheldon's successor, Isaac B. Poucher, whom she married Feb. 4, 1890. They had been co-workers at Oswego for a long time. The same exactness and orderliness which had characterized Miss Cooper's work as critic, teacher, statistician, and preceptress were now transferred to home making. She now found time to take an active interest in church and social affairs of the town. It was while performing her duty as a director of the Oswego Hospital that death came upon her suddenly after only a few hours of illness.

COOTE, RICHARD (1636–Mar. 5, 1701), Earl of Bellomont, colonial governor, was the son of Richard Coote and Mary, daughter of Sir George St. George, Bart. He succeeded his father as Baron Coote of Colouny, in the Irish peerage, in July 1683. His father, uncle, and grandfather had distinguished themselves as soldiers in Ireland, and as supporters of the Restoration in 1660. In corresponding fashion Richard, the second baron, was an early and warm supporter of the movement in favor of the Prince of Orange in 1688, attained to friendly personal relations with William, and received substan-
Catherine, and interest landowner, and New Parliament where the due York, advanced, Nov. 2, 1689, to the dignity of Earl of Bellomont, in the Irish peerage, receiving also extensive grants from the Irish forfeited estates. By his marriage to Catherine, daughter of Bridges Nanfan, landowner, of Bridgemorton, he acquired an interest in Worcestershire, and he was member of Parliament for Droitwich from 1688 to 1695. His appointment in 1697 to be governor of New York, Massachusetts, and New Hampshire, with command of the militia during the war in Rhode Island, Connecticut, and the Jerseys (Documents Relative to the Colonial History of the State of New York, IV, 261-62), was said to have been due to the King's high estimate of his integrity and resolution (William Smith, History of New York, 1814, p. 150). A more unified conduct of the affairs of the English plantations on the northern frontier of the American continent, particularly in matters of defense, was regarded as imperative, while scarcely less pressing were the problems presented by the American disregard of the imperial trade laws, and the encouragement said to be given to piracy, especially in New York.

Bellomont's administrations in New England, where he spent fourteen months, May 1699 to July 1700, were comparatively uneventful, and through no fault of his own the cause of inter-colonial union cannot be said to have been advanced by his lordship's tri-provincial governorship. The situation in New York, where he arrived on Apr. 2, 1698, after a long and stormy passage, was one of extreme difficulty. In that province evasion of the trade regulations and complicity with piratical operations were complicated with the political consequences of the passionate Leislerian feud, which had been raging for over seven years. This internal disturbance was of perilous significance for all the English colonies on the American continent by reason of the close connection of the New York government with the Iroquois confederacy, the pivot upon which turned the fate of the issue between the French and the English in North America.

The precipitate vigor of the Earl's proceedings soon aroused the antagonism of the mercantile community, the landed interest, and the few but highly placed Anglicans of the province. Though personally of aristocratic bearing, he found himself maneuvered into the appearance of leading the Leislerian "democracy" against the pillars of provincial society as that had hitherto developed. Moreover his opponents had powerful friends in England, and spared no efforts in their attempt to undermine the Earl's support from home. In this they failed, but Bellomont was obliged, as indeed was every governor who tried to realize the imperial ideal, to carry on a struggle on two fronts. By unrelenting exercise of executive prerogatives he was able to put a considerable restraint on the dealings of New York merchants with pirates. But for the enterprise of promoting an orderly development of provincial affairs in accordance with the aims of the English government, it would seem that he was not especially well fitted. Free from personal avarice, high-spirited, prone to quick judgment and action, he was lacking in the deliberate prudence, the capacity for indirect methods, and especially the patience, which the conditions in New York at that time seemed to require. On the other hand, the observations expressed in his voluminous correspondence with the English authorities displayed alertness of perception and far-sighted imagination in estimating the possibilities of the "plantations," and on several important features of colonial policy his representations bore fruit in orders later issued from Whitehall. Regulations for the granting of land and for facilitating the policy of naval-stores production are cases in point. Especially comprehensive and far-seeing were his ambitions for the development of Indian relations, but, in this matter, as in regard to his whole administrative career, the shortness of his time in America precludes definitive judgment. For the student of English colonial administration in America Bellomont's administration is exceedingly significant and suggestive, but its actually permanent results elude exact estimate. Bellomont died Mar. 5, 1701, and was buried with public honors in the chapel of the fort, near the site of the present Bowling Green in New York. When this building was demolished in the late eighteenth century, his coffin was interred in St. Paul's churchyard, but without monumental notice.

[The chief sources of information concerning Bellomont's American career are to be found in the archives of the provinces concerned, and in the Public Record Office in London. Much of this material is accessible in the Calendar of State Papers, America and West Indies, and Calendar of Treasury Papers, and in the Docs. Relative to the Colonial Hist. of the State of N. Y., vol. IV (1854). The chief biographical sketches are F. de Peyster, Life and Administration of Richard, Earl of Bellomont (1879); and the chapter by A. G. Vermilye in Jas. G. Wilson, Memorial Hist. of the City of N. Y., vol. II (1892). See also Herbert L. Osgood, The Am. Colonies in the Eighteenth Century (1924), vol. I, ch. VIII and pp. 466-72, 499-504, 530-42. For facts as to his family and peerage, see J. B. Burke, A Geneal. Hist. of the Dormant... and Extinct Peerages of the British Empire (1866), pp. 133-35; A. de Vlieger, Hist. and Geneal. Record of the Coote Family (1900).] C.W.S.
COPE, CALEB (July 18, 1797–May 12, 1888), merchant, financier, son of William and Elizabeth (Rohrer) Cope, was born in Greensburg, Pa. His father died when Caleb was very young and he was cared for by his mother and maternal grandfather. He received a rudimentary education in a one-story log-cabin school-house and at the age of twelve or thirteen was bound out by his mother to John Wells, a storekeeper, with whom he served a four-year apprenticeship. In 1815 he went to Philadelphia where his uncles, Israel and Jasper Cope, well-known merchants, had offered him a home. To their training he attributed much of his success. In 1820 his uncles discontinued their part of the business and conveyed all their merchandise to Caleb Cope and his cousin. The firm of Caleb Cope & Company, dealing principally in silks, became one of the wealthiest in the country. In 1857, however, came a panic and the failure of the firm. Cope was forced to sell his country seat, “Springbrook,” near Holmesburg, and then removed to the St. Lawrence Hotel. He was one of the founders and for many years president of the Merchants Hotel Company, which in 1861 opened the Continental Hotel, where Cope made his residence thenceforth. When the Civil War broke out, the government selected him to represent it in Europe for the purchase of supplies, but he was unable to accept the post. In 1864 he was elected president of the Philadelphia Saving Fund Society in which he had been a director since 1841, and to its service he successfully devoted the best efforts of the remaining years of his life, living to see it become the largest institution of its kind in America.

In his earlier years Cope had served as a director of the United States Bank, acting as its president in the temporary absence of Nicholas Biddle. He was one of the original trustees of the Lehigh Coal & Navigation Company, and the Philadelphia agent for the Bank of Kentucky. He was a manager of the Pennsylvania Hospital, of the Institution for the Instruction of the Blind, and an active worker for other charitable organizations. He had an ardent interest in horticulture and at his country place was raised for the first time in America the Victoria Regia, or great American water-lily. He was twice married: first, in 1835, to his cousin Abby Ann Cope who died in 1845, and in December 1864 to Josephine Porter of Nashville, Tenn. He was one of the best-known and most highly respected men of Philadelphia and though frequently pressed to accept political honors, always refused them.

(Sketch of Caleb Cope prepared by his son Porter F.)

COPE, EDWARD DRINKER (July 28, 1840–Apr. 12, 1897), zoologist, paleontologist, a lineal descendant of Oliver Cope who came from Wiltshire, England, about 1868, was born in Philadelphia. His parents, Alfred and Hannah (Edge) Cope, were wealthy members of the Society of Friends, and at the age of thirteen he was sent to the Friends’ School at Westtown, where he received his early training, supplemented by a single year at the University of Pennsylvania, and by the assistance of private tutors. As a mere boy he showed a strong love for the natural sciences, extraordinary powers of observation, and unusual ability in the discrimination of characteristics essential in classification. His note-books made before reaching the age of ten were filled with sketches from life and notes that would have done credit to one of twice his years. In 1859 he went to Washington and studied reptiles under S. F. Baird [qv.] at the Smithsonian Institution, and while there made his first contribution to scientific literature in a paper “On the Primary Divisions of the Salamandridae, with a Description of Two New Species,” which appeared in the Proceedings of the Academy of Natural Sciences of the same year. Returning to Philadelphia, he entered upon his course at the University under Joseph Leidy [qv.] and at the same time worked almost daily at the Academy, paying particular attention to the reptiles and pursuing his studies with such diligence that at the age of twenty-two he was recognized as one of the country’s leading authorities in his field (King, post, p. 2). In 1863–64 he spent several months in study abroad. On his return he accepted the chair of comparative zoology and botany at Haverford College, but he was obliged by ill health to abandon the position in 1867. He devoted the following twenty-two years wholly to exploration and research. His studies in vertebrate paleontology, the branch in which he became most proficient, began in 1866 with the reptilian (dinosaur) remains from the Greensand of New Jersey and the Cetaceans and the other vertebrate remains of the Miocene deposits of Maryland and Virginia. In 1868 he began studies on the air-breathing vertebrates of the upper Mississippi Valley and in 1870 became associated with Leidy in the description of fossils collected by the Hayden Survey in Wyoming, making in this, as it proved, the beginning of his connection with the National Survey which last-
ed throughout the life of the organization. In 1874 he became connected for a single year, as paleontologist, with the Wheeler Survey west of the one-hundredth meridian. In 1889, through bad investments and loss of a considerable portion of his fortune, he was led to accept the professorship of geology and mineralogy in the University of Pennsylvania, and in 1895, after the death of Leidy, he assumed the chair of zoölogy and comparative anatomy, which position he held until his death.

Cope in his early youth was precocious almost to the danger point. He became a tremendous force in the anatomical world, an active, tireless, and rapid worker, carried away by the impetuosity of his thoughts, the immensity of the work to be done, and the excitement of competition with O. C. Marsh, a rival in his field. His haste occasionally led him into superficiality; Leidy once charged him with having described a new form which was without a skull, "wrong end to." Nevertheless, it was said of him that his intuition was better than his logic.

His literary fecundity was remarkable, amounting in some cases to as many as fifty papers within a single year. In all, he is credited with 600 separate titles, one of which, a monograph of the Hayden Survey familiarly known as "Cope's Primer," was a pudgy quarto volume of 1,009 pages and 137 plates. From January 1878 he was owner and senior editor of the American Naturalist. Concerning his work as a whole one cannot do better than quote from a contemporary: "The greatest and most enduring monument to his fame will prove to be the gigantic work which he accomplished among the extinct vertebrates of the far West. . . . It was in the unraveling of the complexities of the freshwater Tertiaries that Cope's most splendid services to geology were rendered" (W. B. Scott, post, pp. 32, 35).

Cope's first honor was his election to membership in the Philadelphia Academy of Natural Sciences in 1861 when he was but twenty-one years of age. In 1865 he became a curator and in 1879 was elected a member of the council, holding the office until 1880. He was a member of the National Academy of Sciences and of the American Association for the Advancement of Science, and president of the latter in 1896. He was married, on Aug. 14, 1865, to Annie Pim, a daughter of Richard Pim of Chester County, Pa. (The Friend, Oct. 14, 1865), by whom he had one child, a daughter. His domestic ties were not strong, however, and he died amidst the clutter of his work rooms and surrounded by the objects of his life study, in Pine St., Philadelphia.

Cope

G. P. M.

COPE, THOMAS PYM (Aug. 26, 1768–Nov. 22, 1854), merchant, philanthropist, the son of Caleb and Mary (Mendenhall) Cope and a descendant of Oliver Cope who emigrated from England to Pennsylvania about 1687, was born in Lancaster, Pa. He was given an education, good for his time, which included the study of English and German and a foundation in Latin. His parents were both Quakers, and when he was a boy of twelve, his father gave shelter to Major André and other British prisoners who, sent to Lancaster by Gen. Montgomery, could find no one else willing to give them a place in which to live. The populace grew so excited at this act of their Quaker neighbors that they broke every window in the Cope house. In later years they redeemed themselves by assisting liberally in the reconstruction of the house when it had been accidentally destroyed by fire.

In 1786 Thomas Cope went to Philadelphia and began a four-year apprenticeship to his uncle, Thomas Mendenhall, a merchant. In 1790 the firm of Mendenhall & Cope was formed, but it was dissolved two years later. Then Cope began business for himself, importing his own goods and selling them. He was a prudent man, and his rise in the business world was not as rapid as it was sure and sound. In 1803 he again formed a partnership in the firm of Cope & Thomas. While thus engaged in business, he laid the foundation for a line of packet ships to Europe. His first ship, the Lancaster, was built in 1807, and in 1821 he established the first regular line of packet ships between Philadelphia and Liverpool. His mercantile success was such that he became possessed of one of the large fortunes of his day and his business passed on to his sons and grandsons. He lived his long life in the Quaker faith, creditably discharged many positions of public trust, and did much for the development of Philadelphia. Having been ill with yellow fever in the epidemic of 1793, on his recovery, and again during the return of the scourge in 1797, he rendered much service, being a manager of the Almshouse and one of the "Guardians of the Poor" who carried food to the homes of the sufferers. At the close of the century he was a member of the City Council, and as such was a promoter and staunch advocate of the introduction of Schuylkill River water into
the city, one of the most important health measures devised in his day. He served in the state legislature in 1807, later refusing overtures which might have led him to Congress, and was an important member of the state constitutional convention of 1837. He was one of the founders, and for many years president, of the Mercantile Library Company, and one of the first members of the city’s Board of Trade of which he was the first, and for a period of twenty-two years ending with his death the only, president. He was instrumental in bringing about the completion of the Chesapeake & Delaware Canal, and was active in promoting the construction of the Pennsylvania Central Railroad. A close friend of Stephen Girard, he was one of the executors of the Girard will and later a director of Girard College. Influential in securing Henry J. Pratt’s estate, “Lemon Hill,” for a park for the city and contributing heavily toward the purchase of the Sedgeley estate for a similar purpose, he also gave $25,000 to the Zoological Society, and $40,000 to the Institute for Colored Youth to found a scientific school. He took great delight in social life, and his buoyancy of spirit made him a favorite at the social gatherings of his day. He was twice married, his first wife being Mary Drinker of Philadelphia.

Merchants (1857), I, 103-31; Henry Simpson, Lives of Eminent Philadelphians (1859); Gilbert Cope, Record of the Cope Family (1861); S. N. Winslow, Biogs. of Successful Phila. Merchants (1864); Makers of Phila. (1894), ed. by Chas. Morris.]  
E. Y.

COPE, WALTER (Oct. 20, 1860–Nov. 1, 1902), architect, was born in Philadelphia, the son of Thomas P. and Elizabeth Waln (Stokes) Cope. He was given the finest type of old-fashioned Quaker training, in which strictness and culture were combined. Upon graduating from the Friends’ School at Germantown, he entered the office of a builder named Hutton and, subsequently, the architectural office of T. P. Chandler, where he received his professional training. In 1884 he went abroad for a year, bringing back many sketches which showed his skilful draftsmanship, sense of composition, and grasp of details. In 1886 he formed an association, later a partnership, with John Stewardson [q.v.]. Emlen L. Stewardson became a partner in 1887.

The earliest important commission of the firm of Cope & Stewardson was Radnor Hall at Bryn Mawr College (1886). They subsequently designed Pembroke, East and West, and Denbeigh Halls at Bryn Mawr. This work, with which the elder Stewardson had much to do, revolutionized college building in America; at Bryn Mawr, for the first time, the English collegiate Gothic was adapted freely, beautifully, and successfully to the problems of modern American collegiate architecture (Seeler, post, p. 289). Cope & Stewardson were given the commission for the University of Pennsylvania dormitory group in 1897, where they developed further the use of the English collegiate Gothic, this time in brick and stone, with details rich, but occasionally, to the modern eye, heavy. The quadrangle scheme adopted was carried out in a masterly manner with a just balance of informality and directness. Later (1900) Cope & Stewardson were made official architects of the University. They began an epoch-making work at Princeton in 1896 with Blair Hall and its great arched tower (now containing memorial tablets to both Cope and Stewardson) and the low dormitories which flank it. This was the last of the firm’s designs prior to the death of John Stewardson, who was drowned in January 1896. Later work at Princeton included the Ivy Club (1897), Stafford Little Hall (1899-1901), and the enormous gymnasium (1903); and at the University of Pennsylvania the Archeological Museum (done in association with Frank Miles Day and Wilson Eyre) and the Law School, a great brick and stone building in a modified Georgian style. Probably the finest of the educational work was that done for Washington University in St. Louis, which was awarded to the firm after a competition in 1899. This is characterized by the most admirable restraint; there are none of the facile tricks to which the Tudor lends itself; everything is of the most direct simplicity, distinguished by exquisite proportion and refined detail. Cope used many styles with equal ease and freedom; for instance, the Law School of the University of Pennsylvania is Georgian; the Lady Chapel of St. Mark’s Church and the choir screen of St. Luke’s (both in Philadelphia) are in the richest type of intimate late Gothic; the winning design in the competition for the Municipal Building in Washington is in a severe classic of French character; and the Cassatt house at Rosemont, Pa., with its quiet stone and stucco walls and high slate roofs, is a perfect example of Normandy inspiration. In 1895 Cope spent several months in Spain. The results appeared shortly in the Pennsylvania Institute for the Instruction of the Blind, at Overbrook, Pa., one of the earliest successful adaptations in America of the more informal type of Spanish renaissance. It is not obviously stylistic, Italian motives abound, but the Spanish influence is dominant in the quiet dignity of its courts and in its broad, stucco wall surfaces.
Copley

Cope was a Fellow of the American Institute of Architects in 1893, he was chairman of the committee appointed by the Philadelphia chapter to restore Congress Hall, the result of his intense interest in the preservation and restoration of Philadelphia colonial relics, and he directed the restoration of Stenton for the Colonial Dames. He was a manager of the Stewardson Travelling Scholarship in Architecture (named after his partner), and was one of a small group who volunteered their services as lecturers on architecture in the early days of the University of Pennsylvania School of Architecture. He was also largely responsible for the foundation of the T-Square Club in Philadelphia.

Cope was distinguished by his love of nature, his frankness, his larger grasp of a problem, his charm and hospitality. He was “simple, direct, sincere, and . . . studious” (Editorial in the Architectural Review, IV, 273). In 1893 he married Eliza Middleton Kane. They made their home in Germantown.

Copley, John Singleton (1738–Sept. 9, 1815), painter, was born, presumably, at Boston, Mass., a son of Richard and Mary Singleton Copley, both Irish. Allan Cunningham gives the date of his birth as July 3, 1737 (The Lives of the Most Eminent British Painters, Sculptors, and Architects, 1830–33, V, 162), but the published Boston Records have no entry confirming this date. Copley himself wrote, Sept. 12, 1766, to Peter Pelham, his step-brother, that he had had “resolution enough to live a bachelor to the age of twenty-eight” (“Copley-Pelham Letters,” post, p. 48). His daughter, Elizabeth Clarke Greene (in a letter quoted by William Dunlap, post, I, 119) spoke of her father as “born in 1738.” Worthington C. Ford, editor of the Copley-Pelham correspondence, and Frank W. Bayley, a biographer, accept the evidence as indicating that the artist “was born in 1738, and not in 1737 as usually stated” (“Copley-Pelham Letters,” p. 48).

Copley’s mother in his early boyhood kept a tobacco shop on Long Wharf (Dunlap, III, 323). The parents, who according to the artist’s grand-daughter, Martha Babcock Amory, came to Boston in 1736, were “engaged in trade, like almost all the inhabitants of the North American colonies at that time” (Amory, post, p. 4). The father was of Limerick; the mother, of the Singletones of County Clare, a family of Lancashire origin. Letters from John Singleton, Mrs. Copley’s father, are in the Copley-Pelham collection. Richard Copley, described as a tobacco-nist, is said by several biographers to have arrived in Boston out of health and to have gone, about the time of John’s birth, to the West Indies where he died. William H. Whitmore (Notes Concerning Peter Pelham, 1867, p. 13) gives his death as of 1748, the year of Mrs. Copley’s remarriage. James Bernard Cullen (The Story of the Irish in Boston, 1889, p. 190) says: “Richard Copley was in poor health on his ar-
Copley

rival in America and went to the West Indies to improve his failing strength. He died there in 1737." Neither of the foregoing dates has been either confirmed or disproved.

Except for a family tradition of his precocity in drawing, nothing is known of Copley's schooling or of the other activities of his boyhood. His letters, the earliest of which is dated Sept. 30, 1762, reveal a fairly well educated man. He may have been taught various subjects, it is reasonably conjectured, by his future step-father, who besides painting portraits and cutting engravings eked out a living in Boston by teaching dancing and, beginning Sept. 12, 1743, by conducting an "Evening Writing and Arithmetic School," duly advertised. Certain it is that the widow Copley, May 22, 1748, was married to Peter Pelham [q.v.] and that at about that time she transferred her tobacco business to his house in Queen St., at which the evening school also continued its sessions. In such a household young Copley may have learned to use the paint brush and the graver's tools. Whimlock says plausibly (p. 29): "Copley at the age of fifteen was able to engrave in mezzotint; his step-father Pelham, with whom he lived three years, was an excellent engraver and skillful also with the brush." Extant portraits by Peter Pelham, both painted and engraved, excite admiration and prove how unnecessary it is to surmise that Copley had lessons from John Smibert, who died in 1751 or Joseph Badger (1708-65), the latter distinctly inferior as a craftsman to the elder Pelham.

The artistic opportunities of the home and town in which Copley grew to manhood should be emphasized because he himself, and some of his biographers, taking him too literally, have made much of the bleakness of his early surroundings. His son, Lord Lyndhurst, wrote (Amory, p. 9) that "he (Copley) was entirely self taught, and never saw a decent picture, with the exception of his own, until he was nearly thirty years of age." Copley himself complained, in a letter to Benjamin West, Nov. 12, 1766: "In this Country as You rightly observe there is no examples of Art, except what is to be met with in a few prints indifferently executed, from which it is not possible to learn much" ("Copley-Pelham Letters," p. 51). Variants of this thesis are found almost everywhere in his earlier letters. They suggest that while Copley was industrious and an able executant he was physically unadventurous and temperamentally inclined toward brooding and self-pity. He could have seen at least a few good paintings and many good prints in the Boston of his youth.

Copley

The excellence of his own portraits was not accidental or miraculous; it had an academic foundation. A book of Copley's studies of the figure, now at the British Museum, proves that before he was twenty, whether with or without help from a teacher, he was making anatomical drawings with much care and precision. It must be believed that through the fortunate associations of a home and workshop in a town which had many craftsmen he had already learned his trade at an age when the average art student of to-day is beginning to draw.

Copley was fourteen or thereabout and his step-father had recently died, when he made the earliest of his portraits now preserved, a likeness of his half-brother Charles Pelham, good in color and characterization though it has in its background accessories which are somewhat out of drawing. It is a remarkable work to have come from so young a hand. The artist was only fifteen when (it is believed) he painted the portrait of the Rev. William Welstead, minister of the Brick Church in Long Lane, a work which, following Peter Pelham's practice, Copley personally engraved to get the benefit from the sale of prints. No other engraving has been attributed to Copley. A self-portrait, undated, depicting a boy of about seventeen in broken straw hat, and a painting of "Mars, Venus and Vulcan," signed and dated 1754, disclose crudities of execution which do not obscure the decorative intent and documentary value of the works. Such painting would obviously advertise itself anywhere. Without going after business, for his letters do not indicate that he was ever aggressive or pushing, Copley was started as a professional portrait-painter long before he was of age. In October 1757, Capt. Thomas Ainslie, collector of the port of Quebec, acknowledged from Halifax the receipt of his portrait, which "gives me great Satisfaction" (ibid., p. 23), and advised the artist to visit Nova Scotia "where there are several people who would be glad to employ You." This request to paint in Canada was later repeated from Quebec, Copley replying: "I should receive a singular pleasure in excepting, if my Business was anyways slack, but it is so far otherwise that I have a large Room full of Pictures unfinished, which would ingage me these twelve months if I did not begin any others" (ibid., p. 33).

Besides painting portraits in oil, doubtless after a formula learned from Peter Pelham, Copley was a pioneer American pastellist. He wrote, Sept. 30, 1762, to Jean Étienne Liottard (1702-90), the Swiss painter whose "Chocolate Girl" now in the Dresden Gallery is internationally

424
Copley

celebrated, asking him for "a sett of the best Scottish Crayons for drawing of Portraits." The young American anticipated Liotard’s surprise "that so remote a corner of the Globe as New England should have any demand for the necessary cuttensils for practising the fine Arts" by assuring him that "America which has been the seat of war and desolation, I would fain hope will one Day become the School of fine Arts" (Ibid., p. 26). The requested pastels were duly received and used by Copley in making many portraits in a medium congenial to his talent.

Copley’s fame was established in England by the exhibition, in 1766—not in 1760, as stated by Mrs. Amory, and not in 1774 as stated by Michael Bryan in Dictionary of Painters and Engravers (1898)—of “The Boy with the Squirrel,” which depicted his half-brother, Henry Pelham, seated at a table and playing with a pet squirrel. This picture, which made the young Boston painter a Fellow of the Society of Artists of Great Britain, by vote of Sept. 3, 1766, had been painted the preceding year. Copley’s letter of Sept. 3, 1765, to Capt. R. G. Bruce, of the John and Sukey, reveals that it was taken to England as a personal favor in the luggage of Roger Hale, surveyor of the port of London. A familiar story is to the effect that the painting, unaccompanied by name or letter of instructions, was delivered to Benjamin West (whom Mrs. Amory describes as then “a member of the Royal Academy,” though the Academy was not yet in existence). West is represented as having "exclaimed with a warmth and enthusiasm of which those who knew him best could scarcely believe him capable, ‘What delicious coloring worthy of Titian himself!’ " The American squirrel, it is said, disclosed the colonial origin of the picture to the Pennsylvania-born Quaker artist. A letter from Copley was subsequently delivered to him. West got the canvas into the Exhibition of the year and wrote, Aug. 4, 1766, a letter to Copley in which he referred to Sir Joshua Reynolds’s interest in the work and advised the artist to follow his example by making “a visit to Europe for this purpase (of self-improvement) for three or four years.”

West’s subsequent letters were considerably responsible for making Copley discontented with his situation and prospects in a colonial town, and the consequences were such that this may be thought to have been a disservice to American art. Copley in his letters to West of Oct. 13, 1766, and Nov. 12, 1766, gleefully accepted the invitation to send other pictures to the Exhibition and mournfully referred to himself as “peculiarly unlucky in Liveing in a place into which there has not been one portrait brought that is worthy to be call’d a Picture within my memory.” In a later letter to West, of June 17, 1768, he displayed a cautious person’s reasons for not rashly giving up the good living which his art gave him. He wrote: “I should be glad to go to Europe, but cannot think of it without a very good prospect of doing as well there as I can here. You are sensible that 300 Guineas a Year, which is my present income, is a pretty living in America. . . . And what ever my ambition may be to excel in our noble Art, I cannot think of doing it at the expence of not only my own happiness, but that of a tender Mother and a Young Brother whose dependance is intirely upon me” (Ibid., pp. 68–69). West replied, Sept. 20, 1768, saying that he had talked over Copley’s prospects with other artists of London “and find that by their Candid approbation you have nothing to Hazard in Coming to this Place.”

The income which Copley earned by his brush in the seventeen-sixties was extraordinary for his town and time. It had promoted the son of a needy tobacconist into the local aristocracy. The foremost personages of New England came to his painting-room as sitters. He married, Nov. 16, 1769 (not 1771, as stated by Dunlap) Sussannah Farnum Clarke, daughter of Richard [q.v.] and Elizabeth (Winslow) Clarke, the former being the agent of the East India Company in Boston; the latter, a New England woman of Mayflower ancestry. The union was a happy one, and socially notable. Mrs. Copley was a beautiful woman of poise and serenity whose features are familiar through several of her husband’s paintings. Copley had already bought land on the west side of Beacon Hill extending down to the Charles River (concerning his purchases of which see Allen Chamberlain, post, pp. 50–96). The newly married Copleys established their Lares and Penates in “a solitary house in Boston, on Beacon Hill, chosen with his keen perception of picturesque beauty” (Amory, p. 24). It was on the site, approximately, of the present Boston Women’s City Club. Here were painted the portraits of dignitaries of state and church, graceful women and charming children, in the mode of faithful and painstaking verisimilitude which Copley had made his own. The family’s style of living at this period was that of people of wealth. John Trumbull (1756–1843) told Dunlap (I, 120) that in 1771, being then a student at Harvard College, he called on Copley who “was dressed on the occasion in a suit of crimson velvet with gold buttons, and the elegance displayed by Copley in his style of living, added to his high repute as an artist, made a
Copley

permanent impression on Trumbull in favor of the life of a painter."

In town and church affairs Copley took almost no part. He referred to himself (letter to West, Nov. 24, 1770) as "desirous of avoiding every imputation of party spirit. Political contests being neighther pleasing to an artist or advantageous to the Art itself." His name appeared Jan. 29, 1771, on a petition of freeholders and inhabitants to have the powder house removed from the town whose existence it imperiled. Records of the Church in Brattle Square disclose that in 1772 Copley was asked to submit plans for a rebuilt meeting-house, and that he proposed an ambitious plan and elevation "which was much admired for its Elegance and Grandure," but which on account of probable expensiveness was not accepted by the society. Copley's sympathy with the politicians who were working toward American independence appears to have been genuine but not so vigorous as to lead him to participate in any of their plans.

It was known to earlier biographers (as to Dunlap, see his vol. I, p. 121) that Copley at one time painted portraits in New York. The circumstances of this visit, which was supplemented by a few days in Philadelphia, were first disclosed through Prof. Guernsey Jones's discovery of many previously unpublished Copley and Pelham documents in the Public Record Office, London. From these letters and papers, published by the Massachusetts Historical Society in 1914, it appears that in 1768 Copley painted in Boston a portrait of Myles Cooper [q.v.], president of King's College, who then urged his visiting New York. Accepting the invitation later, Copley between June 1771 and January 1772, painted in New York thirty-seven portraits, setting up his easel, according to Dunlap (I, 121) "in Broadway, on the west side, in a house which was burned in the great conflagration on the night the British army entered the city as enemies." Copley's letters to Henry Pelham, whom he left in charge of his affairs in Boston, describe minutely the journey across New England, his first impressions of New York which "has more Grand Buildings than Boston, the streets much cleaner and some much broader," and the successful search for suitable lodgings and a painting-room; thereafter they give detailed accounts of sitters and social happenings. The correspondence also contains Copley's careful instructions to Pelham concerning the features of a new house then building on his Beacon Hill "farm," giving elevations and specifications of the addition of "peazas" which the artist saw for the first time in New York. Copley at the time had a lawsuit respecting title to some of his lands. His letters-reveal a man who allowed such disputes to worry him not a little.

Mr. and Mrs. Copley in September 1771 visited Philadelphia where, at the home of Chief Justice William Allen they "saw a fine Copy of the Titian Venus and Holy Family at whole length as large as life from Coregio" ("Copley-Pelham Letters," p. 163). Returning they viewed at New Brunswick, N. J., several pictures attributed to Vandyck. "The date is 1628 on one of them," wrote Copley; "it is without dout I think Vandyck did them before he came to England." Back in New York Copley wrote, Oct. 17, requesting that a certain black dress of Mrs. Copley's be sent over at once. "As we are much in company," he said, "we think it necessary Sukey [his wife] should have it, as her other Cloaths are mostly improper for her to wear" (ibid., p. 168). On Dec. 15 Copley informed Pelham that "this Week finishes all my Business, no less than 37 Busts; so the weather permitting by Christmas we hope to be on the road." Thus ended Copley's only American tour away from Boston. Accounts of his having painted in the South are without foundation. Most of the Southern portraits popularly attributed to him were made by Henry Benbridge [q.v.].

His correspondents in England continued to urge Copley to undertake European studies. He saved an undated and unsigned letter from some one who wrote: "Our people here are enrap't with him, he is compared to Vandyck, Reubens and all the great painters of Old." His brother-in-law Jonathan Clarke, already in London, advised his "comeing this way." West wrote, Jan. 6, 1773: "My Advice is, Mrs. Copley to remain in Boston till you have made this Tour [to Italy]. After which, if you fix your place of residenc in London, Mrs. Copley to come over."

Political and economic conditions in Boston were increasingly disturbed. Copley's father-in-law, Mr. Clarke, was the merchant to whom was consigned the tea that provoked the Boston Tea Party. Copley's family connections were all Loyalists. He defended his wife's relatives at a meeting described in his letter of Dec. 1, 1773. He wrote Apr. 26, 1774, of an unpleasant experience when a mob visited his house demanding the person of Col. George Watson, a Loyalist mandamus counselor, who, fortunately, had gone elsewhere. The patriots having threatened to have his blood if he "entertained any such Villain for the future," Copley exclaimed: "What a spirit! What if Mr. Watson had stayed (as I pressed him to) to spend the night. I must either
Gentleman."

With many letters of introduction, all of which are published in the Copley-Pelham correspondence, Copley sailed from Boston in June 1774, leaving his mother, wife, and children in Henry Pelham's charge. He wrote, July 11, from London "after a most easy and safe passage." An early call was upon West, to "find in him those amiable qualities that makes his friendship both desirable as an artist and as a Gentleman."
The American was duly introduced to Sir Joshua Reynolds and was taken to "the Royal Accademy where the Students had a naked model from which they were Drawing." In London Copley took no sits at this time though urged to do so. Shortly before leaving for Italy he "dined with Gov'r Hutchinson, and I think there was 12 of us altogether, and all Bostonians, and we had Choice Salt Fish for Dinner."

On Sept. 2, 1774, Copley chronicled his arrival at Paris where he saw and painstakingly described many paintings and sculptures. His journey toward Rome was made in company of an artist named Carter, described by Cunningham (V, 167) as "a captious, cross-grained and self-conceited person who kept a regular journal of his tour in which he set down the smallest trifle that could bear a construction unfavorable to the American's character." Carter was undoubtedly an un congenial companion. Copley, however, may at times have been both depressing and bumptious. He found fault, according to Carter, with the French firewood because it gave out less heat than American wood, and he bragged of the art which America would produce when "they shall have an independent government." Copley's personal appearance was thus described by his uncharitable comrade: "Very thin, a little pock-marked [presumably a souvenir of the Boston smallpox epidemic described by Copley in a letter of Jan. 24, 1764], prominent eyebrows, small eyes, which after fatigue seemed a day's march in his head." Copley afterward wrote of Carter (Dunlap, I, 129): "He was a sort of snail which crawled over a man in his sleep and left its slime, and no more." Mrs. Amory relates that "both parties were undoubtedly glad to separate on their arrival at their destination." Oct. 8, 1774, found Copley at Genoa where he wrote to his wife describing, among other things, the cheapness of the silks: "The velvet and satin for which I gave seven guineas would have cost fourteen in London." He reached Rome, Oct. 26. "I am very fortunate," he wrote, "in my time of being here, as I shall see the magnificence of the rejoicing on the election of the Pope; it is also the year of jubilee, or Holy Year."

Copley's plan of study and mode of living at Rome are described in several letters. He found time for excursions. He visited Naples in January 1775, writing to his wife: "The city is very large and delightfully situated but you have no idea of the dirt, . . . and the people are as dirty as the streets,—indeed, they are offensive to such a degree as to make me ill" (Amory, p. 44). The excavations at Pompeii greatly interested him and in company with Ralph Izard of South Carolina (whose family portrait he later painted) he extended his journey to Paestum. At Rome early in 1775 he copied Correggio's "St. Jerome" on commission from Lord Grosvenor, and other works for Mr. and Mrs. Izard. About May 20 he started on a tour northward through Florence, Parma, Mantua, Venice, Trieste, Stuttgart, Mayence, Cologne, and the Low Countries. From Parma he wrote to Henry Pelham urging that the whole family leave America at once since, "if the Frost should be severe and the Harbour frozen, the Town of Boston will be exposed to an attack; and if it should be taken all that have remained in the town will be considered as enemys to the Country and ill treated or exposed to great distress." This anxiety was groundless, for Mrs. Copley and the children had already sailed, May 27, 1775, from Marblehead in a ship crowded with refugees. She arrived in London some weeks before Copley returned from the Continent, making her home with her brother-in-law, Henry Bromfield. Her father, Richard Clarke, and her brothers came soon after. Copley happily rejoined his family and set up his easel, at first in Leicester Fields (Ibid., p. 99) and later (not immediately, as related by Dunlap, I, 129) at 25, George St., Hanover Square, in a house built by a wealthy Italian and admirably adapted to an artist's requirements. Here Mr. and Mrs. Copley and their son Lord Lyndhurst lived and died.

As an English painter Copley began in 1775 a career promising at the outset and destined from personal and political causes to end in gloom and adversity. His technique was so well established, his habits of industry so well confirmed, and the reputation that had preceded him from America was so extraordinary, that he could hardly fail to make a place for himself among British artists. He himself, however, "often said, after his arrival in England, that he could not surpass some of his early works" (Ibid., p. 76). This was in effect the painter's own confession that the pictures of his maturity did not always reach the standard of the best of those of his youth. The
Copley

deterioration of his talent was gradual, however, and some of the “English Copleys” are superb paintings.

Following a fashion set by West and others, Copley began to paint historical pieces as well as portraits. His first essay in this genre was “A Youth Rescued from a Shark,” its subject based on an incident related to the artist by Brooke Watson. Engravings from this work achieved a popularity that has continued until the present. For a place over the fireplace of the George St. dining-room was painted the great family picture now at Boston, which, when first publicly shown by Lord Lyndhurst at the Manchester exhibition, 1862, was “pronounced by competent critics to be equal to any, in the same style, by Vandyck” (Ibid., p. 79). But the artist’s fame as a historical painter was made by “The Death of Lord Chatham.” The painting, however, brought him denunciation from Sir William Chambers, president of the Royal Academy, who objected to its being exhibited privately in advance of the Academy’s exhibition. In an open letter Chambers accused Copley of purveying his picture like a “raree-show” and of purposing “either the sale of prints or the raffle of the picture.” To this censure, obviously unfair to one newly arrived in London and uninformed as to the professional ethics of exhibiting, Copley one morning wrote a caustic reply, and at evening wisely threw it into the fire. Engravings from the Chatham picture later sold well in England and America.

Copley’s adventures in historical painting were the more successful because of his painstaking efforts to obtain good likenesses of personages and correct accessories of their periods. He traveled much in England to make studies of old portraits and actual localities. At intervals came from his studio such pieces as “The Red Cross Knight”; “Abraham Offering up Isaac”; “Hagar and Ishmael in the Wilderness”; “The Death of Major Pierson”; “The Arrest of Five Members of the Commons by Charles the First”; “The Siege of Gibraltar”; “The Surrender of Admiral DeWindt to Lord Camperdown”; “The Offer of the Crown to Lady Jane Grey by the Dukes of Northumberland and Suffolk”; “The Resurrection”; and others. He continued to paint portraits, among them those of several members of the royal family and numerous British and American celebrities. Between 1776 and 1815 he sent forty-three paintings to exhibitions of the Royal Academy, of which he was elected an associate member in the former year. His election to full membership occurred in 1783 (Cunningham, IV, 145).

Copley

The industry with which Copley labored over his compositions was exemplary save that it may at times have injured his health and disposition. “He has been represented to me by some,” wrote Cunningham (Dunlap, I, 142), “as a peevish and peremptory man while others describe him as mild and unassuming.” Both descriptions probably fitted Copley according as he was nervous from overwork and worry or was in a normal condition. His grand-daughter, Mrs. Amory, recalls that he usually painted continuously from early morning until twilight. In the evening his wife or a daughter read English literature for his benefit. He took but little exercise—probably not enough for health. (See his wife’s letter, Amory, p. 301.)

He would have liked to return to America but his professional routine prevented this. He was politically more liberal than were his relatives. He painted the Stars and Stripes over a ship in the background of Elkanah Watson’s portrait, Dec. 5, 1782, after listening to George III’s speech formally acknowledging American independence. “He invited me into the studio,” wrote Watson in his Journal (Bayley, p. 255), “and there, with a bold hand, a master’s touch, and I believe an American heart, attached to the ship the Stars and Stripes; this was, I imagine, the first American flag hoisted in Old England.” Copley’s contacts with New England people continued to be many. He painted portraits of John Adams, John Quincy Adams, and other Bostonians who visited England. His daughter Elizabeth was married in August 1800 to Gardiner Greene of Boston, a wealthy gentleman whose descendants have preserved much of the correspondence of the Copley family.

Prior to this marriage of his daughter, Copley had sold his Beacon Hill estate to a syndicate of speculators headed by Dr. Benjamin Joy. He felt himself victimized when he learned that the purchasers knew of a project of building the State House at the top of the hill, and he sent his son John Singleton Copley, Jr. (see sketch in Dictionary of National Biography), then at the beginning of his brilliant legal career, to Boston in 1796 seeking to annul the arrangement. The letters which the future lord chancellor wrote during his visit to the United States are interesting reading but his quest was unsuccessful. “I do not believe,” he wrote to his father, “that any person could have obtained from them one shilling more.” Despite this report the artist made further efforts to recover his “farm.” The subject of his grievance frequently recurs in the family correspondence, but it is not certain that Copley had any reason to feel himself de-

428
frauded. A memorandum prepared for him by Gardiner Greene stated (Amory, p. 144) that long after the land "had passed out of Copley's possession it, or a part of it, was offered at no higher price than was paid to his son." Allen Chamberlain, whose Beacon Hill gives an admirable summary of the complicated negotiations consequent upon this purchase, holds that Copley was fairly compensated at a price three times what he had paid for property from which he had had rents of considerable amount.

In his last fifteen years, though painting persistently, Copley experienced much depression and disappointment. The Napoleonic wars brought hard times. The household at 25, George St., was expensive to maintain. The education of a talented son was costly. It grieved the father that after the young barrister began to earn his way it became necessary to accept his help in carrying the home. Lord Campbell (Lives of Lord Lyndhurst and Lord Brougham, 1869) quotes the jurist as saying that "his father, having lived rather expensively, accumulated little for him." Mrs. Amory (p. 176) makes out a case for Mrs. Copley's admirable management, but it appears that a standard of living difficult to maintain in the changed circumstances made much borrowing inevitable. Copley was chagrined by the failure of his "Equestrian Portrait of the Prince Regent" to "bring a financial return." Cunningham says, "No customer made his appearance for Charles and the impeached members." Other canvases involving years of labor were unsold. Troubles with engravers were many, whether the fault was theirs or the painter's. Copley's letters to his son-in-law in Boston usually concerned loans made to him and frequently extended.

The aging artist's physical and mental health gave anxiety. In 1810 he had a bad fall which kept him from painting for a month (Ibid., p. 300). He incessantly bewailed the loss of his Boston property. Mrs. Copley wrote Dec. 11, 1810: "Your father has been led to feel this affair [his unsuccessful litigation to recover the "farm"] more sensibly from the present state of things in this country where every difficulty of living is increasing and the advantages arising from his profession are decreasing" (Ibid., p. 301). In October 1811, Copley wrote to Greene in distress, craving an additional loan of $600. And on Mar. 4, 1812 he wrote: "I am still pursuing my profession in the hope that, at a future time, a proper amount will be realized from my works, either to myself or family, but at this moment all pursuits which are not among the essentials of life are at a stand" (Ibid., p. 304).

In August 1813, Mrs. Copley wrote that, although her husband was still painting, "he cannot apply himself as closely as he used to do." She reported in April 1814: "Your father enjoys his health but grows rather feeble, dislikes more and more to walk; but it is still pleasant for him to go on with his painting." In June 1815, the Coples entertained as visitor John Quincy Adams with whom they jubilantly discussed the new terms of peace between America and England. In the letter describing this visit the painter's infirmities are said to have been increased by "his cares and disappointments." A note of Aug. 18, 1815, informed the Greenes that Copley while at dinner had had a paralytic stroke. He seemed at first to recover. Late in August his prognosis was favorable to his painting again. A second shock occurred, however, and he died on Sept. 9, 1815. "He was perfectly resigned," wrote his daughter Mary, "and willing to die, and expressed his firm trust in God, through the merits of our Redeemer." He was buried at Croydon in a tomb belonging to the Hutchinson family.

How sadly embarrassed Copley was in his latest years was disclosed in Mrs. Copley's letter of Feb. 1, 1816, to Gardiner Greene in which she gave details of his assets and borrowings and predicted: "When the whole property is disposed of and applied toward the discharge of the debts a large deficiency must, it is feared, remain." The estate was settled by Copley's son, later Lord Lyndhurst, who maintained the establishment in George St., supported his mother down to her death in 1836, and kept the ownership of many of the artist's unsold pictures until Mar. 5, 1864, when they were sold at auction in London. Several of the works then dispersed are now in American collections.

Copious as is the Copley documentation no authoritative and exhaustive life of John Singleton Copley, covering both the American and the English periods, has been published to date. The chief source book for the artist's early years is the collection of "Letters and Papers of John Singleton Copley and Henry Pelham," edited by a committee of the Mass. Hist. Soc. consisting of Chas. Francis Adams, Guernsey Jones, and Worthington Ford, and published in Mass. Hist. Soc. Colls., vol. LXXI (1914). The letters in this volume are printed entire and the explanatory footnotes are numerous and accurate. Martha Babcock Amory's Emericus and Artistic Life of John Singleton Copley (1882) is a grand-daughter's tribute to a great artist's memory, marred by a few minor inaccuracies and some inferences not justified by the data presented, but repaid with well-selected extracts from the family correspondence of the years 1800-15. The collection of documents which Mrs. Amory used in writing her biography was the subject of litigation among descendants in 1922. Augustus Thorndike Perkins in 1873 printed privately his Sketch of the Life and Some of the Works of John Singleton Copley, containing a list, generally accurate, of Copley's paintings as then owned. Perkins's work was the basis of The Life and Works of John Singleton Copley (1915), by Frank W. Bayley, which lists and
Copley

describes many canvases attributed to Copley. Since 1915 several works by Copley not then known have been discovered and many changes in ownership have been reported in the bulletins of the art museums, in *Am. Art News*, and in other periodicals. Wm. Dunlap’s *Hist. of the Arts of Design in the U. S.*, published in 1834, had an entertaining, gossipy, and not altogether reliable account of Copley, some of the mistakes of which are corrected in footnotes of the Bayley and Goodspeed edition, 1918. The accounts of Copley in Michael Bryan’s *Dictionary of Painters and Engravers* (1808) and in the *Dictionary of National Biography* (1923) contain inaccuracies and lacunae. One of the best literary appreciations of Copley is in Chas. H. Caffin’s *The Story of Am. Painting* (1907). Descriptions of several of his most famous paintings are in *The Boston Museum of Fine Arts* (1924) and *The Art of the National Gallery* (1906), both by Julia DeWolf Addison. The Boston Pub. Lib. has a large scrapbook of correspondence and newspaper cuttings relating to the purchase of “Charles I Demanding the Surrender of the Five Members,” now in the trustees’ room at the library.

In 1691, he was stationed at the fortress of Hull, about 1681, he was commended by the Duke of York as an honest man. He was a Protestant. The governor of the fortress was a Catholic. During the English revolution of 1688 the governor purposed to fill all the offices with Catholics. Copley, hearing of this, sent for the other Protestant officers, and they unanimously agreed to call the Protestant soldiers privately to arms to seize the governor and his principal adherents.

The plan was successfully executed, the town and fortress were secured for King William, and Copley, promoted to the rank of colonel, was made lieutenant-governor. He was commissioned as the first royal governor of Maryland on June 27, 1691, but his earliest instructions are dated two months later, and he did not arrive in the province until late in March or early in April 1692. He was sworn in at a meeting of the Provincial Council Apr. 6, 1692, and met the Assembly on the 10th of the following month.

In his brief address to this body he urged that the heats and animosities which had been rife during the overthrow of the proprietary government be laid aside and that adequate provision be made for his salary. He approved bills for the establishment of the Church of England, for granting the Governor an annual revenue, for the limitation of officers’ fees, for the administration of justice, for regulating the militia and providing for defense, and for regulating trade with the Indians. He refused to permit one of the nominees for the Council to take a seat in that body on the ground that he was the leader of a small hostile faction. Three separate treaties of peace were concluded by him with the Piscataway, Mattawoman, and Choptico Indians, all dated May 14, 1692. In a dispute between the Governor and the Secretary of the Council over the right to the fees derived from the appointment of county clerks and over the right of their removal, the home government decided in favor of the Secretary. The Secretary also claimed the fees derived from the sale of ordinary licenses, but the assembly gave these to Copley as part of his annual revenue as governor.

Copley stated that it was morally impossible for one in his position to serve the king without bringing complaint from Lord Baltimore, who under the royal government was supposed to enjoy all the territorial rights that had been his under the proprietary government. Lord Baltimore’s chief grievance was that, by Copley’s permission, the Assembly had passed an act depriving him of a fourteen-pence tonnage duty. Copley’s wife died in March 1692/93 and he himself in the September following, leaving two sons, Lionel and John, and a daughter, Ann.

Copley, Lionel (d. Sept. 9, 1693), colonial governor, was commissioned a captain of royal foot-guards in 1676. Before this his home had been in Wadsworth, Yorkshire, England. When first stationed at the fortress of Hull, about 1681, he was commended by the Duke of York as an honest man. He was a Protestant. The governor of the fortress was a Catholic. During the English revolution of 1688 the governor purposed to fill all the offices with Catholics. Copley, hearing of this, sent for the other Protestant officers, and they unanimously agreed to call the Protestant soldiers privately to arms to seize the governor and his principal adherents.

The plan was successfully executed, the town and fortress were secured for King William, and Copley, promoted to the rank of colonel, was made lieutenant-governor. He was commissioned as the first royal governor of Maryland on June 27, 1691, but his earliest instructions are dated two months later, and he did not arrive in the province until late in March or early in April 1692. He was sworn in at a meeting of the Provincial Council Apr. 6, 1692, and met the Assembly on the 10th of the following month.

In his brief address to this body he urged that the heats and animosities which had been rife during the overthrow of the proprietary government be laid aside and that adequate provision be made for his salary. He approved bills for the establishment of the Church of England, for granting the Governor an annual revenue, for the limitation of officers’ fees, for the administration of justice, for regulating the militia and providing for defense, and for regulating trade with the Indians. that body on the ground that he was the leader of a small hostile faction. Three separate treaties of peace were concluded by him with the Piscataway, Mattawoman, and Choptico Indians, all dated May 14, 1692. In a dispute between the Governor and the Secretary of the Council over the right to the fees derived from the appointment of county clerks and over the right of their removal, the home government decided in favor of the Secretary. The Secretary also claimed the fees derived from the sale of ordinary licenses, but the assembly gave these to Copley as part of his annual revenue as governor. Copley stated that it was morally impossible for one in his position to serve the king without bringing complaint from Lord Baltimore, who under the royal government was supposed to enjoy all the territorial rights that had been his under the proprietary government. Lord Baltimore’s chief grievance was that, by Copley’s permission, the Assembly had passed an act depriving him of a fourteen-pence tonnage duty. Copley’s wife died in March 1692/93 and he himself in the September following, leaving two sons, Lionel and John, and a daughter, Ann.

Nearly all that is known of Copley is contained in vols. VIII (1890) and XIII (1894) of *Archives of Md.*, but see Calendar of State Papers, Colonial Ser., 1663-96, pp. 572, 573; and for a secondary account of Copley’s administration, J. T. Scharf, *Hist. of Md.* (1879), vol. I. For an account of the seizure of Hull see John Tickell, *Hist. of the Town and County of Kingston upon Hull* (1796).

N. D. M.

Copley, Thomas (1595-c. 1652), Jesuit missionary, appears in the domestic records of the Society of Jesus as Philip Fisher, which name he assumed upon joining the Order. His grandfather, Thomas Copley, was, at the close of the reign of Mary I, a wealthy and influential Protestant of Surrey, England, but became a Catholic early in the reign of Elizabeth and was driven into exile. William Copley, son of the exile, married Magdalen, daughter of Thomas Prideaux, and they were in Madrid, Spain, in 1595, when Thomas was born. The family returned to England in 1603, the year of the accession of James I, and there Thomas was educated as a Catholic until 1611, when he went to Louvain for the study of philosophy. Five years later he joined the Society of Jesus. He returned to England about 1623 and soon became prominent in the affairs of the Society’s London mission. When, in 1633, Lord Baltimore was preparing to send out the first colonists for a plantation in Maryland, Father Copley was the business manager for the Society in cooperating with Lord Baltimore and in founding a Maryland mission. He remained in London “putting heat and spirit of action” into the business until 1637, when he
Coppée
sailed for Maryland to give personal direction to the missionary activities there.

Within a few months after his arrival in the province, he was engaged in a struggle with Lord Baltimore over the relation of church and state. In founding Maryland, Lord Baltimore was governed chiefly by economic motives and to that end he sought religious toleration and the complete subordination of all sects to the civil authorities. Father Copley contended that none had done so much in "peopling and planting this place" as he and his fellow missionaries, and he desired for the mission many of the exemptions from lay jurisdiction that had formerly been enjoyed by the Church of Rome. He asked that the missionaries be permitted to receive lands as gifts from converted Indians; that their churches and their houses have the privileges of sanctuary; that they be exempted from the jurisdiction of lay courts, from taxes, and trade regulations; and he warned that he who placed restrictions on ecclesiastical liberties might incur danger of excommunication. Lord Baltimore was alarmed. He suspected that the missionaries designed his temporal destruction by forming an opposition party or by arming the Indians. He appealed to the English Provincial for the Society, and Copley was superseded as head of the Maryland mission. In 1645, during the Clai-
borne and Ingles rebellion, Copley was seized and carried to England where he was kept in prison for two years. He was then tried on the charge of coming to that country to seduce subjects of the Commonwealth, and was banished. He re-
turned to Maryland and there the record of his activities terminated in 1652. As head of the Maryland mission Copley was characterized by a contemporary as a man of good talents but deficient in judgment and prudence.

[The Calvert Papers (1889) contain important in-
formation relative to Copley as head of the Md. mission. Katharine C. Dorsey, Life of Father Thos. Copley (1889), is valuable chiefly for information relative to the Copley family. Thos. Hughes, Hist. of the Society of Jesus in North America, vol. 1 (1907), contains a more scholarly account of the conflict between Lord Bal-

N.D.M.

COPPÉE, HENRY (Oct. 13, 1821-Mar. 21, 1895), soldier, educator, was the son of Edward and Carolina Eugenia Raingeard De Lavallate Coppée, who fled from Santo Domingo during the great slave insurrection. His father, a physi-
cian, took up the practise of medicine in Georgia, was one of the founders of the First Presbyte-
ian Church in Savannah in 1827, and was a charter member of the Georgia Historical So-
ciety in 1839. Henry was born in Savannah, and lived there until his fifteenth year, when he en-
tered Yale with the class of 1839. After two years, however, he ceased to attend college. He was employed in the construction of the Central of Georgia Railroad, from Savannah to Macon, and in the study of engineering until the age of nineteen, when he entered West Point, from which institution he graduated in 1845, eleventh in his class. As brevet second lieutenant of artil-
erry he was assigned to garrison duty at Fort Co-
lumbus, N. Y., until the outbreak of the war with Mexico, when he was transferred to the 1st Artillery which was with Scott. In the progress of the campaign he was promoted to the rank of first lieutenant and after the storming of Chap-
tuletepec was brevetted captain "for gallant and meritorious conduct" in the battles of Contreras and Churubusco.

In 1848 upon the conclusion of the war he was married to Julia de Witt and returned to West Point as assistant professor of French. After a year he was transferred again to garrison duty, this time at Fort McHenry, but the year follow-
ing saw his return to the military academy as assistant professor of geography, history, and ethics. Here he taught and also had charge of the library until his resignation from the army in 1855 and his acceptance of the chair of Eng-
lish literature and history at the University of Pennsylvania. For eleven years he held this post with distinction. During this period he be-
came identified with the American Philosophical Society, of which he was an honored member; he also published a number of text-books and collections of literature, among them: Elements of Logic (1857); Elements of Rhetoric (1858), which ran through eleven editions; Gallery of Famous English and American Poets (1859); and Gallery of Distinguished English and Amer-
ican Female Poets (1860).

When the secession crisis preceding the Civil War made the question of loyalty an imperative one, Coppée made his choice for the Union rather than for his native state. Although he did not reenter the army, he threw himself with great zeal into the cause for the Union and through various writings on military science he sought to contribute to the efficiency of the Northern armies, publishing in 1862 his Manual of Bat-
talion Drill and a translation of Marmont's Es-
Coppée

*Coppée*

*Magazine*, a military periodical conceived along broad and scholarly lines, which, however, went out of existence two years later when Coppée was led to relinquish the editorship as well as his chair at the University of Pennsylvania to accept the presidency of the newly founded Lehigh University.

From 1866 to 1875 Coppée acted not only as the first president of Lehigh but also as professor of history and literature. His chief interests, however, were in teaching and writing, and he therefore resigned the presidency in 1874, continuing in office another year until a successor could be found, and then taking the title of professor of English literature and international and constitutional law. Upon the death of President Lambert in September 1893, Coppée became acting president and continued to serve until the time of his death. During his connection with Lehigh University he published *Grant and his Campaigns. A Military Biography* (1866); *Lectures in English Literature* (1872); *English Literature Considered as an Interpreter of English History* (1873), which ran into nine editions; an American edition of *La Guerre Civile en Amérique* by the Comte de Paris, in four volumes (1875–78); and *General Thomas* (1893), in the Great Commander series. His most pretentious and solid literary effort was the *History of the Conquest of Spain by the Arab Moors*, which first appeared in *The Penn Monthly*, a short-lived literary magazine of that period, in 1873, and in 1881 was published in two volumes, a second edition appearing in 1892 (see, for critical reviews, C. K. Adams, *A Manual of Historical Literature*, 1882, and the *Nation*, Apr. 21, 1881). He also was a contributor to the *North American Review*, the *Princeton Review* and the *Church Quarterly*. These various literary efforts bespeak the breadth of Coppée's knowledge and the wideness of his intellectual interest. His manner of writing was easy and flowing, if sometimes a little over-ornate; his mentality was distinctly Gallic in its enthusiasm, its imagination, its logical trends. *His History of the Conquest of Spain* shows his strength and weakness as a writer and scholar. It is delightfully written and a really valuable contribution, but it will hardly take rank with the very best contributions to historical literature both because new sources have been made available since he wrote and because he was occasionally inclined to come warmly to the defense of the traditional rather than submit it to the cold test of supportable evidence.

As a young man Coppée was strikingly handsome and during his latter years he made a most impressive and venerable appearance with his white hair and flowing beard. By all testimony he possessed an unusual charm of presence. He was fond of reading Shakespeare, and the élite of the Lehigh Valley eagerly gathered to hear him interpret that master. He was a man of simple faith and a devout churchman as is attested by his *Songs of Praise in the Christian Centuries* (1866); for many years before his death he served as the warden of the Church of the Nativity in Bethlehem. At the time of his death he was a regent of the Smithsonian Institution.

The chief sources for the life of Coppée are the publications of the various institutions with which he was identified during the periods of his connection; G. W. Cullum, *Biog. Reg.* (3rd ed., 1891); *Centennial of the U. S. Mil. Acad. at West Point* (1902); *Proc. Am. Philosophical Soc.* (1895); *The Twenty-Year Book of the Lehigh Univ.* (1886); the memorial number of the *Brown and White* of Lehigh Univ., Mar. 1895; information from personal acquaintances.]

Coppens, Charles (May 24, 1835–Dec. 14, 1920), Roman Catholic priest, educator, was born at Turnhout, Belgium, the son of Peter Hubert and Caroline (Vaes) Coppens. He began his training in the Jesuit college of St. Joseph in his native town and came to the United States to continue it in the scholastics at St. Louis and at Fordham universities. He entered the Society of Jesus in 1853 at Florissant, Mo., and was ordained in New York by Cardinal McCloskey in 1865. He was professor of Latin and Greek in St. Louis University 1855–59 and in St. Xavier's College, Cincinnati, 1860–62, taught rhetoric in the normal school at Florissant, Mo., 1863–75, and in St. Louis University 1876–80, was president of St. Mary's College at St. Mary's, Kan., 1881–84, was professor of rhetoric again at Florissant, 1885–86, and of philosophy in Detroit College, 1887–95, in Creighton University at Omaha, 1896–1905, in St. Louis University, 1906–08, and finally in Loyola University in Chicago, where he died. His sixty years in the classroom exerted a strong influence on Jesuit education in America. Besides contributing to the *American Catholic Quarterly Review*, the *American Ecclesiastical Review*, the *Messenger of the Sacred Heart*, the *Jesuit*, *Men and Women*, and the *Catholic Encyclopedia*, Father Coppens was the author of numerous text-books and devotional works: *The Art of Oratorical Composition* (1885); *A Practical Introduction to English Rhetoric* (1886); *A Brief Text-Book of Logic and Mental Philosophy* (1891); *A Brief Text-Book of Moral Philosophy* (1895); *The Living Church of the Living God* (1902); *A Systematic Study of the Catholic Religion* (1903); *Mystic Treasures of the Holy Mass* (1904); *The Protestant
Coppet — Copway

Reformation: How It was Brought About in Various Lands (1907); Choice Morsels of the Bread of Life, or Select Readings from the Old Testament (1909); A Brief History of Philosophy (1909); Who Are the Jesuits? (1911); Spiritual Instruction for the Religious (1914); The Spiritual Exercises of St. Ignatius Adapted to an Eight Days Retreat and Six Triduums (1916); and A Brief Commentary on the Little Office of the Immaculate Conception of the Blessed Virgin Mary (1916). Several of his textbooks have been widely used in Catholic schools and colleges. They are admirably suited to their purpose and are written in a style of unusual lucidity and ease. In them, as in his devotional works, Father Coppen made no significant departures from Jesuit tradition as regards style and matter. More originality was displayed in his most important book, Moral Principles and Medical Practice (1897; new and enlarged edition by H. S. Spalding, 1921). He was the first to treat medical ethics and medical jurisprudence from the Catholic point of view. His book deals with matters highly controversial in a way to provoke thought if not to secure assent. He was slight of stature and seemingly fragile, delicate of health, and so zealous and humble that “he never lost a moment of time or spoke an uncharitable word.”

G. H. G.

COPPET, EDWARD J. de. [See De Coppet, Edward J., 1855–1916.]

COPWAY, GEORGE (1818–c. 1863), Chippewa (Ojibway) chief, Wesleyan missionary, author, was born in the fall of 1818 near the mouth of the river Trent in Ontario, while his parents were attending the government’s yearly distribution of presents. His Indian name was Kah-Ge-Ga-Gah-Bowh and his father belonged to the Crane, his mother to the Eagle tribe. His great-grandfather was the first Chippewa to settle in the Rice Lake district, which had formerly been territory of the Hurons. His father was an hereditary chief of the Rice Lake Chippewas, a medicine man, and an excellent hunter. The family, like the other Indians of the region, were able by hunting, fishing, and farming to gain only a bare subsistence. One winter, while on a fur-gathering expedition, they were snowed in in their wigwams and nearly perished of hunger. Copway was taught to read by the Rev. James Evans, an English Wesleyan missionary, and in the summer of 1830 was converted to Methodism. His mother, who had died the previous February, and his father had both become Christians. In June 1834 Copway was sent as missionary’s helper to the region south of Lake Superior, and from that time till his death he was engaged either in actual missionary work among his scattered people or in lecturing and gathering funds for the cause. His field extended over what are now Michigan, Minnesota, Wisconsin, Iowa, and Illinois. He attended Ebenezer Academy near Jackson, Ill., 1838–39 and after finishing his schooling there made an extensive, somewhat unceremonious, tour of the East. On the journey from Boston to New York he had for a traveling companion Father Edward Taylor (Life, p. 136). Copway was tall, handsome, and muscular, and had fine manners. Once he carried more than 200 pounds of flour, shot, coffee, and sugar on his back for a quarter of a mile without resting; at another, in 1835, in order to fetch flour to his starving companions he traveled 185 miles on foot in two days. In the early summer of 1840 he married Elizabeth Howell of Toronto. In 1850 he visited Europe, attended the Peace Congress at Frankfurt, and took back books from Freiligrath, the German poet, to his friend Longfellow (S. Longfellow, Life of Henry Wadsworth Longfellow, 1891, II, 212). For a while he engaged in journalism in New York City. His books are: The Life, History, and Travels of Kah-Ge-Ga-Gah-Bowh (Albany, 1847, 2nd to 6th eds., Philadelphia, 1847; revised as Life, Letters, and Speeches of Kah-Ge-Ga-Gah-Bowh, New York, 1850, and as Recollections of a Forest Life, London, 1850, 1851); The Traditional History and Characteristic Sketches of the Ojibway Nation (London, 1850, Boston, 1851; later published under the title Indian Life and Indian History, 1858, 1860); The Ojibway Conquest, a Tale of the Northwest (1850); Organization of a New Indian Territory East of the Missouri River (1850); and Running Sketches of Men and Places in England, France, Germany, Belgium, and Scotland (1851). He also helped the Rev. Mr. Hall of Lapointe, Mich., in translating the Gospel according to Luke and the Acts into Ojibway. His own style is an amalgam of Washington Irving, St. Luke, and elements derived from Methodist exhorters. In his earnest advocacy of a new Indian territory he displayed the vision of a statesman. He is said to have died near Pontiac, Mich., about 1863.

[F. W. Hodge, Handbook of Am. Indians (1907); Copway’s own writings.]

G. H. G.

COQUILLET, DANIEL WILLIAM (Jan. 23, 1856–July 8, 1911), entomologist, was the sixth child of Francis Marquis LaFayette Co-
Quillett and his wife Sara Ann. He was born on a farm at Pleasant Valley near Woodstock, Ill. He was educated at the country school and taught there for one or two terms. While helping his father on the farm he began collecting, rearing, and studying insects. He bought books on entomology with all of his spare money, and began corresponding with A. R. Grote of Buffalo. He also studied birds, and in 1876, with his brother's help printed on a hand-press *The Oology of Illinois*. His first paper was on the larvae of Lepidoptera, and was published in the *Canadian Entomologist* for 1880. This article attracted the attention of Cyrus Thomas, state entomologist of Illinois, and Coquillett was engaged to prepare an article on these larvae for the entomologist's *Annual Report*. He was then employed by Thomas until his health failed in 1882, when his parents took him to Anaheim, Cal., where he recovered and continued his studies of insects. In 1885 he was appointed a field agent of the Division of Entomology of the United States Department of Agriculture. During this employment he experimented with hydrocyanic-acid gas as a remedy for scale insects and perfected its use. In 1887 he cared for the first shipments sent by Koebel from Australia of the beneficial ladybird beetle (*Vedalia* or *Novius cardinalis*). He handled them with extreme care and succeeded in bringing about their acclimatization, with the result that they saved citrus culture in California, by destroying the white or cottony cushion scale which threatened ruin to the growers. In 1893 he was brought to Washington, and in 1896 was appointed custodian of the Diptera in the United States National Museum, holding this position until his death.

Aside from his important work with hydrocyanic-acid gas and his help in the acclimatization of the Australian ladybird beetle, his achievements were mainly in the taxonomic study of the true flies (Order Diptera). He was a tireless worker, and his bibliography covers more than two hundred and fifty titles. He was an extremely shy, retiring man, and although he belonged to several scientific societies and contributed frequently to their proceedings and transactions, he never read a paper at a meeting. At the time of his death he was probably the foremost dipterologist of the United States.

*Proc. Entomological Soc. of Washington, XIII (1911), 196–210, including a list of Coquillett's published writings; Canadian Entomologist, Sept. 1911; and Entomological News, Oct. 1911.*

L. O. H.

**Coram, Thomas** (1668–Mar. 29, 1751), merchant, colony promoter, was the son of a mariner of Lyme Regis, Dorsetshire, England. Left motherless, he went to sea “at 11 years and [a] half old until 5 years after” his father apprenticed him to a London shipwright. It was as a shipbuilder, a factor for Thomas Hunt of London, that he began an acquaintance with the colonies which led Horace Walpole to describe him in 1735 as “the honestest, the most disinterested, and the most knowing person about the plantations, I ever talked with” (Coxe, *Walpole*, 1708, III, 243). In 1693 he carried over a party of shipwrights to Boston; and in 1697 he removed for a time to Taunton, and set up a shipyard in South Dighton, drawn thither by “the Vast great plenty of oak and fir Timber, and Iron oar.” But his forthright personality and sturdy Anglicanism soon involved him in quarrels and litigation in that primitive Puritan community—a “generation of vipers,” as he afterward described his neighbors. He won his lawsuits, upon appeal, and escaped two murderous assaults. In 1703 he took characteristic revenge by deeding in trust fifty-nine acres—awarded him as indemnity by the Superior Court—for building a Church of England edifice, “if ever hereafter the inhabitants of the town of Taunton . . . should be more civilized than they now are” (Compston, *post*, p. 32).

Those ten stormy years served, however, to fix Coram’s interest in the material and spiritual development of the colonies. He naturally supported various efforts to extend the Church of England in New England, and himself projected a King’s College at Cambridge. But his Anglicanism was not inflexible. At Boston he married (June 27, 1700) a Puritan wife, Eunice Wayte (1677–1740). For years he corresponded with the Boston divine, Benjamin Colman, and enlisted the Associates of Dr. Bray and other agencies to supply books for the New England missionaries to the Indians, and for other dissenting ministers. The American projects of this “indefatigable schemist” ranged from missionary efforts “to Beat down the Old Goliath’s [the] French Jesuits,” and plans for the relief of distressed New England seamen in foreign ports, to full-fledged enterprises of colonization. Probably no contemporary promoter showered so many memorials upon the Board of Trade. He returned to England in 1704, and at his own expense, so he claimed, solicited the act to encourage the making of tar and pitch in the plantations (3 and 4 Anne, c. 10). For several years he was employed in supplying the Admiralty with American naval stores. He was a strong mercantilist; as his first biographer remarked, “He loved the daughters dearly: but he loved them as daughters.” In a memorial of 1732 he recom-
Corbett

V.W.C.

CORBETT, HENRY WINSLOW (Feb. 18, 1827—Mar. 31, 1903), merchant, banker, railroad promoter, politician, the son of Elijah and Melinda (Forbush) Corbett, was descended from seventeenth-century English settlers of Massachusetts. He was born at Westboro, Mass., but spent his boyhood on a farm in Washington County, N. Y., where he enjoyed the advantage of a common school. He then attended an academy at Cambridge, N. Y., during parts of two years, at the same time working in a store. Later he received a few months more of formal schooling and another year of apprenticeship in the mercantile line. In 1843 he entered the dry-goods establishment of Williams, Bradford & Company in New York City, remaining until 1850. During his seven years' service he so completely won the confidence of his employers that they were prepared to fit him out with an extensive line of merchandise for the far West, and in October 1850 he sailed "round the Horn," arriving, Mar. 4, 1851, in Portland, Ore., then a small river town of some four hundred inhabitants. The venture proved highly successful and made the beginning of Corbett's business career in Oregon which was to continue for more than half a century. In company with Henry Failing, he established a large wholesale hardware business, and also secured control of the First National Bank of Portland. He promoted the building and operation of river steamboats; he assumed important responsibility in the work of completing the Northern Pacific Railroad; he was deeply interested in the Oregon-California Railroad; he was, for a time, the contractor for carrying the United States mail between Sacramento, Cal., and Oregon. He was a great builder, having at the time of his death more structures to his credit in Portland than any one else. He was always ready to invest in worthy business enterprises in his home city and finally, as a crowning service to Portland and the Pacific Northwest, he took the lead in working out plans for the Lewis and Clark Exposition to which he also contributed a large sum of money. He was first president of the exposition but died before the work was completed. He was married twice: in 1853 to Caroline E. Jagger of Albany, N. Y., and in 1867 to Emma L. Ruggles of Worcester, Mass.

435

Coram

mended the suppression of various colonial manufac-
tures in their infancy, though at other times he pressed the claims of the colonial iron manufacture. He vigorously espoused the complaints of the London Company of Felt Merchants against colonial competition, and lobbied for the Hat Act of 1732 (5 George II, c. 22). In Hogarth's portrait of Coram there appears conspicuously the hat which he accepted from time to time as his sole fee from the Company.

For some years after the Peace of Utrecht, Coram was engaged in the shipping trade, but increasingly he devoted himself to philanthropic projects: to his famous scheme for the Foundling Hospital, chartered in 1739, and to his less successful colonial plans. In 1713 he incited a group of officers and soldiers, unemployed after the wars, to petition for a grant of the eastern lands between the Kennebec and the St. Croix, from the Atlantic to the St. Lawrence. For thirty years this was the favorite scene of his projects, in which he proposed to employ Chelsea pensioners, Huguenots, convicts, Palatines, Ulster Scots, and the "graduates" of the Foundling, to raise hemp and provide naval stores. Several times the Board of Trade indorsed his designs, but after 1717 the opposition of Massachusetts and of rival claimants defeated his obstinate efforts to prove the Crown's title to the Sagadahoc lands. From the beginning, moreover, the Board of Trade had preferred, for strategic reasons, that he colonize Nova Scotia. Accordingly in 1735 Coram turned his energies toward the settlement of unemployed artisans in Nova Scotia and in one of the Bahamas. Meanwhile, as a friend and parishioner of Dr. Thomas Bray [q.v.], he had been drawn into the Georgia Trust. But he had soon quarrelled with the "Olgethropians" for neglecting the religious aims of Bray, and over their land-tenure system and "military rule"; and he now hoped to draw off the Georgia malcontents to his northern colony. In his own schemes, though he had proposed as early as 1717 that the soil be vested in eminent trustees, he had consistently urged a singularly free government under the Crown, "the Nearest to the English Government in America." But such an establishment was ill-adapted to a frontier colony. The Board of Trade indorsed his Nova Scotia plan in 1737, but the approach of war gave it the quietus. Coram lived to see Halifax settled, but upon a footing contrary to his generous proposals.

Corbin

Corbett was a man of extraordinary personal force. He was of conservative temper, and of rare business acumen. He was always interested in politics, transferring his allegiance early from the Whig to the Republican party, and taking a prominent part in insuring the triumph of Republicanism in Oregon. In 1862 he was urged to become a candidate for governor but refused. In 1866 the legislature, in order to break a deadlock, elected Corbett to the United States Senate where he served a single term, from Mar. 4, 1867, to Mar. 4, 1873. He was a member of the Committee on Finance, of which John Sherman was chairman, and his work centered in that committee’s activities. The records show that Corbett spoke almost exclusively on financial questions, such as resumption, the repeal of the tax on raw cotton, and the tariff. His speeches were always informal, usually brief, but often crammed with statistics. It cannot be said that he exhibited remarkable qualities as a debater, a tactician, or parliamentary leader. His forte was business rather than statesmanship; he had the gifts of the executive, not those of the legislator.

[See the Cong. Globe for the years of Corbett’s service in the senate. Chas. Henry Carey, Hist. of Ore., gives in very concise form Corbett’s business and political career. The best sketch of Corbett’s life is by Harvey W. Scott, as reprinted from the Oregonian in Hist. of the Oregon Country, ed. by Leslie M. Scott (1924), V, 183-88.]

J.S.

CORBIN, AUSTIN (July 11, 1827–June 4, 1896), capitalist, railroad executive, a descendant of Clement Corbin who had settled in Connecticut during the first half of the seventeenth century, was born at Newport, N. H. His parents, Austin and Mary (Chase) Corbin, were well-to-do and had enjoyed educational advantages better than the average, but until he reached his twentieth year their son had no formal instruction beyond that afforded by the common schools of the neighborhood. About that time, however, he obtained employment in a Boston store and later entered the Harvard Law School, from which he graduated in 1849. He began law practice, but did not long continue in it. At that time the West was calling to the young men of New England in persuasive tones. Corbin was attracted to Davenport in the new state of Iowa and located there in 1851. Three years later the firm of Macklot & Corbin opened a bank that was to have a successful career during the period of “wild-cat” banking that preceded the Civil War. In the panic of 1857 it remained one of the few unshaken financial institutions in Iowa. Corbin had induced friends in the East to loan money on Iowa farm lands as security. In a short time he built up in this way a profitable business, which was managed on conservative principles. On the establishment of the national banking system of 1863, the First National Bank of Davenport, organized by Corbin, was one of the earliest in the country to receive a charter and is said to have been actually the first to open its doors for business. Corbin’s reputation for sound banking soon extended beyond Iowa. His Eastern connections continued to grow in importance and in 1865 led to his removal to New York City, where Austin Corbin & Company (after 1874 the Corbin Banking Company) opened an office. At that time Corbin was well started on the road to wealth, and, without great exertion, he might have achieved his ambitions so far as his personal fortune was concerned. A man of initiative and vision, however, he was forming constructive objectives that involved far more than his individual profit. Not long after coming to New York his attention was directed to the advantages of Coney Island as an ocean resort within a short distance from the city. Thinking of New York’s population in terms of millions, instead of the hundreds of thousands then dwelling on Manhattan Island, Corbin looked forward to a day when those millions would be carried safely, cheaply, and quickly from the midsummer heat of the tenements to the breeze-swept beaches of Long Island. Transportation between New York and the ocean-side resorts was a problem that had never been worked out. The Long Island Railroad at that time was an inefficient and unproductive system that failed to meet even the modest requirements of the day. Corbin got control of it, energized its operation, and in time made it a useful servant of the public. Through that and other rail connections he developed transportation to Coney Island and neighboring beaches so effectively that within a few years they were the most popular resorts in the metropolitan area. For a time, especially in the development of the Manhattan Beach Railway, his brother, Daniel Chase Corbin [q.v.], was associated with him. His reorganization of the Long Island Railroad having restored the earning power of that corporation, Corbin began to be regarded as a successful railroad executive. Under his management, in the years 1886-88, the Philadelphia & Reading, which had been in a receivership, was rehabilitated and made a paying enterprise. Corbin’s railroad operations were all broadly constructive and planned for the future of communities and industries. Some of his projects were regarded as ahead of his time. He was interested in a transatlantic steamship port at the eastern end of Long Island, with a view to cutting the time required for the passage from

436
Corbin

Europe to New York Harbor. He gave much thought to a scheme of metropolitan subway transit, even having borings made and bringing an engineer from England to make plans, at his own personal expense. He could obtain no consideration for his project, however, and died long before the New York subway had been built. The last great enterprise of public interest in which he engaged was the establishment near Newport, N. H., of a game park eleven miles long and four miles wide, embracing 26,000 acres. He spent $1,000,000 in stocking this preserve with animals and providing for their maintenance and increase. Thrown from his carriage in a runaway accident near his New Hampshire birthplace, he died within a few hours from the injuries thus received. He was married in 1853 to Hannah M. Wheeler, who, with a son and a daughter, survived him.

[Harvey M. Lawson, Hist. and Geneal. of the Descendants of Clement Corbin (1905); N. Y. Times, June 5, 1896; Hist. of Scott County, Iowa (1882); Iowa State Register (Des Moines), July 18, Aug. 22, 1886; Century Mag., Oct. 1897; Wm. T. Bonner, N. Y., the World's Metropolis (1924).] W.B.S.

CORBIN, DANIEL CHASE (Oct. 1, 1832—June 29, 1918), financier, railroad president, son of Austin and Mary (Chase) Corbin, was born at Newport, N. H. He received a common-school education and in 1852 secured a government contract for surveying lands in Iowa. In 1858 he began similar operations in Nebraska and laid the foundations of a substantial fortune by purchasing land in the latter territory. The important mining developments in Colorado in the early sixties aroused his interest in the overland trade and in 1862 he moved to Denver. He secured important contracts for supplying the quartermaster's department at Fort Laramie, Wyo., and operated wagon trains from the Missouri River, via Denver, to places as far inland as Salt Lake City. After three years in Denver he moved to Helena, Mont., where for the next ten years he was actively engaged in mercantile business and also in banking as cashier and part owner of the First National Bank, one of the pioneer institutions of the Territory. In 1876 he moved to New York and until 1882 was associated with his brother Austin Corbin [q.v.] in the financing and active management of the Manhattan Beach Railway. This project was a success, and Daniel Corbin also established financial connections which were of great importance in subsequent projects.

The approaching completion of the Northern Pacific Railway brought about his return to the Northwest to begin the most significant and constructive part of his career. In 1883 the great importance of recent silver-lead discoveries in the Cœur d'Alène district attracted his attention to the Idaho Panhandle, and, three years later, under contract with the Bunker Hill & Sullivan Mining Company, he constructed one of the first concentrating plants in the region. About the same time he became interested in the transportation problems of the district and organized the Cœur d'Alène Railroad & Navigation Company, operating steamers on Lake Cœur d'Alène, and constructing a railroad from the head of navigation to the adjacent mining town. This line was completed in 1887 and was sold a year later to the Northern Pacific, becoming a feeder of the latter system and making an important contribution to the upbuilding of Spokane, Wash. Corbin moved to Spokane in 1889 and was associated with its various activities and those of the adjacent region for the rest of his life. He grasped the importance of the site as a strategic center for transportation and distributing developments, based on the great agricultural, mineral, and timber resources of the Inland Empire. In 1889 he began the construction of the Spokane Falls & Northern Railway, building the line northward through Colville to Northport on the Columbia. Within a few years, in spite of the acute financial stringency, he was able to secure capital for the extension of the line to Rossland, B. C., thus opening up another great mineral area. In 1899 this line was absorbed by the Great Northern.

Corbin was active in various local projects and developments including British Columbia mining, and organized the Corbin Coal & Coke Company to handle his extensive properties in the southern part of the province. He attempted to promote sugar-beet culture in the lands south of Spokane, but this development proved unsuccessful, largely because of the scarcity of labor. He was a director in the Old National Bank and Union Trust Company, the leading financial institutions in eastern Washington. In 1905 he began the construction of the Spokane International Railway, extending from Spokane through the Panhandle to Eastport, Idaho, and connecting with the Canadian Pacific Railway at Yakh, B.C., thus giving the city another transcontinental outlet, opening up a great stretch of productive territory, and tapping important coal areas. After ten years of independent operation this line was purchased by the Canadian Pacific in 1916.

Corbin spent almost sixty years in various development projects beginning at a time when frontier conditions still prevailed. He had the shrewdness, sound judgment, tenacity of purpose, and integrity characterizing many New
Corbin

England business men in the unprecedented growth of the West. He avoided publicity and was reputed to be irritable and brusque in manner, although his associates testified to his loyalty to friends and employees, and also to a great deal of unostentatious or anonymous charity and kindness on his part. His business operations were constructive in character and likely to leave a permanent impress on the history of the Northwest. He married in 1860 Louisa M. Jackson of Iowa, who died in August 1900. In 1907 he married Mrs. Anna (Larsen) Peterson, who survived him.

[The Spokesman-Review (Spokane), June 30 and July 1, 1918, contains interesting obituary material and editorial comment, as does Ry. Age (July 19, 1918), p. 154; see also H. M. Lawson, Hist. and Geneal. of the Descendants of Clement Corbin (1905); Edmund Wheeler, Hist. of Newport, N. H., from 1766 to 1787, with a Geneal. Reg. (1879); Nelson W. Durham, Hist. of the City of Spokane and Spokane County, Wash. (1912), vol. III; Post-Intelligencer (Seattle), and Daily Colonist (Victoria, B. C.), June 30, 1918.] W. A. R.

CORBIN, MARGARET (Nov. 12, 1751-Jan. 16, 1800), Revolutionary heroine, was the daughter of Robert Cochran, a Scotch-Irish pioneer in western Pennsylvania. She was born in what is now Franklin County. In 1756, at a time when she was away from home, her father was killed by Indians, and her mother carried off. She lived during the rest of her childhood at the home of an uncle. In 1772 she married John Corbin. When the Revolution began he joined the First Company of Pennsylvania Artillery as a matross (Pennsylvania Archives, ser. V, vol. III, p. 948). Margaret accompanied him, a custom not unusual at that period. At the battle of Fort Washington, Nov. 16, 1776, where Corbin was in charge of a small cannon on a ridge later named Fort Tryon, he was killed during an assault by the Hessians. Margaret, who witnessed his fall, took his place and courageously performed his duties until she was severely wounded. After the surrender of Fort Washington, she was not included among the prisoners, but was allowed to go to Philadelphia. Her injuries completely incapacitated her, and her serious condition came to the attention of the Executive Council of Pennsylvania, which, on June 29, 1779, granted her $30 for her immediate necessities and referred her case to the Board of War (Minutes of the Supreme Executive Council of Pennsylvania, XII, 34). The Board reported favorably (Papers of the Continental Congress, no. 174, vol. III, folio 501), and Congress, on July 6, 1779, voted her "during her natural life or the continuance of said disability the one-half of the monthly pay drawn by a soldier in the service of these states . . . and now . . . one complete suit of cloaths, or the value thereof in money" (Journals of the Continental Congress, XIV, 805). This act enrolled her in the Invalid Regiment, organized forarrison purposes, and her name appears several times on the pay-roll, and finally on the list of those discharged when it was mustered out in April 1783 (Pennsylvania Archives, ser. V, vol IV, pp. 40, 59, 65, 79, 90). She spent the remainder of her life in Westchester County, N. Y., near the scene of her husband's death and her own heroism.

CORBY, WILLIAM (Oct. 2, 1833—Dec. 28, 1897), Roman Catholic clergyman, president of the University of Notre Dame, Indiana, was the son of Daniel Corby, a native of King's County, Ireland, who came to America as a young man and settled in Detroit. There William was born and reared. After a boyhood in the common schools and practical experience in his father's business, he entered Notre Dame in 1853. Impressed by the religious atmosphere of the place, he joined in 1854 the Congregation of the Holy Cross, an order of priests and brothers devoted to education and charity, and decided to dedicate his life to the cause of Christian education. He pursued his studies with ardor, made his religious profession as a member of the congregation in 1858, and was appointed Prefect of Discipline in the University. Upon his ordination to the priesthood in 1860, he was made a professor and director of the Manual Labor School at Notre Dame, at the same time having charge of the mission at South Bend, where he was the first resident Catholic clergyman. In December 1861, along with six other priests from Notre Dame, he was commissioned by the Governor of New York and served for three years as chaplain of the famous Irish Brigade, with the rank of captain of cavalry. He performed faithful service in all the campaigns of the Army of the Potomac, his most conspicuous act being his general absolution pronounced under fire on the field of Gettysburg on the afternoon of July 2, 1863. At the close of the war he took up vigorously his work at South Bend, but was made vice-president of Notre Dame in 1865 and in the following year was elected its president and local superior of his order. After an administration of six years, marked by the establishment of a law school and great general prosperity, he was transferred to the presidency of the young and struggling Sa-
Corcoran

cred Heart College at Watertown, Wis., which he placed on a firm footing. In 1877 he was again made president of Notre Dame and became a powerful factor in its progress and advancement. He rebuilt its buildings on a larger scale after the fire of 1879, added a number of new departments, broadened the standards of learning, and earned for himself the title of second founder of the University. Retiring from the presidency in 1881, he became the Provincial General of his order in the United States, and later First Assistant General in All Parts of the World. He was commander of the Indiana commandery of the Loyal Legion and founder and commander of Notre Dame Post, No. 569, G. A. R., the only post composed entirely of members of a religious order.

Father Corby was a modest man whose character combined simplicity and strength. He had a high forehead, kindly eyes, and a distinguished bearing. His portrait in oil may be seen at Notre Dame. A bronze statue of Corby in the act of pronouncing absolution was dedicated at Gettysburg in 1910, and its replica stands on the campus at Notre Dame. His Memoirs of Chaplain Life (1894) is a vivid narrative of camp and battlefield.

F. T. P.

CORCORAN, JAMES ANDREW (Mar. 30, 1820-July 16, 1889), Catholic priest, theologian, editor, was born in Charleston, S. C. At the age of fourteen he went to Rome to attend the Propaganda College, and there, eight years later, he was ordained by Cardinal Fransoni, being the first native son of the Carolinas to enter the priesthood. He had made a brilliant record, especially in languages. Latin came as fluently as English, and he was thoroughly familiar with the European tongues. A year's added study gained for him the degree S.T.D., and he was ready to return to Charleston in 1843, to begin his notable services to the Church in America.

After a seasoning tour of teaching in the Charleston Seminary, with the rectorship of the cathedral and other pastoral duties added, when preparations began for the Eighth Baltimore Provincial Council of 1855, Corcoran came to national prominence as a theologian. He was made secretary of the Council and was so successful that he was given a like post at the Ninth Council in 1858. Charged with supervising the progress and drawing up the decrees at these Councils, which were in effect national gatherings, he left his stamp on the results of both. Thus when the Second Plenary Council was held at Baltimore, eight years later, he was promptly chosen secretary-in-chief. Seven archbishops, thirty-nine bishops or their procurators, and two abbots signed the fourteen decrees of this Council, all of which bore the mark of Corcoran's deep knowledge and exactness as an interpreter of conciliar decisions recognized by the whole body of the Church as binding precedents. In 1868, the American hierarchy unanimously named him their theologian on the preparatory commission for the Twentieth Ecumenical Council at the Vatican, which he later attended. It was he who drew up the "Spalding formula" on Papal Infallibility, the chief matter dealt with at this gathering. Following this period, he became professor of theology at Overbrook Seminary near Philadelphia, which had just been opened. This post he held until his death. When, however, the American archbishops went to Rome in 1883, preparatory to the Third Plenary Council, they took Corcoran as their secretary, and at their request he attended their sessions. Returning, he brought his experience and learning to bear once more at the Council's meetings in Baltimore.

Corcoran's editorial periods were two in number. Immediately after his return from his studies in Rome, he became a co-editor of the United States Catholic Miscellany, the pioneer Catholic literary journal of the country. He continued with the Miscellany for fifteen years, from 1846 to 1861, and it was in this period that an accident denied him the authorship of a great work. Having become engaged in an editor's controversy over Luther, he gathered a wealth of material and was well advanced in writing a life of the outstanding figure of the Reformation when his library burned, destroying both manuscript and material. His second editorial period began in 1876, when he was chosen chief editor of the newly-founded American Catholic Quarterly Review. His contributions to this journal were notable and successful. He was one of the editors of the works of Bishop England (1849). In 1883 he was made a Domestic Prelate and the Propaganda College conferred on him the degree D.D.

Corcoran was a pastor as well as a scholar. When in 1862, Gen. Beauregard sent four doctors to Wilmington, N. C., which was swept by yellow fever, Corcoran unhesitatingly accompanied them. He labored with great fortitude amid his disease-smitten flock, and continued as their pastor until 1868.

E. F. B.
Corcoran

Corcoran, William Wilson (Dec. 27, 1798-Feb. 24, 1888), banker, philanthropist, was the son of Thomas and Hannah (Lemmon) Corcoran of Baltimore. His father was born in Ireland in 1754, emigrated to America in 1783, settled in Georgetown, D. C., in 1788, was magistrate, member of Levy Court, and postmaster. William was educated in private schools, and for one year at Georgetown College, now Georgetown University. In 1815 he insisted upon going into the dry-goods store of two brothers, James and Thomas Corcoran, in Georgetown. In 1817, they established him in the same business under the name of W. W. Corcoran & Co. In 1819, the firm added a wholesale auction-and-commission business which suspended in 1823 with debts of $28,000, which were then settled at fifty cents on the dollar. Corcoran attended to his father's affairs until 1830. From 1828 to 1836 he was engaged with business of the branch Bank of the United States and Bank of Columbia. In 1837 he began a brokerage business in Washington and in 1840 formed the banking firm of Corcoran & Riggs, which has continued under various changes of name and organization to the present time. He served in the militia of the District of Columbia as lieutenant, captain, lieutenant-colonel, and colonel. On Dec. 23, 1835, he married Louise Anny Morris, daughter of Commodore Charles Morris, U. S. N.

The business of Corcoran & Riggs prospered to such an extent that, in 1847, Corcoran paid the creditors of W. W. Corcoran & Co. in full the balance of the indebtedness existing at the failure of that firm in 1823, with interest to date. In 1848, Corcoran & Riggs bid 103.02 for the entire issue of $16,000,000, of the bonds of the United States issued under act of Mar. 31, 1848, and were awarded $14,065,550. On a trip to England, in spite of discouraging initial experiences, Corcoran succeeded in placing $5,000,000 of these bonds in London, with great enhancement of the public credit. This success caused such a rise in the market price of the bonds as to net a handsome profit to his firm, making the foundation of his fortune. On Apr. 1, 1854, he retired from active business and devoted himself until the time of his death to the management of his properties and to his philanthropic interests.

As was the case with a majority of the old and leading residents of the District of Columbia, his sympathies were with the South during the Civil War, but this did not extend to any act of opposition to Federal authority. He left the United States in 1862 and remained abroad until the close of the war. The Government's proposed seizure of his residence in Washington was prevented by the French Minister, who claimed the right to occupy it under lease. Corcoran had begun the construction of the Corcoran Gallery of Art in 1859. During the Civil War the building was occupied by the Quartermaster-General's Office. This delayed the completion and inauguration of the gallery until Feb. 22, 1872. The act of Congress of May 24, 1870, incorporated the Gallery and provided compensation to the corporation for the use of the building by the Government. Corcoran's gifts, including a bequest, amounted to $1,600,000. His own considerable collection formed the nucleus of the Gallery collection. The building at Pennsylvania Ave. and Seventeenth St. was purchased by the Government by act of Mar. 3, 1901, and is now occupied by the United States Court of Claims. The new Gallery on Seventeenth St. between E St. and New York Ave. was opened in 1897.

The Louise Home was founded by Corcoran in 1869 as "an institution for the support and maintenance of a limited number of gentlewomen, who have been reduced by misfortune." His donations for this purpose, including a bequest, were $550,000. Other considerable gifts during his lifetime were to The Columbian (now George Washington) University, Ascension P. E. Church toward a new church building, the University of Virginia, William and Mary College, Virginia Military Institute, Washington and Lee University, Episcopal Theological Seminary near Alexandria, Va., Protestant Orphan Asylum of Washington, and the convent and Academy of the Visitation of Washington. Besides these larger benefactions, he continually gave to regular and occasional beneficiaries a large aggregate of gifts, of which a large proportion were to residents of Virginia and other Southern states who had been impoverished by the Civil War. In 1883 he caused the remains of John Howard Payne [q. v.], author of "Home, Sweet Home," to be removed from Tunis and re-interred in Oak Hill Cemetery in Georgetown, and there erected a monument to his memory.

A portrait of Corcoran by Charles Loring Elliott is in the Gallery of Art. He was of medium height, heavy set; of agreeable, kindly, and dignified bearing and courtly manners. He dressed with care and always wore gloves, carried a gold-headed cane, and wore a red rose in his button-hole. His wide circle of friends, extending over a long period of years, included Stephen Decatur, George Bancroft, George Peabody, Daniel Webster, William H. Prescott, Jefferson Davis, Winfield Scott, Edward Everett, Charles Sumner, and Presidents Millard Fillmore and James Buchanan.

Corliss

[Corliss, George Henry (June 2, 1817- Feb. 21, 1888), inventor, manufacturer, was the only son of Hiram and Susan (Sheldon) Corliss. He was born at Easton, Washington County, N. Y., where his father practised medicine and surgery. To permit him to be properly educated, Corliss's family moved to Greenwich, N. Y., when he was eight years old. He proved to be a very apt student and showed a marked inclination toward mathematics and mechanics. He remained at school until he was fourteen, when, as the field for mechanical pursuit was quite limited, he entered the employ of William Mowray & Son as their general storekeeper. In this service he was clerk, bookkeeper, salesman, and official inspector and measurer of cloth turned out by the factory. After four years, he was sent by his father to Castleton Academy in Vermont. Here he remained for three years, after which he returned to Greenwich and started a store of his own. His first real opportunity to apply his natural mechanical instincts was afforded him about this time as a result of persistent complaints of customers over the stitching in the shoes he sold. At an outlay of about $100 he devised, in a crude way, a machine for sewing boots, which consisted, in the main, of passing needles and thread through the heavy leather in opposite directions at the same time. A United States patent was granted him in 1842. Two years later he went to Providence, R. I., to try to market his invention. The firm of Fairbanks, Bancroft & Company, machine and steam-engine builders, undertook to assist him, and it was not long before they recognized his genius. To secure his services they offered him a position as a draftsman, provided he dropped the sewing machine idea. Corliss accepted, sold out his store in Greenwich, and moved with his young wife and two children to Providence. In less than a year he was admitted to the firm, and before another year had elapsed he had devised mechanisms that very soon revolutionized the construction and operation of steam-engines. His first ideas for improvements in the steam-engine were formulated in 1846 when he was twenty-nine years old, and his first United States patent embodying his ideas was granted Mar. 10, 1849 and reissued July 29, 1851. In 1848, and before receiving his patent, Corliss left Fairbanks, Bancroft & Company and joined with John Barstow and E. J. Nightingale of Providence, organizing a new company under the name of Corliss, Nightingale & Company. It was this company that built the first steam-engine embodying the Corliss features. His invention consisted of rotary valves (separate ones for steam and exhaust ports) and a governor which by a system of levers controlled the valves and the admission of steam to the engine cylinder. Reciprocating steam-engines have not been greatly bettered either in steam or fuel or fuel economies since the introduction of engines operated with Corliss's valve gear and drop cut-off, as the invention is called. By the technical world Corliss is ranked equally with Watt in the development of the steam-engine. Corliss's company bought land in Providence for the erection of a steam-engine factory; by 1856 the new plant was completed, and the company was incorporated under the name of the Corliss Engine Company. Corliss as president not only directed all the business activities but at the same time devised all the subsequent improvements in his engine mechanism. His first type of valve gear was improved in 1850, a second type was devised in 1852, a third in 1858, a fourth in 1867, a fifth in 1875, and a sixth and seventh in 1880. During this time, too, the business of the company grew at a prodigious rate until over one thousand men were employed in the plant. The principal features of the engine were copied by engine manufacturers, both in the United States and Europe, and Corliss had many infringements to fight. Besides his steam-engine inventions, he received patents for a gear-cutting machine, an improved boiler with condensing apparatus, and a pumping engine for water-works. Although he had little taste for politics he represented North Providence in the General Assembly of Rhode Island in 1868-70 and was a Republican presidential elector in 1876. He was twice married: first, in January 1839, to Phoebe F. Frost of Canterbury, Conn., who died in 1850; second, in 1866, to Emily A. Shaw of Newburyport, Mass., who survived him.

Cornbury

[Corliss's exhaust valves were held by levers instead of being formed as a separate component. These valves were devised in 1849 by William R. Scribner in a new steam-engine.] W. B. K.

[Corliss, George Henry (June 2, 1817- Feb. 21, 1888), inventor, manufacturer, was the only son of Hiram and Susan (Sheldon) Corliss. He was born at Easton, Washington County, N. Cornbury, Edward Hyde, Viscount (1661-Apr. 1, 1723), governor of New York and New Jersey, was the eldest son of Henry Hyde, second earl of Clarendon, and the grandson of Edward Hyde, first earl of Clar-
Cornbury

endon, famous as Lord Chancellor under Charles II and historian of the Civil War. Cornbury was first cousin to Queen Anne. He was educated at Geneva and in 1688 married Katherine, daughter of Lord O’Brien. “Early taught to consider his relationship to the Princess Anne as the groundwork of his fortunes,“ he came under the influence of John Churchill (later Duke of Marlborough) and at his suggestion was one of the first officers of the army to desert James II at the time of the Revolution (T. B. Macaulay, The History of England, edited by C. H. Firth, 1913-15, III, 1147). He thus ingratiated himself with William of Orange. Since 1685 he had been a member of the Commons, but owing to straitened financial circumstances he sought office in the Colonies. Appointed governor of New York and later of New Jersey, he arrived at his post, May 3, 1702 (Documents Relative to the Colonial History of the State of New York, IV, 953). Because of his relationship to the Queen he was received with unusual deference, but his administration in both provinces was a complete failure. “Careful inquiry into the course of Cornbury’s administration in New York on the whole substantiates the legend which portrays him as a spendthrift, a ‘grafter,’ a bigoted oppressor and a drunken, vain fool” (Spencer, post, p. 309). Throwing his influence to the aristocratic Anti-Leislerian faction in New York, he secured from an assembly dominated by them a gift of £2,000. As the second Intercolonial War was raging, he obtained grants for the raising of men and supplies, but on the embezzlement of a large part of the money he was drawn into bitter conflict with the Assembly. He was eventually compelled to submit to the naming of a treasurer, elected by and responsible to the Assembly, through whom the public funds were to be expended. In spite of his peculations, he showed great zeal for the Church of England. He seized the church at Jamaica from the Presbyterians and unjustly prosecuted one Francis Mackemie [q.v.], a Presbyterian minister, for preaching without the governor’s license. Finally the Assembly, Sept. 11, 1708, unanimously adopted resolutions condemning various features of his rule.

Cornbury’s administration in New Jersey was even more disastrous. Great importance was attached to his policy there because after the surrender by the proprietors it rested with Cornbury to initiate royal rule. His Lordship took bribes, however (Archives of the State of New Jersey, ser. I, vol. III, pp. 198 ff.), oppressed the Quakers, and came into collision with leading proprietors like Lewis Morris and Samuel Jen-

ings. In May 1707 the Assembly of the Jerseys adopted an outspoken remonstrance against Cornbury’s policy which was read to the Governor in person by Jenings as speaker (Ibid., pp. 173 ff.). Among the charges brought by the Governor’s critics was the strange accusation that he forfeited respect by publicly appearing in woman’s attire (Smith, post, I, 194). This has been put down as a mad prank due to Cornbury’s vanity in imagining that he resembled his royal cousin, but Stanhope (History of England, 3rd ed., 1853, I, 79) declared that Cornbury endeavored in this way actually to represent Queen Anne (see also The Memorial History of the City of N. Y., edited by James Grant Wilson, vol. II, 1802, p. 86, note). Finally, in December 1708, Cornbury was recalled. His numerous creditors at once caused his arrest, however, and he remained in the custody of the Sheriff of New York until the death of his father made him Earl of Clarendon and enabled him to return to England. In 1711 he was raised to the Privy Council and in 1714 served as Envoy Extraordinary in Hanover (Stanhope, op. cit., I, 79). Lady Cornbury died in New York, Aug. 11, 1706 in her thirty-fifth year. Apparently she also had shown peculiarities of character (Wilson, op. cit., II, 78, note). The impression left in America by Lord Cornbury is indicated by Smith, the Tory historian of New York, who wrote “We never had a governor so universally detested” (post, I, 194).

E. P. T.

CORNELL, ALONZO B. (Jan. 22, 1832-Oct. 15, 1904), politician, governor of New York, was born at Ithaca, the eldest son of Ezra Cornell [q.v.] and Mary Ann (Wood) Cornell. Before his sixteenth birthday the boy had exchanged home and school for a telegrapher’s key in Troy. There he discovered the possibility of reading by sound, and upon passing from the control of his father’s lines in Montreal to take charge of the main western office in Cleveland he organized it as the first to dispense with the recording tape. Marriage led him to prefer less confining employment in an Ithaca bank (1852-56). After a term as manager of the Wall Street telegraph office he returned to Ithaca (1859) and bought the line of steamboats plying on Cayuga Lake, but soon sold them to participate
Cornell

in organizing the first national bank there, of which he was cashier 1864–66. In 1868 he began a thirty-year directorship of the Western Union Company. During 1870–76 he was its vice-president and in 1875 its acting president. He was apprenticed to politics in 1858 as the youngest member of the Tompkins County Republican committee. Next year he became its chairman and in 1864 and 1865 was also supervisor for Ithaca. Mounting Republican majorities in "talismanic Tompkins" drew the attention of larger politicians. He was placed on the Republican state committee (1866); nominated, and defeated, for lieutenant-governor (1868); appointed by President Grant, at Senator Conkling's desire, to be surveyor of customs for the port of New York (March 1869); and, in September 1870, advanced to the chairmanship of the state committee. In this capacity he carried through, and defended in the Syracuse convention of 1871, a reenrolment of the city Republicans, whose central committee, under the ornamental chairmanship of Horace Greeley, he had found to be "subsidized by Tammany plunderers." In the Liberal nomination of Greeley for the presidency in 1872 Cornell saw a continuation of this contest between the Conkling and Fenton factions for control of the Republican organization and summoned all his energies to hold the state against the party traitor. In return, his Republican colleagues in the Assembly of 1873 elected him to be speaker despite his entire lack of legislative experience. As state chairman in the campaign of 1876, although the state was lost to Tilden, Cornell was judged by the organization to have made a good fight. In February 1877, President Grant, about to retire, rewarded him with the lucrative post of naval officer in the New York customs house. In June, President Hayes issued his executive order forbidding federal office-holders to engage in party management. Cornell, being under no charges of official misconduct (C. R. Williams, Life of Hayes, 1914, II, 94), refused either to resign his office or to relinquish what he procurred to consider his duty to his party. Hayes therefore suspended him and in February 1879, the Senate, against Conkling's persistent opposition, confirmed his successor. The state organization, in reply, marked its approval of Cornell's stand by nominating him for governor and he was elected.

Discharge of executive office was to work a change in Alonzo Cornell's reputation. He had determined to give the state the best administration he could. His appointees for the purpose were men of his own choice, many of them active politicians whose qualities he knew. The reformers inferred that he was repairing the Conkling machine, the Conklingites that he was building a machine of his own. In any event it did the state's work without scandal. His recommendations to the legislature concerned chiefly elections and state finances. Not all of them were accepted, but the state government began to receive a modern stamp. More spectacular was Cornell's use of the veto power. Over three hundred loosely drawn acts were returned for amendment; over four hundred others, deemed unconstitutional, subversive of local government, or extravagant, failed to receive his signature, including much-lobbied measures desired by New York's traction-mongers. From this stream of vetoes great irritation arose in the legislature, but so little outside that not one of them was overridden.

On May 19, 1881, Cornell sent in his briefest message, and the most momentous for his political career: "The Legislature is hereby respectfully notified that the two Senatorial offices by which the State of New York is entitled to representation in the Congress of the United States, are now vacant by the resignations of the late incumbents." Thus was indicated his determination to keep clear of the spoils squabble with President Garfield into which Senators Conkling and Platt had plunged upon the nomination of the "half breed" William H. Robertson [q.v.] to be collector of customs at New York. Defeated in Washington, they had transferred their grievance to Albany, counting on the legislative influence of the Governor to secure them a political vindication. The senior senator chose to attribute his collapse to the ingratitude of "that lizard on the hill."

Cornell openly sought renomination in 1882. His chances seemed good. Independents who had resented his first nomination had been converted by the merits of his administration, the rank and file of Republican voters were pleased, and there were experienced political managers in what the administration press called his machine. But contests were decided against Cornell delegates and the administration candidate, Charles J. Folger [q.v.], was nominated. Cornell took no farther part in politics. He engaged in business in New York, wrote a biography of his father, published in 1884, and at length returned to Ithaca, where he died on Oct. 15, 1904. He was twice married: on Nov. 9, 1852 to Elen Augusta Covert, and after her death in 1893 to her widowed younger sister.

[The materials for Cornell's life are scattered. In 1889 he wrote a reticent autobiography still in MS. His Public Papers were printed by the state in three vol-
Sullivan to industry" battle the forces of Rhode Island, May 1, 1780 he resigned his commission, and having received the thanks of the Assembly for his military services, was shortly after elected by that body delegate to Congress. Twice re-elected (May 1781 and May 1782), he proved a useful member, acting on various committees and serving on the Board of War from December 1780 until its abolition in October 1781. He favored the establishment of a stronger national government and in opposition to the general sentiment of his state was willing to confer upon Congress authority to tax imports. After serving as inspector of the main army under Washington from Sept. 19, 1782 until the formal conclusion of the war, he retired to his farm at Scituate. He was a strict disciplinarian, was cool in battle, and brought to the management of both military and civil affairs an unusual fund of common sense. He died at Milford, Mass.

Cornell, Ezekiel (Mar. 27, 1733–Apr. 25, 1800), Revolutionary soldier, the son of Richard Cornell and Content Brownell, was born in Scituate, R. I. He was a mechanic before he entered the army, and largely self-educated. In 1760 he married Rachel Wood of Little Compton. He took a lively interest in the affairs of Scituate, representing it in the Assembly in 1772, 1774, and 1775, serving on its Revolutionary Committee of Correspondence; helping to draft for it a remarkable paper respecting colonial independence; and serving as moderator of its town meeting. He was the first to promote the establishment of a public library and the cause of education in his native town. When the Rhode Island Assembly, on receipt of the news of the battles of Lexington and Concord, voted to raise an "army of observation," Cornell was appointed (May 3, 1775) lieutenant-colonel of Hitchcock's regiment. He participated in the siege of Boston, and after the British evacuation accompanied his regiment (known in 1776 as the 11th Continental Infantry) to New York, where he took part in the battle of Long Island and presumably in the operations following it. From Oct. 1 to Dec. 31, 1776 he served as deputy adjutant-general.

In December 1776 the Rhode Island Assembly voted to enlist a brigade of three regiments of infantry and one of artillery to serve principally in defense of the colony. Thus originated the Rhode Island State Brigade of which Cornell, after acting in a subordinate position, was appointed commander, Dec. 19, 1777, with the rank of brigadier-general. Under his leadership the brigade rendered valuable service in protecting the colony against British marauders, and especially distinguished itself at the battle of Rhode Island, Aug. 29, 1778, which was fought near the Cornell homestead. Gen. Sullivan in his dispatch to Congress lauded Cornell's "good conduct" and "indefatigable industry" in preparing for the retirement of the colonial forces to Tiverton on the day following the battle. During this period, Cornell was chosen by the Assembly to act on various committees of a military character, and was for a time a member of the Council of War which supervised arrangements for the defense of Rhode Island. On May 1, 1780 he resigned his commission, and having received the thanks of the Assembly for his military services, was shortly after elected by that body delegate to Congress. Twice re-elected (May 1781 and May 1782), he proved a useful member, acting on various committees and serving on the Board of War from December 1780 until its abolition in October 1781. He favored the establishment of a stronger national government and in opposition to the general sentiment of his state was willing to confer upon Congress authority to tax imports. After serving as inspector of the main army under Washington from Sept. 19, 1782 until the formal conclusion of the war, he retired to his farm at Scituate. He was a strict disciplinarian, was cool in battle, and brought to the management of both military and civil affairs an unusual fund of common sense. He died at Milford, Mass.

Cornell, Ezra (Jan. 11, 1807–Dec. 9, 1874), capitalist, founder of Cornell University, was born of New England Quaker stock, the son of Elijah and Eunice (Barnard) Cornell, the former a farmer and pottery maker, at Westchester Landing on the Bronx River in New York. Elijah Cornell failing to prosper at earthenware manufacture, the family in 1819 removed to De Ruyter in Madison County, N. Y. Here Ezra attended the village school, helped manage his father's farm and earthenware manufactory, and learned carpentry. At eighteen he set out for himself, working as a laborer and mechanic at Syracuse and Homer, N. Y., exhibiting mechanical ingenuity, tenacity, and Yankee shrewdness. Hearing of Ithaca as a town rising in commercial importance through its connection with the Erie Canal by Lake Cayuga, in the spring of 1828 he secured employment as a carpenter and millwright there—thenceforth his lifelong home. His practical abilities shortly raised him to the general management of the flooring and plaster mills of J. S. Beebe. Here he planned and built an enlarged flooring mill; devised many mechanical improvements; dug a tunnel through solid rock for water-power; and built a difficult dam. Fortunately for his future, the conversion of the mills into a woolen factory...
Cornell

in 1841 cost him his place and threw him into a larger sphere.

Temporary occupation in promoting a patent plow in Maine shortly brought Cornell in contact with F. O. J. Smith, editor of the Maine Farmer and member of Congress, who was interested in Morse's magnetic telegraph. Congress having appropriated $30,000 to enable Morse to test the invention, Smith contracted to lay a pipe with wires from Washington to Baltimore, and appealed to the enterprising Cornell to build a machine for the purpose. Cornell devised a successful machine and supervised the pipe-laying near Baltimore, but, when underground insulation was found impracticable, at Morse's bidding he wrecked the device to gain time for further experiment. He then furnished Morse a satisfactory method of insulating the wires on poles, and aided in erecting the Washington-Baltimore line. Shrewdly confident of the great commercial future of the telegraph, he at once threw himself into the work of demonstrating it, enlisting capital, and building lines, and became within a few years the chief figure in this field. He helped organize the Magnetic Telegraph Company to connect New York and Washington, and in 1845 built the line from the Hudson to Philadelphia. He followed this by constructing a New York-Albany line, on which he made $6,000, his first large profit. Other remunerative contracts for lines in parts of New York, Vermont, and Quebec were completed.

With his accumulated capital he then launched in 1847 his Erie & Michigan Telegraph Company, which after many discouragements linked together Buffalo, Cleveland, Detroit, Chicago, and Milwaukee; this was followed by the New York & Erie Telegraph Company, which connected New York City with Dunkirk. Subsidiary lines were rapidly constructed, especially in the Middle West, where the telegraph preceded rather than followed the railroad. Meanwhile, numerous rival companies appeared, and many towns soon had three or four competing telegraph offices. The cut-throat competition made some form of combination indispensable, and in 1855 Cornell and other leading owners of Middle Western lines formed the Western Union Telegraph Company, a consolidation of seven major and several minor systems. This company rapidly extended its operation to most parts of the United States and Canada. Cornell was for twenty years a director and in limited degree active in the management; for more than fifteen years he was the largest stockholder. As the company grew rich his dividends rose above $100,000 a year, and his son said that "he was enabled to realize for his telegraph interests in the aggregate probably more than two millions of dollars."

Thus achieving wealth and leisure, Cornell, with his usual calm energy, turned his attention to public affairs. He built in 1863 a free public library in Ithaca, for which he ultimately gave more than $100,000. He established a model farm, with imported Shorthorn cattle and Southdown sheep, and in 1862 became president of the State Agricultural Society. For six years beginning in 1861 he sat in the legislature, two years in the Assembly and four in the Senate, and in his rugged way became a force there. As a trustee of the feeble State Agricultural College just founded at Ovid, N. Y., he was struck with the unrealized potentialities of such an institution. The result was a hasty offer to endow it with $300,000 on condition that it be removed to Ithaca and that half the Morrill land grant, provided by Congress in 1862, be given it. This suggestion met the opposition of Andrew D. White [q.v.], a member of the state Senate from Syracuse, who vehemently objected to dividing the federal endowment. Cornell had imagination as well as practical grasp, and White's enlarged views of university education and of the need for a new institution in New York devoted to the liberal and mechanic arts opened a new vista before his mind. As a result of much conversation and thought he was aroused to ardor and agreed to pledge a site and $500,000 to such a new institution. He cooperated with White in drafting and carrying the legislation to found Cornell University; and he was White's unswearied co-worker, counselor, and financial supporter in all the labors which led to its opening in the fall of 1868. Both inside and outside the legislature he met obstacles, misunderstanding, and abuse, but his dour and unflinching patience matched the liberality of his principles and the shrewdness of his foresight. The university bore the impress of his democratic and practical ideas in its total freedom from religious ties, its provision for the education of women, its emphasis on advanced training in agriculture and engineering, and its facilities for poor students. It was he who was mainly instrumental in the choice of Andrew D. White for the first president. Not less important than his endowment of the university was his wise resolve, carried out with grim determination, to prevent the premature sale of the land grant: he agreed in 1866 to purchase the land-scrip, locate the land at his own expense, pay all taxes and other charges, and bind himself to turn into the state treasury for
Corning
the benefit of the "land-poor" university all the profits realized. This plan within twenty years yielded the university approximately two and a half millions. Cornell also gave numerous special gifts to the classical and scientific departments. As White wrote, "He felt that the university was to be great, and he took his measures accordingly." He was sometimes irritatingly taciturn as to his plans, he was always stern and austeres, and he was not broadly educated; but he needed only to be convinced of the rightness of any purpose to support it with immovable resolution. His friendship with Goldwin Smith, Agassiz, Lowell, and other lecturers gave him special pleasure. Till his death in 1874 his tall spare figure, set off with frock coat and stovepipe hat, was a familiar sight on the campus. He was married to Mary Ann Wood on Mar. 19, 1831. Alonzo B. Cornell [q.v.], governor of New York, was his son.

CORNING, ERASTUS (Dec. 14, 1794-Apr. 9, 1872), prominent in railroad development in the state of New York, was born in Norwich, Conn., the son of Bliss and Lucinda (Smith) Corning. His father was a Revolutionary soldier and was a descendant of Ensign Samuel Corning who emigrated from England to Beverly, Mass., in 1641. Erastus served his apprenticeship in business as a clerk in the hardware store of his uncle, Benjamin Smith, in Troy, N. Y. In 1814 he removed to Albany and there began his career as an iron manufacturer. Starting in a small way in a partnership in a hardware store, he took advantage of an opportunity to purchase a small foundry and rolling-mill for the making of nails from imported bar iron. In 1837 he associated himself with John F. Winslow [q.v.], a genius in the working of metals, and the business under their management became one of the most extensive in the country. Corning's active business life was coincident with the birth and early development of railroads, and he seemed from the beginning to grasp their significance for the industrial development of the country. The Mohawk & Hudson had been chartered in 1826 and opened for operation in 1831, paralleling the Erie Canal from Albany to Schenectady. Its opening, although attended by many difficulties, due to working in a pioneer field, at once demonstrated the feasibility of this form of transportation and led to an avalanche of railroad charters, many of which were of course wholly impracticable. Among them, however, was one for the incorporation of the Utica & Schenectady, dated Apr. 29, 1833, with an authorized capital stock of $2,000,000, which was to extend the Mohawk & Hudson to Utica, a distance of about seventy-eight miles. It is a fair inference that Corning was one of the chief promoters of the enterprise, for he was elected one of the thirteen original directors and was the road's first and only president, serving for twenty years until it became a part of the New York Central in 1853. The road was opened on Aug. 1, 1836. It was built in a productive region along a natural line of travel and proved very profitable to its stockholders. For his long and efficient service as president, without compensation, Corning was presented by the stockholders in 1850 with a service of plate costing $6,074.10.

By the early forties the desirability of consolidating the short stretches of road across the state into a continuous system had become obvious and various overtures in that direction had been made. At a convention of the interested companies in 1851, a resolution was adopted on Corning's motion, appointing a committee to apply to the legislature for a law, authorizing any two or more companies to consolidate into a single company. When the consolidation act was finally passed in 1853, the only question left to consider was the terms of consolidation; the principle had long since been agreed upon. Committees from the roads met in convention for the purpose and from them was chosen a subcommittee of one from each road, consisting of the ablest men present, to devise the actual plan of consolidation. Corning was made chairman of this committee. Following the consolidation he was elected first president of the New York Central Railroad, a position which he held until he resigned in 1864. He was a director for a few years longer and ceased his connection with the road in 1867. He was for some years a director of the Michigan Central Railroad and from 1849 to 1863 of the Hudson River road.

He did not confine his interest in transportation to this one railroad system. The Corning Land Company was organized by him in 1835 for the purpose of establishing a commercial cen
Cornoyer
ter at the head of navigation on the Chemung River. The village of Corning at this location was named in his honor. A railroad was built south into Pennsylvania to the coal region at Blossberg for the purpose of diverting traffic to the new Chemung Canal, and thence through the Erie Canal and the Hudson to New York, an answering challenge to the commercial rivalry of Baltimore and Philadelphia.

Cornning was four times elected mayor of Albany, resigning during his fourth term in 1837. He was a state senator from 1842 to 1846, was twice elected a Democratic Representative in Congress, in 1857–59 and 1861–63, and was again reelected but resigned, presumably on account of ill health. His career in Congress was undistinguishable. He was a member of the Peace Conference held in Washington in 1861. A regent of the University of New York from 1833, he was at the time of his death vice-chancellor.

There is a story, not well authenticated, told by John W. Starr in Lincoln and the Railroads (1927) to the effect that when Lincoln was in New York in 1860, delivering a political address at Cooper Institute, he was offered by Cornning the position of general counsel of the New York Central at an annual salary of $10,000. Whether or not this story is true, Cornning had occasion three years later to learn something of Lincoln's power of argumentation. After Vallandigham's arrest, a meeting of Democrats called in Albany, May 16, 1863, in which Cornning took a prominent part, passed resolutions denouncing the arrest as unconstitutional. These resolutions were sent in a covering letter to Lincoln. His uncompromising reply, dated June 12, 1863, and addressed to Erastus Cornning and associates, constitutes one of his greatest state papers (Nicola Hay, Complete Works of Abraham Lincoln, 1905, VIII, 298).

The best source is Frank Walker Stevens, The Beginnings of the N. Y. Central, A History (1926). Otherwise material is to be found in various scattered sources, including: Joel Munsell's Annals of Albany (1850–59), vols. V–X; Albany Chronicles (1906), comp. by Cuyler Reynolds; Pioneer Days and Later Times in Corning and Vicinity, 1789–1920 (1922), by Uri Mulford; Encyc. of Biog. of N. Y. (1916), by Chas. E. Fitch.] F. H. D.

CORNROYER, PAUL (Aug. 15, 1864–June 17, 1923), painter, was born at St. Louis, Mo., a son of Charles and Marie (Barada) Cornoyer, both of French descent. Paul began to draw and paint as a young boy, and at seventeen he entered the St. Louis School of Art whose director, Halsey C. Ives, befriended and encouraged him. While continuing his art education Cornoyer did reporting for the St. Louis Republic, having secured a position through Augustus Thomas, then a news-

Cornstalk
paper writer. In 1889, thanks in part to commissions from appreciative fellow townsmen, Cornoyer had accumulated funds sufficient to assure him several years' study at Paris. He entered the Julian Academy where he had criticisms from Jules Lefebvre and Benjamin Constant. He exhibited in the Salon and in 1892 won the first prize of the American Art Association of Paris. In 1894 he returned to St. Louis where, despite his winning the gold medal of the St. Louis Association of Painters and Sculptors in the ensuing winter, he found less encouragement than he had expected. A canvas, meantime, which he had sent to the Pennsylvania Academy of Fine Arts was seen, admired, and bought by the painter William M. Chase [q.v.]. The purchase led to correspondence in which Cornoyer was urged by his older confrère to settle in New York City. Cornoyer followed this advice and became in 1899 an instructor at the Mechanics' Institute where he proved himself an able and inspiring teacher. He held summer painting classes at first in Connecticut and then on the Massachusetts North Shore. His own creative work of his best period included many New York street scenes which he rendered with acute appreciation of the picturesque quality of rainy day effects, of dully gleaming pavements, and of the intermingling of natural and artificial lights. He also did notable decorations, of Italianate and other subjects, such as those for the Planters' Hotel, St. Louis, and the residences of W. B. Thompson, Yonkers, N. Y., and Francis J. Oakes, Brookline, Mass. He was elected an associate of the National Academy of Design in 1909. In 1917 he decided to make his permanent residence at East Gloucester, Mass., where he had remodeled an old house to provide a commodious and attractive studio. He was a moving spirit in the formation of the North Shore Arts Association of which he was vice-president when he died. He was a friendly, helpful man, greatly beloved by his fellow artists. He is represented by characteristic street scenes in the collections of the Brooklyn Museum, the City Art Museum of St. Louis, and the Dallas Art Association.

[The Art Interchange, Dec. 1903, printed an appreciative biographical sketch of Cornoyer. See Am. Art News, June 23, 1923, for a detailed and generally satisfactory obituary. Information as to specific facts has been had from the artist's sister, Miss Julie Cornoyer of Burlington, Ia., and Mr. and Mrs. Charles A. Winter of New York, who were associated with Cornoyer at East Gloucester.] F. W. C.

CORNSTALK (c. 1720–1777) was a Shawnee Indian chief, whose English name was a translation of his Indian cognomen, Keigh-tugh-qua, the blade or stalk of the maize plant. Nothing is known of his early life, although he may have
Cornstalk

been born in Pennsylvania, where a portion of the Shawnee tribe dwelt before removal about 1730 to the plains of the Scioto. Cornstalk's first known raid against the English settlers was in 1759 during the height of the French and Indian War; in alliance with the French traders he led a party into what is now Rockbridge County, Virginia, and killed ten of a family named Gilmore. Again in 1763 during the Pontiac outburst Cornstalk raided the Greenbrier settlements of western Virginia, and when Col. Bouquet marched his avenging soldiery into Ohio the next year Cornstalk was one of the hostages exacted from the repentant but sullen tribesmen.

The ten following years (1764-74) there was a state of suppressed war along the Ohio-Virginia frontier. In the spring of 1774 the clashes between the whites and the red men grew so frequent that all backwoods settlements were alarmed. Cornstalk and his brother Silver Heels remained true to their parole and escorted several white traders to safety near the forts. Despite their neutrality, Silver Heels was fired upon as he went back, and was seriously wounded. Cornstalk sent messages to the governors of the neighboring colonies asking for a cessation of hostilities. Nevertheless, the disturbance grew until the governor of Virginia, Lord Dunmore, called out the militia and initiated the hostilities known as Dunmore's War. Cornstalk was compelled to yield to the exigencies of the time. He enrolled his warriors and led them against the western wing of Dunmore's army and fought on Oct. 10, 1774, the battle of Point Pleasant. The frontiersmen led by Col. Andrew Lewis drove back the Indians, not without considerable loss. Throughout the battle Cornstalk could be heard exhorting his warriors to stand.

Dunmore followed the retreating Indians to the plains of the Scioto, where the treaty of Camp Charlotte was made with Cornstalk, and reinforced the next year by a treaty at Fort Pitt. Cornstalk loyally kept his promise of alliance, and returned all white prisoners and stolen horses. In 1777 he went to the fort at the mouth of the Kanawha, where he had fought his battle three years earlier, to warn the whites that the Shawnee were about to take up arms at the instigation of British officers. Capt. Arbuckle thought best to detain him as a hostage. His son Elimipsie came on a visit to his father, when a soldier named Gilmore was shot from ambush. His enraged comrades rushed upon the hostages at the fort, and despite their officers' orders murdered them all. Cornstalk was brave until the the last, exhorting his son to meet death as the Great Spirit willed it. Some of his murderers fled the country to avoid prosecution; others were tried but acquitted. After the loss of their chief the Shawnee tribe became enemies of the whites for nearly a score of years. A monument to Cornstalk stands near the site of the fort where he met his death.

[The best account is in manuscript: Draper MSS. Wis. Hist. Lib. on which is based the sketch in the Ohio Arch. and Hist. Quart., XXI, 245-62 (Apr.-July 1912). There are documents on Cornstalk's later career in R. G. Thwaites and L. P. Kellogg, Documentary Hist. of Dunmore's War (Madison, 1905); Rev. on the Upper Ohio (Madison, 1908); Frontier Defense on the Upper Ohio (Madison, 1912); also accounts of him in Jos. Doddridge, Notes on Indian Wars (Albany, 1876), pp. 239-41; Alex. S. Withers, Chronicles of Border Warfare (Cincinnati, 1895), pp. 172-73.]

L. P. K.

Cornwallis

CORNWALLIS, KINAHAN (Dec. 24, 1839–Aug. 15, 1917), lawyer, editor, writer, was born in London, the son of Elizabeth and William Baxter Kinahan Cornwallis, barrister-at-law. Certain branches of the Cornwallis family were of Irish origin but Kinahan Cornwallis said of himself that he never saw or walked on Irish ground until he was fifteen and that his parents were not Irish, but English. After a collegiate education, while still very young, he entered the British Colonial Civil Service and spent two years in Melbourne, Australia. At this time and later he visited the Philippines, Singapore, Ceylon, Suez, Egypt, and various parts of Japan, Australia, Africa, South America, and Canada. In 1860 he came to New York and secured an editorial position on the New York Herald, where he continued until 1869, acting much of the time as financial editor. When the Prince of Wales, later Edward VII, visited the United States in 1860, Cornwallis was selected by the State Department, as a representative of the government, to accompany the Prince on his travels through the country. In 1863 he was admitted to the New York bar. He became editor and proprietor successively of the Knickerbocker Magazine and the Albinon and from 1886 until about the time of his death was editor and proprietor of the Wall Street Daily Investigator, later the Wall Street Daily Investor. During all this time he successfully practised law, with offices in Nassau St. He was twice married: his first wife was Annie Louise Tisdale of New York, his second, Elizabeth Chapman of Hartford, Conn. Before coming to the United States, while still under twenty, Cornwallis had published several books. He continued writing at intervals, novels, verse, travels, history, and works on legal and financial subjects, until he was over sixty. His chief writings are: Howard Plunkett (1857), a novel; An Australian Poem (1857); The New Eldorado, or British Columbia (1858); Two Jour-
Coronado

KEYS TO JAPAN (1859); A PANORAMA OF THE NEW WORLD (1859); WRECK AND RUIN (1858), A NOVEL; MY LIFE AND ADVENTURES (1860); THE CROSSSTREES (1859), A MEDLEY; Royalty in the New World (1860); Pilgrims of Fashion (1862), A NOVEL; Adrift with a Vengeance (1865), A NOVEL; THE GOLD ROOM AND THE NEW YORK STOCK EXCHANGE AND CLEARING HOUSE (1879); A MARVELOUS COINCIDENCE (1891), A NOVEL; THE HISTORY OF CONSTRUCTIVE CONTEMPT OF COURT (1802); INTERNATIONAL LAW (1892); HISTORICAL POEMS (1892); THE SONG OF AMERICA AND COLUMBUS (1892); THE CONQUEST OF MEXICO AND PERU (1893); TWO STRANGE ADVENTURES (1897), A NOVEL; AND THE WAR FOR THE UNION (1899). WHEN DEALING WITH THE NEW YORK STOCK EXCHANGE OR LEGAL SUBJECTS, HE WRITES AS SOMETHING OF AN EXPERT BUT AS A HISTORIAN HIS WORK WOULD HARDLY BE CONSIDERED SCHOLARLY. THE INSTITUTION OF SLAVERY, WITH ALL ITS SOCIAL RESULTS, AND ITS DOWNFALL IN THE CIVIL WAR PERIOD FURNISHED MATERIAL WHICH HE USED BOTH IN HISTORY AND NOVELS. HIS VERSE IS NEG- LIGIBLE. HIS TRAVELS ARE INTERESTINGLY WRITTEN, WITH ORIGINAL PERSONAL OBSERVATIONS AND MUCH HUMOR. HIS NOVELS, WHICH HE PARTICULARLY ENJOYED WRITING, ARE FRANKLY MODELED AFTER THE PICARESQUE ROMANCES OF STERNE AND SMOLLETT. THEY ARE STORIES OF WANDERINGS, HARDSHIPS, AND ADVENTURES, MELODRAMATIC AND FREQUENTLY INTERRUPTED BY PAGES OF MORALIZING. HIS OWN TRAVELS ARE UTILIZED AS BACKGROUNDS. AT THE TIME OF HIS DEATH CORNWALLIS WAS LIVING IN EAST TWENTY-SECOND ST., NEW YORK CITY. HE DIED, AFTER A SHORT ILLNESS, AT ST. LUCY'S HOSPITAL.

S. G. B.

CORONADO, FRANCISCO VÁZQUEZ (1510-1554), explorer, governor of Nueva Galicia, was a native of Salamanca, Spain. There his ancestors were Señores de Coquilla y de la Torre de Juan Vázquez. He came to Mexico in 1535 in the retinue of Antonio de Mendoza, first viceroy of New Spain. Two years later he married Beatriz de Estrada, "the Saint," daughter of Alonso de Estrada, former treasurer of New Spain. With Doña Beatriz he received as dowry an estate near Mexico City described as "the half of Tlalpa." He took part in suppressing a negro uprising in the mines of Amatepeque, and in 1538 he became governor of Nueva Galicia. In the same year he assisted Fray Marcos de Nizza [q.v.] with an outfit for his northern explora-tions, and escorted him as far as Culiacán. As governor he did much to improve his capital city of Guadalajara.

When Fray Marcos returned from the Zuñi pueblos in New Mexico, Coronado accompanied him to Mexico City and was appointed commander of an expedition organized to follow up the friar's explorations. To cooperate with Coronado, Hernando de Alarcón [q.v.], was sent with two vessels up the Gulf of California. Vice-roy Mendoza went in person to the rendezvous at Compostela on the western coast to review the forces. Coronado's following consisted of some two hundred Spaniards on horseback, seventy foot-soldiers, and nearly one thousand Indian allies and servants. So eager were the volunteers that it was feared that the country would be depopulated. The expedition was equipped at royal expense with a thousand horses, mules for pack-trains, cannons, and droves of cattle, sheep, goats, and swine for food.

The start was made on Feb. 25, 1540. As far as Culiacán the way was well known. From there Coronado went ahead with about a hundred picked men and four friars. Following behind, the main army moved up to Corazones in the Yaqui River valley, where the Spanish town of San Gerónimo was founded and left in charge of Melchior Díaz. In July Coronado reached the Zuñi pueblos, which he conquered with little difficulty. But the country was disappointing, and the expedition resulted chiefly in explorations. These, however, were of great importance. Alarcón ascended the Colorado River, passing the mouth of the Gila. Melchior Díaz went by land from San Gerónimo to the Colorado to communicate with Alarcón, but failed and lost his life. During the journey, however, he crossed the Colorado and went some distance down the Peninsula of California. Hearing of the Moqui pueblos to the north of Zuñi, in July Coronado sent Pedro del Tovar to find them which the latter succeeded in doing. Shortly afterward García Lopez de Cárdenas [q.v.] went further northwest and discovered the Grand Canyon of the Colorado. Moving to the Rio Grande, Coronado visited the pueblos in its valley and camped at Tiguex, above Isleta. In the course of the winter the Indians revolted and were put down with great severity.

Meanwhile Coronado heard of a rich country to the northeastward called Gran Quivira, and in April 1541, he set out to find it. Crossing the mountains and descending the Pecos River, he marched out into the limitless buffalo-covered plains, the "Llanos del Cibola," inhabited by roving tribes. Near the upper Brazos River he
Corrigan

turned north, crossed the Texas Panhandle and Oklahoma, and reached Quivira in eastern Kansas. It was probably a settlement of Wichita Indians. Disappointed, he then returned to Mexico. Three fearless missionaries remained behind to preach the Gospel, and soon achieved the crown of martyrdom. Coronado had made one of the epochal explorations of all history but to Viceroy Mendoza he was a disappointing figure. Although he returned to his governorship of Nueva Galicia, his rule there was marked by numerous acts of cruelty to the natives which led to an investigation, conducted by Lorenzo de Tejada, in 1544. Coronado was found guilty of crimes and negligence, was removed from the governorship, and was fined 600 gold pesos. He then went back to Mexico City, where he spent the remainder of his days as a regidor in the municipal administration. His last public appearance was on Jan. 26, 1554 and he died sometime before Nov. 12, 1554.

[Coronado's lineage is treated in Alberto and Arturo Garcia Carraffa, Diccionario Heráldico y Genealógico de Apellidos Españoles y Americanos, Tomo XXV, pp. 177-178 (Madrid, 1927). A great deal of light on his career in Mexico has been thrown recently by the researches of Dr. A. S. Atton, whose results are summarized in his Antonio de Mendoza (Durham, N. C., 1927). See also "The Later Career of Coronado" by Dr. Atton in Am. Hist. Rev., XXX, 298-304 (Jan. 1925). The principal known source for the history of the Coronado expedition is the Relación de la Jornada de Cibola, written several years after the event by Pedro de Castañeda, a member of the expedition. In 1896 this narrative was published in both Spanish and English, with an excellent historical introduction, by George Parker Winship ("The Coronado Expedition, 1540-1542," in the Fourteenth Annual Report of the Bureau of Ethnology, pp. 329-613). With the Castañeda narrative Winship published most of the supplementary documents then known. The Relación was reprinted in English by Winship in 1904 (The Journey of Coronado, 1540-1542); and by Frederick W. Hodge in 1907 (Spanish Explorers in the Southern U. S., 1528-1543).]

H. E. B.

CORRIGAN, MICHAEL AUGUSTINE
(Aug. 13, 1839—May 5, 1902), archbishop of New York, was born in Newark, N. J., the fifth child in Thomas and Mary (English) Corrigan's household of nine. His father, a cabinetmaker, had emigrated from County Meath, Ireland, in 1828, and about the same time his mother had accompanied her Catholic mother from County Cavan to Newark on the death of her father, who was a member of an Irish Presbyterian family. Thomas Corrigan as a grocer and a frugal man of business made money which enabled him to give advantages to his family. Michael attended a local private school kept by his godfather, Bernard Kearney, a cultured Dublin emigrant, and served as an acolyte at St. John's Church under the distinguished Father Patrick Moran. Studying two years at St. Mary's College in Wilmington, he proceeded to Mount St. Mary's College at Emmitsburg, Md. (1855), bearing a recommendation from Bishop James Roosevelt Bayley [q.v.], as "the son of one of our most respected Catholic citizens." His formal studies were interrupted in 1857 when he spent a year in European travel with his health-seeking sister, who later became an Augustinian nun. Returning to college with some linguistic attainment, Corrigan out-distanced his fellow students in classics and literature and was graduated in 1859. Experiencing a religious call, he was assigned by Bishop Bayley to the newly established American College at Rome as one of its first twelve seminarians. Here he was associated with students who were destined for high stations in the Catholic Church, among them Edward McGlynn [q.v.]. Completing the course in theology, he was ordained by Cardinal Patrizi at the Basilica of St. John Lateran (Sept. 19, 1863). A year later on the award of a doctorate from the College of the Propaganda, he was recalled by his ordinary to teach dogmatic theology and sacred scripture at Seton Hall Seminary, South Orange, N. J.

A conscientious teacher, Corrigan continued his studies and subjected himself to the rigorous seminary routine and table. Soon he was named director of the seminary and vice-president of the collegiate department, in this office displaying an unusual blend of strength and executive ability with an effeminate gentleness. In 1868, he succeeded to the presidency on the elevation of his intimate friend and superior, Bernard J. McQuaid [q.v.], to the see of Rochester. His brothers, Father James as director of the seminary and Dr. Joseph M. as school physician, assisted in the administration and joined him and Father George, another brother, who was pastor at St. Joseph's, Newark, in founding a Corrigan burse and in developing the library from their personal funds. Corrigan continued as president until 1876 and as a director until 1891. In 1868, he was named vicar-general and in this capacity administered the diocese while Bishop Bayley was at the Vatican Council and on his translation to Baltimore. Indeed Corrigan is said to have been considered for the bishopric of Columbus until the bishop of Newark insisted upon retaining his services.

Corrigan's nomination, therefore, to the see of Newark was no surprise, although he was opposed by Bayley and other bishops on the score of youth, until Bishop McQuaid with characteristic vigor maintained that "they had little comprehension of the capacity and learning and strength of will-power of that mere boy." At
Corrigan

all events, his appointment as bishop of Newark by Pius IX was well received by the bishops of the province and the clergy and laity of the diocese, and he was consecrated (May 4, 1873) in St. Patrick's, Newark, by Archbishop Mc- Closkey. For seven years, he administered the diocese which included all of New Jersey. Through the Catholic Union, a religious fraternity, he sought in vain for Catholic freedom of worship in state reform schools, though ultimately the state accepted the principle and named Catholic chaplains in penal and charitable institutions. Thereupon, the bishop built the St. Francis Catholic Proctorcy for boys at Den- ville (1874) and established a Good Shepherd home for girls in Newark (1875). Keenly interested in dependents, he founded a newsboys' lodging house. An authority on questions of morals, rubrics, and canon law, he was frequently consulted by various bishops, and he spent some time systematizing the Baltimore archdiocesan records. Calling synods (1878, 1879), he amended and enforced the regulations of his diocese, and thereafter by visitation and inspection kept a methodical record of ecclesiastical affairs, annual parochial reports, and finances. Through his aid and personal contributions, the tremendous debt on the poorly administered parish of St. John's in Orange was lessened and ultimately fully met. In 1875, he ordered a census of Italians whose confessions he was compelled to hear himself because of a lack of Italian-speaking priests. Interested in Catholic education, he aided the Jesuits in establishing a college in Jersey City, fostered academies, orphanages, and hospitals, and compelled pastors in the larger parishes to build schools. In 1874, he encouraged a lay pilgrimage to Rome, the first of its kind from the United States. With an increase of churches and chapels from 121 to 182, the diocese of Newark thrived under Bishop Corrigan's direction.

Meanwhile Cardinal McCloskey counseled with his suffragan bishops concerning a coad- jutor with the right of succession, and they agreed upon Corrigan who was forthwith named by Rome with the title of Archbishop of Petra (Oct. 1, 1880). Apparently, Corrigan was loath to undertake the enlarged responsibilities, but he followed the call of duty. In September of 1883, he attended the fourth provincial council of New York for which he had helped prepare the schema, and, in November on a papal invitation, he accompanied a number of American archbishops to Rome to help prepare for the Third Plenary Council of Baltimore, at which he later represented the cardinal. As Cardinal Mc-

Closkey's agent, he preserved the American College at Rome from Italian confiscation through skilful negotiations with President Arthur and his friend, Secretary Frelinghuysen (1884). On the death of the Cardinal, Corrigan automatically became archbishop of New York (Oct. 10, 1885), though he was not formally installed by Cardinal Gibbons until May 4, 1886.

Almost immediately Archbishop Corrigan, a conservative, a strict canonist, and a stalwart patron of parochial schools, came into conflict with Father McGlynn of St. Stephen's Church, who disapproved of separate schools, actively interested himself in the Anti-Poverty Society, and associated with advanced social and political thinkers including Henry George whose candidacy for mayor he openly supported. On Jan. 14, 1887, Corrigan removed McGlynn from his pastorate. McGlynn, summoned to Rome, refused on the score of health to make the journey, and was excommunicated, July 4, 1887. Archbishop Corrigan was named "prelate assistant at pontifical throne" as a defender of the faith. McGlynn had strong supporters among the clergy and laity, and as a martyr won outside sympathy, though the press and conservatives supported Corrigan's drastic action. In 1892, Father McGlynn was restored after his economic views had been considered by four professors at the Catholic University and after a hearing before Mgr. Satolli, papal delegate, who had been authorized to settle current disputes between priests and their bishops. On Aug. 15, 1893, Corrigan, in the presence of the delegate, preached a sermon in St. Patrick's Cathedral in which he emphasized his loyalty to the Holy See, thus closing the lips of aggressive critics. McGlynn was assigned to St. Mary's Church at Newburgh (1895), though he continued to be Henry George's friend and was his eulogist at the grave (1897). As Corrigan's severity was due to the rigidity of over-zealousness, rather than personal bitterness, he learned to forget, even presiding over Father McGlynn's requiem mass (1900).

Archbishop Corrigan's lack of interest in the Ancient Order of Hibernians, his faint sympathy for Irish nationalism, and his strict definition of the rule concerning secret societies, which would prevent Catholic membership in the Odd Fellows, Knights of Pythias, and Sons of Temperance as well as in the Free Masons, annoyed various elements. He had no sympathy with Archbishop John Ireland's Faribault experiment. He was quite annoyed by the assistance which Archbishop Ireland gave to the candidacy of Father Sylvester L. Malone for a vacant regency of the State University of New York when he him-
Corrothers

Corrothers, James David (July 2, 1869–Feb. 12, 1917), clergyman, poet, was born in Calvin, Mich., and died in West Chester, Pa. His mother, Maggie Churchman, was part negro and part French, and his father, James Richard Corrothers, had a negro mother. The boy was reared by his father's father, whose ancestry was Indian and Scotch-Irish. His upbringing, which involved nine years in the South Haven, Mich., public schools, was penurious but extremely pious. He worked at many tasks for little money, from sailor on Lake Michigan to boot-black in a hotel. His ambitious determination at length attracted the patronage of some white friends, among whom was Frances E. Willard, and he was enabled to spend some time at Northwestern University. He taught school, and under the influence of his friend, Paul Laurence Dunbar, composed dialect verse which was published chiefly in the Century Magazine. He wrote for various newspapers, among others for the Chicago Journal, for which he did a series of humorous negro "reports" later published in book form as The Black Cat Club (1902). “A sunburst having fallen upon his being,” he entered the ministry, and in this capacity traveled over a fair portion of the United States and observed something of its inhabitants. At first he was Methodist, but after some years he was expelled from this body—unjustly, he maintained—on a charge of having "plotted to ruin his bishop's good name." Then he became a Baptist. At last, "for conscience sake, convinced that his race needed religious training along the higher lines," he became a Presbyterian. In 1916 he published an autobiography, In Spite of the Handicap. He was at heart an earnest, sentimental American who assumed until he died the ascendency of a social order which even in his youth had passed its zenith. For all his being a spokesman for the negro, the people to whom he attached most importance were usually white—dealers in general merchandise, as likely as not, in a Virginia village. New England as he knew it was disillusioning—ignorant, he complained, of Whittier and Emerson, filled up with "a large and assertive foreign population which has not imbibed any other than the coarser Americanisms." He was married first to Fannie Clemens and later to Rosina Harvey.

CORSE, JOHN MURRAY (Apr. 27, 1835–Apr. 27, 1893), Union general, was born at Pittsburgh, Pa., of Huguenot ancestry. His parents, John L. and Sarah (Murray) Corse, removed in 1842 to Burlington, Ia., where the father was six times mayor. Young Corse was employed, and afterward became a partner, in his father's book and stationery business. At the same time he studied law, and was admitted to the bar. He took an active part in politics, and in spite of his youth received the Democratic nomination for secretary of state of Iowa in 1860, but was defeated. He was appointed major of the 6th Iowa Infantry, July 13, 1861, and served as inspector-general on Pope's staff during the operations at New Madrid and Island No. 10. Promoted to lieutenant-colonel, May 21, 1862, he took command of his regiment, to the colonelcy of which he was promoted, Mar. 29, 1863. In the Corinth and Vicksburg campaigns he established a reputation for able leadership and conspicuous courage, and was appointed brigadier-general of volunteers, Aug. 11, 1863. Desperately wounded at Missionary Ridge, Nov. 25, 1863, he was sent home to recover. Rejoining the army in time for the Atlanta campaign, he acted as Sherman's in-
Corse

spector-general until July 26, 1864, when he was put in command of a division. In October, while Sherman was preparing for his march to the sea, and Hood moved northward to cut his communications, Sherman ordered Corse to hasten to Allatoona Pass and hold it until the army could be brought to its relief. Arriving in the morning of Oct. 5, Corse found himself in command of some 2,000 men, to defend the post against French’s division, which was closing around it. To French’s demand for an unconditional surrender, “to avoid a needless effusion of blood,” Corse replied that “we are prepared for the needless effusion of blood whenever it is agreeable to you.” Corse says the fighting which ensued was of the most extraordinary character; French calls the battle “one of the most sanguinary conflicts of the war.” In spite of the loss of one-third of his command, Corse held out, repelling all attacks, till late afternoon, when news of the approach of the relieving force caused French to withdraw. Corse himself was badly wounded and lay insensible for half an hour, but resumed command as soon as he recovered consciousness, and next day sent the triumphant message, “I am short a cheekbone and one ear, but am able to whip all hell yet.” Meanwhile, Sherman had been advancing in great anxiety, for communication had failed for several hours. During the morning, however, a staff officer caught the flicker of a signal flag, and spelled out the message, “We hold out. Corse here,” and in the afternoon came news that the attack was repulsed. Sherman issued a general order offering the thanks of the army to the defenders. The hymn, “Hold the Fort” (written by Philip P. Bliss [g.a.]), was inspired by this fight at Allatoona, one of the most dramatic incidents of the war. Corse served in the march to the sea and the Carolina campaign; was mustered out, Apr. 30, 1866, declining an offered appointment as lieutenant-colonel in the regular army; and became collector of internal revenue in Chicago. For some years after, he was engaged in railroad and bridge construction. Removing to Massachusetts, he resumed active political work, and was chairman of the State Democratic Committee. As postmaster of Boston during Cleveland’s first administration his efficient conduct of the office made it known as the “model office of the United States.” He died at Winchester, Mass., and was buried at Burlington. He was twice married: first, in 1856, to Ellen Edwards Prince, and second, in 1882, to Frances McNeil, a niece of Franklin Pierce.

[A biography by Wm. Salter was published in *Annals of Iowa*, vol. II (1895), pp. 1–19, 105–45, 278–304. See also *Official Records (Army)*, 1 ser., vols. M. S.]

CORSON, HIRAM (Nov. 6, 1828–June 15, 1911), teacher, author, was born in Philadelphia, Pa., and died in Ithaca, N. Y. Until he was fifteen, his education was conducted by his parents, Joseph Dickinson and Ann Hagey Corson, and from fifteen to twenty he attended schools in Montgomery County, Pa. He was notably proficient in mathematics and in classical languages. When twenty-one, he went to Washington, to become for a short time a reporter in the Senate, and later for about seven years, a librarian in the Smithsonian Institution. His associations in the library and his marriage in Boston in 1854 to Caroline Rollin, an erudite lady of European education, stimulated his interest in modern literatures. From 1859 to 1865 he was an unattached lecturer and private teacher in Philadelphia. He did not take part in the Civil War, but at its conclusion, he published, “for the use of the Southern freedmen,” *A Revised Edition of Jaudon’s English Orthographical Expositor* (1866). During 1865–66 he was professor of moral science, history, and rhetoric in Girard College; from 1866 to 1870, professor of rhetoric and English literature in St. John’s College, Annapolis; and from 1870 to 1903, when he was made professor emeritus, he taught literature at Cornell. In the many books which he wrote or edited between 1863 and 1899 he dealt with most of the great phases of English letters. His most important writings were perhaps his critical volumes, *An Introduction to the Study of Robert Browning’s Poetry* (1886) and *An Introduction to the Study of Shakespeare* (1889), his *Printer of English Verse* (1892), and, above all, his *Aims of Literary Study* (1895). Through all his scholarly work he insisted on two things as necessary for a true understanding of literature—a disciplined use of the human voice, and a recognition that philosophic and esthetic elements in literature must take precedence over elements that are wholly technical. Among his contemporaries, some of the teachers of literature who considered themselves most advanced believed apparently that his contention relative to beauty in speech was too trivial for notice; and his contention upholding the spirit as against the technique of art was too often the object of their ridicule. Championing his side of this debate firmly—in his writings as well as in his lectures at Cornell, Johns Hopkins, and elsewhere—he induced at last, or helped to induce, a real and valuable, if meager, shift of emphasis in the public estimate of these matters. He knew many distin-

453
Corson

guished people intimately, among them Walt Whitman, whom he defended when such defense was still dangerously irregular. One of the earliest ardent admirers of Browning, he organized numerous Browning clubs throughout America, and in 1882 lectured before the Browning Society of London, to the high approval of the poet himself. He did not limit his attention purely to letters. He was a zealous opponent of slavery; he publicly deplored many aspects of organized religion (Corson, Spirit Messages, pp. 8, 99); he was strenuously apprehensive of the social effects of concentrated wealth; and as early as 1874, he wrote for a Cornell student publication an essay avowing his faith in spiritualism. This faith grew with years into a dominant passion. He reserved a room in his house for the portraits of people whom he had loved and who were dead, and before each portrait he kept always an offering of flowers. It pleased him to think that disembodied spirits were likely to be about him at any moment. His book, Spirit Messages, published posthumously in 1911, sets forth the result of twenty-four daily seances between himself and a ghostly but convivial and extremely famous group organized by his wife in 1901 soon after her death.

J. D. W.

CORSON, JULIET (Feb. 14, 1842–June 18, 1897), pioneer teacher of cooking, was born in Roxbury, Mass., the daughter of Peter R. and Mary Ann (Henderson) Corson. When she was six years old her parents moved to New York City. Too delicate to attend school regularly, she spent much of the next ten years in the home of her uncle, Dr. Alfred Upham, in whose library she became well acquainted with Greek and Roman history and classical poetry. Soon after her mother's death, when she was eighteen years old, she started to earn her own living. After assisting in a teaching agency for a short time, she obtained the post of librarian in the Working Women's Library in the New York University building. The pay was very small and she added to her income by writing poems and sketches for various newspapers. She wrote a weekly article for the New York Leader and was employed to prepare the half-yearly index of the National Quarterly Review, where her work so pleased the editor that she was given a place upon the staff of the publication. Her career as teacher of cooking grew out of her interest in the Free Training School for Women, which was opened in 1873 in her own home. At first only free instruction in sewing was given, but the institution proved so popular that it was soon moved to larger quarters and the curriculum enlarged to include bookkeeping, shorthand, and proof-reading. Miss Corson saw the need for training in cooking also and set about fitting herself to teach that science. A chef was hired to demonstrate to the classes while she explained the theory.

In 1876, she opened a school of her own in St. Mark's Place, where she taught paying classes and also gave free instruction. Her lessons attracted much attention and in 1878 she was commissioned by John Eaton, United States Commissioner of Education, to prepare a circular for the Bureau of Education on the history and management of cooking schools in Europe and the United States. The following year he arranged for her to lecture before the Training School for Nurses in Washington, D. C., and later, under his patronage, she addressed groups in many other cities, making one trip to the Pacific coast.

Probably the first lessons in cooking given in a public school on this continent were given by Miss Corson in a six weeks' course to high-school girls in Montreal in 1880. There, for the first time, she did the cooking herself, the chef having failed to appear, and thereafter, finding that it appealed to her audience, she always did her own demonstrating. While eager to increase the general knowledge of scientific cookery, her chief interest, always, was in teaching the women of the poorer classes how to prepare nourishing yet inexpensive food. With that end in view, she published, in 1877, Fifteen Cents Dinners for Workmen's Families, and distributed 50,000 copies free, chiefly at her own expense. Always on her lecture tours she gave free lessons to those who could not afford to pay for instruction. In her Cooking Manual (1877), which ran into several editions, she said she had endeavored to answer the question of the hour, "How well can we live if we are moderately poor?" (1886 edition), and in 1887 she published Family Living on $500 a Year. The material in this book was derived from a series of articles on "Sanitary Living" which appeared in Harper's Bazar, 1882–84. Her writings received much favorable comment and her lectures were exceedingly popular. In 1880, the French government requested her to prepare a plan of work and list of books for use in the schools of France. For a few months in 1890–91, she was editor of the Household Monthly. At the World's Columbian Exposition in Chicago, she was awarded the prize for scientific cookery and sanitary dietetics. The last years of

454
Corson

her life were devoted chiefly to literary work, most of it done in an invalid's chair. She died in New York City and was buried in Greenwood Cemetery.

CORSON, ROBERT RODGERS (May 3, 1831-Feb. 19, 1904), merchant, humanitarian, was born at New Hope, Pa., a descendant of Cornelius Corson of Staten Island, who was born in France but emigrated to New York with other Huguenots and was commissioned a justice of the peace and captain of foot (Calendar of Historical Manuscripts in the Office of the Secretary of State, Albany, N. Y., 1865–66). Benjamin Corson, a son of Cornelius and Maritie, his wife, moved from Staten Island to Bucks County, Pa., in 1726, taking with him Benjamin Corson II. From the latter was descended Dr. Richard D. Corson of New Hope, Bucks County, who married Helen Stockton Johnson of Princeton, N. J. Dr. Corson became well-known in his locality as a medical practitioner and as an instructor of medical students who studied under his direction and rode with him in his medical circuits. His son, Robert Rodgers Corson, was educated in the local schools at New Hope and in the Tremont Seminary at Norristown, Pa. At nineteen years of age he went to Pottsville to learn the business of mining and selling coal. In 1856, having leased a coal-mine near Pottsville, he moved to Philadelphia and became active as a coal merchant and shipper, operating three wharves on the Schuylkill. He married Rebecca J. Foulke of Penllyn District, who later shared his humanitarian labors. They had no children. At the outbreak of the Civil War the Union soldiers were largely assembled at and near Philadelphia. With others, Corson established the Union Volunteer Refreshment Saloon and served as its corresponding secretary. The United States government established its military hospitals at Philadelphia, and the activity of Corson in the visitation of the sick soldiers, and his ministrations to the army were of such importance that he was commissioned State Agent by the governors of Connecticut, Indiana, Massachusetts, Maine, Wisconsin, Vermont, New Jersey, New Hampshire, Rhode Island, Delaware, and Maryland. The resolution of the Rhode Island Assembly in January 1866 expressing thanks for his devotion to the interests of "our soldiers," and the Massachusetts General Order No. 13 of July 20, 1864, thanking Corson for his "kindness in watching over the sick and wounded soldiers from this state" are typical of the contemporary appreciation of this work. Corson's little volume, A Soldiers' Guide, containing local addresses of army officials, railroad schedules, etc., seems to have been his only publication. It was distributed freely by the Committee of the Union Volunteer Refreshment Saloon. Corson recruited some 14,000 colored troops into the Union service without cost to the Government. He was a member of the Union League of Philadelphia from Feb. 20, 1864, to Sept. 23, 1883, when he resigned. His interests in humanitarian effort were extensive. He served as secretary to the Freedmen's Relief Association, as treasurer of the Association for the Prevention of Cruelty to Animals, as director and treasurer of the Citizens Municipal Reform Association, as inspector for the Deaf and Dumb, for the State of Pennsylvania. His interest in prison reform resulted in his appointment as inspector to the Moyamensing Prison. He took an active part in the work of the Philadelphia Society for Organizing Charity, and various other Philadelphia welfare works. In 1881 he became interested in the Luray Caverns in Virginia. Under his management electric lights were introduced into the caverns and the Luray Inn was built. He later returned to Philadelphia, where he died.

CORTAMBERT, LOUIS RICHARD (1808–Mar. 28, 1881), author, journalist, was born in Paris, France, the son of a physician. He emigrated to the United States as a youth, making St. Louis his home in the thirties, where he married Susan, daughter of Auguste P. Chouteau [q.v.], and became French vice-consul, resigning, however, in 1851 as a protest against the coup d'état. From 1855 to 1858 he edited in St. Louis La Recue de l'Ouest, a weekly French newspaper. He was an abolitionist, and his philosophy in many respects resembled that of Thoreau. He sought to duplicate Thoreau's Walden experience, but Walden near Concord and the Illinois lowlands differed, and malaria aided in ending Cortambert's experiment. From 1864 to 1881 he edited in New York City Le Messager Franco-Américain, a daily French newspaper. He wrote numerous books in his native tongue and came to be regarded by many as the most distinguished writer in French in the United States. To his Histoire Universelle Selon la Science Moderne (Paris, 1879), Henri Martin the historian wrote a preface; and Victor Hugo praised his Religion du Progrès (New York, 1884). Among his other works are: Voyage aux Pays des Osages (Paris, 1847); Les Trois Époques du Catholicisme.
Corthell

(Paris, 1849); Le Catéchisme Rationaliste (St. Louis, 1855). Jointly with F. de Tranaldos, he wrote: Le Général Grant: Esquisse Biographique (New York, 1868) and L'Histoire de la Guerre Civile Américaine (Paris, 1867). His Général Grant is an enthusiastic, laudatory biography of Grant as a soldier. The two-volume Histoire de la Guerre Civile Américaine was written entirely from the Union side as far as sympathy is concerned. Both books are vivid in style, the work of an advocate rather than a historian. Cortambert frequently lectured in French in New York and in Canada. Dr. Alexander N. De Menil, a nephew, described him as a tall, solemn, dignified man, generally dressed in black, adding: "He always seemed to be in a meditative mood, even while on the streets. He was a handsome man, but his solemnity repelled in spite of his courteousness." Cortambert was the brother of Eugene Cortambert, the noted French geographer, and the uncle of Richard Cortambert, a promising young author who died in his early thirties.

W.W.

CORTHELL, ELMER LAWRENCE (Sept. 30, 1840—May 16, 1916), civil engineer, was born in South Abington (now Whitman), Mass., the son of James Lawrence and Mary Gurney Corthell. He prepared for college at the South Abington high school and the Phillips Exeter Academy and then entered Brown University in 1859. At the outbreak of the Civil War he enlisted as a private in the 1st Rhode Island Artillery, serving for the period of the war. He left the army with the rank of captain to return to Brown, from which he was graduated in 1867, taking the degree of M.A. a year later. He was married in 1870 to Emily Theodate Davis of Providence, R. I. She died in 1884, and in 1900 Corthell married Marie Küchler of Bern, Switzerland.

In his youth it was Corthell's desire and intention to become a Baptist minister. Ill health made it advisable, however, for him to enter a more active profession, and he chose civil engineering. He found employment with Samuel Barrett Cushing, a prominent engineer of Providence, and began what proved to be all but a half-century's work devoted to engineering in its various fields and on two continents. His great contribution was the improvement of transportation facilities and at the same time the reduction of transportation costs. In 1868 he was assistant engineer on the construction of the Hamblib & Missouri Railroad. In 1871 he began his work in connection with the levees along the Mississippi River. He was chief engineer of the Sny Island Levee, fifty-one miles in length, and then became assistant to James B. Eads [q.v.] in the construction of the jetties at the South Pass mouth of the river. Ill health forced him to go north again in 1880. During his convalescence he wrote his History of the Jetties at the Mouth of the Mississippi River (1880).

Some construction work for the New York, West Shore & Buffalo Railroad Company was followed, in 1884, by Corthell's association with Eads in the promotion of the Tehuanatepec Ship Railway. In exploiting this railway he visited various cities of the United States and exhibited perfect working models of the railroad and a ship being placed in its cradle on the rails. By this time he had established himself as a consulting engineer and was variously engaged on the construction of railroads, bridges, and harbors all over the country. He was engineer in charge of the design and construction of the substructure and foundation of the St. Louis Merchants' Bridge over the Mississippi, and acted as special consultant in the charge of the terminal work in Chicago for the Chicago, Madison & Northern Railroad. In 1889 he examined and submitted plans and a report on an improvement of the harbor at Tampico, Mexico, for the Mexican Central Railroad; later he was chief engineer for the construction of their jetties.

In 1891 Corthell went to Europe to study engineering education as it was administered in the leading universities and technical schools there. This was in conjunction with his work as a trustee of the University of Chicago. He also examined European railroad terminals and harbors in order to fit himself better for solving problems in the United States and Mexico. He revisited Europe in 1897. The results of his investigations were published in the Engineering Magazine and presented in a paper which he read before the Fiftieth Anniversary Meeting of the American Association for the Advancement of Science held in Boston in 1898. In 1900 he sailed for Buenos Aires where, for the Argentine minister of public works, he investigated and reported on many problems pertaining to commerce. A few years later he was engaged on important commercial works in Brazil, at Para, and in other South American cities. He maintained his consulting engineering office in New York City.

Corthell was representative for the Department of State of the United States at the International Engineering Congress in Brussels. It was he who suggested and then acted as chair-
man of the executive committee having charge of the International Engineering Congress held during the Columbian Exposition. He was active in advancing the interests of the national technical and scientific societies and his printed papers on engineering subjects fill many volumes. He had boundless enthusiasm and industry, and was generous not only with advice but with financial aid to younger members of his profession.

E. Y.

CORWIN, EDWARD TANJORE (July 12, 1834–June 22, 1914), clergyman, historian, was born in New York City, son of Edward Callwell and Mary Ann (Shuart) Corwin. He traced his ancestry to Matthias Corwin, an Englishman who first settled at Ipswich, Mass. (c. 1634), and subsequently moved to Southold, L. I. On his mother's side he was related to the Dutch founders of New York. He was graduated from the College of the City of New York in 1853, and from the New Brunswick Theological Seminary three years later. After a year spent in special linguistic studies he was ordained as a minister in the Reformed Church of America (Dutch) in 1857, and was pastor successively at Paramus, N. J., Millstone, N. J., where he spent twenty-five years, and Greenport, N. Y. In an interval of seven years between the last two pastorates he was rector of Hertzog Hall at the Reformed Church Seminary at New Brunswick, N. J. He was married on July 25, 1881 to Mary Esther Kipp at Geneva, N. Y. In each of his pastorates he became immediately interested in local church and town history, an avocation that resulted in the publication of Manual and Record of Church of Paramus (1858), The Millstone Centennial (1866), and General Ecclesiastical History of Columbia County, N. Y. on Occasion of the 60th Anniversary of the Church of Greenport, N. Y. (1896). Research in a wider field enabled him to bring out A Manual of the Reformed Protestant Dutch Church in North America (1859), a revised and enlarged Manual a decade later, and two subsequent editions (1879 and 1902). A fifth edition, published in 1922, was dedicated to his memory. When a history of the Reformed Church, Dutch, was desired for the American Church History Series, Corwin was selected to write it (see Volume VIII of the Series). These historical instincts coupled with a genius for hard work finally resulted in The Ecclesiastical Records of the State of New York (7 vols., 1901–16). Corwin had been commissioned in 1897 by the General Synod of the Reformed Church to explore ecclesiastical archives in Holland. His report of his findings at Amsterdam and The Hague revealed so much of historic value that the New York legislature, in 1899, made an appropriation for the publication of the records under the general direction of the state historian with Corwin as editor. The Index Volume to this work, which was long delayed, represents the painstaking activity of Corwin's last years; he did not live to see it in print.

A. E. P.

CORWIN, THOMAS (July 29, 1794–Dec. 18, 1865), governor of Ohio, senator, secretary of the Treasury, traced his ancestry to Matthias Corwin who settled in Ipswich, Mass., about 1634. When Matthias Corwin, a descendant of the first Matthias, settled at Lebanon, Ohio, in 1798, he had only $100 with which to buy a farm, but he possessed qualities of mind and character which brought him to the speakership of the state Assembly, and endowed his children with an excellent inheritance. His wife, Patience Halleck, is reputed to have been a person of marked intellectuality. Thomas, their fifth child, born in Bourbon County, Ky., early exhibited bookish tendencies which the father did little to encourage, less, it appears, through lack of sympathy than through lack of means. From his large family he selected an older son to be educated as a lawyer, leaving Thomas to acquire what learning he could by the diligent use of a scanty leisure and his brother's books. At twenty-one, Thomas began to read law and in due course was admitted to the bar. In 1822 he married Sarah Ross, daughter of a congressman, related on her mother's side to the Randolphs of Virginia. He was elected to the General Assembly in 1821, 1822, and 1829, and became a supporter, in national politics, of the Clay-Adams group, by this path passing into the Whig party. Following Jackson's election, Corwin's party put him forward in his home district, a community favorable to Jackson, as its strongest candidate for Congress, and elected him with one-fourth more votes than his opponent received. During a decade in Congress,
Corwin

a period of Democratic control, his speeches, although infrequent, made an excellent impression. Most notable of these was his reply to Gen. Isaac Crary (Feb. 15, 1840).

His canvass for governor in 1840 made him famous as a campaign orator. He won by a majority of 16,000, but was defeated in 1842, in consequence of party strife over matters for which he had slight responsibility, and he refused renomination in 1844. He campaigned actively for Clay, however, on the Texas issue. The Whigs lost the presidency, but, regaining control of the Ohio legislature, sent Corwin to the United States Senate. Here, during the Mexican War, he reached the climax of his career. Convinced that the war was waged for territory, he besought Webster and Crittenden to stand with him against further appropriations. When they failed him, he pursued his opposition alone, delivering a powerful speech on Feb. 11, 1847, in which he denounced the war as unjust, and with prophetic vision as well as eloquence predicted the sectional conflict which would follow the acquisition of Mexican territory. A few radicals talked of him for the presidency, but most Whigs as well as Democrats regarded such sentiments uttered in actual time of war as traitorous. Petitions to the legislature, however, demanding that his resignation be required, brought forth as a committee report a resolution of confidence.

Taylor's death brought Fillmore to office and Corwin to the post of secretary of the Treasury; this he filled without distinction, retiring with his chief in 1853. As the slavery controversy developed, he reluctantly abandoned the Whig party, being elected to the House in 1858 as a Republican, although he did not wholly accept the party program. He advocated the abolition of slavery in the territories, but upheld the right of each new state to decide the slavery question for itself. After Lincoln's election, he earnestly sought means of allaying the fears of the South, and served as chairman of the House committee of thirty-three. As minister to Mexico during the critical years 1861–64, he filled acceptably his last public office. Returning to Washington, he opened a law office, but died only a few months later.

Corwin's face was remarkably expressive, and his voice, although neither deep nor powerful, was musical and far-reaching. As a lawyer he was brilliant rather than learned; politics diverted his attention from profound study. A natural wit, he came to believe that fun-making had hampered his career, but his brilliant satire seldom left a sting. Though not a church member, he was permanently influenced by the religious atmosphere in which he was reared. His speeches are saturated with Biblical allusions and quotations. His chief fault was laxity in financial affairs. He was careless in collecting fees, and during most of his life was handicapped by a burden of debt. After leaving the cabinet he was impoverished by an unfortunate investment in railway stocks. He suffered loss frequently through becoming surety. He was much loved, and nowhere more so than at home and by his neighbors, for he was kind and generous.

Corwin, A Sketch (1882), a somewhat laudatory character study containing valuable anecdotal material. Some sidelights are provided by letters of Thos. Corwin to Wm. Greene, 1841-51, in "Selections from the Wm. Greene Papers," ed. by L. Belle Hamlin, in Hist. and Philosophical Soc. of Ohio Quart. Pub., vol. XIII (1918). See also Speeches of Thos. Corwin with a Sketch of his Life (1859), ed. by Isaac Strolm; Ohio Hist. and Philosophical Soc. Quart. Pub., vol. IX (1914). The Lib. of Cong. has twelve volumes of Corwin Papers covering the years of Corwin's term as secretary of the Treasury.]

H. C. H.

Cory, Charles Barney (Jan. 31, 1857–July 29, 1921), ornithologist and author, was, throughout the greater part of his life, contrary to the usual lot of scientific men, surrounded with all the comforts and opportunities that wealth could provide. His father was Barney Cory, a wealthy importer of Boston, a descendant of Philip Cory who settled in Rhode Island early in the seventeenth century, and his mother was Eliza Ann Bell of Newport, R. I. Charles was from early youth deeply interested in all sorts of outdoor sports, especially in hunting, and he soon began collecting specimens of birds. In 1876 he entered the Lawrence Scientific School of Harvard University where he came in contact with J. A. Allen [q.v.], the noted zoologist, then curator of birds and mammals in the Museum of Comparative Zoology. Just before this he had joined the Nuttall Ornithological Club of Cambridge and made the acquaintance of William Brewster [q.v.] and other local ornithologists so that his interest in birds was greatly stimulated and it became his chief pastime. His college course was never completed, but for nearly forty years, beginning in 1877, he devoted his life to travel and the collecting of ornithological specimens, visiting Florida most frequently but also other parts of America, and Europe. He published accounts of his experiences in several volumes, such as Southern Rambles (1881), A Naturalist in the Magdalen Islands (1878), Hunting and Fishing in Florida (1866). In 1878 he visited the Bahamas and then concentrated his interests on the
Cory

West Indies, becoming the recognized authority on the birds of these islands. He published *Birds of the Bahama Islands* (1880), *The Birds of Haiti and San Domingo* (1885), and *The Birds of the West Indies* (1889), many papers in *The Auk* and the *Bulletin of the Nuttall Ornithological Club*, and a large folio work with colored illustrations entitled, *Beautiful and Curious Birds of the World* (1880–83).

Cory was married in 1883 to Harriet W. Peterson of Duxbury, Mass. His home at this time was at Hyannis, where he established a spacious game park which he maintained as a bird sanctuary, one of the first in the United States. He was one of the founders of the American Ornithologists’ Union in 1883 and later served it as treasurer, vice-president, and president. Upon the establishment of the Field Museum at Chicago he presented to that institution his entire collection of birds, and was made curator of ornithology for life with no residence obligations, an assistant caring for the collections under his direction. He was thus enabled to continue his travels and his collecting. In 1906, when in his fiftieth year, he experienced the crisis of his life—the loss of his entire fortune. He accepted a salaried position in the Museum, and the care-free roving amateur became a hard-working professional ornithologist.

About the time of his first connection with the Field Museum he had published a key to the birds of eastern North America and he now prepared a volume on the *Birds of Illinois and Wisconsin* (1909). He next arranged for the extensive collecting of South American birds by the field force of the museum, and the study and identification of these specimens occupied most of the remainder of his life. In this connection he conceived the *Birds of the Americas*, a synopsis and synonymy of all the birds of North, Middle, and South America. He published two volumes of this, his most important work (1918 and 1919), and the Museum later provided for its completion.

Cory’s interest was not confined to his ornithological studies. Among his other publications were *Hypnotism or Mesmerism* (1888); a number of light opera librettos: *The Corsair* (1887), *The Mermaid*, or *The Curse of Cape Cod* (1888), *A Dress Rehearsal* (1891), *An Amazon King* (1893); and a volume of short stories, *Montezuma’s Castle and Other Weird Tales* (1899). His prowess in various athletic sports was notable and he played games with the same concentration and determination to succeed that marked his scientific work. He was kind and generous in disposition and possessed of a keen sense of humor. The fortitude with which, at middle age, he gave up all the comforts and associates of a luxurious life and set about making a living for his family with no outward show of mental suffering, illustrates better than anything else his strength of character.

W. S.

**COSBY, WILLIAM** (c. 1690–Mar. 10, 1735/6), colonial governor of New York and New Jersey, was a member of an influential Irish family. His father was Alexander Cosby of Stradbally Hall and his mother, Elizabeth, who died in 1692, was a daughter of Henry L’Estrange. William Cosby became an officer in the British army and married Grace Montagu, a sister of the second earl of Halifax. During Cosby’s régime in New York his daughter was wedded to Lord Augustus, son of the Duke of Grafton. According to hostile critics this match was due to the intrigues of Lady Cosby (Smith, *post*, II, 33). Cosby was one of the placemen who surrounded the Duke of Newcastle. Before coming to America he had served as governor of the Island of Minorca, but had incurred charges of extortion (Smith, *op. cit.*, II, 1). Nevertheless, upon the death of Montgomerie in 1731, Cosby secured commissions as governor of New York and the Jerseys. Delaying, however, in order to lobby against the Sugar Act which was hurtful to his colonies, he did not arrive in New York until Aug. 1, 1732. Among his first acts were to appoint his son, “Billy,” to a sinecure as secretary of the Jerseys and to send a live beaver to the Duchess of Newcastle (*Documents Relative to the Colonial History of the State of New York*, V, 936–37). With the Assembly of New York he got on fairly well, securing an act for support for five years with additional reward for his services against the Sugar Act. He came into collision, however, with a group of provincial aristocrats of whom the leaders were Chief Justice Lewis Morris and James Alexander [q.q.v.]. These men foiled Cosby’s efforts to wrench from Rip Van Dam [q.q.v.], president of the Council, one-half of the emoluments received for conducting the administration before his arrival, and they supported John Peter Zenger [q.q.v.] in establishing the *New York Weekly Journal* to assail Cosby. The Governor struck back in the famous libel suit but met humiliating defeat when Zenger was acquitted. About a year later Cosby died after a long illness. As governor of the Jerseys he avoided serious trouble. He was the last gover-
Costansó

nor of the united provinces, as after his death New Jersey was given a separate executive. Cosby's correspondence shows him to have been devoid of statesmanship, seeking money and preterment. He was accused of violence and profanity, and ranks with Fletcher and Cornbury [q.q.v.], among New York's most unenlightened royal governors. His point of view appears in his oft-quoted letter to Newcastle: "I am sorry to inform your Grace, that ye example and spirit of the Boston people begins to spread among these colonists in a most prodigious manner. I had more trouble to manage these people than I could have imagined" (Ibid., V, 937).

[For Cosby's public career the chief sources are the Docs. Relative to the Colonial Hist. of the State of N. Y. and the N. J. Archives. Wm. Smith, Hist. of the Late Province of N. Y. (2 vols., 1830), gives an interesting but partisan account. The best recent study is Herbert L. Osgood, Am. Colonies in the Eighteenth Century (1924), II, ch. V. See also P. W. Chandler, Am. Criminal Trials (2 vols., 1841-44); Livingston Rutherford, John Peter Zenger, His Press, His Trial, etc. (1904); J. B. Burke, General and Heraldic Hist. of the Landed Gentry of Ireland (1912).] E. P. T.

COSTANSÓ, MIGUEL (fl. 1769-1811), Spanish cosmographer and army engineer, was the ensign (alférez) of engineers sent under Gov. Gaspar de Portolá to make astronomical observations when José de Gálvez, visitor general of New Spain, and his coadjutor Francisco de Croix the viceroy, decided to send, in 1769, a "Holy Expedition" to occupy Alta California. Costansó sailed from La Paz, Baja California, on Jan. 10, 1769, on the paquebot San Carlos, reaching the port of San Diego, Alta California, on Apr. 29 or 30, after 110 terrible days at sea. On July 14 he was a member of Portolá's famous party which set out by land to find Sebastián Vizcaíno's noteworthy port of Monterey, upon which a fort was to be built. On this expedition Costansó and Father Juan Crespi [q.q.v.] took observations of the latitudes, usually with fair agreement; they also participated in bestowal of place names along the coast, many of which survive in use. Costansó returned to Mexico in July 1770. He was the author of the first book which concerned Alta California exclusively, his Diario histórico de los viajes de marin y tierra hechos al norte de la California, finished at Mexico Oct. 24, 1770, and printed there before 1771. It contains the complete account of Portolá's first expedition promised in the preceding brief pamphlet, the Extracto de noticias del Puerto de Monterey, of which two editions were printed at Mexico. The Diario histórico was preceded by Costansó's fuller Diario del viaje de tierra hecho al norte de la California, finished at San Diego, Cal., Feb. 7, 1770, manuscript copies of which are in the Sutro Library and Archivo Nacional, Mexico City (Historia, tomo 396).

Costansó thus made three major contributions to the literature of the Spanish conquest of California; they are full of reasonable scientific accuracy, competent personal experience, and humane observations on the country and the natives. The author's name appears again in connection with this territory when in 1772 he was consulted as an expert on the feasibility of the plan proposed by Juan B. Anza [q.q.v.] to connect Sonora and Alta California by a land route; his affirmative advice contributed to the success of Anza in the founding of San Francisco in 1776. Again in 1794-95 the engineer's opinion was called for when the problem came up of defending the coast from European enemies. He also served as consulting engineer in affairs concerning the drainage of Mexico City through the Huehuetoca Canal, in the fortification of Vera Cruz, and in the matter of the military judgment on Intendant Riaño's strategy in opposing Miguel Hidalgo's attack on Guanajuato in 1811.

[Cotton's Diario histórico was translated by Wm. Reverley, and printed in English by A. Dalrymple, London, 1790, from a MS. obtained from Dr. Wm. Robertson the historian. It appeared again, edited by C. F. Lummis, in The Land of Sunshine (Los Angeles) June and July issues, 1901. The Spanish text with English translation appeared in the Acad. of Pacific Coast Hist. Pubs., vol. I, no. 4, Mar. 1910. There is a manuscript copy in the Sutro Library, San Francisco. The Diario del viaje de tierra was published as Acad. of Pacific Coast Hist. Pubs., vol. II, no. 4, Aug. 1911, and was there accompanied by a reproduction of Costansó's map of the California coast from Cape Blanco to Cabo de Corrientes on the Mexican coast; the map was drawn in Mexico in 1770 and printed in Madrid in 1771. Our chief knowledge of Costansó is gleaned from his writings already mentioned; Father Francisco Palou mentions him frequently in his Noticias de la Nueva Cal., as published by the Cal. Hist. Soc. with an introduction by John T. Doyle (4 vols., 1874) and more recently by H. E. Bolton, Hist. Memoirs of New Cal. (4 vols., 1926). There is frequent mention of Costansó in Crespi's letters, as edited by Bolton in Fray Juan Crespi (1927).] H. I. P.

COTTON, JOHN (Dec. 4, 1584-Dec. 23, 1652), Puritan clergyman, author, was born at Derby, Derbyshire, England. His father, Roland Cotton, was a lawyer and a strenuous Christian, and his mother is also said to have been an extremely religious woman. Little is known of his childhood until he became a student of Trinity College, Cambridge, in his thirteenth year. He received the degree of A.B. in 1603 and that of A.M. in 1606. He had a strong inclination for the life of a scholar and was assisted financially by his father who seems to have been well-to-do. The young student was particularly proficient in Hebrew and in an
examination based mainly on that language won a fellowship at Emmanuel College, which had been founded by a Puritan and was the most inclined to Puritanism of all those in Cambridge, the university at that time being strongly Puritan in tone. Cotton remained at Emmanuel for six years, became head lecturer and dean and preached occasionally with great effect at St. Mary’s Church. It was during these years at Emmanuel that he experienced his first genuine religious awakening. On July 13, 1610, he was ordained deacon and priest at Lincoln, and in 1613 he received the degree of B.D.

His learning and his ability in preaching had already attracted attention, and on June 24, 1612, when only twenty-seven years old, he was chosen vicar of the large and beautiful parish church of St. Botolph’s at the seaport of Boston in Lincolnshire. Cotton Mather tells the odd story that the city council was tied in the election and that Cotton received the appointment only by the mayor’s twice casting his vote in favor of him by mistake. The appointment had to be approved by the bishop of the diocese, and it appears that his approval was secured by bribery, although there is no evidence that Cotton had any direct hand in or even knowledge of this transaction (Whiting in Young’s Chronicles, p. 423). He had been only a few years at St. Botolph’s when he began to alter the liturgy by omitting certain forms and ceremonies in accord with Puritan belief and practise. His first change in this direction seems to have been made about 1615. Although there is good evidence that he was beloved by his parishioners, he appears to have carried only a part, possibly a minority, of his congregation with him in gradually abandoning the practises of the Church of England for the simpler Puritan form of worship. As was often done in such cases, an assistant was appointed who held services according to the old forms while Cotton was left free to follow his more Puritanical ideas.

Within three or four years he was in trouble with the ecclesiastical authorities, but no action was taken and throughout almost the entire twenty years that he spent at Boston he was treated with great leniency and consideration by his bishop. It was even said by one of his friends that King James himself had ordered that he should not be molested for his non-conformity (Ibid., p. 426). An incident in 1621, when some unruly Puritans broke all the beautiful stained glass in the church and defaced the monuments and carving, does not seem to have led to anything else, and there is nothing to connect Cotton himself with the outrage. In 1632, however, Cotton was summoned to appear before the Court of High Commission, and, although the summons was not served, he fled to London, where he was befriended by John Davenport [q.v.]. From there he resigned his charge in a letter to the Bishop of Lincoln, dated May 7, 1633.

Cotton had already been interested in Massachusetts, having been a friend of John Winthrop [q.v.], and having journeyed from Boston to Southampton to preach the farewell sermon when Winthrop and his party sailed. In July 1633 he embarked for America on board the Griffin with his wife, Thomas Hooker, Edmund Quincy, John Haynes, and others who later became prominent in New England. On the voyage his first son was born and named Seaborn. He landed at Boston on Sept. 4 and on Oct. 10 was chosen teacher of the church there, a post he occupied until his death. He at once became a leading figure on the small stage of the colony’s public life, taking an active interest in its political as well as religious affairs. Indeed, in the New England theocracy the two were almost identical. So much weight did his opinion carry that it was said that whatever he pronounced in the pulpit soon became either the law of the land or the practise of the church. In one case, however, his influence happily failed and the Abstract of the Laws of New England which he drew up for the General Court in 1636 was rejected by that body in favor of a less drastically Mosaic code.

In the constant disputes which characterized the life of the colony Cotton naturally took a leading part. It is impossible here to attempt to treat of the Antinomian controversy which for several years shook the colony to its foundations, ending in the excommunication and banishment of its protagonist, Mrs. Anne Hutchinson [q.v.], in 1638. All of the participants, as C. F. Adams has said, were “lost in a thick fog of indefinable ideas and meaningless phrases” but of the importance of the controversy in the life of the colony there can be no doubt. Cotton at first took the side of the defendant but when he found himself practically alone among the leaders in his attitude he went over to the side of the persecutors. However honest his opinion may have been, from that time on he became more narrow and bitter in his views.

His two controversies with Roger Williams brought forth many pamphlets on both sides. The first of these disputes had to do with the question of church membership, Williams taking the ground that only those who definitely renounced the Church of England should be
Cotton

members of the church in New England, Cotton taking the opposite and more liberal stand. In the second controversy Williams maintained that magistrates should have no power over men's souls, Cotton claiming that their authority should extend to the religious as well as to the secular affairs of the citizens.

Cotton was a man of indefatigable industry. He is said to have remarked that twelve hours should make a scholar's day, and what his church services meant to him and his congregation in mental strain may be inferred from the fact that he sometimes consumed six hours in praying and preaching. In addition he was a voluminous writer. His catechism called Milk for Babes (1646) was for long the standard work on which New England children were brought up. He also wrote, besides his controversial pamphlets, many works on prayer, church music, and, most important of all, his works on the theory and methods of Congregationalism as practised in New England. The most widely read of these treatises was The Way of the Churches of Christ in New England (1645), although perhaps The Keyes of the Kingdom of Heaven (1644) was not less important. In 1648 he answered the opponents of these volumes in The Way of the Congregational Churches Cleared. As one of the foremost defenders of Congregationalism it was suggested that he attend the Westminster Assembly in England in 1643 but he did not go. By 1646 he had become the Congregational leader in New England and was one of the three ministers chosen by the Cambridge Synod to frame a model of church government, although his plan was not the one finally adopted.

Cotton was undoubtedly one of the ablest and most influential men of his day in Massachusetts, of much natural sweetness of disposition and a scholar by temperament. Yet in studying his career in America it is difficult to avoid the conclusion that he was more and more warped from his own nature by the unconscious desire to retain his prestige and influence in the narrow and bigoted environment in which he had become great. As he advanced in his career he became more and more reactionary. A non-conformist himself in England, he came in later life, like most of the Massachusetts leaders, to uphold staunchly the power of the civil magistrate over the conscience of citizens and was willing to grant the state power of life and death in order to bring about conformity. "Better," he said, "a dead soule be dead in body, as well as in Spirit, than to live, and be lively in the flesh, to murder many precious soules by the Magistrates Indulgence." Like Winthrop, he had no faith in the common man and advocated a strong government by the few. "Democracy," he wrote, "I do not conceyve that ever God did ordayne as a fitt government eyther for church or commonwealth."

Cotton labored to the end of his life. In the autumn of 1652 he caught a heavy cold while preaching to the students of Harvard and this developed into serious trouble with the respiratory organs. He preached in his church for the last time on Nov. 21 and died on Dec. 23. He was married twice: first, on July 3, 1613, at Balsham, Cambridgeshire, England, to Elizabeth Horrocks who died some time after Oct. 2, 1630; second, on Apr. 25, 1632, to Sarah (Hawkridge) Story, widow of William Story, who survived him and married the Rev. Richard Mather [q.v.], whom she also survived. Of Cotton's six children by his second wife, his daughter Maria married Increase Mather [q.v.], and became the mother of Cotton Mather [q.v.].

COTTRELL, CALVERT BYRON (Aug. 10, 1821-June 12, 1893), inventor, manufacturer, born in Westerly, R. I., the home of the Cottrell family for many generations, was the son of Lebbeus and Lydia (Maxson) Cottrell. He had the regular education afforded by the local schools and at the age of nineteen began his apprenticeship as a machinist in Phenix, R. I., in the shops of Levalley, Lanphear & Company. Here he remained for fifteen years, most of the time as an employing contractor. While so engaged he made many improvements in machine
Cottrell
tools and machinery and saved enough money to start a business of his own. In 1855 he formed a partnership with Nathan Babcock, a skilled mechanic, and rented a shop from the Pawcatuck Manufacturing Company in Westerly. Cottrell & Babcock had intended doing a general machinist’s trade but the Pawcatuck Company had just purchased the rights to manufacture a patent oscillating printing-press and prevailed upon the new firm to manufacture this. Press manufacture, however, did not engage their whole time until 1868. In that year it was made the predominant feature, and thenceforward Cottrell’s inventive genius began to show itself. Among the first of his press improvements was the air spring for reversing the bed of a press, which lessened the jar and permitted greater printing speeds and hence increased the capacity of a press. He was the first to apply tapeless sheet delivery to the drum cylinder press. He invented and introduced hinged roller frames and devised an attachment for controlling the momentum of the cylinder. After a brief period of minor but valuable inventions, he introduced front sheet delivery which permitted dispensing with both tapes and fly, delivering the sheets of paper to the cylinder, front side up, and at the front end of the press. He also invented a rotary color printing-press, feeding from a roll of paper and printing in three colors 300,000 labels a day. Probably his most valuable invention was the shifting tympan for a web perfecting press. This prevented offset on the second cylinder and enabled a press which had heretofore been capable of printing only the ordinary newspaper to execute the finest class of illustrated printing. The invention contributed much to making the five and ten cent magazines possible. During his life Cottrell received over a hundred patents in the United States and Europe, the first one having been obtained in 1858. Cottrell & Babcock continued in business until 1880 when Babcock retired, Cottrell continuing, however, with the aid of his three sons. Just a year before he died, the business was incorporated with a capitalization of $800,000 as C. B. Cottrell & Sons Company. In the early days of his business, Cottrell traveled a great deal among the trade, and he was known widely for his quick but accurate judgment, geniality, and sincerity. On May 4, 1849 he married Lydia W. Perkins, a descendant of John Perkins of Ipswich who came from England in 1632. Cottrell died in Westerly survived by his widow and five children.

Couch

COUCH, DARIUS NASH (July 23, 1822–Feb. 12, 1897), Union general, was born on a farm in the town of Southeast, Putnam County, N. Y., to which place his father, Jonathan Couch, had removed from Redding, Conn. His grandfather, Thomas Couch, came to Redding from Fairfield, Conn., where the family had been long established; he served under Montgomery at Quebec (C. B. Todd, History of Redding, Conn., 1906). Couch entered West Point in 1842, and graduated in 1846, in the class with McClellan, Stonewall Jackson, and Reno. The last-named, afterward killed at South Mountain, was his room-mate for three years. Couch was commissioned in the 4th Artillery and sent to Mexico, where he was present at the battle of Buena Vista. Promoted to first lieutenant, Dec. 4, 1847, he served until Apr. 30, 1855, chiefly at stations on the Atlantic coast, and then resigned his commission. While on leave of absence in 1853–54 he made an expedition into northern Mexico, collecting zoological specimens, and was then for a time on duty with the Smithsonian Institution. He had married Mary Caroline Crocker, Aug. 31, 1854, and after his resignation entered the employment of the Taunton (Mass.) Copper Company, conducted by the Crocker brothers. He entered the volunteer service, June 15, 1861, as colonel of the 7th Massachusetts Infantry, which arrived in Washington July 13, and camped on the Kalorama estate. Couch remained with it only a few weeks, being assigned to the command of a brigade and appointed brigadier-general of volunteers with his commission antedated to May 17. He commanded a division in the Peninsular campaign with high ability, especially distinguishing himself at the battle of Fair Oaks, although always handicapped by ill health. “During the Rebellion,” he says, “my well days were few in consequence of disease contracted during the Mexican War” (unpublished letter). For this reason he offered his resignation in July 1862, but McClellan did not forward it, and he was appointed major-general of volunteers. He commanded his division at Antietam, and the 2nd Corps at Fredericksburg and Chancellorsville. Profound distrust of Hooker’s capacity was aroused in him by the plan of the Chancellorsville campaign. He wrote of Hooker: “It hardly seemed possible that a sane General could have talked in this manner” (Ibid.). The issue of the battle confirmed his opinion, and he asked to be relieved from duty with the Army of the Potomac. He was therefore assigned to command
Coudert

in Pennsylvania, where he turned out the militia to assist in the Gettysburg campaign, kept order in the coal-mining districts, and opposed, though unsuccessfully, the raid on Chambersburg. He was in charge of the ceremonies at the consecration of the national cemetery at Gettysburg. Late in 1864, he was assigned to a division of the 23rd Corps and joined in time to command it at the battle of Nashville, where his horse was shot under him. After taking part in the Carolina campaign, he resigned, May 26, 1865. He was Democratic candidate for governor of Massachusetts in that year, but was not elected. For a short time he was collector of the port of Boston, under a recess appointment, and then became president of a Virginia mining and manufacturing company. After 1870 he lived in Norwalk, Conn. He was quartermaster-general of Connecticut for two years, and adjutant-general of the state for two years. He died at Norwalk and was buried at Taunton.

[G. W. Cullum, Biog. Reg. (3rd ed., 1891), Bull. Ass. Grads. Mil. Acad., 1897, pp. 53–62; Official Records (Army), 1 ser., vols. T. M. S.

COUDERT, FREDERIC RENÉ (Mar. 1, 1832–Dec. 20, 1903), lawyer, was born in New York City, the eldest son of Charles Coudert and Jeanne Clarisse du Champ. The father was a native of Bordeaux, France, and was an army officer under Napoleon I. After the restoration, he became allied with Lafayette in a plot to place the Duke of Reichstadt on the throne. He was sentenced to death, escaped, and returned to France two years later; but was again forced to flee, and reached the United States in 1824. Here he set up a school which became widely known, in which his son, Frederic, was prepared for college. The latter entered Columbia College at the age of fourteen, and was graduated with honors in 1850. While in college, he gave Spanish and French lessons to a large class of boys. He studied law in the offices of Edward Curtis and Edward Sanford, contributing to his own support meanwhile by writing for the press, particularly for Porter’s Spirit of the Times, the leading sporting journal of the period. In 1853, he was admitted to the New York bar, and with his two brothers, Charles and Louis Leonce, formed a law partnership. He married Elizabeth McCredy.

Throughout his life, Coudert was interested in politics as an independent Democrat, but he consistently declined office. He believed it to be “the duty of every citizen to become, at some time or other, and to some extent, an active factor in the working of the governmental machinery,” but he thought that this might be “more effectually done by those who ask no reward from the powers that be, and no salary from the public treasury.” He exemplified this text in his own life by accepting the presidency of the Young Men’s Democratic Club, and of the Manhattan Club. In the presidential campaign of 1876 he was active in support of Tilden, and was one of a committee of citizens who visited New Orleans to influence the Returning Board to render a fair count in Louisiana. In 1892, he successfully led that branch of his party in New York which insisted on the renomination of Cleveland for president.

Coudert’s interests were broad. He served as commissioner of public schools of New York City in 1883–84, was president of the Columbia University Alumni Association, and from 1890 until 1901, a trustee of the University. He was devoted to the interests of the Roman Catholic Church; in 1873, gave a series of addresses under the auspices of the Catholic Union; was president of the United States Catholic Historical Society; and for many years aided in the management of the St. Vincent de Paul Orphan Asylum. He was an ardent admirer of France and the French; was president of the French Benevolent Society, and gave the address to the French Delegates, at the presentation of the Statue of Liberty in June 1885.

As a lawyer, Coudert held high place for forty years. In the judgment of his colleagues, he was sound and learned. He was elected seventh president of the Association of the Bar of the City of New York, and was offered, but declined to accept, appointments to the New York court of appeals and to the United States Supreme Court. In 1893 he successfully led the protest against the elevation of Judge Maynard to the New York court of appeals. His practise included a wide range of cases, civil, commercial, criminal; and he demonstrated his practical business capacity as government director (1884–87) and government receiver (1892–98) of the Union Pacific Railroad. His greatest achievements, however, were in international law, public and private. Initiated into this field as associate to Reverdy Johnson in the Civil War blockading cases, he eventually became counsel in the United States to the French, Italian, and Spanish governments. His firm had foreign branches and handled a large volume of patent, trade-mark, and extradition cases. He was a delegate of the New York Chamber of Commerce to the Antwerp conference called to revise the rules of general average, and in 1880 was a member of the International
Couples

Conference at Berne, for codification of the law of nations. He was one of the American counsel in the Bering Sea Fur Seal arbitration in 1893–95, and in 1896 was appointed by President Cleveland a member of the commission to investigate and report on the Venezuelan boundary dispute. Coueert had great natural gifts as an advocate, an intuitive insight, power of clear statement, and originality in presentation of arguments. He possessed a withering power of sarcasm, was easily moved, and "took refuge from pathos by unexpected transitions to humor."

COUES, ELLIOTT (Sept. 9, 1842-Dec. 25, 1899), ornithologist, was born in Portsmouth, N. H., the son of Samuel Elliott Coues, a man of literary and humanitarian interests, and of Charlotte Haven Ladd, a descendant of John Mason, the original grantee of New Hampshire. He was descended from Peter Coues, a native of the island of Jersey, who about 1735 settled in Portsmouth. In 1835, when Elliott was but eleven years of age, his family moved to Washington where the father had secured a position in the Patent Office. The son attended Gonzaga Seminary and Columbian College (now George Washington University) where he received the degrees of A.B. (1861) and M.D. (1863). During the Civil War he enlisted (1862) in the United States Army as a medical cadet and was appointed assistant surgeon in 1864, a position which he retained until his resignation in 1881. In boyhood Coues had shown a marked interest in the study of birds, and his removal to Washington, where he met many naturalists at the Smithsonian Institution, had increased this interest until it became absorbing. His first paper, A Monograph of the Tringaae, published at the age of nineteen, was typical of him. Instead of beginning with some amateurish note on a rare bird seen, or upon some field trip, he wrote a technical treatise of which any ornithologist in America might well have been proud, exhibiting not only knowledge of the subject but remarkable facility of expression. There followed at short intervals a long series of papers, notes, and reviews covering the whole field of ornithology but dealing with the birds of North America. These appeared in the American Naturalist, the Bulletin of the Nuttall Ornithological Club, the Auk, and the Proceedings of various societies. Coues's assignments in the army took him to various outposts in the West at a time when it was as yet little affected by civilization. He was stationed at Fort Whipple, Ariz., in 1864; at Fort Macon, N. C., in 1869–70; at Fort Randall, Dakota, in 1873; and he was appointed naturalist and secretary of the United States Northern Boundary Commission, 1873–76. Wherever he was located he made collections, discovering a number of hitherto unknown bird species and securing a vast amount of information for later publications. Realizing that the exploration of the West had so increased the knowledge of its ornithology as to render all general works on the subject out of date, he conceived and published, in 1872, his famous Key to North American Birds which ran through five editions, the last appearing in 1903, several years after his death. A preface to the work covered the history of ornithology and the elements of field and general ornithology, including in small compass the most astonishing amount of ornithological information and illustrating once more the author's remarkable ability to write forcibly and tersely. In 1874 he published his Birds of the Northwest, one of the most important works on the bird life of the north central portion of the country. Then came the classic Birds of the Colorado Valley (1878) containing some of the finest bird biographies that have ever appeared, as well as some beautiful examples of English prose writing. Unfortunately this work was never completed, but an appendix containing a bibliography of North American Ornithology from 1612 to 1877 is as notable in its way as the text itself. This was a part of a Universal Ornithological Bibliography upon which Coues had spent years of work in the large scientific libraries of the country. He also turned his attention to North American Mammals, publishing a notable volume on the Fur Bearing Animals (1877), a monograph of the North American Mustelidae, and later five monographs of Rodentia to accompany others by J. A. Allen, the whole forming the bulky fourth volume of the Hayden Survey. He occupied the chair of anatomy in Columbia University, 1877–86. He became secretary and naturalist of the Geological and Geographic Survey of the Territories under F. V. Hayden in 1880, and wrote many important ornithological papers which appeared in the Bulletin of the Survey. He was one of the founders of the American Ornithologists' Union, in 1883, and served later as vice-president and president, acting also as associate editor of its publications, the Bulletin of the Nuttall Ornithological Club and its successor, the Auk. He was one of the committee of the Union which prepared the original edition of the Check List of North American Birds (1886), and the
**Coutes**

Code of Nomenclature by which it was governed. From 1884 to 1891 he became a contributor to *The Century Dictionary* covering the subjects of general zoology, biology, and comparative anatomy, and supplying upwards of 40,000 definitions. The ornithological portion has well been termed an “encyclopedia of ornithology.”

During the eighties he devoted much time and attention to the subject of psychical research. In 1884, on a visit to Europe, he met Henry Steel Olcott and Mme. Helena Blavatsky [qq.v.] and became an ardent theosophist. He soon founded the Gnostic Branch of the Theosophical Society in Washington, D.C., and was elected president of the American Board of Control of the Theosophical Society; he was also active in the formation of the American Society for Psychical Research. He brought out an American edition of Olcott’s *Buddhist Catechism* and edited Robert Dodsley’s *True and Complete Economy of Human Life*, adding the sub-title “Based on the System of Theosophical Ethics.” But his ambition to become head of the entire theosophical movement in America, as well as his skepticism in regard to Mahatmic messages, brought him in May 1888 into conflict with William Quan Judge [q.v.] and eventually into conflict with the whole society. As late as Dec. 25, 1888, he could still write to Mme. Blavatsky as “the greatest woman of this age, who is born to redeem her times;” and, indeed, on Apr. 16 and 17, reiterated his devotion, but less than a month later, after his failure to be elected president of the American Section, he denounced the Society as “Mme. Blavatsky’s famous hoax” (*Religio-Philosophical Journal*, May 11). On June 22 he was formally expelled. An injudicious interview given to the New York *Sun* a year later (Sun, July 20, 1890) in which he assailed the characters of Mme. Blavatsky and of Judge, led to a libel suit terminated by the *Sun*’s abject apology on Sept. 26, 1892, which stated that the charges of Coutes were “not sustained by evidence and should not have been printed” (for a detailed, if partisan, account of these episodes, see *The Theosophical Movement*, 1925, chs. 12-14).

Coutes finally turned his attention to the editing of various works on early travel in the West. In turn there appeared *History of the Expedition of Lewis and Clark* (1893), *Expedition of Zebulon Montgomery Pike* (1895), *Journals of Alexander Henry and David Thompson* (1897), *Journal of Major Jacob Fowler* (1898), *Forty Years a Fur Trader on the Upper Missouri* by Charles Larpenteur (1898), and *Diary of Francisco Garces* (1900), fifteen volumes in all, and, with the exception of the Lewis and Clark and Pike volumes, consisting of hitherto unpublished matter. All contained copious annotations by the editor. While he was on an arduous journey through New Mexico and Arizona in search of information for the last of the above works Coutes’s hitherto robust health gave way and a complication of maladies resulted in his death. He was married twice: on May 3, 1867, to Jane Augusta McKenney; and, on Oct. 25, 1887, to Mrs. Mary Emily Bates who survived him.

[D. G. Elliott, “In Memoriam: Elliott Coutes,” *Auh*, vol. XVIII, no. 1 (Jan. 1901); *Nat. Acad. Sci.,* “Biographical Memoir of Elliott Coutes,” J. A. Allen, VI, 397-446 (June 1909); personal acquaintance.]

**COULDOCK, CHARLES WALTER** (Apr. 26, 1815—Nov. 27, 1898), actor, was born in Long Acre, London, the son of a composer who died when the boy was four years old. His mother remarrying, the boy was taken into the carpenter shop of his stepfather. He attended the London High School, and continued his education by going to evening school, while he worked at various trades during the day. When he was sixteen he saw Macready play Werner, and from that time on he was determined to be an actor. The realization of this desire, however, was delayed by the opposition of his grandmother. When she died, young Couldock turned to the stage at the age of twenty-one. He obtained his training by speaking in an elocution class, by acting with a company of strolling players at Farnham in Surrey, and by playing in stock companies at Gravesend, Bath, Southampton, and Edinburgh, arduous work that kept the young actor up many nights studying new parts. Later he was engaged to play leading rôles at Birmingham, appearing on Dec. 26, 1845, as Sir Giles Overreach in *A New Way to Pay Old Debts*. He remained as leading man at the Theatre Royal in Birmingham and at the Theatre Royal in Liverpool for four years, acting with all the stars of the day, Macready, John Vandenhoff, Charles Kean, Madame Vestris, Buckstone, Webster, Ellen Tree, Madame Céleste, Charles Mathews, Fanny Kemble, and many others, including the American actress Charlotte Cushman, with whom he came to America.

In America Couldock’s ability was recognized at once. He appeared on Oct. 8, 1849, at the old Broadway Theatre playing the title rôle in *The Stranger* to Charlotte Cushman’s Mrs. Haller. He made a brief tour with her company, after which he remained for four seasons at the Walnut Street Theatre in Philadelphia as leading man. During his first engagement in America Couldock played Othello, Macbeth, King Lear, Iago, Hamlet, Cardinal Wolsey, Jacques, St. Pierre, Master Waller, Duke Aranza, Benedict,
Coulter

and Louis XI, then his greatest success. He also played many parts in stock. At the Walnut Street Theatre he took the part of Luke Fielding in *The Willow Copse* (1853), a new play brought to America by Madame Céleste, who rewarded Couldock's brilliancy as an actor by presenting him with a copy of the drama with the right to produce it (*New York Dramatic Mirror*, Apr. 13, 1895). He traveled for several seasons with this play, starring extensively with his daughter Eliza. In *The Willow Copse* and *The Chimney Corner* he made a national reputation. In 1858 he joined Laura Keene's company, playing the original Abel Murcott in *Our American Cousin*. He originated the character of Dustin Kirke in the popular domestic drama *Hazel Kirke*, and he played the part at the Madison Square Theatre for 486 performances before the play was withdrawn. His name was also among the prominent artists who appeared at the Boston Museum from 1850 to 1870. He appeared on the stage for sixty years, and few actors of his time equaled him in his hold on the public. He earned considerable money, but he gave it away to the poor. A complimentary benefit performance was given him May 10, 1887 (matinée), at the Star Theatre in New York City in celebration of his fiftieth year upon the stage. A profound lover of dramatic art, he knew all the important actors of his time. He was the friend of Edwin Booth, Macready, and Joseph Jefferson, who said of him: "I have known him as a father, a husband, a friend. And during the forty years that I have known him, and longer than that, no living man can say that Charles Walter Couldock ever disappointed a public, deceived his friends, or injured his enemy" (*New York Times*, May 13, 1895). He was a man of fertile mind, of great vitality, and of inestimable energy. He was hearty, genial, full of wit, and a good story teller.

**Coulter, John Merle** (Nov. 20, 1851–Dec. 23, 1928), botanist, was born at Ningpo, China, the son of missionary parents, Moses Stanley and Caroline E. (Crowe) Coulter. He graduated with the degree of A.B. from Hanover College in 1870. In 1872 he was assistant geologist on the Hayden Survey. While the expedition was waiting in the mountains for Hayden, the rest of the party whiled away the time playing cards; but since young Coulter did not know how to play, he collected plants. When Hayden arrived, he was so impressed by Coulter's collections that he appointed him botanist of the expedition. The object of the expedition was to look for the rumored hot springs and geysers of what is now Yellowstone Park. When they found the geysers, each member was assigned one of the holes for study. Since Coulter was the youngest member of the party, they assigned him one of the smaller holes. It turned out to be Old Faithful.

The study of his botanical collections took him to Washington, where he met Asa Gray. The meeting was the beginning of a life-long friendship. Coulter became Gray's most distinguished pupil and with Sereno Watson he edited (1890) the sixth edition of Gray's famous *Manual*. In 1873 he received the degree of A.M. from Hanover College and was professor of natural sciences there, 1874-79, and professor of biology in Wabash College, 1879-91. During this period (in 1884) he received the degree of Ph.D. from Indiana State University. He was a lifelong friend of David Starr Jordan, and when Jordan resigned from the presidency of Indiana State University (1891), he persuaded Coulter to succeed him. The politics of a state university and the worry about securing funds from politicians were so distasteful that Coulter resigned in 1893 and became president of Lake Forest University, which he thought was so well endowed that there would be no financial problems. Even at Lake Forest, however, administrative duties interfered seriously with his chosen work and he went to the University of Chicago (1896), where he was able to devote nearly thirty years to building up a strong department and to training young men and women for teaching and research. After retiring from active teaching in 1925 he became adviser to the Boyce Thompson Institute for Plant Research at Yonkers, N. Y., for the foundation of which he was largely responsible.

His early training and teaching in botany were taxonomic; but when the nomenclature controversy promised to make the taxonomy of the next twenty years a quarrel over the names of plants, he turned to morphology, and nearly all of the research done under his direction at the University of Chicago belonged to this field. Nevertheless he was broad-minded and sympathetic in his attitude toward other phases of botany. He called Prof. Charles R. Barnes to Chicago to develop plant physiology and gave to Prof. Henry C. Cowles such an opportunity to develop the new field of ecology that this branch has become recognized as one of the fundamentals of a botanical education.
Couper

In 1875, while at Hanover College, he founded the Botanical Gazette, which he not only edited, but also managed and often financed. It has become the leading botanical journal of America. Reviews of the critical type, as distinguished from the colorless type of abstracting journals, have always been a feature of the Gazette, and Couler's reviews are models of this kind of writing. He wrote several manuals and botanical text-books, among which were: Manual of the Botany of the Rocky Mountain Region (1885), Manual of Texan Botany (1893), Plant Relations (1899), Plant Structures (1899), Plant Studies (1900), Morphology of Gymnosperms (1910) with Charles J. Chamberlain, Morphology of Angiosperms (1903) with the same, A Textbook of Botany (1906), Fundamentals of Plant Breeding (1914), Evolution of Sex in Plants (1914), Plant Genetics (1918). Besides these there were taxonomic monographs and shorter articles. What would have been his greatest contribution, a history of botany, will probably never be completed. For years he had been gathering material, and, occasionally, in lectures he had given glimpses of what the work might be. He had just completed a collection of biographical sketches when he died.

Couler's greatest influence was not through his books and papers, however, numerous and good as they were, but through the men and women he trained. No other American botanist has so many students holding high positions. He belonged to botanical organizations at home and abroad and received all the major honors his fellows botanists could bestow upon him. Before his death, his students had already established the John M. Couler Research Fellowship in Botany, to support exceptional students engaged in research.

C.J.C.

COUPER, JAMES HAMILTON (Mar. 4, 1794–June 3, 1866), planter, was the son of John and Rebecca (Maxwell) Couper. John Couper emigrated to Georgia from Scotland, and, in partnership with a boyhood friend, James Hamilton, acquired (1804) an extensive tract of land on the southern bank of the Altamaha River about sixteen miles from Brunswick, Ga. The name "Hopeton" was given to this plantation of some 2,000 acres. John Couper also owned a large plantation on St. Simon's Island known as Cannon's Point. He became a wealthy and influential citizen of the community. In deed he was one of the leaders in the most influential group of seaboard planters.

After graduation from Yale in 1814, James Hamilton Couper spent some time in Holland studying the Dutch methods of water control. On his return to Georgia he was made manager of the Hopeton estate. His father failed in business in 1826. The partner, Hamilton, assumed all of John Couper's liabilities in return for a half interest in the Hopeton property. James Hamilton Couper, the following year (1827), bought from Hamilton a half interest in the Hopeton plantation and remained as manager of the whole. He also in time inherited his father's place at Cannon's Point and acquired other interests in his own right. In his heyday James Hamilton Couper had the supervision of 1,500 slaves and the management of extensive properties owned by others in addition to his own important plantations.

Couper's distinction derives from the fact that he was one of the first American planters to conduct his operations on the basis of scientific research and experimentation. Not content with following time-honored methods, he blazed the way for his contemporaries and successors in the great coastal plantation area. The diking and drainage system established by him at Hopeton became the model followed by all rice planters. Couper's experiments in agricultural lines were of much interest and importance. At first his efforts were devoted principally to the production of sea island or long staple cotton. He found, however, that because of the richness of the soil, the plant grew too late in the season for proper maturing. He thereupon shifted to sugar cane as his leading crop. In 1829 he erected at Hopeton the most complete and modern sugar mill in the South. After 1838 Couper and most other Georgia planters practically abandoned sugar growing for rice. Couper made extensive experiments in the production of olive oil. His father had set out a grove of olive trees at Cannon's Point. The son demonstrated that olive growing was practicable on the Island despite losses from occasional heavy frosts. He was furthermore the pioneer in the crushing of cotton seed for oil. The United States Census states that the first cotton-seed oil mill was established in 1837, but by 1834 Couper was operating two such mills, one at Natchez, Miss., the other at Mobile, Ala. (Couper Letters, January 1834 and Dec. 13, 1834). Couper undertook many other experiments in the way of introducing and acclimatizing exotic plants, notably in the introduction of Bermuda grass, now the principal grass of Georgia. His fame as a scie
Courtney

scientifc farmer, experimenter, geologist, and con-
chologist spread. Many noted travelers from
Europe visited him at Hopeton and Cannon's
Point. These visitors were unanimous in their
praise of his agricultural system, his manage-
ment and treatment of slaves, and expressed
wonder at the bounty of his hospitality, the ex-
tent and beauty of his orchards and gardens.
So well did lie systematize his time that he had
ample leisure for reading and for practising the
art of conversation, of which he was a master.
His library was large and well chosen.

The Civil War rudely interrupted this life.
The slaves were freed, work abandoned, the
plantations fell into decay, the primeval forests
and the uncontrolled water reclaimed the coast-
al areas. Every rice plantation on the Savan-
nah, Ogeechee, and Altamaha rivers was ultima-
tely abandoned (Wyllly, Memorieis). Couper
had been opposed to secession, but all five of
his sons went into the Confederate army. Two
of them died in the service, the eldest, Hamil-
ton, a graduate of Yale University, and John, a
gifted artist. Couper died in 1866, broken in
health and fortune. He lies buried at Frederika
on St. Simon's Island.

There is some first-hand material bearing on the
life of Couper in the possession of his grand-daughters,
Mrs. Franklin B. Screven of Savannah, Ga., and Mrs.
W. S. Lovell of Birmingham, Ala. The writings of
Capt. Chas. Spalding Wyllly, a family connection of
the Coupers, may also be ranked as primary sources.
His studies are Annals and Statistics of Glynn Coun-
ty, Ga. (1897); The Seed That Was Sown in the Colo-
cy of Georgia (1910); Memories (1916). Geo. R.
White, Hist. Colls. of Ga. (1855), was dedicated to
Jas. Hamilton Couper and contains valuable data, par-
ticularly with reference to his father. Sir Chas. Lyell,
Second Visit to the U. S. (1849), vol. I, chs. xvii and
xix, gives a full account of the Couper plantations.
References to Couper and his work are also to be
found in Fredrika Bremer, The Homes of the New
World (1853), vol. III; Frances Anne Kemble, Jour.
of a Residence on a Georgian Plantation in 1838-39
(1868); and Frances Butler Leigh, Ten Years on a
Georgian Plantation (1883). Hon. W. G. Brantley,
a former congressman from Ga., and a resident of Brun-
swick (the county seat of Glynn County) delivered
a notable address on the life of Couper before the Inter-
State Sugar Cane Growers' Association, in Macon,
Ga., held May 6, 7, 8, 1903. This address reproduces
a number of the Couper letters and other writings.

R. P. B.

COURTNEY, CHARLES EDWARD (Nov.
13, 1849-July 17, 1920), single sculler, rowing
coach, was born at Union Springs, N. Y., the
son of James Thomas Courtney, a landscape
gardener, who had moved thither from Salem,
Mass. Fascinated by yacht-racing, then popu-
lar on Cayuga Lake, Charles at the age of twelve
years built his first boat. He learned the car-
penter's trade and with his eldest brother became
a builder and contractor. In August 1868 a
New Yorker named Tyler appeared on Cayuga
Lake with a paper scull and issued a challenge
for a race. Courtney entered the race, putting
oars in a home-made sailing craft which out-
weighed those of his competitors by over twen-
ty pounds, and won in walk-away style. This
was the beginning of his career. On June 25,
1873, at Syracuse, he defeated Charles Smith and
William Bishop of New York, by almost a quar-
ter of a mile over a three-mile course. In Sep-
tember of that year, he entered the Saratoga
regatta and won against twelve entries in rec-
ord time. After that as an amateur he won
eighty-eight consecutive races. At Saratoga
with Frank Yates he rowed two miles in twelve
minutes, sixteen seconds, still the world's rec-
ord for this distance. At Aurora, in a single
scull, he rowed two miles in thirteen minutes
fourteen seconds, the fastest time on record for
a race with a turn. In practise he rowed a mile
in six minutes and a mile and a half in nine
minutes. In 1877 he turned professional. He
had never been beaten until he met Ned Hanlan
at Lachine in 1878 and lost in a race which
was so close that the sporting world demanded
another to determine which man was the bet-
ter oar. Papers were signed for a return race
on Chautauqua Lake on Oct. 8, 1879. On the
morning of the race, Courtney's shell was found
in his boat-house saved in two. Courtney was
accused, and for a generation an argument,
which was never settled, raged between his
friends and his enemies. As a professional
Courtney rowed forty-six races of which he lost
seven.

His career as a trainer and a coach began in
1875 with a class of girls from the seminary at
Union Springs. In 1883 he prepared a Cornell
four in ten days, which defeated by thirty-two
seconds, Pennsylvania, Princeton, and Wesleyan.
In this race, Courtney introduced sliding seats
on rollers. In 1885 he was made head coach at
Cornell, after which he practically withdrew
from professional sculling. From 1883 until he
retired in 1916 he coached approximately 146
Cornell crews which took part in inter-collegi-
ate races of which they won 101.

In 1895 Cornell sent her eight to the Henley
regatta, where an unfortunate incident and
Courtney's secretive methods created a bad im-
pression among the English rowing public.
Courtney, however, learned a lesson at Hen-
ley and afterward lengthened out and improved
his stroke, though he always stubbornly denied
that he had changed his style in the slightest
degree. In his coaching he tried everything
that was suggested or invented; he was the first
man to use the camera in rowing, and a
Covode

pressure-recording machine attached to a rowing machine. As a coach he was a martinet, imposing upon his men rules of diet and training to which few college boys would submit. With all his temperamental ways and czar-like methods, however, he was affectionately known to students and faculty as “The Old Man.” On his way to Poughkeepsie in 1915 he was thrown against the end of his berth and suffered a serious concussion of the brain, but went on with his coaching until the day of the regatta, when he collapsed. He never fully recovered.

A. H. B.

COVODE, JOHN (Mar. 19, 1808–Jan. 11, 1871), congressman, son of Jacob Covode and — Updegraff, was the grandson of Garrett Covode, who was kidnapped on the streets of Amsterdam by a sea-captain and brought as a child to Philadelphia where he was sold as an indentured servant. John Covode received a scantly education in the public schools of Westmoreland County, Pa. After working for several years on his father’s farm and serving an apprenticeship to a blacksmith, he found employment in a wooden-mill at Lockport. Of this mill he became owner in his early manhood and continued in the business of manufacturing for the remainder of his life, although from time to time he was interested in other business enterprises, such as the Pennsylvania Canal, the Pennsylvania Railroad, and the Westmoreland Coal Company. At his death he had a considerable fortune.

Through his conduct in his first public office, that of justice of the peace, Covode gained for himself the sobriquet, “Honest John,” which clung to him all his life. He served two terms as a Whig in the Pennsylvania House of Representatives and was twice a Whig candidate for the state Senate, being defeated both times. He was elected to the national House of Representatives as an anti-Masonic Whig in 1854 and re-elected as a Republican in 1856. In this position he served continuously until 1863 when he declined the nomination. He reentered the House in 1867 and remained a member until his death.

In Congress he first became prominent in the spring of 1860 by reason of his chairmanship of the Covode Investigation Committee, appointed by the House on the adoption of Covode’s resolution of Mar. 5, 1860, to inquire into the alleged use of improper influence by President Buchanan in attempting to secure the passage of the Lecompton Bill (*Congressional Globe*, 36 Cong., 1 Sess., p. 997). In moving this investigation Covode was probably retaliating for a charge made by the President that bribery had been used in the Congressional elections in Pennsylvania in 1858; his pretext was the charge by two members of the House that the President had attempted to bribe and coerce them in the Lecompton affair (*Ibid.*, p. 1017). Buchanan sent to the House a protest against this investigation so far as it related to himself, but the House disregarded the protest and the investigation proceeded. It resulted in a majority and a minority report (*House Report* 648, 36 Cong., 1 Sess.), but the House took no action on either. In all probability the investigation was meant to produce nothing more serious than ammunition to be used by the Republicans in the presidential campaign of 1860; Covode was a member of the Republican Executive Congressional Committee for this campaign.

During the war Covode was a strong supporter of Lincoln. In December 1861 he was appointed a member of the Joint Committee on the Conduct of the War and took an active part in its work until his retirement in 1863. In the summer of 1865 he was sent by the War Department into the South, “to look into matters connected with the interests of the government in the Mississippi valley.” Upon his return President Johnson declined to accept his report, in which he urged the removal of Gov. Wells of Louisiana and opposed the policy of withdrawing the troops from the South (*Report of the Joint Committee on Reconstruction*, 1866, pt. 4, p. 114). The President suggested that he file it with the War Department under whose authority he had been acting. From this time on Covode was an opponent of the President and upon his return to Congress steadily supported the congressional policy of reconstruction (*Congressional Globe*, 40 Cong., 2 Sess., Appendix, p. 462). He introduced into the House the resolution calling for the impeachment of Johnson. The results of Covode’s mission to the South do not appear to have been of any special importance nor does he appear to have exerted any considerable influence in Congress at any time during the Reconstruction period.

R. S. C.

COWAN, EDGAR (Sept. 19, 1815–Aug. 31, 1885), lawyer, United States senator, was born at Greensburg in Westmoreland County, Pa., of Scotch-Irish ancestry. In his childhood he lived
Cowan

with the family of his grandfather, Capt. William Cowan. Through his own efforts he secured funds to attend Franklin College at New Athens, Ohio, from which he graduated in 1839. In 1842 he was married to Lucetta Oliver of West Newton, daughter of Col. James B. Oliver. Admitted to the bar in Westmoreland County in the same year, he soon won recognition as one of the ablest lawyers in western Pennsylvania. At first a follower of Andrew Jackson, he had become a Whig in 1840, and in 1856 he joined the Republican party. In 1861 he became a candidate to succeed William Bigler in the United States Senate. His most dangerous opponent in the Republican caucus was David Wilmot; but Cowan, although not as well known, was believed to be conservative and therefore safe at a time when the people of the state wished to show the South that they did not believe in extreme measures. He was elected by a vote of 98 to 35 for Henry Foster, his Democratic opponent (Pittsburgh Gazette, Jan. 15, 1861).

Cowan went into office with the confidence of his constituents (Philadelphia Press, Jan. 23, Pittsburgh Gazette, Jan. 22, 1861). Unfortunately, however, this soon gave way to the most violent denunciation. His adherence to a strict construction of the Constitution led him in 1862 to oppose the expulsions of Senator Jesse D. Bright [q.v.] of Indiana (Congressional Globe, 37 Cong., 2 Sess., p. 653). Believing that the purpose of the war was the suppression of a rebellion and not the conquest of the Southern states, he opposed the Confiscation Act (Ibid., pp. 1049, 1862, 1865). He refused also to support the Legal Tender Act (Ibid., p. 804) and the National Bank Act (Ibid., 3 Sess., p. 897). Such a course led him to be bitterly denounced by the Unionists. Ben Wade termed him the “watch-dog of slavery” (Pittsburgh Daily Post, June 18, 1862). The Republicans of Allegheny County passed resolutions of censure at their annual convention in 1862 (Ibid., June 25, 1862). This criticism continued to the end of his term and made his re-election impossible, despite his support of such measures as the suspension of the writ of habeas corpus, conscription, and the various acts authorizing loans, increasing taxes, imposing additional revenue duties, and raising the tariff. So complete was the reversal of his political status that in 1867 the Democrats supported him as their candidate for the Senate (Pittsburgh Gazette, Jan. 20, 1867). Cowan upheld President Johnson in his contest with Congress. The belief that his selection as minister to Austria in 1867 was a reward for this support led the Senate to refuse to confirm his nomination. He retired to private life at the expiration of his term in the Senate and practised law until his death. He was an able lawyer, a well-trained scholar, and a forceful speaker. In assuming the unpopular position that he took on public questions he contended that he did that which he believed to be constitutional. Possessed of strong convictions, he had the courage to be true to them.

B. H. P.

COWELL, SIDNEY FRANCES. [See Bate- man, Sidney Frances Cowell, 1823-81.]

COWEN, JOHN KISSIG (Oct. 28, 1844-Apr. 26, 1904), lawyer, railroad administrator, was the son of Washington and Elizabeth (Lemmon) Cowen, Pennsylvanians of Scotch-Irish descent. They early moved to Holmes County, Ohio, where Washington Cowen eked out the income from his pioneer farm by blacksmithing for his neighbors. In Holmes County, John Kissig was born, and reared under the discipline which comes from religion, poverty, and hard work. His earliest education was gained in the public schools at home, his preparation for college in private institutions. In the academic year 1863-64 he matriculated at Princeton. A fellow student described him as then being "six feet tall, big-shouldered, and strong-looking all over," with a "big round head covered thickly with reddish hair." This Western youth likewise had a humorous philosophy and an amiable disposition which won him many friends. He soon excelled in his studies, especially in Greek and mathematics, and, in 1866, graduated at the head of his class. Following graduation he studied law, first, by himself, while teaching in the Millersburg, Ohio, high school and while principal of an academy at Shreve, and then as a student in the law school of the University of Michigan. In 1868 he passed the bar examinations at Canton, Ohio, and shortly afterward began to practise in Mansfield.

In addition to the rarely combined qualities of unusual eloquence, clarity of expression, and sound judgment, Cowen had a fine perception of the spirit of the law. He soon became a leading member of the profession in Ohio, and gained an extensive practise, always preferring civil to criminal cases. In 1872 he was offered the position of counsel for the Baltimore & Ohio Railroad Company, which he accepted, and for the remainder of his life he was connected with that
Cowles

railroad and made his home in Baltimore. In 1876 he became general counsel for the company. During the early years in Baltimore he had considerable private corporation practise; and for some time following 1882, he gave attention to politics, usually acting independently on local questions but affiliating, as regards national issues, with the “sound money” Democrats. From 1894 to 1896 he was a representative in Congress from Baltimore, but he had little leisure to give to service in Congress because of the now great burdens connected with his relation to the railroad company.

The financial difficulties of the Baltimore & Ohio had already begun when Cowen joined the company, and in 1896 matters reached a climax. A receivership was necessary, and this position was given by the court jointly to Cowen and Oscar G. Murray. In addition, Cowen was made president of the company. The receivership, which lasted from February 1896 to June 1898, was handled with unusual ability. Under it, the company’s property was reorganized and placed in a sound condition, and made a net earning of almost $25,000,000. On a very narrow collateral the receivers were able to borrow approximately $20,000,000, which was necessary for repairing the road. Every bondholder was paid in full, the floating debt was paid, and the fraction of loss to the stockholders of the company was a small one. Cowen’s heavy duties, however, caused a serious physical breakdown, and in 1901 he resigned the presidency of the Baltimore & Ohio and was made a member of the board of directors. Most of his time during the few remaining years of his life was given to a futile effort to recover his health. Cowen was married to Helen Woods.

COWLES, EDWIN (Sept. 19, 1825–Mar. 4, 1890), journalist, was born in Austenburg, Ohio. A Cowles, originally Coles or Cole, had come to Massachusetts in 1635, and a year later had joined the pioneer band that the Rev. Thomas Hooker led from Cambridge to Connecticut. In 1810, a descendant, Dr. Edwin Weed Cowles, settled at Austenburg, Ohio, among Connecticut neighbors who had been lured into the West. When Edwin, the son of Dr. Edwin Weed and Almira (Foote) Cowles, was seven years of age, the family took up its abode in Cleveland. Ed-

Cowley

win’s education was limited to a few years in the local schools and one at the Grand River Institute in Austinburg. At the age of fourteen, he entered a printer’s office. Five years later (1844) he and T. H. Smeal became partners in the printing business. In 1853, the partnership with Smeal was dissolved and another formed with Joseph Medill and John C. Vaughn (Medill, Cowles & Company). The new organization published the Forest City Democrat, a Free-Soil Whig newspaper. In 1854, the name was changed to the Cleveland Leader. A year later Cowles became sole owner and shortly afterward editor as well. His enterprise rapidly grew to include both a morning and an evening daily newspaper.

His connection with political history was intimate. He was one of the founders of the Republican party. At the beginning of the Civil War he became an insistent advocate of coercion of the Southern states and immediate emancipation of the slaves. In 1861, Lincoln appointed him postmaster in Cleveland, an office he held five years. In 1876 and 1884, he was a delegate to the National Republican Convention. On the second occasion he was vice-president of the convention. He was a regular party man, loyal to Grant, and throughout his life a believer in Blaine. Finding that Blaine could not be nominated in 1876 and 1880, he threw his influence behind Ohio’s favorite sons, Hayes and Garfield. Working all his life under a handicap of deafness that would have baffled a weaker personality, he was an editor of remarkable courage, unchangeable convictions, and relentless dogmatisms, and such qualities made his pen a power in northern Ohio for a generation.

He was married in 1849 to Elizabeth C. Hutchinson of Cayuga, N. Y. In his later years he aided his sons, Eugene and Alfred, in the development of new methods in electric smelting. The aluminum, carborundum, calcium carbide, and acetylene industries grew out of their work. A company was formed for the manufacture of such products and Edwin Cowles, who supplied most of the capital, was its president. His interests in this company kept him in Europe much of the last two years of his life.

[The chief sources are Cowles’s newspapers, files of which are in the Western Reserve Hist. Soc. The Cleveland Plain Dealer, The Leader, and The Y. Times, Mar. 5, 1890, each published an estimate of his work. See also the Cleveland Weekly Leader and Herald, Mar. 8, 1890; Gertrude Van Rensselaer Wickham, The Pionner Families of Cleveland (1914), II, 394 ff. A Hist. of Ashtabula County, Ohio (1878), contains a sketch prepared under Cowles’s direction.]

E. J. B.

COWLEY, CHARLES (Jan. 9, 1832–Feb. 6, 1908), lawyer, author, was born at Easting-
Cowley

ton, Gloucestershire, England, his parents being Aaron and Hannah (Price) Cowley. While he was a child, the family came to the United States and settled in Massachusetts, his father establishing carpet factories at Lowell and Woburn. Charles attended the common schools at Lowell and after a short period of private tuition, commenced reporting for the local newspapers. He became editor of the Lowell Daily Courier, June 30, 1853, at the same time interesting himself in the early history of the locality and the antiquities of the native inhabitants. He gave up journalism, however, in 1854, studied law, and on his admission to the Middlesex bar, May 16, 1856, commenced practise at Lowell. In the same year he wrote a “History of the City of Lowell” for A Handbook of Business in Lowell. This was followed by Memories of the Indians and Pioneers of the Region of Lowell (1862). In the meanwhile the Civil War had begun, and Cowley entered the United States navy as a paymaster, being at first stationed at Brooklyn Navy Yard. Later he served in the same capacity on the monitor Lehigh, then attached to the South Atlantic Squadron under Admiral Du Pont. When Rear Admiral Dahlgren assumed command in 1863 Cowley was appointed judge-advocate on the latter’s staff and transferred to the flagship Pennsylvania, later becoming provost judge. He was present at the occupation of Savannah and Charleston. On the termination of the war he opened a law office at Boston, but in a short time returned to Lowell, resuming his historical investigations, and devoting much time to literary pursuits. His Illustrated History of Lowell (1868) covered new ground and was written in an attractive style. It displayed thorough research and became the standard work on the subject. He had also interested himself in social welfare work, and acted as legal adviser to the various labor organizations in Lowell. He was counsel for the Grand Lodge of Knights of St. Crispin, and, when its incorporation by the legislature was assailed as unconstitutional, he was successful in establishing the legality of trade unions in Massachusetts (Snow et al vs. Wheeler, 113 Mass. 179). He ardently championed the ten-hour movement through a five years’ struggle in the legislature. When that body in 1874 finally passed a penal act restricting the hours of labor of women and children to ten hours a day, he established its constitutionality in the supreme judicial court (Commonwealth vs. Hamilton Manufacturing Company, 120 Mass. 383). In 1875 and 1876 he was a member of the Common Council of Lowell, the only public office he ever held, serving on the commit-

tee which drafted a new city charter and ordinances. His interests were diversified and his literary activity was at this period intense. He edited Revised Charter and ordinances of the City of Lowell (1876) and Dahlgren’s Maritime International Law (1877), and in rapid succession wrote Famous Divorces of All Ages (1878), Histon Sketch of Middlesex County (1878), Leaves from a Lawyer’s Life Afloat and Ashore (1879), Reminiscences of James C. Ayer (1879) and Our Divorce Courts; Their Origin and History (1879). He later published Lowell in the Navy during the War (1894) and The Siege of Charleston: a History of the Department of the South and of the North Atlantic Blockading Squadron (1899). He also published in the Contributions to the Old Residents Historical Association of Lowell a number of papers on subjects of local interest. He died at Lowell, Feb. 6, 1908. [Material for the details of Cowley’s life is scanty, the best review of his career being in New Eng. Hist. and Gen. Reg., vol. LXIII (1909), p. iii. See also his Leaves from a Lawyer’s Life Afloat and Ashore, which however singularly lacks personal detail.] H.W.H.K.

Cox, George Barnsdale (Apr. 29, 1853-May 20, 1916), Ohio politician, was born in Cincinnati, the son of George Barnsdale Cox, and of a daughter of James Stitt, a Canadian customs official. His father, an Englishman who came to this country in 1847, died penniless when the boy was eight years old and to support his mother Cox left school. He was, in turn, newsboy, bootblack, butcher boy, wagon driver, tobacco salesman, bartender, and ultimately proprietor of a saloon. At eighteen he entered the Republican party as a challenger at the polls because, as he later declared, “my father had been a Republican” (Cincinnati Enquirer, May 15, 1911). At twenty-four he was elected to the city council, the only public office he held with the exception of that of state inspector of oil to which he was appointed in 1888. He was, however, twice a candidate for county clerk but in each case was defeated. In 1881 he sold his saloon and devoted his time to real estate and local politics. By 1884 his prominence as a ward politician caused him to be elected chairman of the Republican County Congressional Committee. The success of his candidates in the October election brought his appointment as chairman of the Blaine campaign in Hamilton County. Blaine carried Cincinnati and the county by a large majority, and this further enhanced Cox’s prestige. The following year Joseph B. Foraker [q.v.] was elected governor, and it was during his administration that the foundation of the Republican machine was laid through the efforts of Dr. Thomas Graydon; R. K. Hynicka, Cox’s secretary; August Hermann; and

473
Cox. The Ohio legislature was induced to pass a law replacing the elective Cincinnati Board of Public Works by a Board of Public Affairs appointed by the governor. The new Board proceeded to dismiss all Democratic office-holders, and Cox was given the power to appoint Republicans. By a judicious method of scattering his appointments over all the wards his own power was increased. From 1888 to 1910 "no man had a chance to get on the Republican ticket without the approval of Cox"; and the organization he erected was "in its way, more complete, more exacting, and under more rigid discipline than Tammany Hall" (Ibid., May 21, 1916). To learn the essentials of boss rule, Cox visited New York and studied the Tammany machine; but his success lay largely in the apathy of the individual voter and the press (with the exception of the Cincinnati Times-Star) in the early eighties, the inefficiency of the reformers when in office, the decimating of the ranks of his opponents by offers of lucrative positions, his shrewdness in confusing the public by placing "third tickets" in the field, his close association with the corporate interests, his loyalty to his supporters, and the faith they had in his skill. There was always, however, a minority in his party who resented his rule; and this group, combined with the Democrats, frequently attempted to dethrone him. They failed to do so in 1894 but in 1897 the fusionists were triumphant. Cox published a letter of resignation, but the "call of the people" caused his return and in 1899 he elected his full slate. Beaten again in 1905, he regained control in 1907, even though the Drake Committee, appointed by a Democratic state legislature in 1906, had brought out the fact "that various banks had for years been paying interest on vast sums" which had not been paid into the treasury. This disclosure caused the return of $214,908.76 to the treasury (Goss, post, I, 264-76). In 1911 the district attorney obtained an indictment against Cox on the ground that he had perjured himself in testifying that he had never received any of this money. These indictments were finally quashed on the ground that Cox had been subpenaed before the grand jury while under investigation and that "under the constitution of Ohio and the constitution of the United States no one can be compelled to be a witness against himself" (Cincinnati Enquirer, May 21, 1911). With the closing of this case Cox retired from active politics and during the remainder of his life devoted his time to his large theatrical and other business enterprises. In a personal interview to the New York World, May 15, 1911, he gave his own views on bosses and politics. He acknowledged the title given him, claimed the boss was a product of American political life, and with due modesty declared that he had evolved into a boss "because of my peculiar fitness." To him politics was a game. "I like it because I am successful. One usually likes to play the game in which one is successful." Yet at the same time he strenuously "advised young men not to enter politics. . . . In the first place there is no money in it for the honest man and in the second place there is only abuse whether you are successful or unsuccessful" (Ibid., May 15, 1911). Cox was physically a large man, fearless in the face of danger (Ibid., May 21, 1916), methodical in his habits, a man of few intimate friends, reticent in speech, and devoted to his wife, Caroline, daughter of Samuel Shields.

The most illuminating sketch of Cox's life is given in his personal interview to the New York World printed in the Cincinnati Enquirer, May 15, 1911. Cf. also Cincinnati Enquirer, May 21, 1916, for a general résumé of his career. The most complete printed account of his activities can be found in Chas. F. Goss, Cincinnati, the Queen City (1912), but this is somewhat biased by the strong feelings of the writer. H. C. Wright, Bossism in Cincinnati (1909), is of slight value. Brief accounts can be found in "The Uncovering of the Corrupt Rule of Boss Cox," Arena, XXXV, 632-37 (June 1906); Lincoln Steffens, The Struggle for Self-Government (1906), pp. 161-208.1

R.C.M.

COX, HANNAH PEIRCE (Nov. 12, 1797-Apr. 15, 1876), Quaker anti-slavery worker, daughter of Jacob and Hannah (Buffling) Peirce, was born in Chester County, Pa. Bayard Taylor praised the peace and beauty of its landscape and Whittier testified to its hospitable air of prosperity. Here she lived, her character influenced by her environment. Of Quaker stock, she was of the fifth generation of her family in America, George Peirce having come over from England with William Penn in 1684, and the Bufflingons also having been early Quaker colonists. In 1731 George Peirce had purchased land in East Marlborough township, Chester County, where seven generations of his family were to live. Jacob Peirce's farm, "Longwood," contained two hundred acres of rich soil and woodland. Prosperous, public-spirited, and intelligent, he built the first school-house in the neighborhood and the brick house where Hannah was born, lived, and died.

Hannah was early left fatherless, and her education was directed by her brother Jacob, "a man of fine intellect and a member of the Philadelphia Academy of Natural Sciences." She studied for a time at the Westtown Boarding School, developing a love of nature, sympathy for the oppressed, and positive ethical views. After a brief career as teacher she married, apparently in 1820 or 1821, J. Pennell, who soon afterward was
Cox

killed in an accident. In 1823 she married John Cox, of near-by Willistown, a farmer and, like herself, a Friend of high character. Two sons and two daughters were born to them. Four years were passed in Willistown; Cox then purchased “Longwood,” the Peirce homestead, which was thereafter their home. The Liberator and poems of Whittier’s interested them in the anti-slavery movement; the burning of Pennsylvania Hall in 1838 quickened their zeal. Thenceforth Mrs. Cox labored unceasingly for the negro. Her husband and she conducted a station of the Underground Railroad, cooperating with Thomas Garrett at Wilmington, Del. Fugitive slaves were received, generously fed and clothed, and conducted northward by Cox or his sons, often with thrilling attendant incidents. The Coxes formed life-long friendships with Lundy, Garrison, Whittier, Lucretia Mott, and many other anti-slavery advocates who enjoyed their hospitality. From the anti-slavery interest ultimately sprang a liberal movement organized as “The Progressive Friends of ‘Longwood.’” Many notable reformers, from as far as Boston, attended its yearly meeting; these Mrs. Cox and her husband gladly entertained, “Longwood” becoming a center of cultured effort for reform. At the Coxes’ golden wedding, Sept. 11, 1873, eighty-two guests were present and “The Golden Wedding of Longwood” was contributed by Whittier and “A Greeting from Europe” by Bayard Taylor. Mrs. Cox interested herself in current social movements for emancipation, temperance, peace, the abolition of capital punishment, and woman’s betterment, exerting a strong influence on all whose lives touched hers. Garrison testified to her “motherly nature,” her eager charity, her unpretentiousness.

[Phoebe A. Hanaford, Daughters of America (1883); Kennett News, Apr. 20, 1876; Historic Homes and Institutions of General and Personal Memoirs of Chester and Delaware Counties, Pa., II, 530—31; information from Mrs. Cox’s grand-daughters, Mrs. W. W. Polk and Miss Isabelle Cox of Kennett Square, Pa.]

R. S. B.

COX, HENRY HAMILTON (c. 1769-c. 1821), farmer, poet, religionist, was born in Ireland, son of Joshua and Mary (Cox) Hamilton. He took the name of Cox in 1784 as a condition of inheriting the estate of Dunmanway, County Cork, according to the will of Sir Richard Cox, the second Baronet of that name (Sir Bernard and Ashworth P. Burke, A Genealogical and Heraldic History of the Peerage, etc., 8th edition, 1926, p. 329; George Edward Cokayne, Complete Baronetage, 1904, vol. IV, p. 238n.). He married Letitia Elinor, daughter of David Wilson Hutcheson of Dublin, and, after serving in the British army in India, he came to America about 1799, leaving his Irish estate in the care of a faithful steward until the income should cancel the encumbrances upon it. After settling first near York, Pa., he removed in 1813 to Chester County, near London Grove, where he leased a large farm. He became a member of the Society of Friends and was active in both York and London Grove meetings. He sometimes preached, but not with enough success to be recorded a minister. It is said that he spoke ably in business meetings but at times forgot himself and addressed the assembled Friends as “My Lords.” He had a large family of children whom, according to tradition, he brought to the meeting door in a farm cart and then dumped them as he would a load of potatoes. In spite of this eccentricity and others, he was respected by his neighbors and was described by a contemporary (J. J. Lewis, post) as a man of superior ability, with an air of authority and the manners of a gentleman.

When Cox first came to America he gave to the Library Company of Philadelphia five volumes of seventeenth-century manuscripts consisting chiefly of official documents relating to affairs in Ireland. These “Irish State Papers” probably came rightfully into Cox’s hands but they were gracefully returned to the British government in 1867 by the Library Company to fill an unfortunate gap in a series (see Calendar of the State Papers Relating to Ireland, 1603-66, 1872, p. lxxxvii; The First Report of the Deputy Keeper of the Public Records in Ireland, 1869, App. no. 31; Herbert Wood, A Guide to the Records Deposited in the Public Record Office of Ireland, 1919, p. 285).

Cox’s literary efforts resulted in Metrical Sketches. By a Citizen of the World (1817). In this little collection his “Pennsylvania Georgics” was the most important poem. His knowledge of farm practise and his skill in verse may be judged from the following apostrophe to clover:

“Cox, Mrs. Cox, Clover, what new toils appear,
Nor least the clover claims the farmer’s care;
Blest plant, tho’ latest known, Columbia’s pride,
None ever fail to praise thee who have tried:
Our mows beneath the swelling burden groan,
Our furrows wave with fatness not their own;
In either line thy genuine worth appears,
Fruitful of hay or nurse of golden ears.”

Upon hearing that his Irish estate had been cleared of debt, Cox returned to it in 1817, taking with him a Minute of London Grove Meeting of Friends addressed to Dublin Meeting, Ireland. On shipboard he apparently thought better of his Quakerism, and in Ireland he returned to the Anglican fold. His religious exploits were later capitalized by Bayard Taylor in “The Strange Friend.” Cox appears as Henry Donnelly in this story, and liberal embellishments of fiction are
added to the facts of history (see Bayard Taylor, "The Strange Friend," in Beauty and the Beast: and Tales of Home, 1872, pp. 75-105).

[Apprently the only serious attempt at a biographical sketch of Cox is Jos. J. Lewis, "Sketch of the Life of Henry Hamilton Cox," MS. in the Lib. of the Hist. Soc. of Pa., Phila. There are some errors in this sketch, but it is valuable, partly as a source, since Lewis as a boy knew Cox and later consulted with many others who knew him. See also J. S. Puthey and Gilbert Cope, Hist. of Chester County, Pa. (1881), pp. 505-08. The Quaker records of York and Chester counties, Pa., contain scattering references to Cox and his children. His Metrical Sketches, 60 pp., was printed for the author by J. R. A. Skerrett, Phila. There is a copy in the Lib. of Cong., and one is owned by the Lib. Co. of Phila., Ridgway Branch.]  

R. W. K.

Cox, Jacob Dolson (Oct. 27, 1828-Aug. 8, 1900), Union general, governor of Ohio, secretary of the interior, author, was descended from one Michael Koch, who came from Hanover and settled in New York City in 1705. Jacob Dolson Cox, Sr., received his middle name from his mother, a member of a Dutch family of New York: his wife, Thedia R. Kenyon, was descended from Elder William Brewer and from the Allyn's and Kenyons of Connecticut. To them was born, at Montreal, Jacob Dolson Cox, Jr., while the father, a building contractor, was engaged in the construction of the roof of the Church of Notre Dame. Returning to New York City soon after this event, the family suffered business reverses during the crisis of 1837. The boy's hope of obtaining a college education was impaired by the misfortune, and, under the state law, the alternative path to a lawyer's career, to which he aspired, was a seven years' clerkship in a law office. Entering upon such an apprenticeship in 1842, he changed his mind two years later, and went into the office of a banker and broker, where the shorter hours permitted him, with the aid of a friend, to pursue the study of mathematics and the classical languages. After two years more, through the influence of Rev. Charles G. Finney [q.v.], then professor of theology at Oberlin College, he was led to enter the preparatory department of that institution. Three years later (1849), while still an undergraduate, he married Helen, the daughter of Finney who was now president of the college. Graduating in 1851, Cox served for two years at Warren, Ohio, as superintendent of schools and principal of the high school, reading law at the same time, and beginning to practise in 1853.

Cox was at this time a Whig, but his Oberlin associations, his marriage, and other influences, combined to make him strongly anti-slavery in principle. He voted for Scott in 1852, but took a prominent part in bringing about the fusion of Whigs and Free-Soilers, and in 1855 was a delegate to the convention at Columbus which organized the Republican party in the state. A few years later his party friends, against his protest, nominated and elected him to the state Senate. Entering the Senate in 1859, he found there his friend James A. Garfield, and Governor-Elect Dennison, with whom he soon became intimate, this trio, together with Salmon P. Chase, then governor, forming a radical anti-slavery group.

With the outbreak of war in 1861, Cox's activity in organizing volunteers brought him a commission as brigadier-general of volunteers. During the summer he had a part in the Kanawha Valley campaign under McClellan, and a year later, in the Army of the Potomac, he participated in the battles of South Mountain and Antietam, commanding the 9th Corps at the former after the fall of Gen. Reno. He was advanced to the rank of major-general on Oct. 6, 1862, but the following April was reduced to his former rank because the number of major-generals permitted by law had been inadvertently exceeded. This bungling, which resulted in the promotion of less deserving officers, was a discouraging episode in his military career; but after repeated urging on the part of his superiors he was at length recommissioned in December 1864. During the winter of 1862-63 he commanded the forces in West Virginia, and from April to December 1863 was in charge of the Ohio military district. During the Atlanta campaign he led a division of the 23rd Army Corps, and after the fall of Atlanta for a time commanded the entire corps. He took part in the battle of Nashville, and early in 1865 was sent into North Carolina to open communications along the coast with Sherman, who was nearing the end of the march to the sea. On this expedition Cox defeated Bragg's troops and effected a junction with Sherman at Goldsboro.

After the war, while engaged in superintending the mustering out of the troops in Ohio, Cox was elected governor of the state. During the campaign in response to the inquiries of friends at Oberlin, he expressed himself as opposed to negro suffrage. He could not assume as they did, he wrote, that the suffrage, while whites and blacks dwelt in the same community, would cure all of the ills of the freedmen. Carrying these ideas further, he declared while governor, that the large groups of whites and blacks in the Southern states could never share political power, and that insistence upon it on the part of the colored people would bring about their ruin. As a remedy, he advocated the forcible segregation of the negroes, a plan which found little or no support. By such views, and by his indorsement of President Johnson's reconstruction policy,
Cox

which he thought essentially the same as Lincoln's, he lost favor with his party, and was not renominated. He tried in vain to mediate between Johnson and the radical Republicans, and finally himself abandoned the President because of the latter's obstinacy and pugnacity. In 1868 Cox declined Johnson's tender of the post of commissioner of Internal Revenue.

Upon Grant's accession, Cox accepted the office of secretary of the interior. He had become a prominent advocate of the new cause of civil-service reform, and in his own department he put the merit system into operation, resisting the efforts of the party spoilsmen to dictate appointments and to collect campaign assessments. He and Attorney-General Hoar were regarded by the Independent Republicans as the only strong men in Grant's cabinet. When Grant's extraordinary Santo Domingo embroilglo forced Hoar from the cabinet—the story of which episode Cox gave to the public twenty-five years later (see Atlantic Monthly, August 1895)—Cox lost hope of maintaining his fight without the support of the President. Already he had clashed with Grant over the fraudulent claims of one McGarrah to certain mineral lands, as well as over the Dominican situation and on Oct. 5, 1870, he submitted his resignation. "My views of the necessity of reform in the civil service," he wrote, "have brought me more or less into collision with the plans of our active political managers, and my sense of duty has obliged me to oppose some of their methods of action" (New York Tribune, Oct. 31, 1870).

The breach with Grant hurt Cox deeply. He held Grant's military talent in high esteem, and did not allow his judgment thereof to be affected by their difference (see, e.g., his review of Grant's Memoirs, in the Nation, Feb. 25, 1886, July 1, 1886); but in private conversation he permitted himself to criticize the President's course severely. Grant on his part, with his military instincts and experience, regarded Cox's independence of mind as a kind of insubordination. "The trouble was," as he put it, "that General Cox thought the Interior Department was the whole government, and that Cox was the Interior Department. I had to point out to him in very plain language that there were three controlling branches of the Government, and that I was the head of one of these and would so like to be considered by the Secretary of the Interior" (Hamlin Garland, Ulysses S. Grant, p. 427). Progressive opinion supported Cox, and his political "martyrdom" undoubtedly hastened the triumph of the reform movement.

Upon leaving the cabinet the former secretary became conspicuously identified with the Liberal Republican movement, and was much talked of as its probable nominee for the presidency in 1872. At the Cincinnati convention, however, he was defeated by the more available Greeley. Meanwhile he had resumed the practise of law, at Cincinnati; but in 1873 he removed to Toledo to become president of the Wabash Railway. This position he gave up in turn upon being elected to Congress in 1876, from the 6th Ohio District, by an unprecedented majority.

He served but one term in Congress. He seems to have hoped to be able to do something to support President Hayes in his reform efforts, and his helplessness—under existing political conditions probably discouraged him. At any rate he abandoned politics, even refraining thereafter from comment on political events, with the exception of a single speech during the Garfield campaign. Resuming his residence at Cincinnati, he became dean of the Cincinnati Law School (1881), a position which he held for the next sixteen years. During part of this time (1885-89) he also served as president of the University of Cincinnati. In addition to high repute as a lawyer, his reputation as a business man was enviable, and brought him in the middle nineties the tender of the post of railroad commissioner in New York City. This offer he declined, preferring to continue his connection with the Law School. In 1897 he declined President McKinley's offer of the Spanish mission, but in the same year he presented his library to Oberlin College and retired thither to write his Military Reminiscences. This work was barely completed and still unpublished when his death occurred, after a brief illness, while he was enjoying his customary summer outing along the coast of Maine, in company with a son.

Cox was tall, graceful, and well-proportioned, with erect, military bearing, and a frame denoting great physical strength. A man of many interests, he devoted much time in his later years to the study of microscopy, in which field he won international distinction. He was also a student of European cathedrals. His wide information, conversational gifts, and courteous manners made him an agreeable companion. The artistic genius of a son, Kenyon Cox [q.e.d.], doubtless bears witness to undeveloped talents of the father.

No small part of Cox's reputation rests upon his work as a writer. From 1874 until his death he was the Nation's military book critic. In addition to contributions to this and other journals, he wrote several books on military topics, the most important of which are: Atlanta, and The March to the Sea; Franklin and Nashville (vol-
Cox

umes IX and X in the Campaigns of the Civil War series, 1882); The Battle of Franklin, Tennessee, November 30, 1864 (1897); and Military Reminiscences of the Civil War (2 vols., 1900). He also contributed four chapters to M. F. Force's Life of General Sherman (1899). A work of less consequence is The Second Battle of Bull Run as Connected with the Fitz-John Porter Case (1882). Some critics of these books regard his attitude toward Roscruans as unjust and not well informed, and his judgment in the Fitz-John Porter case is open to question. In general, however, he is recognized as an elegant and forceful writer, of fine critical ability and impartial judgment, one of the foremost military historians of the country.

[The autobiographical nature of the Military Reminiscences makes it the chief source of information for Cox's life as a soldier. It contains a portrait. See also Bibliotheca Sacra, July 1901, pp. 436-68. J. R. Ewing, Public Services of Jacob Dolson Cox (1902), is a slight sketch of about twenty pages which contains some data not found elsewhere. Jas. Ford Rhodes touches the high points of Cox's civil career and appraises his personality in "Jacob D. Cox" (Hist. Essays, 1900, pp. 83-88). He tells the story of the cabin controversy in Hist. of the U.S. from the Compromise of 1850, VII (1910), 3-7. See also L. A. Coolidge, Ulysses S. Grant (1912); Hamlin Garland, Ulysses S. Grant, His Life and Character (1898); Nation, Aug. 6, 1901, p. 107. Estimates of Cox's writings may be found in the Am. Hist. Rev., III (1898), 578-80, and VI (1901), 602-66.]

H.C.H.

Cox, Kenyon (Oct. 27, 1856—Mar. 17, 1919), painter, art critic, born at Warren, Ohio, came of a distinguished family. His father, Jacob Dolson Cox [q.v.], was a major-general in the Civil War, becoming one of its able historians. His mother was Helen, a daughter of Dr. Charles G. Finney [q.v.], theologian and first president of Oberlin College. His youth was clouded by ill health, as he was practically bedridden from his ninth to his thirteenth year and often under the surgeon's knife. This left its physical impression through life. In the meantime his mother directed his studies, and, after a recovery, in view of his taste for art, he entered McMicken's Academy at Cincinnati, where Robert Blum was a fellow student. At that time he shared Blum's enthusiasm for Fortune. They visited the Centennial Exhibition at Philadelphia together in 1876, and remaining to study at the Pennsylvania Academy of the Fine Arts, then set up a studio at Elbow Lane, where Brennan joined them. In 1877, Cox went to Paris and for a year worked in Car- olus Duran's atelier, where Carroll Beckwith and John Sargent [q.q.v.] had preceded him. Desirous of thorough academic training, he entered Gérôme's atelier at the École des Beaux-Arts, continuing there until his return to America in 1882. That he benefited by this combined instruc-

Cox

tion is made evident by the exhibition of two pictures at the Salons in 1879 and 1882. After his return to New York, his academic studies led to the production of several pictures of classic nudes, which failed to find purchasers. Similar subjects by European artists found places in American collections, but no encouragement was given to native painters who depicted the undraped figure. In portraits, however, of which he painted several, Cox's conscientious drawing and characterization were more appreciated. His academic precision tempered the bolder brush work of some of his associates of the lately formed So- ciety of American Artists who represented the limited conventions of the older National Academy of Design. In 1886 he illustrated Rossetti's "Blessed Damozel," and in such paintings as "Moonrise," and some time later in "Hope and Memory," used landscape as a setting for classic figures of symbolic intent. Not meeting with en- couragement in the pictorial treatment of life-size figures, however well and learnedly painted, he turned toward decorative art, and as a prepara-

478
are considered better from the point of view of purely decorative design than from that of their general color effect, and suggest a certain detachment from actuality. Several lunettes were executed for the Iowa State Capitol, and some fine decorations for the court house at Wilkes-Barre, Pa. Cox’s decoration at Winona, Minn., “The Light of Learning,” is remarkable for beautifully calculated rhythms of color and line. On the walls of the state capitol at St. Paul, Minn., he depicted “The Marriage of the Atlantic and the Pacific,” with several mosaics somewhat formal in treatment but beautiful in design. In the meantime, his easel pictures were to be seen at the Metropolitan Museum, at the Lotos and Players Clubs in New York, at the National Gallery, Washington, and at the Carnegie Institute, Pittsburgh, as well as at the various current exhibitions.

As a writer on art subjects, Cox for twenty-five years contributed articles and essays to the Nation, Scribner’s, and other magazines. These were appreciated as much by professional artists as by a wider circle of readers in search of standard opinions. His various essays and lectures were gathered into succeeding volumes published under the titles of Old Masters and New (1905), Painters and Sculptors (1907), The Classic Point of View (1911), The Fine Arts (1911), Artist and Public (1914), Concerning Painting; Considerations Theoretical and Historical (1917). In these writings his classical preferences in no way precluded a broad appreciation of other points of view or of certain manifestations in modern art. Besides membership in the Society of American Artists, he became an associate of the National Academy in 1900 and a full member in 1903. Medals were awarded him at the Paris Salon and Universal Expositions of 1889 and 1900, and in various American exhibitions, including the National Academy and Architectural League. He was an early and active member of the American Academy of Arts and Sciences, serving also on many art committees and juries. He stood heroically for the authority of tradition in an age of art license. His theory and practise were not only salutary and enlightening while he lived, but will remain as valuable sources of information for future students of art.

R. J. W.

COX, LEMUEL (1736–Feb. 18, 1806), mecha-

Cox

chanic, bridge-builder, was the youngest son of William and Thankful (Maudsley) Cox. He was born in Boston, Mass. In 1763 he married Susannah, daughter of William and Sarah (Sale) Hickling. Not much is known of Cox’s early life. As early as 1765 there are records to show (Suffolk Deeds, vol. CIII, pp. 239, 251) that Cox and his brother Jesse, “wheelwrights all of Boston,” purchased land in that city. He was a Loyalist, and in 1775 for that reason he served a term of confinement at Ipswich. His name is numbered in Boston’s quota of some two thousand adherents of the King who left Massachusetts temporarily. Later he removed to Taunton, Mass., returning to Boston about 1789 and living there till June 1792 when he moved to Medford before going abroad.

Cox first came into prominence in 1785–86 as the master workman under whose supervision was constructed between Boston and Charlestown the first bridge across the Charles River, a piece of work which at that time was considered very remarkable. Its length was 1,503 feet and its width forty-two feet, and it was especially adapted to withstand tidal currents and ice. Its opening on June 17, 1786 was celebrated with great pomp by a large civil and military procession, including both branches of the legislature, with Cox himself occupying a prominent position. Broadsides were published upon the occasion, one of them being a poem of forty stanzas of which the following is a specimen:

“No Boston, Charlestown, nobly join,
And roast a fatted Ox;
On noted Bunker Hill combine,
To toast our patriot, Cox.”

Cox was also the architect and builder of the Essex Bridge from Salem to Beverly, a bridge which stood second only to the Charles River Bridge in its size and in the caliber of work involved. Success with these two undertakings and others in Massachusetts and Maine resulted in his being asked to construct the great bridge at Waterford, Ireland, which was built under his direction and supervision in 1793. For many years a bridge in Ireland, near Dublin, bore his name inscribed upon its piers. His stay overseas resulted in a number of works requiring great mechanical and engineering skill. He returned to Massachusetts, and died in Charlestown. He seems never to have acquired great wealth. “In 1796,” says Joseph Barlow Felt in his Annals of Salem (1845, vol. I, p. 308), “he [Cox] had a grant of 1,000 acres of land in Maine from our legislature for being the first inventor of a machine to cut Card wire, the first projector of a Powder Mill in Massachusetts, the first
suggestor of employing prisoners on Castle Island to make nails, and for various other discoveries in mechanical arts."

K. W. C.

COX, PALMER (Apr. 28, 1840—July 24, 1924), author, illustrator, who was born in Granby, Canada, of Scotch parents, Michael and Sarah (Miller) Cox. He grew up in the little Scotch community and after graduating from the Granby Academy started out to make his own way. He went to San Francisco in 1863, for several years was a railroad employee, and for some time worked as a ship-carpenter. During these years, for his own pleasure, he contributed humorous verse and cartoons to California papers, but none of his productions attracted any special attention. In 1875 he wrote and drew the pictures to accompany a story called Squibs of California or Everyday Life Illustrated, which met with no applause. He then went to New York and obtained a place on a weekly comic paper, Wild Oats, which struggled along for about five years and then went out of existence. During this time Cox published three stories, Hans Von Peller’s Trip to Gotham (1876), How Columbus Found America (1877), and That Stanley (1878). At the age of forty he began illustrating stories for St. Nicholas Magazine, to which he also contributed short poems of his own, with fantastic illustrations. He loved children and enjoyed entertaining them, and the children loved his drawings. As the magazine called for more and more material his brain was taxed for an original idea with which to carry on a series of stories, and eventually the famous “Brownies” were conceived. Suggested by the folklore of the Grampian Mountains, legends which Cox had heard in his childhood from the emigrant Scots at Granby, the “Brownies” were modified to fit the environment of the nineteenth-century American child. He resolved that there should be no pain or crime in the beings of his creation, only laughter for children. He managed, however, to convey a suggestion of reality, and the Brownie Policeman, the Brownie Wheelman, and the other reflections of contemporary life soon found a secure place in the child’s imaginary world. The Brownies gave joy to two generations of children. Cox estimated that he drew over a million of them, and of his thirteen Brownie books over a million copies were sold within his lifetime. His financial success enabled him to return to his old home at Granby and build a huge house which he called “Brownie Castle.” Thereafter his summers were spent in Canada, and the major part of his winters on Long Island. He died, unmarried, at Brownie Castle. His publications for children include: The Brownies, Their Book (1887); Queer People (1888); Queer People with Wings and Stings (1888); Queer People With Paws and Claws (1888); Another Brownie Book (1890); The Brownies at Home (1893); The Brownies Around the World (1894); The Brownies Through the Union (1895); The Brownies in Fairyland (1895), a cantata in two acts; Palmer Cox’s Brownies (1895), a play in three acts, which ran almost five years; The Brownies Abroad (1899); The Brownies in the Philippines (1904); The Palmer Cox Brownie Primer (1906); Brownie Clown in Brownie Town (1907); The Brownies’ Latest Adventures (1910); The Brownies Many More Nights (1913).

M. S.

COX, ROWLAND (July 9, 1842—May 13, 1900), patent lawyer, author, was a direct descendant of Richard Cox who, emigrating from England in 1708 to Newark, Del., ultimately settled in Chester County, Pa., in 1728. His father, John Cooke Cox, who married Ann Johns, daughter of Judge Rowland of the supreme court of Delaware, resided at Philadelphia where Rowland Cox was born. Receiving his early education privately, he entered the College of New Jersey (Princeton) in the class of 1863. The outbreak of the Civil War, however, interrupted his studies and he enlisted as a private in Company B, 15th Pennsylvania Volunteer Cavalry, on Oct. 3, 1862, at Carlisle. He took part in the Stone River and Chickamauga campaigns, and was promoted assistant adjutant-general on the staff of Major-Gen. J. B. McPherson, commanding the 17th Army Corps, Oct. 9, 1863. He remained on McPherson’s staff when the latter assumed command of the Army of Tennessee, and was present at the battle of Atlanta, July 22, 1864, where McPherson was killed. He then joined the staff of Major-Gen. F. P. Blair and participated in Sherman’s march through Georgia and the Carolinas. At the conclusion of the war he retired with the rank of brevet major, and took up the study of
COX

law at Quincy, Ill., being admitted to the Illinois bar in 1808. He practised for a short time at Washington, D. C., specializing in the law of inventions, copyright, and trade-marks, and edited American Law Times Reports, volumes II-VI (1869-74), and American Law Times Reports, volumes I-IV (1874-77), in addition to preparing American Trade Mark Cases, a Compilation of all the Reported Trade Mark Cases Decided in the United States Courts prior to 1871, Together with the Leading English Cases (1871). In 1875 he removed to New York City where he acquired a national reputation as an expert in trade-mark and copyright law. In 1878 in conjunction with Howard Ellis, he edited The Reporter: Decisions of the Supreme and Circuit Courts, United States, Courts of Last Resort in the Several States and of the English and Irish Courts, volumes V and VI, being a continuation of American Law Times Reports, N. S., volumes I-IV. In 1881 appeared his Manual of Trade Mark Cases; Comprising L. B. Sebastian's Digest of Trade-Mark Cases Covering Cases Prior to 1879, with Those of a Leading Character since that Time, which became the standard work on the subject and passed through several editions. For over twenty years he was engaged in most of the important trade-mark and copyright litigation in the United States. He made it an invariable practise to accept retainers on behalf of complainants only, being thus enabled to employ a systematic method of argument in every instance. Never spectacular, he always appealed to the intellect, and his clear, cold, logical arguments, clothed in unpretentious yet forcible language, always had a powerful effect in cases where the principles of equity were allowed full sway. He died at Plainfield, N. J. On Oct. 29, 1886, he was married to Fanny Cummins, daughter of Robert Hill of Smyrna, Del.

H. W. H. K.

COX, SAMUEL HANSON (Aug. 25, 1793–Oct. 2, 1880), Presbyterian clergyman, educator, a man of brilliant but eccentric genius, was born in Rahway, N. J., the son of James Cox, member of a New York importing firm, and Elizabeth (Shepard) Cox. He was of Quaker ancestry, fifth in descent from Isaac Cox of Talbot County, Md., and received his early education privately and at a Friends' academy in Westtown near Philadelphia. In 1813, while studying law under William Halsey at Newark, N. J., the charm of Quakerism in which he had been nurtured "was dissolved by the unmystical verities of the Bible," and he joined the Presbyterian Church. His experiences at this period he describes at length in Quakerism not Christianity (1833), a discursive work of nearly seven hundred pages. He now turned to the study of theology, and, Oct. 10, 1816, was licensed by the New York Presbytery. On July 1, 1817, he was ordained and installed pastor of the Presbyterian Church, Mendham, N. J. His other pastorates were at Spring Street Church (1820–25) and Laight Street Church (1825–35), New York, and the First Presbyterian Church, Brooklyn (1837–54). He was married, Apr. 7, 1817, to Abia Hyde Cleveland (1796–1865), by whom he had fifteen children, the eldest of whom, Arthur Cleveland Cox [q.v.], became a bishop in the Episcopal Church. His second wife, whom he married Nov. 16, 1869, was Anna Fosdick Bacon.

He was noted both for his peculiarities and for his gifts. His utterances, tinged with intellectual arrogance and interlarded with quotations from the Latin, a language he spoke fluently, reveal an amusing fondness for long and uncommon words. His learning was extensive, but his scholarship not profound. Strong sympathies and antipathies led him into extravagances. Nevertheless, his versatility, eloquence, wit, sincerity, and courage, gave him standing and influence. At the outset of his career he came into prominence through being refused an appointment by the Young Men's Missionary Society of New York, because of his Hopkinsian sentiments. In the sharp conflicts of 1836–38 which split the Presbyterian Church, he was one of the New School leaders, and he was moderator of the New School General Assembly in 1846. He was a founder of New York University, and during a thirty-six years' term as director of Union Theological Seminary did much to shape its policies. From 1835 to 1837 he was professor of sacred rhetoric and pastoral theology at Auburn Seminary, and from 1856 to 1863 the head of Ingham University, Le Roy, N. Y., an institution for young women. He died at Bronxville, N. Y.

Although at the anniversary of the British and Foreign Bible Society, London, May 1833, he defended his country when attacked on the score of slavery, his early radical anti-slavery sentiments got him into trouble. His church and house were stoned, and in July 1835, he was hanged in effigy at Charleston along with Garrison and Arthur Tappan. For the London edition of William Jay's Slavery in America (1835), a work antagonistic to the Colonization
Cox

Society he wrote a vigorous introduction. Later he modified his views, fought the attempted exclusion of slaveholders at the meeting of the Evangelical Alliance in London, 1846, and repudiated his former friendship for Frederick Douglass because of his behavior at a temperance convention they attended there (Liberator, Nov. 20, 1846). Violently opposed both to intoxicants and to tobacco, he wrote a long introduction, addressed to John Quincy Adams, for Benjamin I. Lane's Mysteries of Tobacco (1851). He edited and brought down to date Archibald Bower's anti-Catholic History of the Popes in 1844-47. Interviews Memorable and Useful (1853) indirectly reveals many of his characteristics.

H. E. S.

COX, SAMUEL SULLIVAN (Sept. 30, 1824-Sept. 10, 1889), congressman, writer, was a descendant of Thomas Cox, one of the original proprietors of East Jersey, who came to the Province in 1670. A great-grandson of this pioneer was Gen. James Cox, soldier of Brandywine and Germantown, speaker of the New Jersey legislature, friend of Jefferson, and member of the Tenth Congress. His son, Ezekiel Taylor Cox, removed to Zanesville, Ohio, and became editor of the Muskingum Messenger, marrying the daughter of Samuel Sullivan, at one time state treasurer. Of this union were born thirteen children, Samuel Sullivan Cox being the second child.

After attending Ohio University for nearly two years, Samuel entered Brown University, graduating in 1846 with high honors. During his course he distinguished himself as a debater and writer of prize essays in history, economics, and criticism. Returning to Ohio after graduation he read law. Two years of practise in Cincinnati opened prospects of professional success, but his tastes drew him to literature and travel. In 1849 he married Julia A. Buckingham of Zanesville, who was thenceforth his congenial and inseparable companion. With her he visited Europe, publishing upon his return his first book, A Buckeye Abroad (1852). Its favorable reception turned his attention to journalism, and he became editor and chief owner of the Ohio Statesman at Columbus. A glowing description of a sunset, printed May 19, 1853, won him a sobriquet which clung—"Sunset" Cox.

Journalism led into politics. As chairman of the Democratic state committee Cox showed such efficiency that President Pierce offered him the post of secretary of legation in England (1855). He chose in preference a similar appointment to Peru, but turned back on the way because of ill health. Thereupon he was elected to Congress (1856), defeating his Republican and "Know-Nothing" rivals by a plurality of 355. From 1857, with the exception of the Thirty-ninth and Fortieth Congresses and a year of diplomatic service, he was almost continuously a member of the lower house. Despite reapportionments, gerrymanders, and other vicissitudes of politics, he failed only a few times in thirty years to win reelection by votes which show an increasing hold upon his constituents. When his career closed, few if any of his associates enjoyed greater distinction for long and useful service. Almost every major issue for a generation had felt his influence.

Entering Congress during the Kansas crisis, while Douglas was attacking the Lecompton constitution in the Senate, Cox's maiden speech was made against it, the first by any member of the House. As war drew near, he supported all measures which promised adjustment of sectional difficulties; and after hostilities began, although he voted consistently for money and men to sustain the Federal authority, he advocated every effort to restore peace and union. He strenuously opposed the resort to martial law outside of the war zone (he was a friend of Clement L. Vallandigham [q.v.] and, as he testified on oath, was the author of the words for which Vallandigham was arrested); as a member of the Committee on Foreign Affairs, he aided in settling the Trent affair; he influenced Lincoln's decision to treat Southern seamen as prisoners of war instead of pirates; he was among the foremost in efforts to abolish privateering; he was instrumental in bringing about the Hampton Roads Conference in 1865. At the National Democratic Convention of 1864 he seconded McClellan's nomination for the presidency. In 1864 he successfully opposed extreme confiscation measures. Defeated in the autumn election, he removed permanently to New York City, in the belief, it seems, that his Ohio district would thenceforth be Republican. He practised law and wrote Eight Years in Congress (1865), while the radicals passed the Thirteenth and Fourteenth Amendments and impeached the President. Returning to Congress in 1868, he labored during many sessions for complete amnesty, and was prominent as an advocate of reform of the tariff and the Civil Service. He was directly responsible for bills establishing
the Life Saving Service, securing increased pay and vacation privileges for letter-carriers, and broadening the scope of the census enumeration of 1890. He took pride in the development of the West, promoting legislation for the reclamation of waste lands, and insisting upon statehood for the Dakotas, Montana, and Washington. Appointed minister to Turkey by President Cleveland in 1885, he resigned and returned to America after a year. The literary result of this sojourn was *Diversions of a Diplomat in Turkey* (1887). Almost immediately after reaching home he was sent to Congress again in place of Joseph Pulitzer, resigned. He visited the Northwest in the summer of 1889, following the admission of the “omnibus” states, but his health, never robust, broke down, and his death followed.

Cox was a deeply religious man, a scholar of broad reading and prodigious memory, and an independent thinker who never allowed his party to prescribe his course. He opposed centralizing tendencies in government, and saw in Cleveland's election the promise of a permanent return to early Democratic principles. In debate he was ready, witty, and courteous. He was a prolific writer. In addition to the titles already mentioned the following may be enumerated: *Puritanism in Politics* (1863); *Why We Laugh* (1876); *Free Land and Free Trade* (1880); *Arctic Sunbeams* (1882); *Orient Sunbeams* (1882); *Three Decades of Federal Legislation* (1885).

[The chief source is Wm. Van Zandt Cox and Milton Harlow Northrup, *Life of Samuel Sullivan Cox* (Syracuse, 1890). See also the addresses of fellow members of Congress at the memorial session held on Apr. 19, 1890; *Congressional Record*, 51st Cong., 2 Sess., 3558-60; 7028-33. Cox's own books are also valuable sources, especially the *Three Decades of Federal Legislation*, which contains an engraved portrait of the author on the title-page. A statue erected by the letter-carriers and executed by Louise Lawson, stands in Astor Place, New York City.]

H.C.H.

**Cox, William Ruffin** (Mar. 11, 1832—Dec. 26, 1919), Confederate soldier, politician, was descended from John Cox, a British naval officer of good family and trading inclinations, who settled in North Carolina in the early nineteenth century. His son Thomas, after building up at Plymouth, N. C., an important export business with the West Indies, married Olivia Norfleet and became a planter in Halifax County, the home of his wife. Here, at Scotland Neck, their son William Ruffin was born. On his father's death he was, for family reasons, put to school in Tennessee. After graduating from Franklin College and studying law at Lebanon College, he practised at the Tennessee bar for five years. In 1857 he married Penelope Battle of Edgecombe County, N. C., and, settling there, began to develop the fine plantation which he retained throughout his life. Soon, however, he became an enthusiastic secessionist. Having organized and equipped a military company at his own expense and having set himself to the study of military tactics, on the outbreak of the Civil War he was appointed by the governor major of the 2nd North Carolina Regiment. During the next four years he was with the Army of Northern Virginia continuously, participating in most of its battles and winning official commendation for ability to keep his command intact and for skill and intrepidity in attack. Eleven times he was wounded, five times at Chancellorsville. The temporary command of a brigade came on May 31, 1864. To Cox fell the honor of leading the last organized attack made by his army. After the war his military record was an asset of first importance when, having begun again the practise of law in Raleigh, he drifted into politics. For a while it seemed that original secessionists and the Holden party might unite in support of Cox as a candidate for governor in opposition to Worth, whom old Unionists supported. Instead, however, the former elected to assist in building a party of out-and-out opposition to the Radical régime by standing, in 1868, for the humble, but at that time peculiarly important, office of solicitor in the heavily Radical Raleigh district. Winning by the narrowest of margins, he continued to serve in this capacity until 1874, when he was made chairman of the state Democratic committee. Emphasizing fairness of nominations, rigid party discipline, and thorough local organization (*Raleigh Daily News*, June 11, 1874), this committee under his leadership “redeemed” the state in the three stirring campaigns of 1874, 1875, and 1876. In 1876 Cox became district judge by appointment. Resigning in 1880 he was elected to Congress from the Raleigh-Durham district, and was reelected in 1882 and 1884. As chairman of the House Committee on Civil Service he supported President Cleveland's reform policy, declaring in a set speech (*June 1886*) that the merit system involved "the very essence and genius of Democracy." For this reason chiefly he was defeated for renomination by his party, though not until his friends had deadlocked the convention for 197 ballots. In consonance with common opinion—although Cox indignantly denied that there was any understanding to that effect—President Cleveland offered him a position in the Land Office. This he declined (*News and Observer*, Raleigh,
Coxe

Aug. 7–10, 1886). In 1893, however, he was elected secretary of the Senate, a position which he continued to hold until 1900. Meantime he was busy with many other affairs. He served as grand master of the Masonic Order, sat in the councils of the Protestant Episcopal Church, served on the executive committee of the State Agricultural Society, and as chairman of the committee that established the North Carolina Journal of Education. He often delivered memorial addresses, the most elaborate of which was "The Life and Character of Ramseur." These addresses disclose no unusual learning or eloquence and tend to confirm Gov. Worth's view that Cox was "a man of slender capacity" (J. G. de R. Hamilton, Correspondence of Jonathan Worth, II, 707). On the other hand it is recorded that he was of striking physical appearance, cultured and courtly; and his political choices indicate wisdom as well as character. In 1883 he was married to Fannie Augusta Lyman, who bore him two sons, and in 1905 to Mrs. Herbert A. Claiborne of Richmond, Va.

[In addition to references above see sketch by S. A. Ashe, in Biog. Hist. of N. C., vol. I (1905); obituary in the News and Observer (Raleigh), Dec. 27, 28, 1919.]

C. C. P.

COXE, ARTHUR CLEVELAND (May 10, 1818–July 20, 1866), Episcopal bishop, writer, was born in Mendham, N. J., the first parish of his celebrated Presbyterian father, Rev. Samuel Hanson Cox [q.v.], the son adopting what he deemed an earlier spelling of the family name. His youth was spent principally in New York. He early displayed a liking for the Episcopal Church, which was probably strengthened in the home of his uncle, Dr. Abraham Cox, a prominent New York physician. At twenty he graduated from the University of the City of New York, and in 1841, from the General Theological Seminary. He was ordained priest, Sept. 25, 1842, at St. John's Church, Hartford, Conn., of which he became rector. From 1845 to 1863 he was rector of Grace Church, Baltimore, declining an election to the episcopate of Texas in 1856, and from 1863 to 1865, rector of Calvary Church, New York. On Jan. 4, 1865, he was consecrated assistant bishop of Western New York, and at the death of Bishop De Lancey, three months later, he succeeded him. On Sept. 21, 1841, he married Katherine Cleveland Hyde, a second cousin once removed.

He was long a prominent figure in ecclesiastical councils, and a prolific writer on subjects covering a wide range. In physical vitality, versatility, learning, intensity of feeling, and devotion to reform he resembled his father. In addition he had a gift of versification which enabled him to publish several volumes of ecclesiastical poetry. His best-known work of this kind is Christian Ballads (1849), many editions of which appeared both in America and England. The impression of the author created by these is said to have had much to do with his election as bishop (Charles W. Hayes, Diocese of Western New York, 1904, p. 245). Theologically and ecclesiastically he was strongly conservative. He was opposed to the consecration of Phillips Brooks as bishop (Ibid., p. 350), and his Holy Writ and Modern Thought (1892) shows little sympathy with the scientific tendencies of the day. His efforts at reform were directed chiefly toward Christian unity on the basis of "that constitution of the Church and that profession of faith which were recognized, not invented, by the Council of Nicea." The Criterion (1866) and Apollos, or the Way of God (1871) state fully his views. After a visit to Dr. John von Hirschere at Freiburg, a precursor of the Old Catholic movement, he published at Oxford (1852) a translation of the former's On the Actual State of the Church, under the title, Sympathies of the Continent, a work which attracted much attention in England and at home. He participated actively in the formation of the Anglo-Continental Society, an object of which was the promulgation on the Continent of the principles of the English Reformation. His Letter to Pius the Ninth, at the calling of the Vatican Council in 1869, was published in Europe in French, German, Greek, Bohemian, and Italian. In 1874 he published in Paris L'Episcopat de l'Occident, a treatise on the history of the Church of England, controverting Roman Catholic attacks. He opposed revisions of the Bible on the ground that the authorized version was a bond that united the churches, and in 1857 published his Apology for the English Bible. He organized the Christian Literature Company in 1885 for the publication of the patristic fathers, and during 1885–86 brought out an edition of the Ante-Nicene Fathers.

Dignified in bearing and punctilious in deportment, with finely chiseled features, high forehead, waving white hair, and side whiskers, he looked and acted the part of the typical bishop.

[See Christian Litt., Sept. 1896; Critic, Aug. 1, 1896; Churchman, July 25, 1896; Henry C. Potter, Reminiscence of Bishops and Archbishops (1901); Herman G. Batterson, Sketch-Book of the Am. Episcopate (1891) lists eighty-one of Coxe's publications.]

H. E. S.

COXE, DANIEL (August 1673–April 25, 1739), landowner, politician, was the eldest son of Daniel and Rebecca (Coldham) Coxe of London. His father (1640–1730) was a member of
Coxe

the Royal Society (March 1664/5), a doctor of medicine of Cambridge (1666), one of the physicians to Charles II and to Queen Anne, and a writer on chemistry and medicine. Although he was never in America, Dr. Coxe was a figure of importance in early colonial history. He acquired interests in West Jersey in 1684 and in East Jersey in 1686 and by purchase of land from the heirs of Gov. Billinge he was nominally governor of West Jersey from 1687 to 1692, when he sold the greater part of his proprietary. Dr. Coxe was a large speculator in colonial proprietary rights; by 1698 he had procured the assignment of Sir Robert Heath's patent to Carolana, which included Norfolk County, Va., and the English rights to the Mississippi Valley west of the Carolinas. He agitated many years with partial success for the confirmation of this patent. He conceived the magnificent idea of forming a commonwealth within Carolana, and sent two armed vessels to explore the Mississippi, but, having once abandoned his plan for a settlement there, attempted unsuccessfully to settle a body of Huguenots in Virginia. He collected a large body of documentary information concerning colonial travels and explorations and from these compiled his advertising tracts; in his "Account of New Jersey" he wrote that he had "made great discoveries towards the great Lake . . . and contracted Freinishipp with diverse petty Kings," but these events were experienced where they were written—in the quiet of his library in Aldersgate Street.

Dr. Coxe was ably assisted in his claims and efforts by his son, Daniel, who came to America in 1702 with Lord Cornbury [q.v.], of whom he was a favorite. Appointed by the latter commander of the forces in West Jersey he was thereafter known as Col. Coxe. He was recommended in 1702 and again in 1705 for a seat on the Governor's Council; in 1706, despite the opposition of the Quakers, he was appointed. In the same year he was made one of the associate judges of the supreme court of the province. In 1707, following an elopement, this "fine, flouting gentleman" married Sarah Eckley, daughter of a Philadelphia Quaker. When Lord Lovelace became governor of the province in 1708 Coxe was again appointed to the Council. He was unable to get along with the succeeding governor, Hunter, and in 1713 was removed from the Council through Hunter's influence. Having obtained the Swedish vote in Gloucester County, he was elected to the Assembly in 1714 and again in 1716, when he was chosen speaker. Hunter at once prorogued the Assembly, and when it convened again Coxe and his followers absented themselves in an unsuccessful attempt to obstruct the session. When a majority of the Assembly was finally gathered, Coxe and his friends were expelled and fled to Bristol in Pennsylvania. He returned to London, and his father and his brother Samuel petitioned the Lords of Trade in January and February 1714/15 against the renewal of Hunter's commission, but without success.

While in London in 1722 he published A Description of the English Province of Carolana, by the Spaniards call'd Florida, and by the French La Lousiane also of the great and famous river Meschacebe or Mississippi, composed of the memoirs of traders and explorers collected by his father. This book is chiefly remarkable because in the introduction Coxe sets forth what is believed to be the first printed plan for a political confederation of the North American colonies. He proposed that the colonies "be united under a Legal, Regular, and firm Establishment," that a Lieutenant or Supreme Governor be constituted to whom the colonial governors should be subordinate, and that two deputies, elected by the Assembly of each province, should "meet together, consult, and advise for the good of the whole, settle and appoint particular Quotas or Proportions of Money, Men, Provisions that each respective government is to raise for their mutual defense and safety."

He returned to New Jersey and in 1723 was a candidate for the Assembly from Burlington. In 1730 he was deputed as "Provincial Grand Master of the Provinces of New York, New Jersey, and Pensilvania" and thus became the first appointed Grand Master of Masons in America. He was again appointed to the supreme court in 1734 as third judge, a position which he held until his death in 1739.

COXE, ECKLEY BRINTON (June 4, 1839—May 13, 1895), mining engineer, the son of Charles Sidney Coxe, district attorney of Philadelphia and later judge of the district court, and of Ann Maria (Brinton) Coxe, was born in Philadelphia. He was a descendant of Col. Daniel Coxe [q.v.] and a grandson of Tench Coxe [q.v.]. The latter had acquired large tracts of
Coxe

land in the anthracite region of Pennsylvania before the importance of coal was generally realized, and Eckley Coxe was educated with the intention that he should develop them. At the age of nineteen he was graduated from the University of Pennsylvania. After graduation he continued for a time at the University, studying science, French, and bookkeeping. During his college course his summers had been spent in the coal regions and in 1859 he assisted in surveying the family's lands. In 1860 he went to Paris where he spent two years at the school of mines, after which he attended for a year the famous mining academy at Freiberg in Saxony, thus helping to set a fashion which led many American students of mining thither. Prof. Julius Weibach of Freiberg authorized Coxe to translate the first part of his important treatise on mechanics; this was published in 1870 in New York as *A Manual of the Mechanics of Engineering and of the Construction of Machines*, with *An Introduction to the Calculus: Vol. I, Theoretical Mechanics*, a volume of 1,112 pages. Coxe spent nearly two years more in Europe studying the actual operations of mines in England and on the Continent; this was during the period of the Civil War in America. In 1864, at the age of twenty-five, he returned to America to take up the development of the coal lands. In 1865 the firm of Coxe Brothers & Company was organized, the name later being changed to The Cross Creek Coal Company. Eckley Coxe made his home at Drifton, near Wilkes-Barre, in the anthracite region, and on June 27, 1868, married Sophia G. Fisher, daughter of Joshua Francis Fisher of Philadelphia.

The problems of Coxe in the development of the coal lands were both administrative and technical. Several leases for mining coal on the family's lands had already been granted. For economy in operation he maneuvered to consolidate these. By 1886 only 1,200 acres of the estate remained outside the control of the Cross Creek Company, of which Coxe was president, and the company controlled about 35,000 acres. The problem of transportation was critical. After controversies with the several railroads serving the region, the Delaware, Susquehanna & Schuylkill Railroad was organized in 1890 with members of the Cross Creek Company as stockholders and Coxe as president. Other problems were labor troubles, fires in the coal-mines, and the waste of coal due to short-sighted policies of operators anxious for quick profits. Coxe's policy in meeting all of these difficulties was commendable and patriotic. Among his technical achievements were the inventions of long steel tapes to use instead of chains for mine-surveying; Coxe's micrometer; an automatic slate-picking chute; corrugated rolls for breaking coal; coal-jigs; gyrating screens; the mechanical stoker; grease-packing for plunger-pumps; and applications of compressed air to machinery. His efforts to reduce the waste of small coal were particularly noteworthy and helped to stop the growth of the great culm heaps that marked the enormous losses in early anthracite mining. Many of Coxe's inventions and improvements were made in conjunction with skilful assistants who worked under his directions. A number of patents in his name or assigned to him were recorded about 1890. Over seventy of these were issued to cover mechanical stoking—an important development in engineering.

Coxe's constructive ability was not confined to his business enterprises. He established and contributed liberally to the support of a technical school at Drifton, for the sons of working miners. He was one of the founders of the American Institute of Mining Engineers and its president in 1878 and 1879, president of the American Society of Mechanical Engineers from 1892 to 1894, member of the American Society of Civil Engineers and of the American Chemical Society, state senator from the Luzerne and Lackawanna district of Pennsylvania from 1880 to 1884, and a trustee of Lehigh University from its inception. He was a Democrat and an Episcopalian. As a politician he was too conscientious to be practical; as a trustee of Lehigh he was active and enthusiastic. He was a robust, forceful man characterized by energy and spontaneity, and had an unusually large number of friends. He died of pneumonia at the age of fifty-four.

P.B.M.

COXE, JOHN REDMAN (Sept. 16, 1773–Mar. 22, 1864), physician, a descendant of Col. Daniel Coxe [q.v.] and the son of Daniel and Sarah (Redman) Coxe, was born in Trenton, N. J., but brought up by his grandfather, the distinguished physician John Redman [q.v.], in Philadelphia. Young Coxe was sent to school in England and then studied medicine in London and Edinburgh. In 1790 he returned to Philadelphia where he resumed his medical studies under Dr. Benjamin Rush [q.v.] and at the University of Pennsylvania, from which he received his degree of M.D. in 1794. During the yellow-fever epidemic of 1793 he worked faithfully by the side of his great preceptor. The following year he
Coxe went abroad again and spent several years studying in the hospitals at London, Edinburgh, and Paris. He returned to Philadelphia in 1796 and started to practise. During the yellow-fever epidemic of 1797 he gave up his private work to serve as resident physician at the Bush Hill Hospital under Dr. Physick and Dr. Cathrall. Coxe was an early advocate of vaccination, naming a son of his Edward Jenner and vaccinating him as well as himself in 1801. He was also an expert pharmacist. The compound syrup of squills of the United States Pharmacopoeia was originally prepared by him and was generally known as Coxe's Hive Syrup. He is said to have introduced the Jalap plant into the United States. His lectures on materia medica and pharmacy were the chief source of systematic instruction for prospective apothecaries before the establishment of the College of Pharmacy.

Coxe was editor of the Medical Museum which was published from 1805 until 1811. In 1808 he edited the American Dispensatory and published a Medical Dictionary. His other writings include: An Inquiry into the Claims of Dr. William Harvey to the Discovery of the Circulation of the Blood with a More Equitable Retrospect of that Event, to Which Is Added an Introductory Lecture Delivered on the Third of November, 1829, in Vindication of Hippocrates from Sundry Charges of Ignorance Preferred Against Him by the Late Professor Rush (1834); The Writings of Hippocrates and Galen Epitomized from the Original Latin Translation (1846). From 1802 to 1807 he was physician to the Pennsylvania Hospital. He was professor of chemistry in the University of Pennsylvania from 1809 to 1819, when he was transferred to the chair of materia medica and pharmacy in the medical department. In 1835 his chair was declared vacant by the Board of Trustees. He seems to have been too conservative in his teachings. According to Carson, "The doctrines and opinions of the earlier fathers of Physic had so superior a value in his estimation as to lead to too exclusive an exposition of them in his lectures."

At the time of Coxe's death his library, according to Gross, who held Coxe's learning in high esteem, contained the "best collection of the Fathers of Medicine and of Theology" in the country. The library was sold by auction; the theological section was purchased for the Princeton Library and the Theological Seminary in Philadelphia, and Gross himself bought many of the medical books. Coxe was married to Sarah, daughter of Col. John Cox, by whom he had six children.

Coxe, Richard Smith (Jan. 1792–Apr. 28, 1865), lawyer, was a great-grandson of Col. Daniel Coxe [q.v.], and a son of William Coxe [q.v.] and Rachel (Smith) Coxe, who at the time of Richard's birth were residing at Burlington, N. J. Richard obtained his early education at the Burlington Academy, was prepared for college by a private tutor, and entered the College of New Jersey (Princeton) in 1805, graduating in 1808. He then read law for three years in the office of Judge William Griffith at Burlington, after which he went to Philadelphia, studied with Horace Binney [q.v.], and was admitted to the bar of the supreme court of Pennsylvania, Dec. 11, 1812. He practised for some time in Philadelphia, making a special study of real property law. Early evincing great literary activity, in his leisure he prepared A New Critical Pronouncing Dictionary of the English Language Compiled by an American Gentleman, which was published in 1813. He also compiled Reports of Cases Argued and Determined in the Supreme Court of New Jersey from April Term 1790 to November Term 1795 Both Inclusive, which appeared in 1816. This work forms the first volume of the series of reports of decisions of the supreme court of New Jersey. On his marriage, Jan. 23, 1816, to Susan B., daughter of Judge Griffith, he returned to Burlington and was admitted to the New Jersey bar in May 1817. Opening an office in Burlington he soon acquired a good practise and was appointed deputy attorney-general for Burlington County. In December 1822, however, he removed to Washington, D. C., and was admitted to the bar of the circuit court of the District of Columbia. At this period much litigation dealing with intricate questions of real property law applicable to the colonies of Great Britain, France, and Spain arose from the cession of Florida and Louisiana, and in due course came before the Supreme Court of the United States. Coxe, owing to his having specialized in real property law, was briefed in a number of suits, and such was the skill which he displayed in handling these cases, involving as they did not only important principles of municipal law but delicate considerations of public international law, that he quickly established himself as a leader of the Supreme Court. Thenceforth his practise was chiefly before that tribunal, where his ability procured for him some years predominance as counsel. It was said of him at one time that he was employed in more cases upon the docket of the Supreme Court of the United States than any other lawyer
in the country (Crew, *post*). Despite his heavy professional engagements, he prepared a *Digest of Decisions Supreme, Circuit, and District Courts, United States, 1789–1829*, which was published in 1829. As judge advocate he appeared for the government in many prosecutions before courts-martial. Consistently refusing to enter public life, he confined himself to his professional work, seeking his recreation in literary studies, particularly the English classics. To this avocation may be attributed the attractive scholarly way in which he invariably presented his cases to the Court, his arguments being remarkable for their perfection of language and logic. He was frequently called upon on academic and patriotic occasions to deliver addresses, a number of which were subsequently published, and, in addition to the works previously referred to, he wrote a *Review of the Relations between the United States and Mexico* (1846) and a brochure, *The Present State of the African Slave-Trade* (1858). In 1840 he married as his second wife Mrs. Susan R. Wheeler, daughter of John Warren of New York. He died at Washington.

H. W. H. K.

COXE, TENCH (May 22, 1755–July 16, 1824), political economist, was the son of William and Mary (Francis) Coxe and grandson of Col. Daniel Coxe [q.v.], colonial legislator and judge, and of Tench Francis [q.v.], attorney-general of the province of Pennsylvania. Tench Coxe, like his brother William [q.v.], was born in Philadelphia. He was educated at the College of Philadelphia, now the University of Pennsylvania, though he seems not to have graduated. He studied law, but instead of undertaking an independent practice entered his father's counting-house, and in 1776 became a member of the firm of Coxe, Furman & Coxe. Friendly writers have said that it was the exigency of the business, of which he was left in complete charge, which made him neutral during the Revolution. Others declare that royalist sympathies made him resign from the militia and leave Philadelphia to join the British, returning in 1777 with the army under Howe, and that with Howe's withdrawal Coxe was arrested, paroled, and turned Whig. At any rate, he did not sacrifice the esteem of patriots, for he was a member of the Annapolis Convention of 1786 and of the Continental Con-

gress in 1788. He supported the adoption of the Constitution in an able pamphlet, *An Examination of the Constitution for the United States* (1788), which was one of the earliest arguments to appear in its behalf, and marks its author in every way a Federalist. He was particularly anxious that the financial difficulties of the Confederation should be cured through adoption of the new instrument. He was made assistant secretary of the treasury in 1789 and became Commissioner of the Revenue in 1792. From the latter post Adams removed him in December 1797 (probably because of Wolcott's dissatisfaction with his subordinate, though no official reason was given), and Coxe altered allegiance again by joining the Republicans. In the campaign of 1800 he added to the Federalist discomfort, already acute through Hamilton's attack upon President Adams, by publishing a letter which he had received from Adams in 1792 openly insinuating that Charles and Thomas Pinckney, both Federalist leaders, were not to be trusted because under British influence. Federalists promptly branded Coxe a traitor to the party, whereupon Jefferson took him up, in 1803 appointing him Purveyor of Public Supplies, which office he held until it was abolished in 1812. Jefferson and Madison remained his friends, and the latter, in 1820 when Coxe was an old man, sought unavailingely to have Monroe give him preferment.

Coxe's shifts in politics were in marked contrast to his steadfastness in adherence to the economic policies which he believed would promote the prosperity of the new nation. Dealing in practicalities rather than in doctrine, he belonged to the nationalist group which later found its full expression in the works of Henry C. Carey [q.v.]. He resented the hardships of Britain's colonial policy, realized the necessity of close political union following the weakness of the Confederation, and was moved to action by the flooding of American markets with British goods when peace was concluded. His pamphlet, *An Enquiry into the Principles on Which a Commercial System for the United States of America Should be Founded*, read to a meeting in the house of Benjamin Franklin in 1787 and published in the same year, is a key to his views. While ever mindful of the claims of agriculture (which he calculated embraced seven-eighths of the country's wealth), he thought these would best be served by development of manufactures which would afford a home market for raw materials and foodstuffs. He believed a revenue tariff, combined with the natural advantages of the country, sufficient for the encouragement of
American industry. He was unalterably opposed to commercial restrictions between the states. He urged confining importation to American bottoms and to ships of the country of origin. Coastwise trade, he held, should belong exclusively to American ship-owners. He early (1775) became a member of the United Company of Philadelphia for Promoting American Manufactures, and became president of the Pennsylvania Society for the Encouragement of Manufactures and the Useful Arts (founded in 1787). He has been called the father of the American cotton industry because he was one of the first to urge on the South cultivation of cotton as a staple, and was active in the promotion of cotton manufacture. In 1787, two years before Samuel Slater's arrival, Coxe attempted, though without success, to have models of the Arkwright machinery brought to America by way of France. Early aware of the existence of coal in central and western Pennsylvania, and, apparently, of its future importance (see his View of the United States of America, 1794, pp. 70-71), in 1787 and 1793 he purchased extensive tracts of land in the coal areas, which he transmitted to his heirs. A grandson, Eckley B. Coxe [q.v.], educated to develop the coal lands, became one of the outstanding mining engineers of the United States.

Tench Coxe was married twice: first, to Catherine McCall of Philadelphia, who died without issue; and second, to Rebecca, daughter of Charles Coxe of New Jersey. He was a handsome, winning person, capable and versatile, high in the second rank of men of his day.

[See Henry Simpson, The Lives of Eminent Philadelphians (1856); Lorenzo Sabine, Biog. Sketches of Loyalists of the Am. Revolution (1864); Pa. Mag. of Hist. and Biog., vols. V (1881) and XVI (1893); George S. White, Memoir of Samuel Slater (2nd ed., 1836) obituaries in Philadelphia papers: Franklin Gazette and National Gazette for July 16, 1824, andoulson's Am. Daily Advertiser for July 17, 1824. There are numerous references to Coxe in the letters of Jefferson, Madison, and Adams. For his opinions see his View of the United States (1794), which is in effect a compilation of a number of his papers published during the years 1787-94, and (also by Coxe) A Statement of the Arts and Manufactures of the U.S. for the Year 1819.] B.M.

COXE, WILLIAM (May 3, 1762-Feb. 25, 1831), pomologist, a grandson of Col. Daniel Coxe [q.v.], was born in Philadelphia. His parents were William and Mary (Francis) Coxe, and Tench Coxe [q.v.] was an older brother. William's schooling was imperfect, but he had a great fondness for reading, and through his own efforts, and with the aid of a member of his family, laid the foundation for an education which eventually fitted him for a wide and influential public service. At the time of his marriage to Rachel Smith in 1789, he was engaged in a mercantile business in Philadelphia, but apparently without results that justified its continuance. He moved to Burlington, N. J., where he materially improved extensive property owned by his wife, and laid out the work which in due course was to make him known as the father of American pomology. There he began the cultivation of fruit, assembling in his orchards varieties not only from all parts of the United States, but from England and France as well. His first-hand observations and experience gained him a position of authority probably held by no other at that time. The demands made upon him for scions and for information became so great that he decided to give the public the benefit of his knowledge in print, which he did in the book entitled: A View of the Cultivation of Fruit-Trees, and the Management of Orchards and Cider; with Accurate Descriptions of the Most Estimable Varieties of Native and Foreign Apples, Pears, Peaches, Plums, and Cherries, Cultivated in the Middle States of America: Illustrated by Cuts of Two Hundred Kinds of Fruits of the Natural Size. This book was published in 1817 and undoubtedly had a marked influence on the development of American pomology during the first half of the nineteenth century. Coxe planned a new edition and collected material with it in view. His daughters, Mrs. McMurtrie and her sisters, prepared illustrations in color of about 160 varieties of apples, pears, peaches, plums, and cherries, more than one hundred of the paintings being of apples and crabs. The book was not published, however, and in succeeding years the paintings were lost. A recent search resulted in their discovery in the possession of Mrs. McMurtrie's grandchildren, who gave them, together with a manuscript upon which the original book was apparently based and various notes in manuscript, to the library of the United States Department of Agriculture.

Coxe was recognized abroad as well as at home. He was instrumental in introducing the Seckel pear into England and for this service was made an honorary member of the Royal Horticultural Society. He withdrew his membership, however, after a few years, feeling that the recognition was out of proportion to the service. Always public-spirited though in no sense a politician, he was a member of the state legislature, 1796-1804, 1806-09, 1816 and 1817, and speaker of the Assembly from 1798 to 1800, and also in 1802. In 1813 he went to Congress as a Federalist, remaining for one term. For financial reasons he sold his residence in Burlington and moved to his farm located on the Delaware River, near town, where he spent the last years

489
Coxetter

of his life in comparative retirement, devoting himself to his family, his books, the interests of his church, and the welfare of those about him. He was a handsome man, of gentlemanly bearing and kindly spirit, generously sharing with his neighbors his knowledge, his fruit, and his extensive library. One of his daughters married Bishop McIlvaine [q.v.], and a son, Richard Smith Coxe [q.v.], attained distinction as a lawyer.

H. P. G.

COXETTER, LOUIS MITCHELL (Dec. 10, 1818–July 10, 1873), mariner, was the most celebrated of the Confederate privateers and one of the most successful of the blockade-runners. He was born in Nova Scotia; but early in his youth made Charleston, S. C., his home port. He entered the Florida trade, and soon rose to the command of a schooner plying between Charleston and St. Augustine. During the Mexican War he was in public service as a transport captain. Upon the termination of hostilities, he returned to Charleston, and initiated the first line of steam-packets between that city and Florida ports, commanding in turn the Florida, Carolina, and Everglade. A few days after President Davis issued his famous letter-of-marque proclamation, a company, composed of men of high standing, was organized in Charleston to send the brig Putnam (the one-time slaver Echo) to sea as a private-armed cruiser under the Confederate flag; and Coxetter was invited to join this syndicate, as part owner and captain. He received his commission as commander of the vessel, renamed the Jefferson Davis, on June 18, 1861, and ten days later ran the blockade, having on board about seventy men and five obsolete guns. He cruised leisurely up the coast into New England waters, taking heavy toll of the West-Indian and South-American trade. The United States sent nine war vessels in search of this raider; but Coxetter successfully eluded his pursuers, transferring his cruising ground to the West Indies, with base at San Juan, Porto Rico. At length he found his crew so reduced by the number of men which he had put on his prizes that he was forced to turn homeward to recruit. In attempting to call at St. Augustine, Aug. 18, 1861, a half-gale blowing, he got aground on the bar and lost his ship. The crew was saved. Upon his return to Charleston, he was presented with a gold watch and fob as a token of the public estimation. Of his prizes only two were captured; one was burned; three released as cartels; and one released on account of her neutral cargo.

His skill and resolution were recognized by the Navy Department, which recommended him to its foreign purchasing agent as a suitable man to run a cargo of supplies through the blockade. In October he left Charleston on the Confederate transport Theodore (which also carried Mason and Slidell on the first leg of their famous interrupted voyage). It was generally supposed in Charleston that he had gone to Cuba to get another privateer to sea; but he went on to England incognito, using his middle name, and switched to a blockade-running career. He entered the service of John Fraser & Company of Charleston, and Fraser, Trenholm & Company of Liverpool, recognized agents of the Confederate government. His first command was the Herald, a fast steamer, which was subsequently renamed Antonica in honor of his wife. He also commanded the Beauregard of the same line. In the last few weeks of the war, he was engaged by the navy on some secret mission in the Savannah River, near Augusta, probably in connection with the mining of the river against the ascent of Federal gunboats from Savannah.

His humanity as a privateersman is attested by the high character which his captives gave him (see Capt. Smith in New York Herald, July 22, 1861, and Mate Jones, Ibid., Aug. 21, 1861). After the war he reentered the packet service, commanding, until about two months before his death, the side-wheel steamer Dictator, of the Charleston-Palatka line. He owned a ninth interest in this vessel and five-sixths of the Cooper River steamboat Starlight. He was survived by his wife, Antonica Geiger, and three of his four sons. He was buried from St. Mary's Church (French Catholic) in St. Laurence Cemetery, July 11, 1873.

W. M. R.

COZZENS, FREDERICK SWARTWOUT (Mar. 11, 1818–Dec. 23, 1866), author and wine merchant, son of Frederick Cozzens, a chemist and naturalist of New York City, was descended from Richard Haywarde who was born in Hampshire, England, in 1693, and emigrated to Rhode Island as a Moravian missionary. Haywarde's great-grand-daughter married Issachar Cozzens, Quaker descendant of Leonard Cozzens, who had

Cozzens
Cozzens

been admitted to Rhode Island as a freeman on May 3, 1715, after his emigration from Devizes, Wiltshire, England. Issachar Cozzens, who fought at Bunker Hill, was the paternal grandfather of Frederick Swartwout Cozzens. His maternal grandmother was a native of Carlisle on the Scottish Border and possessed a fund of Border tales and ballads, to his familiarity with which as a boy he later attributed his passion for poetry. As a child he formed studious tastes which led him to turn for recreation to reading, to the theatre, to writing, and to travel. He devoted some attention to mechanics and spent three years in the machine branch of bank-note engraving. At the age of twenty-one, he entered the grocery and wine business in Vesey St., and became an important wine merchant of the city, introducing the native Longworth wines of Ohio. He gave active attention to his business until his failure in 1868, when he retired to Rahway, N. J. His wife was Susan Meyers of Philadelphia.

One of the original members of the Century Club in New York, he enjoyed the friendship of many of the writers of his generation, though literature was with him only an avocation. His first publication, Yankee Doodle (1847), was a humorous imitation of Spenser. At this time began his eight years of contribution, anonymous for the most part, to the Knickerbocker Magazine. Many of these essays, sketches, and poems were collected in Priscatics (1853) under the pseudonym Richard Haywarde, the name of his earliest American ancestor. His greatest popularity grew out of The Sparrowgrass Papers, an account with humorous exaggeration of the experiences of the city man in setting up a rural abode at "Chesnut Cottage," the author's summer home in Yonkers. The first chapters appeared in Putnam's Magazine in 1854, and their publication in book form in 1856 won Cozzens immediate and wide recognition as a humorist. They were reprinted in at least five editions, of which the latest appeared in 1870.

In 1854 he began the publication of the Wine Press, a trade monthly designed primarily to promote the introduction of native wines. This he edited for seven years. The entertaining and instructive essays on various topics by Cozzens and a few of his contemporaries, which had appeared, chiefly, in this periodical, were collected in The Sayings of Dr. Bushwhacker and Other Learned Men (1867). The New York Publishers Association, in 1858, sent Cozzens as their representative to the copyright congress in Brussels. Following a tour in Nova Scotia, he published Acadia; or, a Month with the Bluenoses (1859), and in the same year contributed to the New York Ledger his "True History of New Plymouth." Primarily a humorist, Cozzens could command at times an unpretentious, dignified style and a manner of simple eloquence. These traits characterize his memorials to Col. Peter A. Porter (1864) and to Fitz-Greene Halleck (1868). His humor was widely copied and even imitated, but his popularity did not survive his century; and his unsatirical pleasantries have passed with the trivial incidents upon which they were expended.

[See the autobiographical Sayings, Wise and Otherwise (1886), with an Introductory Note by Donald G. Mitchell (1886); Jas. Grant Wilson, Bryant and His Friends (1886); and Life and Letters of Fitz-Greene Halleck (1866); Mary Ross, "An Impression of the Fifties," in Putnam's Magazine, Jan. 1908; "Leaves from the Journals of Frederick S. Cozzens," with explanatory comment by Arthur D. F. Randolph, in Lippincott's Magazine, May 1890; N. Y. Herald, Dec. 25, 28 and World (N. Y.), Dec. 28, 1869.]

A. L. B.

CRABTREE, LOTT A (Nov. 7, 1847—Sept. 25, 1924), actress, was born in New York, the daughter of John Ashworth Crabtree, a bookseller, and Mary Ann (Livesey) Crabtree, both of whom came of Lancashire stock. Caught by the gold fever, Crabtree left for California early in the fifties. His wife and Lotta followed in 1853, arriving in San Francisco at a climax in that free outburst of theatres which had become one of the astonishing features of life on the Coast in those years. Handsome theatres had been built; the major theatrical talent of the period had hastened to California. Mrs. Crabtree was a woman of unusual enterprise, resourcefulness, and native wit. With Lotta she soon joined her husband at the flourishing mining camp of Grass Valley, and there met Lola Montez, who taught Lotta to dance. At Lola's cottage both Lotta and Mrs. Crabtree met traveling players. In 1855, at Rabbit Creek, a remote, wild camp in the Sierras where Crabtree had gone in further search for gold, Lotta made her first appearance on the stage as child of eight, dancing and singing in a rude hall before the assembled miners, who showered her with gold nuggets. Mrs. Crabtree learned to play the triangle, and with Lotta joined a small company of troupers, setting out in the spring of the same year through the mountains, traveling by wagon or on the backs of mules. For the next few years Lotta made many such tours, with highly-colored adventures on the road and unbroken success in the mining camps. Her tiny figure, bright black eyes, and mop of red hair, her blackface impersonations, her intricate step-dancing, charmed the existing audiences of miners. In 1859 she began long engagements at the variety halls of San Francisco. Five years later, still hardly more than a child, she left for the East. After a mis-
taken venture in New York and months of hard travel in the south and middle west, she attracted the attention of John Brougham [q.v.], who dramatized for her scenes from The Old Curiosity Shop, under the title of Little Nell and the Marchioness. With her appearance in the doubled rôles at Wallack’s in New York in 1867, her widespread popular triumphs began. Her most successful plays included Little Nell, The Little Detective, Nan the Good for Nothing, The Ticket of Leave Man, Heartsease—a California play—Zip, Musette, with others bordering upon minstrelsy and comic opera. These were all slight in idea and plot; they were given character by Lotta’s gift for extravaganza. Her comic faculty seemed boundless. In the mining camps she had gained a free, infectious humor; she had also learned there the power of intimate communication with an audience. Her dancing and by-play were often considered daring, but she gave an innocent distinction to her most piquant innovations, and became an outstanding figure in the growing native art of burlesque and extravaganza. Almost unbelievably child-like in appearance, known affectionately only as “Lotta,” she remained a favorite throughout the country for many years. The only break in her long success came in 1888, when an unfortunate combination of circumstances brought her almost to the brink of failure in England. She triumphed in spite of these, returned to the United States, and continued on the stage until 1891.

Upon her retirement Lotta became a comparatively solitary figure. Her life off stage had always been in marked contrast to her public career. Widely beloved, she had had few close friendships. She had never married. Her single companion had been her mother, who had directed her early stage successes, and had managed her business affairs astutely. Her immense wealth—even at the end of her early California period she had possessed a comfortable fortune—was the cause of a fantastic episode after her death. All the members of her immediate family had died; she left no direct heirs. A woman who claimed to be her daughter by a secret marriage precipitated one of the most remarkable contest of recent years. The claim was proved wholly fraudulent, however, and Lotta Crabtree’s large fortune was bequeathed mainly to charity.

[See Constance Rourke, Trouper of the Gold Coast, or the Rise of Lotta Crabtree (1928), which contains a statement of sources.] 

C. M. R.

CRADDOCK, CHARLES EGBERT. [See Murfree, Mary Noailles, 1850–1922.]

CRAFTS, JAMES MASON (Mar. 8, 1839–June 20, 1917), chemist, teacher, administrator, was the son of Royal Altemont and Marian (Mason) Crafts, and grandson of Jeremiah Mason, noted lawyer and statesman of Portsmouth, N. H., and Boston. His father was a merchant and manufacturer of woolens in Boston where James attended the Sullivan School, and the Boston Latin School, and studied under the tutelage of Dr. Samuel Eliot. The young boy was of generally serious mien, but vigorous and at times full of fun. He attracted attention among his mates by his mechanical ingenuity and dexterity and his fondness for scientific subjects, a fondness which was fostered by attendance at the Lowell Institute Lectures in Boston, and the personal interest of Prof. William Barton Rogers [q.v.], soon to be founder of the Massachusetts Institute of Technology. Crafts was graduated from the Lawrence Scientific School of Harvard in 1858, with chemistry as his major subject, having worked mainly under Prof. Horsford. He remained at Harvard for nearly a year after graduation as a student of engineering, and in 1860 went to Europe. He first studied at the Bergakademie at Freiberg but soon transferred to Heidelberg, where for a year he worked with Bunsen, acting as assistant just at the time when spectrum analysis was a newly discovered tool in the search for and identification of the rare metals. He then went to Paris to take up work under Wurtz, the noted French organic chemist. At this time he published several papers in conjunction with Charles Friedel and a firm friendship was established between them, with important later results. Crafts continued his study at the École de Médecin for four years. In 1865 he returned to America and became an inspector of mines in Mexico at a time when this occupation called for courage and alert resourcefulness as well as expert knowledge. Not long after the opening of Cornell University, Crafts began his teaching career (1868) as professor of chemistry in charge of the department, a position which he held until 1871. Meanwhile, in 1868, he married Clémence Haggerty of New York. From Cornell Crafts returned to Boston where he succeeded Prof. Francis H. Storer at the Massachusetts Institute of Technology, an institution also in its early youth. He threw himself into his new duties with characteristic energy, being “particularly interested in the establishment of advanced courses of study and research in chemistry, physics, and other branches which should lead to a higher degree” (Cross, post, p. 161).

In 1874 impaired health made it necessary for him to abandon teaching for a time, and the research resources open to him in Paris led him again to transfer his residence to the latter city,
Crafts

though he retained a non-resident professorship at the Massachusetts Institute until 1880. He remained in France until 1891, spending his time mostly upon research at the École des Mines, again in conjunction with Friedel. Many papers, published in the Comptes Rendus and the Bulletin of the Chemical Society of Paris followed. Among these one, published with Friedel, relating to the use of aluminum chloride in organic syntheses (1877), gave permanent distinction to its authors because of the far-reaching applicability of the reaction which they discovered, known to chemists as the “Friedel-Crafts reaction.” Other valuable contributions relating to thermometry and to the determination of vapor densities belong to the same time. In all, Crafts was author, or joint author (almost wholly with Friedel), of more than one hundred and thirty-five scientific papers.

After his return to America in 1891 he was elected a member of the corporation of the Massachusetts Institute of Technology and became professor of organic chemistry in 1892. Upon the death of President Francis A. Walker in 1897, Crafts became chairman of the faculty, and subsequently was president for two years. During his presidency the question of the merging of the Massachusetts Institute of Technology with the Lawrence Scientific School of Harvard was the subject of serious, and sometimes acrimonious, discussion. Crafts favored the merger, believing that the two institutions should unite energies and resources to a common end while retaining their independence, but this view was ardently opposed by many of the alumni of the Institute and various difficulties arose which finally led to its abandonment. Crafts soon after (1900) resigned the presidency, the duties of which were never fully congenial to him, and returned to teaching and research, retaining a laboratory at the Institute until his death. His researches at that period concerned themselves chiefly with a study of catalysis and accurate thermometry with reference to the exact determination of boiling points to serve as standards. After several years spent in the design and perfection of elaborate apparatus for this purpose, he began experimentation in 1904.

In the summer of 1911 he suffered a severe attack of neuritis from which he never fully recovered. While he was thereafter debarred from continuously active laboratory work, he devoted himself to the preparation for publication of the collection of exact data resulting from years of activity. During this period, “he divided his time between his Boston residence on Commonwealth Ave.... and his beautiful country place at Ridgefield, Conn., where he had a small laboratory well-fitted for his work, and where he enjoyed quiet and seclusion always more suited to his taste than the publicity and whirl of city life” (Richards, post). Crafts was handsome and imposing in appearance, a man of marked culture and refinement, quiet but kindly in manner, yet somewhat difficult on first approach. He was an active worker when his health permitted. As an administrator he was just in his decisions and fertile in suggestion. His short term of office did not permit of the fulfilment of many new policies. He retained the vigor of his mental powers until his death, from heart disease, in his seventy-ninth year.

In 1880 he received the Jecker Prize of 2,000 francs from the Paris Academy of Sciences for his researches relative to organic chemistry, and in 1885 he was made a Chevalier of the Legion of Honor. In 1911 he received the Rumford Medal of the American Academy of Arts and Sciences, of which he had been a Fellow since 1867, “for his researches in high temperature thermometry and the exact determination of fixed points on the thermometer scale.” He was elected a member of the National Academy of Sciences in 1892, a corresponding member of the British Association for the Advancement of Science, and a foreign member of the Royal Institution of Great Britain (1904).

H. P. T.

CRAFTS, WILLIAM (Jan. 24, 1787-Sept. 23, 1826), author, lawyer, was born in Charleston, S. C., the eldest child of William Crafts (1763-1820) by his first wife, Margaret Tébaut, and the sixth in descent from Griffin Craft, who, with his wife Alice, emigrated in John Winthrop’s company to Massachusetts in 1630 and settled at Roxbury. His father, born in Boston, became an opulent, public-spirited merchant of Charleston. His mother was the daughter of a Beaufort, S. C., family. Young Crafts was handsome and popular and acquired a precious reputation as a wit and scholar. Upon his graduation from Harvard College in 1805 he dawdled over Coke and Littleton for three years in a Charleston law office, returned to Cambridge to receive his M.A., and set the college agog with the banter and informality of an oration couched in execrable Latin, was admitted to the South Carolina bar Jan. 9, 1809, and set out to win glory in law, politics, and letters. The glory, however, was never more than local. Born to money and good society, gifted but in-

493
Crafts

dolent, Crafts was spoiled by a succession of easy triumphs in his early manhood and never learned to work. Entering politics as a Federalist, he was elected to the lower house of the legislature in 1810, was defeated in the next election, but later was reelected for a term or two. His principal achievement as a legislator was a ringing speech on the necessity of public education, which he delivered in November 1813, when some wisecracks proposed in the interest of economy to suspend the free public schools. For the last six years of his life Crafts was a member of the state Senate. His career as a lawyer was handicapped by the fact that his knowledge of law was negligible; Hugh Swinton Legaré even denied that he was a lawyer at all. Accordingly he drifted into criminal cases, in which his shortcomings were less conspicuous and his talent for dazzling juries with his rhetoric was of great effect. As a literary man he achieved a fuller measure of success. He was in constant demand as an orator for public funerals and anniversary celebrations; and his Eulogy on the Late Rev. James Dewar Simons, Rector of St. Philip's (1814) was regarded locally as one of the masterpieces of American eloquence. In 1817 he delivered the Phi Beta Kappa address at Harvard. To the Charleston Courier he contributed theatrical criticisms, essays in the manner of Addison, and poems first in the manner of Pope and Gay and later in that of Byron and Moore. His most ambitious effusions were "Sullivan's Island," a descriptive poem modeled too closely on "Windsor Forest," "The Raciad," a pleasing picture of Charleston social life, and a "Monody on the Death of Decatur," which was published the day after the news of Stephen Decatur's death reached Charleston. His anacreontics are the best verse written in South Carolina before William Gilmore Simms. His principal publications are The Raciad and Other Occasional Poems (1810), The Sea Serpent: A Dramatic Jeu d'Esprit (1819), and Sullivan's Island, The Raciad, and Other Poems (1820). On June 19, 1823, he married his cousin, Caroline Crafts Homes of Boston, who survived him. He died at Lebanon Springs, N. Y., whither he had gone for his health, and was buried in King's Chapel churchyard in Boston.

Craig

CRAIG, AUSTIN (July 14, 1824-Aug. 27, 1881), clergyman, educator, noted as a pioneer advocate of freedom of thought in the church and of the obliteration of denominational lines, was all his life associated with the "Christian connection," joining it, as he states, "before the word 'denominational' came into vogue among us. I do not consider myself as belonging to that word. It is to me a disagreeable word. I like the name Christian far better. That name expresses all I have ever desired to be" (Harwood, *post*, p. 306). Horace Mann, who in his later activities leaned heavily upon him for advice and encouragement, called him a religious genius, and such was his scholarship and ability in exegesis that Henry Ward Beecher declared that "Whenever I have met that man I have felt like taking a stool and sitting at his feet and listening to his words as long as he would talk to me."

Born in Peapack, N. J., the son of Moses and Rachel (Carhart) Craig, he was of Scotch-Irish and English descent. His father, formerly a teacher, was a successful merchant and farmer, and Austin was brought up in a home where both learning and religion were highly regarded. When he was sixteen he entered Lafayette College, but left during his third year, returning in 1846 for the study of Hebrew. He was extremely independent and individualistic, never disciplining himself to a harness of any kind. At college he and a classmate petitioned the faculty to permit the study of Christian writers instead of the usual Greek and Latin authors, and he left because, as he confessed, he would not study what the authorities offered, since they would not let him study what he desired. He had a most vigorous and retentive mind, however, and was always a thorough student of everything pertaining to the Bible. He became one of the best New Testament Greek scholars in the country, and was invited to be one of the American revisers of the Bible. Though he declined because of other duties, he was repeatedly consulted when difficult problems arose.

He began to preach while in college. In May 1844, he was licensed by the New Jersey Christian Conference, and was ordained in 1845. For six years he was an itinerant preacher and supply, serving without pay, since, as he said, he was getting his ministerial education. His principal charge was at Blooming Grove, Orange County, N. Y., where he settled in 1851, and remained with the exception of two or three brief intervals.

494
Craig until 1865. It was preceded by a short pastorate at Feltville, N. J., and in 1868–69 he was pastor of the North Christian Church, New Bedford, Mass. While in Feltville he became widely known because of an address delivered at a church conference held at Camptown (Irvington), N. J., May 18, 1850, arraigning sectarianism and setting forth in masterly fashion the basis for Christian union. Horace Greeley published it in the New York Tribune, and it was issued in pamphlet form. From this time on Craig was a constant writer of tracts and articles for religious periodicals, many of the former having extensive circulation here and in England. He was the constant adviser of Horace Mann when the latter undertook the establishment of Antioch College, was supply professor of Greek in 1855, and, yielding to Mann's entreaties, became college pastor and professor of logic and rhetoric in 1857, but returned to Blooming Grove in 1858. He was elected president in 1862, but did not take active charge, though he aided in the rehabilitation of the institution, until 1865, and then only for a year. Prior to 1869 he also served for several years as non-resident professor of Christian Life and Experience at the Meadville Theological School. From 1869 until his death he was president of the Christian Biblical Institute, located first at Eddytown, N. Y., and later at Stanfordville, N. Y., established with the aim of helping its students "to search the Scriptures for themselves, with the aids and appliances of modern scholarship, and to qualify them for the free and untrammeled interpretation of the Holy Scriptures according to the individual conscience, without bias or prejudice, and to train them to be efficient ministers of the Gospel of Christ." This statement embodies the spirit and chief interest of Craig's whole life.

He was twice married, first, Aug. 12, 1858, to Adelaide Churchill, who died June 24, 1879; second, in 1880, to Sarah J. McCarn, M.D. Many of his productions may be found in Martyn Summerbell's Writings and Addresses of Austin Craig, 2 vols. (1911, 1913). O. O. Wright and Selah Howell published in 1885 A Memorial of the Rev. Austin Craig, D.D., which contains phonographic reports of his lectures.

Craig, Daniel H. (c. 1814–Jan. 5, 1895), journalist, was born in Rumney, N. H. His father fought in the War of 1812 and his grandfather was a Revolutionary soldier. After learning the printing trade, Craig went to New York and then to Baltimore where with Arunah S. Abell [q.v.] of the Sun he experimented with the use of carrier pigeons to carry news. He next appeared in Boston as an independent news collector, succeeding Samuel Topliff and Harry Blake, pioneers in gathering and selling news to Boston newspapers. He met the Cunard boats with schooners as they approached Boston, received packets of news from the incoming vessels and sent synopses of it to Boston papers by carrier pigeons released sometimes fifty miles from port. News thus forwarded arrived several hours before the boat docked and was published as an extra for the Boston Daily Mail and for Bennett's New York Herald. The extras bearing the Herald title were forwarded to New York where rivalry between the Herald and Sun was intense.

When the New York newspapers formed the Associated Press in 1848, Craig faced formidable competition which he met by moving his base of operations to Halifax where Liverpool steamers touched en route to United States ports. He had a synopsis of the latest news prepared in Liverpool. This was sealed in a tin can and thrown overboard at Halifax where Craig's representatives met the ships in small boats. The news was then rushed to New York and Boston by carrier pigeons and pony express. When the New York and Boston papers finally combined to charter a steamer to carry dispatches from Halifax in faster time than Craig's system made possible, Craig traveled to Halifax carrying two of his best pigeons in a basket. He got his European news, bought passage on the special steamer, and when it was off the Massachusetts coast secretly released his carrier pigeons with the result that his news was in print before the steamer arrived in Boston. Shortly after, about 1850, the Associated Press employed Craig as its Halifax representative. In 1851, he was brought to New York as general agent of the Associated Press. He succeeded Gerard Hallock as president in 1861 and resigned in 1866. After his retirement from journalism, he was associated with Ezra Cornell [q.v.] in development of telegraphic facilities. His later years were spent in quiet comfort at Ashbury Park, N. J.

Craig's publications include four pamphlets: The American Telegraph Company and the Press. A Reply to the Falsehoods of the Executive Committee (1853), Letter to F. M. Edson (on the House Telegraph Line) (1853), Machine Telegraphy of Today (1888, 1890, 1891), Startling Facts! Practical Machine Telegraphy. One Thousand Words per Minute (no place and no date).
Craig

D. W. M.

CRAIG, THOMAS (Dec. 20, 1855-May 8, 1900), mathematician, was of Scotch descent, his parents, Alexander Craig and Mary Hall, having been born in Ayrshire. The father was a mining engineer and came to America for the purpose of engaging in his profession in the coal regions of Pennsylvania. Thomas Craig was born at Pittston, in that state, and was prepared for college at the Pittston Seminary, showing even in his school days notable ability in his studies. Interested in his father's profession, he entered Lafayette College in September 1871, and was graduated four years later (1875) with the degree of civil engineer. After teaching for a year he entered Johns Hopkins University in 1876, induced by the opportunities offered to study under the guidance of Prof. Sylvester, then beginning his notable (although not his first) work in this country. His abilities were immediately recognized by the grant of a fellowship and by its extension for a period of three years (1876-79). The degree of Ph.D. in mathematics was conferred upon him in 1878, he being one of the first of Sylvester's pupils to receive it. Even before this, however, he was called upon to lecture in the university, and soon after graduating he became connected with the United States Coast and Geodetic Survey, a relationship maintained for three years (1879-81). He was successively a fellow, associate professor, and (1892-1900) professor of mathematics at Johns Hopkins University.

For many years he was a contributor to the American Journal of Mathematics, later becoming a member of the editorial staff and finally (1894-99) the chief editor, his wide mathematical interests making him unusually well equipped for such a position. He also contributed to the Bulletin of the American Mathematical Society, to Crelle's Journal, and to the Comptes Rendus. His published works include A Treatise on Projections (1882), prepared for the use of the Coast and Geodetic Survey; Elements of the Mathematical Theory of Fluid Motion (reprinted from Van Nostrand's Magazine, 1879); and A Treatise on Linear Differential Equations; Vol. I, Equations with Uniform Coefficients (1889), a work of which he completed only the first volume. At the time of his death he was engaged in preparing a treatise on the theory of

Craighead

surfaces. His closing years were less productive than those immediately following his graduate days, his failing health having limited his capacity for sustained effort. For some years he had suffered from insomnia and from heart difficulty, and the end came peacefully in his hours of sleep.

Prof. Simon Newcomb, under whose guidance Craig studied Königsberger's Vorlesungen über die Theorie der elliptischen Functionen, Nebst einer Einleitung in die allgemeine Functionenlehre, briefly and fairly summed up his abilities as follows: "From the beginning he showed an extraordinary development of the faculty of acquisition, being able to master, almost without effort, the writings of any of the great geometers to which he was attracted."

Craig was married at Washington on May 4, 1880, to Louise Alvord, daughter of Gen. Benjamin Alvord, U. S. A., himself the author of several mathematical works.

D. E. S.

CRAIGHEAD, EDWIN BOONE (Mar. 3, 1861-Oct. 22, 1920), educator, was born at Ham's Prairie, Mo. His parents Oliver and Frances (Payne) Craighead were of Scotch-Irish ancestry. They had migrated from Virginia and the father was a prosperous farmer. Edwin was given a good education and graduated from Central College, Mo., in 1883. He then went to Vanderbilt for a year to continue his study of Greek, Latin, and English literature. His enthusiasm for his studies led him to Leipzig, but the methods of research there soon repelled him and he went to Paris and took up the study of French literature. Before going to Europe he had been for a time a teacher in Neosha Collegiate Institute, and upon his return to America he began again to teach. He married Kate Johnson in 1889. In 1890 he became professor of Greek at Wofford College. His broad culture, his grasp of educational and other public affairs, and his powers as a speaker and writer attracted so much attention that in 1893, at the age of thirty-two, he was elected president of the South Carolina Agricultural and Mechanical College at Clemson. At this institution he began a new policy insisting upon higher standards of preparation and attainment than were usual in the South of that day. In 1897 he became president of Central College, his alma mater, and four years later he was elected president of the Missouri State Normal School at Warrensburg. Here he organized the pro-
gram more in accordance with college curricula and under his administration attendance greatly increased. In 1904 he was elected president of Tulane University, where his first work was to reorganize the medical school, doing away with part-time instructors, raising the standards of admission, and encouraging the study of tropical medicine, which Tulane has continued to make its special field.

In 1912 he was elected president of the State University of Montana, an institution with an enrolment of 230 students. Three years later its registration had increased to about 850 students. He sought to bring to the University men of reputation as scholars, added a school of forestry and a school of journalism, started a premedical course, and formed a plan to consolidate the four small state institutions of higher education into one university. This project was defeated, but his campaign led to the “unification” of the institutions of higher education, under a plan providing for the continuance of their physical separation but allowing a centralized administration under one executive known as the chancellor. Opposition to his policies led to his dismissal, in 1915, in spite of the protests of alumni and students. He was then elected commissioner of education for North Dakota, to act as expert adviser for the board of regents in reconstructing the system of higher education for the state. The Non-Partisan Movement put an end to this plan of reorganization and he returned to Missoula, where he had established a newspaper. The remainder of his life was given to spreading his ideas through this paper, the New Northwest. He opposed the influence in politics and education of big business and particularly of the Anaconda Copper Mining Company. He advocated vigorously academic freedom in teaching. His other important service was as trustee (1904-15) of the Carnegie Foundation for the Advancement of Teaching.

Although he was a man of courage and stubbornness Craighead possessed a gentleness and charm that won him great popularity with students and alumni. He was original in planning educational policies and shrewd in carrying them out. Tolerant of opposing opinions, he was uncompromising in his own, and even when failure was inevitable he would not yield. He gave vitality and broader ideals to the institutions he served.

The writings of Craighead are widely scattered, mostly in newspapers. The Montana newspapers, particularly the Missoulian from 1912 to 1915, gave him much attention. Cassius J. Keyser, “No Braver Man,” in Mole Philosophy and Other Essays (1927) is a fine appreciation of a friend. See also obituaries in New Orleans States, Montana Record Herald, Anaconda Standard, Helena Independent, all of Oct. 23, 1920

CRAIGIE, ANDREW (June 7, 1743-Sept. 19, 1819), apothecary, financier, and speculator, was born in Boston, one of the three children of Andrew and Elizabeth Craigie. He was educated in the Boston Latin School. Information is wanting as to whether he was trained as an apothecary or as a physician, but he was known as a man skilled in medicine. His public career began on Apr. 30, 1775, when the Massachusetts Committee of Safety appointed him to take care of the medical stores of the Colony. On May 14 he was empowered to impress beds, bedding, and other hospital necessities. He was present at the battle of Bunker Hill and assisted in taking care of the sick and wounded. Shortly afterward he was appointed by the Provincial Congress medical commissary and apothecary to the army of Massachusetts. He took part in the siege of Boston, and on Aug. 3, 1775 was given charge of the medical store at Watertown, Mass. He was probably the first to fill the office of Continental apothecary, created in July 1775. With the exception of a few months, he served either in this office or in that of apothecary general (created in February 1777) during the entire Revolutionary War. By an act of the Continental Congress, Oct. 27, 1779, the apothecary general was given the military rank of lieutenant-colonel.

The first pharmaceutical laboratory in the United States was established during Craigie’s term of office, and the first Pharmacopoeia in America, published by Dr. William Brown [q.v.], also came into existence during this time. In 1780 Craigie was “well known to the whole army as a surgeon of the highest character.” He served as apothecary general on the general staff to the end of the war and was mustered out about Nov. 12, 1783. He became a member of the Society of the Cincinnati. During his connection with the army he acquired a large fortune by purchasing government certificates and by other speculations. For a time after returning to private life he engaged in the wholesale apothecary trade, but soon broadened the scope of his activity. He was one of the directors of the first United States Bank, and maintained a voluminous correspondence. The American Antiquarian Society has about 600 of his letters bound in three large volumes.

In 1791 Craigie purchased the Vassall house in Cambridge, where Gen. Washington had his headquarters during the siege of Boston. This house came to be known as the Craigie Mansion.
Craik

and later as the Craigie-Longfellow house. Craik laid out gardens, built a greenhouse and an ice-house, and maintained a princely bachelor establishment which became a social center. The merchant princes enjoyed his hospitality. Entertainments were on a large scale, and after Craik's marriage to the beautiful Elizabeth Nancy Shaw, the social functions became even more brilliant. Royalty was entertained. Mrs. Craik had all the luxury and social prestige money could provide, but it did not bring her happiness and she became estranged from her husband. Craik continued in his speculations, buying large properties around Cambridge and built the bridge which was the inspiration of Longfellow's poem, "I Stood on the Bridge at Midnight." After a time, however, his glory waned, and he became so heavily involved in debt that he was unable to leave his property for fear of arrest. He was a vestryman of Christ's Church, which was a comfort and solace to him in his reverses. He is buried in the tomb of the Vassall family. Mrs. Craik survived her husband many years, dying in 1841.

CRAIK, JAMES (1730–Feb. 6, 1814), chief physician and surgeon of the Continental Army, was born at Arbigland near Dumfries, Scotland. Of his father we know only that he had an estate on which the father of the famous John Paul Jones [q.v.] was the gardener. Craik studied medicine at Edinburgh, and emigrating in 1750 he practised in the West Indies, in Norfolk, Va., and in Winchester, Va., where he was also surgeon at the fort. He was commissioned surgeon in Col. Fry's regiment Mar. 7, 1754. In the following year he was at the battle of Great Meadows, and attended to Braddock's wounds at Monongahela, July 3, 1755. When Col. Washington was made commander-in-chief of the Virginia forces, Aug. 14, 1755, Craik became his chief medical officer. He built a house on a fine plantation at Port Tobacco, Charles County, Md., and Nov. 13, 1760, married Mariamne Ewell of Prince William County, Va. In the autumn of 1770, Washington and Craik went by horseback and canoe into the wilds along the Ohio and the Kanawha to make a "location" of land granted by the Crown to officers and men who had fought in the French and Indian War.

In 1777 Washington offered Craik the appointment of senior physician and surgeon of the hospital of the middle district which "includes the States between North or Hudson's River and the Potomac," or of assistant director-general (Writings of Washington, Sparks ed., vol. IV, 1834, p. 400). Craik became assistant director-general, organizing the hospitals for the French army when Rochambeau arrived at Newport, R. I. When the medical department of the army was reorganized in 1780, he was made one of the chief hospital physicians, and, in 1781, Congress appointed him chief physician and surgeon of the army. He served until Dec. 23, 1783. As a close friend Craik warned Washington of the "Conway Cabal," naming Gen. Mifflin [q.v.] as one of the party against him (Ibid., vol. V, 1834, p. 493).

During his first presidential year Washington while ill wrote to the Hon. James McHenry about Craik (Ibid., vol. X, 1834, p. 13): "Could it be made consistent with his advantage to be near me, I am sure it would be highly pleasing to me...." Craik was commissioned director general in the hospital department in 1798. When war with France was feared, Washington became commander-in-chief as lieutenant-general on condition that Craik was to be physician-general. The latter was appointed, July 19, 1798, being honorably discharged, June 15, 1800. On Dec. 14, 1799, about nine in the morning, Craik arrived at Mount Vernon to attend Washington, ill of "acute laryngitis." He saw that little could be done, so rapid was the course of the disease, but bled the patient afresh and prescribed certain medicines. About ten in the evening of the same day Washington died. Craik's only known published writing deals with this illness, A Sermon Occasioned by the Death of Gen. Washington ... Preached December 29, 1799. By the Rev. Hezekiah N. Woodruff, A.M. ... To which is Added.—An Appendix, Giving a Particular Account of the Behaviours of Gen. Washington, During his Distressing Illness, Also of the Nature of the Complaint of which he died. By Doctors James Craik and Elisha C. Dick, Attending Physicians (1800). The Appendix, signed "James Craik, Attending Physician" and "Elisha C. Dick, Consulting Physician," is dated from Alexandria, Va., Dec. 30. Dr. Gustavus Brown, the other consultant was not present to sign the statement. A clause in Washington's will runs: "To my compatriot in arms, and old and intimate friend, Dr. Craik, I give my bureau (or, as the cabinet makers call it, tambour secretary), and the circular chair, an appendage of my study."
Cramer

For several years before he died, Craik and his wife lived with their daughter-in-law, Mrs. George W. Craik, near Alexandria. He had a healthy, cheerful old age.

Cramer, Michael John (Feb. 6, 1835-Jan. 23, 1898), Methodist clergyman, diplomat, was descended from Swedish refugees in Switzerland at the time of the Reformation. He was the eldest son of John Jacob and Magdalene (Baumann) Cramer, and was born near Schaffhausen, Switzerland. When he was five years old his mother died. In 1845 the family emigrated to America, making its home first in Pittsburgh and later in Cincinnati, where young Cramer entered the German department of the Methodist Book Concern, learning the printer's trade. He devoted his spare time to preparation for college, entering Ohio Wesleyan University, where by teaching German and Latin he earned his expenses, graduating with honors in 1859. The following year he joined on trial the Cincinnati Conference of the Methodist Episcopal Church. While pastor of the Pearl Street Church of Cincinnati, he married (Oct. 27, 1863) Mary Frances, daughter of Jesse Root and Hannah (Simpson) Grant, and sister of General Grant. In 1864 he reorganized the Methodist churches of Nashville, Tenn., which had been abandoned after the fall of Vicksburg. After serving as chaplain at Newport Barracks, he was appointed (May 1867), by President Johnson, consul at Leipzig. President Grant in 1871 appointed him minister to Denmark, a position which he held for ten years. His chief accomplishments were a naturalization treaty and a series of reports on trade which resulted in a marked increase of exports from the United States to Denmark. A distressing neuralgic difficulty of long standing was aggravated by the rigors of the Danish climate, and, at his own request, he was transferred by President Garfield in 1881 to Berne, Switzerland, where he was resident minister and consul-general for four years. Resigning from office, he returned to the United States in July 1885. For one year he was professor of systematic theology at the Boston University School of Theology. Ill health compelled him to resign this position as the climate caused a recurrence of his old trouble. In 1886-87 he substituted for Dr. George R. Crooks [q.v.] as professor of church history at Drew Theological Seminary. He then became assistant editor of a theological magazine published at Cleveland, called Zeitschrift für Theologische und Kirche. At the time of his death, which occurred at Carlisle, Pa., he was occupying the chair of philosophy at Dickinson College. His European friendships included such scholars as Christlieb, Tischendorf, Luthardt, and Harbeck. He was a member of the Victoria Institute, the Society of Biblical Exegesis, the American Society of Church History, and the American Institute of Christian Philosophy. While Cramer wrote many articles and essays on European affairs, on art and literature, and on theology, his only book is Conversations and Unpublished Letters of Ulysses S. Grant (1897).

[See Minutes Annual Conferences M. E. Ch., Spring Conferences, 1868 (1868), under Newark Conference, pp. 112-13; Zion's Herald, Jan. 26, 1898; N. Y. Times, Jan. 25, 1898; Philadelphia and Public Ledger (Philadelphia), Jan. 24, 1898. Details of the above account have been verified by Cramer's only son, Dr. Jesse Grant Cramer of Pasadena, Calif.]

Cramp, Charles Henry (May 9, 1828-June 6, 1913), shipbuilder, was the eldest son of William [q.v.] and Sophia (Miller) Cramp. He received his early education in the Philadelphia public schools, attending the Central High School from July 1841 to September 1844. After receiving his first specialized training for his life-work in the shipyard of his uncle John Byerly, he entered the employ of his father in 1846. With the aid of his father and the naval architects employed by him, and by dint of much study on his own part in higher mathematics and in modern languages, he perfected his education in the art of shipbuilding in all its important phases. In 1859 he became an active participant in the management of The William Cramp Shipbuilding Company, sharing, along with his younger brothers who followed him into the company, in the achievement of his father in overcoming the obstacles in naval architecture during the transition period when iron and steel vessels were replacing those of wood. In 1872 William Cramp, appreciating the efforts of his five sons, changed the name of the firm to The William Cramp & Sons' Ship and Engine Building Company. The concern was incorporated at this time. In 1879, upon the death of the father, Charles Cramp became its president continuing in this capacity until his retirement at the age of seventy-five. He retained a considerable interest in the management of the company, as chairman of its board of directors, until his death in 1913.
Cramp

Cramp's desire for research was great, and as a result he achieved distinction not only as president of one of the most famous shipyards in the world but also as one of the leading naval architects of his day. The shipyard he inherited from his father was relatively small, but by his energy, intelligence, and organization, he developed it into one of the most extensive and complete in the United States. Many important merchant and naval vessels were constructed under his direction. The steamships *St. Louis* and *St. Paul* were among the fastest vessels in their day, holding the world's record for the transatlantic trip. The steamships *Kronland* and *Finland* were the largest vessels ever built in the United States up to the time that they were launched. Many war-vessels were constructed for the United States navy, ranging through all varieties and types from gunboats to battleships. Among the most famous vessels of the latter type were the U. S. S. *Maine*, which was sunk in Havana Harbor, the U. S. S. *New York*, U. S. S. *Indiana*, and the U. S. S. *Massachusetts*. The U. S. S. *Colorado* and U. S. S. *Pennsylvania*, the construction of which was authorized in 1900, were armored cruisers of the first class. They were powered with twin screw, vertical, triple-expansion engines, the steam being supplied by water-tube boilers, and were fast vessels, developing twenty-two knots per hour. Their normal displacement was 13,680 tons. Cramp's work achieved international reputation, and the Russian, Turkish, and Japanese governments placed orders with his firm for the construction of war-vessels. He was decorated by the Czar of Russia in appreciation of the success of the vessels designed and built for the Russian navy.

Under his skilful guidance Cramp's Ship and Engine Building Company became a pioneer in engine development. The first triple-expansion engine ever constructed in America was installed in the yacht *Peerless*. The U. S. S. *Columbia*, a protected cruiser of 7,350 tons displacement and 21,000 horse-power, was the first American vessel to be propelled by three screws, and previously only one such vessel, of 6,900 tons and 14,000 horse-power, had ever been built in Europe. The U. S. S. *New York*’s machinery was composed of four separate engines in independent water-tight compartments, working in pairs on two shafts, and provided with sliding collar couplings by means of which the forward engine on each shaft could be engaged with or disengaged from the after engine in a few minutes. Emperor William II of Germany was much impressed by this achievement, and paid several visits to this vessel.

Cramp believed that the shipping industry was one of the important key industries of the United States. As a result, he did everything possible by speaking and writing to promote an American merchant marine. His attitude on this topic is suggested by his words in a speech before the American Society of Naval Architects and Marine Engineers: “Let me remark that the ships [St. Louis and St. Paul] are American from truck to keelson. No foreign materials enter into their construction. They are of American model and design, of American material, and they are built by American skill and muscle.”

Cramp was married twice: in 1850 to Hannah Ann Cox, and in 1870 to her sister, Amy Jane Cox. He followed the tradition established by his father and took his six sons into the shipbuilding establishment.

H. S. P.

CRAMP, WILLIAM (Sept. 22, 1807—July 6, 1879), shipbuilder, was a descendant of Johannes Kramp of Baden, Germany, who settled near Penn Treaty Park, Philadelphia, in 1703. This original homestead of the Cramp family was located not far from the site of the present shipyard of The William Cramp & Sons’ Ship and Engine Building Company, whose founder, William Cramp, was born in the Kensington section of Philadelphia. After he had received a good elementary education in the Philadelphia schools he was placed under the instruction of Samuel Grice, the leading American naval architect of the time. In 1827 he married Sophia Miller. Early in life he had conceived the idea of going into business on his own account, and at the age of twenty-three he established The William Cramp Shipbuilding Company. His plant was located at the foot of Otis St., now called East Susquehanna Ave., but this location soon proved to be inadequate, and he moved the plant a short distance down the Delaware River. Here many important sailing and steam vessels were constructed. Under Cramp’s able direction the concern was provided with modern mechanical devices, and came to be considered one of the best equipped of shipyards. This factor, combined with his extraordinary capacity for work, his reputation for honest dealings, and the pride he took in his ships made his concern prosperous even through prolonged periods of business depression. The shipbuilding industry itself was in the throes of a transition in the design and construction of vessels. Wooden vessels were
Cranch

replaced by iron and in turn iron vessels were replaced by steel. The changes involved the installation of new machinery, a new industrial organization, and a new science of naval architecture and construction. William Cramp was among the first American shipbuilders to foresee the inevitable change, and his aggressiveness and astuteness enabled him to cope with the situation. By 1872 he had taken into his organization several of his sons, all of whom were taught the art of shipbuilding. In this year he decided to incorporate the concern and to affiliate his sons more closely to its destiny. Accordingly its name was changed to The William Cramp & Sons’ Ship and Engine Building Company. Cramp exerted an important influence on America’s national and international economic and political affairs, as he was directly responsible for the construction of 207 vessels of all sorts, both merchant and naval. Two foreign countries, Russia and Venezuela, gave him contracts for the construction of war-vessels. The United States Government gave him several contracts for naval vessels of all classes and types. The first of these was completed in 1862, when the U. S. S. New Ironsides was launched, the most powerful cruising ironclad of its time, which participated in more naval engagements during the Civil War than any other vessel of the United States. Cramp remained president of the company which he had founded until his death at Atlantic City in his seventy-third year when he was succeeded by his eldest son, Charles Henry Cramp [q.v.].

H. S. P.

CRANCH, CHRISTOPHER PEARSE (Mar. 8, 1813–Jan. 20, 1892), painter, critic, poet, Unitarian minister, was the youngest of the thirteen children of William Cranch [q.v.] and Anna (Greenleaf) Cranch. His father, a Massachusetts man, had been appointed by President John Adams to a judgeship in the circuit court of the District of Columbia, and Christopher was born in Alexandria, then part of the District. The boy had early training in drawing from his brother Edward, a topographical draftsman, but, being destined for a learned profession, he attended Columbian College, Washington, from which, after graduation in 1831, he entered the Divinity School of Harvard College. He preached as a Unitarian minister at Andover, Bangor, and Portland, Me., and at Richmond, Washington, St. Louis, Cincinnati, and Louis ville. In the last-named city he took James Freeman Clarke’s pulpit, and edited the Western Messenger. Cranch here illustrated Emerson’s Essays with comic drawings which caused merriment among literati. The year 1840 found him preaching at South Boston. He became a social favorite in Boston; he was picturesquely attractive, with dark, curly hair and delicately beautiful features, he had a fine baritone voice, and he played several instruments. He wrote poetry (as notably the 200th Anniversary poem, Quincy, Mass., May 25, 1840). Emerson became interested in his poems, several of which he published in the Dial. Cranch was in sympathy with the experiment at Brook Farm, and a frequent welcome visitor there.

In 1841, while spending the summer at Washington, he tried landscape painting. He became engaged the following October to Elizabeth De Windt of Fishkill, N. Y., a cousin, who encouraged him to paint. They were married, Oct. 10, 1843, with slender but assured resources, and Cranch took a house on Lexington Ave., New York, to practise his new profession. In 1846 in the congenial company of George William Curtis [q.v.] the Cranches went to Italy for study and observation of art. At Rome and Florence they formed many friendships (see Cranch’s Personal Recollections of Robert Browning, 1891). In August 1849 they returned to New York where they spent several winters. Cranch wrote her “Farewell to America” for Jenny Lind in 1853. In that year he took his family to Paris for a ten years’ residence. He painted diligently, studied, and cultivated friendships. In 1856 he recorded his delight at discovering Barbizon and its painters. In 1863 he returned to America, his son George, aged eighteen, having enlisted in the Union army for service which resulted in his death. The family lived for a time on Staten Island but in 1873 they removed to Cambridge, Mass., where the rest of Cranch’s life was spent as, so he wrote, “an ignoramus trespassing in the dominion of scholars.” Life near Harvard he found stimulating, but he deplored a prevalent indifference to art. As a member of the Boston Radical Club he was associated with many New England liberals. In 1880 he made his third visit to Europe, at Rome meeting Francis Duveneck whose work he admired, and who painted his portrait. Cranch’s health began to fail in 1880. After his peaceful death his friend Curtis wrote in “The Easy Chair” of Harper’s Magazine: “Cranch ... followed the leading of his tempera-
Cranch

ment and talent in becoming an artist... He was poet, painter, musician, student, with a supplement of amusing social gifts, and chief of all was the freshness of spirit which kept him always young... It was a long and lovely life, and if great fame be denied, not less a beautiful memory remains." Among Cranch's numerous published works his translation of Vergil's *Aeneid* was his monumental achievement. As a painter he won respect and liking without attaining marked distinction or professional leadership.

[Cranch's story is told with copious extracts from his letters and journals in *The Life and Letters of Christopher Pearse Cranch* (1917), by his daughter, Leonora Cranch Scott. For additional criticism and appreciation see: G. W. Cooke, *The Poets of Transcendentalism* (1903); Mary E. F. Sargent, *Sketches and Reminiscences of the Radical Club of Chestnut St., Boston* (1886); J. T. Gidman, *Brook Farm, Historic and Personal Memoirs* (1894); Lindsay Swift, *Brook Farm* (1900); H. T. Tuckerman, *Book of the Artists* (1867); *Critic*, Jan. 30, 1892; *Harper's Mag.*, Apr. 1892; *Boston Transcript*, Jan. 20, 1892].

F. W. C.

CRANCH, WILLIAM (July 17, 1769–Sept. 1, 1855), jurist, was a grandson of Richard Cranch, who coming from Kingbridge, Devonshire, England, settled at Braintree, Mass., in 1720. The latter's son, Richard, was a member of the Massachusetts legislature and judge of the court of common pleas. He married Mary, daughter of the Rev. William Smith of Weymouth, Mass., and sister of Abigail Adams [*q.v.*], wife of the future president. This connection had an important influence on William's future career. Born at Weymouth, and educated privately at Haverhill, he entered Harvard in February 1784, and graduated with honors in 1787. John Quincy Adams being a class-mate. He studied law at Boston and in July 1790 was admitted to practise. Opening an office in Braintree, he moved after a year to Haverhill. The following year he went to Washington, D. C., as agent for a real-estate firm which had made large speculative investments in that city on the strength of its selection as the federal capital. The venture, however, was a disastrous failure, and Cranch himself became involved financially. In 1800 President Adams appointed him a commissioner of public buildings of the District of Columbia, and when, Feb. 27, 1801, the United States circuit court of the District of Columbia was established, he was nominated junior assistant judge by the President, commencing an association with that court which lasted for the unprecedented term of fifty-four years. In 1802 he became reporter of the Supreme Court of the United States, and published *Reports of Cases Argued and Adjudged in the Supreme Court of the United States* 1801–15 (9 vols., 1804–17).

These reports have always been highly regarded for their clarity and accuracy, and are of great importance since they contain a large number of Chief Justice Marshall's most vital opinions on fundamental constitutional problems. In 1805, President Jefferson appointed Cranch chief justice of the district court, much to the general astonishment, since he was a Federalist in politics, and his uncle John Adams was the President's political opponent. He remained chief justice for fifty years. During its earlier years the business of the district court had been light, but additional jurisdiction in admiralty and on appeal from the Commissioner of Patents was conferred upon it, and the volume of its work steadily increased. Cranch's opinions were distinguished for their accuracy and logic. During the whole course of his judicial career only two of his decisions were reversed on appeal. An outstanding case before him was *U. S. v. Bollman & Swartwout*, 1 Cranch (U. S.) 379, where, resisting presidential pressure and popular clamor, he held the arrest of Aaron Burr's accomplices unjustifiable, and was sustained by the United States Supreme Court. He contributed occasional papers and articles to local periodicals on matters of public interest, and in 1817 delivered before the Columbian Institute a lecture upon his uncle, published as *Memoir of the Life, Character and Writings of John Adams* (1827). He was compelled in 1817, by pressure of judicial work, to discontinue his Supreme Court Reports, but in his later years he assembled the decisions of his own court, which had theretofore existed only in manuscript, and published them as *Reports of Cases Civil and Criminal in the United States Circuit Court of the District of Columbia* from 1801 to 1841, in six volumes (1852–53). The United States Government published a collection of his *Decisions in Cases of Appeal from the Commissioner of Patents* 1841–47 (U. S. Miscellaneous, Law relating to Patents, 1848, pp. 87–150). The authorship of *An Examination of the President's Reply to the Remonstrance*, signed Lucius Junius Brutus (New York, 1801), relating to President Jefferson's course in removing Federalists from office to make way for Republicans, has been attributed to him (see Cushing, *Initials and Pseudonyms*, 1885, p. 42; Sabin, *Bibliotheca Americana*, IV, 229). He died in Washington, in his eighty-seventh year. He was married to Anna Greenleaf, sister of James Greenleaf, real-estate operator. Christopher Pearse Cranch, the artist [*q.v.*], was his son.

[An excellent survey of Cranch's career by A. B. Hagner appeared in *Great Am. Lawyers* (1907–09), ed. by Wm. D. Lewis, III, 87. See also *The Life and Character of the Hon. Wm. Cranch* (1855), by Moncure D.
CRANDALL, CHARLES HENRY (June 19, 1858–Mar. 23, 1923), poet, son of Henry Sargent Crandall and Mary Carmichael Mills, was born in Greenwich, N. Y., and died in Stamford, Conn. He lived for seventeen years on the farm where he was born, engaged in mercantile business for five years, and was for five years on the staff of the New York Tribune. He also worked for a while with the New York Globe. In 1893—following a nervous collapse—he retired to the farm near Stamford on which he spent the remainder of his life. He was married in 1884 to Kate Virginia Ferguson, a New York newspaper woman. After her death, he married in 1891 Mary Vere Davenport of Stamford, from whom he was divorced in 1916. In 1890 he edited an anthology of American sonnets, with an elaborate introduction, and from 1883 to 1918 he published seven volumes of his own poetry, collected in general from magazines in which it had already appeared. These magazines were usually the most distinguished in America, but the verse is not appropriately satisfying. It deals with the conventional subjects of poetry, but, above all, with patriotism. That theme stirred him most—the thrill of seeing one's flag unfurled, the superior bravery of the American military, the divine mission of America as guardian of her neighbors to the south, and as model for the governments of Europe. The Daughters of the American Revolution solicited his verse, Theodore Roosevelt "sympathized cordially" with it, Leonard Wood urged that it be given the "widest circulation." When the United States went into the World War, Crandall's four sons entered the service of the government, one of them to be killed in action. The father's boundless enthusiasm was set forth in 1918 with vigor and sincerity—if without other merit—in his Liberty Illumined and Songs for the Boys in Khaki. The war was to him a holy and invincible crusade for everything that spiritual men most ardently and most rightfully desire, and at the conclusion of it, he believed, we should all be justly happy. One day, less than five years after the war ended, he killed himself with a pistol.

J. D. W.

CRANDALL, PRUDENCE (Sept. 3, 1803–Jan. 28, 1889), educator and reformer, born at Hopkinton, R. I., was of Quaker descent, the daughter of Pardon and Esther Crandall (J. N. Arnold, Vital Record of Rhode Island, vol. V, 1894). The family had a tinge of fanaticism in their blood and her younger brother was imprisoned for nearly a year in Georgetown, D. C., without trial, for spreading Abolitionist doctrines there. Prudence moved from Rhode Island and after a brief career as a teacher at Plainfield, settled at Canterbury, Conn., where in 1831 she opened a school for girls. A colored girl wished to attend and received Miss Crandall's permission. Immediately there were protests, whereupon Miss Crandall decided to keep a school for negroes only. A town meeting was held on Mar. 9, 1833, to prevent her. She was denied opportunity to be heard in defense by counsel, although she offered to retire to a more secluded place if reimbursed for her preparatory expenses at Canterbury. The leader of the movement against her declared that no negro school should be established anywhere in Connecticut, but Miss Crandall continued firm in her resolution and opened her school. Disgraceful forms of intimidation were used against her. Her well was filled with refuse, physicians refused to attend the sick in her home, she was forbidden to enter the church, her house was attacked and narrowly escaped burning, and she was threatened with personal violence. Her opponents secured (May 24, 1833) the passage of an act in the state legislature making it illegal for any one to set up a school for colored people who were not inhabitants of the state without the consent of the selectmen of the town in which the school was to be located (Public Statute Laws of the State of Connecticut, 1833, chap. ix). Under this law, she was arrested and imprisoned. By this time the case had attracted very wide attention in Abolitionist circles, the Rev. Samuel J. May and Arthur Tappan [g. v.] took up her cause, eminent counsel were retained in her behalf, and a newspaper, the Unionist, of Brooklyn, Conn., edited by C. C. Burleigh [g. v.], was established to defend her. The first trial resulted in a divided jury but a new case was made up and she was tried a second time. Her counsel claimed that the law was unconstitutional, as negroes were citizens and it infringed that clause of the Federal Constitution which gave the "citizens of each state... all privileges and immunities of citizens in the several states." The case, however, was decided against her. It was then appealed to the supreme court of Connecticut which reversed the decision of the lower court on the ground merely of insufficient evidence and dodged the real issue (see 10 Conn. 339). The supreme court decision was rendered in July 1834 and the next month Miss Crandall married the Rev. Calvin Philleo, a Baptist cler-

Crane

1869, she married Augustus Seemüller, a prosperous New York merchant. She had not resided long in her New York City home before she learned many things so "fearful" that she felt constrained, she said, to expose them or "the very stones would have cried out against me" (Boyle, p. 356). But her response, Reginald Archer (1871), so dutifully intended, brought against her the outcry of the moralists. The dedication was exemplary, "affectionately, to my husband, in token of the happy days when this was written," but this could not atone for the all too sure occupation of some of the female characters of the book, or for the failure of the author to award sorrow and painful death to all who sinned, or, in general, for a woman's writing openly of matters which seemed clearly a problem for men only. She was ill, and while the protests against her were still sounding, she went to Europe and died in Stuttgart.

J. D. W.

CRANE, FRANK (May 12, 1861-Nov. 5, 1928), Methodist and Congregational clergyman, journalist, was born in Urbana, III., the son of James Lyons and Elizabeth (Mayo) Crane. In those qualities of heart and head that insured his success as a writer of newspaper homilies he resembled his father, a Methodist minister, whose kindly, strongly marked idiosyncrasies made him one of the best liked men in central Illinois. The elder Crane, incidentally, was for a few months chaplain of the 21st Illinois Volunteers under U. S. Grant, who in 1869 appointed him postmaster of Springfield. He was noted for his "happy faculty...of stoutly maintaining, his own opinions on all subjects, doctrinal, ecclesiastical, or political, in such a way as to give no cause of offence to any one." Young Crane helped his father in the post-office, attended Illinois Wesleyan University 1877-78, read law, taught country schools, and was admitted on trial into the Illinois Conference of the Methodist Church in 1885 and into full connection in 1884. On Sept. 26, 1883, he married Ella C. Stickel of Hillsboro. For twenty-seven years he was in the active ministry, serving congregations at Roodhouse, Ashland, Island Grove, Rantoul, Urbana, Bloomington (First Church), Omaha, Nebr. (First Church), Chicago (Trinity; Hyde Park; and an independent

CRANE, ANNE MONCURE (Jan. 7, 1838-Dec. 10, 1872), author, was born in Baltimore and died in Stuttgart, Germany. Her father, William Crane, a descendant of Jasper Crane, one of the founders of both New Haven and Newark, came to Richmond, Va., in 1812. He was already married, but his wife died in 1830, and in something less than a year he married Jean Niven Daniel, originally from Falmouth, Va. In 1834 he removed to Baltimore and organized a business in leather. Anne's education was supervised by a Rev. N. A. Morrison, and she was "graduated"—whence, it is not disclosed—in 1855 (Boyle, p. 554). She was intensely fond of music and reading, and her thoughts were always likely to be colored by a sort of mystical piety. When she was about twenty, a group of young women of which she was a member decided that each of them should write a novel. Hers alone seems to have been completed. She wrote under a stimulus perhaps not granted to her companions; she thought herself inspired. "The angel," she was fond of quoting, "said unto me, 'Write'; and I wrote" (Shepherd, p. 72). The resulting composition was held in manuscript for five years. Then, under the title Emily Chester, it was offered to some publishers in Boston, who put it out anonymously in 1864. The style is tedious, but the characters, residents of New York and Baltimore, are rich and distinguished, and the plot involves the effort of a married woman to suppress her attraction toward a man not her husband. The book rapidly went through many editions in America and England, it was successfully dramatized, and a translation of it was published in Germany. Indeed it set a literary fashion which for ten or twelve years was widely followed by women writers. Her next novel, Opportunity (1867), was also concerned with the denial of passion for the sake of respectability. Late in

gyman of Ithaca, N. Y. The project for educating colored girls in Connecticut was obviously hopeless, and the couple moved to Illinois. After her husband's death in 1874, Mrs. Phillove lived with her brother Hezekiah in southern Kansas, dying at Elk Falls in that state. She retained both her mental vigor and her great interest in the colored race until her death.

[A short pamphlet on Prudence Crandall was written by John C. Kimball during her life and privately printed in 1886. See also: S. J. May, Some Recollections of Our Anti-Slavery Conflict (1860); W. P. and F. J. Garrison, Wm. Lloyd Garrison (4 vols., 1885); J. C. A portrait is at Cornell University.]

J. T. A.
Crane

People's Church), and Worcester, Mass. (Union Congregational). Though effective, popular, and well paid, by 1909 he found his profession tame and cramping and decided to make a change. Borrowing $1,600 on his life insurance to tide him over, he resigned his charge, returned to Chicago, and began haunting newspaper offices. He lost his first job, on the Chicago Evening Post, after a few months, but not before his writings had attracted the attention of Edward Bok and other expert judges of the public taste. Before long he was firmly established as a writer for newspaper syndicates and the popular magazines. Although he published a number of books, including The Religion of To-morrow (1899); a volume of verse, Vision (1906); a disquisition on the 103rd Psalm, The Song of the Infinite (1909); War and World Government (1915); Why I am a Christian (1924); and The Ten Commandments (1928), he owed his affluence and renown to his four-hundred word didactic, inspirational, and personal essays, which were long a daily feature of many American newspapers. Some hundreds of these essays were reprinted in three collections: Four Minute Essays (10 vols., 1919); The Crane Classics (10 vols., 1920); and Everyday Wisdom (1927). The shrewd, homely, humorous, tolerant, sentimental, common sense tone of these brief writings, together with their brevity and simple phrasing, won for them a multitudinous audience. Among the plain people their author enjoyed the honors of a sage, while the city wits derided him as the current great prophet of tautology, a mere dealer in weary platitude and facile optimism. A more discerning criticism saw in him an amiable gentleman of decided liberal tendencies, who took a hearty pleasure in being the counselor and spokesman of the average American. Though in his later years he suffered from diabetes, his personal cheerfulness remained unquenchable, and he continued to write his daily article and to answer faithfully every letter addressed to him that bore a legible signature and address. He lived in New York and Los Angeles and traveled a great deal. He admired the French people and lived as much as he could in France. He died at Nice, of a cerebral hemorrhage, while on a tour around the world. His wife and their two children survived him. He left an estate of $200,000 in stocks and bonds.

G. H. G.

CRANE, JOHN (Dec. 7, 1744-Aug. 21, 1805), Revolutionary soldier, was born at Braintree, Mass., the son of Abijah Crane and Sarah Beverley. At the time of the French and Indian War, although only fifteen years of age, he offered to serve in place of his father who had been drafted by the Massachusetts provincial government and was in poor health. On his return from the war, he learned the trade of housewright. About 1762 he helped to set out a famous row of elm trees opposite the Granary Burying-ground, Boston. In 1767 he married Melitable Wheeler, and with his brother purchased a house and shop on what is now Tremont St., near Hollis. In the years following the passage of the Stamp Act, Crane was identified with the Sons of Liberty. At his shop some of the men who staged the Boston Tea Party disguised themselves as Indians and set out for Griffin's Wharf, Crane among them. As he was down in the hold of one of the ships, a chest of tea fell upon him and knocked him senseless. His companions believing him to be dead concealed him under a heap of shavings in a near-by carpenter shop, but thanks to a sturdy constitution he recovered. In 1774 owing to the paralysis of trade produced by the Boston Port Bill, he removed to Providence. He had already acquired some knowledge of gunnery when, as a resident of Boston, he had joined a train of artillery composed of mechanics and commanded by Maj. Adino Paddock. On the arrival of the news of the battle of Lexington, he was made captain of the train attached to the Rhode Island "army of observation." Marching to Boston, he joined Gridley's regiment of artillery, and thenceforth saw almost continuous service. During the siege of Boston, he was in charge of a breastwork on the Neck and on July 8, 1775 attacked and routed a British advance post. He also participated in several skirmishes on islands in the harbor. On Dec. 10, 1775 he was commissioned major in Knox's regiment of artillery and later accompanied the army to New York. He was disabled for a time by a wound in the foot received Sept. 14, 1776 at Corlear's Hook while he was bombarding a British man-of-war. On Jan. 1, 1777 he was commissioned colonel and proceeded to raise a regiment in Massachusetts, the 3rd Continental Artillery. Detachments of it were present under Sullivan in the Rhode Island campaign—where Crane's services evoked honorable mention in the dispatches—under Gates at Saratoga, and in the defense of Red Bank. On
Crane
Sept. 30, 1783 Crane was brevetted brigadier-general. After the war he went into the lumber business on Passamaquoddy Bay, but, the venture not proving successful, he removed to Whiting, Me., where he had been given a grant of 200 acres for his military services by the legislature of Massachusetts. He was appointed judge of the court of common pleas by Gov. Hancock in 1790. He died Aug. 21, 1805, highly respected by his comrades in arms for his energy, courage, and coolness in the presence of danger.

E. E. C.

CRANE, JONATHAN TOWNLEY (June 18, 1810–Feb. 16, 1886), Methodist clergyman, was born at Connecticut Farms, now a part of Union, N. J., the youngest of the six children of William and Sarah (Townley) Crane. He was a descendant of Stephen Crane who, coming probably from England or Wales, settled at Elizabeth-town as early as 1665. William Crane, who was a farmer, surveyor, and justice of the peace, died June 4, 1830, and his wife, Aug. 18, 1832. While saving money to enter the College of New Jersey (Princeton University), Crane worked in a Newark trunk factory. Upon his graduation in 1843 he prepared himself for the Methodist ministry, for though of Presbyterian stock he had been converted to Methodism at New Providence, N. J., when he was eighteen years old. Licensed as a local preacher in 1844, he spent one year on the Parsippany circuit, six months on the Asbury circuit, six months at Port Richmond, Staten Island, and on Quarantine, was admitted to the New Jersey Conference, and was pastor at Hope 1846, Belvidere 1847, and Orange 1848. On Jan. 8 of that year he was married to Mary Helen Peck of Wilkes-Barre, Pa., daughter of the Rev. George Peck. In 1848 also he published an Essay on Dancing, the sentiments of which may have recommended him to the leaders of his church, for in June he was elected principal of the Conference Seminary at Pennington. After ten years of being schoolmaster he returned to preaching as pastor of Trinity Church, Jersey City, 1858–60; at Haverstraw, N. Y., 1860–62; of the Central Church, Newark, N. J., 1862–64; at Morristown 1864–67; and at Hackettstown, 1867–68. Then followed eight laborious years as presiding elder of the Newark district, 1868–72, and of the Elizabeth district, 1872–76. After that he was pastor of the Cross-street Church, Paterson, 1876–78, and of the Drew Church, Port Jervis, N. Y., from 1878 till his death.

Crane was the author of numerous contributions to the Methodist Quarterly Review and the Christian Advocate and of The Right Way, or Practical Lectures on the Decalogue (1853, 1857); The Fruitful Bough: the Centenary Sermon preached before the Newark Conference, Mar. 23, 1866 (1866); Popular Amusements (1869); Arts of Intoxication: the Aims and the Results (1870, 1871); Holiness the Birthright of All God's Children (1874); and Methodism and its Methods (1876). His style is chaste, well ordered, and economical, and rises on worthy occasions to a sober eloquence. In doctrine he was a strict Methodist of the old stamp, filled with the sense of God's redeeming love, deeply concerned about such sins as dancing, breaking the Sabbath, reading trashy novels, playing cards, billiards, and chess, and enjoying tobacco and wine, and too innocent of the world to do more than suspect the existence of greater viciousness. Even his discussions of theatre-going, smoking, and drinking are strangely academic and derivative; probably he did not know intimately any one who had been defiled by those sins and was consequently unable to study their effects at first hand. In controversy he was gentlemanly, in his judgments charitable. Noah's lapse from temperance principles he was thus able to excuse, "The Scriptures tell us that Noah planted a vineyard and on one occasion drank of the wine until he was drunken. Very possibly the process of fermentation had not before been noticed, the results were not known, and the consequences in this case were wholly unexpected." He leaves the impression of an unusually noble mind straitened by dogma and a narrow education. Of his fourteen children the youngest, the darling of his last years, was Stephen Crane [q.v.], who was to write the Red Badge of Courage.

G. H. G.

CRANE, STEPHEN (Nov. 1, 1871–June 5, 1900), writer, was the fourteenth, and ninth living child of Rev. Jonathan Townley Crane [q.v.] and Mary Peck. He was born in the Methodist parsonage at 14 Mulberry St., Newark, N. J., and named for a New Jersey ancestor who signed the Declaration of Independence. When he began school the family was settled in a
Crane

pleasant, tree-shaded house in Port Jervis, N. Y. Here his father died in 1880, and the terrors of the village funeral fastened on the boy. "We tell kids," he wrote later, "that Heaven is just across the gaping grave and all that bosh, and then we scare them to glue with flowers and white sheets and hymns ... I have forgotten nothing about this, not a damned iota, not a shred." There is much of Crane in this outburst, in its revelation of sensitiveness and feeling for children, its hard vividness, its suggestion of other qualities that startled the eighteen-nineties. For most of the next ten years the family lived at Asbury Park, Stephen helping an elder brother, a newspaper correspondent, in gathering summer news. He was at the Hudson River Institute, Claverack, N. Y., 1887–89, at Lafayette a year, and the next year at Syracuse University, where he had worked as correspondent of the New York Tribune. The record of this period has more of loafing, news-writing, and baseball—he was team captain at Syracuse—than of studies. There are hints of reading: a gift of Tolstoi's Sebastopol, praise of Flaubert's Salammbo, criticism of American writers as not "sincere." College ended after his mother's death in 1890. She was a talented, religious woman; her counsel in last letters to Stephen was to be good, independent, honest.

Aside from summers in Asbury Park and visits to his brothers, his life in the next two years was that of a struggling writer in New York, actually hungry and sometimes ill in the old Art Students' League on East Twenty-third St., reporting intermittently for the Herald or Tribune, exploring the slums, lounging in Bowery saloons. His first significant writing, Maggie: A Girl of the Streets, had all the qualities of his later work, but it was impossibly grim for magazines, and when printed late in 1892 with $700 borrowed from a brother, it was piled in his room unsold. The Red Badge of Courage was finished in the following summer, and with it, in William Dean Howells's phrase, Crane's genius seemed to "spring to life fully armed." From reading Battles and Leaders of the Civil War, from no actual experience save his own struggles and failures, came this realistic picture of war, its truth vouchsafed for by veterans; but more than this, an extraordinary study of the common man amid the turmoil, clamor, and distortion typified by war. Pushed by his friend Hamlin Garland, the story was serialized in the Philadelphia Press and published, October 1895, by Appleton, and by Heinemann in London. It sold amazingly, and Crane rose to sudden fame. Its intensity, its startling yet inevitable descriptive phrase, struck a new note in American prose. Its success led the publishers, in the following year, to issue Maggie.

Meantime the reading of some of Emily Dickinson's poems, at a luncheon with Howells, suggested the manner at least of The Black Riders and Other Lines, published in 1895. But readers of that year were ready for neither the form nor the content of poems such as the one which describes the world as set sailing in a careless moment,

"So that forever rudderless it went upon the sea,
And there were many in the sky
Who laughed at this thing."

In the same winter he went West as a writer for the Bacheller Syndicate, traveling from Nebraska to Texas and Mexico, where he was pleasantly thrilled by a bandit attack, and finding color and setting for "The Blue Hotel," "The Bride Comes to Yellow Sky," and others of his best tales. George's Mother, a bare, somber story of the Maggie type, and The Little Regiment and Other Episodes of the Civil War appeared in 1896. Though the success of The Red Badge was a matter of observation and expression, not of theme (save as war was a pleasant subject than slums), Crane was thrust into the groove of his masterpiece, and spent most of his remaining years seeing and writing of war. In December 1896 he sailed for Cuba in a filibustering vessel which sank off the Florida coast, and with four others he experienced the fifty-hour struggle with the "jagged," "boisterously abrupt" waves described later in "The Open Boat." The Turkish war took him in the next year to Greece, where inexperience, ignorance of languages, and indigestion rendered him almost helpless. In the autumn he went to London, meantime having married (Aug. 25, 1898) Cora Taylor, a capable, attractive woman, older than he, whom he had first met in Jacksonville.

At London Crane met Conrad, and a warm friendship was cemented by Crane's devotion to the Conrads' infant boy. Conrad spoke of the younger writer's "intense earnestness," "his very steady, penetrating blue eyes," of "a strain of chivalry which made him safe to trust with one's life." H. G. Wells, another friend made at this time, described him as "very typically American, long and spare, with very straight hair, and straight features, and long quiet hands and hollow eyes, moving slowly and speaking slowly." London lionizing was not altogether escaped in the cottage the Cranes took in Oxted, Surrey, for even here they were overrun by friends and acquaintances who imposed on their hospitality.
Crane

In April came the Spanish-American War, and Crane was off for Cuba as a highly paid writer for the World. He won official recognition for coolness under fire in a skirmish at Guantanamo, described in his Cuban sketches, Wounds in the Rain (1900). In the fighting around Santiago he was dazed by quinine and worn out by bad food and hardship, so that he returned to New York broken in health. In New York the Crane "myth," started perhaps by Maggie and his slum adventures, had swollen until he was accused of drugs, drunkenness, and general depravity. Although he had many ardent friends and defenders, Howells, Garland, Huneker, Richard Harding Davis, and others, Crane was disgusted and returned to England after Christmas, 1899. His last year was spent in Brede Place, a great, dilapidated, medieval house in Sussex. Active Service (1899) was now finished, like The Third Violet (1897) a not very successful adventure in the field of conventional fiction; and the "Whilomville Stories" in which the humors and tragedies of childhood are handled in a manner suggestive of Tarkington's later work, were continued in Harper's Magazine. A second volume of verse, War is Kind (1899), appeared in this year, and the uninspired "Great Battles of the World." There were welcome visits from H. G. Wells and the Conrads, horseback riding and drives, long nights of writing, and the same wild swarm of guests as at Oxted. Hardly heeded, tuberculosis hung over Crane throughout the winter. He suffered a hemorrhage in March, and died at Badenweiler in the Black Forest, after a hurried journey thither in May. The permanent achievements of these few crowded years are perhaps slender, but Crane will live by The Red Badge of Courage, which set fresh standards in descriptive writing, and by the best of his other work, the bulk of which is collected in the volume Men, Women and Boats of 1921.

[Crane's writings have been collected and admirably edited by Wilson Follett in twelve volumes (1925-26). The best biography is Thomas Beer's Stephen Crane (1923). There is a shorter life by T. L. Raymond, published by the Carteret Club, Newark, N. J. (1923); Stephen Crane: A Bibliography by Vincent Starrett (1943); and much useful material gathered by the Stephen Crane Society of Newark, the president of which, Max J. Herzberg, has been indefatigable in Crane research. Valuable reminiscences and criticism are found in articles by H. G. Wells, in North Am. Rev., Aug. 1900; Hamlin Garland, in Yale Rev., Apr. 1914; Jos. Conrad, in Notes on Life and Letters (1921); Edward Garnett, in Friday Nights (1922); Mrs. Conrad, in The Bookman, Apr. 1926; Crane's niece, Edna Crane Sulbury, in the Literary Digest Internat. Book Rev., Mar. 1926; Willis Fletcher Johnson, Ibid., Apr. 1926; Ralph Paine, in Roads of Adventure (1922), and Ford Madox Hueffer, in Thus to Revisit (1921).]

A. W.
Crane

those two fields. He was a member of the board of editors of the initial volumes of the Journal of American Folklore (I-V, 1888-92). His first independent publication dealt with a subject which he was to make peculiarly his own: Medieval Sermon-Books and Stories (1883). This was followed by his edition of The Exempla, or Illustrative Stories from the Sermones Vulgares of Jacques de Vitry (1890), the introduction and notes giving it at once the place it holds as a standard work. Later contributions of his own and of others he summed up in his Medieval Sermon-Books and Stories and their Study since 1883 (1917), while his last book was a well-edited edition of the Liber de Miraculis Sancta Dei Genitricis Mariae, Published at Vienna, in 1731 by B. Pex (1925).

His Italian Popular Tales (1885) is not only one of the best selections of stories for young readers, but its introduction and notes make an attractive and informing guide to the comparative study of the genre for older readers. His Italian Social Customs of the Sixteenth Century (1920) presents a wide orientation of an important factor in modern social and literary life. The wide range of his interests in literature and history can be appreciated by the bibliography of his writings, published as a supplement to Pex's Liber de Miraculis, which includes no less than 331 items.

Crane married on July 10, 1872, Sarah Fay Tourtellot, who died Aug. 21, 1912.

[The principal source of information for his biography down to 1868 is Crane's own article "How I Became a Professor," Cornell Era, XL1 (1909), 149-58, and his unpublished autobiography covering the same period. See also Who's Who in America, 1926-27; W. T. Hewett, Cornell Univ., A Hist. (1905); N. Y. Times, Dec. 11, 1927; Nation (N. Y.), Jan. 18, 1928.]

G. L. H.

CRANE, WILLIAM HENRY (Apr. 30, 1845-Mar. 7, 1928), actor, was born at Leicester, Mass., the son of a locksmith, Amaziah Brito Crane, and of his wife, Mary Sophia Masters. At the age of seven or eight he took part in his first theatricals in a barn loft. At sixteen he graduated from the Brimmer School in Boston; and during that same year his name appeared for the first time on a theatrical program when he acted the part of Hatchet in Black-Eyed Susan at Cambridgeport. After leaving school he began working in a furniture store, but was unhappy there and continued rehearsing with amateur companies. At eighteen he joined the Holman Opera and Dramatic Troupe as an "apprentice," receiving no salary at first. He had a fine bass voice, and for several years his forte was thought to be light opera. He sang in the operas of Offenbach, Balfe, Donizetti, and others, though he had also numerous spoken parts in popular plays of the time. He began with serious or "straight" rôles, but, substituting on one occasion for a comedian who was ill, he made such a hit that he continued to play comedy throughout most of his career. He remained with the Holman Company seven years and the Oates Opera Company four years. In 1874 he entered R. M. Hooley's stock company in Chicago, where he played not only in the melodrama and comedy of the period, but in Shakespearian and other classics. In 1877 he made a notable success in a new play, Evangeline. That year also marked the beginning of his connection with Stuart Robson. Crane had been engaged to play the lead in a comedy, Our Boarding House; then plans were changed, Robson was employed for the leading rôle, and Crane given one less important. Robson, learning the facts, came to Crane and offered to withdraw, but the latter would not permit it; and thus began a partnership which continued for twelve years and a friendship which endured until death. One of their best-remembered hits together was made as the two Dromios in A Comedy of Errors. Crane also scored in such parts as Falstaff, 'Squire Hardcastle, Sir Toby Belch, but the partners met with their greatest success in an American comedy, The Henrietta, by Bronson Howard. In 1889 they separated amicably, Crane to take the star part in The Senator, in which he frankly imitated, in make-up and "business," Senator Plumb of Kansas. During the remainder of his career he was best known as the exponent of a slightly varying, homely, American type, usually a bit uncouth, sometimes gruff and crotchety, but sound and kindly at heart. Such were his parts in On Probation, The American Minister, Brother John, Fool of Fortune, The Pacific Mail, and The Head of the Family. A notable variation was that of the tight-fisted, heartless screw in Business is Business (1906). From 1900 to 1903 he played perhaps his greatest hit, David Harum, a dramatization of Edward Noyes Westcott's popular novel. This was followed by The Spendere and Business is Business. Then came The Senator Keeps House and a revival of She Stoops to Conquer. George Ade's Father and the Boys was successful in the seasons of 1907-10. Crane's last play was The New Henrietta, his old comedy rewritten and brought up to date. He retired from the legitimate stage in 1916, though in November of the following year he appeared in vaudeville. The last years of his life were spent in California, where he played in at least two motion pictures. He died at
CRANE, WILLIAM MONTGOMERY
(Feb. 1, 1784–Mar. 18, 1846), naval officer, was born at Elizabeth, N. J., son of Gen. William Crane, who fought under Montgomery at Quebec, and of Abigail (Miller) Crane. He entered the navy as midshipman May 23, 1799, served in the United States under Barry during the naval war with France, and remained on her until 1803. After promotion to lieutenant, July 26, 1803, he was in the Vixen in the Mediterranean, commanding gunboat No. 7 in the bombardment of Tripoli, Aug. 7, 1804. He was later second lieutenant in the Chesapeake, and testified against Captain Barron [q.v.] in his court martial after the Chesapeake-Leopard affair of 1807. At the outbreak of the War of 1812 he commanded the brig Nautilus, and sailed from New York July 15. Next day at sunrise the Nautilus ran into Broke’s blockading squadron and surrendered to the Shannon after a six-hour chase, during which Crane threw overboard his lee guns, and, according to the verdict of the subsequent court of inquiry, “did everything to prevent capture that a skilful and expert officer could possibly do” (Naval Monument, 1840, pp. 9, 210). Exchanged soon afterward at Halifax, he was in temporary charge of the Charlestown Navy Yard in November 1812, and during the next spring commanded the John Adams at New York. Then with his crew he was ordered to join Chauncey on Lake Ontario, where he arrived July 3, 1813. In command of the Madison he took part in the desultory actions of Aug. 9 and Sept. 27–28 on the lake, and during Chauncey’s absence was in charge at Sackett’s Harbor through the following winter, showing great energy in pushing new construction in spite of illness among his force and threats of enemy attack. He commanded the General Pike in the summer of 1814, and remained on Lake Ontario till the next spring. He was then given the Independence (74 guns), flagship of Bainbridge’s squadron against Algiers, which left Boston July 3, 1815. In the Mediterranean he transferred to the Eric, and took part in the naval demonstration off Algiers in the following April. Noteworthy in his subsequent service was his command of the Mediterranean Squadron June 1827–October 1829, during which, in the winter of 1828–29 he was joint commissioner with Consul Offley of Smyrna in negotiations for a commercial treaty with Turkey (see C. O. Paulin, Diplomatic Negotiations of American Naval Officers, 1912, p. 141). He was Commandant of the Portsmouth (N. H.) Navy Yard, 1832–40; Navy Commissioner, 1841–42; and chief of the Bureau of Ordnance and Hydrography, 1842–46. As ordnance chief he incurred some responsibility for the bursting of the new gun “Peacemaker” on the Princeton, Feb. 28, 1844, which killed the secretaries of state and navy and several others (United States Naval Institute Proceedings, November 1926). Though Crane had disapproved the gun and refused to witness the trials, his suicide by cutting his throat, in the Navy Department offices two years later, was attributed by his family to brooding over the accident. He was buried in the Congressional Cemetery. Commodore Crane was an upright and dependable officer, popular with his men and greatly loved by family and friends. He had no children. His wife, who survived him, was Eliza King, sister to the wife of Commodore Warrington and daughter of Col. Miles King of Norfolk, Va.

A. W.

CRANE, WINTHROP MURRAY
(Apr. 23, 1853–Oct. 2, 1920), manufacturer, governor of Massachusetts, senator, was bred in a family where paper-making and counsel-giving were hereditary activities. The son of Zenas Marshall and Louise (Laflin) Crane, he was the grandson of Zenas Crane who in 1799 established at Dalton, Mass., the first paper-mill west of the Connecticut River. This Zenas Crane, his son, and his grandson, Winthrop Murray Crane, each served in the Massachusetts Executive Council. Winthrop’s brief schooling at Wilbraham Academy and Williston Seminary ended when he was seventeen, and he returned to Dalton, where he underwent a thorough training in all branches of the paper business from the crudest processes up to factory management and sales. At twenty-six, in keen competition, he secured for the Crane Company the contract for the silk-threaded paper such as has been used ever since for the United States notes, and then at the mill he personally worked out the novel processes for its production.

In 1892, as delegate-at-large from Massachusetts, he attended the Republican National Convention, and was placed upon the Republican
Crane

National Committee. He served upon it for more than twenty years, but would never accept its chairmanship, although he became a most potent influence in nominating conventions and election campaigns. In 1896 he was elected lieutenant-governor; he served three terms as governor, 1900–02, giving the commonwealth a most businesslike administration. He brought about the merging of many commissions, made prompt and discriminating appointments, and upheld the merit system. In the interest of economy and of local self-government he vetoed bills freely, and every veto was sustained. In 1902 a Boston teamsters' strike, which threatened widespread disaster, was settled through the Governor's summoning to the State House the representatives of the contending parties and there acting as the patient intermediary between them. A few months later in personal conference he urged upon President Roosevelt a similar procedure in dealing with the anthracite strike, and this led to the White House conference at which that long deadlock was broken. In that year Crane was urged to accept the position of secretary of the treasury, but declined because of his duties to the state and to his family. On two later occasions he declined President Roosevelt's tender of other cabinet positions—postmaster-general and secretary of the interior. In 1904 Roosevelt's celebrated announcement as to a "third term" was issued after a conference in which Crane had advised such action, and on Nov. 24, 1911, Roosevelt wrote to Crane expressing "extreme pleasure" that Crane took the position that he should not accept the nomination for the presidency.

On Oct. 12, 1904, Crane was appointed to fill the vacancy caused by the recent death of Senator Hoar. He quickly won friendly association with his colleagues of both parties, for no one who knew him could doubt his sincerity and his disinterested public spirit. It was said that not even the official whips knew the trend of opinion on different bills or the attitude of individual senators so well as he. "He was one of the wonders of the Senate. He never made a speech. I do not remember that he made a motion. Yet he was the most influential member of that body. His wisdom, tact, his sound judgment, his encyclopedic knowledge of public affairs and of public men made him an authority" (C. M. Depew, My Memories of Eighty Years, 1922, p. 183). A leading Democrat declared that in the last years of Crane's service "no other member had such control in shaping and directing legislation" (Griffin, post, p. 125, quoting Hoke Smith). President Taft's opinion was that, although Crane entered the Senate without legislative experience, "he became its most influential member." In routine work his most important service was on the Post Office and Interstate Commerce Committees. In May 1912, because of ill health and family responsibilities, he announced his intention not to stand for re-election.

He was profoundly impressed with the opportunity and duty of the United States to enter the League of Nations, and in the Massachusetts Republican convention of 1919 it was his insistence that resulted in the platform's declaration in favor of such entrance, against Lodge's demand for indorsement of the Senate's action. With waning strength but with undaunted spirit, in 1920 he went to the Republican National Convention, but there his utmost efforts could not dissuade the implacable senators on the Resolutions Committee from their determination to pledge the party to approval of their defeat of the League. Broken by this struggle into which he had thrown himself without reserve, he came home to die. To the last he remained convinced that the entrance of the United States into the League was demanded alike by justice and by sound national policy.

Throughout his life he showed himself a man of unfailing friendliness, his strength constantly over-taxed by his will to help. "Arrange your business so as to have time for personal and public service" was his advice to young men. He responded not more generously to the need for financial help than to appeals for business counsel and for intimate human sympathy. He hated publicity. In all his political campaigns he made no speech; he stood upon his record. His gift to his town by will was a community house, for he "desired above all to provide a place where the people of Dalton could spend their evenings in pleasant companionship." He was married twice: in 1880 to Mary Benner of Astoria, N. Y., who died in 1884, and in 1906 to Josephine P. Boardman of Washington, D. C.

G. H. H.

CRANSTON, JOHN (1625–Mar. 12, 1680), physician, colonial governor of Rhode Island, was descended from an ancient Scotch family holding lands in Mid-Lothian. He was the eldest son of Rev. James Cranston, M.A., a chaplain of King Charles I, at one time attached to the church of St. Mary Overie, now known as St. Saviour's, in London. At an early age his father placed him in the care of Jeremiah (or Jeremy) Clarke, a London merchant and nephew of Richard Weston, lord high treasurer to King Charles.
Cranston

I. About 1637, Clarke emigrated to the island of Aquidneck (Rhode Island), bringing with him his wife and her four children by a former husband, and his ward, John Cranston. Descended as he was from a long line of Scottish border fighters, and born and brought up in the atmosphere of the English Church and the Stuart court, John Cranston took his place among the Cavalier families who had been driven out of Boston with Anne Hutchinson and were laying the foundations of Portsmouth and Newport. At the General Court of Elections held at Newport on Mar. 13, 1644, when he was eighteen or nineteen years old, he was chosen drummer of the Portsmouth militia and, within a few years, captain of the train band. At a meeting of the General Assembly on May 16, 1654, he was elected “Generall Attornie,” and was reelected to this office in 1655 and in 1656. He was commissioner from Newport in the General Assembly every year except three from 1655 to 1666. On June 3, 1658, he married Mary Clarke, the eldest daughter of his former guardian.

During these years Cranston was employing his time profitably in gaining a knowledge of medicine and surgery. On Mar. 1, 1664, the General Assembly of the colony unanimously voted that “the said Captayne John Cranston is lycenced and commissioned to administer Phis sicke and Practice chirurgery throughout this whole Colony, and is by this Court styled and recorded Doctor of Phissicke and Chirurgery.” This was probably the first time that a degree equivalent to that of Doctor of Medicine was granted in the American colonies.

Cranston was Assistant in 1669, 1670, and 1671, and member of many sub-committees chosen to negotiate with other colonies and to deal with other important matters. In 1672 he was elected deputy-governor, and was thrice reelected. At the time of King Philip’s War, in 1676, he was commissioned major. Two years later, in October 1678, Gov. William Coddington died, and John Cranston, who was then deputy-governor, was chosen to fill his place. He was reelected governor the following year, but did not complete his term of office. He presided at a meeting of the Assembly on Mar. 10, 1680. The following day the Assembly met and adjourned on account of the sudden illness of the Governor, and on the 12th he died. He was buried in the old Common Burial Ground on Farewell St., Newport. His son, Samuel Cranston [q.v.], also served the colony as governor.

W. J. CRANSTON, SAMUEL (August 1659–Apr. 26, 1727), colonial governor of Rhode Island, was born in Newport. In spite of the fact that the colony was a chartered democracy, family connections eased his way into office. His father was John Cranston [q.v.], and his mother, Mary Clarke, was the daughter of Gov. Jeremiah Clarke, and sister of Gov. Walter Clarke [q.v.]. Samuel Cranston himself took as his first wife Mary Williams Hart, grand-daughter of Roger Williams, by whom he had seven children. A second wife was Judith Parrott Cranston, widow of his brother Caleb (J. O. Austin, Genealogical Dictionary of Rhode Island, 1887). Tradition has it that as a young husband he went to sea; was picked up by pirates; escaped, and, returning, found his wife, by whom he had been given up for dead, on the point of marrying a Mr. Russell of Boston. The wedding guests had assembled, when the lost sailor appeared, declared himself by a scar on his head, and shattered the nuptial scene.

He was chosen governor in 1698 and rechosen thirty years in succession. At no time during the colony’s stormy history was the stress greater than during his administration. Under his immediate predecessors (Walter Clarke, his uncle, and John Easton, both Quakers and little active officially), the deputy-governor, John Greene, had been gracious to pirates,—“privateers” they were called,—granting, it was said, commissions to “applicants and their assigns” and exacting no bonds. Selected by England in 1697 to bring about reform, Richard Coote [q.v.], the Earl of Bellomont, was appointed governor of New York, Massachusetts, and New Hampshire, with powers of captain-general over Rhode Island; while in Rhode Island a royal judge of admiralty was named. In all this, the danger was that Rhode Island might lose its charter and therewith its liberties. When, therefore, the colony was charged by the Lords of Trade with “disorders and irregularities,” and when sight was demanded of the commissions and bonds (mostly non-existent) which John Greene had issued, Gov. Cranston, realizing this danger, tactfully abased himself, praying a “favorable construction of what weakness may appear in us, we being a plain and mean sort of people... yea, an ignorant and contemptible people.” Bellomont died in 1701, but was replaced as inquisitor for Rhode Island by Joseph Dudley [q.v.], governor of Massachu setts, who revived the Bellomont charges and contrived others. Queen Anne’s War had now
Crapsey

broken out, however, and privateering, wherein Rhode Island excelled, was better thought of. Besides, the Colony had as representative at Court the astute William Penn. Accordingly Gov. Cranston challenged Dudley’s charges with noteworthy diligence. Even so, loss of charter rights by Rhode Island was but narrowly escaped, for a bill regulative of chartered governments actually passed the Commons, failing in the Lords.

Following the disposal of the Dudley charges, Gov. Cranston was confronted with ancient disputes with Massachusetts and Connecticut over boundaries. In both cases Rhode Island was successful, that with Connecticut, ended in 1726, being of major consequence, since it involved the whole of the present county of Washington, the famed Narragansett country. A never-ending problem was that of the currency. With both the parties created by the reckless experiment (beginning 1710) in bills of credit not redeemable through taxation but based on mortgages upon land, Cranston seems to have been in favor. In 1714 the hard-money element won the Colony elections, retaining Cranston; but in 1715 the paper-money element reversed the vote, still, however, retaining Cranston. In 1727, the year of his death, he was privileged to look back upon a career checkered, but, as tested by events, highly successful. Population in Rhode Island had trebled; trade had grown; society had improved; and a printing-press had been set up at Newport.

CRAPSEY, ADELAIDE (Sept. 9, 1878–Oct. 8, 1914), poet, became a legendary figure within a year of her death. In 1915 a slender gray volume, *Verse*, appeared, bearing on its covers a delicately enigmatic device in gold. Scarcely known to the general public, this book became almost immediately a symbol of the initiate to the young poets of the day. Its fragile word etchings, poignant, brief, written during the last year of Miss Crapsey’s short life, a year spent in isolation, a conscious prisoner with death, caught by contrast the imagination in a period devoted to realism rather than beauty. She was the daughter of the Rev. Algermon Sidney Crapsey [q.v.], a noted Episcopal clergyman, and of his wife, Adelaide Trowbridge. At the time of her birth her father was on the staff of Trinity Parish, New York City, but in June 1879 he became rector of St. Andrew’s, Rochester, N. Y., in which city Adelaide’s girlhood was passed. A brilliant student, she stood at the head of her classes in the preparatory school of Kemper Hall (Keno-sha, Wis.) as well as in Vassar College, where she graduated in 1901. Her verse of this period—none of it published—is said to have been of a gay, light-hearted character. She spent the years 1903–05 as a teacher of history and literature at Kemper Hall, 1905–06 as a student in the School of Archeology in Rome, and 1907–08 as an instructor in literature and history in Miss Lowe’s Preparatory School in Stamford, Conn. In the latter year came the first threat of tuberculosis, and she went abroad to recuperate. While there she planned *A Study in English Metrics* of which only the first part, dealing with the relations of monosyllabic and polysyllabic words, was ever published (posthumously, 1918). In 1911 her health was apparently sufficiently recovered for her to resume teaching, and for the next two years she was instructor in poetics at Smith College: but a too strenuous devotion to her work eventually caused another, and final, break-down. She went to Saranac Lake where her windows overlooked “Trudeau’s Garden,” as she grimly named the grave-yard; here in exile she lingered for only a little over a year. To this single year of failing health and fading hope she owes her place in American letters. The fastidious conclusion which marks all of her poems, and which was responsible for the small number which she herself selected and arranged for posthumous publication, led her to create an original verse form which she called the cinquain. This five-line verse with approximately twenty-two syllables achieves a brevity approached only by that of the Japanese *hokku* which there is every reason to suppose was known to Miss Crapsey and may well have influenced her later style. Although she wrote in many meters, the brevity and starkness of the cinquain made it the most perfect form of expression for her poised, unresigned, and valiant spirit.

G.G.—m.

CRAPSEY, ALGERMON SIDNEY (June 28, 1847–Dec. 31, 1927), Episcopal clergyman, author, was born at Fairmount, five miles west of Cincinnati, Ohio, the son of Jacob Tompkins and Rachel (Morris) Crapsey and grandson of Thomas Morris [q.v.]. He went to work in his
eleventh year when his father's law practise had gone into a decline; at fifteen he campaigned for four months in Kentucky and Tennessee as a private in the 79th Ohio Infantry and was invalided home to die of a hypertrophied heart; at twenty, while a bookkeeper in a New York printing-office, he joined the Episcopal Church and decided to become a minister. He pursued a special course at St. Stephen's College at Annandale-on-Hudson 1867–69, graduated from the General Theological Seminary in New York in 1872, was ordained deacon that same year and priest in 1873, and until 1879 was on the staff of Trinity Parish in New York, being assigned to the work at St. Paul's Chapel. There he was from the outset so successful that the special position of junior assistant minister was created for him. On June 2, 1875, he married Adelaide Towbridge of Catskill, N. Y., who with five of their nine children outlived him. Adelaide Crapsey [q.v.] was their third child. In order to have a parish of his own he relinquished his post in New York and in June 1879 assumed the rectorship of St. Andrew's, Rochester, N. Y., a small, impromptu, and spiritually sickly church. Under his guidance it grew to be one of the most frequented and influential in the city and the center of extensive, highly efficient social work. A gentle, soft-spoken, scholarly little man—he was five feet six inches tall and weighed only 120 pounds—he attracted men of all classes to him by his eloquence, still more by his transparent sincerity and consecration. As missioner, conductor of retreats, and occasional preacher, he became one of the best-known clergymen of his denomination. On Apr. 18, 1906, at Batavia, N. Y., he was placed on trial for heresy before the court of the Diocese of Western New York for having said in a lecture that “in the light of scientific research the Founder of Christianity, Jesus the son of Joseph, no longer stands apart from the common destiny of man in life and death, but He is in all things physical like as we are, born as we are born, dying as we die, and both in life and death in the keeping of that same Divine Power, that heavenly Fatherhood, which delivers us from the womb and carries us down to the grave.” The trial ended in the conviction of the heretic and the propagation of his heresy. Unable to recant before his bishop, Crapsey was deposed from the ministry, and on the Christmas Eve before his death might have heard the same teaching in regard to the Second Person of the Trinity broadcast over the radio, quite without criticism, by one of the leading Episcopal clergymen of New York City. Friends within and without the Church remained steadfast and manifested their friendship in helpful ways. He continued to live in Rochester, devoting much of his time to lecturing and writing, was a delegate to the International Peace Conference at The Hague in 1907, and in 1914 was appointed one of the state parole officers. As a writer he constantly grew in power; his last book, which ranks well among American autobiographies, is also his best. Crapsey wrote Meditations on the Five Joyful Mysteries (1888); The Greater Love, a novel (1902); Sarah Thorne, memoir (1900); Religion and Politics (1905); The Rebirth of Religion (1907); The Rise of the Working Class (1914); International Republicanism (1918); The Ways of the Gods, an excellent popular work (1920); Lewis Henry Morgan (1923); and The Last of the Heretics (1924).

Y., Dem. and Chron., Jan. 1–4, 1928; Churchman, vols. 93–94 (1906), and Jan. 14, 1928; Arguments for Presenters and Defence of Rev. A. S. Crapsey Before the Court of Review of the P. E. Church Upon his Appeal from the Judgment of the Court of the Diocese of Western N. Y. (1906); J. W. Suter, Life and Letters of Wm. Reed Huntington (1925).]

G. H. G.

CRARY, ISAAC EDWIN (Oct. 2, 1804–May 8, 1854), educator, first representative in Congress from Michigan, was born in Preston, New London County, Conn., of Puritan stock. He was the oldest son of Elisha and Nabby (Avery) Crary, and had in him some of the adventurous spirit which had impelled Peter Crary to move from Northumberland to Plymouth, Mass., and later to go with 200 armed men to found a colony near Mystic River in New London County, Conn. It was not until Isaac Crary had reached the age of twenty-seven, however, that his adventurous spirit had an opportunity to assert itself. He was educated at Bacon Academy, Colchester, and Trinity College, Hartford, graduating from the latter institution in 1827 (Catalogue of Trinity College, 1855). In Hartford he read law with Henry W. Ellsworth, practised law for two years, and assisted G. D. Prentice in editing the New England Weekly Review. Early in the year 1832 the tide of westward emigration carried him to southern Michigan, where he bought 240 acres of land (Michigan Pioneer and Historical Collections, III, 1881, 401), located in Bellevue, Eaton County. The next year he began to practise law in Marshall, Calhoun County. Here he became intimately acquainted with Rev. John D. Pierce [q.v.], in whose house he lived for a time (Ibid., vol. I, 1877, p. 38). They owned a sawmill in Marshall, and sponsored a plan to have a railroad constructed through Calhoun County (see letter by Crary to Lucius Lyon, dated Marshall, Jan. 7, 1834). In the militia organization of Michigan Crary was nominally a brigadier-
Cratty
general; hence the title of Gen. Crary, so often applied to him. In October 1835 he was elected territorial delegate for Michigan, and two years later he became the first representative of the newly created state. He served in this capacity till 1841. Although a man of considerable ability, he was not a statesman of the first order. Particularly unfortunate was his decision to speak slightly in Congress of the military career of Gen. Harrison, for he so aroused the anger of John Quincy Adams that the latter permitted Tom Corwin to attack Crary in scathing terms, whereupon Adams and others referred to the representative from Michigan as the “late Gen. Crary” (see B. P. Poore, Reminiscences, vol. I, 1886, pp. 234–37; Congressional Globe, 26 Cong., 1 Sess., pp. 200–01). From 1842 to 1846 he was a member of the state legislature, and during his last term he was speaker of the House. Throughout his whole career he was an ardent Democrat. He was far more widely known as an educator, however, than as a statesman. He was not only one of the founders of the University of Michigan, but was chairman of the Committee on Education, in the constituent convention of 1835, and prepared the Article on Education. This Article proposed a school system closely patterned after the Prussian model. It provided for the first superintendent of public instruction in any state, which office was first filled by Crary’s friend, the Rev. J. D. Pierce. Provision was also made for the founding of a state university “with such branches as the public convenience may hereafter demand.” These “branch universities” were established in various parts of the state. In 1837 Crary was appointed a member of the board of regents of the newly created university. Twice he was reappointed; in 1844 he resigned the office. He served as a member of the state board of education from 1850 to the time of his death. Crary was married twice, but left no children. He was cold in temperament, and careless in his dress. It was his habit to walk along the street with swinging gait, his hat cocked on one side. His last years were spent in Marshall.

[In addition to references given above see Mich. Pioneer and Hist. Colls., V (1884), 382–84; XI (1888), 273–74; XIV (1890), 280–83. Crary’s letter to Lucius Lyon is in the Lib. of the Univ. of Mich.] A. H.—a.

CRATTY, MABEL (June 30, 1868–Feb. 27, 1928), social worker, was born at Bellaire, Ohio, the daughter of Charles Campbell and Mary (Thoburn) Crary. Her mother was a sister of Bishop James M. Thoburn [q.v.], missionary bishop of the Methodist Episcopal Church in India, and of Isabella Thoburn [q.v.], first unmarried American woman foreign missionary. Miss Cratty herself was a life-long Methodist. She was educated in the public schools of Bellaire, at Lake Erie Seminary, Painesville, Ohio, and at Ohio Wesleyan University, where she graduated with the degree of B.L. in 1890. She taught in the Wheeling (W. Va.) Female Seminary and in the high schools of Kent and Delaware, Ohio, and was principal of the Delaware High School, 1900–04. Through the efforts of two of her college friends she became interested in Y. W. C. A. work (1902), and for a time she was a member of the Ohio state committee. She was appointed associate general secretary of the American Committee of the Young Women’s Christian Association in 1904, and, with the unifying of Y. W. C. A. movement and the formation of the National Board in 1906, she was made general secretary of the Board. In this position she remained until her death, closely associated, during the early years, with Grace H. Dodge [q.v.], first president of the Board. Miss Cratty’s interests and activities were not limited to the organization of which she was so important a part, but extended to many other movements, among them the Camp Fire Girls of America, Institute of Pacific Relations, National Social Work Council, Council of Christian Associations, National Council Committee to study relations between the Young Men’s Christian Association and the Council of Churches, National Committee on the Cause and Cure of War. In the development of the last organization, she was prominent from its beginning. Miss Cratty attended many meetings of the World’s Committee of the Y. W. C. A., and World Conferences; in Paris (1906), Swansea (1910), Berlin (1912), Stockholm (1914), Champéry (1920), Washington (1924), Oxford (1926). She visited Y. W. C. A. headquarters in Germany, Czechoslovakia, Italy, France, Switzerland, Great Britain, the Scandinavian countries, China, Japan, and Honolulu. In 1922 she was a member of the John D. Rockefeller, Jr., party which spent four months in the Orient. In July 1927 she was a delegate to the Institute of Pacific Relations at Honolulu. Seven months later, after a brief illness from pneumonia, she died at the Rockefeller Institute Hospital, New York City. She was buried in the family lot at Bellaire, overlooking the Ohio River.

Miss Cratty was called the “statesman” of the Y. W. C. A. With great ability for organization and complete understanding of her problems, she preferred to keep herself in the background and to work through others. This she did so successfully that in 1928 the Y. W. C. A. had over 1,300 local associations and a membership of about 600,000. In 1906 the National Board employed a few assistants in one small room; in 1928 a
Cravath

twelve-story building, 600 Lexington Ave., was occupied by a staff of 110 women secretaries. Except for her direct, kindly expression, Miss Cratty was not striking in appearance, and her personality was a quiet one, but those who knew her appreciated her uprightness, keen insight, patience in obtaining results, clear vision, practical sense, helpfulness, gift for developing others, and justice. Two aims were hers throughout life and to the accomplishment of them she contributed much: the securing of social justice and improvement in industrial conditions for working women; and the advancement of international sympathy, with the object of world peace.

S.G.B.

CRAVATH, ERASTUS MILO (July 1, 1833-Sept. 4, 1900), clergyman, first president of Fisk University, was born at Homer, N. Y., the eldest son of Oren Cravath, a prosperous farmer, and Betsey (Northway) Cravath. Early influences created in him a hatred of the institution of slavery and a deep sympathy for the slave. His father's house was a station on the Underground Railroad. As a youth in his teens he attended for a year New York Central College, a poorly equipped institution founded by abolitionists. Here some of the students and one of the faculty were negroes, and it is to be presumed that Cravath joined his fellow students in their song, "I am an Abolitionist, I glory in the name" (The Fisk Herald, November 1900). In 1851 the family moved to Oberlin, Ohio, where anti-slavery sentiment had for many years been strong. From Oberlin College Cravath graduated in 1857 and three years later he completed the work of the theological seminary. In this same year he married Ruthanna Jackson of Kennett Square, Pa., and assumed the pastorate of the Congregational church in Berlin Heights, Ohio. The Civil War affected Cravath's life profoundly. He became chaplain of the 101st Regiment of Ohio Volunteers in December 1863, served for the remainder of the war, and was mustered out in Nashville, Tenn. Here he began the work of educating the freedmen to which he was to devote the remaining thirty-five years of his life. For ten years, successively as field agent, as district secretary, and as field secretary of the American Missionary Association, he labored with missionary zeal and with notable success in raising money in the North and establishing and supervising negro schools in the South. One of these schools became Atlanta University; another became Fisk University, in Nashville. He was elected first president of this latter institution in 1875, but because of a tour of Europe with the famed Jubilee Singers of Fisk he did not assume active administration of its affairs until three years later.

His ideal of education for the colored race he once expressed in these words: "There must be thoroughly and liberally educated men and women of their own race to fill the high places of influence and responsibility in school and church, in business and professional life, if the masses are to be reached and uplifted" (The Fisk Herald, December 1884). He made the university a leader in the field of negro education. Tall, handsome, dignified, he inspired in his students and faculty members deep affection and something of awe, and in his highly critical white neighbors a large measure of respect.

[Brief sketch in W. W. Clayton, Hist. of Davidson County, Tenn. (1880); Nashville Bonner, Sept. 5, 1900; The Congregationalist, Sept. 13, 1900; materials in the offices of the Am. Missionary Ass. in New York City and at Fisk Univ.; information as to certain facts from Cravath's daughter, Mrs. Herbert A. Miller of Columbus, Ohio, through her brother Mr. Paul D. Cravath of New York City.]

P. M. H.

CRAVEN, BRAXTON (Aug. 22, 1822-Nov. 7, 1882), first president of Trinity College (now Duke University), was born in Randolph County, N. C. His early years were spent at the home of a farmer, Nathan Cox, and his education was secured mainly by self-help. He attended two sessions at New Garden School (now Guilford College) and in 1850 he passed the examinations on the entire course of study at Randolph-Macon College in Virginia, and received the degree of B.A. In 1841 he became assistant teacher at Union Institute, Randolph County, a local school organized in 1838 by a group of Quakers and Methodists, and in 1842 he was made principal. Desiring to make the institution more than an academy, he undertook the training of teachers for the common schools of North Carolina, and in 1850 he published his Theory of Common Schools, the first comprehensive program of teacher training formulated in North Carolina. The same year he began the publication of the Southern Index, an educational journal, which was soon converted into a literary magazine, the Evergreen. He sought aid from the legislature and in 1851 Union Institute was rechartered as Normal College, those students holding a certificate from the institution being authorized to teach in the common schools without further examination. In 1852 the college was granted a
Craven

loan of $10,000 from the State Literary Fund. This was the first college for teacher training in North Carolina; but the experiment was not a success and Craven turned to the Methodist Church for aid. In 1856 an agreement was made by which Normal College was transferred to the North Carolina Conference of the Methodist Episcopal Church, South. The Conference agreed to raise $20,000 for the institution, but never fulfilled its promise. In 1859 the name of the institution was changed to Trinity College. Braxton Craven remained its president until his death, with the exception of an interval during the Civil War.

**CRAVEN, JOHN JOSEPH** (Sept. 8, 1822-Feb. 14, 1893), inventor, physician, was born in Newark, N. J., in such lowly circumstances that he was deprived of even the limited advantages afforded the youth of the time. When he was old enough to work he entered a chemical manufacturing plant in Newark where he continued for a number of years, taking every opportunity for study. About the time of his majority the telegraph had been launched, and, when the construction of the line from New York to Philadelphia was begun in 1845, Craven left the chemical plant and joined the telegraph construction crew. He continued with the Magnetic Telegraph Company, as the organization was called, until after its completion, and had the distinction of being the first man to use the newly invented pole climbers. He is said to have devised a gutta-percha insulation for cables at this time which had the particular advantage of permitting the laying of the telegraph wires in water. It is said further that with his insulated cables successful communication was had between New York and Philadelphia, but a patent for which he applied was denied on technical grounds. His insulation method pointed the way for the later successful ocean cable. In 1849, with a group of friends, he sailed around the Horn for California. He apparently had rather indifferent success in the search for gold and within two years was again back in Newark. His early work in chemistry undoubtedly had a marked influence upon him, for from this time on he devoted himself to the study of medicine, in which he eventually gained success. At the outbreak of the Civil War he joined the 1st New Jersey Infantry as a surgeon, but within a few months was mustered out and became a surgeon of volunteers, serving throughout the war in this capacity. In 1862 he was medical director of the Department of the South, and in 1864 became director of the 10th Corps. For "faithful and meritorious service during the war" he was made a brevet lieutenant-colonel of volunteers in 1865, and was mustered out of service Jan. 27, 1866. While with the 10th Army Corps, he was in attendance upon Jefferson Davis who was a prisoner at Fortress Monroe, Va., and after the war he published *The Prison Life of Jefferson Davis* (1866, republished in 1905). Craven returned to Newark after the war, served four years as postmaster, and then became a practising physician until 1883, when he retired and removed to Patchogue, L. I. Here he entered energetically into the civic affairs of the town in various capacities, such as health officer, president of the library association and board of education, as well as acting as consultant for several abattoir organizations. His wife was Catherine S. Tichenor, daughter of Samuel Tichenor of Newark.

**CRAVEN, THOMAS TINGEY** (Dec. 20, 1808-Aug. 23, 1887), naval officer, was born in the District of Columbia. His father, Tunis Craven, who was a native of New Jersey and who early in life was a merchant in Alexandria, Va., was a purser in the navy, 1812-13, and for many years a naval storekeeper, first at Portsmouth, N. H., and later at Brooklyn, N. Y. His mother, Hannah (Tingey) Craven, was a daughter of Commodore Thomas Tingey [q.v.]. Entering the navy as a midshipman from New Hampshire on May 1, 1822, Craven was made a passed midshipman in 1828, and a lieutenant in 1830. In the last-named grade, he served off the Brazilian coast and in East Indian waters, and later, in 1838-39, as first lieutenant of the *Vincennes*, the flagship of the Wilkes exploring expedition. In 1843-44 he assisted Commodore M. C. Perry [q.v.] in suppressing the slave-trade off the coast of Africa, part of the time as commander of the schooner *Porpoise*. For almost eight years, 1850-55 and 1858-60, he was commandant of midshipmen at the Naval Academy. He initiated and elaborated the practise cruise, still regarded as one of the most beneficial features of the course at Annapolis. In 1852 he was promoted commander and in the first year of the Civil War while in command of the Potomac flotilla, he was made a captain. In the following year he commanded the *Brooklyn* of Farragut’s squadron on the Mississippi and had an active share in the stirring events that resulted
Craven

in the opening of that river. In 1863 he was made a commodore and was ordered with the steam frigate Niagara to European waters there to perform certain special duties, which included the protection of American commerce. In August 1864 he captured off the coast of Portugal the Confederate steamer Georgia. Eight months later off the coast of Spain near Corunna, the commander of the Confederate ironclad ram Stonewall challenged Craven to a trial of strength in the open sea. In addition to the Niagara the Commodore at this time had under his control the sloop-of-war Sacramento. These two wooden ships carried an armament superior in the number of guns, but otherwise much inferior to that of the Stonewall. Craven therefore declined the challenge and allowed the Stonewall to proceed on her way unmolested. His action was much criticized and on his return to the United States he was brought before a court martial composed of nine of the most distinguished officers of the navy, with Vice-Admiral Farragut as president. The court found him guilty of failing to do his utmost to destroy the Stonewall and sentenced him to be suspended from duty for two years on leave-pay. On the ground that the finding was inconsistent, Secretary Welles set aside the proceedings of the court and discharged Craven from arrest. The Secretary, nevertheless, was of the opinion that the Commodore was too cautious an officer (Diary of Gideon Welles, vol. II, 1911, p. 267).

In 1866 Craven was promoted rear admiral, and, after serving as commandant of the Mare Island navy-yard and commander of the Pacific Squadron, he was in 1869 retired in that grade. In the following year he served as port admiral at San Francisco. He died at the Boston navy-yard. His first wife was his cousin, Virginia Wingate; his second, Emily Truxton Henderson, by whom he had eight children. Three of his sons graduated at the Naval Academy.

CRAVEN, TUNIS AUGUSTUS MACDONOUGH (Jan. 11, 1813-Aug. 5, 1864), naval officer, son of Tunis and Hannah (Tingey) Craven, was born in Portsmouth, N. H. He was the youngest brother of Rear Admiral Thomas Tingey Craven [q.v.]. His early education was acquired at the grammar school of Columbia College, New York, after his father became naval storekeeper at the Brooklyn navy-yard. Entering the navy in 1829 as a midshipman, he

in 1835 was promoted to be a passed midshipman and in the last-named year was for the first time employed in surveying the coast, an employment, chiefly in connection with the United States Coast Survey, which lasted, with intervals of other duties, for more than twenty years. Developing an aptitude for scientific work, he became one of the leading surveyors and hydrographers of the navy, and in 1857-58 was in charge of the expedition that surveyed a ship canal route through the Isthmus of Darien from the Atlantic to the Pacific Ocean by way of the Atrato River. His report on this survey was published by the Federal Government (House Executive Documents, No. 63, 46 Cong., 2 Sess.). His surveying duties were interrupted in 1846-49 by his service as a lieutenant, to which grade he was promoted in 1841, on board the sloop Dale, of the Pacific Squadron, which cruised during the Mexican War off the coast of Mexico and California. In 1845-46 he was the chief editor of the United States Nautical Magazine, one of the first periodicals devoted to the interests of the navy and the merchant marine. While in command of the steamer Mahawik of the home squadron, 1859-61, he captured off the coast of Cuba the slaver Wildfire, with more than five hundred negroes on board. In 1860 he saved the crew of the Bella, a Spanish polacca, that had been wrecked on a Cuban island. As a token of her appreciation, Queen Isabella II presented him with a gold medal and a diploma. For similar aid rendered to American merchantmen in distress, the Board of Underwriters of New York sent him a complimentary letter and gave Mrs. Craven a handsome silver service.

Early in the Civil War as commander of the steamer Crusader, Craven had an important share in saving Key West for the Union. In September 1861, soon after he received his commission as commander, he took command of the new sloop Tuscarora, with orders to report to the American minister in London, Charles Francis Adams. He cruised in European waters for more than a year in search of Confederate commerce-destroyers. While he made no captures, he kept so close a watch on the Sumter that her officers and crew abandoned her at Gibraltar. In the summer of 1863 he was placed in command of the ironclad Tecumseh and later joined Rear Admiral Lee's James River flotilla. He was among the first to reach City Point. Ordered to reinforce Rear Admiral Farragut, Craven arrived in Mobile Bay the evening before the attack was made on the Confederate defenses, Aug. 5, 1864. The Tecumseh, one of the
CRAWFORD, FRANCIS MARION (Aug. 2, 1854-Apr. 9, 1909), novelist, historian, was born in Bagni di Lucca, Tuscany, the youngest of four children of Thomas Crawford [q.v.], an American sculptor long resident in Italy, and of Louisa Cutler Ward, a sister of Julia Ward Howe. He was early sent to relatives at Bordentown, N. J., but on the death of his father he was returned to Italy where his mother still made her home. The boy's education from the first was thorough and peculiarly cosmopolitan.

"Most of my boyhood," he wrote in later years, "was spent under the direction of a French governess. Not only did I learn her language of her, but all of my studies, geography, arithmetic and so forth were taught me in French and I learned to write it with great readiness as a mere boy because it was the language of my daily tasks. The consequence is that to this day I write French with the ease of English." Between the ages of twelve and fourteen he was a pupil at St. Paul's School, Concord, N. H., and during the following ten years he was successively student of mathematics and Greek at Rome; student with a tutor at Hatfield Broad Oak, Essex, England; matriculant at Trinity College, Cambridge, where he pursued courses in German, Swedish, and Spanish; and attendant upon lectures at Karlsruhe and Heidelberg. As a result he became fluent in most of the languages of Europe including the Turkish and the Russian, and later learned to converse in most of the Eastern languages. At twenty-two he was at the University of Rome specializing in the study of Sanskrit in which he had become intensely interested, and it was to perfect himself in this language at its fountain head that in 1879, borrowing the money to pay his expenses, he went to India. In financial straits at length, he turned, like Kipling in later years, to journalism; for eighteen months he served as editor of the Indian Herald at Allahabad. He returned to Rome in 1880 and the next year was in America pursuing studies in Sanskrit at Harvard, making his home with his aunt Julia Ward Howe. Unsettled, perplexed as to what was to be his life-work, supporting himself precariously with hack-work sold to papers and magazines, in May 1882, while in New York City the guest of his uncle Samuel Ward, he told at a dinner the story of one Jacobs, a diamond merchant of Simla, whose sale of an unusual stone had called forth a protest from the British government. Recognizing the interest of the story and the graphic power of the telling, his uncle urged him to put it into the form of a novel and publish it. The result was Mr. Isaacs which Crawford wrote in less than six weeks, the greater part of it at his aunt's home in Boston. The success of the novel was instant and sensational. It was the most talked of book of its season. Crawford had found his profession. From that time until his death fiction flowed from his pen in a steady stream, often two or three volumes coming in a single publishing season. In less than twenty-five years he produced more than forty novels, not to mention other works historical and critical.

His second book was Dr. Claudius (1883), its central character drawn from his uncle Samuel. Then Aldrich asked for a serial for the Atlantic, and A Roman Singer (1884) resulted. Historical romances laid in the Orient and in Europe, Italian novels, and stories of contemporary life, some of them American, now came in full tide. The titles are suggestive: To Leeward (1884); An American Politician (1885); Zoraster (1885); A Tale of a Lonely Parish (1886); Marzio's Crucifix (1887); Paul Patoff (1887); Saracinesca (1887); With the Immortals (1888); Greifenstein (1889); Sant' Ilario (1889); A Cigarette Maker's Romance (1890); Khaled (1891); The Witch of Prague (1891); The Three Fates (1892); The Children of the King (1892); Don Orsino (1892); Pietro Ghisleris (1892); Marion Darcehe (1893); Katharine Lauderdale (1894); Love in Idleness (1894); The Ralstons (1895); Constantinople (1895); Casa Braccio (1895); Adam Johnstone's Son (1895); Taquisara (1895); Corleone (1896); A Rose of Yesterday (1897); Via Crucis (1898); In the Palace of the King (1900);
Crawford

Marietta, a Maid of Venice (1901); Cecilia, a Story of Modern Rome (1902); The Heart of Rome (1903); Whosoever Shall Offend (1904); Soprano, a Portrait (1905); A Lady of Rome (1906); Arethusa (1907); The Little City of Hope (1907); The Primadonna (1908); The Diva's Ruby (1908); Stradella (1909); The White Sister (1909); The Undesirable Governess (1909); Wandering Ghosts (1911). In addition to these he wrote three historical works of considerable value, Ave Roma Immortalis (1898); Rulers of the South (1900); Saxon Venetia; Gleanings from Venetian History (1905), and also a suggestive treatise on the art of fiction, The Novel—What It Is (1893). He was the author of a play Francesca da Rimini, produced in Paris by Bernhardt in 1902. At the time of his death he left incomplete a series of archeological studies of Italy which were to have eventuated finally in a history of Rome in the Middle Ages.

As a novelist Crawford was primarily a story-teller. He could create character, and could picture with vividness scenes in unusual, sometimes unique, areas which his cosmopolitan life had opened for him. He was a master of dialogue; he excelled in portraying action; his power to hold his reader to the end was unfailing. To him the novel was "a pocket theatre" exclusively for entertainment; propaganda, or moral teaching, or the shedding of light upon the meaning of life was no part of its province. He wrote undoubtedly too much; more than half of his voluminous product could be spared, but the other half, especially those novels like the Saracinesca series which deal with the Italian life he knew so well, has won a secure place.

His life was unusually strewn with the picturesque. The year 1884 he spent mostly in Constantinople where he was married to Elizabeth Berdan, daughter of Gen. Berdan, and the next year he settled at Sorrento, Italy, at "Villa Crawford," on a high bluff overlooking the Bay of Naples. Here he made his home for the rest of his life and here he died. Almost yearly he was in America, sometimes in his own yacht of which he was himself the captain and master mariner. He was commanding in physique, athletic, and handsome, with a melodious voice and polished deportment,—a cosmopolite, an adventurer, romantic, restless, competent, "driving his boats into the most dangerous seas, building his palaces on the Mediterranean shore, travelling over every queer quarter of the globe, fearless and challenging and heroic."

Carroll E. F. Harkins, Little Pilgrimages Among the Men who have Written Famous Books (1902), pp. 169–83; M. C. Fraser, "Notes of a Romantic Life," Collier's.  

Crawford

F. L. P.—e.  

CRAWFORD, GEORGE WALKER (Dec. 22, 1798–July 22, 1872), governor of Georgia, was a member of a family noted in Georgia for ability and devotion to the public service. Though not so well known in national affairs as his second cousin, William H. Crawford [q.v.], he was yet a leader in his day and an intimate friend of Toombs, Stephens, and other eminent Whig politicians. His forebears, of Scottish descent, migrated to Georgia from Virginia at an early period. He was the son of Peter and Mary Crawford, whose home was in Columbia County, near Augusta.

After graduation from the College of New Jersey (Princeton) in 1820, Crawford was admitted to the bar (1822) and opened a law office in Augusta. He was a successful candidate (1827) for the office of attorney-general and held the place for four years. From 1837 to 1842 he was, with the exception of one year, a member of the legislature from Richmond County. In 1843 he was elected as a Whig to Congress to fill an unexpired term, but served in Congress only one month (Feb. 1 to Mar. 4, 1843). His brief service was due to the fact that he received the Whig nomination for governor in 1843. He was elected, and reelected in 1845, serving until 1847. His term as governor was coincident with the period of recovery after the crisis of 1837 and the succeeding depression. The decade of the forties was characterized by great economic activity—railroad construction, building of cotton-mills, improvement in banking facilities, and the extension of cotton culture. Wise handling of the state finances by the Governor contributed materially to the growing prosperity of Georgia in the period. Robert Toombs said of him, "There are but few able and no purer men in America, and he has administrative qualities of an unusually high order" ("Correspondence," post, p. 147). His service to the state as a competent administrator was the most important aspect of his public career.

On the election of President Zachary Taylor the post of secretary of war was tendered to Crawford. He accepted (March 1849), but resigned (July 1850) on Taylor's death. From the time of his resignation to the outbreak of the Civil War he was in retirement. His last public service was as chairman of the state secession convention in 1861.  

CRAWFORD, JOHN (May 3, 1746-May 9, 1813), physician, was the second of four sons of a North Ireland clergyman. All four became professional men. At seventeen John Crawford entered Trinity College, Dublin, but he took his medical degree at the University of Leyden, in Holland. He acquired his first practical experience as surgeon and agent in charge of the British Naval Hospital in Barbados, where he had opportunities for studying the reactions of the British to a tropical climate. During a fearful hurricane in 1780 he showed himself a generous friend and devoted physician, giving away his own supplies and his entire stock of medicines. Ill as a result of strain and exposure, he went to England on furlough, his wife dying during the voyage. Leaving his infant children in England, he returned to his post to begin a long period of activity and patient investigation. About 1790 he was transferred to Demerara, then a Dutch possession, and was given a hospital of from sixty to eighty beds. Here he made frequent autopsies, studied botany and entomology, and laid the foundation for his later theory, of “animal contagion.” He saw and described many cases of hepatic abscess. In 1794, during a visit to Leyden, he discussed with his old teachers his theory of contagion, but it received little attention. Apparently because of some disappointment or because of an antagonism to British methods, he never returned to Demerara, which in 1796 was taken by the British. Instead, in that year, he emigrated to Baltimore with his children. For seventeen years he practised and wrote there, becoming one of the best-known members of his profession. Rather didactic and cock-sure, he seems to have aroused a good deal of antagonism, but in such atmosphere he thrived and rejoiced.

In the summer of 1800 Crawford received from Dr. Ring in London (Cordell, post, p. 48) some vaccine “on a cotton thread, rolled up in paper and covered with a varnish which excluded the air.” This was the first vaccine received in Maryland, but no record of its use appears to have been kept. In 1809 Crawford published in the Baltimore Medical and Physical Recorder (I, 40–52, 81–92, 206–21) “A Series of Observations on the Seats and Causes of Disease,” in which he set forth the theory of infection or contagion which was his most important contribution to medical science. This he discussed further in a lecture, Introductory to a Course of Lectures on the Cause, Seat and Cure of Diseases (1811). He stated his belief in a contagium vivum or animatum. Man, he said, is an animal having many properties in common with any other animal. He then traced the connection between animals and the vegetable world, especially between vegetables and insects. Everywhere he found parasitism. He held that disease was caused by the introduction into the human body of some form of animal life so minute as to escape observation, and he believed that each of these minute organisms produced its own peculiar disease, just as a seed in the vegetable kingdom produces its own type of plant and no other. In Baltimore he found no interest in his idea, but he said himself in the lecture of 1811: “The difficulties I have met with have only increased my ardour. As long as life and health remain, I shall devote myself strictly to the performance of my duty, and I shall leave the results to the August Being who made nothing in vain.” His literary activity was very great, although few of its results were printed and many of his manuscripts were lost or destroyed after his death. In addition to the papers mentioned above he published four letters on yellow fever and quarantine (Federal Gazette, Baltimore, September 1802 ff.); four letters on quarantine (Baltimore Observer, Nov. 29, 1806 ff.); “An Extraordinary Case of Ascites” (Baltimore Medical and Physical Recorder, vol. I, 1808–09, pp. 1–5); “An Account of the Sanicula” (Ibid., pp. 222–31); “A Case of Hepatic Infection” (Ibid., pp. 306–09). He also left a manuscript of 175 pages “On the Means of Preventing, the Method of Treating and the Origin of the Diseases most prevalent and which prove most destructive to the natives of Cold Countries visiting or residing in warm countries.” This study, written about 1807, embodied the results of observations made during his service in the tropics.

Crawford’s vital personality soon overflowed the bounds of professional life into the civic life of Baltimore. He helped to found a Society for the Promotion of Useful Knowledge, the Baltimore Dispensary, and the Baltimore Library (1798); and he was deeply interested in the building and up-keep of Baltimore’s first penitentiary. He gave public lectures, apparently not very successfully; was an active Free Mason and Grand Master of his Lodge in 1801. He was censor, examiner, and orator of the Medical and Chirurgical Faculty of Maryland, and member of the committee appointed to publish its Transactions. He was also a member of the board of health. Crawford died after four days’ illness and was buried with great pomp by his Masonic brethren, in the Presbyterian cemetery at Fayette and Greene Sts. Apparently he had married a second
time, for in the year of his death his library of several hundred valuable books was sold to the University of Maryland by his widow.

**CRAWFORD, JOHN MARTIN** (Oct. 18, 1845–Aug. 11, 1916), physician, translator, son of John S. and Clarissa Crawford, was born in Herrick, Pa., and died in Cincinnati, Ohio. He attended public school, and at the age of twenty-two, after teaching school for four years, entered Lafayette College. Completing his course there in 1871, he soon went to Cincinnati, where for eight years he taught Latin and mathematics. In the meantime he studied at three different medical schools in Cincinnati. Having received a diploma from each, he taught and served as registrar at one of them, the Pulte Medical College, during the years 1881–89. In 1884 he is reported to have been at work on a dictionary of medical and scientific terms, and in 1887 he completed the first English translation of the ancient Finnish epic, *Kalevala*. He had become acquainted with the poem while a student in Lafayette College, because of the admiration in which it was held by one of his teachers. As teacher of Latin and as student and teacher of medicine, he diverted himself by turning this poem into English verse metrically imitative of the original. It was a vast undertaking; the poem contains more than 150,000 words, and the translation of it obviously required a faithful study of history and prosody as well as of language. For all that, the translator was not sated. He long anticipated revising the entire work, and as late as 1904 he was busily engaged with a translation of the Estonian epic, *Kalevipoeg*. From 1889 to 1894 he was United States consul-general in Russia. Here he added to his official responsibilities the somewhat kindred responsibility of negotiating between the Russian government and the administration of the World’s Fair in Chicago. In connection with this work, he translated into English, in urgent haste, he complained, the encyclopedic and voluminous *Industries of Russia* (1893). Returning home to Cincinnati, he successfully engaged in merchandising, manufacturing, and banking, but affairs were never so pressing as to obliterate the interest in European affairs which he had acquired during his term as consul. He read much, and lectured from time to time on subjects having to do with Finland and Russia. He was married twice, in 1873 to Nellie Baldwin, and in 1888 to Cora Hayward.

**CRAWFORD, JOHN WALLACE (CAPTAIN JACK)** (Mar. 4, 1847–Feb. 28, 1917), “the poet scout,” was born in County Donegal, Ireland, the son of John Austin and Susie (Wallace) Crawford. The mother claimed descent from the famous chieftain, William Wallace. The father, a Glasgow tailor, when threatened with arrest for some seditious utterance, fled to Ireland, where he met and married Miss Wallace. In 1854 he came to America, finding work as a coal miner at Minersville, Pa., and four years later the mother and children followed. The boy began to work in the mines at an early age and thus had no opportunities for schooling. On the opening of the Civil War the father enlisted in the army, and the boy, after two rejections on account of his youth, was accepted for service in the 48th Pennsylvania Volunteers. At Spottsylvania, May 12, 1864, he was badly wounded. In the Saterlee Hospital, in West Philadelphia, through the efforts of a Sister of Charity, he learned to read and write. He was again sent to the front, and at Petersburg, Apr. 2, 1865, was again wounded. Shortly afterward his mother and father died, his mother exacting a deathbed promise from him that he would never touch liquor.

He married Anna M. Stokes of Numidia, Pa., in 1869, and some time afterward went West, where for several years he was variously employed. He is said to have been one of the first seven men to enter the Black Hills region after the Custer expedition of 1874. A local document dated Apr. 25, 1876, mentions him as a member of the Board of Trustees of Custer City and chief of scouts for a volunteer organization known as the Black Hills Rangers. In the Sioux War of that year he served as a scout and messenger for both Merritt and Crook, and on Aug. 24 succeeded Cody (Buffalo Bill) as Merritt’s chief of scouts. He later served as a scout in the campaigns against the Apaches. He was for a time post trader at Fort Craig, N. Mex., and later a special agent of the Indian Bureau. Near San Marcial, on the Rio Grande, in 1886, he established a ranch, which for the remainder of his life was his main home, though he also had a home in Brooklyn. He had by the late seventies become famous as a composer and reciter of verses. His first volume, *The Poet Scout*, was published in 1879 and was succeeded by a revised and enlarged edition of the same work (1886); *Camp
Crawford

Fire Sparks (1893); Lariattes (1904), and The Broncho Book (1908). He also wrote three plays, in the production of which he took the leading part, and more than one hundred short stories. As a lecturer and a reciter of his own verses he was a noted figure for many years. He died in his Brooklyn home.

Crawford was a tall man of wiry build, with nervous, sensitive face. He wore his hair and beard after the fashion of his friend Buffalo Bill, and he dressed the part of a "poet scout." His histrionic embellishments seem, however, to have been chiefly a concession to the public demand, for he was at bottom simple and unaffected. "I am simply Jack Crawford," he said, "boy soldier, rustic poet, scout, bad actor, etc." His work as a scout was highly praised by his commanders. His verses, though popular in his day, can by no stretch of courtesy be called poetry.

CRAWFORD, MARTIN JENKINS (Mar. 17, 1820—July 23, 1883), judge, congressman, Confederate soldier, was the son of Hardy and Betsy Roberts (Jenkins) Crawford and was born in Jasper County, Ga. This county lay in the heart of the old black belt or cotton plantation area and Hardy Crawford was a prominent and wealthy planter of his community. After a term spent at Mercer University, a Baptist institution at Macon, Ga., Martin Crawford read law and was admitted to the bar (1839), before his twentieth anniversary, by a special act of the legislature. Meanwhile the Crawfords had removed to Harris County, following the westward trend of the planters, and for a time Martin practised law in that county and represented it in the legislature (1845-47). In 1849, however, he made his home at Columbus, Ga., and he was thereafter identified with that city. Throughout the later ante bellum period Columbus was a hot bed of radical state-rights sentiment. Crawford, though a comparatively young man at the time of his removal thither, became at once a leader of the state-rights group. In 1850 he was appointed a delegate to the Nashville Convention. In 1855, after a year's service as judge of the superior court of the Chattahoochee circuit, he was elected to Congress as a Democrat, defeating the Know-Nothing candidate. He held his seat until the Southern congressmen withdrew on the outbreak of the Civil War. Throughout his service in Congress the matter of the territorial expansion of slavery occupied the front of the stage. In the running debate on the Kansas trouble and after secession had actually begun, he was constantly on his feet, championing the Southern views, but always in a moderate and courteous manner.

After the secession of Georgia, Crawford was elected to represent the state in the Provisional Congress of the Confederacy at Montgomery and participated in the organization of the Confederate government. He was the most important of the three members appointed by Jefferson Davis to serve on the peace commission with which Seward dallied for a brief time. On the failure of this commission, Crawford returned to Georgia, raised a regiment of cavalry, and became its colonel. A year later he joined the staff of Gen. Howell Cobb and was serving there when the war closed. Near the end of the war, Federal troops overran west Georgia, destroying many plantations, including that of Crawford. He was impoverished, but, being comparatively young, resumed the practise of law and continued for many years prominent in state affairs. The year 1875 found him again judge of the Chattahoochee circuit. In 1886 he was appointed by Gov. Colquitt associate justice of the supreme court and was on the bench at the time of his death in 1883.

Crawford was described by contemporaries as tall, slender, well built and of blond coloring, gifted as an orator and possessing a vein of dry humor and keen practical wisdom, qualities which made him a man of considerable influence. His decisions as a supreme-court justice are marked by clear and concise reasoning. In 1842 he married Amanda J. Reese, daughter of Joseph Reese of Morgan County. He died in Columbus.

R. P. B.

CRAWFORD, SAMUEL JOHNSON (Apr. 15, 1835—Oct. 21, 1913), Union soldier, governor of Kansas, of Scotch-Irish descent, was the son of James and Jane (Morrow) Crawford. He was born on a farm near Bedford, Lawrence County, Ind., attended the public schools in that town and later read law there in an office. He was admitted to the bar in 1856 at the age of twenty-one. Desiring better preparation he entered the Cincinnati Law School, from which he was graduated two years later. In 1859 he moved to Garnett, Kan., and began the practise of his profession. In November of that year he was elected a member of the first state legislature, which did not convene, however, until Mar. 26, 1861, two months after Kansas attained statehood. After
It was of the ship young in the fall and early winter of 1862. A year later he became colonel of the second regiment of Kansas Colored Infantry. In July 1864 he conducted an expedition through the Indian territory and later took part in the campaign against the Confeder ate Gen. Price who led a raid into Missouri and southeastern Kansas.

Crawford's military record attracted the attention of the people of his state and on Sept. 8, 1864, he was nominated for governor by the Republican party. Two months later he was elected by a majority of 4,939 votes in a total of 22,335. On Dec. 2, 1864, he resigned his military commission and five weeks later was sworn into office, being at that time less than thirty years of age. In March 1865 he was made brevet brigadier-general of volunteers "for meritorious services." Toward the end of his first term as governor he was nominated again and re-elected by a large majority. Much useful and important legislation was enacted while he was governor and the interests of the young state were greatly advanced. On Nov. 27, 1866, he was married to Isabel M. Chase of Topeka. In the summer of 1868 Indians began to raid the frontier settlements of Kansas. As the season advanced the savages became bolder and their incursions more destructive. Men were killed, women and children made captives, buildings burned, and stock driven off. On Oct. 10 Gov. Crawford issued a call for the enlistment of a regiment of cavalry for frontier service. On Nov. 4—two months before the expiration of his second term of office—he resigned the governorship to become commander of the new regiment known as the 19th Kansas Cavalry. The campaign against the Indians was entirely successful and the captives were recovered. This ended his military career and his direct participation in Kansas politics. The last half-century of his life was spent in civil pursuits, farming, the practise of law, and acting as claim agent for his state at Washington. His book, Kansas in the Sixties, was published in 1911. It deals chiefly with events in which Crawford was a participant. For a short time prior to his death he was the only surviving war governor in the Northern states.

Crawford

Crawford

Crawford, Thomas (Mar. 22, 1813– Oct. 10, 1857), sculptor, was probably born in New York City, of Irish parents. A writer in the Albany Knickerbocker (quoted in the New York Evening Post, Dec. 21, 1857) says, however: "We know that he was a native of Ireland, and emigrated with his parents at an early age (about seven years) from Ballyshanan, in the county of Donegal, and the writer of this was well acquainted with his father in the city of New York thirty years ago. Give old Ireland her due." The date of Crawford's birth was either 1813 or 1814. Even when very young, he showed delight in beauty. He gazed tiptoe into print-shop windows, he tinted engravings, he sketched, he drew, sometimes neglecting his routine school lessons, but not the drawing lessons to which his parents sent him. At the age of fourteen, he went to work with a wood-carver; his evenings he spent in his room, modeling in clay. At nineteen, he placed himself as apprentice in the studios of Frazee & Launitz, leading monument-makers of the city. Here he sensitive carvings of marble flowers and his intelligent service in monumental design won approval. He worked also on marble busts, including that of Chief Justice Marshall. Meanwhile he gained some knowledge of architecture from poring over books, he studied art in the evening classes of the National Academy of Design, and he began collecting casts, among them a copy of Thorwaldsen's "Triumph of Alexander." When Launitz disregarded his plea for higher wages, he quietly went back to work in the wood-carver's shop, where Launitz sought him out, inviting him to return, and granting his request. Launitz became his true friend, encouraged him to go to Rome for study, and gave him letters to two residents there, Dr. Paul Ruga and Thorwaldsen. In May 1835, at the age of twenty-two, he set sail for Leghorn in a small merchantman, and in the following September he presented his letter to Thorwaldsen. The famous sculptor received him kindly, giving him the freedom of his studios, and setting him at work on a clay copy of an antique. Naturally the sensitive carver of marble flowers was feeble in his grasp of the ensemble. With the utmost patience Thorwaldsen explained the need of studying mass before detail. A lasting friendship resulted. "These few words of instruction," wrote Crawford, years later, "gave me more insight into my art and
were of more service to me than all else put together that I have ever seen and heard.”

In Rome, the young man devoted himself heart and soul to his studies, working with even too much eagerness day and night. His vigorous health suffered. “I am alone,” he had written from Leghorn to his sister; “I am venturing much.” And almost alone as well as unknown he at first remained. He modeled and drew from the nude; he spared time to visit collections, studios, museums. By the purchase of books, casts, and other tools of trade as needful to him as breath, he made serious inroads into his funds, denying himself physical comforts. In ten weeks (1837) he modeled seventeen busts for marble, “at a laborer’s wage,” he wrote to his sister; and the same year he copied in marble a Demosthenes in the Vatican. His solitary lamp burned nightly in his little studio in the Via del Orto di Napoli. He began to attract consideration. One day Mr. Greene, American consul at Rome, got a tremendous note, “Come and see me.” He found Crawford prostrate and delirious from fever, and at once obtained for him through Dr. Ruga the best medical aid and nursing, probably saving his life thereby. Interest was aroused; numerous minor commissions came. Before the end of 1839, Crawford completed two bas-reliefs, the “Centaurs,” the “Hercules and Diana,” for Prince Demidoff of St. Petersburg; a group, “Lead Us into Life Everlasting,” for Mr. Tiffany of Baltimore; also portrait busts of Mr. Greene, of Commodore Hull, of Sir Charles Vaughan, of Kenyon, the English poet, of Charles Sumner, the American statesman. Crawford was then engaged on his “Orpheus,” his first group of genuine importance. Sumner, full of faith in the sculptor’s genius, created interest in Boston for this work, and pushed a subscription to carry it out in marble. Returning to Rome after a studious visit to the art-treasures of Florence, and oppressed by misgivings as to the fate of the “Orpheus,” Crawford found awaiting him Sumner’s draft. The next mail brought other orders. From that moment, his anxieties as to bread and shelter were over. Prosperity, no less than adversity, stimulated his mind. An astonishing productiveness ensued. In the Piazza Barberini he fitted up a suite of studios, soon to be peopled with a host of forms created by him, and carved in marble by Italian workmen under his direction. “I regret,” he writes to his sister in 1842, “that I have not a hundred hands to keep pace with the workings of the mind.” From that remark may be deduced a valid criticism of Crawford’s sculpture. He constantly undertook a greater volume of work than he could direct; nay more, he accepted commissions which were beyond his artistic powers. He did not know this, nor did most of his contemporaries. His friends held his genius to be different from that of others, because of his rapid mental processes and his poetic vision. “His ‘Orpheus,’” said the painter Thomas Hicks, “an expression of heroic manhood inspired by Genius, had secured to him noble and permanent friendships.” This once-famous group, bought in 1840 by the Boston Athenæum, has for modern eyes the characteristic aspect of work done when Thorwaldsen ruled the world of sculpture, and Houdon’s sturdy realism was out of fashion. With his marble cloak at his back, with his lyre under his arm, and with Cerberus at his feet, Orpheus strides peering through Hades. The hero’s anatomy is slicked rather than understood; unintentionally, Cerberus is thrice grotesque. Yet in the whole work Crawford is as always an eager, aspiring artist, full of lofty thought. Hawthorne, not as a rule sympathetic toward this sculptor, called it his best production, a view often shared by later critics; and without doubt the group was a stimulus to American art. In quick succession came other idealistic conceptions, generally mythological, allegorical, or anecdotal, but not always sculptural. Crawford read avidly and widely, with a special liking for the classics in translation, and his approach to his work was from the literary side. To be seen at New York, in the Metropolitan Museum of Art are his “Dancing Girl” (1844), his “Dying Indian Maiden” (1848), and his “Flora” (1853), all in marble. The Corcoran Gallery has his “Peri,” a winged figure, life size. In 1843, a head of “Vesta,” exulted for purity of expression, was a sensation of the season in Crawford’s studio, then much frequented by interesting visitors. That year, he became engaged to Louisa Cutler Ward, sister of Mrs. Julia Ward Howe [q.v.], and daughter of Samuel Ward, the New York connoisseur; in 1844 he returned to his native city for a marriage which brought happiness to both. Already famous, he carried back to Rome, thereafter his permanent residence, American commissions as well as an American bride. Crawford, who spoke Italian well, had many Italian friends. When the Revolution of 1848 broke out, he joined the Civil Guard as officer, notwithstanding his American citizenship. In 1849, having returned to his country for business reasons, he read by mere chance a newspaper item announcing a competition to obtain for the city of Richmond, Va., a design for a grandiose equestrian monument to Washington. For years he had thought of this theme. In his room in the Via del Orto di Napoli he had made sketches
Crawford

of it, and now, aided by his prodigious memory, he swiftly struck off a model which won the prize. Ingenuity rather than imagination characterizes this work, with its outposts of allegory framing a central equestrian group of Washington precariously set above a six-nosed plinth bearing statues of six great Virginians. Among these, the "Patrick Henry" and the "Thomas Jefferson," modeled by Crawford himself, are by far the most interesting. The four other statues, the "Marshall," "Mason," "Nelson," and "Lewis," were made by Randolph Rogers, who after Crawford's death completed the monument. Hawthorne admits that this Richmond work "will produce a moral effect through its images of illustrious men." Taken as a single part of a pretentious whole, Crawford's "Patrick Henry" deserves praise from others besides the moralist. In the pose, in the use of the cloak, and above all in the eloquent head, an artist's inspiration is manifest. This is true also of Crawford's "James Otis," at Mount Auburn, Cambridge, an authentic sculptural conception finely expressed, and of his massive harmony-haunted bronze "Beethoven," long dominating the old Music Hall in Boston, and by many considered his most poetic work.

On winning the Richmond competition, the sculptor hurried back to Rome, there to spend the next six years (1850-56) in joyous unremitting labor. He had accepted from the United States Government the invitation to compete for sculptural decorations proposed for the Capitol, and as a result, he had received the award of the most extensive commissions of that period. The works thus entrusted to him were the marble pediment and the bronze doors for the Senate wing, and the bronze "Armed Liberty" capping the dome. Charles E. Fairman ("Works of Art in the United States Capitol Building," Senate Document, No. 169, 63 Cong., 1 Sess., p. 18) states that the only pieces which were executed under the sculptor's personal supervision are the marble figures of "History" and "Justice" over the Senate doors. On the Capitol grounds, Italian workmen carved in Massachusetts marble Crawford's huge pedimental group with its busy unrelated figures planted at each side of the central subject "America," an America amply draped, secure in her laurel wreaths, eagle, and sun-rays. The theme is "The Past and Present of America." The sculptor has treated it with a literal pioneer simplicity. He is the modeling story-teller, celebrating the vanquished Indian, the sturdy woodman, the hunter with his spoil, the soldier, the merchant, the mechanic, the teacher, the schoolboy. Many of the figures have power; that of the Indian received great praise both here and abroad. The bronze doors, unfinished at Crawford's death in 1857, were completed years later by Rinehart, and cast at Chicopee, Mass. They capture attention by their stories, not by their sculpture. The colossal "Armed Liberty," cast in bronze by Clark Mills (1860), and hoisted atop the dome to the booming of cannon and the hurrahs of the multitude, is a successful creation, simple, solidly based, and cleaving the sky in a good silhouette. Crawford's letters to Secretary of War Jefferson Davis during the progress of the Capitol models reveal Crawford's clear mind, urbane temper, and grasp of practical details. The spring of 1856 found him once more on native soil, arranging business matters relative to these and other works. In the fall, leaving behind his wife and children, and accompanied by his sister, he returned to Rome. On the voyage one eye troubled him and in Rome a marked protrusion of the eyeball rapidly increased. Absorbed in the supervision of his studios, he paid scant attention to medical advice. Finally an explorative operation, afterward unjustly criticized, discovered a malignant growth behind the orbit of the eye; it "encroached on the sources of life itself." Crawford was sent to Paris for treatment and his wife was summoned. Many months of suffering patiently borne ended in his death in London. The news reached the United States by the same ship that brought his bronze equestrian Washington, cast in Munich for the Richmond monument.

Crawford was tall, handsome, bright-eyed; his portrait medallion shows a head of classic type, with a wholly genuine look of dedication to purpose. He lived his ardent life of forty-four years unassailed by doubts which were afterward to appear on the horizon, doubts as to the value and stability of an American art based largely on imitation of classic forms. Had longer life been granted him, his sensitive temper might have responded valiantly to newer ideals. Better American sculptors came after him, not before.

Information about Thos. Crawford and his works is found in Lorado Taft, Hist. of Am. Sculpture (1903); Wm. J. Clark, Jr., Great Am. Sculptures (1878); Samuel Osgood, Address Before the N. Y. Hist. Soc. Upon the Reception of Crawford's Statue of the Indian, Presented by Frederic de Peyster (1853); Passages from the French and Italian Note-Books of Nathaniel Hawthorne (1883); C. E. Lester, The Artists of America (1860); T. Tuckerman, Book of the Artists (1867), and "Crawford and Sculpture," Atlantic Mo., June 1858; G. S. Hillard, "Thos. Crawford: a Eulogy," Atlantic Mo., July 1869, a painstaking review of the sculptor's career; C. E. Fairman, "Art and Artists of the Capitol of the U. S. A.," Senate Doc. No. 93, 69 Cong., 1 Sess.; Thos. Hicks, Thos. Crawford, His Career, Character, and Works (1858), valuable not only
Crawford

in itself, but for the Appendix which gives correspondence relating to Crawford's malady, and its treatment by celebrated surgeons, also some of the Davis-Meigs and Davis-Crawford letters concerning the Capitol sculptures.]  

A.A.

CRAWFORD, WILLIAM (1732–June 11, 1782). Revolutionary soldier, was born of Scotch-Irish parents who migrated from Pennsylvania down the mountain valleys to Frederick County in the northwestern part of Virginia. His father was a farmer, and the son, a tall, athletic fellow, was both farmer and surveyor. In the latter capacity he was for a time associated with Washington. He fought in Braddock's campaign, 1755, and became captain and leader of scouts. He was with Forbes in the successful expedition to Fort Duquesne, 1758, and served in the Pontiac War. In 1766 or the following year he removed with his family to that part of western Pennsylvania which became Fayette County, and settled in New Haven (now included in Connellsville). He was soon a justice of the court of quarter sessions, and a land agent for his friend Washington, who visited him in 1770. Three years later he received a visit from the governor, Lord Dunmore. In Dunmore's War, 1774, Crawford destroyed two Iroquois villages in Ohio. Soon after this he was removed from his office of judge by the Pennsylvania authorities, as the region where he had settled was in dispute between that colony and Virginia.

When the Revolution began, Crawford was a member of the committee of defense at Pittsburgh, and he also aided in raising the West Augusta (Virginia) regiment. He was commissioned lieutenant-colonel of the 5th Virginia, Feb. 13, 1776, and colonel of the 7th Virginia, Aug. 14, 1776. He took part in the battle of Long Island, in the retreat from New York, and in the battles of Trenton, Princeton, Brandywine, and Germantown. Not long after the last of these he went to the West, and thenceforth was engaged in the defense of the frontier. In 1778, he was placed in charge of the militia, under Gen. Lachlan McIntosh [q.v.], and the next year he accompanied Col. Daniel Brodhead [q.v.] on his punitive expedition against the Indians. Among his fortifications were Fort Crawford on the Allegheny River and Fort Pincastle, at the site of the present Wheeling, on the Ohio. He resigned in 1781, intending to pass in quiet the remainder of his life.

From his retirement, however, Crawford was summoned in May 1782 at the urgent request of Gen. Irvine, to take part in an expedition against the Indians of Ohio. The little army of Pennsylvania and Virginia mounted men, about 400 in number, gathered at Mingo Bottom, near the modern Steubenville. The men were "not specially fit"; some of the troops had shared in an outrageous attack upon the Christian Indians shortly before. Crawford was elected commander, and the army marched northward, planning a surprise, and by June 4 reached "Battle Island" near a Wyandot deserted village, three miles from the modern Upper Sandusky in Wyandot County. The Indians, however, were well informed, and about 400 Wyandots and about 200 Delawares had collected. The fighting of the first day was to the advantage of the frontiersmen, but on June 5 reinforcements appeared for the Indians, among others, 200 Shawnees and a force of British, Butler's Rangers. Crawford's army was surrounded, supplies were running low, and the guides advised return to the Ohio. The retreat began that night, and the main force under Williamson reached the river, with a loss of about seventy. One report says, "They had been deceived, out-generated and caught in a trap" (Hill, post). Crawford himself became separated from the main body, and, with a companion, Dr. Knight, fell into the hands of the Delawares. The captives were taken to a point near Crawfordsville, where the unfortunate commander was tortured and burned at the stake. Dr. Knight, who had been a witness of his sufferings, escaped, and eventually reached the settlements and gave a report of the event.

[Knight's narrative, probably first published in the Freeman's Jour. (Phila.), Apr. 30–May 21, 1783, was reprinted in pamphlet form the same year and went through many subsequent editions, Narratives of the Perils and Sufferings of Dr. Knight and John Slover (a guide) being reprinted in 1867 from a Nashville edition of 1834. See also N. N. Hill, "Crawford's Campaign against the Sandusky Indians," in Mag. of Western Hist., May 1885; Jas. H. Anderson, "Col. Wm. Crawford," in Ohio Arch., and Hist. Pubs., vol. VI (1898), pp. 1–34; C. W. Butterfield, An Hist. Account of the Expedition against Sandusky under Col. Wm. Crawford in 1782 (1873); Washington-Crawford Letters (1877), and Washington-Irving Correspondence (1882), both ed. by C. W. Butterfield; address by Henry P. Snyder, Col. Wm. Crawford, Pioneer and Patriot (1909).]  

E. K. A.

CRAWFORD, WILLIAM HARRIS (Feb. 21, 1772–Sept. 15, 1834), senator, cabinet member, presidential candidate, was descended from Thomas Crawford who immigrated from Scotland to Virginia in 1643 and was the progenitor of a numerous family now scattered throughout the South. His descendants of present concern, middle-class folk undistinguished except for tall stature and ruddy faces, seem to have followed the prevailing drift of population up the James River valley, until the eve of the Revolution when Joel Crawford and his wife, who had been Fannie Harris, were settled on Tye River close
Crawford

against the Blue Ridge. Their children eventually numbered eleven, with William Harris in the middle of the list. In his boyhood financial stress prompted another removal which took the then prevailing course to South Carolina, and, after a few years, yet another trek to the clearings in what is now Columbia County, Ga. Between the sessions of an "old field school" the boys worked on the farm; but William soon turned to teaching, and then had the good fortune to continue his studies, like McDuffie and Calhoun, under the talented master, Moses Waddel [q.v.]. This modified the outlook of the youth, which doubtless would otherwise have been that of the plantation squire toughened by contact with a crude frontier. After teaching school again, now in the town of Augusta, and shortly being admitted to the bar, Crawford attained enough prosperity by 1804 to marry Susanna Girardin to whom he had long been engaged, and to build a home near the village of Lexington, Ga. There at "Woodlawn" he spent the rest of his life when not riding the circuit of the courts or absent on public service. The steadying was gradually enlarged into a plantation, with a corps sufficient to furnish each of his eight children with several slaves in the division of property after his death.

Before the end of the eighteenth century Crawford had taken some part in politics, denouncing the sale of Yazoo lands by the Georgia legislature and incurring the stiff attitude of President Adams toward France. Elected to the legislature in 1803, he quickly became the leading upland ally of James Jackson [q.v.] of Savannah in a faction which was known successively as the Jackson, Crawford, and Troup party. This embraced most of the well-to-do Georgians and was differentiated in policy from the opposing Clark faction chiefly by its insistence upon conservative public finance. As episodes in his political career, Crawford killed Peter L. Van Allen in a duel in 1802, and had his left wrist permanently crippled by John Clark [q.v.] at the duello distance of ten paces in 1806. Clark had proposed that the combatants be permitted to advance at will to a distance of five paces and that they continue to exchange shots until one of them could not stand, kneel, or sit (Clark, Considerations, p. 94), but Crawford demurred.

Upon the death of Abraham Baldwin in 1807 Crawford was elected to fill the vacancy in the United States Senate, where, along with his gigantic stature and handsome face, a studious disposition, a clear judgment, a native sagacity, an engaging affability, and a fund of entertaining anecdotes promptly marked him for distinction. He was particularly congenial to John Randolph as an anti-Yazooist, to Nathaniel Macon as an advocate of public frugality, and to Albert Gallatin as a willing promoter of treasury business in the Senate. But Crawford was no man's man, as he took some pains to show. In his "Delphic Oracle" speech in 1810 he censured Madison's message for its ambiguity on military preparations; and the next year he advocated the extension of the national bank's charter against the opposition of most of his Democratic-Republican colleagues, including Henry Clay who denounced it as unconstitutional.

Honors now crowded upon Crawford. He was elected president pro tempore of the Senate upon the death of Vice-President Clinton; he declined an offer of the secretoryship of war, only to accept appointment in 1813 as minister to France; and, resigning this in 1815, he was made secretary of war by Madison while yet upon the homeward voyage, and then secretary of the treasury for the better utilization of his financial talents. At this time, indeed, he was the choice of most of the Democratic-Republicans at Washington for the presidency as against Madison's favorite, Monroe. So strong was the movement, despite Crawford's private disavowals of candidacy, that Abner Lacock [q.v.], senator from Pennsylvania but a Virginian by birth and a supporter of Monroe, sought a conference with Crawford with a view to prevent a disruption of the party. Monroe, said he, was the last of the Revolutionary worthies who could have a claim to the presidency, whereas Crawford was young enough to serve after Monroe should have gone to his grave. Crawford answered that his own feelings would not permit him to oppose Monroe for the office, and that Lacock was free to quote him to this effect. Lacock reported the conversation, Feb. 7, 1816, to John Binns [q.v.], editor of the Democratic Press at Philadelphia, who published it (reprinted, with Binns's praise of Crawford's magnanimity, in the Savannah Daily Republican, Jan. 10, 1824). Nevertheless, when the usual congressional caucus was held soon afterward, fifty-four members cast their ballots for Crawford, as compared with sixty-five for Monroe. Crawford continued at the treasury during both of Monroe's administrations, but declined reappointment at the hands of John Quincy Adams.

The election of 1820 went again to Monroe by default, but campaigning for the succession began at once. The disappearance of the Federalist party had now produced the so-called Era of Good Feeling, which from Crawford's point
of view was wretchedly misnamed. He was easily the foremost aspirant, supported warmly by Randolph and Macon and also by Madison, Van Buren, and Marcy, with a chorus of newspapers including the New York Evening Post, the Albany Argus, the National Intelligencer, the Washington Gazette, and the Richmond Enquirer. His group was often styled “the Radicals” because they clung more or less to the rights of the states after most others had become nationalists. But their leader was disposed to sanction moderate protection in tariff legislation, as well as to maintain the national bank. As early as Jan. 7, 1821, James Barbour [q.v.] had written from Washington lamenting the rise of opposition: “No one challenges universal support—the candidates multiplying like the leaves upon the forest. The secret plots and but badly disguised schemes already beginning—the progress and catastrophe are concealed by the future” (manuscript in Tait Papers, Alabama Department of Archives). The field, indeed, was becoming full of rivals—Adams, Clay, Jackson, for a while Calhoun, Lowndes until his untimely death, and sundry lesser lights. All of these or their supporters were with one accord striving to weaken Crawford, and they were aided indiscriminately by his inveterate enemy John Clark, now for a time governor of Georgia. Crawford was censured by many penmen for having recommended in 1816 that, as an alternative to the expulsion and extermination of the Indians, they be persuaded to adopt private landholding and agriculture, and that the whites intermarry with them if necessary to promote their civilizing. He was charged by Ninian Edwards [q.v.] with having corruptly favored certain banks in the panic of 1819. He was cleared of this charge, disastrously to Edwards, by a congressional investigation, whereupon John Randolph issued a jubilant address to the “freeholders” of his district (printed in the Richmond Enquirer, May 25, 1824). At his door was also laid responsibility for the “spoils system”; but it has been well argued latterly that his main purpose in promoting the enactment of the four-year law of 1820 was to increase efficiency in the public service (C. R. Fish, The Civil Service and the Patronage, 1905, p. 170). His administrative work, including the initiation of coast fortification, the construction of the “National Road,” and the improvement of the public land system, was largely ignored.

Crawford's prospects continued fairly bright until the fall of 1823 when he was stricken with paralysis. For a year and a half he lay in seclusion, almost blind and quite incapacitated though slowly improving. His friends issued bulletins as favorable as might be, and maintained their plan of nominating him by caucus. All elements of opposition now turned against the caucus as undemocratic, though Adams and Clay, the latter with some protest, had participated in such assemblages in earlier years. As the months passed there were many defections, but Barbour declared that if no one else should attend he would hold the caucus alone and do all the voting. When the meeting was held, Feb. 14, sixty-four votes were cast for the nomination of Crawford, two for Adams, and one each for Jackson and Macon. But the absence or abstinence of the rest of the 261 senators and representatives made of the occasion a fiasco which marked the end of the congressional caucus as an institution. The election in the following November returned Crawford as a poor third among the four surviving candidates, with no one elected under the constitutional provision. With the choice thus thrown into the House of Representatives, Crawford's friends hoped forlornly and labored in a losing cause, for Adams was elected with Clay's assistance.

Crawford's remaining years were those of a Talansus. Crippled in body and none too clear of mind, he found no solace on the judge's bench upon which his Georgia devotees placed him in 1827, but nursed a fatal ambition for the White House, though his former following had scattered to new allegiances. With a view to making a rift between Jackson and Calhoun, he said to a visitor in 1828 and repeated in a letter of 1830 that it had been Calhoun and not he who had proposed in the cabinet in 1818 that Jackson be disciplined for having invaded the Spanish province of Florida and having executed there the Englishmen Arbuthnot and Ambrister. This had the desired effect of embroilment, and it revived for a moment the name of Crawford on the lips of men, but with no beneficial result.

[Paralysis played a securv trick upon Crawford's person and repute. His rivals for the presidency lived on to great prominence, attracting biographers each of whom wanted a foil for his hero. Crawford was made to serve again and again until by the time of Carl Schurz (Henry Clay, 1887, I, 223) he was reduced to a "reputation of a reputation." J. E. D. Shipp in his Gians Days, or the Life and Times of Wm. H. Crawford (1909) has tried to redress the balance, but with a tyro's ill success. Among the contemporary pamphlets John Clark's Considerations on the Purity of the Principles of Wm. H. Crawford, Esq. (1819, and ed., 1823) and Some Objections to Mr. Crawford as a Candidate for the Presidency by "a South-Carolinian" (1824) are offset by the eulogistic Life and Character of Wm. H. Crawford, by "Americanus" (1824, reprinted from the Albany Argus). There are sketches of Crawford in the Southern Literary Messenger, Apr., May 1827; the Am. Portrait Gallery (vol. IV, 1839);

Sparks, Memories of Fifty Years (1870). Crawford's diary during part of his ministry to France has been edited by D. C. Knowlton and printed in the Smith College Studies in History (vol. XI, no. 2, 1925). See also Memorials of that Branch of the Crawford Family which Comprises the Descendants of John Crawford of Va. (1883).

U. B. P.

CRAZY HORSE (c. 1849—Sept. 5, 1877), generally regarded as the greatest military genius of the Sioux Confederacy, was of the Oglala tribe. His name, Tashunca-uitco, translated "Crazy Horse," is said to have been suggested by the incident of a wild pony dashing through the village of his people at the time he was born. Of his youth little is recorded, but it is probable that he took an active part in the campaigns of the noted Oglala chieftain, Red Cloud, against the forts and settlements of Wyoming in 1865-68. Bold, adventurous, and implacable, he early became one of the leaders of the element among the Southern Sioux and Northern Cheyennes who refused to be confined on the reservations and who made frequent forays against the Crows and isolated parties of whites. His marriage to a woman of the Cheyennes brought him into closer affiliation with that tribe, which at various times furnished him with most of his following. With the rest of the “hostiles” he ignored the War Department’s order that all roving bands must be back on the reservations by Jan. 1, 1876, and he was the first to feel the shock of the war. Gen. George Crook’s early start in the campaign caught him unawares, for on Mar. 17 his village of 105 lodges, with probably 400 warriors, near the mouth of the Little Powder, was surprised by a detachment of 450 men under Col. J. J. Reynolds, who destroyed it and captured his pony herd. Crazy Horse, however, kept up a stubborn resistance, and on the retirement of the force followed it for twenty miles and recaptured most of the ponies. On June 17—he was attacked on the upper Rosebud by Crook’s army of 1,300, but after a day’s fighting Crook withdrew, with severe losses and baffled at every point. Crazy Horse now moved north and joined the large body under the medicine man, Sitting Bull, in the valley of the Little Big Horn.

In the famous battle of June 25, in which Reno was driven with heavy loss from the upper end of the village and Custer’s immediate command of 212 men was annihilated, the Indians had no supreme commander, though Gall, the chief of the Unkapa Sioux, doubtless exercised a predominant influence. Crazy Horse led a force consisting mostly of Cheyennes, who charged upon Custer from the north and west, while Gall, after routing Reno, assailed Custer from the south and east. In the subsequent siege of Reno and Benteen on the bluffs, which lasted until the afternoon of the 26th, neither Crazy Horse nor any of the other chiefs was conspicuous, the warriors keeping up the fight by fits and starts, with no discipline and little concert of action. On the break-up of the savage horde into bands moving in various directions, some weeks after the battle, Crazy Horse, with about 800 warriors, started in the direction of the agencies, probably intent upon getting recruits, ammunition, and supplies. Crook followed him closely, and on Sept. 9, at Slim Buttes, in northwestern South Dakota, a picked force of 150 men under Capt. Anson Mills surprised the village of American Horse, capturing and destroying it, killing a number of the warriors and mortally wounding the chief. Crazy Horse, with the remainder of his force, hurried to the scene, but Crook was ahead of him, and after some long-range fighting the chief withdrew. His plan of reaching the agencies having failed, he slipped past Crook to the west and took up winter quarters in the Wolf Mountains, near the head of the Rosebud. Here Col. Nelson A. Miles, with a force much inferior in numbers, but with two pieces of artillery, attacked him on Jan. 8, 1877, in one of the most desperate and daring encounters of the war, and broke up his village, though he retired in good order. With ammunition and supplies well-nigh exhausted, the Cheyennes openly resentful over his refusal to succor Dull Knife’s band (though he then had nothing to give), and his own tribesmen deserting him, he was now ready to listen to the pleas of his friends that he give up the hopeless contest. Yet for another four months he held out. On May 6, with about 1,100 men, women, and children, he arrived at the Red Cloud agency, near Camp Robinson, Nebr., and surrendered. For a time he was quiet; but in August the officers began to suspect that he was planning another outbreak. On Sept. 5 he was arrested and taken before Gen. L. P. Bradley, commander of the district, with headquarters at the fort. Remanded to the charge of the officer of the day, he suddenly realized that he was to be locked up, and in a frenzy of rage drew a long knife and started to fight his way out. One of his close friends, Little Big Man, grappled with him and attempted to seize his wrists. In the mêlée that followed he was mortally wounded in the abdomen, either by a bayonet thrust from a soldier or (as Little Big Man subsequently told
Creath

Capt. John G. Bourke by an accidental lunge of the knife in his own hand, and at midnight he died. It is certain that orders had been given to convey him to Omaha, and it seems probable that a decision had been made to transport him to the Dry Tortugas. The body was given to his father and mother, who buried it secretly somewhere in the hills near the camp.

Capt. Bourke, who was stationed at Camp Robinson in 1877, described him as a man who "looked quite young, not over thirty years old (he was probably not more than twenty-eight), five feet eight inches high, lithe and sinewy, with a scar in the face. The expression of his countenance was one of quiet dignity, but morose, dogged, tenacious and melancholy. . . . All Indians gave him a high reputation for courage and generosity. . . . He was one of the great soldiers of his day and generation." "He was a born soldier," writes Brady, "whose talents for warfare and leadership were of the highest order, . . . one of the bravest of the brave and one of the subtlest and most capable of captains."

Wheeler, Buffalo Days (1925); Cyrus Townsend Brady, Indian Fights and Fighters (1904); Nelson A. Miles, Serving the Republic (1911).] W. J. G—4.

CREAMER, DAVID (Nov. 20, 1812–Apr. 8, 1887), hymnologist, was born in Baltimore, the son of Joshua and Margaret (Smith) Creamer, and the fourth in descent from Henry Creamer, a German emigrant who settled in Westminster County, Md. In 1832 he became a partner in Joshua Creamer & Son, dealers in lumber. On Nov. 27, 1834, he married Eliza Ann, daughter of Judge Isaac Taylor of the orphans' court of the city. For two years (1836–38) he was publisher and co-editor of the Baltimore Monument, which described itself as a "weekly journal devoted to polite literature, science, and the fine arts." It was a poor little sheet, ambitious but impetuous, made up largely of snippets from other papers. In it Creamer printed several poetic effusions of his own, and for one or two of them, as a special feature, a musical accompaniment was provided. The financial panic of 1857 almost wiped out his lumber business, and the next year he retired. Thereafter he was for a considerable time in government employ. A staunch Union man, he was foreman of the jury that investigated the deaths in the attack Apr. 19, 1861, on the 6th Massachusetts Infantry, and through him the people of Massachusetts were informed of the care given their dead and injured by the citizens of Baltimore. In August 1862 he was appointed recruiting officer of the state. In September of the same year the governor nominated him to visit the regiments in and near Washington and to report on their needs. In July 1863 he was made an assessor of internal revenue. Later, for some ten or eleven years, he was a clerk in the Post Office Department in Washington.

This none-too-successful merchant and minor government employee was a devout Methodist. Piety and mild taste for poetry led him to read and reread lovingly the hymns of the Methodist Church, and by private study he made himself the first American hymnologist of any note. Through booksellers in England he acquired a set of the poetical publications of the Wesleys, complete except for a single pamphlet, and many rare hymnals and works on hymnology. His collection, numbering in all about seven hundred volumes, was sold at auction in December 1884 and became the property of Drew Theological Seminary at Madison, N. J. In 1848 he published privately in New York his Methodist Hymnology, accurately inventoried on its title-page as "comprehending notices of the poetical works of John and Charles Wesley; showing the origin of their hymns in the Methodist Episcopal, Methodist Episcopal South, and Wesleyan collections; also, of such other hymns as are not Wesleyan, in the Methodist Episcopal hymn-book, and some account of the authors; with critical and historical observations." Except for the smaller Wesleyan Hymnology (London, 1845) by Burgess, the book was without a precedent. It is still valuable, and the simple piety and enthusiasm of the author linger in its pages. He was one of the two laymen on the committee that prepared the Hymns for the Use of the Methodist Episcopal Church (1849). He contributed to the New York Christian Advocate, was for twenty-one years a trustee of Dickinson College, and was a pillar of the Monument Street Methodist Church. He died in Baltimore on Good Friday, 1887, in the house where he had lived for fifty years.

CREATH, JACOB (Feb. 22, 1777–Mar. 13, 1854), clergyman, commonly called Elder Jacob Creath, Sr., to distinguish him from his nephew Jacob [q.v.], whose career was somewhat similar, was for thirty-two years a Baptist preacher, and then, excluded from that denomination because of his Campbellite views, was for twenty-seven years more a pioneer promoter of

531
Creath

churches of the Disciples of Christ in Kentucky. The Creath family was prolific in preachers and influential in the religious development of the Southwest. At least one of Jacob's brothers and five of his nephews were ministers. He was born near Cumberland, Nova Scotia, the son of Samuel and Susan (Moore) Creath. In 1784 his father, having been in prison for seven years because of his sympathy with the American Revolutionists, was given twenty days to leave Canada or be hanged. He brought his family to New York, from which place they went to Cherry Valley, Pa., and finally in 1786 settled in Grassy Creek, Granville County, N. C. Here Jacob seems to have grown up, for in 1795 he joined the Grassy Creek Baptist Church (Chas. C. Ware, North Carolina Disciples of Christ, 1927). According to a contemporary, however, being a spritely lad, he attracted the attention of a Colonel Carter of Culpeper County, Va., who reared him in his own home, where the youth fell in love with his benefactor's daughter whom he married (J. H. Spencer, A History of Kentucky Baptists, 1886, I, 310). It is certain that he was married, Jan. 24, 1799, to Milly V. Carter, whose father, Job, however, is said to have hailed from Lancaster County, Va. (Stratton Nottingham, The Marriage License Bonds of Lancaster County, Va., 1701-1848, copyright 1927). He began to preach at the age of eighteen, and in April 1798, was ordained at Roundabout Meeting House, Louisa County, Va. After serving as pastor in Mathews County, Va., he migrated to Kentucky in 1803 where he became a member of the Elkhorn Association. For the remainder of his life he was conspicuous in the religious affairs of the state. He was of good appearance, "inclined to be foppish in his dress," and "possessed a fine tact for carrying the populace with him." He was also charged with being bold, aspiring, and ambitious. Thomas Campbell was much impressed with his abilities as a speaker, and Henry Clay is said to have called him "the finest orator that Kentucky has ever produced." In spite of his evangelical effectiveness, however, he proved a disturbing element among the Baptists. A personal difference with Jacob Lewis over a slave trade in which friends of both parties took sides, became a cause célèbre, and led Elder Elijah Craig to issue a pamphlet entitled, A Portrait of Jacob Creath, written with a pen "dipt in poison." Creath was acquitted of its charges by a council of churches, but the affair disrupted the Elkhorn Association and brought about the formation of the Licking Association. By 1830, he had become one of the leading champions of Campbellism in that section of the state, and his church with others was dropped from the Baptist connection. Thereafter he did much to organize and build up churches of the Campbellite order, traveling extensively and baptizing large numbers of people. For the last seven years of his life he was totally blind.

H. E. S.

CREATH, JACOB (Jan. 17, 1799-Jan. 8, 1886), clergyman, was originally a Baptist, but later became an aggressive champion of Campbellism in the South, especially in Missouri. To distinguish him from his uncle [q.v.] who had the same name and was also a pioneer Campbellite, he was known as Jacob Creath, Jr. He was the son of William Creath, a Baptist preacher who was born at sea during the passage of his parents from Dublin, Ireland, to Nova Scotia, and came with them to the United States where they finally settled in Granville County, N. C. Here he married Lucretia, daughter of Thomas and Elizabeth Brame. They had sixteen children, five of whom became ministers. Jacob was born on Butcher's Creek, Mecklenburg County, Va., and throughout his youth was obliged to work upon the farm which helped to support the ever-increasing family. He was licensed to preach, however, on Feb. 15, 1818, and in January of the following year he put himself under the instruction of Prof. Abner W. Clopton of the University of North Carolina. He accompanied him to Milton, Caswell County, N. C., in 1820, where the latter took charge of a seminary, and in September 1820 was ordained at Mill Creek Meeting House. Subsequently he entered Columbian College, Washington, D. C., where he remained until December 1823, soon after which he took up his residence in Kentucky, supplying at various Baptist churches.

There now began a career long, strenuous, militant, often bitterly controversial, but on the whole constructive in its influence. Creath was six feet tall, of remarkable physical and mental energy, bold in defending what he thought was right, but intense in his passions and prejudices, and relentless toward his opponents. After two years in Kentucky he made a long tour through the South as far as New Orleans. So strong was sectarian feeling that his polemic preaching excited violent opposition; his character was assailed; once he was burned in effigy; and he was assured that his life was in danger. Upon returning to Kentucky, he visited Alexander Campbell whom he later accompanied on one or two preach-
Creelman

he was on the staff of Count Field Marshal Oyama in Manchuria, and he was present at the taking of Port Arthur. For the New York Journal he reported the Greco-Turkish War in 1897. In Cuba, in 1898, he volunteered to lead the forces to the Fort of El Caney, as he was the only man who knew the back road up the hill. He was wounded in that attack, and returned to the United States to become editorial writer and then Washington correspondent for the Journal. Returning to the New York World in 1900 for six years of service, in 1906 he became associate editor of Pearson's Magazine, and held this position until 1910. In 1902 he published a novel, Eagle Blood; his other books include Why We Love Lincoln (1908), and Diaz, Master of Mexico (1911). For two years (1910-12) he was president of the Municipal Civil Service Commission under Mayor Gaynor of New York, resigning to become associate editor of the New York Evening Mail. Early in 1915 he went to Berlin as war correspondent for the New York American, but died of pleurisy a few days after his arrival. He was married to Alice L. Buell of Marietta, Ohio, in 1891. His chief peculiarity was an abhorrence of nicknames: for six years he worked beside Robert H. Davis but at the end they were still "Mr. Creelman" and "Mr. Davis" to each other.

J. M. L.

Creesy

CREELMAN, JAMES (Nov. 12, 1859-Feb. 12, 1915), journalist, was the son of Scotch-Canadian parents, Matthew and Martha Creelman, the latter a daughter of Edward Dunwoodie. Born in Montreal, James ran away from home at twelve to follow his mother who had settled in New York City. He walked most of the way and reached the latter city with five cents in his pocket. He rebelled against school and, although his mother was a Scotch-Presbyterian, found a job on an Episcopal paper, the Star. In 1878 he joined the staff of the New York Herald with which he remained nearly two decades and for which he secured an interview with Pope Leo XIII on labor troubles. His work took him to London in 1890 and a year later to France, to edit the Paris edition of the Herald. Securing interviews with King George of Greece and other "crowned heads" for use in the Herald, he later used the same material in a book, On the Great Highway (1901). Anxious to secure public recognition as a writer, he broke with James Gordon Bennett, proprietor of the New York Herald, because the latter insisted that all interviews be anonymous, and in 1893 he became manager of a British edition of the Cosmopolitan Magazine. At the request of the New York World, he served (1894) as a special correspondent in the Sino-Japanese War. For six months he was on the staff of Count Field Marshal Oyama in Manchuria, and he was present at the taking of Port Arthur. For the New York Journal he reported the Greco-Turkish War in 1897. In Cuba, in 1898, he volunteered to lead the forces to the Fort of El Caney, as he was the only man who knew the back road up the hill. He was wounded in that attack, and returned to the United States to become Editorial writer and then Washington correspondent for the Journal. Returning to the New York World in 1900 for six years of service, in 1906 he became associate editor of Pearson's Magazine, and held this position until 1910. In 1902 he published a novel, Eagle Blood; his other books include Why We Love Lincoln (1908), and Diaz, Master of Mexico (1911). For two years (1910-12) he was president of the Municipal Civil Service Commission under Mayor Gaynor of New York, resigning to become associate editor of the New York Evening Mail. Early in 1915 he went to Berlin as war correspondent for the New York American, but died of pleurisy a few days after his arrival. He was married to Alice L. Buell of Marietta, Ohio, in 1891. His chief peculiarity was an abhorrence of nicknames: for six years he worked beside Robert H. Davis but at the end they were still "Mr. Creelman" and "Mr. Davis" to each other.

J. M. L.

CREESY, JOSIAH PERKINS (Mar. 23, 1814-June 5, 1871), sea captain, came from old colonial stock. He was born in Marblehead, Mass., the eldest child of Josiah P. and Mary Woolridge Creesy. The family surname has been spelled in some twenty-three different ways, with several variations even in the case of Creesy himself—"Cressey" and "Cressey" for instance. Young Creesy shipped before the mast in an East Indian while still a boy. Promotion was rapid, and he was commanding a ship at twenty-three. In 1841 he married Eleanor Horton Prentiss, who thereafter accompanied him on many of his voyages. Several fast runs from China in the Oneida gave him the reputation of a successful "driver." This led Grinnell, Minturn & Company of New York to give him the command of their new clipper, the Flying Cloud, built at East Boston by Donald McKay [q.v.]. She left New York for San Francisco on her maiden voyage June 2, 1851, seven weeks after she was launched. Creesy, striving for a record, spared neither his ship, his crew, nor himself. Three days out, three
spars were carried away; the mainmast cracked a week later; sails were torn to bits; but repairs were made without slackening speed. Shortly before noon on Aug. 31, Creesy brought his ship to anchor at San Francisco. The voyage had been accomplished in eighty-nine days and twenty-one hours, and shattered all previous records. Creesy then proceeded across the Pacific to China for tea, and returned to New York the following April after a ninety-four day run around Africa from Whampoa. In 1854, he shortened his original record to San Francisco by thirteen hours. No other captain or ship equaled it (claims that the Andrew Jackson beat these records in 1860 seem to have been disproved. See O. T. Howe and F. C. Matthews, American Clipper Ships, 1926, I, 9, 103). Creesy’s records for his five trips to San Francisco—89, 115, 92, 89, and 108 days—average better than those of any other clipper. On her fourth voyage the ship ran into a coral reef a few days out from Whampoa and leaked at the rate of eleven inches an hour, but Creesy kept the pumps going all the way and brought the precious cargo to New York in a run of 115 days. At the end of 1855 he retired to his home for a much-needed rest, but went to sea again for a short naval career in the Civil War, being made a volunteer acting lieutenant on Aug. 2, 1861, and given command of the ship Ino. He had been absolute master on his own quarterdeck so long that he did not fit into naval discipline. Early in 1862 when the commander of the squadron ordered him to release two Confederate prisoners taken at Tangier, Creesy bluntly replied, “I positively decline to give these men up,” and sailed away without orders. Commander Craven preferred charges against him for this “contumacious disregard” and Creesy was dismissed on July 18, 1862 (Official Records, Navy, I ser., I, 319, 392; Navy Register, 1863, p. 168). He returned to the China trade and commanded the clipper Archer for two voyages. He died at Salem at the age of fifty-seven and was buried at Marblehead.

[In addition to sources cited above see A. J. Clark, Clipper Ship Era (1910); B. J. Lindsey, Old Marblehead Sea Captains and the Ships in Which They Sailed (1915); T. W. Higginson, Mass. in the Army and Navy in the War of 1861–65 (1866), II, 36, name spelled Cressey; Vital Records of Marblehead, Mass., to . . . 1849, 1 (1903), 122, II (1904), 102; Town Records (MS.) of Marblehead.]

R. G. A—n.

CREIGHTON, EDWARD (Aug. 31, 1820–Nov. 5, 1874), pioneer telegraph builder, banker, philanthropist, was the fifth of nine children of James and Bridget (Hughes) Creighton, both natives of Ireland, who came to the United States in 1805 and 1808 respectively and were married in 1811. They settled in Belmont County, Ohio, in 1813, removing subsequently to Licking County. Poverty permitted Edward only a rudimentary schooling. At fourteen he was put to work as a wagon-driver. When the poles bearing the iron wire began advancing over the Ohio hills, the newly invented magnetic telegraph excited the imagination of the young man. With little capital but his brawn, energy, and vision, he took on contracts to build lines in the Middle West and the Southwest, coming into close touch with the telegraph magnates of that day, especially with Jeptha H. Wade and Hiram Sibley whose complete confidence he won. To Creighton, Sibley entrusted the delicate task of making a pseudo survey of the South to suggest impending construction of a competing telegraph, a performance constituting “the lemon-squeezer” that frightened the company there entrenched into yielding a coveted lease necessary to the success of the budding Western Union. Sibley originated the first practical plan for a transcontinental telegraph to the Pacific and in this, too, assigned Creighton an essential rôle. In 1854, Edward Creighton had associated with him in his work his younger brother, John Andrew [q.v.], and the two made their advent two years later in Omaha City, the prairie-outfitting base on the edge of Nebraska Territory, to which they brought the wires from St. Joseph, bridging distance previously traversed only by steed, stage, and steamboat.

About this time, Edward Creighton was deputed by Sibley to examine a cross-country telegraph route by way of Fort Smith, and another by way of Memphis. Both proving unsuitable, he turned to the trail from Omaha to Salt Lake via Fort Kearny, Laramie, and South Pass and over the Sierra Nevadas to Sacramento and San Francisco. He covered the entire stretch personally on muleback, in the winter of 1860, made his report Apr. 12, 1861, and asserted his readiness to undertake construction to Salt Lake. Having procured congressional legislation for a subsidy, Sibley chartered the Pacific Telegraph Company and engaged with the government for completion within ten years. Actual work at both ends began July 4, 1861, the section from Julesburg, Colo., to Salt Lake City falling to Creighton. Connection with Salt Lake City was established Oct. 24, and the section from Salt Lake west was completed two days later. Nov. 15 saw the line in operation from ocean to ocean, only four months and eleven days after its commencement. One of the largest subscribers to the stock, Creighton emerged in possession of a great fortune, further increased by successful ventures in gold and silver mines and large-scale cattle-rais-
ing. For a number of years he served as general manager of the telegraph company, then joined in organizing the first national bank in Nebraska Territory and became its president. A devout Roman Catholic, his public spirit paralleled his prosperity and he frequently proclaimed his purpose to provide a free Catholic school for higher education, a project still of the future when he was stricken with paralysis in his fifty-fifth year. His widow, Mary Lucetia Wareham, whose sister had married John Andrew Creighton, determined to carry out the unfulfilled intention of her husband but she died within two years and it remained for John Andrew Creighton as executor of the bequest in her will ($100,000), supplementing it from his own ample resources from time to time, to usher Creighton University into existence. It was incorporated Aug. 14, 1879, and entrusted to the Jesuit order.

Bell, Hist. of Omaha (1894); The Story of Creighton (1928), souvenir of the fiftieth anniversary of Creighton University; contemporary newspaper obituaries; incidental references in biographies of associates. The date of birth is taken from his tombstone.]

V.R.—

CREIGHTON, JAMES EDWIN (Apr. 8, 1861—Oct. 8, 1924), philosopher, was born in Pictou, Nova Scotia, the son of Scotch-Irish parents, John and Mary C. (O'Brien) Creighton. He attended school in his native town, helped his father on the farm, and taught in the schools of his Province until he was twenty-two, when he entered Dalhousie College in Halifax. Here he came under the influence of Prof. Jacob Gould Schurman who aroused his interest in philosophy and influenced his entire future life. In 1887 Creighton won his A.B. degree with distinction in philosophy and then entered Cornell University to pursue his graduate studies under the guidance of Schurman, who had been called to Cornell in 1886. He spent the year of 1888 at the universities of Leipzig and Berlin, and upon his return in 1889 was appointed to an instructorship at Cornell which he held until 1892. In that year he received the doctor's degree upon the presentation of his doctoral thesis on The Will, Its Structure and Mode of Action (published 1898). This led to his advancement to an associate professorship of logic and metaphysics in the Sage School of Philosophy, which had been established at Cornell in 1891 through the efforts of Schurman, who became its dean. In 1892 Creighton married Katherine F. McClain of Pictou. In 1895 he became the Sage Professor of logic and metaphysics, a chair which he held for the rest of his life. Additional duties, however, were placed upon him in 1893 when he was made co-editor, with President Schurman, of the Philosophical Review, a journal devoted to philosophical research which had been established by Cornell University in 1891. In 1902 he assumed full charge as editor-in-chief, retaining the important office until his death in 1924. During this long period he exercised a wholesome influence upon the study of philosophy in the United States: he possessed high ideals of scholarship and fine literary taste, qualities which were supported in his case by an editorial conscience that was satisfied only by good workmanship. From 1896 to 1924 he served as the American editor of Kant-Studien, the organ of the German Kant Society. His ability was also shown in the influence which he wielded in the American Philosophical Association, in the founding of which he played a leading part and of which he was the first president (1902—03). All these interests and activities contributed to his success as a teacher, particularly in the field of graduate study. The respect of his students was expressed by the publication of a volume of Philosophical Essays published in 1917 under the editorship of Prof. G. H. Sabine, of the Ohio State University. The esteem in which he was held by his own university found expression in his election, in 1914 as dean of the Graduate School and in 1922 as a faculty representative on the Board of Trustees. Creighton's philosophy was greatly influenced by the Hegelian philosophy, as this had been developed in England by Bernard Bosanquet and his following. He became the leading American exponent of the idealistic or speculative philosophy and its most strenuous defender. From this standpoint he reviewed and criticized all the new American systems of his time, the pragmatisms of William James and John Dewey, as well as the neo-realism and materialism of the younger thinkers. His published works include: a translation of Wundt's Human and Animal Psychology (1894), with E. B. Titchener; An Introductory Logic (1898); a translation of Paulsen's Immanuel Kant, His Life and Doctrine (1902), with Albert Lefevre; and Studies in Speculative Philosophy, edited by H. R. Smart and published posthumously in 1925.

CREIGHTON, JOHN ANDREW (Oct. 15, 1831—Feb. 7, 1907), philanthropist, was born in Licking County, Ohio, youngest of nine chil-
Creighton

children. His parents, James and Bridget (Hughes) Creighton, both natives of Ireland, emigrated to the United States in the years 1805 and 1808, respectively, and were married in 1811. James Creighton was employed for a time in a Pittsburgh foundry, but in 1813 he moved to Ohio, where he became a farmer. John received his formal education at the local district school, and at St. Joseph's, a Dominican college at Somerset, Ohio. He had hoped to fit himself for the profession of civil engineering, but in 1854, after only two years of college, he entered the employ of his elder brother, Edward [q.v.], who built telegraph lines and took grading contracts. In 1856 the latter met with some reverses in Missouri and Iowa, after which the two brothers and several of their relatives settled in Omaha. Here John secured temporary employment in a store. It soon developed that the road to fortune lay still farther to the West. In 1860 he took two train-loads of merchandise by ox-team to Denver, where he remained until 1861. On July 4 of that year the construction of a telegraph line to the Pacific was begun. Edward Creighton had contracted to build the section from Julesburg, Colo., to Salt Lake, and John was put in charge of the work. Thereafter for many years the interests of the two men centered in the Far West, where as freighters, traders, contractors, and stockmen they amassed great wealth. John Creighton was active in starting the packing industry in South Omaha. For five years he was located at Virginia City, Mont., and at one time he figured prominently as a member of the famous Vigilantes. In 1868, however, he left the rough life of the western mining camp, was married to Sarah Emily Wareham, the sister of his brother Edward's wife, and once more established himself in Omaha.

In 1874, Edward, by this time reputed to be Omaha's wealthiest citizen, died, and John succeeded to much of his brother's property, including Wyoming cattle interests which sold in 1875 for $700,000. Wisely invested in numerous enterprises both in Omaha and in the West, the Creighton fortune compounded rapidly in spite of the numerous benevolences that were charged against it. Childless, and after 1888 a widower, Creighton took great pleasure in giving liberally, especially to the Catholic Church, of which he was a devout member, and to Catholic institutions. To Creighton University, which his brother Edward's widow had endowed in accordance with a plan of her husband to establish a free Catholic school of higher education, he gave most liberally, and the day (Feb. 7) of John Creighton's death has been adopted as the University's Founder's Day. It is said that the total gifts to the institution from John Creighton and his estate reached nearly a million and a quarter dollars. In recognition of these good works Pope Leo XIII made him a knight of the Order of St. Gregory, and in 1895 conferred upon him the title of Count of the Papal Court. As "Count Creighton" the Omaha capitalist was thereafter generally known. In 1900 Notre Dame University gave him its Laetare medal. Creighton's imposing figure, made almost patriarchal in his later years by silvery hair and a flowing beard, was well-known in Omaha and indeed throughout the entire West. His business connections, his philanthropy, his marked devotion to his church, and his political enthusiasms all brought him before the public. In politics he was an ardent Democrat, and he voted for Bryan in 1896 when most men of wealth, regardless of party, supported the Republican candidate. He remained to his dying day, in spite of his riches, distinctly the Westerner, always fully alive to the interests of the West, and always sympathetic with its point of view.

The best sketch of Creighton's life is to be found in a little volume dealing appreciatively with the lives of several members of the Creighton family, Creighton (1901), by P. A. Mullens. The brief biography in the Illus. Hist. of Nebr. (1905), ed. by J. Sterling Morton and Albert Watkins, I, 629, was read and approved by Creighton himself. Local histories such as J. W. Savage and J. T. Bell, Hist. of the City of Omaha (1894), contain frequent references to Creighton and his work. See also World-Herald (Omaha), Feb. 7, 1907. J. D. H.

CREIGHTON, WILLIAM (Oct. 29, 1778-Oct. 1, 1851), congressman from Ohio, lawyer, was one of the group of Virginians, "the Chillicothe Junto," who brought about Ohio's statehood. The son of William Creighton, he was born in Berkeley County, Va. (now in West Virginia). At seventeen he was graduated from Dickinson College, Carlisle, Pa. He studied law for two years in Martinsburg, Va. (now W. Va.), and emigrated to Chillicothe, Ohio, in 1799. Shortly afterward he was admitted to the bar. When statehood was achieved Creighton's abilities were recognized by his appointment (Mar. 5, 1803) as the first secretary of state. He continued to hold this office by repeated appointment until his resignation in December 1808. Shortly after his resignation he acted as one of the attorneys in defense of two Ohio judges who were impeached for having declared an act of the legislature void because unconstitutional. The acquittal of the two judges marks the establishment in Ohio of the practice of judicial review. This trial and the subsequent ousting of the judges and other appointive officials through the "sweeping resolution" led to a schism in the Republican
party in the state. Creighton was identified with the conservative wing of the party and for a time was the leader of the opposition to Thomas Worthington and Edward Tiffin [qq.v.], particularly at the time when these men were seeking to control the state through the medium of a Tammany Society (1810–11). Worthington, prior to this break, had been Creighton’s warm friend, and had obtained his appointment as United States district attorney, a position which he held during the years 1809, 1810, and a part of 1811. In 1813 Creighton was elected to Congress to fill a vacancy, and in 1814 was elected to the subsequent Congress. His attention was then directed (1817) to his legal business and it was not until 1827 that he again appeared in Congress. He was elected in 1828 as an Adams man. President Adams sought to recognize Creighton’s ability by appointing him federal district judge in August 1828, but his appointment was not confirmed by the Senate. He was sent back to the Twenty-second and Twenty-third Congresses, but, judging by the *Annals of Congress* and the *Congressional Debates*, he played no important rôle. He was identified with the Whig party and continued to serve its interests after his retirement to his legal practise in 1833. His home, which preserved the best traditions of Virginia, was presided over by his wife, Elizabeth Meade Creighton, whom he had married Sept. 5, 1805.

[The fullest sketch of Creighton’s life is in N. W. Evans, *A Hist. of Scioto County, Ohio* (1903), pp. 167 ff. See also *A Biog. Dir. of the Am. Congress* (1928). Many of his letters are to be found in the Worthington MSS. in the Ohio State Lib. at Columbus. D. M. Massie, *Nathanial Massie, a Pioneer of Ohio* (1896), contains many references to Creighton. For the political situation in early Ohio see the article by W. T. Utter, “Judicial Review in Early Ohio,” in *The Mississippi Valley Hist. Rev.*, June 1927.]  

**CRERAR, JOHN** (Mar. 8, 1827–Oct. 19, 1889), financier, philanthropist, was born in New York City and died in Chicago. His parents, John and Agnes Smeallie Crerar, were born in Scotland. His father died in July 1827 when John was only a few months old, but his mother gave him not only the common-school education of the day but also an ardent, reverent affection for herself and for Scotch Presbyterianism. A few years after her husband’s death, Mrs. Crerar married William Boyd, whose business was in iron and steel. In his eighteenth year John Crerar began work under his step-father, and after about five years was sent as a bookkeeper to an affiliated branch of his firm in Boston. He returned to New York after a short time and engaged himself, still as bookkeeper, to another business house also dealing in iron. At this time he entered somewhat fully into social life, joining several clubs, among others, the Mercantile Library Association, as president of which he is said to have induced Thackeray to come to America. In 1856, he formed with Morris K. Jesup [q.v.] a friendship which affected his life profoundly as regards both business and philanthropy. He entered Jesup’s firm, first as employee and soon as partner, and in 1862 went to Chicago in connection with the branch of the firm inaugurated there in 1859, a manufactory of railroad supplies and contractors’ materials. A few months after his arrival, in company with one of Jesup’s emissaries who had preceded him, he bought over all the interests of the firm in his locality. Circumstances were propitious and the administration excellent; the complexity and wealth of the new business increased rapidly. In 1867, Crerar was one of the incorporators of the Pullman Palace Car Company organized by his friend G. M. Pullman [q.v.]. He remained a director in this company throughout his life. He became also a director of the Illinois Trust and Savings Bank, of the Chicago & Alton Railroad Company, and president of the Chicago & Joliet Railway Company. He was a civic force of great importance, lending his influence and resources to any cause that seemed to him at once sound of itself and conducive to the development of Chicago. In the personal relationships which came as a result of his associations in business, he was characterized by geniality and imagination. His other contacts were restricted. He lived quietly, in hotels, and when he was urged by his friend Jesup to engage in his lifetime in large-scale philanthropies, he demurred, saying, “I am satisfied and content.” He professed that he was in love with all women, but he never married. Until the death of his mother in 1873 he continued to regard New York as his home, and he specified in his will that he be buried beside her in Brooklyn. The influence of his mother probably accentuated an hereditary bent toward ecclesiasticism. In this regard he was fervent, an active protagonist of orthodoxy. He could not fancy what the story of Jonah and the whale had to do with religion, but he was careful to make a bequest to a certain church contingent upon its “preserving and maintaining the principles of its faith,” and he remembered to ban from the library he founded “all nastiness and immorality,” that is, he explained, “dirty French novels and all skeptical trash and works of questionable moral tone.” His will, written about three years before his death, made legacies to many friends and to certain cousins related to him through his mother, but omitted mention of other cousins equally re-
lated to him through his father. Members of the latter group contested the will vigorously at the time of his death, but it was sustained by the courts in 1893. The major portion of his vast estate was left to the many philanthropic purposes dear to him, to the endowment of scholarships, churches, and mission boards, and, most notably, to the erection of "a collossal statue of Lincoln" (that by St. Gaudens), and to the creation of the John Crerar Library, an institution which in 1918 had total assets of over $5,500,000. It was not he, but his friends, named by him as trustees of this library, who determined to make it primarily a place of scientific and technical reference. They felt that in this way they might best supplement the other library facilities of Chicago, and at the same time might exclude automatically from its collections those classes of books which the great financier had prohibited as incompatible with "healthy, moral and Christian sentiment."

CRESAP, MICHAEL (June 29, 1742-Oct. 18, 1775), border leader and Revolutionary soldier, the son of Col. Thomas Cresap [q.v.], was born in what is now Allegany County, Md. At an early age he married Mary Whitehead of Philadelphia and set up as a trader near his father's stockaded house and trading-post at Oldtown. He began in the spring of 1774 to clear land in the neighborhood of Wheeling on the Ohio, but before he had made much progress, the activities of the border were halted by the Indian war sometimes called Cresap's War but described more critically as Dunmore's War. The war was actually brought to an outbreak by the Yellow Creek Massacre on Apr. 30, 1774, an ugly incident which is supposed to have been effected by one Daniel Greathouse. The fatalities included certain members of the family of Tah-gah-jute or Logan [q.v.], a Mingo warrior then on friendly terms with the white people. Under a Virginia commission, Cresap took part as a captain in the campaign that resulted in the white man's victory at Point Pleasant on Oct. 10, 1774, and it was at the treaty following this battle that John Gibson [q.v.], fresh from an interview with Logan, read that warrior's message accusing Cresap of the murder of his family. Illness prevented Cresap from resuming his land-clearing operations, but he was well enough in the following year to accept a Maryland commission to raise a company of riflemen for the Continental Army, and volunteers from the Ohio and Western Maryland made his recruiting a short task. This company set out from Frederick, Md., on July 18, 1775, and twenty-two days later, the first southern troops on the scene, joined Washington before Boston, having marched the intervening 550 miles at the rate of twenty-five miles a day. Ill for weeks before leaving and exhausted by the march, Cresap gave up his command two months later and on his journey homeward died in New York on Oct. 18, 1775. Cresap's memory has been kept alive by an unusual set of circumstances. Logan's speech, with its pitiable conclusion, "Who is there to mourn for Logan? not one!" was printed in the Virginia Gazette for Feb. 4, 1775. Then in 1782 Jefferson printed the "morsel of eloquence" in his Notes on Virginia, and in the brief introduction referred to Cresap as "a man infamous for the many murders he had committed on those much injured people" [i.e. the Indians]. When assailed for the assertion by his political opponent Luther Martin [q.v.], who chanced to be also the son-in-law of Cresap, Jefferson modified his statements somewhat, but brought forward in the 1800 edition of the Notes on Virginia much asidiously collected evidence to prove Cresap's guilt. Unhappily for his case in modern eyes, he suppressed evidence to the contrary known to be in his possession, notably the letter in which George Rogers Clark exonerated Cresap from the specific charge of the Yellow Creek Massacre (Clark to Samuel Brown, June 17, 1798, enclosed in letter from Brown to Jefferson, Sept. 4, 1798, Jefferson Papers, Library of Congress). The testimony, in general, points to Cresap's innocence in the Logan matter, and shows him to have been no more brutal in his dealings with the Indians than the normal actor in a scene in which men went day and night in fear of an appalling death. Perhaps the final judgment should be that Cresap, whose interest as a settler of new lands would have impelled him to keep peace with the Indians, was forced to act in defense of his land and of the people who made him their leader, and that in performing this duty he was caught in a snarl of intercolonial politics that has not yet been unraveled.

CRESAP, THOMAS (c. 1702-c. 1790), pioneer, was born at Skipton in Yorkshire and came to Maryland at the age of fifteen. About 1727, he
Crespi

married Hannah Johnson, and two years later removed from the neighborhood of Havre de Grace, Md., to a tract near the present town of Wrightsville, Pa., in the territory then in dispute between Lord Baltimore and the Penns. The murderous little war which now broke out with Cresap as its leader under a Maryland commission as captain of militia came to an end on Nov. 24, 1736 with the burning of Cresap's house by the Pennsylvanians. The year 1740 found Cresap the westernmost occupant of lands in Maryland at a place known as Shawanese Oldtown, where two years later his son, Michael Cresap [q.v.], was born. Thomas Cresap's stockaded house and trading-post lay on the old Indian trail customarily taken by the Iroquois on their war expeditions against the Cherokees, and though frequently at odds with the Indians, he soon became the intermediary between the Maryland government and the friendly Iroquois of the north and the enemy Cherokees of the south. The position of his house, printed in many maps of the day, made it a stage in westward journeys from Virginia, Maryland, and Pennsylvania. He was one of the most prominent men of the Appalachian border, known to Indian and white man alike from Canada to Carolina. When the Ohio Company was chartered in 1749, Cresap's name was found among the organizers, and to him was committed by the Company the practical task of blazing the old Indian trail Gist had followed in his preliminary explorations of the territory. With his Indian friend Nemacolin, Cresap marked and improved the sixty miles of trail that ran from Fort Cumberland to the junction of the Redstone and the Monongahela. He was an active patriot in a private capacity in the Revolution, prominent as a local magistrate, and interested always in schemes of western land development and of western transportation. He died about the year 1790. From personal knowledge of Cresap, John J. Jacob speaks of his benevolence and hospitality, his personal bravery, coolness, and fortitude, but the old frontiersman seems to have possessed an uncertain temper, and the disinterestedness of his motives was never above suspicion in the estimation of his contemporaries. Even with this admitted, however, there is no doubt of the value of Cresap's services to his province and to the whole western border at a time when soft hands, white collars, and the ethical niceties were neither fashionable nor useful in that country.

Mag., IX, 1-17 (March 1914); Registers of All Saints' Parish, Frederick County, Md., and the published "Earliest Records of All Saints' Parish, Frederick, Md., 1727-81" in G. N. Brumbaugh, Md. Records, vol. I (1913).]

L. C. W.

CRESPI, JUAN (1721–Jan. 1, 1782), missionary, explorer, is conspicuous among the diarists who recorded explorations in the New World. For more than three decades he was a pioneer in the wilds of North America. Like Francisco Palou [q.v.], he was a pupil of the great Junipero Serra [q.v.], and for many years was his close companion. Like them both he was a Mallorcan. In the same mission with them he came to America in 1749. With them he became a member of the Franciscan College of San Fernando in Mexico. Beside them he went as missionary to the Sierra Gorda, that wild mountain fastness northeast of the Aztec capital. With them he was sent to the Peninsula of California on the expulsion of the Jesuits in 1767, and there was put in charge of Mission Purisima Concepción. Two years later he was one of the small band of friars selected by Serra to join the Portolá expedition for the occupation of San Diego and Monterey (see sketch of Gaspar de Portolá). Crespi even preceded Serra on the great march, for he joined Rivera y Moncada, who led the vanguard, while Serra followed with Portolá. Crespi was one of the handful of pioneers who planted the Cross and the banner of Spain at San Diego in the summer of 1769. With Portolá he continued north, accomplishing the first European expedition by land up the California coast. With the mystified Portolá, seeking the harbor of Monterey, he pushed still farther north, and became one of the discoverers of San Francisco Bay, whose existence theretofore was unknown and whose importance he was one of the first to recognize. Returning to San Diego with Portolá he again made the land march to Monterey. With Serra he became one of the founders of Mission Carmel, and there he spent the next twelve years, as Serra's companion. In 1772 he went with Pedro Fages [q.v.], to explore a route around San Francisco Bay. Two years afterward he joined the Pérez expedition to Alaska. In 1782 he died at Carmel.

Gentle character and zealous missionary though he was, Crespi is famous primarily as explorer and diarist. Of all the men of the half decade (1769-74) so prolific in frontier extension up the Pacific Coast by land and sea, he alone participated in all the major path-breaking expeditions. From Vellicatá to San Diego, he jour-
Cresson

neyed; from San Diego to San Francisco Bay; from Monterey to the San Joaquin Valley; from Monterey by sea to Alaska. In distance he outtravelled Coronado. In all these expeditions he went in the double capacity of chaplain and diarist. Of all of them he kept superb diaries that have come down to us. His precious pages record nearly two thousand miles of land travel and a sea voyage of twice that distance.

[Data for Crespi's career as a whole are contained in Palón's Relación Historica de la Vida ... del Venerable Padre Pio de la Villa at wasj. (Mexico, 1872), English translation by G. W. James and C. Scott Wil-

liams (Pasadena, 1913). Crespi's diaries have been translated and edited by Herbert E. Bolton in Juan Crespi, Missionary Explorer on the Pacific Coast, 1769-71 (1927). Good secondary accounts are H. H. Bancroft, Hist. of Cal. (1889) and Chas. A. Engelhardt, The Missions and Missionaries of Cal. (4 vols., 1908-15).]

CRESSON, ELLIOTT (Mar. 2, 1796-Feb. 20, 1854), Quaker merchant and philanthropist, was born in Philadelphia. A representative member of a family of successful merchants and valued citizens, he was in his generation noted more for the distribution of his wealth than for activities in attaining it. The family trace descent from Pierre Cresson, Huguenot refugee from France to Holland and later to New Amstel on the Delaware River in 1657. Elliott Cresson was the eldest son of John Elliott and Mary (War-der) Cresson, and was brought up in the influence of a Quaker home. He became a partner in Cresson, Wistar & Company at 133 Market St., Philadelphia, and resided at 30 Sansom St. (above Seventh) with his mother, who outlived him. Through the grave exterior of a "plain" friend there could be seen in his countenance a character of kindly sympathy. From the teachings of the Society of Friends he had come to have an interest in the oppressed races, the American Indian and the negro, even thinking at one time of becoming a missionary to the Seminole Indians. His devotion, however, was chiefly given to the cause of colonization. He was one of the organizers, in 1834, of the Young Men's Colonization Society of Pennsylvania and a life member of the American Society for Colonizing the Poor People of Color of the United States. In addition to liberal gifts to the cause himself and helping to buy land for the colony at Bassa Cove, Liberia, he made a trip to New England in the winter of 1838-39 as agent of the American Colonization Society to raise funds and to arouse the spirit of colonization, which had become dormant in those regions (Alexander, post, p. 550). He made simi-
lar visits to the South and to England.

His interests covered a wide range. In addi-
tion to gifts during his life and bequests to relatives by his will, he left to the American Sunday School Union, $50,000; to the Philadelphia School of Design for Women, $10,000; to the Historical Society of Pennsylvania, $10,000; for a monument to William Penn, $10,000; for Epis-
copal missions, schools and college, at Fort Cresson, Liberia, $10,000; to the Pennsylvania Hospi-
tal for the Insane, $5,000; to the City of Phila-
delphia, for planting trees, $5,000; to the Uni-
iversity of Pennsylvania, to endow a professor-
ship in the fine arts, $5,000; for founding a Miners' School in Pennsylvania, $5,000; to the Pennsylvania Agricultural Society, $5,000; to the Protestant Episcopal Seminary, Alexandria, Va., $5,000; and to the Athenæum, Philadelphia, to the Widows' Asylum, Philadelphia, to the Deaf and Dumb Asylum, to the House of Refuge, to the Colored Refuge, to the Refuge for Decay-
ed Merchants and to the Pennsylvania Colo-
nization Society, $1,000 each. He also left land valued at over $30,000 to found and support a home for aged, infirm or invalid gentlemen and merchants. Another line of interest is shown in his founding the Elliott Cresson medal, award-
ed annually by the Franklin Institute "for some discovery in the Arts and Sciences, or for the invention or improvement of some useful ma-
chine, or for some new process or combination of materials in manufacturing, or for ingenuity, skill or perfection in workmanship."

[Colonial Families of Phila., ed. by John W. Jordan, vol. II (1911); Archibald Alexander, Hist. of Colo-

CRESSON, EZRA TOWNSEND (June 18, 1838-Apr. 19, 1926), entomologist, was the son of Warder and Elizabeth (Townsend) Cresson. His original American ancestor, Pierre Cresson, probably a native of Picardy, was born in 1610, emigrated to Holland, and thence to America, settling at New Amstel on the Delaware in 1657, moving later to Manhattan Island and fi-

nally to Staten Island. Ezra T. Cresson was born at Byberry, Bucks County, Pa. His fa-
thor, Warder Cresson, brother of Elliott Cresson [q.v.], was United States consul at Jeru-
salem in 1844. Ezra Cresson married Mary Ann Ridings in 1859. In the same year, with James Ridings and George Newman, he founded the oldest of the entomological societies of this country, at first called the Entomological Society of Philadelphia, but changed in 1867 to the Amer-

ican Entomological Society. Cresson was an officer of the Society from its beginning until
Creswell

1924, serving as editor of its Transactions for forty-two years and as treasurer for fifty years. On account of the poverty of the Society in its early days, he acted as compositor and pressman in getting out its publications. He was employed by the Franklin Fire Insurance Company in 1869, and was made its secretary in 1878, holding this position until his resignation in 1910. His scientific life-work was devoted almost solely to the insects of the order Hymenoptera, and between 1861 and 1882 he had published sixty-six papers of a descriptive, synoptic, or monographic character. He was undoubtedly the ranking American student of this great order. His work culminated in his Synopsis of the Families and Genera of the Hymenoptera of America North of Mexico, Together with a Catalogue of the Described Species and Bibliography (1887). In 1865 and 1866 he was editor of the Practical Entomologist, the first journal devoted to economic entomology published in the United States. Creswell himself summarized his work upon the Hymenoptera in a paper entitled The Creswell Types of Hymenoptera published in 1916 as No. 1 of the Memoirs of the American Entomological Society. In this paper he recorded the types of 2,737 of his species. A bibliography comprising seventy titles was appended to this paper. His influence on the progress of entomological studies in the United States was very great, and, like most of the leading naturalists of the nineteenth century, he was always ready to help and encourage young workers.

L. O. H.

CRESWELL, JOHN ANGEL JAMES (Nov. 18, 1828–Dec. 23, 1891), postmaster-general, was born at Port Deposit, Md. His father, John G. Creswell, was a Marylander of English ancestry, and his mother, Rebecca E. Webb, a Pennsylvanian, whose forebears were German and English, one of the latter being the famous Quaker missionary, Elizabeth Webb. Creswell received his advanced education at Dickinson College, graduating with honors in 1848. After studying law for two years, he was admitted to the Maryland bar, in 1850, and soon began to practise. Early in his career he married Hannah J. Richardson of Maryland, a woman of considerable wealth.

In politics, Creswell was a strong partisan. He first affiliated with the Whigs, then after that party broke up, was for a short period a Democrat, and attended the Cincinnati convention which nominated Buchanan. After the Civil War opened, however, he became and remained a staunch and influential Republican. In the critical days of 1861 and 1862 Creswell filled his first public office, as loyalist member of the Maryland House of Delegates, and did much toward keeping the state in the Union. A year later, as assistant adjutant-general, he had charge of raising Maryland's quota of troops for the Northern army. From 1863 to 1865 he was a member of the national House of Representatives; but in March of the latter year he was elected to the Senate to fill the unexpired term of Thomas H. Hicks. In January 1865, after Maryland had freed its slaves, he made a strong impression by a speech in the House in favor of general emancipation. As senator, he stood for manhood suffrage, the compensation of loyal owners of drafted slaves, and strict enforcement of the Civil Rights Act.

Creswell's most important public work was done as head of the Post Office Department, to which he was appointed by President Grant in March 1869. The country has had few, if any, able postmasters-general. The changes made by him in the Department were sweeping, reformatory, and constructive. The cost of ocean transportation of letters to foreign countries was reduced from eight cents to two, and great increase in speed was secured by giving the carriage of the mails to the best and fastest steamers, four of which were to sail each week, and by advertising a month in advance the vessels selected; the pay to railroads for mail-carriage was rearranged on a fair basis; there was great increase in the number of railroad postal lines, postal clerks, and letter-carriers, and in the number of cities having free delivery of mail and money-order departments; one-cent postal cards were introduced; the system of letting out contracts for the internal carriage of the mails was so reformed as ultimately to do away with straw bidding and to secure fair competition among responsible bidders; the laws relating to the Post Office Department were codified, with a systematic classification of offenses against the postal laws; and postal treaties with foreign countries were completely revised. Creswell also denounced the franking system as the "mother of frauds," and secured its abolition, and he strongly urged the establishment of postal savings banks and a postal telegraph.

Pressure of private business led him to resign from the Post Office Department in July 1874, but he later accepted the position of United
Crétin

States counsel before the court of commissioners on the Alabama claims, and served until the court expired by law in December 1876. Thereafter, he spent most of his remaining years at Elkton, Md., where he had his home, and gave his attention to banking and the practise of law. Here, following two years of general ill health, he died of bronchial pneumonia.

*U. S. Dept. of the Md. House of Delegates, 1861-62; Cong. Globe, 1863-69; Reports of the Postmaster-General, 1869-74; Biog. Am. Cong., 1774-1927 (1928); sketch in *Biog. Cyc. of Representative Men of Md. and the D. C.* (1879), based, apparently, upon data furnished by Creswell himself. The short biography included in Sams and Riley, *Bench and Bar of Md.* (1901), was founded upon the account given in the *Biog. Cyc.* just mentioned. An editorial on Creswell's appointment as postmaster-general appears in the Baltimore (Weekly) *Sun,* Mar. 6, 1869, and an obituary in the supplementary issue of the same paper for Dec. 26, 1891.] M. W. W.

CRÉTIN, JOSEPH (Dec. 19, 1799-Feb. 22, 1857), first Roman Catholic bishop of St. Paul, Minn., was born at Montuel, Ain, near Lyons, France, the son of a prosperous bourgeois baker, Joseph Crétin, and his wife, Jane Mary Mery. His early education was received amid the reverberations of the Napoleonic wars, and, while studying at Meximieux, he saw the seminary occupied by Austrian troops after the “Hundred Days’ Campaign” in 1815. He attended the colleges at L’Argentière and Aix, and entered the famous seminary of St. Sulpice in Paris in 1820. Ordained at Belley by Bishop Devie on Dec. 20, 1823, he was immediately appointed vicar at Ferney, for many years the home of Voltaire, with the special object of overcoming the rationalistic influences surviving this philosopher. He opened a preparatory college and later became pastor of the parish. The July Revolution of 1830 found him more than sympathetic with the fallen monarchy, and his refusal to offer public prayers for the new king, Louis Philippe, brought him under sharp displeasure at Paris for a time. He had long cherished the desire to enter foreign missions, and in 1838 after meeting Mathias Loras, the first bishop of Dubuque in the Iowa territory and former his professor at Meximieux, Crétin slipped quietly away to Havre and left for America.

Arriving in Dubuque in April 1839, he was made vicar-general of the huge pioneer diocese containing over 30,000 Indians, and among these, the Winnebagoes particularly, he labored for a number of years. Strongly recommended by the federal agent and by many others to be principal of the government Indian school on the Turkey River, he was ignored by Gov. Chambers, and in 1845 even forbidden to erect a mission school in the neighborhood, although he was allowed to remain as a missionary. After suc-

cessful work in Dubuque and Prairie du Chien, he was appointed in 1850 the first bishop of St. Paul, which diocese embraced the state of Minnesota, and was consecrated Jan. 26, 1851 at Belley, France, by the same bishop who had ordained him a priest. He pushed vigorously his missionary activities among the Indians and was in Washington in 1852 discussing government Indian schools with President Millard Fillmore. He encouraged the colonization of his state and made heroic efforts to reach the scattered members of his faith throughout his diocese. A strong advocate of the temperance movement and a bitter foe of the frontier saloon, he ordered the cathedral bell to be rung in approval when the Minnesota legislature enacted a “liquor law.” Ever active in educational work and parochial organization, he also commenced building a stone cathedral in 1854 but arduous tasks and a prolonged illness brought death upon him before its completion.

CRÉVECŒUR, J. HECTOR ST. JOHN. [See Crevecœur, Michel-Guillaume Jean de, 1735-1813.]

CRÉVECŒUR, MICHEL-GUILLAUME JEAN DE (Jan. 31, 1735-Nov. 12, 1813), essayist, was born near Caen, in Normandy, the son of Guillaume Jean de Crévecœur (see birth certificate) and of Marie-Anne-Thérèse Blouet. He later stated that his family name was Saint-Jean, “Crévecœur” being the name of an ancestral estate which neither he nor his father ever possessed. Though the descendant of families of distinction, the young man chose to become a pioneer and wanderer. He migrated to Canada and served under Montcalm in the last of the French and Indian wars. He had received part of his education in England, which he had left in 1754, and during his services in New France seems to have explored the vast tracts of land near the Great Lakes and the Ohio River. His official duty was, perhaps, that of map-maker. In any case, he acquired a knowledge of the

542
Crèvecoeur
countries of the Scioto and the Muskingum, and of their Indian peoples. These adventures were a mere overture to his later participation in the drama of American colonization and revolution. At the age of twenty-four (1759), he landed in New York. For the next decade he again traveled widely, acquiring a thorough knowledge of Pennsylvania and New York, and, presumably, penetrating into the Carolinas. Now, however, there were anchors for this French voyager. In December 1765 he became a naturalized American citizen; in 1769 he married Mehitable Tippet of Yonkers, and in the same year he settled on his farm, at “Pine Hill,” Orange County, N. Y. Though details of his experiences are wanting between 1769 and September 1780, when he embarked for France, it is probable that during this decade he wrote most of the charming and informative essays on which his reputation rests. These are, for the most part, available in Letters from an American Farmer (1782) “by J. Hector St. John,” a name which Crèvecoeur occasionally used simply because he liked it; and in Sketches of Eighteenth Century America (1925). It is likely that he sometimes wrote long after the event, and the particular essays cannot be finally dated, but it is reasonable to think that these two volumes present substantially the Farmer’s reactions to American life during his stay here.

Immediately after the war he returned to America, arriving in New York, Nov. 19, 1783, only to discover that his home had been burned. His wife had died, and his children had disappeared. “I should have fallen to the ground,” he said, “but for the support, at this instant, of my friend Mr. Seton, who had come to conduct me from the French vessel to his house.” Eventually he found his children, but the dramatic circumstances of the Indian raid which had caused the catastrophe in his absence seem a startling parallel to the sufferings of the frontier which he himself had described in his essays. He now became French consul at New York and endeavored to cement the friendly relations of his two countries. He corresponded with Washington; he knew Franklin; he wrote for the American newspapers over the signature “Agricola,” and at the marriage of his daughter, America-Francés, Thomas Jefferson was present. Perhaps of equal interest to this born farmer was his boast that he had introduced into America sain foin, lucerne (alfalfa), the vetches, vignon, and racine de disette. In 1790 he took final leave of his adopted country. He died at Sarcelles, on Nov. 12, 1813.

Had Crèvecoeur written nothing, his life as a Frenchman living through the upheaval of the Revolution would have been remarkable. He was a master of the forest and of the pioneer farm. He studied with the utmost thoughtfulness the vexed question of taxation. He was familiar with the evils of fraudulent titles, heavy mortgages, and imperfect agricultural equipment. He understood the misery of the poor, and he observed the vast reestablishments in America of feudal systems under the Dutch and other colonial aristocrats. He was particularly interested, since this was his own lot, in the difficulties of the independent family tilling the soil, under cramped methods of husbandry, for a perilous livelihood. Finally, he experienced the despair of the Revolution which set at naught all that he, and those like him, had gained. Though deeply attached to the common people, he became, perhaps because of an innate aristocratic bias, a Loyalist; and he saw in the chicanery of some so-called patriots much to support him in this conviction. In Landscapes, an early specimen of American drama, and in various essays, he penetrated shrewdly economic and personal motives that underlay the Revolution. An intense lover of true liberty, he saw clearly the oppressions committed in America in its name, and he could not endure those, as he said, who were “perpetually bawling about liberty without knowing what it was.”

All this he set down in vigorous English, in such letters or essays as “What Is An American?”, or “The American Belisarius.” These great issues he viewed with a broad and sane philosophy, but he described also in detail the physical and social conditions of rural life in America. In “Farm Life,” “Enemies of the Farmer,” “Customs,” and “ Implements” he at once gives a photographic record of the husbandman’s life about the year 1775; and he also destroys finally the popular notion that he was a sentimentalizer concerning agricultural life. Truer than this outworn tradition is the fact that many of the essays reflect the warm humanity which was so strong a part of his own nature. He can describe unforgettably a negro under torture, travelers arriving for the night; children coming home from school in a snowstorm; a woman’s cry as the raiders enter her home for massacre; or a family “frolic.” In “The Wyoming Massacre” he silhouettes the refugees on their long journey through the forest. On a horse with bedding as a saddle, “sat a wretched mother with a child at her breast, another on her lap, and two more placed behind her.” He himself said, “There is something truly ridiculous in a farmer quitting his plough
or his axe, and then flying to his pen," but, in spite of oddities in spelling, construction, and style, he has also, by reason of his powers of observation and selection of trenchant detail, some claim to be regarded as a man of letters. Charles Lamb wrote, "Tell Hazlitt not to forget to send the American Farmer." In the simple, strong writing that is the chief characteristic of American literature of the eighteenth century the essays of Crevecœur have a distinct place.

(The Letters from an Am. Farmer were published in London in 1782; the next year the author broke out in Paris his Lettres d'un Cultivateur Americain, a translation and expansion of the original essays, and in 1793 another English edition appeared, the latter re-published in 1901 with preface by Wm. P. Trent and introduction by Ludwig Lewisohn. Crevecœur’s Voyage dans la Haute Pennsylvanie et dans l’Etat de New-York (4 vols.) was published in Paris in 1801. In 1822, new MSS., apparently suppressed in 1782 by Crevecœur or his publishers, were discovered by H. L. Bourdin. These appeared, with fresh introductory material, as Sketches of Eighteenth Century America (1922), ed. by Bourdin, R. H. Gabriel, and S. T. Williams; they form an important supplement to the volume published during Crevecœur’s lifetime. A few other essays have also appeared, ed. by Bourdin and Williams: "Crevecœur on the Susquehanna," Yale Rev., Apr. 1925; "Hospitals (During the Revolution)," Philological Quart., Apr. 1926; "Crevecœur, The Loyalist," Nation, Sept. 23, 1925; "Sketch of a Contrast Between the Spanish and English Colonies," Unio. of Cal. Chronicle, Apr. 1926. The most complete biographical study is St. Jean de Crevecœur (1916), by Julia Post Mitchell. See also Robert de Crevecœur, Saint John de Crévecoeur, S.J., (1873); Cambridge Hist. of Am. Lit. (1917), vol. 1; "Unpublished MSS. of Crévecoeur," ed. by H. L. Bourdin and S. T. Williams, Studies in Philology, July 1925, and The Am. Farmer Returns (by the same editors), North Am. Rev., Sept. 1925.)

S. T. W.

CRIMMINS, JOHN DANIEL (May 18, 1844-Nov. 9, 1917), contractor, capitalist, was of Irish ancestry. A son of Thomas and Johanna (O'Keefe) Crimmins, he was born and grew up in New York City. His father was a well-to-do contractor, who gave his son educational advantages in addition to what were afforded by the public schools of the period. The lad was graduated at the College of St. Francis Xavier and at once entered his father's contracting business. At twenty-one he was made a member of the firm, which added building to other forms of construction. Under the son's management more than 400 buildings were erected, many of which were private dwellings, but public works continued to occupy an increasing part of the firm's attention. Most of the elevated railway mileage in New York City was built by Crimmins, and later the subways required for electric wiring in the city streets were constructed under his contracts. At times as many as 12,000 men were in his employ at once. Practically all the work that he did was under contracts made with corporations, estates, and individuals, on a percentage basis. His firm did not seek city or county contracts. He was the first to make use of steam drills in excavation work in New York. The fact that he was a large employer of labor, known to have been for years on good terms with his employees, caused him to be sought as an arbitrator in wage disputes. He might also have gone far in local politics if he had been inclined to that kind of career. In 1883-88 he served as Park Commissioner for the city. He was a member of the state constitutional convention of 1894, and was appointed by Gov. Roosevelt a member of the Greater New York Charter Revision Commission. Distinction came to him also as a Roman Catholic layman. He gave generously of his wealth to religious and charitable institutions, and for services to the Church he was made a Knight Commander of the Order of St. Gregory by Pope Leo XIII, and a count by Pope Pius X. All his life interested in the history of the Irish people in America, Crimmins, as a member of the American-Irish Historical Society, the Friendly Sons of St. Patrick, and other organizations, sought to popularize a knowledge of that history. His two books, St. Patrick's Day: Its Celebration in New York and Other American Places, 1737-1845 (1902) and Irish-American Historical Miscellany (1905), contain much information not easily to be obtained elsewhere. His zeal in these researches led him to engage in the collection of books and manuscripts on a large scale. At the same time he became purchaser of rare works of art. In 1868 Crimmins married Lily Louise Lalor (like himself of Irish parentage), who bore him eleven children. She died in 1888.

[The Diary of John D. Crimmins from 1878 to 1917 (privately printed, 1925); Who's Who in America, 1916-17; N. Y. Times, Nov. 10, 1917.) W. B. S.

CRISP, CHARLES FREDERICK (Jan. 29, 1845-Oct. 23, 1896), congressman, was the son of William and Elizabeth Crisp, natives of England. They had become American citizens, but were on a visit to England when Charles was born at Sheffield. During his early infancy they removed to Georgia. The Crisps were theatrical people, playing for the most part Shakespearian roles. William Crisp owned theatres in various parts of the South. Charles seems to have had no formal education except such as was afforded in the public schools of Macon and Savannah. While he was yet a boy the Civil War began, and at sixteen he was at the front. He became a lieutenant in Company K, 10th Virginia Infantry, fought three years in the Confeder
Crisp

army, and passed one year as a prisoner at Morris Island. Released from prison in June 1865, he returned to his old home in Ellaville, Schley County, Ga., and began to study law. He was then twenty years of age, but four years of war had made a man of him. He was admitted to the bar and settled at Americus, an important town in southwest Georgia. In 1872 he was appointed solicitor-general of the southwestern superior court circuit and after five years was elevated to the bench. This position he was holding in 1882 when he resigned to accept the Democratic nomination for Congress. He was elected and entered the Forty-eighth Congress, serving from Mar. 4, 1883, until his death. On entering Congress, Crisp devoted himself to mastering the rules and methods of procedure. He came to be regarded as an exceptionally able parliamentarian. When John G. Carlisle of Kentucky, went into the Senate, Crisp became the Democratic leader of the House, and, when the control of the House passed in 1891 to the Democrats, he was elected speaker. He held this post through the Fifty-second and Fifty-third Congresses (1891–95). His rise to the leadership of his party in Congress and to the speakership was due, as one of his colleagues put it, to the “sheer force of his remarkable fitness.” Perhaps the most important legislation with which Crisp was concerned was the Interstate Commerce Act of 1887. It chanced that the chairman of the committee in charge of this bill was away from Congress and that the burden of championing it fell upon Crisp. He, along with another Georgian, Judson C. Clements, deserves a large measure of credit for the passage of the bill. He was a leader of the silverites, advocating the Sherman Act of 1890 which provided for a limited coinage of silver, and in 1896 announcing his candidacy for the Senate on a free-silver platform. A series of four debates in important Georgia towns was arranged between Crisp and Hoke Smith, another prominent Georgian, and at the time secretary of the interior in Cleveland’s cabinet, who stood with the President in his fight to maintain the gold standard. Smith was not a candidate for office, but felt it incumbent upon him to defend the administration in Georgia. The debates occurred early in the summer of 1896 before the meeting of the state Democratic Convention in June and before the nomination of Bryan in Chicago. Georgia, like other agricultural states, was a debtor community and swallowed eagerly the arguments of the inflationists. Public sentiment was, therefore, with Crisp, and he was regarded as having had the better of the contest. The Democratic state convention which met shortly after the debates indorsed free silver. A silver legislature was elected in the autumn and Crisp would unquestionably have been elected to the Senate but for his untimely death in October of that year. A seat in the United States Senate had been his highest ambition. Once before the opportunity had presented itself, when, on the death of Senator Alfred H. Colquitt [q.v.],Gov. Northen tendered Crisp the post. But at that time his sense of public duty did not permit him to resign the speakership of the House. Crisp is generally regarded as among the two or three ablest Georgia congressmen since the Civil War. Rising from obscurity, without the advantages of wealth, education, or family influence, he attained eminence through the force of his own ability, character, and efforts. He had a commanding physical appearance, was a convincing speaker, ranks as one of our greatest parliamentarians; and, personally, he won and retained the respect and affection of his colleagues of both parties in Congress. In 1867 he married Clara Belle Burton of Ellaville, Ga.

[This sketch of Crisp’s life has been based principally on information supplied by his son, Chas. R. Crisp, who succeeded him in the House of Representatives. A volume of Memorial Addresses published by order of Congress in 1897, contains a number of important estimates of Crisp’s personal character and work as member and speaker of the House. The debate with Hoke Smith is described in L. L. Knight, Ga. and Georgians (1917), II, 999. See also L. L. Knight, Reminiscences of Famous Georgians (1908), II, 380–91.] R. P. B.

CRITTENDEN, GEORGE BIBB (Mar. 20, 1812–Nov. 27, 1880), soldier, eldest son of John Jordan Crittenden [q.c.] and Sally (Lee) Crittenden, was born in Russellville, Logan County, Ky., whether his father had recently moved to take advantage of the prosperity that had come to this part of the state with the opening of new lands. George B. Crittenden was graduated from West Point in 1832, and as brevet second lieutenant saw his first service in the Black Hawk War. He was later stationed at Augusta, Ga., and in Alabama, but as the drab existence at army posts did not appeal to his rather restless nature, he resigned from the army in 1833 to study law. He began under his father, then continued his studies at Transylvania University in Lexington. The law, however, ultimately proved less attractive than the army, especially in view of the excitement then prevailing on the southwestern border. In 1842 Crittenden decided to cast in his lot with the Texans. In 1843 he enlisted with Col. William Fisher’s forces which crossed the Rio Grande and rashly attacked the village of Mier. The small army was soon overwhelmed and captured, and, after an unsuccessful attempt to escape, the prisoners were commanded

CRITTENDEN, GEORGE BIBB (Mar. 20, 1812–Nov. 27, 1880), soldier, eldest son of John Jordan Crittenden [q.c.] and Sally (Lee) Crittenden, was born in Russellville, Logan County, Ky., whether his father had recently moved to take advantage of the prosperity that had come to this part of the state with the opening of new lands. George B. Crittenden was graduated from West Point in 1832, and as brevet second lieutenant saw his first service in the Black Hawk War. He was later stationed at Augusta, Ga., and in Alabama, but as the drab existence at army posts did not appeal to his rather restless nature, he resigned from the army in 1833 to study law. He began under his father, then continued his studies at Transylvania University in Lexington. The law, however, ultimately proved less attractive than the army, especially in view of the excitement then prevailing on the southwestern border. In 1842 Crittenden decided to cast in his lot with the Texans. In 1843 he enlisted with Col. William Fisher’s forces which crossed the Rio Grande and rashly attacked the village of Mier. The small army was soon overwhelmed and captured, and, after an unsuccessful attempt to escape, the prisoners were commanded

545
Crittenden

to draw lots in order to determine which one out of every ten men should be executed. Crittenden was fortunate enough to draw two white beans, the first of which he gave to a fellow Kentuckian, and was carried prisoner to Mexico City. He was later freed through the efforts of Daniel Webster and Waddy Thompson, the American minister to Mexico.

Crittenden returned to Kentucky and on the outbreak of the Mexican War in 1846 volunteered and was made captain of a company of mounted rifles. For bravery at Contreras and Churubusco he was made brevet major, and was promoted full major in 1848. After peace he chose to remain in the army. He was sent to the frontier, and in 1856 was promoted lieutenant-colonel. In June 1861, when the dangers of civil war were upon the country, he resigned from the army in the Territory of New Mexico and returned to Kentucky. Against his father's views he joined the Confederate army, and was made a brigadier-general. In January 1862 he attacked at Mill Springs, Ky., a Federal force much larger than his own and was badly defeated, losing his wagon train and most of his artillery. For his rashness he was put under arrest and later censored. He now resigned his commission, but his heart was with the South, and, though he had a brother, Thomas Leonidas [q.q.v.], in the Federal army, he joined the Confederate forces again and served without rank for the rest of the war, on the staff of Gen. J. S. Williams. After the war he returned to Kentucky and resided in Frankfort. His bravery and loyalty to the South were soon recognized by a state that had become converted to the Confederacy after the war had ended. In 1867 he was appointed state librarian and continued in that position until 1874. He died in Danville and was buried beside his distinguished father in the Frankfort cemetery.

E. M. C.

Crittenden, John Jordan (Sept. 10, 1787–July 26, 1863), lawyer, statesman, one of the four sons of John and Judith (Harris) Crittenden, was of Welsh descent on his father's side and of French Huguenot descent on his mother's. His father, a major in the Revolution, the year after the treaty of peace was signed emigrated to Kentucky, settling in Woodford County. Here, near Versailles, John J. Crittenden was born. He was sent to Jessamine County in 1803-04 to be prepared for college, having as school-mates John C. Breckinridge and Francis P. Blair, Sr. [q.q.v.]. He early developed a liking for the law and began its study with George M. Bibb, living in his home at the time. Finishing his course at William and Mary College in 1807, he returned to Woodford County where he first began his practise. Central Kentucky was well supplied with excellent lawyers, however, and Crittenden left for the recently opened western part of the state, settling at Russellville in Logan County. He soon became the best-known lawyer in that section, and in 1809 was appointed attorney-general for the Illinois Territory, holding the position for a year. The approach of the second war with Great Britain led him into military service. He was aide-de-camp to Gen. Sam Hopkins in some operations against the Indians; then (1812) he was appointed by Gov. Charles Scott to a similar position in the 1st Kentucky Militia. In 1813 he was appointed aide-de-camp to Gov. Isaac Shelby and was present at the battle of the Thames, receiving the special commendation of the governor for his faithfulness in carrying out orders.

Crittenden's war service was coincident with the beginning of his political career. In 1811 he was elected to the legislature to represent Logan County, and was reelected successively six times, being chosen speaker of the House in 1815 and 1816. When in 1817 a vacancy in the United States Senate developed, he was chosen to complete the term. He took an active part in the affairs of the Senate, assuming early his life-long rôle of champion of the downtrodden and defenseless, but left the Senate at the expiration of his term in 1819, believing that his interests and greatest happiness lay in Kentucky, where his private fortune was yet to be made. During the next sixteen years his activities were identified entirely with Kentucky, and it is probable that this was the happiest period of his life. He removed to Frankfort, where his business before the courts could best be served, and here and in the surrounding counties his name became associated with many important trials. He was generally engaged by the defense and generally won his case. He was always in great demand for the defense in murder trials. One of his first public services after returning from the Senate was in connection with the boundary dispute between Kentucky and Tennessee. In 1820 he and John Rowan were appointed to treat with the latter state, but the negotiations failed, principally because the two Kentucky commissioners could not agree. The radical developments that had their climax in the Old and New Court struggle aroused Crittenden's conservative character, and,
After the defeat of Solomon P. Sharp, whose assassination on the eve of the meeting of the legislature necessitated a new election, Crittenden ran again and won. Four years later he was elected again and was reelected successively for the next three terms. Throughout these four years (1829–32) he was speaker of the House, and three times he was elected without opposition.

The presidential election of 1824 saw the beginning of Crittenden's active support of Henry Clay, which was to continue for the next quarter of a century. After Clay had been eliminated and the election had gone to the House of Representatives, Crittenden favored Jackson, though in no decided fashion. On the election of Adams he became the President's staunch supporter and received as a reward (1827) the appointment of United States district attorney for Kentucky. Knowing that Crittenden would be removed by President Jackson in 1829, the former's friends persuaded Adams to nominate him for the United States Supreme Court, but a majority of the Senate, supporting Jackson, refused to let the nomination come up for ratification before March 4, 1829, and so the appointment was never made.

When Jackson became president he promptly dismissed Crittenden from the district-attorneyship. In 1834 Crittenden became secretary of state of Kentucky under Gov. James T. Morehead.

In 1835 he was again elected to the United States Senate for a full term of six years, and for the remainder of his life he remained a national figure, being connected with the federal government in some capacity almost all the time. In the Senate he opposed Jackson's bank policy and Van Buren's financial schemes; and in the campaign of 1840 he spoke from one end of Kentucky to the other in favor of Harrison, whom he affectionately referred to in his correspondence as "Old Tip." In December 1840 the Kentucky legislature relected Crittenden to the Senate, but he soon resigned to accept from President Harrison the position of attorney-general. Immediately on assuming office he was sent to New York despite his protests, to aid the federal government in preventing a breach with Great Britain over the McLeod trial. He saw Gov. William H. Seward and secured from him a promise to pardon McLeod immediately if he should be convicted. This was Crittenden's only service of note as attorney-general and he insisted that it was an encroachment upon the duties of the secretary of state. Harrison's death one month after he had assumed the presidency placed at the head of the government John Tyler, whose refusal to support the Whig bank policy brought confusion to the party. Unable to agree with Tyler, Crittenden resigned on Sept. 11, 1841, together with all the other members of the cabinet excepting Webster.

Having given up a six years' term in the Senate to serve his party, Crittenden now after six months was left without an office. On his return to Kentucky he was welcomed at a public dinner at Maysville. His Woodford County friends, mindful that his private fortune had dwindled during his public service, bought at a cost of $17,000 the farm on which he had been born, and presented it to him. Kentucky elected him to the Senate again in 1842, to fill the position Clay had resigned, and he was reelected for the full term beginning Mar. 4, 1843. He now took a prominent part in the discussions on the Texan and Mexican question and on the Oregon boundary dispute. While earlier he had rejoiced to see Texas win her independence, he now strongly opposed her admission into the Union. He was equally opposed to forcing the issue with Great Britain on the Oregon question. Later when the joint occupation agreement was repealed, he insisted that England be given at least two years' notice. In this instance as well as in all other dealings with foreign nations he stood for a conservative, peaceful course of action.

In the campaign of 1844 he loyally supported Clay and stood with him against the annexation of Texas. On the defeat of the Whigs, Crittenden opposed the joint resolution admitting Texas into the Union. Shortly thereafter when Gen. Taylor was attacked by the Mexicans on the Rio Grande and President Polk asked for a declaration of war, Crittenden was skeptical as to the justice of the cause of the United States. Having long stood for peace and friendship with Mexico and South America he saw in this war a great calamity. When his government entered the struggle he was willing to support it with men and money, but he wished to send commissioners along with the army to offer peace with every blow. Throughout the war he kept up a voluminous correspondence with Gen. Taylor on military affairs, now and then interspersed with political matters. As early as 1847 presidential candidates were being discussed. Some of Crittenden's friends suggested his own name but he received the idea coolly, and led Taylor on in his ambitions to secure the Whig nomination. Clay, he was sure, could not possibly be elected if nominated, but he felt that Taylor might win. Clay, hearing of Crittenden's stand, wrote him in September 1847 for an avowal of his position, and received a confirmation of it. Thereafter Clay
never communicated with Crittenden until reconciliation came on the former's deathbed. Crittenden felt very keenly the loss of this long-standing and cherished friendship. Taylor after his election visited Frankfort and offered Crittenden his choice of the cabinet positions, none of which he accepted, refusing largely out of respect for Clay's feelings.

In the meantime Crittenden had in 1848 resigned from the Senate to run for governor of Kentucky, believing that only with his assistance could the Whigs carry the state. In November he won Kentucky for Taylor and was himself elected. In less than a year Taylor died, and Fillmore on assuming the presidency offered Crittenden the post of attorney-general, which he now accepted. During an illness of Webster in 1851 he acted as secretary of state. At the end of Fillmore's term Crittenden returned to Kentucky to resume his law practise, but in January 1854 he was elected again to the United States Senate. He saw with much concern the country torn over the slavery question and drifting toward war. He had always, with Clay, been actuated by the hope that slavery might eventually disappear, and had in 1836 been one of the vice-presidents of an anti-slavery society which James G. Birney was promoting. But he at no time embraced the abolition cause or showed patience with abolitionists. He decried the reopening of the slavery debate in the Kansas-Nebraska Bill and felt that a great mistake had been made when the Missouri Compromise was superseded. He opposed the Topeka constitution as irregular and held the Lecompton constitution to be a fraud. He believed that the South could not wish to lend its support to statehood for Kansas, since that would inevitably increase the Northern majority in Congress. He stood for any course of action that would bring peace and compose the slavery turmoil. His position on slavery in the territories was one of congressional non-intervention. With the downfall of the Whig party he came out in support of the Know-Nothings, advocating restriction of the privileges of aliens, especially with regard to their rights to the public lands. In the presidential election of 1860 he supported the Bell and Everett ticket, although he had entertained a good opinion of Douglas since his refusal to support the Lecompton constitution.

Perhaps the most solemn and the greatest effort of Crittenden's life came during his last three years. The Union had always been almost a passion with him, and as governor in 1848 he had said, "The dissolution of the Union can never be regarded—ought never to be regarded—as a remedy, but as the consummation of the greatest evil than can befall us" (Coleman, post, I, 333). The excitement over Lincoln's election produced melancholy forebodings in him. In Buchanan's message to Congress in December 1860 he saw some hope of a solution, though he did not agree with the President that there was no power in the national government to deal with the seceded states. In December he introduced in the Senate the famous "Crittenden propositions," restoring by constitutional amendment the Missouri Compromise line and guaranteeing the protection of slavery in the District of Columbia against congressional action. He saw his compromise defeated in the Committee of Thirteen, and he saw with bewildered amazement the uncompromising attitude of radical senators whose course he believed would deliberately destroy the Union. He even found great difficulty in getting the opportunity to present petitions to the Senate favoring the compromise measures. On Jan. 3, 1861, he introduced a resolution calling for a referendum on his propositions, feeling, as many have felt since, that his compromise would have been overwhelmingly supported by a popular vote. Later he sought to secure the adoption of the program of the Washington Peace Conference, but failed utterly.

Finding himself checked by a determined group of hostile radicals in Congress, he returned to Kentucky to keep his native state from seceding. On Mar. 26, 1861, he addressed the legislature and sought to show the utter folly of leaving the protection of the federal Union to join the weak and untried government of the Confederacy. On Apr. 17, five days after the Fort Sumter bombardment, almost dazed by the quick war movements, he made an address in Lexington in which he still counselled Kentucky to remain in the Union and to refuse to take part in a war she had neither promoted nor desired, but had tried to avert. This was the neutrality which the state adopted a month later. He was a member of the futile conference, May 10, between three Bell and Douglas representatives and three Breckinridge men to decide on some course of united action for Kentucky. On May 4 he was elected a delegate to a Border Slave State convention which met in Frankfort on May 27 and was made chairman. The convention called upon the seceded states to reexamine their position, and counselled moderation on the part of the North.

In June, Crittenden was elected to the special session of Congress meeting in July. Having failed to prevent the war, he now as a member of the House gave all of his efforts to controlling its purpose. On July 19 he introduced resolutions declaring that the war was not for the conquest
or subjugation of the South or to interfere with the established institutions of a state, but "to defend and maintain the supremacy of the Constitution, and to preserve the Union with all the dignity, equality, and rights of the several states unimpaired." He measured the subsequent acts of the Federal government by this standard and soon found many things of which he could not approve. He opposed the dismemberment of Virginia, the confiscation acts, the enlistment of negro troops, the Emancipation Proclamation, and the military régime in his native state, which was bringing about arrests, banishments, and interference with courts, elections, and trade. He was preparing to run for re-election to Congress when he died in Frankfort in 1863, not yet completely divorced from his sympathy for the national government.

Crittenden was married three times: first, in 1811, to Sally O. Lee, a daughter of Maj. John Lee of Woodford County; second, in 1826, to Mrs. Maria K. Todd, a daughter of Judge "Hary" Innes; and third, in 1853, to Mrs. Elizabeth Ashley, who survived him. He had altogether five sons and four daughters. In the Civil War one son, George B. Crittenden [q.v.], joined the Confederacy, to his father's great sorrow, and another, Thomas L. [q.v.], became a major-general in the Federal army.

Crittenden was never a profound lawyer, but he was one of Kentucky's greatest advocates at the bar. He loved political activities, was intensely honest in his opinions and dealings with people, and had feelings so tender that he could never forgive himself for offending a friend or losing one.

The records of Crittenden's life are voluminous. Besides the contemporary material in newspapers and in official sources, the Crittenden Papers are in the Lib. of Cong. No critical life of Crittenden has been written, but Mrs. C. Coleman, The Life of John J. Crittenden (2 vols., 1871), is a valuable source. Short sketches may be found in R. H. and L. Collins, Hist. of Ky. (1874); and in Lawyers and Lawmakers of Ky. (1897), ed. by H. Levin; R. M. McElroy, Ky. in the Nation's Hist. (1909), is also valuable.

E. M. C.

CRITTENDEN, THOMAS LEONIDAS
(May 15, 1810–Oct. 23, 1893), lawyer, soldier, was the second son of John Jordan Crittenden [q.v.] and Sally (Lee) Crittenden, and a brother of George B. Crittenden [q.v.]. He was born in Russellville, Logan County, Ky., received an education as good as could be obtained outside of a college, and early began the study of law under his eminent father. He was admitted to the bar in 1840 and two years later was elected commonwealth's attorney for his district. At the outbreak of the Mexican War he enlisted, was appointed aide to Gen. Zachary Taylor, a kinsman, and was present at the battle of Buena Vista. A few months later when the 3rd Kentucky Infantry was organized he was made its colonel, with John C. Breckinridge [q.v.] serving as a major under him. He was mustered out of the service in 1848. When Taylor became president he appointed Crittenden consul at Liverpool, where the latter remained until 1853, in that year returning to Kentucky to begin the practise of law in Frankfort. After a few years he removed to Louisville and became a merchant.

When the state's militia laws were reorganized in 1860 and the state guards were set up under the control of Simon B. Buckner [q.v.], Crittenden was commissioned major-general. Following in the footsteps of his father, he opposed secession, and, on Sept. 18, after Buckner had led most of the state guards to the Confederacy, was given command of the state forces. The Kentucky troops were soon mustered into the Federal service, however, and Crittenden joined the Union army, being made a brigadier-general on Oct. 27, 1861. He commanded a unit in the march south through Kentucky and in the invasion of Tennessee. He especially distinguished himself at Shiloh, for which service he was promoted major-general. He was with Rosecrans at Murfreesboro and at Chickamauga, commanding the left wing in the former battle and the 21st Army Corps in the latter. At Chickamauga he was driven back after having weakened his forces to reinforce Gen. Thomas. He was relieved of his command and his conduct investigated. On Dec. 14, 1863 the Kentucky legislature demanded of President Lincoln a rehearing. In February following, Crittenden was honorably acquitted by a court of inquiry at Louisville. He was now transferred to the Army of the Potomac in Virginia and on Dec. 13, 1864 resigned from the service.

In January 1866 he was appointed state treasurer for Kentucky but on Nov. 15, 1867, having been offered a colonelcy by President Johnson, he resigned his civil office to reenter the army. He was stationed at various posts in the West, and finally at Governors Island where he remained until he was retired in 1881. He died at Annadale on Staten Island, twelve years later, and was buried in the Frankfort cemetery.

He married Kittie Todd of Frankfort.

Crittenden

CRITTENDEN, THOMAS THEODORE
(Jan. 1, 1832—May 29, 1909), governor of Missouri, was born near Shelbyville in Shelby County, Ky. His father, Henry Crittenden, was a younger brother of John Jordan Crittenden [q.v.]. His mother, Anna M. (Allen) Crittenden, was the daughter of John Allen, an eminent Kentucky lawyer. Young Crittenden received such education in the elementary branches as the schools of the country afforded and in 1852 entered Centre College at Danville, Ky., from which institution he graduated in 1855. He then studied law in the office of his uncle, John J. Crittenden, at Frankfort, and was admitted to practise in 1856. In the fall of the same year, he was married to Carrie W. Jackson, a lady of charming accomplishments, daughter of Samuel Jackson of Kentucky. Crittenden removed to Missouri in the summer of 1857, settled at Lexington in Lafayette County, formed a law partnership with Judge John A. S. Tutt, and very soon attained an active and lucrative practise. Early in the Civil War he entered the Union service and was appointed by Gov. Gamble to be lieutenant-colonel of the 7th Regiment of the Missouri State Militia, a cavalry regiment commanded by Col. John F. Philips. This regiment performed much valuable service and did good fighting in Missouri and Arkansas. Crittenden served to the end of the war and was honorably discharged in 1865. He had already been appointed attorney-general of Missouri by Gov. Hall to fill the vacancy caused by the death of Aikman Welch in 1864. At the close of the war he returned to civil life and formed a partnership with Francis Marion Cockrell [q.v.] for the practise of law at Warrensburg. This partnership existed until Crittenden was elected to the United States Congress from the 7th Missouri congressional district in 1872. He served one term, but in 1874 after 600 ballots he was defeated for renomination by his old military associate, Col. John F. Philips. In 1876 Crittenden received the nomination without solicitation on his part and was elected by the largest Democratic majority ever given in the 7th district. In 1880 he secured the nomination for governor on the Democratic ticket, and in the election defeated the Republican candidate, David P. Dyer, by a plurality of 54,034. The most memorable act of his administration was the institution by the State of Missouri of the suit against the Hannibal & St. Joseph Railroad for the payment, with interest, of $3,000,000 loaned to that road in 1851 and 1855. The suit was settled in favor of the state, and the road paid the claim in full with accrued interest. Crittenden was persis-
tent in his efforts to suppress outlawry, and succeeded in ridding Missouri of the notorious Jesse James [q.v.] and in breaking up the James gang. During the second administration of President Cleveland, he was appointed consul-general to Mexico. At the time of his death in Kansas City, May 29, 1909, he was referee in bankruptcy for the United States district court. He was a man possessed of an unusually cheerful and genial disposition. In politics he was a Democrat of the conservative type, and in religious belief a Presbyterian of the old school. In Congress he was a conspicuous figure and made friends among the leading politicians. As governor, he was distinguished by his positive and aggressive spirit.

Cities (1884); Messages and Proclamations of the Govs. of the State of Mo., vol. VI (1921); Centennial Hist. of Mo. (1921), vol. III; Mo. Hist. Rev., July 1909; Kansas City Star, May 29, and St. Louis Republic, May 30, 1909.]

F. C. S.—r.

CRITTENTON, CHARLES NELSON
(Feb. 20, 1833—Nov. 16, 1909), "Merchant Evangelist," founder of the Florence Crittenton Missions, was of English and Welsh ancestry, the son of Harvey and Phoebe (Matson) Crittenton. Born and brought up on a farm in Henderson, Jefferson County, N. Y., he was educated in the common schools, and began his business career as a clerk in the village store. When twenty-one years old he went to New York to make his fortune, and succeeded. First he was office boy for an undertaker, the sexton of St. George's Church; then bookkeeper, cashier, and salesman for W. H. Dunham, later being taken into the firm, which was known as Dunham, Crittenton & Company. In 1861 he withdrew and with sixty dollars capital started a drug business in a little back room on Sixth Ave. Ultimately this became the Charles N. Crittenton Company, capitalized at $800,000. In 1859 he married Josephine Slosson of Lawrenceville, Pa. With his wife he was confirmed in St. Clement's Episcopal Church in 1874, but did not "experience conversion" until after the death of his four-year-old daughter Florence in 1882. Almost immediately he became active in evangelistic and mission work, especially in rescue work for women, and soon retired as the active head of his business in order to give all his time to service. With others he formed an organization for saving unfortunate women, named after his daughter the Florence Mission, which opened at 27 Bleecker St., Apr. 19, 1883. Similar institutions were started elsewhere, so that at the
CROCKER, ALVAH (Oct. 14, 1801-Dec. 26, 1874), manufacturer, politician, and railroad builder, was born in Leominster, Mass., the eldest son of Samuel and Comfort (Jones) Crocker. Both parents were intensely religious; they had been founders of the Baptist church in Leominster, and their seven sons were reared in the strictest traditions of New England Puritanism. As the family was large and the income small, Alvah was put to work in a paper-mill at the age of eight where he worked twelve hours daily at twenty-five cents a day. His schooling was scanty, but was supplemented by wide reading and by a short period at Groton Academy during his sixteenth year. Having given up hope of attending college, he went to work in 1820 in a paper-mill at Franklin, N. H. Removing to Fitchburg, Mass., in 1823, he worked for a while in the mill of Gen. Leonard Burbank. In 1826 he managed to borrow sufficient capital to start paper-manufacturing on his own account. His early years as a manufacturer were hard ones, but unfailing optimism and unremitting toil enabled him so to establish his factory that his business continued to grow even when his own energies were largely consumed in politics and railroad building. Increasing pressure of other affairs led him in 1850 to take in Gardner S. Burbank as his partner, and to reorganize his paper-factory as Crocker, Burbank & Company. This firm expanded rapidly until it became one of the largest paper-manufacturing concerns in New England. In addition to manufacturing paper Crocker at one time owned a chain factory and a machine-shop (both destroyed by fire in 1849). In 1847 he was prominent in establishing the Fitchburg Mutual Fire Insurance Company; he was on the first board of directors of the Rollstone Bank, and was a trustee of the Fitchburg Savings Bank from 1851 until his death. Perhaps his most significant contribution as a manufacturer was his organization of the Turners Falls Company in 1866 which set itself to develop the water-power at Turners Falls, Mass., and built there a number of mills. Until his death Crocker was a leader in the growth of that community.

He was one of the earliest of the American business men whose imaginations were fired by the possibilities of rail transportation. As a member of the legislature, as a speaker at scores of meetings, and as the leading member of the board of directors he was chiefly responsible for the building of the Fitchburg Railroad (1843-45) between Boston and Fitchburg. His dreams, however, were more inclusive, and he labored for many years to open rail communication with Canada and the West. Hardly had the last spike been driven in the Fitchburg Railroad before a charter was obtained for the Vermont & Massachusetts Railroad which Crocker, as president, built from Fitchburg to Brattleboro, Vt., between 1845 and 1849. In 1848 a bill to incorporate the Troy & Greenfield Railroad was passed. To build this railroad necessitated the tunneling of the Hoosac Mountains and a loan from the state to carry the work to completion. During all of the early stages Crocker was the leader in the movement for the western connection, and when, in 1868, the state was forced to complete the work, he became commissioner in charge.

His interest in politics was life-long. He commenced as "bog-reeve" in 1830, became "tithingman" in 1831, and after holding other local offices was elected to the General Court in 1836. He served three times in the lower house and twice in the upper, his service covering the years 1837-38 and 1842-43. Upon the resignation from Congress of William B. Washburn to become governor of Massachusetts (1872), Crocker was elected on the Republican ticket to complete his term, and was re-elected the same year to the Forty-third Congress. Past seventy when he entered Congress, he refused to be a candidate a third time. He was not only an indefatigable worker and a man of great earnestness of purpose, but a ready debater and excellent orator. A devout Christian, and a vestry-
man of the Episcopal Church, he left a political
and business reputation of the strictest honesty.
He was married three times: first, to Abigail
Fox of Jaffrey, N. H., on Aug. 14, 1829; sec-
ond, to Lucy A. Fay of Fitchburg, on Apr. 9,
1851; and third, to Minerva Cushing, on Oct.
20, 1872.

\[\text{H. U. F.}\]

**CROCKER, CHARLES** (Sept. 16, 1822-Aug.
14, 1888), merchant, railroad builder, capitalist,
was the son of Isaac Crocker, a merchant of
Troy, N. Y., and Eliza Wright, daughter of a
Massachusetts farmer, both of whom traced their
lineage in this country back to the early sev-
teenth century. Charles Crocker had few edu-
cational advantages and at an early age began to
aid his father in the support of the family. In
1836 the family moved to Marshall County, Ind.,
and soon afterward Crocker began to earn his
own living, working first as a farm-hand, then
in a sawmill, and then as an apprentice in an
iron forge. In 1845 he discovered a bed of iron
ore in Marshall County and established a forge
under the name of Charles Crocker & Company.
When gold was discovered in California this
business was sold, and Crocker led a band of
young men, including his two younger brothers,
Clark and Henry, by the overland route to the
Pacific Coast, arriving there in 1850. In 1852
he gave up mining and opened a store in Sacra-
mento, Cal., and in October of the same year
returned to Indiana for a short time and married
Mary A. Deming. By 1854 he was one of the
wealthiest and most prominent men in Sacra-
mento and in 1855 was elected to the City Coun-
cil. In 1860 he was elected to the state legis-
lature and soon afterward became associated
with Leland Stanford [q.v.], Collis P. Hunting-
ton [q.v.], and Mark Hopkins in the building of
the Central Pacific Railroad across the Sierra
Nevada Mountains to connect with the Union
Pacific Railroad then being constructed west-
ward from Omaha, Nebr. Crocker had charge
of the actual work of construction, leaving the
problems of financing and general policy to his
associates. A man of tremendous energy whose
strongest point lay in the supervision of large
groups, Crocker was well fitted for the task.
He lived in the construction camps, faring no
better than his men, and seldom left them except
on pressing business. He was constantly mov-
ing up and down in the line guiding the opera-
tions of the army of contractors and their work-
ers. Under his supervision, records for railroad
building were established which have never been
equalled since. At one time construction averaged
three miles per day through rough country. Only
a man of extraordinary physique could have en-
dured the great strain without rest or recrea-
tion, but Crocker had a constitution of iron
without nerves. The work on the Central Paci-
fic was begun on Feb. 22, 1863 and completed on
May 10, 1869. During this period Crocker had
charge of the construction, and he was president
of the Contract and Finance Company until
1869. It was through his efforts that the road
was completed seven years ahead of the time
allowed by the United States government. In
1871 he was elected president of the Southern
Pacific Railroad of California, the construc-
tion of which he personally supervised. In 1884
he effected the consolidation of the Central and
Southern Pacific roads and later took an active
interest in the construction of the California
and Oregon road between San Francisco and
Portland. In addition to his railroad interests
Crocker was concerned in real estate, in bank-
ing and in industrial properties throughout the
state of California. He was also much interested
in the development of various irrigation proj-
ects. After the success of the Central Pacific Railroad became certain, he built in San Fran-
cisco a mansion said to have cost $1,500,000
with the furnishings. This was long one of the show
places of the city, but was destroyed in the fire
of 1906. Later a home was also established in
New York City. Despite his success Crocker
always remained a plain man with simple tastes
and was domestic by choice. In 1886 he was
seriously injured when thrown from his carriage
while driving in New York City and never
really recovered his health. He died in Mon-
terey, Cal., and was survived by his wife, three
sons, and a daughter. His fortune was estimated
at $40,000,000.

Stanford, among others, see \textit{Senate Ex. Doc. No. 54,}
50 Cong., 1 Sess.]
CROCKER, FRANCIS BACON (July 4, 1861—July 9, 1921), electrical engineer, the son of Henry Horace and Anne (Eldredge) Crocker, was born in New York City. He was graduated in 1882 from the School of Mines at Columbia University, and later received the degree of Ph.D. In 1883 with Charles G. Curtis, Crocker formed the firm of Curtis & Crocker, patent attorneys and patent experts. In 1886 the two partners established the C. & C. Electric Motor Company, from which Crocker resigned two years later to join Schuyler S. Wheeler in the formation of the Crocker-Wheeler Company, of which he remained a director throughout his life. His brilliant work in his design of electric motors and the arc furnace and in the chemistry of the primary battery, at a time when these were virgin subjects, resulted in his selection by Columbia University to create and take charge of the department of electrical engineering. He remained in that work for twenty years, poor health alone causing him to retire. His directorship of the department was so successful that many of the technical schools of the United States in the organization of their electrical engineering departments followed the program first mapped out by Crocker at Columbia.

Crocker's most important contribution to the electrical industry was the creation with Charles G. Curtis and Schuyler S. Wheeler of the commercial motor of standard specification, the first of which was put into use in 1886 and which was the forerunner of all the motors now in use. Of this motor Dr. M. I. Pupin said, "It was a wonder of efficiency for those days and for the size of the motor. It is the earliest monument to Crocker's life-long faith that empiricism has no place in the art of designing electrical machinery" (Electrical World, July 16, 1921, p. 135). It is as "Father of American electrical standards" that Crocker will probably go down in engineering history. He was chairman of the committee of the American Institute of Electrical Engineers which drew up the original standardization rules for electrical apparatus, and chairman of the committee which revised them. He was also chairman of the conference of insurance and engineering representatives who formulated the National Electric Code. To him is credited the choice of the name "henry" for the international unit of inductance, a name he chose to honor Joseph Henry of the Smithsonian Institution. In the effort to effect complete international standardization of electrical equipment he was one of the two American delegates to the International Electrotechnical Commission in London in 1906. At its most important session he was able to insure the standardization necessary to make world-wide electrical manufacturing successful. On this occasion Lord Kelvin said of him, "He is one of the world's two greatest electrical engineers."

Crocker's writings were numerous, including many papers for the scientific and technical press as well as a two-volume treatise on electric lighting. His last contribution before his death dealt with temperature rating of motors. He had a remarkably easy, interesting, and at the same time clear and concise, method of writing, and this combined with his belief that things should not be made to appear complicated or "technical" to the public, made him much in demand as a lecturer and writer. He was probably the best known of consulting inventors. In 1897-98 he was president of the American Institute of Electrical Engineers. During the World War he was an adviser for the members of the Naval Consulting Board; he had been asked to become a member of the Board but refused because of poor health. In 1917, in company with Peter Cooper Hewitt, he developed the first helicopter in this country which was capable of flight. So important was this invention that the government took it over and was preparing to manufacture it for use in France when the Armistice was signed. Crocker's researches into the problem of curvature for airplane wings were most successful, and many of his discoveries are now in every-day application. He was a man of many friends and his life was one of constant graciousness. At his death there was an outpouring of tributes to his memory from both industrial and scientific leaders in the electrical world.

[Files and Jour. (Aug. 1921) of the Am. Inst. of Electrical Engineers; Electrical World, July 16, 1921; Aerial Age Weekly, July 18, 1921; N. Y. Times, July 11, 1921; Engineering News-Record, July 14, 1921; Power, July 19, 1921.]

K.W.C.

CROCKER, HANNAH MATHER (June 27, 1752—July 11, 1829), writer, early advocate of woman's rights, was born in Boston, the granddaughter of Cotton Mather, and the seventh child of Rev. Samuel and Hannah (Hutchinson) Mather. On Apr. 13, 1779, she became the wife of Joseph Crocker, son of Rev. Josiah Crocker of Taunton, Mass., a graduate of Harvard, and a captain in the Revolutionary War. Her entire life apparently was spent in the vicinity of Boston. As was to be expected in one of the Mather family, she had a vigorous mind, a firm will, and a keen interest in moral and social questions. Her earlier years were necessarily much taken up with domestic duties, for she was the mother of ten children, and it was not until some time after her husband's death in 1797
that any of her publications appeared. She was among the first women in this country to be conspicuously interested in Masonry, making a study of the history of the institution, and herself being matron of a lodge of women founded on its principles. Chief among the objects of this lodge was the cultivation of the mind, since at that period, she says, "If women could even read and badly write their names, it was thought enough for them, who by some were esteemed as only 'mere domestic animals.'" In 1810 she wrote some letters in the form of a correspondence between "Enquirer" and "A. P. Americana," in advocacy of Masonry, which at the request of Rev. Thaddeus M. Harris [q.v.] she published in 1815 under the title, Series of Letters on Free Masonry, by a Lady of Boston. The following year she published The School of Reform, or Seaman's Safe Pilot, to the Cape of Good Hope, a little homily addressed to sailors with some use of nautical terms, warning against intemperance and vice. In 1818 appeared her Observations on the Real Rights of Women, with Their Appropriate Duties, Agreeable to Scripture, Reason and Common Sense. In it she admits that owing to Eve's having first yielded to temptation, woman was put under subjection to man, though she naively remarks that Adam was to blame for letting his mate wander about the Garden unattended; but she argues that with the Christian dispensation woman was restored to an equality with man. Moral and physical differences in the sexes allot to each appropriate duties, and woman should not trespass upon the peculiar sphere of man, but both have equal powers of mind and ability to judge what is true and right, and recognizing this fact should cooperate in mutual respect and fidelity. Mrs. Crocker inherited most of the Mather library and family portraits and transferred them to Isaiah Thomas [q.v.] for the American Antiquarian Society, Worcester, Mass. At her death she was buried in the Mather tomb, Copp's Hill, Boston.

CROCKER, URIEL (Sept. 13, 1796—July 19, 1887), printer, publisher, was born at Marblehead, Mass., a son of Uriel and Mary (James) Crocker, and the third of eight children. He was graduated from the Academy at Marblehead "as first scholar" when barely fifteen. A true son of the old Massachusetts port he felt the urge to go to sea, but "None of my descendants shall go to sea," was grandfather Capt. James's stern command. Grandfather Crocker took the lad to Harvard for the 1811 Commencement and introduced him to Samuel Parkman, in the hope that the latter would find a job for the grandson in Boston. A few weeks later Uriel was established as "printer's devil" in the office of Samuel T. Armstrong [q.v.], in Cornhill, Boston. For the first four years of his apprenticeship he received his board ($2.50 per week), thirty dollars a year for clothes, and twenty-five cents a thousand for all types he set up in a day in excess of 4,000. The lad's account book shows he earned in this way $180.02 in the four years, and at the end of that time he had attained such proficiency that Armstrong promoted him to be foreman of the establishment. "He told me," said Crocker, "to manage the office just the same as if it was my own, and if any of the men did not do what I told them to, I was to order them to go down stairs and get their money" (Memorial of Uriel Crocker, p. 32). Such was the kindly manner of the nineteen-year-old foreman that he never had "an unpleasant or unkind word" from any of his fellow apprentices. In 1818 Armstrong took Crocker and Osyn Brewster [q.v.], into partnership with him, and seven years later the firm name became Crocker & Brewster. Religious books in great number bear the imprint of the firm; the "best seller" of them all was Scott's Family Bible (1824) which was the first large work in America to be printed from stereotyped plates. The undertaking was distinctly Crocker's. It required eighteen months of labor and cost $20,000. The work in six volumes retailed at twenty-four dollars. The firm published many school texts also, including Andrews's First Lessons in Latin, and a complete set of Latin texts by the same author.

A branch office was established in New York in 1821, but the business there suffered under a dishonest manager and was sold to Daniel Appleton [q.v.] and Jonathan Leavitt, a transaction which represents the start of the publishing firm of D. Appleton & Company. The first iron-lever printing-press in Boston was introduced by Crocker & Brewster, as was also the first power press. During the panic of 1837 when all other booksellers failed, Crocker & Brewster continued in business. From 1811 to 1864 the firm was situated at the same place, although the street number was changed from 50 Cornhill to 47 Washington St. Then a move was made to the adjoining building and the business continued till 1876 when the octogenarian partners sold out to Houghton & Company.

Crocker took great interest in railroad devel-
Crockett

opment, being a director of the Old Colony Railroad Company for many years, president of the Atlantic & Pacific Railroad Company in 1874, and a director of several other roads at different times. The variety of his interests is shown in his official connection with the Boston Dispensary, the Old South Society, the Bunker Hill Monument Association (he addressed the annual meeting of this organization, June 17, 1885, giving reminiscences of Lafayette's visit to New York and Boston in 1824), the Franklin Savings Bank, the Boston House of Correction, the United States Hotel Company, the South Bay Improvement Company, the Massachusetts Charitable Society, the Massachusetts Charitable Mechanics Association, and Mount Auburn Cemetery. Crocker's wife, whom he married on Feb. 11, 1829, was Sarah Kidder Haskell, daughter of Elias Haskell of Boston.

[Memorial of Uriel Crocker (1891), compiled by his son, Uriel Haskell Crocker, is the chief source of information. The book includes Crocker's reminiscences, a number of portraits and letters, a "Crocker Genealogy," and a catalogue of Crocker & Brewster publications. See also obituary in The Publisher's Weekly, July 23, 1887.]

A. E. P.

CROCKETT, DAVID (Aug. 17, 1786–Mar. 6, 1836), frontiersman, was the son of John and Rebecca (Hawkins) Crockett, and was born near the present Rogersville, Hawkins County, Tenn. His father, a Revolutionary soldier who fought at King's Mountain, was born either in Ireland or on the voyage to America, and his mother in northern Maryland. His parents moved (probably from Lincoln County, N. C.) to the Hawkins County location about three years before he was born, later settling on the Holston, where the father kept a tavern. Here the boy remained until about his thirteenth year. To escape an anticipated beating he ran away from home, making his way as far as Baltimore and wandering about for nearly three years. On his return he worked for six months for a neighbor to pay off a debt of $36 owed by his father, and another six months for another neighbor to cancel a similar debt of $40. At eighteen, to heighten his chances with the girl of his choice, he went to school for nearly six months, but left when he learned that he had been jilted. Some months afterward he married Polly Findlay, and on a rented tract, with a horse, his bride's dower of two cows with calves, and $15 capital borrowed from a friend, he set up a home of his own. Though a mighty hunter, he was a poor farmer, indolent and shiftless, and he did not prosper. A couple of years later, with his wife and two babies, he moved to a farm in Lincoln County, near the Alabama line. In the

Crockett War of 1813–14, under the command of Andrew Jackson, he served with distinction as a scout, but retired before the end of the campaign, hiring a substitute to fill out his term of enlistment.

His wife died about 1815, leaving him with three children. He acquired two more by his marriage, some months later, to the widow of a fellow-soldier. He now moved to a settlement eighty miles west, where he was informally chosen a magistrate, and on the incorporation of the district into Giles County was appointed a justice of the peace. In after years he could boast that in reaching his decisions he "relied on natural-born sense instead of law learning" and that none of his judgments was ever reversed. He was elected as colonel of a militia regiment organized in his district, and in 1821 was elected to the legislature. He was then wholly unacquainted with public affairs and did not even know the meaning of the word "judiciary." He moved again, this time to a point in the extreme western part of the state, near the junction of the Ohio with the Mississippi, where his nearest neighbor was seven miles distant. Here, among other activities, he hunted bears; and unless he woefully miscounted his victims, he succeeded in killing, during a period of eight or nine months, 105 of them. His new constituency elected him to the legislature in 1823. In the spring of 1826 he attempted to float a cargo of staves down the Mississippi, losing all his cargo and nearly losing his life. A jocular proposal that he run for Congress decided him to make the race in earnest, and after a campaign enlivened by his humorous stories and the ridicule of his two opponents he was elected. He served in the Twentieth and Twenty-first Congresses (1827–31), was defeated for the Twenty-second, but was elected to the Twenty-third (1833–35). In April 1834, he commenced his celebrated "tour of the north," visiting Baltimore, Philadelphia, New York, and Boston, and, after returning to Washington, left for home to prepare for a new campaign. From the time he entered public life he had generally opposed Jackson, having voted in the legislature against him for United States senator, and later having voted against many of the Jackson measures in Congress. An effective rally of the Jackson sentiment in his district caused his defeat. Disheartened by this reverse, he resolved to leave Tennessee. The movement for Texan independence attracted him, and he started for the war front by way of Little Rock. He arrived at the Alamo in February 1836, took part in its heroic defense, and fell, bullet riddled, in the final assault.
Croghan

Crockett was a brave soldier, an able scout, and an expert rifleman. He was generous and open-handed, frank and upright, of a sterling independence of spirit and blessed with a bubbling good nature and an exceptional degree of self-confidence. His knowledge of public questions, a meager at the start of his career, was probably not greatly enhanced by his service in Washington. He was not a student. He rather prided himself on his lack of education—correct spelling appearing to him in the main as something "contrary to nature" and grammar "nothing at all," despite "the fuss that is made about it." To what degree the autobiographical writings published in his name were his own cannot be said; but it is noteworthy that they bear little resemblance, either in substance or manner, to such of his letters as have come down to us.

CROGHAN, GEORGE (d. Aug. 31, 1782), Indian trader and agent, was brought up as an Episcopalian near Dublin, Ireland, and migrated to Pennsylvania in 1741. His relationship to Gen. William Croghan and his son, Col. George Croghan [1791-1849, q.v.] is uncertain. He established a home on the frontier near Carlisle, Pa., and made it a base for his trading operations. Here his only white child, Susannah, was born in 1750. Croghan was rapidly transformed into a typical frontiersman. He learned the Delaware and Iroquois languages and had an intimate knowledge of the habits and customs of the Indians. He established trading-posts throughout the upper Ohio country; from them English influence spread among the Indians to such a degree that the French feared that a wedge would be driven between Canada and Louisiana. In the numerous Indian councils and treaties that followed, Croghan, as the representative of Pennsylvania, was the leading English agent. In 1752, the French in self-defense opened hostilities at Pickawillany, and by 1754 Croghan's business in the West was ruined and his employees and fellow traders killed or driven across the mountains. As a captain in charge of friendly Indian scouts, he assisted Washington and Braddock in their attempts to stop the French onslaught.

In 1756, Sir William Johnson rewarded Croghan's restless activity and his genius for Indian negotiations by taking him into the imperial ser-vice as his deputy superintendent of Indian affairs. As such, Croghan conducted the most important and delicate negotiations with the strong and sullen tribes in the Northwest. He assisted Gen. Forbes in capturing Fort DuQuesne in 1758 and Col. Bouquet in occupying Detroit in 1760. In 1764, he was in England, supporting before the leading English officials a plan for a strong imperial Indian department and also furthering his own and others' plans to exploit western lands. Upon his return Gen. Gage and Sir William Johnson sent him upon his most famous mission, that of opening the Illinois country to English occupation. It was still ruled by the French and thither Pontiac had retreated like a lion at bay. While on the way, Croghan and his party were attacked and he himself tomahawked and taken prisoner. "I got the stroke of a Hatchet on the Head, but my skull being pretty thick, the hatchet would not enter, so you may see a thick skull is of service on some occasions," he wrote to his friend Capt. Murray. Soon, however, he was freed, met Pontiac, and made a final treaty of peace with him. In 1768 he played a prominent part in making the important treaty of Fort Stanwix. The policy of economy and of restricting the imperial Indian department caused him to lose interest in it and finally to resign in 1772. Meantime he had acquired several thousand acres of land around Carlisle, but soon sold most of his holdings at a profit and followed the advancing frontier to Pittsburgh. Here, in 1758, he built "Croghan Hall" and acquired large estates. In central New York he patented over 250,000 acres. He also purchased 200,000 acres near Pittsburgh from the Indians, but failed to perfect his title. His greatest rival here was George Washington. Between 1763 and 1775, Croghan was intimately associated with Benjamin Franklin, Sir William Franklin, Sir William Johnson, Samuel Wharton, and William Trent [qq.v.] in organizing western land companies. He was a member of the Indiana Company, which for years vainly tried to secure legal recognition of its grant of 2,500,000 acres on the upper Ohio, and of the Illinois Company, which tried to secure 1,200,000 acres on the Mississippi and establish a colony there. Most promising of all, however, was his charter membership in the Grand Ohio Company which planned to establish the "fourteenth" English colony, Vandalia, south of the Ohio. The outbreak of the Revolution, however, wrecked all of Croghan's extensive land operations. His last years were spent in poverty. He was unjustly accused of being a Tory, in spite of the fact that he had served as chairman of the committee of correspondence at Pittsburgh in 1775. He died at
Passyunk, near Philadelphia, in 1782. Next to Sir William Johnson, Croghan was the most prominent English Indian agent of his time. His journals and correspondence constitute one of the chief sources for the history of the West from 1745 to 1775 and his career epitomizes it. He was one of the first Englishmen to foresee the future greatness of the wilderness beyond the Appalachians.

Most of Croghan's journals and many of his letters are found in the III. Hist. Colls., vols. X (1913) and XI (1916); Pa. Archives; Pa. Colonial Records; Docs. Relative to the Colonial Hist. of the State of N. Y., vols. VI to IX (1855); and R. G. Thwaites, Early Western Travels, vol. I (1904). A. T. Volwiler, Geo. Croghan and the Westward Movement, 1741-82 (1926), gives a full bibliography. See also C. W. Alvord, The Miss. Valley in British Polities (2 vols., 1917); Francis Parkman, Conspiracy of Pontiac (1870) and Montecalm and Wolfe (1884).] A. T. V.

CROGHAN, GEORGE (Nov. 15, 1791-Jan. 8, 1849), soldier, was born near Louisville, Ky. His father, William Croghan, emigrated from Ireland, became a planter in Virginia and then in Kentucky, and made an excellent military record during the Revolution. George's mother was Lucy Clark, sister of George Rogers Clark [q.v.] and of William Clark [q.v.], one of the members of the famous Lewis and Clark expedition. Young Croghan was inspired by his illustrious relatives and read widely in history, biography, and military subjects. He graduated from William and Mary College in 1810. During the War of 1812 Croghan's family prestige, together with efficient service as a volunteer aide-de-camp in the battle of Tippecanoe, led Gen. William Henry Harrison to recommend his appointment as captain in the regular army, even though he was barely twenty-one. His excellent record in the defense of Fort Defiance and Fort Meigs caused Harrison to give him command of Fort Stephenson in northern Ohio. Here on Aug. 1, 1813, with 160 men and only one cannon, this youth successfully defended himself with great skill and gallantry against Gen. Proctor with an overwhelming force of British and Indians. Though the event had no great military significance (Harrison had wisely planned to abandon the fort before the attack), it touched the imagination and thrilled the hearts of the American people at a time when disgraceful incompetence, defeat, and surrender alone filled the newspapers. It was a fit prelude to Perry's victory and the battle of the Thames. Presents were showered on Croghan; he was brevetted lieutenant-colonel and Congress tardily awarded him a gold medal in 1835. Except for the few days at Fort Stephenson his life was commonplace and uneventful. In May 1816 he married Serena Livingston, a daughter of John R. Living-}

Croghan, a member of the famous Livingston family of New York. He served as postmaster at New Orleans in 1824, and very ably as inspector-general in the regular army. Drink ruined many of his later years. He served under Taylor in the Mexican War and died of cholera at New Orleans in 1849.

CROIX, TEODORO DE (June 30, 1730-1792), was commandant general of the Provincias Internas of Mexico, 1776-83, and viceroy of Peru, 1784-89. He was descended from a distinguished Flemish family, and at the age of seventeen years entered the Spanish army. Promotion was rapid and before he was thirty years old Teodoro received a colonel's commission. Five years later (1765) he accompanied to New Spain, as captain of the guards, the new viceroy, his uncle, the Marqués de Croix. Soon afterward the royal visitor, José de Gálvez, appointed Teodoro to the important post of collector at Acapulco, the port of arrival and departure for the richly laden vessels in the Manila galleon service. His efficiency and administrative ability are attested by the fact that the port revenues increased greatly during his incumbency. In 1767 Teodoro was entrusted with the supremely important task of collaborating with Viceroy Croix and Gálvez in the execution of the king's secret instructions for the suppression of the Jesuit Order in New Spain. Three years later he was promoted to the rank of brigadier-general and in 1771 he returned to Spain to resume active military service.

Meanwhile, at the suggestion of Gálvez, it had been decided to detach the northern provinces of New Spain—Nueva Vizcaya, Coahuila, Texas, New Mexico, Sinaloa, Sonora, and Upper and Lower California—from the jurisdiction of the viceroy and create of them a new military and political entity, directly under the king, to be known as the Commandancy General of the Provincias Internas. This change, which was virtually equivalent to the creation of a new viceroyalty, was effected by a royal order, dated Aug. 22, 1776, and the same day the king named Teodoro de Croix as the first commandant general. As such he exercised supreme military and civil authority, and, in addition, was invested
Croker

with the administration of the royal finances and the right, under certain limitations, to appoint to church offices. As commandant general Croix set a high standard for administrative efficiency. De Burgos says: "Law, justice, and finance were thoroughly reformed: agriculture and mining were fomented; population increased; towns were founded; the army was reorganized; the paymasters were regenerated; Indian militia were established; home guards and minutemen were created; California was promoted; prisons were built and hospitals founded; crimes decreased; vagabondage diminished; and respect for Spanish institutions increased." Croix was promoted on Feb. 13, 1783, to the rank of lieutenant-general; two days later he was relieved of his post as commandant general. Upon arriving in Mexico City on Sept. 26, 1783, he learned that he had been named viceroy of Peru, the highest office within the gift of the Spanish monarch. He assumed power on Apr. 6, 1784, and ruled for five years. He left office virtually penniless and returned to Spain. In 1791 he was made colonel in the king's bodyguard and also was promoted to a commandership in the Teutonic Order. He died in Madrid at the age of sixty-two.

CROKER, RICHARD (Nov. 23, 1841-Apr. 29, 1922), New York City politician, was a native of Ireland, where his family, originally English, had lived for six generations. He was born at Cloghnakilty, County Cork, the son of Eyre Coote Croker. His mother belonged to the Scotch family of Wellstead, which had lived in Ireland perhaps as long as the Crokers had. When Richard was three years old, his father and mother, with their nine children, migrated to America, settling in New York City, where Richard attended a public school irregularly from his eleventh to his thirteenth year. At thirteen he was large for his age and began working as a machinist. At nineteen he was leader of the "Fourth Avenue Tunnel Gang" and a prize-fighter of no slight distinction among the youth of New York's upper East Side. After he reached his majority, he attached himself to Tammany Hall, which was in control of the city government, under William M. Tweed [q.v.]. He was appointed an attendant in the supreme court, but left that sinecure to become an engineer on a Fire Department steamer. From this comparative obscurity he emerged in 1868 as a member of the "Young Democracy," a faction of Tammany, headed by "Honest John" Kelly [q.v.], which made war on Tweed and all his cohorts. Thirty years later Croker declared that in this fight he was actuated solely by a consuming zeal to release the city from the clutches of Tweed, who had stolen millions of public money, had operated cruelly, and had been found out. Croker was elected a member of the board of aldermen and in that capacity he signed, with other members, on Mar. 20, 1870, an agreement to take no official action on any proposition affecting the city government without first obtaining the consent of certain leaders of the Young Democracy, who were named (Fassett Investigation, vol. II, pp. 1711-12). In that year (1870) Croker, with other anti-Tweed aldermen, was legislated out of office by a bill passed through Tweed's influence in the state legislature. Yet Croker's part in the premature attempt to purify Tammany did not stand in the way of his appointment by the comptroller to a lucrative post in the city administration.

After Tweed's downfall and imprisonment in 1871 Croker's star continued in the ascendancy. He was elected coroner and in that office received fees amounting to $20,000 or $25,000 a year. He gave whole-hearted support to John Kelly, Tweed's successor as boss. On election day in 1874, a man belonging to a faction opposed to Croker's was shot and killed. Croker was charged with the crime, but the case was dismissed, the district attorney admitting a lack of evidence. In after years Croker declared that the guilty man was one of his own henchmen, that the shot had been fired in self-defense, and that he would not "give away" a friend under such circumstances. It was the law of the gang, not that of the state, which most strongly influenced his decisions throughout his life. After a month in jail he resumed the office of coroner, to which he was re-elected two years later. His next promotion was an appointment by Mayor Edson to a fire commissionership. In 1885 he brought about the nomination of Hugh J. Grant for sheriff. In the following year, after ten years' tutelage under John Kelly, Croker succeeded his old chief in the Tammany leadership. He became chairman of the Tammany Finance Committee (which kept no books) and for sixteen years his word was law in the Democratic
Croker

organization of New York City. As leader, he was shrewd enough to surround himself with advisers who had qualities that he himself lacked. Certain of his traits as a political strategist were displayed in the mayoral campaign of 1886, when the labor vote was an important factor. Croker at first offered the Democratic nomination to Henry George [q.v.], who declined it, but later accepted the United Labor party's nomination after more than 30,000 signatures of voters had been secured. Croker then named as the Tammany candidate Abram S. Hewitt [q.v.], a citizen of high standing who was the choice of the County Democracy. The Republican nominee was Theodore Roosevelt. Hewitt was elected and served a term of two years, but antagonized Tammany by his independent attitude and did not receive a renomination. The next two mayors, Grant and Gilroy, were named by Croker and elected by the efforts of the 90,000 enrolled workers, marshaled by thirty-five district leaders, who now made up the Tammany phalanx. The keystone of Croker's political theory was the spoils system, as developed and practised by Tammany. At the same time he was the first Tammany chieftain to turn over the handling of local patronage to the district leaders, whom he held to a strict accounting. He always maintained that a corrupt official could be dealt with more effectively by a disciplined organization such as Tammany than by any other agency. The last public office held by Croker was that of city chamberlain, in 1889-90, at a salary of $25,000. The disclosures before the Lexow Committee concerning the Police Department led to a fusion against Tammany in 1894 and the election of Mayor Strong. Croker's leadership was discredited and he went to England to live.

During the campaign of 1896 the organization was in the hands of John C. Sheehan, and McKinley carried the city by 20,000. In the next year occurred the first mayoral election for the newly created Greater New York, including Brooklyn, Staten Island, and portions of Queens and Westchester counties. Croker returned from England in September 1897, and despite the disaffection of three-fifths of the Tammany district leaders, he succeeded in nominating and electing Robert C. Van Wyck as mayor, although a strong anti-Tammany ticket, headed by Seth Low, was in the field. The running of Gen. B. F. Tracy on a Republican ticket contributed powerfully to Tammany success. In 1899 Croker admitted before a legislative committee that the officials in the Van Wyck administration were selected by himself or his close associates. When asked by counsel whether he was working for his own pocket all the time, he replied that he was doing just that. Although he had been a poor man before he became Tammany's recognized leader, afterward he paid $250,000 for a stock farm and more than $100,000 for race horses, and later $200,000 for a residence. It was never shown that he acquired this wealth illegally. According to a general belief at the time, it was what an associate of Croker's called "honest graft," stock in contracting companies and other enterprises for which the friendship of men in control of certain city departments was helpful, if not essential. In 1900 the English tax officers assessed Croker's income at $100,000, the tax being fixed at $5,000 (World, New York, Dec. 12, 1900). At the end of four years under Van Wyck a genuine fusion movement, with no third ticket in the field, resulted in Seth Low's election. From that time Croker never regained dominance in New York City affairs. He lived for several years at Moat House, Wantage, England, and later bought Glencarrn, near Dublin, Ireland, where he maintained racing stables, breeding horses that won a series of Irish races and in 1907 sending Orby, a half-American horse, to win the classic Derby in England, with betting odds of ten to one against him. As an owner of racers, Croker seems to have conformed to the standards of English sportsmanship. He declined to wager money on his own horse in the Derby. His first wife (Elizabeth Frazier of New York) whom he had married in 1873 and from whom he had been estranged for some years, died in 1914. He then married Beula Benton Edmondson, a twenty-three-year-old Cherokee Indian from Oklahoma. His latter years (1920-22), were embittered by disputes and litigation with his children concerning property. All his mature life Croker was a reserved, silent man, at times taciturn. He was called a "good listener" in conferences with his aides. His physical resemblance to President Grant was often noted.

Stead, "Mr. Richard Croker and Greater N. Y.," in Rev. of Revs. (London), Oct. 1897, is chronologically inaccurate but reflects Croker's opinions at the climax of his career in politics.]

W. B. S.
Croly

CROLY, DAVID GOODMAN (Nov. 3, 1829-Apr. 29, 1889), journalist, was born in Cloghnaclilly, County Cork, Ireland, the son of Patrick and Elizabeth Croly. He came to America when a very small boy and grew up in New York City. For a time he was apprenticed to a silversmith. He went to the University of the City of New York for one year, and received a special course diploma in 1854. In 1855 he became a reporter on the New York Evening Post, receiving a salary of eight dollars a week. After a short time he took charge of the city intelligence department of the Herald, which position he held until 1858. In that year, with his wife, Jane Cunningham Croly [q.v.], also a journalist, whom he had married in 1857, he moved to Rockford, Ill., and started the Daily News. The investment was not profitable financially, but both Croly and his wife were highly regarded in the community, and various persons offered money to keep the paper in existence. Their offers were declined, however; Croly returned to New York in 1860 and became first city editor and then (1862-72) managing editor of the World. In 1868 Croly and C. W. Sweet founded the Real Estate Record and Builder's Guide, the former being joint owner and manager until 1873. Then Croly became editor of the Daily Graphic, a new illustrated paper. He resigned in 1878 because the owners interfered with his editorial management. He was an independent, fearless person who disliked the obvious way of saying or doing a thing and accordingly cultivated the unexpected almost to a fault. He thought and labored as an iconoclast and a reformer. He was the principal author of a book, Miscegenation (1864), in which he stated: "All that is needed to make us the finest race on earth is to engraft upon our stock the negro element which providence has placed by our side on this continent. We must become a yellow-skinned, black-haired people, if we would attain the fullest results of civilization." The word "miscegenation" was coined by Croly and first used in this book (Sir James A. H. Murray, A New English Dictionary, vol. VI, pt. 3, Oxford, 1908). He published (1868), Seymour and Blair, Their Lives and Services, a campaign biography of the Democratic candidates for president and vice-president. In 1872 Truth, an attempt to explain the merits of the Oneida Community, was published. The following year Croly started a new magazine, The Modern Thinker, which he explained was not a monthly, nor a quarterly, but a periodical with no assured periodicity. A strange typographical make-up was employed, each article being printed on paper of a different color with type of various sizes and ink of various tints to match the paper. Three issues appeared. Another book, Glimpses of the Future, dealing with suggestions as to the drift of things, was published in 1888. One of Croly's chief interests was Auguste Comte's theory of Positivism, a philosophy which he did his best to introduce into the United States. In 1871 he published a Primer of Positivism.

M. S.

CROLY, JANE CUNNINGHAM (Dec. 19, 1829-Dec. 23, 1901), journalist, was probably the first American newspaper woman. She was born in Market Harborough, Leicestershire, England, the daughter of the Rev. Joseph H. and Jane Cunningham, and came to the United States with her father when she was twelve years old. In her childhood she was taught by her father and brother at their home in Pouugh-keepsie and later in New York City. In her early girlhood she attended school at Southbridge, Mass., where she edited the school paper, wrote plays, and acted as stage manager. In 1855, she gained a place on the staff of the Sunday Times and Noah's Weekly Messenger, writing under the pseudonym, "Jennie June," because she felt the traditional shyness concerning women in public life. She became a special writer on women's fashions and was among the first to "syndicate" her articles. In 1856 she married David Goodman Croly [q.v.], a New York journalist. Five children were born to them, but Mrs. Croly departed from the conventional mode of the time and continued her journalistic work. For over forty years she held various editorial positions on newspapers and magazines. In the year of her marriage she called the first Woman's Congress, to meet in New York. She was editor, for a time, of Demo-rest's Quarterly Mirror of Fashion, and in 1860, when that journal and the New York Weekly Illustrated News were incorporated into Demo-rest's Illustrated Monthly, she became its editor, remaining as such until 1887. She was also connected with Godsey's and with the Home-Maker. Jane Croly was probably the first woman correspondent in New York for out-of-town papers. For fifteen years she wrote letters for the New Orleans Picayune and the Baltimore American. She represented in New York the New Orleans Delta, the Richmond Enquirer, and the Louisville Journal. At various times she was editorially connected with the New York World.
Crompton

and the Graphic Daily Times, and, for nine years with the New York Times. She was also dramatic critic and assistant editor of the Messenger from 1861 to 1866. In 1868 Mrs. Croly in common with a number of New York women, was extremely indignant because her sex was completely ignored at the Charles Dickens reception. As a protest, in harmony with her advocacy of everything she considered for the betterment of women, she founded Sorosis, which was not the first woman's club, but was the first of any consequence or endurance. Mrs. Croly was the first president of the New York State Federation of Women's Clubs. When her husband attempted to teach in America the philosophy of Positivism originated by Auguste Comte, Mrs. Croly endeavored to aid him. In 1889 she founded the Women's Press Club in New York. Of her separate publications the most notable was The History of the Woman's Club Movement in America, a large volume published in 1898. In 1866 she published Jennie June's American Cookery Book, and in 1875 published For Better or Worse. A Book for Some Men and All Women. In 1898 she met with an accident which crippled her, and subsequently she spent much of her time in England seeking rest and cure. She died in New York City.

M.S.

CROMPTON, GEORGE (Mar. 23, 1829–Dec. 29, 1886), inventor and manufacturer, was the son of William Crompton [q.v.] and Sarah (Low) Crompton, and was born at Holcombe, Tottonham, Lancashire, England. In 1839 William Crompton took the family to Taunton, Mass., where, two years before, he had invented and patented a fancy loom which he now intended to introduce to the mill owners of New England. George grew up at Taunton and received an education there in private schools and in the mills and machine-shops which his father's business opened to him. Later, when the success of his father's loom was established, he was able to attend Millbury (Mass.) Academy. After the completion of his course he worked in the Colt pistol factory at Hartford and in mills belonging to his father, holding a variety of positions, clerical and mechanical, and obtaining a knowledge of the textile industry that very soon proved useful. In 1849 William Crompton was forced to retire because of ill health, and in 1851 the patents on his loom expired and automatically terminated the agreements for its manufacture. George Crompton succeeded in having the patents extended and, with M. A. Furbush, began the manufacture of the loom at Worcester, Mass. He immediately began to improve the loom, receiving his first patent, Nov. 14, 1854, for the substitution of a single cylinder chain for two or more different patterns. In 1859 Furbush retired and Crompton became sole owner of the business which was then known as the Crompton Loom Works. In 1861 the war caused a depression in the demand for looms, and Crompton for two years manufactured gun-making machinery for government and private arsenals. Returning to the manufacture of looms, he continued his improvements and found a steadily growing demand that forced him to enlarge his works. This plant in time became one of the largest and best-known of American machine-shops. The success of the business, and the two hundred patents on which his name appears, indicate the importance of George Crompton's work. He improved practically every part of the loom as well as its appearance, and invented many new textile fabrics. It is estimated that Crompton added sixty per cent to the producing capacity of the loom and saved fifty per cent of the labor formerly necessary for its operation. By making a simpler loom he greatly reduced the time and cost of repairs and many of his looms were capable of more varied work than those before them. Crompton's looms in world-wide competition at the Paris Exposition received the first award, and at the Centennial Exposition of 1876 the Commission pronounced them the best looms for fancy weaving. Crompton was a member of the board of aldermen and of the common council of Worcester and in 1871 was a candidate for mayor. He was one of the founders and the first policy-holder of the Hartford Steam Boiler Inspection & Insurance Company, a founder and president of the Crompton Carpet Company, and a director in various other corporations. He was married on Jan. 9, 1853 to Mary Christina Pratt, who after his death became president of the Crompton Loom Works. Two of his sons also took out a large number of patents, Charles Crompton being one of the inventors of the fancy automatic loom and Randolph Crompton of the first practical shuttle-changing loom.

[See bibliography of Wm. Crompton; obituaries in Manufacturer's Rev. and Industrial Record, Jan. 1887, and Boston Post, Dec. 30, 1886.] F.A.T.

CROMPTON, WILLIAM (Sept. 10, 1806–May 1, 1891), textile machinery inventor and
Crompton

manufacturer, was born at Preston, Lancashire, England, the son of Thomas and Mary (Dawson) Crompton. Preston was a textile mill town where the Crompton family had long been associated with the trade,—though Samuel Crompton, inventor of the spinning "mule," was not a family connection,—so that as a matter of course William was taught handloom cotton-weaving and later the trade of machinist. Before he was thirty years of age he was superintendent of a cotton-mill at Ramsbottom, in which position he had the opportunity to experiment with mill machinery and succeeded in increasing production there very materially. On May 26, 1828 he married Sarah Low of Holcombe. In 1836 he came to Taunton, Mass., entered the employ of Crocker & Richmond, and within a year had designed a loom to weave a pattern of goods such as the looms then used would not produce. This loom overcame two great disadvantages of its predecessors. In the early looms the movement of the warp harnesses was controlled by cams which limited the number of harnesses to not more than six and necessitated the changing of the cams to change the pattern. Crompton used an endless pattern-chain upon which rollers or pins could be variously placed to engage the harness levers as had the cams, but which allowed any number of harnesses to be used (usually twenty-four) and permitted an extremely easy change from one pattern to another. The second novel feature was the double motion of the warp, which allowed more space for the shuttle and put correspondingly less strain on the warp threads (Patent No. 491, Nov. 23, 1837). Crocker & Richmond failed in 1837, and Crompton went back to England where he entered into business relations with John Rostran, in whose name he took out British patents on his loom. Returning to America in 1839, he settled his family at Taunton, and then traveled over New England trying to introduce his loom. Finally the Middlesex Mills, at Lowell, Mass., asked him to adapt one of their looms for the production of figured woolens similar to the French goods then being introduced. In 1840 he demonstrated that with his pattern-chain the desired figure could be woven. This was probably the first instance of fancy woolens being woven by power. Crompton spent two years in the Middlesex Mills, remodeling many of their looms and constructing several of his own invention. He then licensed Phelps & Bickford at Worcester to build his looms on a royalty basis, which they did until the expiration of the patent. Crompton then divided his time between the manufacture of cotton and woolen goods at Millbury, Mass., and travel for the purpose of instructing operatives in the use of his loom, which had rapidly come into use throughout the United States and England. In 1849 he became incapacitated for business and retired to Connecticut where he died years later at Windsor. His loom was greatly improved by his son, George Crompton [q.v.]

E. A. T.

CROMWELL, GLADYS LOUISE HUSTED (Nov. 28, 1885-Jan. 24, 1919), poet, was born in Brooklyn, N. Y., the daughter of Frederick and Esther Whitmore (Husted) Cromwell. Her father was graduated from Harvard at the age of twenty, a conscientious student and something of a dandy. In his mature life he became very rich, and gave much attention to political reform and to the promotion of music and art. His tranquil domestic life of forty-one years was broken in 1909 by the death of his wife, and his own death came in 1914. The youngest of his five children were Gladys and her twin sister Dorothy. They were practically inseparable, eagerly devoted to each other throughout their lives. As girls they traveled extensively in Europe and attended the Brearley School, a private institution in New York City. Both were concerned with the larger phases of social adjustment, and both were writers, Dorothea chiefly in prose, and Gladys in poetry. In spite of their wealth they were in a sense personally frugal, and they had the quality of mind which enabled them to be aware at once of stark actuality and poetic mystery. In 1915, Gladys published Gates of Utterance, a collection of admirable but in no sense remarkable verse. The war in Europe from its early stages was considered by both the sisters as unprecedented disaster, a horrid indorsement of philosophies they had long recognized. Their speculations regarding it were ceaseless, and many of them are recorded in Gladys's verse in various magazines. The volume Poems (1920), containing nearly everything that she wrote, shows great advance over Gates of Utterance, and some of it has the mark of permanence. Two of the lyrics, "The Mould" and "The Crowning Gift," are little short of magnificent, unique in view-point and apparently final in phraseology, but probably too sophisticated ever to be popular; and "The Deep," with its lines "I must have peace, increasing peace, such as dark oceans keep," assumes in connection with its author's
Crook

death a sorrowful tragicalness. In January 1918 the two sisters went to France to do Red Cross work. There, near the front, at Chalons-sur-Marne, they remained without relief for eight months, exposed to every harrowing consequence of war and giving comfort and sympathy to any who were in pain or grief. In January 1919 they took passage for America on the steamer Lorraine, and on the night of the 24th, while the ship was still in the Gironde River making its way seaward, they leapt overboard. Their bodies were buried in France some months later, with special honors from the French government. "Her life," says one who knew Gladys intimately, "was interior, and the delicate charm of her personality was like a slender wreath of smoke that encircled a deep burning fire" (letter of Anne Dunn).

J. D. W.

CROOK, GEORGE (Sept. 23, 1829–Mar. 21, 1890), soldier, son of Thomas and Elizabeth (Mathers) Crook, was born near Dayton, Ohio. His ancestry was Scotch and German. From the public schools he entered West Point on July 1, 1848, and on graduation four years later was commissioned lieutenant of infantry. Until the Civil War he served in the Northwest where he was engaged in explorations and in protecting the settlers from periodic Indian raids. In September 1861 he was commissioned colonel of the 36th Ohio Infantry and with his regiment served in West Virginia, where in May 1862 he received the brevet of major in the regular army for his defeat of a Confederate force under Gen. Heth at Lewisburg. The following August he was made brigadier-general of volunteers and commanded a brigade in the Kanawha Division which was attached to the 9th Corps in the Antietam campaign. He was engaged in the battles of South Mountain and Antietam and for his conduct in the latter received the brevet of lieutenant-colonel. In 1863 he commanded a cavalry division in the Army of the Cumberland and took part in the Chickamauga campaign. Shortly thereafter he undertook the pursuit of Gen. Wheeler's cavalry corps which he engaged successfully at Farmington, Tenn., on Oct. 7. For this he received the brevet of colonel.

In February 1864 he was again in West Virginia, where in the spring of that year, under the orders of Gen. Grant, he undertook to interrupt railway communication between Lynchburg and East Tennessee. In this operation he defeated the Confederates at Cloyd Farm on Walker Mountain, captured the station of Dublin, and destroyed the New River bridge and the railway in its vicinity. For this operation he later received the brevet of brigadier-general. In August of the same year he was placed in command of West Virginia and in personal command of one of the corps of Sheridan's Army of the Shenandoah. He was engaged in the three important battles of that army—Winchester, Fisher's Hill, and Cedar Creek—and in addition to receiving his promotion to the grade of major-general of volunteers he later received the brevet of major-general in the regular army for his conduct in the battle of Fisher's Hill. He now returned to the command of his department. When in March 1865 Sheridan joined Grant in front of Petersburg, he requested that Crook be assigned to the command of one of his cavalry divisions, and in consequence the latter took part in the final battles of the war, being engaged at Dinwiddie Court House, Sailor's Creek, Farmville, and Appomattox.

In the reorganization of the regular army after the war Crook became lieutenant-colonel of the 23rd Infantry and was assigned to the command of the district of Boise, Idaho, where for three years he was engaged in bringing to an end the Indian war which had been raging for several years in southern Oregon, Idaho, and northern California. For this he received the thanks of the legislature of Oregon and the commendation of his superiors. In 1871 he was sent by President Grant to end the war with the Apaches and other hostile tribes in northern Arizona, and this he did with such success that he received the thanks of the legislature of the territory, and in 1873 was promoted from lieutenant-colonel to brigadier-general in the regular army, an unusual advancement at that time. In 1875 he was placed in command of the Department of the Platte, where trouble was expected with the Sioux and Cheyenne tribes of Indians on account of the discovery of gold in the Black Hills of Dakota. Here he took a prominent part in the great Sioux War of 1876, remaining in the field the entire year, and with his troops enduring incredible hardships. In 1882 he was sent back to Arizona where the Apaches were again on the warpath. He had no difficulty in pacifying the tribes with whom he had dealt before. His problem now was the Chiricahua tribe of Apaches whom he had never encountered and who had taken refuge in the Sierra Madre Mountains of Mexico, from which, under their chief Geronimo [q.v.], they raided settlements both north and south of
Crooks

the boundary. In 1883 Crook led an expedition into these mountains where no American or Mexican force had ever penetrated, and induced the tribe, some five hundred persons, to return to their reservation. In 1885 Geronimo with a quarter of the tribe again fled to the mountains and was there pursued until he had only twenty-four followers left. These later surrendered to Gen. Nelson A. Miles [q.v.]. In the spring of 1886 Crook returned to the command of the Department of the Platte where he remained until April 1888 when he was promoted to the grade of major-general and assigned to the command of the Division of the Missouri with headquarters at Chicago. Here he died on Mar. 21, 1890. He was survived by his wife, Mary Dailey of Oakland, Md.

As a soldier Crook was fearless both morally and physically, shunning neither responsibility nor personal danger. By nature he was modest and retiring, chary of speech but a good listener. Of a kindly and sympathetic disposition and easy of approach, he made friends in all classes of society. Although he spent most of his life on the frontier he was never profane, indulged in no intoxicating liquors, and was clean of speech. He thoroughly understood the Indian character. Realizing their hopeless struggle to hold their lands against encroachment, he was more prone to pardon than to punish. In his recommendations on the subject of the Indians he was far in advance of his times. He advocated the division of reservations into individual plots, so that the Indians might become self-supporting. He also believed that they should be granted equal rights with the whites in courts of law and all the privileges of citizenship.

[Crow Department records; Official Records (Army); G. W. Cullum, Biog. Reg. (3rd ed., 1891); Reports of the Secretary of War; John G. Bourke, On the Border with Crook (1891); personal recollections of the author, who served on Crook's staff in the Geronimo campaign.]

G.J.F.

CROOKS, GEORGE RICHARD (Feb. 3, 1822–Feb. 20, 1897), Methodist Episcopal clergyman, educator, editor, the son of George Richard Crooks, was born and spent his early life in Philadelphia. He graduated with highest honors from Dickinson College in 1840, and began his ministerial career as a circuit rider on the Illinois frontier. In 1842 he was called back to Dickinson to be classical and mathematical instructor in the Collegiate Grammar School, of which, the following year, he became principal. In 1845 he was made adjunct professor of Latin and Greek in the college. He reentered the active ministry in 1848, and both in the Philadelphia Conference, which he had first joined, and in the New York East Conference to which he was transferred in 1857, he held some of the most important pastorates. From 1860 to 1875 he edited The Methodist, a weekly paper founded by an association of laymen and clergymen. Surrounding himself with able assistants, he made this paper a powerful influence within the denomination and of acknowledged value without. From 1880 until his death he was professor of historical theology in Drew Seminary. He was married, June 10, 1846, to Susan Frances Emory, daughter of Bishop John Emory. In an unusual degree he possessed scholarly tastes combined with administrative ability and willingness to engage in denominational controversies. He opposed those who would have deprived membership in the church slave-holding Methodists in the border states, and his influence is said to have done much to save that portion of the country to the church and to the Union. Believing that "the Church of God is not an estate to be carved out among the denominations," he was a leader of those who secured for the laity a share in the control and administration of the Methodist denomination. From the beginning of his career he felt that the Methodists owed more to the intellectual elevation of the country than they had ever achieved, and labored for a better educated ministry. As a member of the Committee on Education in the General Conference of 1856, when the distinction between "God-made" and "man-made" ministers was still drawn, he was prominent in securing the adoption of a resolution sanctioning the establishment of theological seminaries. His own contribution of aids to knowledge was considerable. While a young man at Dickinson he prepared with John McClintock A First Book in Latin (1846) and A First Book in Greek (1848), and later, 1858, with Alexander J. Schem, A New Latin-English School Lexicon on the Basis of the Latin-German Lexicon of Dr. C. F. Ingerslev. In 1852 he published Bishop Butler's Analogy of Religion, with analysis, notes, index, and a life of the bishop, a work commenced by Robert Emory. He wrote an elaborate introduction for the Gospel of Matthew (1884) in the American edition of Meyer's Commentary on the New Testament. With John F. Hurst, he edited the Library of Biblical and Theological Literature, for which he himself prepared The Theological Encyclopaedia and Methodology on the basis of Hagenbach (1884). He also published The Life and Letters of Rev. Dr. John McClintock (1876), the Life of Bishop Matthew Simpson (1890) whose sermons he edited in 1885, and The Story of the Christian Church (1897).
Crooks

[WM. F. ANDERSON, "George Richard Crooks." Method., Rev., May 1868; Exsa S. Tipple, Drew Theological Seminary (1817); New York Conference, Minutes, 1897, pp. 107-11; Christian Advocate (N. Y.), Mar. 4, 1897; N. Y. Times, Feb. 22, 1897.] H. E. S.

CROOKS, RAMSAY (Jan. 2, 1787–June 6, 1859), fur-trader, was born in Greenock, Scotland, the son of William and Margaret (Ramsay) Crooks. At sixteen he emigrated to Montreal and at once entered the fur trade. As the clerk of Robert Dickson he went to Mackinaw, and by 1806 he had pushed on to St. Louis. In 1807 he formed a partnership with Robert McClellan, and in the fall of the year, with a force of eighty men, they set out for the upper Missouri. On their way they met the party headed by Ensign Nathaniel Pryor, and learning of its defeat at the hands of the Arikaras, turned back and established a trading-post near the present Calhoun, Nebr. Two years later, with forty men, they started to follow the great expedition of the St. Louis Missouri Fur Company northward, but finding the Sioux hostile gave up the venture. In 1810 the partnership was dissolved and Crooks went to Canada. Here he found Wilson Price Hunt recruiting men for the proposed overland journey to Astoria, and by purchasing five shares of stock became a partner in Astor's Pacific Fur Company. He accompanied the expedition the following spring, but in the Blue Mountains of Oregon, worn out with illness and hunger, he and five others were left behind. In the spring, with a companion, he reached the Columbia, arriving at Astoria May 11, 1812. Four days later, disheartened with the prospects of the enterprise, he relinquished his shares. On June 20 he started on the return east with Robert Stuart's party of seven, which after experiencing many dangers and extreme privations, reached St. Louis Apr. 30, 1813.

Crooks remained in close association with Astor and the American Fur Company, which in 1816 bought out the American interests of the Northwest Company. In this enlarged firm he became a partner. He was appointed general manager of the American Fur Company in 1817. In the winter of 1820–21 he visited Astor, then in Europe, and arranged with him for the next four years' campaign. It was due to his persistent urging that Astor established the Western Department of the company in St. Louis in the spring of 1822. Chittenden considers him to have been the virtual head of the company from this time until Astor's retirement in 1834. Every year he made the long and arduous journey to Mackinaw, frequently going on to St. Louis. He formulated the policies of the company, wrote most of its letters and with an extraordinary grasp of detail managed its business throughout the whole field of its operations. When Astor sold out, he bought the Northern Department, of which he became president, continuing the name of the American Fur Company. He remained in the fur business until his death. He died at his home in New York.

Crooks was married, Mar. 10, 1825, to Mari- anne Pélagie Emilie Pratte, of the Chouteau clan of St. Louis, and by the union greatly enhanced his position in the fur metropolis. Physically he was a frail man, and the almost incredible hardships of his early days left him a legacy of ill health, contrasting strongly with the sustained vigor with which he carried on his work. His character was of the highest; though a relentless enemy in competition, he was fair, and in an industry notorious for its illicit trading he kept the law. A self-educated man, he wrote letters that are models of force and incisiveness and are besides rich in historical information. He is pictured in his age as a genial companion, fond of reminiscence and often surrounded by groups eager to hear him relate his thrilling adventures. In the still unsettled controversy as to who discovered the famous South Pass he maintained, in a letter written June 26, 1856, that the gap traversed by the Robert Stuart party was this identical pass and that it was thus discovered eleven years before a party of Ashley's men traversed it from the east in 1824. His range of interests was wide. He was the first president of the Mohawk & Hudson Railroad Company, serving until 1835. In his later years he was a trustee of the Astor Library as well as of several learned societies.

CROPESEY, JASPAR FRANCIS (Feb. 18, 1823–June 22, 1900), painter, was born in Rossville, N. Y., the son of Jacob Rezeau and Elizabeth Hilyer (Cortelyou) Cropey. His paternal great-grandfather came from Holland and his mother's family were French Huguenots, but his father and mother were born on Staten Isl.
and. He went to the country schools near his home, and early began the study of architecture. At the age of thirteen he received a diploma, from the Mechanics' Institute, for a well-executed model of a house. The American Institute also conferred upon him a diploma for the same model. It attracted so much attention when it was exhibited in 1837, that he was called "the boy that built the House." It secured for him a position in the office of a successful architect, where he studied for five years, at the same time studying landscape painting with Edward Maury. In 1847 he went abroad, visiting London, Paris, Switzerland, and Italy, spending much time in Rome and in traveling with W. W. Story and C. P. Cranch [q.q.v.]. In 1857 he went again to Europe and lived in London for seven years, becoming a regular exhibitor at the Royal Academy, and making many sales of his paintings. He was presented at the Court of Queen Victoria by the United States minister, Charles Francis Adams, and among his acquaintances were Ruskin and other literary personages. He was made assistant commissioner to the International Exhibition of 1862 in London and received a medal for his services. He also received a medal and diploma from the Centennial Exposition at Philadelphia in 1876. He was represented there by his picture, "Old Mill," which received an award and was engraved for the Centennial catalogue. He made illustrations for Poe's and Moore's poems. He painted a series of sixteen landscapes of American scenery for E. Gambart & Company, London publishers. He painted a picture, "The Battle of Gettysburg," shortly after the battle. He was one of the founders of the American Water-color Society, a member of the Artists Aid Society, the Century, Union League, and Lotus Clubs, an honorary member of the Pennsylvania Academy of Fine Arts, as well as a Fellow of the Society of Science, Letters and Arts of London, England. He moved to Hastings-on-Hudson, N. Y., where he made studies from nature. His picture, "Greenwood Lake," sent to the National Academy Exhibition, won him election as Associate of the Academy. Most of his paintings depict autumn scenes. His "Autumn on the Hudson River" was highly praised by the London Times. He was perhaps as successful an architect as he was a painter, and is best known as the designer and superintendent of the building of the Sixth Avenue Elevated Railroad Stations of New York. He also superintended the building of George Pullman's house in Chicago and cottages at Long Branch. He is represented in the Metropolitan Museum, in the Corcoran Gallery, Washington, and in private collections in this country and in Europe.

**Crosby, Ernest Howard** (Nov. 4, 1856-Jan. 3, 1907), author, social reformer, son of Rev. Howard Crosby [q.v.] and Margaret (Givan) Crosby, belonged to a family distinguished for its wealth, ability, and philanthropy. His early life was passed in his birthplace, New York City, where he was educated (graduating from New York University in 1876 and from Columbia Law School in 1878), where he was admitted to the bar, and where he was married to Fanny Schieffelin in 1881. He was elected to the legislature in 1887, as the successor of Theodore Roosevelt. Upon his retirement in 1889 he was nominated by President Harrison as a judge of the International Court in Egypt, upon which he served until 1894. Up to this time he had believed that the political problems of the day could be solved without any radical changes in society, but now the reading of Tolstoy led him to more revolutionary views. He resigned his position and started home, stopping on the way to visit the Russian leader, by whom he was bidden to seek out "the greatest living American," Henry George. Crosby followed this advice, with the result that he became an ardent advocate of Henry George's single-tax program. Disowning, and disowned by, his former associates, he again settled in New York and devoted himself fervently to various movements for social betterment. Anti-militarism, industrial arbitration, vegetarianism, and settlement work shared his allegiance with the single tax. He was one of the founders and the first president of the Social Reform Club which was particularly concerned with the interests of labor. His ethical idealism also found expression in *Edward Carpenter: Poet and Prophet* (1901); *Captain Jinks, Hero* (1902), a satirical novel; *Shakespeare's Attitude toward the Working Classes* (1902); *Tolstoy and His Message* (1903); *Tolstoy as a School-Master* (1904); *William Lloyd Garrison, Non-Resistant and Abolitionist* (1905); *Golden Rule Jones, Mayor of Toledo* (1906). Of more permanent literary value were his poems, *Plain Talk in Psalm and Parable* (1899), *Swords and Plowshares* (1902), and *Broad-Cast* (1905), all written in a free verse reminiscent of Walt Whitman, but expressive of a genuine and at times impassioned aspiration. Although a remarkably
Crosby

handsome man himself, Crosby had little appreciation of sensuous beauty; beauty of character, however, he understood and to a high degree exemplified.

[Addresses in Memory of Ernest Howard Crosby (Cooper Union, N. Y., Mar. 7, 1907), by Hamlin Garland, Felix Adler, Edwin Markham, and others; Who’s Who in America, 1906–07.]

E. S. B.

CROSBY, FANNY (Mar. 24, 1820–Feb. 12, 1915), hymn-writer, was born at Southeast, Putnam County, N. Y., the daughter of John and Mercy (Crosby) Crosby. Her given name was Frances Jane. When she was six weeks old a blundering doctor prescribed hot poultices for an inflammation of her eyes. Her sight was destroyed, although as late as 1843, when she visited Niagara Falls, she could still dimly perceive light and color. She enjoyed in spite of her misfortune a happy childhood, the most interesting incident of which is her contact with Daniel Drew [q.v.], then a dealer in live stock. He good-naturedly gave her a lamb to replace a pet. At fifteen she entered the New York Institution for the Blind. Her readiness at rhyming, already manifest, was gently discouraged by her teachers until a traveling Scotch phrenologist proclaimed her a potential poet. Thereafter she was the prodigy of the school. After completing the course she was a teacher of English and history in the Institution from 1847 to 1858. Meanwhile she was rapidly becoming a celebrity, appeared frequently on the lecture platform, addressed both Houses of Congress on several occasions, and met many of the literary, political, military, and ecclesiastical notables of the day. Several collections of her verse appeared from time to time: The Blind Girl and Other Poems (1844), Monterey and Other Poems (1851), A Wreath of Columbia’s Flowers (1858), which was a miscellany of prose and verse, and Bells at Evening and Other Verses (1897). Several of her pieces such as “Rosalie, the Prairie Flower” and “There’s Music in the Air,” were set to music and sold by the thousand. On Mar. 5, 1858, she married Alexander Van Alstyne, a blind music teacher and church organist, who had been one of her pupils. They made their home in Brooklyn. Not till 1864 did she write her first hymn, but with it she found her vocation, and soon made up for lost time. Although there were days when, she confessed, she could not have written a hymn to save her soul, there were others when she turned out six or seven. No such phenomenon had occurred since the days of Isaac Watts and Charles Wesley. Her productions were widely circulated and were sung by millions of pious people. Some were translated into other languages; at least seventy

came into common use in Great Britain. Her publishers were afraid to credit her with all that she wrote and are said to have issued her hymns under as many as two hundred pseudonyms and initials. When she died in her ninety-fifth year it was conjectured that she had composed about six thousand hymns. Probably her best known is “Safe in the Arms of Jesus,” which she wrote in fifteen minutes. Though her popularity in her own day was enormous, the Methodist Church observing for a time an annual “Fanny Crosby Day,” her real contribution to hymnody is slight. “It is more to Mrs. Van Alstyne’s credit,” wrote a competent judge, S. A. W. Duffield, “that she has occasionally found a pearl than that she has brought to the surface so many oyster shells.” Julian considers her hymns “with few exceptions very weak and poor, their simplicity and earnestness being their redeeming features. Their popularity is largely due to the melodies to which they are wedded.” In her old age, which was as cheerful and healthy as her whole life had been, she wrote two accounts of herself. She died at Bridgeport, Conn.

G. H. G.

CROSBY, HOWARD (Feb. 27, 1826–Mar. 29, 1891), Presbyterian clergyman, the son of William Bedlow and Harriet (Ashton) Crosby, was born in New York City. One of his great-grandfathers, William Floyd [q.v.], was a signer of the Declaration of Independence; another, Joseph Crosby, was a Massachusetts judge; his grandfather, Dr. Ebenezer Crosby, was a trustee of Columbia College, and an uncle, Col. Henry Rutgers for whom Rutgers College was named, was a regent of the University of New York. The latter left the family a fortune. Howard began at six to study Greek, and entered the University of the City of New York at fourteen, graduating four years later (1844) with first honors in Greek. After a period of ill health during which he helped to run a farm owned by his father, he married Margaret E. Givan and traveled abroad. Upon his return in 1851 he published his first book, Lands of the Moslem, and in the same year he became professor of Greek at his alma mater, where he remained until 1859. During this period he taught a Bible class of boys, and helped to organize the New York Young Men’s Christian Association, of which he was the second president. In 1859 he went to Rutgers as professor of Greek. Two years later he published Scholia on the New
Crosby

Testament (1861), and was ordained to the Presbyterian ministry, adding to his academic work the pastorate of the First Presbyterian Church of New Brunswick. In the same year President Lincoln offered him the post of minister to Greece, but he declined it. In 1863 he accepted a call to the pulpit of the Fourth Avenue Presbyterian Church in New York City, where he spent the rest of his life. He was moderator of the Presbyterian General Assembly in 1873, and in 1877 a delegate to the first Presbyterian General Council at Edinburgh.

Inheriting traditions both of scholarship and of public service, he united in a rare degree scholarly tastes with zest for public affairs. He was a member of the Council of the University of the City of New York, and its chancellor from 1870 to 1881; a member of the New Testament Company of the American Revision Committee (1872–80); and in 1879–80 he delivered the Yale Lectures on Preaching, which were published in 1880 as The Christian Preacher. Among his other published works are: Social Hints for Young Christians (1866); Bible Companion (1870); Jesus, His Life and Work (1871); Healthy Christian (1872); Thoughts on the Decalogue (1873); Expository Notes on the Book of Joshua (1875); Commentary on Nehemiah (1877); The True Humanity of Christ (1880); Commentary on the New Testament (1885); Conformity to the World (1891). His keen sense of civic responsibility, however, prompted him to a much wider sphere of activity than study and pulpit afford, while his ardor for righteousness and human well-being made him a champion of numerous reforms. He founded the Society for the Prevention of Crime and served as its president. He was active in the cause of temperance, though opposed to prohibition (see his Moderation vs. Total Abstinence, 1881), and, aided by his son, Ernest Howard Crosby [q.q.v.], was prominent in the attempt to secure high-license laws for New York State. He was also much interested in the effort to secure an international copyright law. Though a man of bold courage, and a born fighter, he was always a courteous gentleman, kind even to his foes, so that among all classes he was held in high esteem.

[Crosby, John Schuyler (Sept. 19, 1839–Aug. 8, 1914), soldier, public official, son of Clarkson Floyd and Angelica Schuyler Crosby, was born in Albany, N. Y., to an inheritance of wealth and aristocratic tastes. Among his ancestors were William Floyd, a signer of the Declaration of Independence, and Gen. Philip Schuyler [q.q.v.]. Crosby was a freshman in the University of the City of New York, 1855–56. In 1856 he made the venturous and at that time rarely attempted crossing of South America from Valparaiso to Montevideo. He entered the Union army early in the Civil War, and during the course of that conflict engaged in active service from Virginia to the lower Mississippi Valley. By August 1861 he was a first lieutenant, and in June 1863 he was made captain. On account of gallant and meritorious conduct in Louisiana, he was brevetted captain in April 1863 and major in April 1864. In March 1865 he was brevetted lieutenant-colonel. His war services as courier attracted the personal notice and thanks of Lincoln. From March 1866 to July 1870 he was lieutenant-colonel and aide-de-camp to Gen. Sheridan in the campaigns against the Indians. He resigned from the army at the close of 1870. In 1877, in recognition of his bravery in saving life at the time of a yacht disaster, he was awarded a medal by Congress. From 1876 to 1882 he was American consul in Florence, Italy, and during this time he was decorated by the King in gratitude for his having captured a notorious band of criminals. From 1882 to 1884 he was territorial governor of Montana. He gave his zealous attention to the progress of the territory, and even made a special appeal to Congress to put an end to schemes for the commercial exploitation of Yellowstone Park. He had long been much concerned with sports, especially shooting, in which he was most proficient. His residence in Montana gave him opportunity to indulge this taste freely, and, at occasional big-game hunts extending over several days, to indulge also his instinct for grand-scale hospitality. Among his guests on one of these hunts, was President Chester A. Arthur. He was first assistant postmaster-general of the United States during the last four months of the Arthur administration, and from 1889 to 1892 he was a school commissioner of New York City. In January 1914, his health, already bad, was further impaired by the violent struggle which ensued when he was attacked by a suddenly crazed Japanese servant. During the following summer he set out as was his custom on a yachting trip, but illness necessitated his being put ashore at Newport, R. I.,
Crosby

where he died. He was married in 1863 to Harriet Van Rensselaer, a daughter of Gen. Stephen Van Rensselaer.

Times, Aug. 9, 1914; Circular and Cat. of the Univ. of the City of N. Y. (1865); Army and Navy Jour., Aug. 15, 1914; H. M. Crittenden, Yellowstone Nat. Park (1893).]

J. D. W.

CROSBY, PEIRCE (Jan. 16, 1824–June 15, 1899), naval officer, a son of John P. and Catharine (Beale) Crosby, was born in Delaware County, Pa., of English ancestors prominent in Pennsylvania since 1682. He was educated in private schools and entered the navy as midshipman, June 5, 1838. After service in the Mediterranean, he was attached to the Coast Survey and was then in the Decatur and Petrel in the Mexican War, participating in the operations against Tabasco and Tuxpan. Following three years in the Relief on the African coast, he was made lieutenant, Sept. 3, 1853, and until 1857 was in the Germantown in the Brazil Squadron. In the Civil War he did energetic work, April and May 1861, in command of tugs protecting trade in the Chesapeake, and then had special duty under Gen. Butler as harbor-master at Hampton Roads. Under Butler and Flag-Officer Stringham he commanded the tug Fanny in the capture of Hatteras Inlet, rendering excellent service, Aug. 28, in rescuing two barges laden with troops which had stranded in a heavy sea. After an attack of typhoid, he took command of the steam-er Pinola at Baltimore, Dec. 18, 1861, and thence joined Farragut below New Orleans. On the night of Apr. 20, 1862, the Pinola, under Crosby, and the Itasca attempted to break the barrier of chains and hulks stretched across the river below New Orleans. Under a heavy fire from the Confederate forts, later checked by Union mortars, the Pinola placed mines in one hulk, but, in the confusion of separating the two vessels, the wires were broken and the charges failed to ignite. Then with much difficulty she released the Itasca, which had grappled another hulk and run aground with it above the barrier, and the two steamers retired after making a gap wide enough for passage of the fleet. While running the forts below New Orleans, and again later at Vicksburg, the Pinola, being in the rear of Farragut’s column, encountered a severe fire. In October, despite Farragut’s protests at losing a depend-able officer (Official Records, Navy. XIX, 338), Crosby was chosen by Admiral S. P. Lee as fleet captain in the North Atlantic Blockading Squadron, in which arduous and responsible position he served from January to October, 1863. Later he commanded the Florida from March to November 1864, the Keystone State in the same squadron, capturing nine blockade-runners. He was in the Metacomet in the Gulf Squadron from December 1864 to August 1865, participating in the later operations leading to the capture of Mobile and sweeping up 150 tor-pedoes below the city with nets of his own de-vising, a service which earned Admiral H. K. Thatcher’s praise as requiring “coolness, judgment, and perseverance” (Ibid., XXII, 92). From 1865 to 1868 he was in the Shamokin in the South Atlantic, and after promotion to captain, May 7, 1868, held several navy-yard positions until commissioned commodore, Oct. 3, 1874. In March 1882 he became rear admiral. After commanding the South Atlantic Squadron for a year and then the Pacific Squadron, he retired in October 1883, living afterward in Washington. Crosby had a fine military figure, standing over six feet and weighing over two hundred pounds. In Admiral John Upshur’s words, he was “brave as a lion and had the tenderness of a woman.” He was married four times: on Oct. 16, 1850, to Matilda Boyer of Lexington, Va., who died in 1853; in March 1861, to Julia Wells who died in 1866; on Feb. 15, 1870, to Miriam Gratz, who died in 1878; and on June 24, 1880, to Louise Audenried. (Official Records (Navy); J. H. Martin, Hist, of Chester, Pa. (1877), pp. 20-2-18; obituaries in Army and Navy Jour., June 24, 1899, and Washington Post, June 16, 1899.)

A. W.

CROSBY, WILLIAM OTIS (Jan. 14, 1850–Dec. 31, 1925), geologist, son of Francis William and Hannah (Ballard) Crosby, both of English descent, was born in Decatur, Ohio. His father was a school-teacher who shortly after the close of the Civil War went south and became superintendent of a gold-mine in North Carolina. Here the boy gained his first insight into the problems of economic geology. In 1871 he accompanied his father, who had become interested in a silver-mine, to Georgetown, Colo., and while there met President Runkle with a party of students from the Massachusetts Institute of Technology and accompanied them on one of their trips. As was to be expected, such association aroused in him sufficient interest to cause him to enter upon a course of study at the Institute, from which he graduated in 1876. He must have been a student of unusual promise, for in the fall of the same year he received an appointment as assistant in the geological department in the Institute, where in the course of time he became full professor and head of the department.

Crosby was from the start an original worker and an inspiring teacher. He was capable of an amount of patient drudgery in his work that
would have been far from congenial to most; and of gathering material, handling and preparing it for his classes or his wider audiences at the Boston Society of Natural History, where he had become a curator, he never tired. Forced by almost total deafness to retire from teaching, he devoted himself after 1906 largely to work pertaining to various phases of economic geology. As an expert in mining problems he covered in more or less detail the whole western mining region, besides many of the states in the East. It was, however, in problems relating to water supply and storage dams in which intricate problems of underground structure were involved, that he became most deeply interested, and widely and favorably known. This work often involved responsibility for large financial outlay, as in his studies of the Muscle Shoals district in Alabama. He served as consulting engineer for the celebrated Arrow Dam in Idaho, the highest in the world; the dams on the Medina River in Texas; the Conchos River in Mexico, and the great dam across the Mississippi River at Keokuk, Iowa, the third longest in the world. He was consulting geologist to the Board of Water Supply of New York City during 1906–12, investigated the conditions for the Ashokan and Kensico dams, the deep Hudson River siphons, and the Catskill aqueduct. He was also called as consulting geologist for three large dams in Spain. Always painstaking and thorough, he became identified with many of the most important hydraulic operations in America.

Crosby’s publications cover a considerable range of subjects. Of greatest importance probably from the standpoint of systematic geology, and involving the most detailed field work over a considerable area was his Geology of the Boston Basin, pts. 1–3 (1893-1900).

Crosby was married in 1876 to Alice Ballard of Lansing, Mich.

[Sketched by Douglas Johnson in Science, June 18, 1926; sketch by H. W. Shimer and Waldemar Lindgren, accompanied by a full bibliography, in Bull. Geol. Soc. of America, Mar. 1927; personal recollections.]

G. P. M.

CROSS, EDWARD (Nov. 11, 1798–Apr. 6, 1887), jurist, was born in Virginia where his grandfather, originally from Wales, had settled early in the eighteenth century. His father, Robert Cross, served with the colonial forces in the Revolutionary War, afterward engaging in farming. In 1799 the family moved to Cumberland County, Ky., where Edward spent his youth on a farm, obtaining his education at the common schools. When he became of age he determined to take up law and went to Overton County, Tenn., reading for two years in the office of Adam Huntsman at Monroe in that county. On being admitted to the Tennessee bar in 1822 he opened an office there and practised for three years. He made progress, but, having been brought up on the frontier, he found the lure of the West irresistible and in 1826 he proceeded to the Territory of Arkansas, settling at Washington, Hempstead County, and entering into partnership with Daniel Ringo, who was later chief justice. In 1828 he became a member of the staff of Gov. Izard and in that position took a prominent part in the organization of the territorial militia. He acquired an extensive practice and had the reputation of being a sound lawyer of sterling character. In 1832 President Jackson appointed him one of the justices of the superior court of the Territory of Arkansas, and he remained on the bench for four years, being reappointed by President Van Buren. On the admission of Arkansas to the Union as a state, June 16, 1836, the court ceased to function, and Cross became surveyor-general of the public lands under the new constitution, a position which he retained for two years. In 1838, as Democratic nominee, he was elected representative in Congress, where he served for three terms, being re-elected in 1840 and 1842. He was extremely active in the presidential election of 1840, taking a leading part in the Democratic campaign and addressing meetings in many parts of the state. As a delegate from Arkansas he attended the National Democratic Convention at Baltimore in 1844, with instructions from his constituents to support Van Buren. The subsequent publication of the latter’s letter opposing the annexation of Texas induced Cross to disobey his instructions and vote for Polk, and this action on his part was afterward approved by his party. In 1852, to meet an emergency, he was appointed by Gov. Drew a special justice of the supreme court of the state. He was one of the promoters in 1853 of the Cairo & Fulton Railroad, which was planned to make eastern connection at Cairo, Ill., and continue the line of the St. Louis & Iron Mountain, running south from St. Louis toward Texas, and was its president from 1855 to 1862, during which period it was, in common with the majority of the companies forming the Missouri railroad system, forced into bankruptcy. After 1860 he took no very active part in politics and gradually relinquished practise, though his interest in public affairs continued unabated to an advanced age. Speaking of this period of his life a contemporary said, “His good morals and integrity are of the highest type and the old patriarch is universally esteemed” (Hallum, post). He died at Little Rock in his eighty-ninth year. On Aug. 4, 1831, he had married
CROSWELL, EDWIN (May 29, 1797–June 13, 1871), journalist, politician, was of English stock, his paternal ancestor having come from England and settled in Boston in 1655. He was born in Catskill, N. Y., the son of Mackay Croswell and the nephew of the eminent Dr. Harry Croswell [q.v.]. Mackay Croswell was a tavern-keeper who was noted for his geniality, his fund of good stories, and boon companionship. He was also editor of the Catskill Packet (founded in 1792) and of its three successors. Edwin spent his boyhood about the tavern and in the office of his father’s newspaper. He and Thurlow Weed [q.v.] were boys together, the one quiet, studious, and of a refined nature, the other a lover of sports and adventure. Croswell educated himself in the English classics; was attracted to Swift’s sententious purity, and patterned his style after the Junius Letters. When he was fourteen years old he entered the office of the Catskill Recorder and was soon assistant editor. Edwin’s future appeared bright while Thurlow hung about Mackay Croswell’s office hoping to be apprenticed. Croswell’s untiring industry and single-hearted devotion to party soon attracted the attention of the politicians. When Moses Cantine (editor of the Albany Argus) died in 1823, the “Albany Regency,” especially Martin Van Buren, called Croswell to the editorial chair of the Argus. He was elected state printer in 1824 and held the office until 1847, save for one interruption, when Weed, master Whig politician, became state printer (1840–44).

Croswell was one of a trio of great partisan editors of the Democratic party in the thirties, the others being Francis Preston Blair [q.v.] of the Washington Globe, and Thomas Ritchie [q.v.] of the Richmond Enquirer. These were the pen-executives for their party until they fell victims to party factions. Croswell was more certain in his judgment than Ritchie, and less vitriolic than Blair. As mouthpiece of the Albany Regency his journal led the way for the New York papers of his faith. He was a conservative who sagaciously labored to keep harmony in the Democracy until the inevitable break came between the “Barnburners” and “Hunkers.” He broke with Van Buren on the Texas question, became embroiled in an unfortunate party quarrel with William Cassidy [q.v.] of the Albany Atlas, which was increasing in strength, and tired from the Argus in 1854. The Canal Bank failure (1848), his illness, and a desire to enter business of a different nature to improve his financial circumstances, had much to do with his retirement. He engaged in business in New York City, but died a poor man at Princeton, N. J., after friends had come to his aid.

Croswell, HARRY (June 16, 1778–Mar. 13, 1858), editor, clergyman, the seventh child of Caleb Croswell and his wife, Hannah Kellogg, was born in West Hartford, Conn. His father had removed to Connecticut from Charlestown, Mass., before the Revolution. The boy received his early education from the Rev. Dr. Nathan Perkins, and had for one winter the advantage of being a member of Noah Webster’s household, where he received instruction from Webster in return for his services. He worked for a little time as a clerk in a country store in Warren, but left there to join an older brother who was in charge of a printing establishment in Catskill, N. Y. This was more to his liking than clerking, and he made the most of his opportunity. He was soon sending communications to the Catskill Packet, which was printed in the shop, and at the age of twenty-two was made editor of the paper. With this assurance of a livelihood he married Susan Sherman of New Haven, Conn., on Aug. 16, 1800 (New Haven Register, Mar. 14, 1858). He soon moved to Hudson, N. Y., however, where he established himself in May 1801 as proprietor of an independent newspaper, the Balance. The town had at this time a Republican paper, the Bee, for whose sting the local Federalists sought an antidote. Croswell provided this by publishing the Wasp, a letter-size sheet first issued in 1802. His caustic pen very soon involved him in difficulties. The Republicans had just placed as judge in Columbia County one of the leading members of their party; and the law of libel in the state did not require that questions of fact be submitted to the jury. Croswell was indicted for libel. The case was sufficiently challenging to the New York Federalists to bring Alexander Hamilton and William Van Ness to the aid of the young editor, but even Hamilton’s brilliant speech could not change the...
Crothers

foregone conclusion of the trial. Crothers was found guilty, and the publication of the Wasp was discontinued. Crothers issued the Balance as a Federalist paper in Hudson until 1809 when encouraged by promises of Federalist support he removed with it to Albany. Promises failed, debts accumulated, and he was jailed by a Federalist creditor. He thereupon gave up his career as a journalist and turned to the ministry for refuge from the ingratitude and uncertainties of the political world. He was ordained deacon in the Episcopal Church, May 8, 1814. His first charge was Christ Church in Hudson, N. Y., where he remained only a few months. On Jan. 1, 1815, he was installed as rector of Trinity Church in New Haven, Conn. Here he passed the remainder of his life contentedly, in the faithful performance of his pastoral duties.

[Crothers's diary (MS.) is in the possession of Yale Univ. Lib. A memoir, based upon it, was published by F. B. Dexter in Papers of the New Haven Colony Hist. Soc., vol. IX (1918), and reprinted in Dexter's A Selection from the Miscellaneous Hist. Papers of Fifty Years (1918). See also Crothers's life of his son, A Memoir of the Late Wm. Crothers, D.D. (1853), and obituaries in New Haven papers, Mar. 14, 1858. An account of Crothers's trial is to be found in Speeches at Full Length of Mr. Van Ness, Mr. Caines, Mr. Harrison and Gen. Hamilton in the Great Cause of the People against Harry Croswell (1844). New York and Albany papers of Feb. 19 and 20, 1804, printed notices of the trial.]

M. A. M.

CROTHERS, SAMUEL McChORD (June 7, 1857–Nov. 9, 1927), clergyman, essayist, was born at Oswego, Ill. His ancestors, of Scotch-Irish stock, came to America in the seventeenth century and settled in Pennsylvania, their descendants spreading westward and taking their part in the life of the frontier. A strain of French Huguenot blood on the mother's side served to intensify the spirit of adventure and independence that marked the family in successive generations. His grandfather, Samuel Crothers, was a Presbyterian minister; his father, John M., who married Nancy Foster, was a lawyer. In 1873 Samuel M. Crothers was graduated from Wittenberg College, Ohio, and in 1874 from the College of New Jersey (now Princeton). He next spent three years at the Union Theological Seminary, New York, in preparation for the work of the Presbyterian ministry.

After graduation from the Seminary, being then just twenty years old, he began the practical life of the ministry, serving in two frontier parishes in Nevada and for two years in Santa Barbara. Up to this time he had remained satisfied with the Calvinistic theology of his forefathers as handed down by Princeton and Union Seminary. In the freer air of the West, however, the mind of the youth soon found itself expanding into larger and more liberal views upon the fundamental problems of Christian life and thought. Without abandoning the old he began to venture into new ways of interpreting the traditions of Calvinism as he had received them. The consequence was that his preaching became suspect to the authorities of his church, while at the same time it was appealing with increasing attraction to the more open-minded in the community and to the visitors from other states. By the end of the year 1881 he had decided to sever his connection with the Presbyterian body and to spend a year in study and reflection before making new denominational attachments. With this object he entered the Harvard Divinity School and there discovered that he was already prepared to join the Unitarian fellowship. In 1882 he began at once the two happy ventures of the Unitarian ministry and the family life, marrying, Sept. 9, Louise M. Bronson of Santa Barbara, Cal. For forty-five years these were to move on together in parallel ways of singular harmony and increasing usefulness.

With characteristic modesty and good sense the young convert declined several brilliant offers of city parishes and accepted a call to Brattleboro, Vt., where for four years he worked out the problems inevitable to so radical a change of mental attitude. From this semi-rural pastorate he was called to wider service at St. Paul, Minn., and during eight years made the church there a far-reaching center of liberal religion throughout the rapidly developing Northwestern country. From St. Paul he made his final change of residence to Cambridge, Mass., as minister of the historic First Parish in 1894. In the congenial atmosphere of the University town and neighboring Boston, he found the keenest stimulation to his ripened powers. His work here became equally fruitful in three lines of activity: first, as pastor of a large, highly organized church already a potent force in the life of the community. Crothers was as far as possible from the type of the bustling, dictatorial church official. Quiet, unobtrusive, hesitating in manner, leaving to others the direct management of every organized effort, he kept his eye and his hand upon the working out of all the plans for social welfare and religious influence of which his church was the center. The traditional forms of worship he accepted as they came to him, approved changes as they were suggested by the parish itself, and sought steadily to infuse all forms with the spirit of true devotion which alone could give them value.

Of his two other functions, those of preacher and writer, it is impossible to speak separately,
Crothers

so closely were they interwoven in the method of his thought. His preaching, as he himself said, had but one subject, and that was "liberty," the freedom of the human soul to think for itself and to act for itself so long as such action does not interfere with the freedom of others. In his writing he developed this doctrine of freedom in his treatment of social habits and institutions. If he had a philosophy, it was the philosophy of common sense, and this meant to him much the same thing as a sense of humor; for, if humor is, as he thought it was, "the perception of the incongruous," it is by the same token the perception of the congruous, the fitting, the same, the harmonious. It is this sanity, this sense of proportion, that above all else distinguishes the long series of essays which are Crothers's literary monument. Written under the impulse of some popular discussion of educational or social problems and often read before publication to friendly audiences, their whimsical humor, their keen insight, their searching criticism of social foibles and their delivery, clothed in a demure, half apologetic seriousness, made them the most delightful of entertainments. To other audiences, at times, their subtlety of thought and playfulness of language made them quite unintelligible. Printed first in magazines of the higher class and later collected into volumes with suggestive titles, they make their appeal to a choice circle of discriminating readers.

The same quality of balanced judgment penetrated also his pulpit utterances, but with rare discretion and self-control he never allowed his sense of humor to appear in his sermons. The cheap devices of the "popular" preacher to catch the attention of his hearers were abhorrent to him, and it is probably owing to this quality of elevation and refinement that his preaching like his writing appealed rather to a limited group of like-minded followers than to great numbers of casual listeners. He spoke without notes, but after such careful elaboration that, as he expressed it, the work of composition was rather an act of memory than of original thinking. His publications include: The Understanding Heart (1903); The Gentle Reader (1903); The Parson's Wallet (1905); By the Christmas Fire (1908); Among Friends (1910); Humanly Speaking (1912); "The Charm of English Prose in the 17th Century: Phi Beta Kappa Oration, Harvard, 1913," in Harvard Graduates Magazine, XXII, 1-15; Meditations on Votes for Women, etc. (1914); The Pleasures of an Absentee Landlord (1916); Oliver Wendell Holmes, the Autocrat and His Fellow-Boarders (1909); The Dame School of Experience (1920); Ralph

Crounse

Waldo Emerson: How to Know Him (1921); The Cheerful Giver (1923); The Children of Dickens (1925). Death came to him suddenly at Cambridge in his seventy-first year.

(The Critic, Mar. 1906; Nation (N. Y.), Nov. 30, 1927; Outlook, Nov. 23, 1912, pp. 643-56; Boston Transcript, Nov. 10, 12, 1927; N. Y. Times, Nov. 10, and editorial Nov. 13, 1927; Who's Who in America, 1926-27; personal acquaintance.)

E. E.

CROUNSE, LORENZO (Jan. 27, 1834-May 13, 1906), jurist, governor of Nebraska, was born at Sharon, Schoharie County, N. Y., the son of John and Margaret (Van Aernam) Crounse. His father was of German, his mother of Dutch descent. He received little more than a common school education, but taught school, studied law, and in 1857 was admitted to the bar. In 1866 he was married to Mary E. Griffiths, and the next year went to war as captain of Battery K, 1st Regiment, New York Light Artillery, but his service ended shortly after the second battle of Bull Run, in which he was severely wounded. In 1864 he moved to Rulo, Nebr., later settling at Fort Calhoun, and again turned to law. From the first Crounse was active in Nebraska politics. He served in the legislature, and helped draft the constitution under which the territory was admitted as a state. He was associate justice of the state supreme court for six years following 1867 and wrote many opinions that were of great local importance. Notable among his decisions was that in Brittle vs. The People (2 Nebr. 198), in which he upheld the right of a colored man to sit on a jury. He served for two terms, 1873-77, in the national House of Representatives, and his disregard while he was there of the wishes of the Nebraska railroads probably accounts for his failure to win in 1876 the seat in the United States Senate to which he aspired. For four years after 1879 he was collector of internal revenues for the Nebraska district, in 1880 he attended the Republican National Convention as an ardent Blaine man, and in Harrison's administration he became assistant secretary of the treasury. During these years he spent much time on the fine farm he had acquired near Fort Calhoun.

By this time the Farmers' Alliance had blossomed into the People's party, and in the election of 1890, because of the agrarian uprising, the Republicans lost control of the Nebraska state government. In order to regain their former supremacy the old party leaders decided in 1892 to nominate Crounse for the governorship. This they did, but with some reluctance, for, while Crounse was no friend to Populism, his disdain for machine politics, which in Nebraska was but another name for railroad dictation, was well known. During the campaign the Demo-
Crouse

CROUTER, ALBERT LOUIS EDGERTON (Sept. 15, 1846–June 26, 1925), educator of the deaf, was a member of a Huguenot family which moved to Germany and later to New York City. Loyal to King George, Crouter’s ancestors went to Canada during the Revolution, and he was born near Belleville, Ontario. His father was Abraham Lewis Crouter and his mother was Elizabeth Eliza German. After finishing his primary and secondary education in the Belleville schools, he entered Albert College. At seventeen he became a teacher in the public schools in Belleville. At twenty he moved to Kansas, where he taught in an Indian school at Shawneetown. While he was there Thomas Burnside, superintendent of the Kansas School for the Deaf at Olathe, offered him a position which he accepted before his twenty-first birthday. From that time until his death he was actively engaged in the education of the deaf. At the age of twenty-one he was offered the superintendency of the Kansas school. He accepted, however, an offer to teach in the Pennsylvania Institution for the Deaf at Philadelphia, and in 1884 he became its principal. Becoming interested in the oral method of instructing the deaf, he organized a separate department for orally taught pupils, extended the trades teaching of the school, and established a normal department. Later all class work was done orally. In 1892, under Crouter’s guidance, the Pennsylvania Institution was moved to Mount Airy, where new grounds and modern buildings with every convenience had been provided by his energy and foresight. The grouping of the buildings into three separate departments according to the ages of the children, and the addition of a manual-training department, have made this a model residential institution for deaf children. The title of principal of this school was changed to that of superintendent without changing the duties, and Crouter remained until his death superintendent of the Pennsylvania Institution. Under his administration it became one of the largest and best-known of schools for the deaf, and was visited and studied by teachers of the deaf from all parts of the world.

He was one of the founders of the American Association to Promote the Teaching of Speech to the Deaf, and became its president in 1904, succeeding Alexander Graham Bell (q.v.). He was for many years a member of the Executive Committee of the Conference of Superintendents and Principals of American Schools for the Deaf. He represented the United States at the Seventh International Conference of Instructors of the Deaf at Edinburgh, and attended practically every important gathering of instructors of the

Democratic nominee, J. Sterling Morton, joined with Crouse in attacking the record of Van Wyck, the popular and capable choice of the third party forces, who advocated ardently the regulation of railway rates by the state. Unfortunately for the Populists Crouse was able to show that his own record was more consistently hostile to the railroads than Van Wyck’s, and on this showing he won the election.

Crouse probably took the governorship as a stepping-stone to the United States Senate, but in 1893 the coveted seat went to a Populist, and Crouse had to serve out his term as governor. His administration, coinciding as it did with a period of acute hard times, gave him small satisfaction. He was compelled to report at its end a condition of “partial failure of crops in the year 1893, and their total destruction in a large portion of the state in the year just closed.” State finances were also in a deplorable state, in spite of the economies he had effected. His colleagues at the state house were for the most part small men under machine control who consistently embarrassed him. Under these circumstances he refused a renomination in 1894, and by so doing paved the way for the choice of a Populist as his successor. Crouse was out of office until 1901 when he became a member of the state Senate. That year the legislature was long deadlocked over the election of two United States senators, and for a time it seemed that Crouse, who was not originally a candidate, would be one of those chosen to break the deadlock, but, when his election was practically conceded, the Burlington and Union Pacific interests, which up to the moment had been fighting each other, joined forces and effected a compromise. Needless to say, they did not choose Crouse.

After this until the time of his death in May 1909 Crouse remained aloof from politics. He traveled, as he had already done previously, both abroad and in this country. Dignified, serious, and in his prime almost austere, he mellowed in his declining years and acquired an “unruffled tranquility” that endeared him to his associates. He was a great lover of books and liked even to translate the Latin of his school days. From the time of his wife’s death in 1882 he remained a widower, and his last years were spent in Omaha with one of his four children.

Crowell
defed in the United States throughout the whole
term of his connection with the Pennsylvania Insti-
tution, which lasted for fifty-eight years. He
also found time to attend meetings of the deaf
themselves and to address them in the language
of signs. A member of the Episcopal Church, he
was rector’s warden of Grace Church, Mount
Airy, for many years, and from 1895 until his
death he was a member of the commission in
charge of the Episcopal Mission for the deaf in
Philadelphia. He wrote many papers dealing
with the education of deaf pupils and with the
training of teachers of the deaf, among them be-
ing “Marriages of the Deaf,” in The American
Annals of the Deaf, October 1889; “The Deaf in
May 1904; “The Supervision and Care of Pup-
is,” *Ibid.*, January 1905; “The Training of
Teachers,” *Ibid.*, November 1911. His style was
particularly clear and forceful. Crouter was sin-
gularly successful as an executive. His pres-
ence was commanding but his expression was at-
tractive and kindly, and he was well loved by his
pupils and by the members of his profession. On
Apr. 30, 1895, he was married to June Yale, a
teacher of the deaf at the Clarke School at North-
ampton, Mass. Three of their nine children have
followed their parents’ calling.

[The Mount Airy World, Nov. 19, 1925; article by
Dr. Harris Taylor in the *Volta Rev.*, Nov. 1925; arti-
cle by Frank W. Booth in The Am. Annals of the Deaf,
Mar. 1926, pp. 89-96; letter from members of Crouter’s
immediate family; personal recollections of the writer.]

P.H.

CROWELL, LUTHER CHILDS (Sept. 7,
1830–Sept. 16, 1903), inventor, was descended
from Yelverton Crowell, who with his brother
Thomas settled on Cape Cod in 1638. Luther was
the son of Francis Baker Crowell, a ship’s cap-
tain, and Mehitable Hall Crowell. Though both
parents were of the same surname, they were not
related. Both were born on Cape Cod, the father
in South Yarmouth and the mother in West Den-
nis, and it was in the latter place that Luther was
born. By the time he was seventeen he had not
only completed the courses of the local schools but
had also attended an academy and spent a year
studying medicine privately with a physician.
Following his adventures in higher education he
entered the merchant marine service and at the
end of four years was offered a captain’s commis-
sion, which he declined. The reason for this, ap-
parently, was his intense interest in aeronautics,
for within a year he had moved to Boston and on
June 3, 1862, obtained a patent for an aerial ma-
chine. He immediately proceeded to develop the
mechanism, but the business failure of his chief
backer put a stop to the work. He then turned his
attention to the development of another idea
which had been suggested in the course of his
work on the aerial machine; namely, a machine
to make paper bags. For this he received a pat-
ent in 1867. Five years later he devised the square-bottomed paper bag universally used to-
day and also the machine for making it; and
while legal proceedings arising out of infringe-
ment of this patent were still in progress, he in-
vented the side-seam paper bag and then sold
partial rights in all his bag patents to the infring-
ing company. Improvements in printing ma-
inery next attracted Crowell and by 1873 he
had devised and patented a sheet-delivery and
folding mechanism. This invention marked a
distinct forward step in the development of
printing machinery and was quite ahead of its
time, so that the first opportunity to introduce it
did not come until two years later when it was
combined with a new press purchased by the Bos-
ton Herald. The combination machine was the
first rotary folding machine whereby newspaper
sheets, singly or collectively, were delivered fold-
ed as complete products. For the next few years
Crowell devoted his time wholly to improving his
mechanism, being unable financially to enter into
the general manufacture of it. Meanwhile R.
Hoe & Company, in their various printing-press
experiments, found that some of their devices en-
croached upon Crowell’s inventions, and offered
him not only a substantial sum of money for par-
tial rights in his paper-bag improvements and
sheet-delivery mechanism but also a liberal sal-
ary to join them. He accepted and in 1879 en-
tered the employ of this firm where he remained
until his death. He could now work to his heart’s
content and during the following ten years he
perfected the double supplement press, and fol-
lowed this with double and quadruple presses and
the combined pamphlet-printing and wire-bind-
ing machines. He obtained over 280 United
States patents for printing machinery alone, in-
cluding those for the printing of both sides of a
web of paper from one cylinder, a rotary print-
ing mechanism, a positive cutting and folding
mechanism without tapes, the first sheet-piling
mechanism, and many others. One of his last in-
ventions was a machine for pasting labels on bot-
tles, and at the time of his death he was working
on a wrapping and mailing machine. Crowell
gloried in being a “Cape Codder.” He despised
shams and expressed himself freely and fearlessly
in all matters. He was a member of the Ameri-
can Society of Mechanical Engineers, and of the
Franklin Institute. On Aug. 18, 1863, he mar-
rried Mrs. Margaret D. Howard of Boston. Al-
though a resident of New York City he died at
his old home in West Dennis.
CROWNE, JOHN (1640-April 1712), Restoration dramatist, was the first Harvard College playwright. He was the eldest of the three children of William [q.v.] and Agnes Mackworth Crowne and was probably born in Shropshire, England, where the family estates of his mother were situated. He accompanied his father to New England in the summer of 1657 when the latter came with Col. Thomas Temple to take possession of the province of Nova Scotia. In the fall of 1657 his father entered him at Harvard College and proceeded to the Penobscot River country. Crowne was a student at Harvard for three years, but did not graduate. He returned with his father to England early in 1661. When in 1667 by the Treaty of Breda the elder Crowne lost his estates in Nova Scotia he could no longer assist his son, who turned to the theatre for a livelihood. By his own confession it was the loss of his father’s fortune that caused him to “run into that Madness call’d Poetry” and to frequent “that Bedlam call’d a Stage.”

He began his career with the tragi-comedy Juliana (1671) but soon devoted his attention to tragedies. He achieved his first considerable success with The Destruction of Jerusalem (1677). He wrote with his eye on the financial rewards and in his efforts to trim his sails to the changing winds of popular favor he attempted all types of drama. Though his tragedies are more numerous than his comedies he is best known to posterity as a comic dramatist. Much of his caustic satire was clever and effective despite its coarseness. His pictures of contemporary London life were often successful. In the summer of 1674, with both Settle and Dryden out of favor, the Earl of Rochester asked Crowne to produce a court masque. His masque, Calisto, first performed in December 1674, won him the favor of Charles II. This was increased by the King’s hearty enjoyment of The Country Wit, produced in 1675. In 1679, at the suggestion of his father, he attempted to capitalize this royal favor when he petitioned, unsuccessfully, for Mounthope, near the Plymouth settlements. The following year he attempted to secure the proprietorship of Boston Neck, a valuable tract of land in the Narragansett country, but without success. During the turbulent period following the Popish Plot, Crowne allied himself with the Tory group and produced the comedy, City Politiques, a clever political satire against the Whigs. Having again pleased Charles II he petitioned for a sinecure that would give him financial independence. The king first demanded another comedy. Crowne reluctantly wrote Sir Courly Nice, now the best known of his many plays, but on the day of the last rehearsal the king was seized with a fit and died three days later. During the last years of his life the struggling playwright suffered from poverty and want. He never ceased his attempts to recover his father’s lands in Nova Scotia, but, though he sometimes lived upon the royal bounty, he failed to secure compensation for the loss of his valuable patrimony. He died in obscurity in London.

[ fascimile of a page from a book with text about Crowne's life and career ]

CROWNE, WILLIAM (c. 1617–1683), adventurer, born in England about 1617, first emerges from the obscurity which surrounds his ancestry and early life when, in 1636, as a servant in the retinue of Thomas Howard, Earl of Arundel, he accompanied him on a diplomatic mission to Ferdinand II of Germany. After his return to England Crowne in 1637 published a brief narrative of the journey, A True Relation of All the Remarkable Places and Passages Observed in the Travels of Thomas, Lord Howard. . . . Through the favor of the same nobleman he was created Rouge Dragon in the College of Arms in September 1638. It was probably during the year following this event that he married Agnes, daughter of Richard Mackworth and widow of Richard Watts. At the outbreak of the civil wars he joined the parliamentary cause and became secretary to Basil Fielding, Earl of Denbigh. After various services to Parliament he became a lieutenant-colonel of militia for Shropshire and for four years was one of the county commissioners. In 1654 he was returned the sole member of Parliament for Bridgnorth. Crowne had amassed considerable fortune when he first became interested in land speculation in America; in 1656 he supplied the funds by which he and Col. Thomas Temple acquired title to Nova Scotia from Charles de la Tour. The new proprietors came to America in the summer of 1657 and in the fall made a division of their property; Crowne became owner of the lesser half of the tract, including the Penobscot River country. He entered his son
Crowninshield

John [q.v.], the future dramatist, at Harvard College and himself proceeded to the Penobscot River where, at Negue, he built a trading-post. He later leased the territory to Temple, who after a short time refused to pay the rent or surrender the land.

With the restoration of Charles II the title of Temple and Crowne to Nova Scotia was jeopardized. Early in 1661 Crowne with his son John sailed to England. In London he successfully defended their claim to Nova Scotia and secured the suspension of Thomas Breeden as governor. As Rouge Dragon he participated in the coronation ceremonies in April 1661 and shortly after resigned the office. While in England he was successfully engaged in making the new government more friendly toward Massachusetts. In recognition of his services the General Court of Massachusetts in October 1662 voted him five hundred acres of land. Meanwhile Crowne could secure no settlement from his unscrupulous partner; the courts of New England, to which he appealed, disclaimed jurisdiction. A greater misfortune befell in 1667, when, by the Treaty of Breda, Charles II disregarded the claims of both Crowne and Temple and ceded Nova Scotia to France. In the same year Crowne settled in Mendon, Mass., and became the first town register. There he lived until 1674 when he went to Rhode Island; by August 1679 he was again a resident of Boston where he remained until his death four years later. Efforts to secure compensation for the loss of Nova Scotia were without success; nor did the sale of his land in Massachusetts and a small grant from the General Court keep his declining years free of poverty.

[The scattered writings about William Crowne are brief, inaccurate, and unsatisfactory. Definitive treatment is Arthur Franklin White's John Crowne: His Life and Dramatic Works (Cleveland, 1922); see also "John Crowne and America" by the same author in Pubs. Mod. Lang. Asso. of America for Dec. 1920.]

F. M.

CROWNINSHIELD, BENJAMIN WILLIAMS (Dec. 27, 1772–Feb. 3, 1851), merchant, politician, brother of George and Jacob Crowninshield [qq.v.], was born in Salem, Mass., the son of George and Mary (Derby) Crowninshield. He was a great-grandson of Johannes Kaspar Richter von Kronenheit (or Kronenschildt) who for killing his antagonist in a duel (F. B. Crowninshield, The Story of George Crowninshield's Yacht, 'Cleopatra's Barge', 1913, p. 174), was compelled to leave the University of Leipzig somewhat hastily. He established himself as a physician in Boston, married Elizabeth Allen of Lynn, who had been one of his patients, anglicized his name, and became highly respected. George Crowninshield was a sea-captain and merchant of Salem. Each of his six sons was taken from school early, and, after a short period in the counting-house, was sent to sea as cabin-boy, so that he might learn navigation and the art of leadership without serving before the mast. This system of training was completely successful: all the brothers except Edward, who died at Guadeloupe at the age of seventeen, commanded ships before they were twenty, and eventually they displaced the Derbys as the leading merchant family of Salem. Like his brothers, Benjamin was taken from school early and sent to sea as a cabin-boy, commanded a ship before he reached his majority, proceeded from the quarter-deck to the counting-room, and was made a partner in the world-renowned firm of George Crowninshield & Sons. On Jan. 1, 1804, he was married to Mary Boardman, daughter of Francis and Mary (Hodges) Boardman of Salem, and sister-in-law of Nathaniel Bowditch and Zachariah Silsbee. The double misfortune of the Embargo and the death of his gifted brother Jacob caused the dissolution of George Crowninshield & Sons in 1809. Benjamin then went into business with his father and his brother George, but the father's death in 1815 and George's in 1817 terminated the enterprise. He was also president of the Merchants Bank of Salem, which was organized in 1811 in opposition to Federalist banks. Meanwhile Benjamin had succeeded Jacob as the politician of the family, sitting as a member of the Massachusetts House of Representatives in 1811 and of the state Senate in 1812. The fame of his brother lent him a reputation that his own political prowess did not deserve, and on Dec. 19, 1814, the Senate confirmed his appointment by President Madison as secretary of the navy. Crowninshield promptly declined and then, a few days later, dispatched a second letter accepting the office. The weakness revealed in this vacillation marked his whole career in Washington. In deference to his wife, he remained in the capital only while Congress was in session. Consequently, although he discharged the administrative duties of his office with entire competence, he never mastered the complexities of national politics. President Monroe retained him in office, but Crowninshield was evidently dissatisfied with the part he was playing and resigned on Oct. 1, 1818. He was a presidential elector on the ticket of Monroe and Tompkins in 1820 and a member of the Massachusetts lower house again in 1821. In 1823 he returned to Washington as a Democrat in the House of Representatives, was reelected to

577
Crowninshield

the Nineteenth, Twentieth, and Twenty-first Congresses but was defeated in 1830 by Rufus Choate. While in Congress he was a friend and supporter of John Quincy Adams, and an ironical, somewhat bewildered, observer of national affairs. In 1833 he was for the third time a member of the Massachusetts House, but his political career was closed. He moved in 1832 to Boston and lived there in retirement for the rest of his life. His death came suddenly, while he was ascending the steps of a business house. He was buried in Mount Auburn Cemetery.

G. H. G.

CROWNINSHIELD, FREDERIC (Nov. 27, 1845–Sept. 13, 1918), painter, writer, was born at Boston, a son of Edward A. and Caroline M. (Welch) Crowninshield, and a scion of a famous Salem family. He was prepared for college at the Boston Latin School and was graduated from Harvard in 1866. In the following year he was married to Helen S. Fairbanks of Boston. Possessed of ample means and a taste for art, which had been stimulated by lessons from Dr. William Rimmer, he went to Paris in 1867 and entered the Ecole des Beaux-Arts. He afterward studied in Italy, remaining abroad until 1878. He then returned to Boston and for seven years occupied a studio, a local landmark, in the rear of the Museum of Fine Arts. He served, under Otto Grundmann, as instructor in drawing and painting and lecturer on anatomy in the museum school. In 1886 Crowninshield removed to New York to devote himself to stained glass and mural painting, foreseeing a great development of these arts in the United States. He was one of the organizers of the National Society of Mural Painters. He was a frequent exhibitor with the Architectural League of New York, of which he was a vice-president. His windows included the depiction of "Hector and Andromache" for Memorial Hall, Harvard University, and the Goodrich window, Church of the Ascension, New York, and he did mural paintings for the Municipal Building, Cleveland, Ohio, the Hotels Waldorf and Manhattan, New York, and many other buildings. In 1900 he became president of the Fine Arts Federation of New York. He took interest in training younger artists for decorative work, and served (1900–11) as director of the American Academy in Rome. He spent much time abroad, living and painting at Rome, Naples, Capri, and Taormina. He wrote poetry as an avocation: Pictoris Carmina (1900); A Painter's Mood (1902), with his own illustrations; Tales in Metre and Other Poems (1903); Under the Laurel (1907); and Villa Miriflore (1912). Crowninshield's summer studio was at Stockbridge, Mass., and there, in his last year, when his serious illness was reported from Capri, where he died, a special exhibition of his works was arranged by the Stockbridge Art Association. In April 1919, at the Boston Museum of Fine Arts, a Crowninshield Memorial Exhibition was hung. This included some of the many water-colors, usually of architectural subjects, which the artist made in Italy. Of them the Boston Herald (Apr. 13, 1919) said: "A cheerful grayness pervades them, for Mr. Crowninshield, like most colorists who learned their art in France in the seventies, was disinclined to overstate the brilliancy of nature."

Crowninshield

CROWNINSHIELD, GEORGE (May 27, 1766–Nov. 26, 1817), sea-captain, merchant, pioneer yachtsman, was the eldest son of George and Mary (Derby) Crowninshield, and brother of Benjamin Williams and Jacob Crowninshield [q.v.]. Young George, like the rest of his brothers, received a common school education until he was eleven, and then, after studying navigation, was sent to sea as a captain's clerk. He was in command of a ship to the West Indies in 1790 and four years later he was commanding the Belisarius to the East Indies. About 1800 he came ashore to assist his father in the counting-house, directing the extensive commercial interests of George Crowninshield & Sons. The firm made great profits from the America and their other privateers in the War of 1812. Upon his father's death in 1815, the firm dissolved and George retired to live upon his very ample income. He always had a love of the spectacular, dressing in the extreme of fashion with bizarre waistcoat, shaggy beaver hat, and tasseled Hessian boots. He drove a flashy yellow curricle and attracted attention by taking a ship to Halifax to bring back the bodies of Capt. Lawrence and Lieut. Ludlow of the Chesapeake. Most conspicuous, however, were his pioneer activities as a yachtsman. About the time that
Crowninshield

he settled down in 1800, he built the first American yacht, the little Jefferson, in which he cruised around Massachusetts Bay, sometimes making thrilling rescues after storms. After his retirement in 1815 he built a more elaborate yacht, Cleopatra's Barge, in which he sailed to the Mediterranean in 1817, carrying with him more than three hundred letters to consuls and other officials in Europe. The yacht was the first sea-going vessel of her class, and aroused considerable wonderment, thongs of visitors coming aboard at every foreign port. The Europeans marveled at the crew where even the negro cook knew the mysteries of navigation. Crowninshield died suddenly at Salem a few weeks after his return from this cruise. He had never married. He was a short man, remarkably robust and strong, with a high reputation for courage.

[Edward W. Crowninshield, "Account of the Yacht Cleopatra's Barge" in Essex Inst. Hist. Colls., XXV, 81-117 (1888), includes a biographical sketch of Crowninshield with verbatim quotations from contemporary newspapers. Further biographical details will be found in the same collections, III. 163 (1881), and in Edward B. Crowninshield, The Story of George Crowninshield's Yacht, Cleopatra's Barge (privately printed, 1913). There is a full account of Crowninshield and his yacht in R. D. Paine, Ships and Sailors of Old Salem (revised ed., 1923), pp. 172-81. The history of the Cleopatra's Barge is continued in S. E. Morison, Maritime Hist. of Mass. (1921), p. 262.]

R. G. A.—n.

CROWNINSHIELD, JACOB (May 31, 1770-Apr. 15, 1808), sea-captain, merchant, congressman, was born in Salem, Mass., the son of George and Mary (Derby) Crowninshield, and brother of George and Benjamin Williams Crowninshield [qq.v.]. Jacob was the second son and the most gifted member of the family. He was master of the schooner Active on a voyage to Europe in 1790. In 1791 he took the Henry to the West Indies. On Nov. 3, 1792, he returned from Calcutta and the Isle of France (Mauritius). On Jan. 23, 1793, he sailed again for India in the Henry, returning in November 1794. In April 1796 he brought to New York, in the famous armed ship America, the first live elephant ever seen in the United States. It was a female six feet four inches high and sold for $10,000. Crowninshield married Sarah, daughter of John and Sarah (Derby) Gardner, June 5, 1796, and remained ashore thereafter, devoting himself to his extensive commercial interests and to politics. Like the other members of his family, he was an uncompromising supporter of Jeffersonian policies. In 1801 he was elected to the Massachusetts state Senate. In the following year he defeated Timothy Pickering [qq.v.] in a bitterly contested race for the national House of Representatives. He served in the

Crozer

Eighth, Ninth, and Tenth Congresses and was regarded as one of the ablest members of the Republican party. In 1805 President Jefferson invited him to succeed Robert Smith [q.v.] as secretary of the navy. Crowninshield felt compelled to decline, but the President nevertheless sent his nomination to the Senate. It was confirmed, and according to the records of the Department of State Crowninshield was secretary of the navy from Mar. 3, 1805, until Mar. 7, 1809, although he never assumed the duties of the office. On May 18, 1807, his wife died. His own health grew precarious. The rugged young viking, who could take a clipper from Salem round the Cape of Good Hope to Calcutta and back again, succumbed to the stuffy, unventilated atmosphere of the hall of the House of Representatives. Blood gushed from his throat as he brought his last speech to a close. He died while Congress was still in session, and his body was brought back to Salem for burial. "We lament him very much for his Natural Abilities, his great Commercial knowledge, his sincere virtues, & his inflexible patriotism," the Rev. William Bentley wrote in his diary for Apr. 20, 1808. "I have known him from a lad & have nothing to blame in him. He was everything in every domestic, social, & civil relation. Had he not been confined in his early education & early been engaged in the business of the Seas he would have left none before him."

G. H. G.

CROZER, JOHN PRICE (Jan. 13, 1793—Mar. 11, 1866), manufacturer, philanthropist, was descended from James Crozer, a French Huguenot, who in 1700 went from France to Antrim, Ireland, whence he emigrated to America and settled in Delaware County, Pa. He married Esther Gleave (J. H. Martin, History of Chester, 1877, pp. 454-55). The son James Samuel Crozer married Sarah Price, and John Price Crozer, one of their five children, was born at West Dale, Delaware County, Pa., in the house where some years before Benjamin West, the painter, had been born. Educated locally and surrounded by Quaker and Baptist
Crozer

influences, Crozer gained a religious training which governed his subsequent life. From 1810 to 1820 he farmed the 173 acres left by his father. Average in height, sturdy built, and vigorous, about 1820 he traveled on horseback for 2,700 miles through Ohio, Indiana, Illinois, and Kentucky to see the country, but returned to his native county. About 1822, with his inheritance of $3,400, he bought second-hand machinery and began the manufacture of yarn, but his product was poor and he went in for weaving. A timely loan of $600 saved him from disaster. In 1824 he bought a near-by mill-seat and farm, which he named West Branch. In the new location his business undertaking succeeded, and in 1825 he married Sallie L. Knowles. In 1828 he built his first meeting-house, which served as a church and school-house for his employees. In 1839 he bought power machinery on borrowed capital and succeeded rapidly thereafter. He took great interest in his employees and visited them personally in sickness, but in 1842 he had the leaders of a strike convicted for conspiracy. An overturned sleigh in 1843 crippled him for life. A flood in the same year swept away his mill-dam buildings at a loss of $50,000. Nevertheless, in 1845 he purchased the Flower estate, near Chester, Pa., which he called "Upland," and on it he built a mansion and a meeting-house. In 1847 he retired, admitting his son Samuel to partnership, and thereafter found his chief interest in his philanthropies. He enjoyed the sharing of his wealth and bounty. Crozer's local benefactions were numerous. He founded a normal school at Upland which served the Government as a hospital during the Civil War. In 1861 he and George H. Stewart were selected as the Philadelphia members of the Christian Commission. He contributed to raising a company for service in the Union cause, and his son George K. Crozer was its captain. He entrusted various funds to the American Baptist Publication Society, built a Baptist church at Upland, and endowed a professorship at Bucknell University. A younger brother died in Africa in connection with the work of the American Colonization Society, in which Crozer was greatly interested. His will established a $50,000 Memorial Fund for "Missions among the Colored People of this Country." His widow and children established the Crozer Theological Seminary at Chester, Pa., as a memorial to him by adding $105,000 for buildings, library, and endowment to the normal school property, then valued at $80,000.

B. C.

CROZET, CLAUDE (Jan. 1, 1790-Jan. 20, 1864), soldier and engineer, was born at Villefranche, in France, was educated at the École Polytechnique, and in 1807 was commissioned in the artillery. He served with credit at Wagram and in the Russian campaign, was captured during the retreat from Moscow, and remained a prisoner in Russia for two years, being released and allowed to return to France only after the fall of Napoleon. He then resigned his captaincy, but rejoined the army on the Emperor's return from Elba. The second restoration of the Bourbons left him once more out of the service, and in 1816 he determined to seek his fortune in a new country. Gen. Simon Bernard [q.v.], the distinguished French military engineer, had just been appointed to a position in the engineer service of the United States army, and Crozet accompanied him to America. On the recommendations of Lafayette and Albert Gallatin, he was appointed, Oct. 1, 1816, assistant professor of engineering at West Point, and on Mar. 6, 1817, was made professor and head of the department. Up to this time instruction in engineering there had been unsystematic and elementary; Crozet improved it greatly, particularly by requiring a much more substantial foundation of mathematics. He introduced the study of descriptive geometry, not hitherto taught in the United States, and prepared the first American textbook on the subject (A Treatise of Descriptive Geometry for the Use of the Cadets of the United States Military Academy, 1821). Both at West Point and at the Virginia Military Institute, with which he was later associated, descriptive geometry has continued a specialty up to the present time. Resigning his professorship in 1823, he soon after became state engineer of Virginia. He left that position in 1832, and spent five years in engineering and educational work in Louisiana, but returned to his place in Virginia in 1839. He had the vision and the technical ability to plan a great development of inland communication by road, canal, and railroad, which, though never entirely carried out, gave Virginia one of the best road systems in the country for the time. He urged, though unsuccessfully, the creation of a through route from the seaboard to the West by canalizing the James River from the head of navigation at Richmond up to Lynchburg, and by the construction of a railroad from that point to deep water on the Kanawha. Perhaps his greatest engineering achievement was the location and construction of a railroad through the Blue Ridge between Albemarle and Augusta counties, which
Cruger

later passed into the possession of the Chesapeake & Ohio Company. He is now best remembered, however, for his work in connection with the Virginia Military Institute, formally organized in 1839. Crozet was a member of the original Board of Visitors, was chosen president of the board, and retained that office until 1845. The statute creating the new institution provided that it should be a "military school," and "give instruction in military science and in other branches of knowledge"; also that the students should be "formed into a military corps" and "constitute the public guard of the arsenal." Subject to these very general directions, its character and curriculum were left to the discretion of the Board of Visitors. Crozet's influence caused it to be modeled closely after the pattern of West Point, where he had previously taught, and whose course of study, indeed, was in a considerable degree his own creation. The regulations of the Military Academy were adopted substantially without change, and its uniform was quite closely copied. The course of instruction could not be made identical, partly for lack of funds and partly on account of the difference in the future vocations of the students of the two schools; but the resemblance was strong, military and mathematical subjects being greatly emphasized. In 1857 Crozet was appointed principal assistant to Capt. (afterward Brig.-Gen.) Montgomery C. Meigs [q.v.] for the construction of the aqueduct which supplies the city of Washington with water from the Great Falls of the Potomac. By a natural misapprehension, the building of the Aqueduct Bridge to the Virginia shore is sometimes ascribed to him. He was not employed upon this, however, for the structure was the property of a canal company and had no connection with the city's water-supply system. In 1859, when work on the aqueduct was suspended because of exhaustion of funds, he became principal of the Richmond Academy, and held that position until his death.

T.M.S.

CRUGER, HENRY (Nov. 22, 1739—Apr. 24, 1827), merchant, mayor of Bristol, England, member of Parliament, N. Y. State senator, was born in New York City, son of Henry and Elizabeth (Harris) Cruger. His grandfather, John Cruger, was the first of the family to come to America, and the family association with the English cousins in Bristol was always intimate. Henry matriculated at King's College in the class of 1758 but he did not complete his course. In 1757 he was sent by his father to the counting-house in Bristol, then a rival of London in the American trade, to familiarize himself with the Cruger business. The young man found it a simple matter to take to wife the daughter of Samuel Peach, a Bristol banker, and settle down to a successful career as merchant. He rose to a high degree of personal popularity, and eminently enjoyed the regard and confidence of his fellow citizens of Bristol" (Van Schaack, Henry Cruger, p. 9). Cruger kept in constant touch with the members of his family in New York during the pre-Revolutionary days and felt keenly the mistakes that were being made by the British government in its treatment of the colonies. In 1774 he stood for Parliament and induced his fellow citizens to place Edmund Burke on the ticket with him. "Burke, Cruger, and Liberty" was the party cry. Triumphantly elected and "chairman," Cruger entered Parliament in the session which began Nov. 29, 1774, although his political enemies tried to get the House of Commons to refuse a seat to the American. In his maiden speech (Dec. 16), admirable for its restraint, he deplored the parliamentary measures that had "widened the breach instead of closing it," that "diminished the obedience of the colonies instead of confirming it," that "increased the turbulence and opposition instead of allaying them," and pled for a different plan of conduct which would "secure the colonists in their liberties, while it maintains the just supremacy of Parliament" (Parl. Hist. of Eng., XVIII, 64-67). During the speech, Flood, the Irish orator, was heard to say: "Whosoever he is, he speaks more eloquently than any man I have yet heard in the House" (Van Schaack, Henry Cruger, p. 14). At the next election, in 1780, Cruger was "turned out," as he said, "because of his attachment to the Americans during the war." However, he was made mayor of Bristol the following year, and was again successful as a candidate for Parliament in 1784.

The Cruger family bond had been sufficiently strong to bring Henry's father to Bristol (1775) to spend his last years with him. Henry himself declined to run again for Parliament in 1790 in an address "to the Gentlemen, Clergy, Freeholders and Freemen of the city of Bristol," and removed with his family to New York. His political welcome was an election to the Senate of New York State in April 1792, a high compliment to his American sympathies. Cruger's second wife was Elizabeth Blair, who died soon

581
after the family removed to New York. His third wife, whom he married about 1799, was an American woman, Caroline Smith. He was not active in business after his return to America, but overcame ill health to live to a good old age.

[Henry C. Van Schaack, Henry Cruger: the Colleague of Edmund Burke in the British Parliament (1859) includes letters to relatives in America and speeches in Parliament; Knebeker Mag. for Nov. 1843 and Jan. 1843; Jour. of the First Cong. of the Am. Colonies (1845), Appendix; Genealogical tables in The Cruger Family (1892).]

A.E.P.

CRUGER, JOHN (July 18, 1710–Dec. 27, 1791), mayor of New York, speaker of the last colonial assembly, first president of the New York Chamber of Commerce, was the second of his name to lead a distinguished career as merchant and public official. John Cruger the elder, probably of German origin, who came to New York from Bristol, England, in 1698, had built up a very prosperous shipping business, and as alderman for twenty-two years and mayor from 1739 to his death in 1744, had brought the family to a position of great weight in the affairs of city and province. John, the third son of John and Maria (Cuyler) Cruger, after two years' service as alderman, was appointed mayor in 1756 and held that office till the close of 1765. In the first year of his service the city was thrown into commotion by the demand of the Earl of Loudon for quarters for large numbers of British troops. The circumstances were new, the behavior of the commander was inexcusably rough, and ugly events were only averted by Cruger's dignified patience, together with his influence in procuring private subscriptions for quarters for the officers. In like manner in 1765, the mayor's cool judgment, aided by the confidence reposed in him by both sides, made possible a popular victory in the delivery of the stamps to the municipality, marred by much less serious breaches of public order than was the case, for example, in Boston in corresponding circumstances.

In the provincial Assembly, in which he served from 1759 to 1775, with an interruption in 1768, he took a prominent part in resistance to the measures of the British ministry. He was a member of the Assembly's Committee of Correspondence and was one of the New York delegation to the Stamp Act Congress. The authorship of the latter's Declaration of Rights and Grievances is claimed for him as well as for John Dickinson [q.v.]. He was one of the organizers of the New York Chamber of Commerce in 1768, and on the occasion of his reelection as its president, May 2, 1769, he conveyed, as speaker of the Assembly, the thanks of that body to the merchants of New York for their proceedings relative to the non-importation of British goods.

Crump

Although an opponent of the British policy, Cruger had always a strong sense of his responsibility as an official both of the Crown and of the Province. When the movement of popular resistance developed into revolution, he thus found himself outside the current of what was destined to be the triumphant cause. His name was included in a list of "suspected persons" in the resolution of the Provincial Congress of June 5, 1776. This was doubtless due in part to his course in the Assembly in opposition to the motion to approve and adopt the proceedings of the First Continental Congress and to his refusal personally to sign the Association, and in part to his close business and family connections with certain active Tories. He is said, however, to have contributed to the funds of the Committee of Safety, and he is known to have urged General Gage, after receipt of the news from Lexington and Concord, to order an immediate cessation of public hostilities. At all events, it does not appear that he was ever summoned before the Committee.

Before the British occupation of the city he retired to Kinderhook, returning to New York after 1783 to live with his nephew, Nicholas, who had been conspicuous for patriotic activities. He died, unmarried, Dec. 27, 1791.

Record, Apr. 1875.]

C.W.S.

CRUMP, WILLIAM WOOD (Nov. 25, 1819–Feb. 27, 1897), jurist, was born in Henrico County, Va., his parents being Sterling Jamieson and Elizabeth (Wood) Crump. His father was an importer and the family had been associated with Virginia for some generations. William's early youth was spent in Richmond, where he attended Dr. Gwathmey's school. After passing a short time at Amherst Institute, Mass., he entered William and Mary College in 1835 and graduated there in 1838. Then joining the College Law School, he studied with Prof. N. Beverley Tucker, and was admitted to the Virginia bar in 1840. Opening an office in Richmond, he at the same time commenced to take an active part in political and civic affairs. He had a natural aptitude for public speaking, being fluent, impressive and lucid, as a consequence of which he came to the front rapidly. An ardent advocate of state rights, he was a strong supporter of Calhoun, Polk, and Cass. In 1851 he was elected by the legislature of Virginia judge of the circuit court of the City of Richmond. By virtue of the reorganization of the courts under the state con-
Crunden

Crunden

stitution of 1850, however, all existing tenures of judicial office terminated July 1, 1852, and on the expiration of his term Crump returned to practise, stating that the bench did not suit his disposition. He was by nature and temperament an advocate rather than a judge. An expert in the art of cross-examination, he was particularly effective in the conduct of cases before a jury (George L. Christian, post), appearing in most of the important civil and criminal cases of his time. He was a strong advocate of secession, and when the Civil War began, became assistant secretary of the treasury of the Confederate States. He represented the city of Richmond in the General Assembly, called at the conclusion of the war, but when the Shellabarger Bill, which put the seceded states under military law came into effect, returned to his law practise. On the arrest of Jefferson Davis, he acted as one of the latter's bondsmen in May 1867, also appearing for the defense in the subsequent trial of Davis for treason. He withdrew, however, from active participation in public affairs, and with the exception of one term in the state legislature, never again held office of any kind. In 1885 he was leading counsel for the defense in the most famous criminal trial in the history of the state, i.e., that of Thomas J. Cluverius for murder. He was also retained in the John Randolph will case. Throughout his life he took a keen interest in the affairs of William and Mary College, and as member and later president of the Board of Visitors, was indefatigable in his efforts to place it on a sound financial basis. He died at Richmond in his seventy-eighth year. His wife was Mary, daughter of Philip Edward Tabb of Waverly, Gloucester County, Va.

CRUNDEN, FREDERICK MORGAN
(Sept. 1, 1847–Oct. 28, 1911), educator and librarian, was born in Gravesend, England. His parents were Benjamin Robert and Mary (Morgan) Crunden, of old Saxon, Welsh, and French ancestry. They moved to St. Louis, Mo., in his early childhood, where he was educated in the public schools. He graduated from the high school in 1865, was valedictorian of his class, and won a scholarship to Washington University. By teaching during vacations, he accumulated funds for support during his college career. After receiving degrees of A.B. in 1868, and A.M. in 1872, he was made instructor at Smith Academy. Six months later he was employed in the public schools as principal of the Jefferson and Benton schools, successively. After two years he was engaged by Washington University as instructor in mathematics and elocution. He became a member of the faculty and remained until 1876, when ill health took him to Colorado. His health restored, Crunden returned to St. Louis and taught in the high school for a short time.

On January 1877 he was appointed secretary and librarian of the Public School Library. He had developed great interest in library work and the new field was most congenial to him. The Library at this time had few books and a small membership. It was not a free library; members were charged for the use of books. The sums thus received, together with a small contribution from the public-school fund, afforded its only support. The new librarian created a sentiment in favor of a free public library, and started the campaign which separated the library from the school board. According to his plan a special tax was provided for the support of the library, and a library board was created to manage the institution and disburse its funds. A prominent member of the board testified that "Mr. Crunden was the life, the soul, and the center of every great advance it made." Before he died St. Louis had a great public library, with six branches and ample support. Over the main entrance to the central building were carved Crunden's words: "Recorded thought is our chief heritage from the past, the most lasting legacy we can leave to the future. Books are the most enduring monument of man's achievements. Only through books can civilization become cumulative."

Crunden regularly attended meetings of the American Library Association, of which he was vice-president (1887), president (1889), and councilor from 1882 almost continuously until his last illness. He was first president of the Missouri State Library Association, and vice-president of the International Library Conference. He served as chairman of the library section of the Louisiana Purchase Exposition, and was selected to arrange and classify the arts and science exhibit. He contributed to various publications, and at his death left unfinished a library textbook. In 1889 he was married to Kate Edmondson. He died after an illness of five years, his funeral services were held at St. Louis, in the Church of the Messiah (Unitarian), and his body was cremated.

Cubero

CUBERO, PEDRO RODRÍGUEZ (1645–1704), Spanish governor of New Mexico, was born at Calatayud, Spain, in the Ebro valley southwest of Saragossa. During the nine years following 1680 he made a world cruise including in his journey parts of America, Asia, and Europe, and he then served for a time at Havana, Cuba. On June 24, 1692, the governorship of New Mexico was granted to him but he was not to take office until the end of De Vargas’s term of five years. This should have occurred on Feb. 22, 1696, but on Mar. 3, 1697, Cubero was making demand upon the viceroy of New Spain for the office. An official investigation followed. De Vargas claimed that he had been reappointed by the viceroy, the Conde de Galve, but the records showed no confirmation from the king. The viceroy ordered Cubero to assume the office and his action was confirmed by the king, Jan. 26, 1699. Cubero arrived in Santa Fé on July 2, 1697, and found De Vargas unwilling to surrender the governorship. The latter, as a result of rather arbitrary methods, had made numerous enemies. On charges preferred by the cabildo (town council of Santa Fé) Cubero placed De Vargas in prison. The following offenses were said to have been committed by De Vargas and his officers: they had appropriated money belonging to the settlers; they had been responsible for the Pueblo uprisings of 1694 and 1696 and for the famine of 1695. In addition to imprisonment De Vargas was fined 4,000 pesos, his property was confiscated, and he was required to pay the costs of the suit. While the Pueblos of the upper Rio Grande valley had submitted to De Vargas, those west of the river including Acoma, Zuñi and the Hopi towns were still independent. Cubero succeeded in gaining the submission of Acoma on July 6, 1699. A week later he persuaded the Zuñi Indians to leave their citadel on Thunder Mountain and return to the valley. The Indians, who had settled in the San José Valley following the Pueblo Revolt, were officially named the Pueblo of Laguna, July 4, 1699, and the Spanish settlement nine miles northeast of Laguna was named Cubero. Several attempts were then made by Cubero to reestablish the missionary work among the Hopi towns but without success, and the missionary at Zuñi was ordered to return to the Rio Grande Valley because the military force was not large enough to protect him. Meanwhile Cubero released De Vargas in July 1700, and the latter’s case was investigated in Mexico City. In 1701 a royal decree was issued providing for De Vargas a second term at the close of Cubero’s governorship. Fearing the events that might follow with their positions reversed, Cubero left Santa

Cudahy

Fé in August 1703, and died in Mexico in 1704. The cabildo of Santa Fé reversing itself, stated that De Vargas had labored to protect the settlements while Cubero had done nothing to prevent attacks from the nomadic tribes but had been “ Solely occupied with drinking and writing papers… and ascribing faults and crimes to those who had not committed them.”

CUDAHY, MICHAEL (Dec. 7, 1841–Nov. 27, 1910), meat-packer, was born in Callan, County Kilkenny, Ireland, son of Patrick and Elizabeth Shaw Cudahy, and came to America with his parents in 1849. He made his home in Milwaukee and at the age of fourteen left grammar school and entered the employ of Layton & Plankinton, meat-packers, in Milwaukee, where he advanced rapidly in the business. Later he worked for another packer, Edward Roddis, until 1866, when the business was terminated. In 1866, he became private meat inspector for Layton & Company, and three years later superintendent in charge of the packing-house of Plankinton & Armour at Milwaukee. Later still he became a board of trade inspector in the Milwaukee packing plants and after three years plant superintendent for Plankinton & Armour. His ability was widely recognized, and in 1875 he was offered and accepted a partnership in the firm of Armour & Company of Chicago, assuming control of the company’s plant operations at the Union Stock Yards as general superintendent. At about this time he was married to Catherine Sullivan of Cedarburg, Wis. Cudahy’s outstanding contribution to the development of American meat-packing operations was the epoch-making innovation of summer curing of meats under refrigeration (1870–80). The packing industry had been hitherto a winter season business for the most part. People had eaten cured meats heavily salted, it being necessary to cure the meats in this manner in order to preserve them; and as this had been customary for centuries, no one had thought of eating fresh meat throughout the year. The process of refrigeration revolutionized the industry so that operations could be carried on continuously throughout the year. It prevented premature decay of perishable products, lengthened the period of consumption and thus greatly increased production, enabled the owner to market his products at will, and made possible transportation in good condition from the point of production to point of consumption,
irrespective of distance. Culberson's part in this evolution was that of a captain of industry who understands the significance of a new scientific development and who makes possible its application to commerce. The first step in meeting the new era was provided by stationary refrigeration in the form of cold storage warehouses, or "coolers," as a part of every packing plant. In addition, it was realized that refrigeration had to be applied to transportation. This was accomplished in the middle seventies with the evolution of the refrigerator car now so common in the transportation of all perishable food products. Culberson's contribution was mainly on the production side, but he was also one of the leaders in the development of the transportation phase.

In 1887 Philip D. Armour, Michael Cudahy, and his younger brother, Edward A. Cudahy, purchased a small packing plant in South Omaha, Nebr., and began a new business there under the name of the Armour-Cudahy Packing Company. There were in Omaha at that time only two small packers, whose business was for the most part confined to the British market, but this was not the best outlet for the rapidly increasing supply of live-stock which was really better adapted to the domestic market. This was more especially true of hogs. The Cudahy brothers very shrewdly saw the opportunity to be developed in packing for the domestic market. In this course they were amply justified, and were later able to develop a foreign outlet on a large scale as well. In 1890 Michael Cudahy sold his interests in the firm of Armour & Company and purchased Armour's interests in the Armour-Cudahy Packing Company, the name of which was subsequently changed to the Cudahy Packing Company. Michael Cudahy was president of the company from the beginning and continued in that office until his death. He was a Roman Catholic and was widely known for his philanthropic and civic activities.

[Obituaries in leading Chicago newspapers following Cudahy's death; see also a short account of his life in Rudolf A. Clemen, Am. Livestock and Meat Industry (1923); for personal characteristics see Patrick Cudahy, His Life (1912).] R.A.C.

CUFFE, PAUL (Jan. 17, 1759—Sept. 9, 1817), negro seaman, was born at Cuttyhunk, on one of the Elizabeth Islands not far from New Bedford. He was the seventh of the ten children of Cuffe Slocum, a Massachusetts negro who had purchased his freedom, and of Ruth Moses, an Indian woman. When sixteen years of age he was a sailor on a whaling vessel. On his third voyage he was captured by the British and held in New York for three months. When released he repaired to Westport to engage in agriculture. He studied arithmetic and navigation, and after various unhappy experiences with small vessels, including the capture of his goods by pirates, he made a successful voyage, in 1795 launched a sixty-nine-ton vessel, the RANGER, and by 1806 owned one ship, two brigs, and several smaller vessels, besides property in houses and lands. As early as 1778 he had persuaded his brothers to drop their father's slave name, Slocum, and to take his Christian name, Cuffe, as their surname. In 1780 he and his brother John raised before the courts of Massachusetts the question of the denial of the suffrage to citizens who had to pay taxes. For the moment the two men were not successful, but their efforts helped toward the act of 1783 by which negroes acquired legal rights and privileges in Massachusetts; and especially did they assist in giving to New Bedford a tradition of just and equal treatment for all citizens. On Feb. 25, 1783, Paul Cuffe was married to a young Indian woman, Alice Pequit. In 1797 he bought for $3,500 a farm on the Westport River where he built a public-school house and employed a teacher. In 1808 he was received into the membership of the Society of Friends of Westport; and he later assisted materially in the building of a new meeting-house. As early as 1788 he had been prominent in the suggestion of an exodus of negroes to Africa. On Jan. 1, 1811, with a crew of nine negro seamen, he sailed in the Traveller from Westport for Sierra Leone. In Freetown he formed the Friendly Society, which looked toward further immigration from America. Returning to America, Apr. 19, 1812, he planned to make a yearly trip to Sierra Leone. On Dec. 10, 1815, with a total of nine families and thirty-eight persons he set forth, expending not less than $4,000 of his own funds in the venture. He was well received and hoped to do even more, but his health failed in 1817. Tall, well-formed, and athletic, he was a man of remarkable dignity, initiative, tact, and piety, and the unselfishness of his efforts impressed all who knew him. He left an estate of $20,000.

[H. N. Sherwood, "Paul Cuffe," in Jour. of Negro Hist., Apr. 1923, VIII, 155-232; Peter Williams, Discourse on the Death of Paul Cuffe (1817); Memoir of Capt. Paul Cuffe (York, Eng., 1812].] B. B.

CULBERSON, CHARLES ALLEN (June 10, 1855—March 19, 1925), lawyer, statesman, born in Dadeville, Ala., was the son of David B. [q.v.] and Eugenia Kimbal Culberson. When he was one year old his parents moved to Gilmer, Upshur County, Tex., and five years later to Jefferson, Marion County. Here he received his primary education. In 1870 he entered Virginia Military Institute where he graduated in 1874.
Culberson

He then studied law in his father's office and later entered the law school of the University of Virginia where he graduated in 1877. He began the practise of law at Jefferson, Tex., and was elected county attorney; but he soon returned to his private practise which grew rapidly. On Dec. 7, 1882, he married Sallie Harrison of Fort Worth; and in 1887 he moved to Dallas. In 1890 he ran for the attorney-generalship of Texas and was elected. In this first race for a state office he displayed that remarkable gift for organization which always marked his political contests. He owed much, no doubt, to the popularity of his father, who was becoming one of the Democratic leaders in Congress; but the son was winning success also on his own merits. When he became attorney-general, James S. Hogg, his predecessor in that office, became governor on a reform platform; and it fell to Culberson to defend before the courts some of the measures which Hogg had enacted into law. The most important of these measures was the railroad commission law, the constitutionality of which the United States Supreme Court upheld in Reagan vs. Farmers' Loan and Trust Company (154 U. S., 362). Other important cases in which he represented the State were: The Houston and Texas Central Railroad Company vs. Texas (177 U. S., 66) in which the State recovered a large tract of land in western Texas claimed by this road; and The United States vs. Texas (143 U. S., 621 and 162 U. S., 1), known as the Greer County case, in which Texas lost its claim to the region between the forks of the Red River, now in Oklahoma. In 1892 he was reelected attorney-general.

In 1894 he entered the contest for the Democratic nomination for governor and won an easy victory. In this, as in his later campaigns his manager was Col. E. M. House, afterward famous as the political adviser of Woodrow Wilson. In the November election he was opposed by Thomas L. Nugent, the Populist candidate, but after a strenuous contest Culberson won by nearly 60,000 votes. The great issue in this campaign was free silver, and the state Democratic platform had leaned toward gold; but Culberson quickly identified himself with the silver men. His administration as governor was notable for activity and vigor in the enforcement of the laws and for a strong fiscal policy by which expenses were reduced through rigid economy and administrative and judicial reforms. The most spectacular action of Culberson was his calling the legislature into special session in October 1895, to enact a law which prevented the holding of the Corbett-Fitzsimmons prize-fight in Texas. In 1896 he was again the Democratic candidate for governor, and in a hard fight defeated the Populist candidate, Jerome C. Kearby, by some 60,000 votes. In 1898 both Culberson and Roger Q. Mills were candidates for the United States Senate—the latter for reelection, but Culberson's organization was so effective that Mills withdrew and Culberson was elected by the legislature. He took his seat in March 1899, and served in the Senate for four consecutive terms. He proved a steady and effective party worker; and his ability, united to a fondness for details and a passion for accuracy, soon attracted attention. In 1907 he became the leader of the Democratic minority in the Senate. Although a rather strict constitutionalist, he generally supported progressive measures, especially those for the regulation of great corporations. His chief service was as a member of the Committee on the Judiciary, of which he was chairman during the momentous years 1913–19. Though his health had broken badly he remained steadfastly at his post and continued actively in committee work; and he had a prominent part in framing the important legislation of the Wilson administration, especially the war measures. In 1922 he was defeated for reelection in the Texas primaries. This was his first defeat and it was largely due to his physical inability to conduct his own campaign. After his retirement in 1923 he remained in Washington, where he died two years later. In his prime he was an unusually handsome man, tall, straight, with regular features and keen twinkling eyes. He was reserved in manner, except among his closest associates, and uncommunicative. It was said of him that he never had to reproach himself for having talked too much. Though he did not speak frequently, he was an accomplished orator, and his prepared speeches are remarkable for literary finish and strength. He is buried at Fort Worth.

[The best sketch is in the Dallas Morning News, Mar. 20, 1925. Culberson himself wrote a sketchy autobiography, "Personal Reminiscences," in the form of thirty-two brief letters which were syndicated through a number of Texas newspapers in the winter of 1923–24. His speeches while governor of Texas he collected and republished in an undated booklet. Some information of value may be gleaned from the following: E. W. Winkler, Platforms of Political Parties in Texas (1916); "The Claims of the Candidates" in the North Am. Rev., June 1908, pp. 812–17, a favorable appraisal by Tom Finty, Jr.; Charles Seymour, ed., The Intimate Papers of Col. House (1926), vol. I. See also J. W. Maddox, Charles Allen Culberson (1929).] C. W. R.

CULBERSON, DAVID BROWNING
(Sept. 29, 1830–May 7, 1900), lawyer, statesman, was descended from John Culbertson who came from the North of Ireland to Chester, Pa.,
Culberson

about 1712. Joseph, the grandson of this John, moved to North Carolina before the Revolution and somewhere dropped the "i" from his name. David Browning Culberson was the son of Rev. David B. Culberson, a well-known Baptist preacher, and Lucy Wilkinson Culberson, daughter of a large planter of Oglethorpe County. He was born in Troup County, Ga. His education was obtained chiefly at Brownwood Institute, Lagrange, Ga. He then read law, after the custom of that day, in the office of the noted lawyer and Whig leader, William P. Chilton of Tuskegee, Ala., who was at that time chief justice of the supreme court of that state. He was admitted to the bar in 1851 and settled at Daleville, Ala. Here he married Eugenia Kimbal, Dec. 2, 1852. In 1856 he moved to Upshur County, Tex., where he continued the practise of law. In 1859 he was elected to the lower house of the legislature. He had been a Whig until that party disappeared and he seems to have supported the Constitutional Unionist candidates in 1860. He opposed secession and the recognition of the Texas Secession Convention by the legislature, and finding that his constituents disagreed with him, he resigned from the legislature. At about this time he moved to the rising town of Jefferson, in Marion County, which was his home throughout the rest of his life. When the war came he enlisted as a private; but in 1862 he aided in raising the 18th Texas Infantry and became its lieutenant-colonel and later its colonel. This regiment served in Arkansas and Louisiana in J. G. Walker's division, and Culberson distinguished himself for courage and resourcefulness. In 1863 his health broke down and he resigned; but in November he was appointed by Gov. Murrah to the post of adjutant and inspector-general of Texas at Austin. In 1864 he was elected to the legislature from Marion County, and resigned his commission. After the war he again took up the practice of law and rose rapidly to a leading position at a bar which was distinguished for able advocates. He became famous as a trial lawyer, for he was not only a profound student of the law but had such a persuasive influence with the juries that he seldom lost a case. In 1873 he was elected to the state Senate. In 1875 he was elected to Congress, and was reelected for ten consecutive terms until in 1896 he refused another election.

His most important service in Congress was as a member of the House Committee of the Judiciary, of which he was several times chairman. Though his chief interest was in legal and constitutional questions, especially judicial reforms, he was attentive to all matters pertaining to the public interest. He worked consistently for the principle of tariff for revenue only and for the federal regulation of railways. He was not particularly active in the free-silver movement, but he voted with his party and section for the bills of 1878 and 1890 and against the limiting amendments engrained on them, and he opposed the repeal of the silver purchase clause of 1893. He introduced in the House, on the part of the judiciary committee, the anti-trust bill of 1890 and supported it with a careful and weighty speech. In 1890 he was offered a place on the Interstate Commerce Commission, but declined it. He was regarded by many of his colleagues as the ablest constitutional lawyer in the House and was ranked in this respect with Senator Edmunds. He spoke but seldom, and almost never on trivial matters, and was always listened to with great respect on both sides of the House. His speeches were characterized by temperateness, a terse and closely woven argument, and remarkable clarity. Though a Democrat, he had never broken entirely with his early Whig training, as is shown by his conservatism and his broad views of the constitutional powers of the Federal Government. He had the personal confidence of members of both parties and in his later years his advice was much sought because of his sound judgment and breadth of view. His hold upon the people of his own district was remarkable, as his twenty-two years of continuous service attest; but it was due not only to their pride in his ability but to his simple unaffected honesty, his plain and unassuming manners, and his warm heart. When he retired from the House it was generally expected that the legislature would elect him to the Senate, but he stood aside for his son, Charles A. Culberson, who was at that time governor of Texas. He was appointed in 1897, by President McKinley, on the commission to codify the laws of the United States, and he was serving in that capacity at the time of his death. He died, widely mourned, at Jefferson, Tex., and was buried there.

[Personal recollections of his surviving friends; Jours. of the 8th and 14th Legislatures of Texas; the records of the office of the Adjutant-General of Texas; the Congressional Record; the contemporary newspapers of Texas. Several of these, notably the Dallas News, published biographical sketches at the time of his death. See also J. P. Blessington, The Campaigns of Walker's Texas Division (1875); L. R. Culberson, Geneal. of the Culberson and Culberson Families (rev. ed., 1923); Biog. Dict. of the Am. Cong. (1928).]

C.W.

CULLIS, CHARLES (Mar. 7, 1833–June 18, 1892), homeopathic physician and leader in a faith-cure movement, was born in Boston, Mass.,
Cullom

the son of John Cullis, of old Puritan stock. As a child he was infirm and he remained more or less an invalid all his life. After serving as a clerk in a mercantile house, his health became seriously impaired and he turned to the study of medicine. His early practise was among the poor, especially among those with chronic illness. Cullis's interest in "faith cure" was quickened by stories of the work of Herman Francke in Germany and that of George Müller in England. He read of Dorothea Truelde of Switzerland, whose work greatly impressed him; later he wrote her life story. About 1865 he opened a home for consumptives in Boston. In a few years he had outgrown his quarters and, entirely through gifts from the public, he built many "homes" on eleven acres of ground in Grove Hall, near Boston. The group consisted of a "Consumptives' Home," a "Spinal Home," two "Orphan Homes," the Grove Hall Church, a "Faith Cure House," and a "Deaconess' House." In Boston he maintained the Beacon Hill Church, the "Lewis Mission," the "Faith Training College," and the Cottage Street Church. Missions were established at Boynton, Va., Alabama, Cal., Renicks Valley, W. Va., Oxford, N. C., and two in India; "tract repositories" were started in Boston, New York, and Philadelphia, the most famous of which was the Willard Tract Repository in Boston. To maintain these numerous activities, Cullis is said to have obtained from the public, "in answer to my prayers," but without solicitation, as much as $600,000 in twenty-five years, in daily contributions from a few cents to $2,000.

The public attended his churches in large numbers and his "homes" were always filled to overflowing. So many came to his church from a distance that he built the "Faith Cure House" near-by for those who had to remain overnight. The training school, established about 1873, was successful and he is said to have collected over $30,000 for it; a bookstore was connected with it, where tracts were sold. During the summer Cullis held open air "conventions" or "revivals" at Intervale, N. H., and Old Orchard, Me. He was attacked from other Boston pulpits as an adventurer, but he never made any reply and thus kept his dignity. Essentially honest, he spent all the money collected on his charities and died a poor man. It is said that he always believed in using medical skill and only took patients after other physicians had seen them. Practically no provision was made for the continuation of his work after his death and most of his charities dissolved in the course of a few years. It is possible that some of his ideas stimulated the development of the Christian Science Church in Boston. He was survived by his wife, Lucretia Ann Cullis, a son, and two daughters.

[An account of Cullis, including illustrations of the "Homes," by W. I. Gill, will be found in the New England Mag., Mar. 1887, V, 438-49. See also: Chas. Cullis, Ann. Report of the Consumers' Home, 1865-77; Boardman, Hist. of the Consumers' Home (1869), and Faith Cures; or, Answer to Prayer in the Healing of the Sick (1879); Dorothea Truelde; or, The Prayer of Faith (1872), intro. by Chas. Cullis; W. E. Boardman, Faith Work Under Dr. Cullis in Boston (1876); Boston Sunday Herald, June 19, 1892; Boston Daily Advertiser, June 20, 1892.]

H. R. V.

CULOM, SHELBY MOORE (Nov. 22, 1829-Jan. 28, 1914), lawyer, statesman, was born in Kentucky, whither his father, Richard Northcraft Cullom, and his mother, Elizabeth Coffey, had emigrated after the Revolution; he from Maryland, she from North Carolina. Of twelve children of their marriage Shelby Moore was the seventh. After the attempt to fasten slavery upon Illinois had definitely failed, his father, who was an anti-slavery man, removed his family thither in 1830. In Illinois, then, mostly an unbroken prairie, the Culloms lived the plain and arduous life of the frontier. Shelby Moore acquired a fair common-school training in the subscription country schools of the locality, and later attended for two years Rock River Seminary at Mount Morris, then reputedly the best school of northern Illinois.

Returning to the labor of the farm he found it hard and ungenial, and so forsook it in 1853 to study law in Springfield, the state capital. There he came immediately into contact with politics. He was admitted to the bar in 1855. The same year he was elected city attorney, thus beginning, as he said, "a political career exceeding in length of unbroken service that of any other public man in the country's history." Though he practised law for ten years, it was politics that he practised more assiduously and with more success. At first, like many men of Southern Whig family antecedents, his politics were uncertain. In 1856 he ran unsuccessfully on the Fillmore ticket as a presidential elector; was that year elected by both Free Soil and Fillmore men to the state legislature; and in 1858 followed Abraham Lincoln (long before, his father's friend) "firmly and without mental reservation" into the Republican party. Thereafter—always by the favor of that party—he was a member of the lower house of the state legislature in 1860-61, 1872, 1873-74 (speaker, 1861, 1873); representative in Congress, 1865-71; governor of Illinois, 1876-83 (two terms—a rare honor); and United States senator from Mar. 3, 1883 until 1913. He was a candidate.
Cullum

for re-election in the state primary of 1912, but was defeated. His election to the Senate before his resignation of the governorship involved a legal question of importance. Chief among the objects which he set himself to accomplish when he entered the Senate was the establishment of national control over interstate commerce. The Illinois constitution of 1870 had expressed, in its provisions, the indignation of the public against business and political practises of the railroads which, in truth, were nation-wide. In the legislature Cullom had been active in procuring the enactment of a state regulatory law (1873), and, as governor, in uncompromisingly maintaining it. Convinced that state control alone was inadequate, he secured a report from the Senate committee on railroads of a bill which, after country-wide hearings by a special committee of which he was chairman, established the Interstate Commerce Commission (1887). He then became chairman of the Senate's Committee on Interstate Commerce. He was also active in securing the passage of the Hepburn Act in 1906. In 1901 he exchanged this chairmanship for that of the Committee on Foreign Relations. This position he held longer than any predecessor. In its affairs he displayed commendable common sense and considerable independence, but nothing particularly signalizes his service. During the Spanish-American War he was a member of the Committee on Cuban Relations, and the same year was chairman of the Hawaiian Commission which drafted the bill for the government of the islands as a territory of the United States.

For more than fifty years, beginning with 1856, he was an active worker in political campaigns. While dependable in voting, in many ways he was fairly independent. He was not a highest-tariff man; could see that his party, until Roosevelt's day, left the Anti-Trust Act a dead letter; favored income and inheritance taxes long before his party accepted them; applauded Roosevelt for enforcing laws against violators in high places, but queried his Panama action, and opposed him (and Cullom's life-long friend John Hay, son of his one-time law partner) for dealing with Santo Domingo by executive agreement rather than by treaty. He kept his mind open throughout life on the issues of imperialism that followed the Spanish-American War; and open even as regarded the railroad "pooling" clauses of his own statute of 1887. He was critical but fair in his judgments of men. He enjoyed the work of the Committee on Foreign Relations more than any other because it was non-partisan. Yet, with all these disproofs of littleness, he was also capable of allowing a purely personal quarrel with the Chicago Tribune to control his conduct in the national campaign of 1892 (Cullom, Fifty Years of Public Service, pp. 249, 251-52). Largely by virtue of his long service in the Senate, and the positions secured under its rule of seniority, he was long prominent in his party. Repeatedly (1872, 1884, 1892, 1908) he was chairman of the Illinois delegation to Republican national conventions, wherein he played an important part. From 1911 to his death he was chairman of the Republican caucus of the Senate. He harbored presidential ambitions in 1888; was a candidate for the nomination in 1896; and once was nearly appointed to the cabinet (1896). In view of these facts it is remarkable how slight a trace he leaves in the biographies and memoirs of his leading contemporaries. This was perhaps partly due to temperament. There was nothing brilliant about him. He was a man of facts; even-tempered, conservative, "regular," conscientious and economical in public business; fair-minded—keeping his friendships outside of politics, and easily forgiving small party disappointments; thoroughly democratic. For these reasons and others (he did not, for example, drink or smoke) he was colorless. In his religious views he was liberal. His party strength in Illinois, and the chief explanation of his long service in the Senate, lay in his wisdom in council and in his reputation for honesty. No faintest scandal ever touched his reputation. It is mainly in connection with the creation of the Interstate Commerce Commission that his name will live nationally.

He married in 1855, Hannah M. Fisher who died 1861, and in 1863, his sister-in-law, Julia Fisher. He survived all his family.

F. S. P.

CULLUM, GEORGE WASHINGTON

(Feb. 25, 1869—Feb. 28, 1892), author, soldier, was born in the city of New York, the son of Arthur and Harriet (Sturges) Cullum, and as a child removed with his parents to Meadville, Pa. He was appointed to the Military Academy in 1829, graduated in 1833, and was commissioned in the Corps of Engineers. He had widely professional experience, including fortifica-
Cullum

tion work in the harbors of Boston, Newport, New London, New York, Annapolis, and Charleston, construction of government buildings at West Point and New York, and instruction in military engineering at West Point. As a result of an act of Congress enlarging the Corps of Engineers he was promoted from second lieutenant to captain in 1838. His health failed in 1850, his life was despaired of, and it was two years before he was able to return to duty. He became a major in 1861. During the early part of the Civil War he served as aide to Gen. Scott. Appointed brigadier-general of volunteers, Nov. 1, 1861, he was assigned as chief of staff and chief engineer to Gen. Halleck, and as such took part in the Corinth campaign. When Halleck went to Washington in 1862, as general-in-chief of the army, Cullum accompanied him, and served on his staff until Sept. 5, 1864. He was promoted lieutenant-colonel of engineers, Mar. 3, 1863. After leaving Halleck's staff he was for two years superintendent of the Military Academy, and then served on engineering duties until his retirement. He was mustered out of the volunteer service on Sept. 1, 1866; promoted colonel, Mar. 7, 1867; and placed on the retired list, Jan. 13, 1874. He married, Sept. 23, 1875, Elizabeth, daughter of John C. Hamilton, and widow of Gen. Halleck. After his retirement he lived in New York, and was active in scientific and philanthropic work. He was deeply interested in the work of the American Geographical Society of New York, of which he was one of the vice-presidents from 1877 until his death. He had already written and translated some engineering monographs; he now turned his special attention to history, writing several papers on the two wars with Great Britain, and revising his great work, the Biographical Register of the Officers and Graduates of the United States Military Academy. A first edition had appeared in 1850, and a second in 1868; he now gave it its final form and published the third edition, in three volumes, in 1891. This monumental work gives a full summary of the career of every graduate of West Point from the foundation of the Academy until 1889, supplemented in many instances by a biographical sketch. As these sketches were based not only on exhaustive research, but also, in most cases, on personal knowledge, their value is extraordinary. They incidentally give considerable insight into Cullum's own character. Somewhat flowery in their language and sentiment, as was the tone of the period to which he belonged, they breathe a passionate devotion to West Point, a high idealism, and the most fervent patriotism. His treatment of those graduates who joined the Confederate army is significant. Of none does he give a biographical sketch, or any mention of their war services. The record of each breaks off with the formula, "Joined in the Rebellion of 1861-66 against the United States," and resumes with the history after the war. It is noticeable, too, that several conspicuous Union generals are denied the honor of biographical sketches, while some of less fame receive them, from which the compiler's own feelings toward them may be inferred. It was Cullum's intention that a supplementary volume should be published every ten years, carrying on the record, and for this he made provision in his will. Supplements were accordingly published in 1900, 1910, and 1920, the last being in two volumes. He helped to organize the Association of Graduates of the United States Military Academy in 1870 and took an active part in carrying on its work. From his wife he inherited a considerable fortune, which was largely devoted to public uses by his own will. Generous bequests were made to the two institutions to which he was so strongly attached. For the benefit of West Point, he left $250,000 for the erection of a memorial hall (to which his name has been given); $20,000 endowment to provide for the erection, from time to time, of memorials within the hall; $20,000 as endowment to provide for the continuance of the Biographical Register; and $10,000 endowment for the Association of Graduates. To the American Geographical Society he left $100,000 for the erection of a building, and $5,000 to provide for the award of a gold medal to those "who distinguish themselves by geographical discoveries or in the advancement of geographical science."

[Cullum's Biog. Reg. (3rd ed. 1891), I, 535-37, gives his various assignments to duty in minute detail, but without comment. There are obituaries in Jour. Am. Geog. Soc., XXIV (1892), pp. 142-45, and Bull. Asso. Grads. Mil. Acad. (1892), pp. 83-86; this last also gives the provisions of his will relating to West Point, pp. 104-08. Something of his military career in the West may be found in the Official Records (Army), I, ser., vols. VII, VIII.]

T. M. S.

CULPEPER, THOMAS, Lord (1635–Jan. 27, 1689), colonial governor, was the son of John, Lord Culpeper and his second wife Judith, the daughter of Sir Thomas Culpeper of Hollingbourn, Kent. He was the eldest of seven surviving children (two having died before his birth) and inherited his father's title and the estate of Leeds Castle in Kent. On Aug. 3, 1659, he was married at The Hague to Margareetta, daughter of Jan van Hesse, by whom he had one child who became the wife of Thomas, Lord Fairfax. His married life was unhappy;
Culpeper

Lady Culpeper stayed for the most part in Leeds Castle while Culpeper lived in London with his mistress, Susanna Willis. He was commissioned by the king, July 8, 1675, governor of Virginia for life, to take office however, only on the death or removal of Sir William Berkeley [q.e.d.]. Berkeley died in 1677, and Culpeper entrusted the administration to his deputies Col. Herbert Jeffreys and Sir Henry Chicheley. He evidently did not intend personally to assume the governorship, but was compelled to do so by the king in 1680. The opposition of the colonists to the royal grant of all of Virginia to Lord Arlington and Lord Culpeper had resulted in the revocation of the grant with the exception of the quit-rents and the escheats. Before his arrival in the colony, Culpeper was regarded as an unscrupulous extortioner. Soon after his arrival, however, in May 1680, he won the confidence of the colonists by the measures which he proposed to the Assembly, and especially by the act for pardoning all the participants in Bacon's Rebellion who were then living. This conciliatory spirit so impressed the Assembly that it was influenced to pass an act which it might not otherwise have countenanced. The act specified that the duty of two shillings a hogshead on exported tobacco should be made perpetual and subject to the king's disposal instead of as formerly subject to the Assembly. Moreover, Culpeper was granted £500 sterling by the Assembly as a special recognition of his services. There seems to have been no objection on the part of the colonists to his being granted by the king an increase of £1,000 in his salary (in addition to the already established income of £1,000), £1,000 in perquisites, and £150 for house rent.

After remaining in the colony about four months, Culpeper returned to England, leaving Chicheley to serve as his deputy. In Culpeper's absence an Assembly was called to consider the low price of tobacco, which was occasioning general discontent. When the Assembly was unable to reach any effectual conclusions, the planters in several counties deliberately destroyed their tobacco plants. Chicheley, desiring to check any further destruction of tobacco, arrested some of those guilty of the offense and imprisoned them. When the news of the disturbance reached England, Culpeper was deprived of his appointment for life and threatened with removal unless he very soon returned to the colony. He was also reprimanded for leaving without royal permission and for having accepted the grant from the Assembly. On his return, which was reluctant, as he preferred staying in England, Culpeper's attitude toward the colonists was changed. He raised, by proclamation, the price of tobacco, with the proviso that his own salary and the royal revenues should not thereby be affected. This was considered by the colonists equivalent to a special tax imposed without their consent, but having no recourse, they submitted. Culpeper's policy in dealing with the plant-cutters was severe, and some of their leaders were hanged. He followed these dictatorial acts by dissolving the Assembly, maintaining that all laws should be drafted by him with the advice of the Council. He endeavored to abolish the right of appeal to the Assembly, emphasizing the appeal to the king. He insisted that the House of Burgesses should submit their choice of speaker for his approval. By imprisonment and disfranchisement he punished Maj. Robert Beverley, clerk of the House of Burgesses, for refusing to surrender the journal of its proceedings. Then, after having remained in the colony about ten months, he went to England in September 1683, leaving Nicholas Spencer, the president of the Council, in charge of the government. He was, thereupon, removed for having again left the colony without permission. He died, Jan. 27, 1689, in London.

P.S.F.

CUMING, Sir Alexander (c. 1690–Aug. 1775), second baronet of Culter (Aberdeenshire), an eccentric Scottish advocate and projector, was the central figure in a colorful episode connected with a voyage to South Carolina in 1729. He was the son of Sir Alexander Cuming, a member of Parliament, and Elizabeth (Swin ton) Cuming. His voyage was not, as has been asserted, an official mission. During the winter of 1729–30 he busied himself with a banking scheme to reform the colonial currency: this project he continued to promote, unsuccessfully, after his return to England. On the eve of his departure he decided to make a rapid excursion of nearly a thousand miles by rough trading-paths into the back-country and the mountains (Mar. 13–Apr. 13, 1730). A member of the Royal Society, he set out as a scientific explorer rather than as a political agent, searching for minerals, herbs, and the "natural curiosities" of

591
Cuming

the land. But another purpose took shape in his erratic mind as he listened to the frontiersmen's accounts of French intrigues and widespread disaffection among the Cherokee Indians, the corner-stone of British alliances and empire in the South. At Keowee in the Lower Towns, Sir Alexander's enterprise, mad or inspired, was first revealed. There he dramatically appeared, fully armed, among the Indians in the town house—a gross breach of Indian decorum,—determined to overawe the Cherokee, single-handed if need be, and force them to submit to the British interest. At his demand, or by the persuasions of the startled traders, the Indians were induced to join in drinking the health of George II on bended knee! This strange rite Cuming interpreted as an acknowledgment of British sovereignty. He continued his hasty progress as far as the remotest Cherokee towns, everywhere repeating his fantastic ceremony. At a great congress of the tribe, at Nequasse, Motoy of Tellico, an Anglophile chief, was crowned "Emperor" of the Cherokee; and to the baronet the Indians signed the "crown of Tennessee" and other trophies "as an Emblem of their all owning His Majesty King George's Sovereignty over them, at the Desire of Sir Alexander Cuming, in whom an absolute unlimited Power was placed." Evidently the flighty Scot had appealed to the dramatic instincts of the Indian, to achieve a tour de force of wilderness diplomacy at a crucial moment. The council further agreed that an Indian embassy should return with him to England. There Cuming's seven protégés furnished the sensation of the season. They were received at court, shown the sights of the town, feasted and entertained, and everywhere they became objects of popular curiosity. But Newcastle and the Board of Trade turned deaf ears to Cuming's memorials. He sought in vain to have his powers as overlord confirmed for three years, promising to live among the Indians and promote the royal service. He was even ignored in the negotiation of the important treaty by which the Board turned this fortuitous incident to imperial advantage, and put the Cherokee upon a footing similar to the Iroquois. But apparently the Indians refused their full assent until Cuming's approval was given. The later career of the self-vaunted "King of the Cherokees" was miserable enough. An alchemist, a visionary promoter, from 1737 to 1765 he was confined as a debtor to the limits of the Fleet. He died, a poor brother of Charterhouse, in 1775.

CUMING, FORTESCU (Feb. 26, 1762–1828), traveler and author, was born at Strabane, County Tyrone, Ireland. After studying medicine, and traveling in France, Switzerland, and Italy, he came to New York, where, in 1784, he married Phoebe, the sixteen-year-old daughter of Thomas Harisson, by whom he had seven children. He lived successively in New York, Trinidad, and Westchester, finally establishing a home at Cedar Hill, just outside of New Haven, in 1792. There are portraits of himself and his wife by St. Memin, dated 1792 (Nos. 54 and 737, The St. Memin Collection of Portraits, published by Elias Dexter, 1862). His family life seems not to have been happy. In 1806 he was again in England, where he purchased lands in Ohio. These were the occasion of the trip taken in 1807–09 down the Ohio and Mississippi rivers and through Louisiana and the Floridas, which he described in his Sketches of a Tour to the Western Country, published at Pittsburgh in 1810. This volume, which is an accurate and detailed record of social and political conditions in the backwoods area, was reprinted in 1904 as Volume IV of Early Western Travels, edited by Reuben Gold Thwaites. Cuming seems not to have returned to his wife, who was buried in New Haven in 1821. He married a Miss Butler, and died in Vermillionville, La., in 1828.

[Thwaites appraised Cuming's work in the Preface to his edition of the Sketches. A "Retrospective Review" was published in the Western Monthly Mag., Nov. 1815. Biographical information has been supplied from the family papers by Cuming's great-grandson, Mr. Alfred Z. Reed of New York.] E. R. D.

CUMMING, ALFRED (Sept. 4, 1802–Oct. 9, 1873), territorial governor of Utah, was born in Augusta, Ga., the son of Thomas and Ann (Clay) Cuming. The family was socially and politically prominent. Cuming's sole title to fame is based upon his connection with the so-called "Mormon War" of 1857–58. He had been mayor of Augusta in 1839 and had acted with commendable courage and efficiency in the severe yellow-fever epidemic of that year; in the Mexican War he had been a sutler with Scott's army, and in the early fifties had served acceptably as an Indian agent on the upper Missouri. He became a national figure when President Buchanan, alarmed at the growing evidences of revolt in
Cumming
Utah, appointed him (May 1857) governor of the territory in place of Brigham Young and dispatched an army to escort him to Salt Lake City. Accompanied by the other territorial officials appointed at the same time, he arrived with the main body of Col. Albert Sidney Johnston’s army at Fort Bridger (renamed Camp Scott) about Nov. 20. On the 21st he issued a proclamation declaring Utah in a state of insurrection, calling upon its militia to disband, and promising, in case the laws were obeyed, a friendly administration. The army, however, paralyzed by lack of supplies and transport, caused by the depredations of Mormon guerrillas, could make for the time no further move, and for nearly five months matters remained at a standstill.

On Mar. 12, 1858, Thomas L. Kane of Philadelphia, a friend of the Mormons, who had journeyed to Utah by way of Panama and California and had conferred with Young, arrived incognito in camp and opened negotiations with Cumming. Ignoring Johnston, and incidentally bringing on a bitter feud between the governor and the commander, he soon persuaded Cumming that in spite of the bombastic declaration of war issued by Young on Sept. 15, 1857, the prophet desired peace. On Apr. 5 Kane and Cumming set out for Salt Lake City, and on their arrival on the 12th Young gave up the executive seal of the territory. Cumming thereupon notified Johnston (Apr. 15) that as peace had been restored the army was no longer necessary. Johnston, however, under his original orders from the War Department to establish military posts in Utah, moved forward in June with replenished transport and supplies. The Mormons, to the number of probably 30,000, in spite of the counsel of Cumming and two special peace commissioners from the President who had arrived on June 7 with a full pardon for Young and his followers, evacuated the city. On the 26th Johnston marched his army through its deserted streets and then proceeded to Cedar Valley, forty miles to the southwest, where he established Camp Floyd. On July 5 the Mormons started to return, and a régime of peace seemed assured. New complications soon arose, however, from the demand on the part of the territorial judges at Provo for military protection—a demand complied with by Johnston, whose action was denounced by Cumming as an infringement of his own powers. Sustained by a decision of Attorney-General Black on May 17, 1859, the governor was thereafter left in supreme authority. In the following March Johnston left the territory; a few months later most of the troops were sent to Arizona and New Mexico; and in July 1861, the remainder were ordered east. Cumming, on the inauguration of Lincoln, did not wait to be removed, but left for his home near Augusta, where for his remaining days he lived in retirement. He is sometimes confused with a nephew of the same name (1829–1910), who was a captain in the Utah expedition and who won distinction as a general in the Confederate army. Gov. Cumming died at his home.

The “Mormon War” reveals many of the features of *opéra bouffe*, and Cumming appears to have been well suited to his part as chief actor in the play. He was simple-minded and credulous, assertive and somewhat pompous in manner and jealous of his personal authority at a time when cooperation with the military arm was essential.

CUMMINGS, AMOS JAY (May 15, 1841–May 2, 1902), journalist, congressman, was born in Conkling, N. Y., the son of Rev. Moses and Julia Ann (Jones) Cummings. His father was editor of the *Christian Herald* and *Christian Palladium*. The educational advantages of the village were few, and Amos, having exhausted them, at twelve years was apprenticed at his eager desire to the printer in whose shop his father’s papers were brought out. At fifteen years he ran away, working as a tramp printer and compositor from town to town through much of the eastern United States. In Mobile he joined one of the Walker filibustering expeditions to Nicaragua, but the exciting adventure ended soon with his arrest and return to the United States with Walker. Reaching New York he worked as a typesetter on the *Tribune* until the outbreak of the Civil War, when he enlisted in the 26th Regiment of New Jersey Volunteers. By 1863 he was a sergeant-major and had been mentioned for signal bravery at Fredericksburg. His two years in the Virginia swamps, however, nearly broke him physically and left him permanently with impaired health. He returned to the *N. Y. Tribune* once more and was one of the four who remained to defend the printing office during the draft riots. He lost his job because of a strike and went to Yonkers on the *Law Transcript* but again returned to the editorial staff of the *Tribune* in 1865 with the task of condensing news for the *Weekly Tribune*. His remarkable news sense came into evidence and he was amazed and gratified to have Greeley take him on as night editor on the daily. In December 1868 he went to the *Sun*, soon serving as night editor, later as man-
Cummings

aging editor. His army illness recurred in 1872 and he resigned after the Republican presidential convention to travel and indulge his desire to rove. For the following four years he wrote from the South and West the letters to the Sun signed "Ziska," reporting to an interested audience his observations in the hinterland. In 1876 he edited for a time the Evening Express, in which the head of Tammany, John Kelly, had a controlling interest. The next year he did feature articles for the Sun on political events, and reported several famous murder trials.

In 1886 he was elected as a Tammany Democrat to the House of Representatives from the sixth New York district. He declined renomination in 1888 because he wanted to stay in journalism. The evening Sun was founded under his editorialship. When Representative S. S. Cox died in September 1889, Cummings reconsidered and was elected to fill the vacancy. He served in the House with but one other interruption until his death. He declined renomination in 1894 to act as subway commissioner but lost that place with a change in municipal administration. He was then elected to the seat vacated by the death of Andrew J. Campbell (Biographical Directory of Congress, 1928). Cummings was essentially a newspaper man. In Congress he was a Tammany regular and served without particular distinction, though he was extremely popular with his colleagues. His Sayings of Uncle Rufus (1886) testify to his humor. After the death of his first wife, he was married. Mar. 6, 1869, to Frances Caroline Roberts.

[Obituaries in N. Y. Times and Sun, May 3, 1902. See also W. G. Bleyer, Main Currents in Hist. of Am. Journalism (1927); F. M. O'Brien, The Story of the Sun (1918); A. O. Cummins, Cumming's Genealogy (1904).]

K.H.A.

CUMMINGS, CHARLES AMOS (June 26, 1833-Aug. 11, 1905), architect, was born at Boston, Mass., the son of Amos and Rebecca (Hopkins) Cummings. After preparing for college in the English High School of Boston, he entered Rensselaer Polytechnic Institute at Troy, where he graduated in 1849 with the degree of C. E. During college he pursued an intensive course in engineering, the effect of which later appeared in his architectural work in which, notwithstanding a peculiar sympathy, there was a lack of creative esthetic imagery and an adherence to architectural logic. His early professional training was gained in the office of G. J. H. Bryant. On Oct. 12, 1869, he was married to Margaret, daughter of Moses Kimball of Boston. Extensive travel and study in Europe and Egypt brought to him strength and vitality in the expression of his architectural ideas. When in 1872 the business district of Boston was devastated by an extensive fire, it became the task of the local architects to replace, with efficiently designed structures, the edifices which had been destroyed. The most characteristic examples of Cummings's style are the New Old South Church, his own residence, and a few houses to be found on Devonshire St. He also designed many commercial buildings but during the last twenty years of his life, he experienced the misfortune of seeing most of these projects, the pride of his professional accomplishment, demolished. His employment of motives based upon Florentine and Venetian Gothic prototypes had resulted in interestingly decorated façades with a comparatively meager window space; changing commercial requirements and the availability of large sheets of plate glass established a demand for a much greater window area.

Cummings collaborated with W. P. P. Longfellow in the Cyclopaedia of Works of Architecture in Italy, Greece, and the Levant (1895-1903) and with R. Sturgis in the Dictionary of Architecture and Building (1901-02). His chief work was the History of Architecture in Italy from the Time of Constantine to the Dawn of the Renaissance (1901). It is the authoritative record in English of Italian architecture, showing with thoroughness and accuracy the development and decline of the types of building which appeared in Italy to the middle of the twelfth century. It is consistently a study from the architect's point of view in which the mixture of styles and stream of influence are treated in a descriptive and narrative style rather than in a philosophical or esthetic manner.

A widely recognized maturity of judgment resulted in Cummings's appointment to many committees and boards: he was a member of the commission for the preserving and restoring of the Massachusetts State House, a member of the Art Commission of Boston, a trustee of the Boston Museum of Fine Arts, and a trustee of the Boston Athenæum.

CUMMINGS, EDWARD (Apr. 20, 1861-Nov. 2, 1926), Unitarian minister, student and worker in social ethics, was the son of Edward N. and Lucretia F. (Merrill) Cummings. He prepared for Harvard College at Woburn, Mass., High School. At graduation from Harvard in 1883, he stood tenth in class, with a magna cum
Cummings

laude in philosophy. He received the degree of A.M. in 1885; was instructor in English, political economy, and sociology, for one year each; and was assistant professor of sociology in the department of economics from 1893 to 1900. Immediately after graduation he studied at the Divinity School, and was associated with Rev. Francis G. Peabody, a pioneer at Harvard and in this country who was giving systematic instruction in social ethics. Cummings was the first holder of the Robert Treat Paine fellowship for study abroad in social science; which gave such opportunities as acquaintance with Rev. Samuel A. Barnett at Toynbee Hall and Prof. Estlin Carpenter at Oxford. As a teacher at Harvard he was human, alert, and stimulating. He was an editor of the Quarterly Journal of Economics, and contributed ten articles to it between 1886 and 1901. They dealt especially with industrial disputes and the cooperative movement, but one described the Exposition of Social Economy at Paris in 1889; another was a critical study of university settlements; another, delivered before a national conference of Unitarian ministers, was on “Charity and Progress.” These illustrate his clear and often humorous way of saying wise things. In application of theory, he served twice as president of the Harvard Cooperative Society.

In October 1900, he was ordained minister of the South Congregational Society, Unitarian, of Boston, the colleague of Rev. Edward Everett Hale. Succeeding Dr. Hale, who died in 1909, he was the pastor until 1925, when the church was merged with the First Church of Boston, and he became emeritus and an associate of Rev. Charles Park, pastor of that church. With both Dr. Hale and Dr. Park, his relations were cordial, loyal, and modest. His sermons are recalled as simple and practical. The test of talks to boys’ schools, he met happily. But he was not preeminently a preacher or pastor, especially when other work claimed much of his thought. He spoke of himself, in the ministry, as an applied sociologist. He supplemented his sermons with talks by various experts on practical problems of citizenship; gave many lectures and addresses outside his church, and was constantly and eagerly working in philanthropy and legislative reform. He served as president of the Benevolent Fraternity of Unitarian Churches, of the Massachusetts Civic League, and was a director of the Massachusetts Prison Association, the Boston Federation of Churches, and Hale House, a social settlement. His chief philanthropic interest for sixteen years was in promoting the World Peace Foundation, whose center was in Boston. In 1910, he was elected a trustee and served as such and as secretary of the Board until in 1916 he became general secretary, the chief executive officer, giving half of his time at least to the Foundation. In 1921, he made an extensive tour of Europe, in order to get a grasp of the many effects of the World War. Becoming interested in relief work, he thenceforth gave to relief from his own limited means and from gifts of others, especially to the Near East. During his term of office in the Foundation, it became the official center for spread of information in this country from the League of Nations, the International Labor Office, and the Permanent Court of International Justice. Cummings was killed on a railroad crossing, in a blinding snowstorm. His wife, Rebecca H. (Clarke) Cummings and a son and daughter survived him.

J. R. B.

CUMMINGS, JOHN (Feb. 12, 1785–June 8, 1867), tanner, was born in Woburn, Mass., the sixth child of Ebenezer and Jemima (Hartwell) Cummings. Both his father and grandfather were tanners as well as farmers, and John, after a meager education, followed his forebears. He started in the business of tanning on his own account in 1804, and until his retirement forty-three years later was a prominent figure in the industry. These years were important in the history of the leather industry, for they spanned the period of change from primitive methods to the modern, factory, machine-made product, and in this progress Cummings was a leader. When he commenced tanning he personally collected the hides and bark from the farmers, and having tanned them, hawked them about the country in small lots. About 1830 he took up the manufacture of “chaise leather” as a specialty, and was so successful that for many years he largely supplied the needs of the chaise manufacturers of the New England States. When enameled leather came into use and took the place of the old-fashioned chaise leather, Cummings immediately began its manufacture, becoming one of the largest slaughter leather tanners in Massachusetts. He is credited with being “the first tanner who appreciated the value of the splitting machine which has been of the greatest service in facilitating the finishing of leather” (Biographical Encyclopedia of Massachusetts, p. 402), and he was appointed almoner of the fund contributed by the leather interest for the benefit of Samuel Parker of Billerica, the inventor of this machine. The Cum- mings factories gave rise to the village of Cummingsville in Woburn. Cummings was important in the early history of the leather business
Cummings

not only because he was quick to adopt new methods, but also because of the many men, later influential in the trade, whom he trained and assisted. He was married May 2, 1811, to Marcia Richardson (June 26, 1793–June 8, 1822) of Woburn, by whom he had three children. His oldest son, John, carried on leather manufacturing in Woburn, and became a leader in Massachusetts finance and industry.

CUMMINGS, JOSEPH (Mar. 3, 1817–May 7, 1890), clergyman, college president, was born of Scotch ancestry, in Falmouth, Me. His ancestors settled in Maine about the middle of the eighteenth century. His father was a Methodist preacher. He prepared for college in the Academy at Kent's Hill, Me., and was graduated from Wesleyan University in 1840. During his college course he supported himself in part by teaching school. For the next three years after graduation he taught natural science and mathematics in Amenia Seminary, New York. From 1843 to 1846 he was principal of that institution. In 1846 he was admitted to the New England Conference of the Methodist Episcopal Church, and he served for seven years in the pastorate. His appointments were all in what is now Greater Boston. The churches which he served were among the most important in the Conference. In 1854 he entered upon the work of a college president, which was destined to be his life-work. From 1854 until 1857 he was president of Genesee College, Lima, N. Y., an institution which was subsequently absorbed in Syracuse University. From 1857 to 1875 he was president of Wesleyan University. The period of his presidency was an Augustan Age for the college. Three buildings were erected—the earliest buildings which gave any architectural distinction to the campus. He served practically as a supervising architect, giving personal attention to all details of the work. The closing years of his administration were marked by two important changes. One was the enlargement of the curriculum, with great extension of the elective system; the other was the admission of women—a policy which remained in force until 1909. In 1875 Cummings resigned the presidency, but remained in Wesleyan University for two years as professor of mental philosophy and political economy, and then resumed his preaching. On June 21, 1881, he was elected president of Northwestern Uni-

versity. During his administration in that institution, a debt of $200,000 was paid off, schools of dentistry and pharmacy were established, a science hall was dedicated in 1887, and an astronomical observatory in 1889.

His teaching may be characterized as eminently thought-inspiring. He thought, and he made his students think,—not by formal lectures, but by the Socratic discussion of topics suggested by the lesson in the text-book. Yet he was a man of affairs rather than a scholar; and, in his thought, the president should be not merely the chairman of the faculty, but the controlling power in the whole life of the college. He was an exceedingly dignified figure. His aspect when pleading for some great cause was singularly impressive. But with the robust strength blended a winning gentleness. He loved children, and children instinctively loved him. For a man of so vigorous an intellect and so strong a personality, he left a small amount of matter in print. He published a number of sermons and addresses delivered on various occasions, and some articles in church periodicals. In 1875 he published an edition of Butler's Analogy of Religion. He married, Aug. 15, 1842, Deborah S. Haskell of Litchfield, Me. One child died in infancy. He had two adopted daughters.

[No biography of Joseph Cummings has been published. See Alumni Rec. and Bulls, Wesleyan Univ.; A. H. Wilke, Northwestern Univ., A History, 1855–1905 (1905); E. F. Ward, The Story of Northwestern Univ. (1924).] W. N. R.

CUMMINGS, THOMAS SEIR (Aug. 26, 1804–Sept. 24, 1894), painter, was born at Bath, England, the only child of Charles and Rebecca Cummings, who emigrated in his infancy and settled at New York. Thomas had in boyhood drawing lessons from Augustus Earle, an English itinerant painter, and later from John Rubens Smith [q. v.]. In 1821 he was received as pupil by Henry Inman from whom he learned to make good miniatures. After three years master and pupil formed a partnership which lasted three years more. In 1827 Cummings was regarded (according to William Dunlap’s History . . . of the Arts of Design in the United States, III, 199) as “the best instructed miniature painter then in the United States.” He married in 1822 Jane Cook, like himself born in England. His part in founding, in 1825, the National Academy of Design was notable. He was elected to its council and for forty years he served as its treasurer. He was of agreeable personality, familiar with business methods and keenly interested in the Academy’s classes for art students. He also for several years conducted in New York a private school of design. This led to a profes-
Cummins

Cummins

sorship in the University of the City of New York. In January 1844, he was an organizer of the New York Sketching Club, which he called "one of the most agreeable and instructive little clubs that ever took share in art matters in the city." Throughout his young manhood Cummings was prominent in military affairs, rising in the 2nd Regiment of New York Light Infantry from private to colonel, and in 1838 to brigadier-general, his command including several of the "crack" companies of the city. One of his friends was S. F. B. Morse, painter and inventor of the telegraph; he was among the invited guests at the first private demonstration of the invention. In 1851 a copy which Cummings had executed of Gilbert Stuart's "Martha Washington" was presented to Queen Victoria and gracefully acknowledged by Lord Palmerston. On Feb. 23, 1863, the Academy resolved to build on land which it had acquired in Twenty-third St. Cummings was chairman of the building committee which, at the then great cost of $250,000, successfully completed the ornate structure that was dedicated in 1865 and which was long a New York landmark.

Soon after this crowning achievement he retired from professional activities, making his permanent home at Mansfield, Conn., and spending several months each winter in New York with his children. After his wife's death in 1889 he removed to Hackensack, N. J., where he died. Cummings was represented at the National Academy's centennial exhibition in Washington and New York, by his portrait of Daniel Seymour and a miniature portrait of the artist Alfred T. Agate [q.v.]. Among his early engraved works, still prized by collectors, are "The Bracelet," "The Bride," and "The Exchange of Queens."

F. W. C.

CUMMINS, ALBERT BAIRD (Feb. 15, 1850–July 30, 1926). lawyer, statesman, was born in Carmichaels, Pa., the son of Thomas and Sarah Cummings, of Scotch-Irish ancestry. When he was seventeen, he entered Waynesburg College in his native state, working his way through college by tutoring and by teaching a country school during vacations. He completed the course in two years and spent the next four years in finding his place in the world. For a short time he was a clerk, later an express messenger, and then a self-taught surveyor and railroad builder. In 1873 he began the study of law in Chicago and after a couple of years was admitted to the bar. During his preparation for the law, he was married to Miss Ida L. Gallery of Eaton Rapids, Mich. In 1878 he removed to Des Moines and formed a law partnership with his brother; later he was associated with ex-Chief Justice George G. Wright, and in due time became the senior member of the firm of Cummings, Hewitt & Wright, for many years the best-known law firm in the state of Iowa. Perhaps his greatest victory at the bar was in the suit brought by him against the barbed-wire trust, in which he appeared as the chief attorney for the farmers. The contest continued for more than five years until finally the issue was fought out before the Supreme Court of the United States, and resulted in the complete overthrow of the monopoly. He acquired a state-wide reputation as a consequence of his handling of this important series of cases.

In 1894 and in 1899 he was an unsuccessful candidate for United States senator. The Iowa State Register (Jan. 12, 1900) described the fight made by Cummings as a "marvel," considering that he had against him "a railroad with millions backing the biggest 'boss' the state ever knew, and a half-dozen allied railroads with the shrewdest men in Iowa political life in their employ, half or more of the congressmen, the entire organization of the great Republican party of Iowa, most of the office holders and aspirants, an army of paid agents, hundreds of influential newspapers whose editors are repaying obligations incurred by accepting postmasterships, and scores of federal office holders whose salaries the nation had paid while they have spent three years in steady, continuous work for their benefactor."

In 1901 Cummings announced his candidacy for governor on a platform in which he declared that his great object was "to bring the individual voter into more prominence, and to diminish the influence of permanent organization in the ranks of the party." (Iowa State Register, Feb. 15, 1901). Thus began the most notable contest within the Republican party in Iowa since the famous Harlan-Allison senatorial campaign in 1872. The opposition supported Maj. Edwin H. Conger [q.v.], the American minister to China, who had recently won fame in the defense of Peking against the Boxers. In spite of the efforts of the former leaders Cummings had 866 delegates out of 1,641 in the convention, and was nominated upon the first ballot. The proposal for tariff revision, which came to be known as the "Iowa Idea," appeared in the platform adopted by this convention, but it
Cummins
did not originate with Cummins, although he indorsed the proposal and gave it an important place in his campaign. His program naturally was largely a personal one, resulting from his own experience in politics. He appealed from the leaders to the people; he believed that the railroad influence was hostile to democracy and independence; and he turned inevitably to the methods and measures by which more popular control and less party management would prevail. Before he retired from governorship, the domination of the railroads had been broken, a prime law adopted, and railroad taxation made more equitable. In short the Progressive movement had been inaugurated in Iowa. Gov. Cummins was renominated by acclamation in 1903, and an interval of quiet prevailed before the outbreak of the bitter controversies that were to mark the later years of his administration. The next general state election was not held until 1906, when, after an extremely acrimonious preliminary campaign, Cummins was renominated upon the first ballot by a vote of 933 to 603 for his opponent. The nomination once secured, election followed as a matter of course, a reduced vote being the only indication of party dissensions. The campaign of 1906 settled definitely the position of Gov. Cummins in Iowa politics. The Progressives had won a decisive victory.

In 1908 the contest for the United States sen- atorship was renewed, and in this campaign the new primary law was used for the first time. There was a strong feeling in the state that Senator Allison's long service entitled him to a nomination without opposition. Gov. Cummins's entrance as a candidate aroused all the old controversies of the contests between conservative and progressive Republicans. Senator Allison won at the primaries in June, but his death early in August reopened the whole question. A special session of the legislature met and amended the primary law so that the people could vote again in November, in case of the death, resignation, or removal for any cause of a candidate nominated at the regular primary in June. The amendment applied only to the full senatorial term beginning in March 1909, and left unsettled the filling of the remainder of Allison's unexpired term. An attempt to elect by the legislature failed because of the conservative opposition to Cummins. Adjournment was taken to November when the result of the primary would be known. Gov. Cummins won over his opponent by a majority of 42,000. Accordingly when the legislature reassembled, it elected him by a decisive vote. The last act in the political drama, which began in 1908, oc- curred when the General Assembly confirmed the verdict of the people in the November primaries, and elected Senator Cummins for the full term. In 1909 the two Iowa senators, Dolliver and Cummins, were among the ten Republicans who, in the final vote upon the Payne-Aldrich tariff bill, opposed it. No two men were more powerful in giving voice and definiteness to the new progressive wing of the Republican party. The campaign of 1910 was dominated by the division in the ranks of that party. Progressive Republicanism was very strong in Iowa. After the renomination of President Taft and the for- mation of the Progressive party, Senator Cummins issued a statement in which he announced his intention of voting for Roosevelt, but declined to join the new party. Senator Dolliver had died in October 1910.

Undoubtedly, Senator Cummins's greatest con-tribution to constructive legislation was in con- nection with the passage of the Transportation Act of 1920, usually known as the Esch-Cummins Act, which provided for the termination of Federal control and the restoration of the rail- road properties to private management. The need for new legislation developed from the shortcomings of the railroads that had been disclosed even before the outbreak of the war. This necessity was increased by the war emergency, and the policies and activities of the war period helped to foreshadow the general charac- ter of future railroad control. The primary responsibility for the formulation of railroad legislation in the Sixty-sixth Congress fell upon the Senate Committee on Interstate Commerce under the chairmanship of Senator Cummins, and the House Committee on Interstate and For- eign Commerce under the chairmanship of Rep- resentative John J. Esch of Wisconsin. The legislation of 1920 was a compromise between the Esch or House measure and the Cummins or Senate bill. The House measure sought to settle problems by agreement as they arose, while the Cummins bill proposed the application of compulsion. Cummins seems to have realized more fully than any one else the nature of the problems confronting the railroads, especially in connection with their financial needs and in the settlement of labor controversies. He urged compulsory consolidation into a small number of systems and compulsory arbitration of labor disputes. The Transportation Act as finally en- acted made provision for railway credit, but Congress was not yet ready to adopt compulsory consolidation and arbitration as advocated by Senator Cummins. Experience since 1920 has
made clearer the need of consolidation and Cummins continued to urge it. He was planning a renewal of legislative discussion of the railroad situation at the time of his death. The provision for the settlement of labor disputes proved entirely inadequate and has already been replaced by another voluntary agreement plan. The outstanding success of the measure has been the financial rehabilitation of the railroads. For this outcome Cummins was largely responsible; but his conspicuous part in the drafting and passage of the Transportation Act of 1920 was the chief reason for his defeat in the primary election of 1926.

His work as governor of Iowa and as senator entitles Cummins to national recognition as a constructive statesman. He was president pro tempore of the Senate from 1919 to 1923. After the succession of Vice-President Coolidge to the presidency in August 1923, he became the regular presiding officer. In his prime he was a man of fine personal appearance. During his campaigns for governor and senator he visited every part of the state. His success was quite largely due to his ability as a speaker and his capacity to meet all sorts of people and situations. To the end of his career he had the support of large numbers of enthusiastic personal friends. In his later years many of his old opponents campaigned for him. Ex-Governor Leslie M. Shaw, when asked his reason for such action on his part, humorously replied: "I thought it best to sink our differences and help him put out the fires he had set."

F. E. H.

CUMMINS, GEORGE DAVID (Dec. 11, 1822–June 26, 1876), clergyman, founder of the Reformed Episcopal Church, was born near Smyrna, Del., the third child of George Cummins and his second wife, Maria Durborow. The former was of Scotch descent, a well-to-do landowner, and prominent in the state; the latter, of English lineage, and the daughter of Rev. John Durborow. When the boy was four years old his father died. He received his early education at a school kept by a Presbyterian min-
there is treachery within is to lower the flag and surrender the citadel to her enemies" (Alexandrine M. Cummins, Memoir of George David Cummins, 1879, p. 333). Finally he lost all hope that the evil would be eradicated by any action of the authorities of the church, and became convinced that by officiating in Ritualistic churches, he was sanctioning and indorsing dangerous errors. These feelings together with the criticisms he brought upon himself by participating in a communion service in the Fifth Avenue Presbyterian Church, Oct. 12, 1873, during a meeting of the Evangelical Alliance, at length caused him to withdraw from the Episcopal Church. He was formally deposed from his office and ministry, June 24, 1874. In the meantime, however, a meeting of clergymen and laymen was held in New York, Dec. 2, 1873, at which the Reformed Episcopal Church was inaugurated, Bishop Cummins being elected presiding officer and Rev. C. E. Cheney [q.v.] elected bishop, and later consecrated by Bishop Cummins. The brief remainder of his life was spent in the service of the new church, his death occurring at his home in Lutherville, Md., less than two years later. In addition to a Life of Mrs. Virginia Hale Hoffman (1859), he published several sermons.

[Mrs. Cummins's Memoir, referred to above, is based chiefly upon Bishop Cummins's diary and correspondence. It contains portraits. See also H. K. Carroll, Religious Forces of the U. S. (1893), and Chas. C. Tiffany, A Hist. of the Protestant Episc. Ch. in the U. S. (1895), both in the American Church History series; Annie D. Price, A Hist. of the Formation and Growth of the Reformed Episc. Church, 1873-1902 (1902); and Benj. Aycrigg, Memoirs of the Reformed Episc. Ch. (5th ed., 1880); and The Sun (Baltimore), Jan. 27, 1876.]

H. E. S.

CUMMINS, MARIA SUSANNA (Apr. 9, 1827–Oct. 1, 1866), author, was a descendant of Isaac Cummins, of Scotch ancestry, who settled in Ipswich, Mass., and owned much land there previous to 1638. She was born in Salem, Mass., the daughter of Judge David Cummins and Mehitable (Cave) Cummins of Middleton, Mass. Her early studies were carried on at home and directed by her father, who himself had literary tastes and encouraged them in his daughter, in whom he thought he discovered a gift for writing. She later attended the fashionable school of Mrs. Charles Sedgwick at Lenox, Mass. When she was only a little past twenty she began to write stories for the Atlantic Monthly and other magazines. The Lamplighter (1854), written when she was twenty-seven, was her one striking success. It met immediate popularity and the sales mounted to over 40,000 copies within a few weeks. It was republished in England and in translation in France and Germany, and in all of those countries had large sales. The novel is the story of a child lost in infancy, rescued from a cruel woman by an old lamplighter, adopted by a blind woman, and later discovered by her well-to-do father. A double love story slightly enlivens the plot, which is worked out at great length. The style is tediously detailed and the point of view is one of extreme piety. Later books of Miss Cummins did not win so much public approval, though Mabel Vaughan (1857) was considered by some critics to be better. El Fureidis (1866) is a story of Palestine and Syria, written entirely from imagination, and Haunted Hearts (1864) is a sentimental tale which was first published anonymously. All her books have a strong moral tone. The life-likeness of some of their characters constitutes their chief appeal. Miss Cummins had a quiet, retiring personality and led an uneventful, secluded life, occupied with the duties of home and church and with her writing. The loss of her father was a great grief to her. The Cummins family had before his death changed their home from Salem to one on Bowdoin St., in Dorchester, a house in colonial style, with gardens, shrubbery, a fish pond surrounded by pine trees, and an orchard. There, soon after the publication of Haunted Hearts, impaired health made it necessary for Maria Cummins to lay aside her writing and there, after a long illness, she died.

Orcutt, Good Old Dorchester (1893); Boston Daily Advertiser, Oct. 2, 1866. A new edition of The Lamplighter was published in 1927.]

S. G. B.

CUNLiffe–Owen, PHILIP FREDERICK (Jan. 30, 1855–June 30, 1926), editor, publicist, was the eldest son of Sir Francis Philip Cunliffe-Owen and Baroness von Reitzenstein whose father was Baron Fritz von Reitzenstein of the Prussian Royal Guards. He was a grandson of the distinguished Capt. Charles Cunliffe-Owen, R.N., and Mary Blosset whose father, Sir Henry Blosset, was Chief Justice of Bengal. Born in London, he received his early education at the Lancing School in England but went for his college work to the University of Lausanne. Becoming an attaché in the British diplomatic service, he was stationed in several foreign countries including Egypt and Japan. He first visited the United States in 1876 to represent officially at the Centennial Exposition his father, the British Executive Commissioner, who was then director of the South Kensington Mu-
Cunningham

seum and one of the greatest promoters of International Exhibitions. After a brief sojourn in England, he returned to the United States to settle in New York, ever after his home. Being an omnivorous reader of foreign newspapers and magazines and having traveled extensively, he soon secured an editorial connection with the New York Tribune as a contributor on foreign topics. These were signed "Ex-Diplomat" until Whitelaw Reid, who had been appointed minister to France in 1889, returned to resume the editorship of the Tribune; then "Ex-Attaché" was substituted lest readers might mistake the author. Because of his encyclopaedic familiarity with foreign affairs Culliffe-Owen had been appointed copy editor of the foreign news. Close confinement to the desk and late hours at night so told on his health that he was made society editor, a position he held until his retirement in 1913. With his wife, formerly Countess Marguerite du Planty de Sourdil, whom he married Nov. 22, 1877, and Willis Fletcher Johnson, day editor of the Tribune, he formed a newspaper syndicate. In 1899 Johnson withdrew but Culliffe-Owen and his wife continued the syndicate with great success under the signature, "La Marquise de Fontenoy." The loss of a son, Algernon, in 1910, was a blow from which the father never recovered. A voluminous contributor of signed articles under his own name, and under noms de plume to British reviews, he radiated culture and learning in all that he wrote. His death left vacant in American journalism the position of international interpreter of foreign affairs. His remarkable collection of newspaper clippings and magazine articles was given (1929) by his executors to the Department of Journalism, New York University.

CUNNINGHAM, ANN PAMELA (Aug. 15, 1816-May 1, 1875), founder and first Regent of the Mount Vernon Ladies' Association of the Union, was born at "Rosemont," Laurens County, S. C., the daughter of Robert and Louisa (Bird) Cunningham. She came of distinguished ancestry on both sides, for the Cunnagham had been prominent in South Carolina for several generations, and the Birds people of importance in Pennsylvania. Her father, a wealthy planter, was much given to hospitality, and took a prominent part in the life of his community. She was educated by a governess and at Barhamville Institute, near Columbia, S. C., and it is said "was remarkable for her precocious and brilliant girl-

hood." The idea of preserving Washington's home for future generations was suggested to her by her mother, who feared it might fall into the hands of speculators. Her first effort was a letter addressed to the women of the South published in the Charleston Mercury, Dec. 2, 1853, and signed "A Southern Matron," a name which she used to hide her identity throughout the campaign. In the same year she founded the Mount Vernon Ladies' Association of the Union, of which she was elected Regent, with the purpose of raising $200,000 for the purchase of Mount Vernon from the owner, John Augustine Washington. A newspaper called The Mount Vernon Record was published, which gave details of the campaign, and committees were organized in various states. The public was hard to arouse and opposed to women attempting such a task, but Miss Cunningham was nothing daunted. Meeting Edward Everett in Richmond in 1856, she won his support for the project, to which he eventually contributed $69,064, the proceeds of his lecture on Washington delivered throughout the country. After many discouragements, the purchase was finally completed Feb. 22, 1859. During the Civil War, Miss Cunningham remained in South Carolina, but from 1868 until her retirement in 1874, she lived at Mount Vernon in order personally to supervise the estate. She died at "Rosemont," and was buried at Columbia, S. C., in the churchyard of the First Presbyterian Church.

In appearance Miss Cunningham was short, with a rather large head, well-rounded figure, auburn-brown hair, and expressive gray eyes. She was handicapped from her early youth by a severe spinal affection, caused by a fall from a horse. The long struggle to obtain a charter from the Virginia legislature so exhausted her that she went from one convulsion into another, and the lawyers had to wait until she was calm enough to receive them and sign the necessary papers. She travelled always under the greatest physical discomfort and pain. "None but God can know," she once said, "the mental labor and physical suffering Mount Vernon has cost me!" She was of a shy, retiring disposition, and had a "horror of publicity for a lady—of her name appearing in the newspapers!" (Historical Sketch of Ann Pamela Cunningham). But it is owing to her perseverance and courage that Mount Vernon is now preserved for posterity.

CUPPLES, SAMUEL (Sept. 13, 1831–Jan. 6, 1912), merchant, manufacturer, philanthropist, was the son of James Cupples, an Irish educator, who emigrated from County Down, Ireland, in 1814, and his wife Elizabeth Bigham. He was born at Harrisburg, Pa., and was educated chiefly by his father, who had established a business school in Pittsburgh. At the age of fifteen he went down the Ohio to Cincinnati, where he was employed by Albert O. Tyler, a wooden-ware merchant. The firm of Samuel Cupples & Company was formed in 1851 and Cupples began business with a stock of wooden-ware in St. Louis which soon became the chief manufacturing and shipping city for wooden-ware. To relieve congestion in freight handling and a lack of warehouse facilities Robert S. Brookings and Cupples established the Cupples Station by acquiring conveniently located land and erecting some fifty buildings so arranged as to have railway trackage to every building. This terminal operation proved to be immediately successful for it met an economic necessity for the heavy shippers of St. Louis (Hyde and Conrad, Encyc. of the History of St. Louis, 1899, I, 535). Cupples and others became interested in “head and hand” education and established the St. Louis Training School of Washington University, which became a model for the United States and other countries. His active participation in manual training brought him into touch with other branches of Washington University work. He and his partner in business and philanthropy, R. S. Brookings, gave to the Washington University for its endowment the Cupples Station property (Encyc. Americana, 1924, VIII, 304). Thus the great terminal of St. Louis serves its manufacturing and shipping needs and provides income to educate its youth. The School of Engineering and Architecture at Washington University was given by him, and with its endowment he provided twelve scholarships to graduates of the Manual Training School, saying that he believed the road to education should be made open at the top (eulogy by C. M. Woodward, in Manual Training Magazine, with a portrait of Samuel Cupples, Oct. 1912, p. 46). Cupples lived to be over eighty years of age. During the last thirty years he was practically an invalid and his chief interest lay in his philanthropies. His gifts to Washington University exceeded $1,750,000, and his other contributions to the cause of education and to the Southern Methodist Church brought the total of his benefactions to $3,000,000. Central College at Fayette, Mo., Vanderbilt University at Nashville, Tenn., the St. Louis Provident Association, the Girls Industrial Home, the Orphans Home, struggling Methodist churches and ministers were beneficiaries of his wealth and interest. He did not live to see the Robert Barnes Hospital completed, of which he was one of the trustees under the will of Robert Barnes. His wife, Amelia Kells of St. Louis, died many years before him. He left one daughter.

[Memorial resolution printed in the Bull. Washington Univ., July 1912; St. Louis Globe-Democrat, Jan. 7, 8, 1912; information from Mr. Robert S. Brookings.]

B.C.

CURRIER, CHARLES WARREN (Mar. 22, 1857–Sept. 23, 1918), clergyman, scholar, author, was the son of Warren Green, a native of New York City, and Deborah (Heyliger) Currier. He was born on the island of St. Thomas, West Indies, and it was there that he received his early education. When fourteen years old he was taken to the Netherlands where, during the next ten years, he made his classical, philosophical, and theological studies in colleges of the province of Limburg and received the doctorate in philosophy and theology. In 1881, on his ordination at Amsterdam to the Catholic priesthood, he accompanied the Vicar Apostolic as missionary to Surinam, Dutch Guiana. But his labors there lasted less than two years, owing to failing health, and in 1882 he was transferred to the United States. Then, for more than a decade, he was identified with the order of Redemptorists, preaching on missions and retreats chiefly in the vicinity of Annapolis and Boston. On his release from his obligations to the Redemptorists, he became attached to the diocese of Baltimore in 1894, where he served first as a curate in a small Charles County parish and afterward as diocesan missionary, until 1900 when he became pastor of St. Mary’s, Washington, D. C. There he remained until 1907 when he joined the Bureau of Catholic Indian Missions, traveling extensively and lecturing and preaching with much success—for he was an interesting and facile speaker and preacher—for the benefit of Catholic education among the American Indians. In 1910 he was designated bishop of Zamboanga, Philippine Islands, but, as the nomination was conditional, he declined the appointment. Instead, he accepted that made three years later by Pius X to the bishopric of Matanzas, Cuba; and with Cardinal Falconio presiding he was consecrated at Rome, July 6, 1913. But in less than two years, owing to ill health, he was compelled to resign the administration of his Episcopate and became titular bishop of Hetalonia. Early in 1915 he returned to the archdiocese of Baltimore where he con-
Currier continued to reside until his death which occurred suddenly while on his way from Waldorf in southern Maryland to Baltimore.

Because of his wide learning and specialized studies, Bishop Currier was regarded as one of the foremost Ispanists and authorities on early American history in the United States. He was chosen to represent this country as a delegate to the International Congress of Americanists held in various years in European centers, and in 1910, during the administration of President Taft, he was commissioned by the State Department United States delegate to a similar congress held at Buenos Aires, on the occasion of the one hundredth anniversary of Argentine independence. He was an enthusiastic promoter of Pan-Americanism and was constantly active in contributing to a better understanding between the countries of the Americas. As a means to this end he furthered the establishment in Washington of the Spanish-American Athenaeum, of which he was a director.

He was the author of several works and his style was clear and wholly unaffected. He began a History of Spanish Literature, of which several chapters were published, and in the same field he wrote a number of criticisms of the work of several Spanish and Spanish-American writers. He also collaborated on the Bulletin of the Pan-American Union. In 1890 appeared his Carmel in America: A Centennial History of the Discalced Carmelites in the United States, in 1894 his History of Religious Orders, and in 1897 his Church and Saints, or the History of the Church in the Saintly Lives of Its Children. Here, too, belong some smaller religious works, such as A Child of Mary (1897), Mission Memories (1898), The Divinity of Christ (1898), and The Mass (1899). He wrote two historical novels, Dimitrios and Irene; or, The Conquest of Constantinople (1894) and The Rose of Alhama; or, The Conquest of Granada (1897). His impressions and records of a tour of South America were published under the title of Lands of the Southern Cross (1911). He also contributed many articles to the Catholic World and the American Catholic Quarterly Review.

CURRIER, MOODY (Apr. 22, 1806-Aug. 23, 1898), financier, politician, was born at Boscowen, N. H., the son of Moody Morse and Rhoda (Putney) Currier. He studied at Hopkinton Academy and graduated from Dartmouth College in 1834. During his college course he supported himself by teaching school and continued that occupation at Lowell, Mass., for several years after graduation, studying for the bar in the meantime. In 1841 he began the practise of law at Manchester, N. H. The growth of the city's industries offered lucrative opportunities and after a few years he definitely abandoned the law for banking and investment operations, and is thus identified with those developments which made the city one of the great industrial centers of New England. He was connected in one capacity or another with four banking institutions; and beginning in 1864 he was for some years president of the Amoskeag National Bank. He accumulated a large estate and was financially interested in various enterprises, being a member of several directorates. In 1856 and again in 1857 he was elected to the state Senate, serving as president in his second term. In 1860-61 he was in the governor's council, and as chairman of its military committee performed important services in preparing New Hampshire troops for active service. In 1884 he was elected governor, serving from June 1885 to June 1887. His message of June 4, 1885, gives an excellent summary of his political philosophy. In it he demanded: "A simple government, administered with rigid economy, with perfect honesty, and with due regard to the security of life and property, the promotion of learning and morality, and the amelioration of the condition of the unfortunate.... A few laws, so reasonable that they will enforce themselves among good citizens, and so evidently just that they can easily be enforced against the vicious and the lawless are all that are required." He opposed the creation of additional commissions and offices, was active in supporting one of the early conservation movements in the state—the restocking of its waters with fish, and was considered an able and successful executive. He retained an active interest in public affairs until late in life and several of his anniversary and other addresses were printed, notably those on the dedication of the Webster monument in 1886 and the Stark memorial in 1890. He was a man of wide reading both in science and literature, having command of several modern languages, and the literary style of his addresses and official papers is decidedly above the average of such documents. He also tried his hand at poetry and printed a small collection of verses in 1880, although this may be regarded merely as an interesting foible of a hard-headed Yankee banker. He was three times married: Dec. 8, 1836, to Lucretia C. Dustin; Sept. 5, 1847, to Mary W. Kider; and Nov. 16, 1869, to Hannah A. Slade.

[E. S. Stackpole, History of New Hampshire (1916),

603
CURRIER, NATHANIEL (Mar. 27, 1813–Nov. 20, 1888), lithographic printer, publisher, was born in Roxbury, Mass., the son of Nathaniel and Hannah Currier. As a boy he was apprenticed to William S. and John Pendleton, who had just set up the first lithographic establishment in the United States, in Boston. William S. Pendleton had imported from Europe not only the equipment necessary for the business, but also artists and workmen. Young Currier was taught the business of lithographic presswork, and when John Pendleton, in 1829, joined a partnership with Cephas G. Childs and Francis Kearney, and opened a lithographic house in Philadelphia, under the name of Pendleton, Kearney & Childs, the apprentice accompanied him to the Quaker City. He remained there until 1833 when he went to New York, where John Pendleton also established a lithographic business. About the time Currier had completed his apprenticeship he began business on his own account in New York, where he resided until his death. His name first appears in the New York Directory in 1835, in which year, having become associated with J. H. Bufford, he issued a lithograph drawn by Bufford, showing “The Ruins of the Merchants’ Exchange.” This was printed toward the close of the year 1835, and inaugurated that series of popular lithographic prints which continued to be published for nearly seventy years, and is best known as Currier & Ives prints. In a rather crude but forceful way this series of prints gives a lively picture of the manners and history of the people of the United States from 1835 until the close of the nineteenth century. Great fires, disasters, the California gold rush, the development of railroads and commerce from the clipper ship to the steamship, are vividly recorded, as are the important political changes, sports, and the making of the West. They also include portraits of eminent Americans of the times. Many of the prints were colored by hand. They were designed for a people who were pioneering in the art of living under a new civilization, and who desired esthetic improvement in their wall decorations. In 1850 Currier took into partnership, J. Merritt Ives, an artist, and after 1857 all of the prints published by the firm bore the imprint, Currier & Ives. Currier retired from active participation in the business in 1880, leaving his son, Edward W. Currier, to continue with Ives. On Nov. 20, 1888, Currier died in New York, of heart disease. Currier & Ives prints became “an institution” and their office frequently entertained such celebrities as Horace Greeley, Henry Ward Beecher, and Hiram Woodruff. “Into the domain of political caricature, Currier & Ives had made incursions as early as the Mexican War. But the presidential campaign of 1856 brought the first sustained effort in this direction” (Frank Weitenkampf in Antiques, Jan. 1925). “There is nothing quite like it (the series) as a historical record and it supplements the newspaper files covering a period when newspapers were not fully illustrated as we have them now” (Karl Schmidt, in Country Life, Aug. 1927). Currier was twice married: first, to Eliza West Farnsworth; second, to a Miss Ormsbee of Vermont.

[For the main facts in Currier’s career the obituary in the N.Y. Tribune, Nov. 22, 1888, and the N.Y. Directory have been relied upon. Consult also his will in the Surrogate’s Office, New York City, and The Antiquarian, Dec. 1923; Antiques, Jan. 1925; Lithographs of N. Currier and Currier & Ives, by Warren A. Weaver (1925); Caricatures Pertaining to the Civil War, etc., published by Currier & Ives, from 1856 to 1872 (1892).]

J. J.

CURRY, GEORGE LAW (July 2, 1820–July 28, 1878), last of the territorial governors of Oregon, was born in Philadelphia, to which city his grandfather, Christopher Curry, had come from England. His early years were spent in Caracas, 1824–29, then two years on a farm near Harrisonburg, Pa. At the age of eleven, after the death of his father, George Curry, he went with an uncle to Boston where he was apprenticed to the printer’s trade. He attended school only three months. His messages as governor and his other writings, however, attest that he became a well-educated man through reading and study. When eighteen he was elected and served two terms as president of the Mechanic Apprentices’ Library Association of Boston. After three years of newspaper work in St. Louis, he set out in 1846 for Oregon and on his arrival in Oregon City was almost at once made editor of the Oregon Spectator, the first newspaper established on the Pacific Coast, the first number of which had been issued in February 1846. Two editors had already preceded him and his own tenure was ended in January 1848, after he had published a resolution which was introduced in the legislature, but not passed, protesting against the appointment of J. Quinn Thornton to any territorial office. Thornton had been sent to Washington by Abernethy, provisional governor and president of the association that owned the Spectator. In March of that year he founded a newspaper of his own, the Oregon Free Press, the first weekly published in the territory, with type purchased from the Catholic clergy and with a homemade press. In the same month he married Chloe Donnelly Boone, a
great-grand-daughter of the famous Daniel, who had come to Oregon over the southern route in 1846. His newspaper was obliged to suspend when his subscribers rushed away to the goldfields of California. He then took up farming, an occupation that he continued to combine with his later activities.

After serving as a member of the legislature of the provisional government (1848-49), as chief clerk of the Territorial Council (1850-51), and as member of the lower house of the legislature (1851-52), he was appointed secretary of the territory in 1853. He acted as governor from May to December 1853, until the arrival of Gov. John W. Davis, and was appointed governor when the latter retired in August 1854. Curry's appointment gave great satisfaction because he was a resident of the territory. Besides, he was persona grata with the "Salem Clique" a group of Democratic leaders, who headed by Asahel Bush, editor of the Oregon Statesman, dominated affairs and directed governmental policies. He is best remembered for his part in vigorously defending the settlers against the Indians in 1855. With the uprising of the Yakima and other Indian tribes of eastern Washington and Oregon and the Rogue River Indians in southern Oregon, he called into the field and equipped some twenty-five hundred volunteers to assist the Federal troops in confining these Indians within their reservations, thus opening their lands to white settlement. The county that was named in his honor was created in 1855. After Oregon became a state in 1859 he came within one vote of being elected United States senator in 1860.

(A brief biography published in the Trans. Ore. Pioneer Asso. (1878), pp. 79-81, is the best sketch of his career. Additional data have been supplied by his son in the Oregon Jour., May 19, 20, 1924; by articles in Morning Oregonian, Feb. 12, 14, 1899, May 20, 1920; by J. C. Moreland, Governor of Oregon (1913); and by H. H. Baneoft, Hist. of Ore. (2 vols., 1886, 1888). See also Oregon Spectator, 1846-48.) R.C.C—k.

CURRY, JABEZ LAMAR MONROE (June 5, 1825-Feb. 12, 1903), statesman, author, educator, was the second son of William Curry of Georgia and Susan Winn Curry. "I can hardly call myself an Anglo-Saxon," he once said, "as in my veins flow English blood, Scotch, Welsh, and French." He was born in Lincoln County, Ga. in 1833 "the stars fell," and the meteoric shower was associated by Curry with his leaving home for a distant school. Later he entered the famous Waddell Academy in South Carolina, where both the arch-nullifier, John C. Calhoun, and the solitary nationalist, James L. Petigru, were trained. In 1838 his father removed with his family to Talladega County, Ala., where fresh lands invited slave labor. The next year Jabez entered the University of Georgia (then Franklin College), where Joseph Le Conte, the scientist, and Benjamin H. Hill, senator from Georgia, were fellow students. Le Conte, writing to Curry from California, in 1887, said in a postscript, "We have just received two or three first-class seismographs. Wanted, an earthquake to record"—a want abundantly supplied in 1906.

In 1843 Curry entered the law school of Harvard College, where he studied under Joseph Story and Simon Greenleaf, and where Rutherford B. Hayes was a class-mate. In Boston the Southern youth was present when Wendell Phillips and William Lloyd Garrison spoke on abolition. His structural purpose in life was shaped at this time, when he heard Horace Mann, the American apostle of public schools. In looking back upon this experience, Curry recorded: "Mann's glowing periods, earnest enthusiasm and democratic ideas fired my young mind and heart; and since that time I have been an enthusiastic and consistent advocate of universal education." Unity in diversity marks Curry's career, and the key to the remaining sixty years of his activity is his zeal for universal education in the South in the spirit and power of Horace Mann. After receiving his law degree at Harvard, in 1845, on his way home to Alabama he visited John C. Calhoun, then secretary of state. "In all my political career," Curry said, "I was an adherent of the Calhoun school of politics." Thus Mann and Calhoun became the poles of his sphere of activity. The future and the past wrestled for his soul. His politics has lost in meaning, but his supreme purpose to "preach a crusade against ignorance" has been a gulf-current to those who came after.

He served in the Mexican War as a private in the Texas Rangers but resigned on account of ill health; he was a member of the Alabama legislature three different times, in 1847, in 1853, and in 1855; a member of Congress, 1857-61; a member of the Confederate Congress, 1861-63, and again in 1864; an aide on the staff of Gens. Joseph E. Johnston and Joseph Wheeler, and lieutenant-colonel of cavalry in the Confederate army, 1864-65; president of Howard College, Ala., 1865-68; professor of English in the University of Richmond (then Richmond College), 1868-81. President Hayes offered Curry a place in his cabinet, and Cleveland appointed him United States minister to Spain, 1885-88. This service, though of cordial and signal success, was "a mere interlude in the man's essential career." Sixteen years later, upon King Alfonso's coming of age, Roosevelt, at the special request

605
of Spain, sent Curry back as ambassador extraordinary (1902).

It was in 1866, when the South was in ashes, that George Peabody, of old New England stock, made a gift of more than two million dollars to quicken schools in the South. Barnas Sears, the first agent of the Peabody Fund, requested that Curry should be his successor, because "he is so many-sided, so clear in his views, so judicious, and knows so well how to deal with all classes of men. His whole being is wrapped up in general education, and he is the best lecturer or speaker on the subject in all the South." It was upon the motion of Gen. Grant that Curry was elected agent of the Peabody Fund in 1881. Four achievements are credited to Curry's administration of this Fund: state normal schools for each race in twelve Southern states; a system of public graded schools everywhere in the cities and small towns; the grounding in the minds of legislators of their responsibility for adequate rural schools; a body of educational literature, in his forty reports and ten published addresses. Inspired by the example of the Peabody Fund, John F. Slater of Norwich, Conn., gave a million dollars in 1882 for negro schools in the South. One of the Slater trustees was Rutherford B. Hayes, who in 1890 secured Curry as agent likewise of this Fund. Thus to Curry's strong hand had come the main threads of educational progress in the South.

In building the idea of public education, Curry was wont to address the legislatures in Southern states, and audiences in all parts of the country. Speaking before the University of Chicago, on July 4, 1898, on the doctrines of Calhoun, he was frequently interrupted by President Harper in order to read aloud telegrams as to the progress of the battle of Santiago that ended Spanish rule in America and made the United States a world-power. Then Curry would turn from Calhoun to greet the star-spangled banner draping the platform, and make it the basis of an appeal for nationality. He was a man of leonine type, both in appearance and in energy. As an orator he was fervent, but his main power as a speaker was due to his personality fused with principle. In his presence before an audience there was, indeed, something of the "demonic" quality which Goethe describes. Once he declared to a great assembly that it was the proudest duty of the South to train every child in its borders, black or white. Silence ensued. He exclaimed, "I will make you applaud that sentiment!" and with irresistible eloquence proceeded to do so.

Just before going to Chicago, Curry attended at Capon Springs, W. Va., a small conference of persons interested in education in the South. The next year, 1899, Curry was elected president of this conference, out of which sprang the Southern Education Board, and, in a sense, the General Education Board. The vast educational effort represented by the work of these boards may be considered, so far as the South is concerned, the culmination of Curry's sixty years' devotion to the cause of universal education. The Southern Education Board was organized in New York City on Nov. 3, 1901, under the presidency of Robert C. Ogden, and Curry was made its supervising director. Ogden carried forward the movement, revealing social statesmanship that practically transformed conditions in the South. He always delighted to say, "Curry was my master." Some of those associated with Curry in the Southern Education Board were Walter H. Page, Albert Shaw, Hollis B. Frissell, George Foster Peabody, Wallace Buttrick, Charles W. Dabney, and Edwin A. Alderman. This group energized public opinion in behalf of better schools for all the children of the South.

Curry was spared to see this flowering forth of all his work. At his death in 1903 the funeral, in accordance with his own request, was held from the halls of the University of Richmond, and he was buried at Hollywood Cemetery. The State of Alabama placed a marble statue of Curry in the Hall of Statuary in the Capitol at Washington. He was married, on Mar. 4, 1847, to Ann Bowie, a native of Abbeville District, S. C. Of the four children of this marriage, but two survived infancy. Ann Bowie Curry died on Apr. 8, 1865. On June 25, 1867, Curry was married to Mary Wortham Thomas, a daughter of James Thomas of Richmond, Va. After a wedded life of thirty-six years, Mrs. Curry survived her husband but three months.

[S. C. M.

CURTIN, ANDREW GREGG (Apr. 23, 1815—Oct. 7, 1894), governor of Pennsylvania, was born at Bellefonte, Centre County, Pa., the son of Roland and Jean (Gregg) Curtin. The Curtins belonged to Scotch-Irish stock. Roland emigrated from Dysert, County Clare, and settled in Bellefonte in 1800. In 1807, he erected
Curtin

a forge on Bald Eagle Creek about four miles from Bellefonte and lived there, occupied in the manufacture of iron, until his death in 1850. His second wife, Jean Gregg, was the daughter of Andrew Gregg, congressman, senator, and secretary of state under Joseph Hiester. Andrew Gregg Curtin was first taught in his native village by a Mr. Brown, a man of culture who had a school of about a dozen boys. Thence he went to Harrisburg Academy and later to Milton Academy, Pa., where, under the Rev. David Kirkpatrick, he was well grounded in mathematics and the classics. With this preparation, he turned to the study of law. At first with W. W. Potter of Bellefonte and then under Judge John Reed at the Law School of Dickinson College, he was initiated into his profession and, in 1839, was admitted to the bar in Center County, becoming, soon after, a partner of John Blanchard, a lawyer of good repute who was later elected to Congress. On May 30, 1844, Curtin married Catherine Irvine Wilson, daughter of Dr. Irvine Wilson and Mary Patten Wilson.

Of commanding presence and genial manner, gifted with wit and power of speech, Curtin became highly effective both before judges and juries. He won early success as a public speaker. In 1840, at the age of twenty-five, he appeared on behalf of Gen. Harrison’s candidacy for the presidency; in 1844 he was enlisted in support of Henry Clay; in 1848, he canvassed the state for Gen. Zachary Taylor, the Whig candidate for the presidency; and in 1852 he took the field for Gen. Winfield Scott. In 1854, he was offered the nomination for governor but refused, and supported James Pollock who was elected and promptly appointed Curtin secretary of the commonwealth and also ex-officio superintendent of common schools. In this post Curtin secured an enlarged appropriation for public schools and pushed a bill through the legislature authorizing the establishment of state normal schools, acts which increased his popularity and made probable his succession to the governor’s chair. The state election of 1860, often called “The Battle of 1860” aroused the keenest interest because of the national issues involved and because Lincoln looked especially to Curtin of Pennsylvania and Henry S. Lane of Indiana to swing the balance in these pivotal states to his side. Both were victorious: Lane won in Indiana, and Curtin, stoutly aided by A. K. McClure, chairman of the state committee, won in Pennsylvania by a majority of 32,000, which was interpreted as making the election of Lincoln secure.

Curtin’s inaugural address, delivered on Jan. 15, 1861, produced wide-spread effects. In it he proclaimed the unswerving loyalty of Pennsylvania to the Union. “The people mean to preserve the integrity of the National Union at every hazard,” he declared. He was the first of the governors to be summoned to Washington by Lincoln. After a consultation with the President on Apr. 8, 1861, he returned to Pennsylvania, won the overwhelming support of the legislature, and aroused so strong a spirit of loyalty among the people that double the state quota of 14,000 men was raised. Appreciating the magnitude and seriousness of the struggle then beginning, he obtained authority from the legislature to equip and maintain the extra force at the state’s expense. Thus he fathered the famous Pennsylvania Reserve Corps which enabled the state to meet acute emergencies during the succeeding year. To inspire patriotic feeling he obtained funds from the Society of the Cincinnati of Pennsylvania for the purchase of regimental flags which he presented to the regiments as they were formed and which were afterward carried through scores of bloody engagements. His unflagging care and oversight of the Pennsylvania soldiers made him known in the army as the “Soldier’s Friend.” His guardianship extended to caring for them in hospital and to bringing their bodies back for burial. Nor did it stop there, but went out to their dependents. In 1863, he obtained from the legislature a fund for the support and schooling of the war orphans. The popular response to his devotion was evident in the election of 1863, when the vote of the soldiers and their friends made him by a great majority again governor. He took a leading part in the Altoona Conference of Union Governors which was successful in at least one of its objects—to disclose the solidarity of the sentiment behind the Emancipation Proclamation. In 1868, he was one of the candidates for second place on the ticket with Grant, an honor which went to Schuyler Colfax. In 1869, President Grant appointed him minister to Russia. He filled the post with credit and on his return in 1872 was chosen delegate-at-large to the constitutional convention. His support of Greeley in the campaign of 1872 estranged his Republican friends, and he subsequently joined the Democratic party. In 1878, he ran for Congress on the Democratic ticket and was defeated. Two years later he ran again, was elected and served three consecutive terms until his retirement in March 1887. He lived quietly the remaining years of his life in his mountain home, surrounded by his family and
friends, and died, after a severe attack of illness, on Oct. 7, 1894.

W. B. P.

CURTIN, JEREMIAH (Sept. 6, 1840-Dec. 14, 1906), linguist, student of comparative mythology, was born either in 1838 or 1840, in Greenfield, near Milwaukee, Wis. His parents, David and Ellen (Furlong) Curtin, provided him with a common-school education and, unwittingly, with a linguistic groundwork. Opportunity to talk with German, Norwegian, and Polish settlers near Milwaukee, where he was born, gave him a start in the branch in which he became distinguished. He worked his way through Carroll College at Waukesha, Wis., through Phillips Exeter, to Harvard, where he was graduated in 1863. The cruise of the Russian Admiral Lissofsky's fleet to the waters of the United States in 1864, and Curtin's pleasant acquaintance with some of the officers of the fleet led him to accept their invitation to go to Russia. Owing to his talent as a linguist he is said to have been engaged in St. Petersburg as a translator of polyglot dispatches, and later was appointed assistant secretary of the United States Legation, holding this and other positions till 1870. Urged by the desire to acquaint himself with the Slavonic group of languages and other tongues, he traveled in eastern Europe and Asia apparently in the service of the Russian government. Bearing a rich store of linguistic spoils, he then went for a year to the British Isles collecting folk-lore and myths in the ancestral homes of his kin in Ireland. America and especially the Bureau of American Ethnology, with its studies of Indian languages, was his next objective, and shortly he was engaged in making independent researches in matters pertaining to the language and customs of the Iroquois, Modoc, Yuchi, Shawnee, and several other Indian tribes. After the Bureau episode (1883-91), he set out on travels around the world, collecting myths of various peoples.

Curtin's earliest published work consisted of translations of Henryk Sienkiewicz, Alexis Tolstoy, Michael Zagoskin, and other authors. In these translations, which had a wide currency in the nineties, he preserved remarkably the fire of the originals. More important were his ethnological contributions (many of them published posthumously) in four different fields: (1) Celtic—represented by Myths and Folk-Lore of Ireland (1890), Hero-Tales of Ireland (1894), Tales of the Fairies and of the Ghost World, Collected from Oral Tradition in South-West Munster (1895); (2) Slavonic—represented by Myths and Folk-Tales of the Russians, Western Slavs and Magyars (1890), Fairy Tales of Eastern Europe (1914), Wonder Tales from Russia (1921); (3) Mongolian—represented by The Mongols in Russia (1908), The Mongols: a History (1908), A Journey in Southern Siberia; the Mongols, their Religion and their Myths (1909); (4) American Indian—represented by Creation Myths of Primitive America in Relation to the Religious History and Mental Development of Mankind (1898), Myths of the Modoc (1912), Introduction to Seneca Fiction, Legends and Myths (1919) in collaboration with J. N. B. Hewitt, Seneca Indian Myths (1923).

A strain of mysticism usually termed Celtic, proper in Curtin's case, was observable in him and helped his tendency toward the romantic. As a collector of myths and tales few excelled him, largely because of his ability to master languages. In fact, Curtin was one of the outstanding linguists of the world. Having a working knowledge of all European languages, he had also more or less acquaintance with many others, the total said to be seventy languages and dialects. Of average height, with strong frame, broad cheek-bones, blue eyes, and a tawny curling full beard, he was a man of noteworthy appearance. He was married on July 17, 1872, to Alma M. Cordelle, daughter of James Cordelle of Warren, Vt.

W. H.

CURTIS, ALFRED ALLEN (July 4, 1831-July 11, 1908), second Catholic bishop of Wilmington, was born of an old but obscure family at Pocomoke, Worcester County, Md. Educated in the local public schools, he studied for the Episcopal ministry and was ordained a deacon in 1856 by Bishop Whittingham. Appointed assistant curate at St. John's Church, Baltimore, he was soon transferred to St. Luke's Church, Baltimore, thence to a small congregation in Frederick, Md., and eventually to the rectorship of a church in Chestertown, Kent County, Md. There he was known as a classical student and an attentive pastor who found time for fishing and yachting. In 1862, only six years after ordination he was honored with the pastorate of
Curtis

the important Mount Calvary Church in Baltimore where he remained until 1870 when he resigned because of dissatisfaction with the Episcopal creed. Going to England, he became interested in the Romeward movement and entered the Catholic Church (1872) under the guidance of Cardinal Newman.

Returning to America, he entered St. Mary's Seminary, Baltimore, and on completion of a two-year course in theology was ordained (Dec. 19, 1874) by Archbishop Bayley. Quiet, studious, dreading publicity, Father Curtis was happy as an assistant at the Baltimore cathedral, as secretary to the archbishop, and later as acting chancellor of the diocese. Named bishop of Wilmington, Del., he was consecrated by Archbishop Gibbons on Nov. 14, 1886, and commenced the trying work of church building in a small diocese heavily burdened with debt. During his short administration, fifteen churches were erected, a visitation convent for contemplative cloistered sisters, and a colored mission under the Josephite Fathers. He was instrumental in bringing to the diocese the Benedictine and Ursuline teaching communities. As a bishop, he was not happy and it was with relief that he resigned in 1896 and became the titular bishop of Echinos. Called back to Baltimore, he acted as Cardinal Gibbons' vicar-general from 1898 until his death. A retiring, silent man, he attracted little attention in the world and was known only to his intimates as a saintly, conscientious priest.

R. J. P.

Curtis, Benjamin Robbins (Nov. 4, 1809–Sept. 15, 1874), jurist, was born at Watertown, Mass., the oldest of the two sons of Benjamin Curtis, 3rd, a ship-captain, and Lois (Robbins) Curtis, daughter of a small manufacturer and store-keeper of Watertown, Mass. The Curtis family was descended from William Curtis, probably of London, who with his wife, a sister of John Eliot, apostle to the Indians, came to Boston in the ship Lyon, Sept. 16, 1632, and settled at Stony River, Roxbury, Mass., in 1639. The family remained small farmers, but after 1738 one or more members of almost every generation are said to have been Harvard graduates, including the grandfather of Benjamin Robbins Curtis, Benjamin Curtis, 2nd, a physician. His widow, Benjamin Robbins Curtis's grandmother, married as her second husband Elisha Ticknor, a man of wealth, and became the mother of George Ticknor [q.v.], Harvard professor and author. This connection was of great value to Curtis throughout life. His father died abroad on one of his voyages, leaving his mother with two young children and without means; but through loans from the elder Ticknor, and by keeping a small dry-goods store and circulating library in Watertown, she was able to prepare Benjamin for Harvard. He passed under the tuition of numerous masters, including John Appleton, later chief justice of Maine, who remembered the boy as the best scholar he ever had.

Curtis entered Harvard in 1825, his mother removing to Cambridge and opening a students' boarding-house. Four years later he graduated as the second scholar in his class. At college he displayed the poise and discreet reserve which marked his later life. While intimate with few classmates, he was a member of the Hasty Pudding Club and the "Institute," and an honorary member of the Porcellian Club. Although none of his relatives were lawyers, he was attracted to the profession by his aptitude for lucid reasoning, and after graduation entered the Harvard Law School, just then revitalized by Story's appointment as Dane Professor. In spite of the distinction he attained as a student, Curtis left the school in 1831 before completing his course, to take over the practise of a country attorney in Northfield, Mass. His motive seems to have been partly a wish to gain practical experience while completing his studies, and partly to secure an immediate competence so that he might marry his cousin, Eliza Maria Woodward of Hanover, N. H. He remained in Northfield until 1834 when he was taken into partnership by a distant relative, Charles Pelham Curtis, an established lawyer in Boston. This connection continued for seventeen years and was strengthened after the death of his wife in 1844 by his marriage in 1846 to Anna Wroe Curtis, the daughter of his partner.

Curtis early gained a reputation at the Boston bar for great skill in all branches of commercial law. While not eloquent, he had a pleasing voice and unruffled manner, and was successful not merely in arguing legal appeals, but as an advocate, because of his remarkable gift for clear statement. Soon after coming to Boston, he was counsel in the case of the slave Med (Commonwealth vs. Aves, 18 Pickering, 193), and argued that a slave-owner who brought a slave temporarily into Massachusetts might restrain the slave while in the state for the purpose of later returning with him to his domi-
Curtis

Curtis

cile. This contention was overruled by the court with reasoning later used by Curtis as the basis of his dissent in the Dred Scott case.

In 1846, in spite of his early age, Curtis was chosen as Judge Story's successor as a member of the Harvard Corporation. Three years earlier he had attracted attention by a scholarly article in the North American Review against debt-repudiation by certain Southern and Western states, which he characterized as "a disgrace in the eyes of the civilized world." Although he kept aloof from politics, he expressed disapproval of the Van Buren administration, described by him as "the ambitious, selfish and ignorant men who now carry on the government."

In 1840 he was for Webster for president "because it is respectable and right." In 1850 he was the spokesman of Webster's friends who invited the latter to Boston to congratulate him on his "Seventh of March" speech, and during the next two years he came forward in active opposition to the Free-Soil party. As a member of the lower house of the Massachusetts legislature in 1851, he prepared an "Address to the People" signed by the Whig members of that body, denouncing the coalition between Free-Soilers and Democrats which had resulted in the election of Boutwell as governor and Charles Sumner as United States senator. In the fall of the same year, the New England seat on the United States Supreme Court became vacant through the death of Mr. Justice Woodbury, and Curtis, through Webster's influence, was appointed, at the early age of forty-one. He served as a member of the Supreme Court during six annual terms, writing the opinions of the Court in fifty-one cases, of which the most important were Cooley vs. Board of Port Wardens (12 Howard, 299) and Murray's Lessee vs. Hoboken Land and Improvement Company (18 Howard, 272). The former established for the first time that the power of Congress to regulate interstate and foreign commerce is not exclusive in such sense as to prevent the states from making regulations of a local character where national uniformity is not required. The Hoboken case permitted Congress to vest an administrative officer with power to determine sums due to the government from one of its officials and to enforce their collection without resort to a law court. Both cases have become basic precedents for later constitutional law.

Curtis's best-known association with the Supreme Court was connected with his leaving it. In the famous Dred Scott case (19 Howard, 393), argued on behalf of the negro by Curtis's brother, George Ticknor Curtis [q.v.], he was one of the two dissenting judges, and urged in a long opinion that residence of a slave with his owner in free territory conferred freedom which the slave could vindicate in the courts on his return to the owner's domicile in slave territory. Curtis also claimed that the Court could not proceed, as it did, to decide the case on the merits after it had ruled that a slave was not a citizen, and was without capacity to sue. This opinion was given to the newspapers in advance of official publication. To meet its arguments, Taney revised the opinion which he had read from the bench. An unpleasant correspondence between Curtis and Taney ensued, Taney objecting to the newspaper publication of Curtis's opinion and Curtis objecting to the revision of Taney's opinion after it had been delivered. At the close of the correspondence Curtis resigned from the Court, assigning as a reason the smallness of the salary he received as a judge, but admitting to his friends that he could not "again feel that confidence in the Court and that willingness to cooperate with them which are essential to the satisfactory discharge of my duties" (Letter to George Ticknor, July 3, 1857 in Memoir, I, 247). After Taney's death Curtis delivered, at a meeting of the Boston bar, a generous tribute to his services.

Until his own death seventeen years later, Curtis was a recognized leader of the American bar. During that time he argued fifty-four cases before the United States Supreme Court and eighty before the supreme court of Massachusetts, besides many before lower courts. His aggregate professional income for this period has been estimated at $650,000. His attitude toward life settled into gloomy but philosophical disillusionment. During the Civil War he wrote that "Washington was always a fatiguing place to me even when it was . . . the place where I had ambitions; and now that I have grown wiser and have none in the usual acceptance of the word . . . this city is very dreary to me" (Letter to his wife, Dec. 15, 1862 in Memoir, I, 353). In 1866 his second wife died, and a year later he married Maria Malleville Allen of Pittsfield, Mass. Always deeply religious, practising daily family worship and never taking his seat on the bench without silent prayer, when his theological views underwent a change, he left the Unitarian faith in which he had been reared, to become an Episcopalian. He was strongly moved by the approach of the Civil War, and braved unpopularity by heading a movement for the repeal of the Massachusetts statute against the return of fugitive slaves in order to reassure the Southern states that the
North harbored no designs against their constitutional rights. During the war he published a pamphlet on "Executive Power," attacking what he regarded as the unconstitutional action of the President in suspending the writ of habeas corpus and in issuing the Emancipation Proclamation. In 1866 he expressed public sympathy with the purposes of a convention called to meet in Philadelphia to oppose the reconstruction projects of the radical Republican majority in Congress. When President Johnson was impeached in 1868 Curtis was selected as his leading counsel. His speech opening the President's defense was his greatest forensic effort, displaying the dignity, coolness, and clarity which marked his style, and was admitted by his opponent Butler to have so thoroughly presented Johnson's case that nothing more was added throughout the trial.

This was Curtis's last service of a public nature. He declined Johnson's offer of the office of attorney-general and in 1871 declined to serve as one of the counsel for the United States before the Geneva Arbitration Tribunal. Two years later he informed his friends on the death of Chief Justice Chase that he did not care to be considered as a possible successor. In 1872–73 he delivered at the Harvard Law School a course of lectures on Jurisdiction, Practice and Peculiar Jurisprudence of the Courts of the United States (1880). Of the litigation in which he was engaged as counsel after his retirement from the bench, three cases are the most famous: Paul vs. Virginia (8 Wallace, 168), Hepburn vs. Griswold (8 Wallace, 603), and Virginia vs. West Virginia (11 Wallace, 39), in all of which the Supreme Court decided adversely to his contentions. His later years were crowded with almost uninterrupted professional work to which his interests became more and more narrowed; and a short trip to Europe in the summer of 1871 seems to have brought him little satisfaction. In the summer of 1874 while at his villa at Newport, R. I., his health broke down and he died there on Sept. 15.

[Curtis's biography by his brother, George Ticknor Curtis, forms the first volume of The Life and Writings of B. R. Curtis, ed. by his son, Benj. R. Curtis (Boston, 1879). While laudatory, it is well done and includes a large number of Curtis's letters and legal opinions. The second volume contains a reprint of his articles on "State Debts" and "Executive Power" and some of his more important addresses and judicial utterances. For his Supreme Court career see Chas. Warren, Supreme Court in U. S. Hist. (1920).] J.D.

CURTIS, EDWARD LEWIS (Oct. 13, 1853–Aug. 26, 1911), Presbyterian clergyman, educator, came by inheritance to the minister's task and the teacher's profession. His father, Rev. William Stanton Curtis, was a native of Burlington, Vt., who after graduation at Illinois College in 1838 and later study at Yale Divinity School became successively pastor at Ann Arbor, Mich., where Edward was born, professor of mental and moral philosophy in Hamilton College, Clinton, N. Y., president of Knox College, Galesburg, Ill., and pastor of the Westminster Presbyterian Church in Rockford, Ill. His mother, Martha (Leach) Curtis, also a native of Vermont, graduated in the second class to leave Mount Holyoke Seminary, where she was later associated in teaching with Mary Lyon, founder of the institution. Before reaching his sixteenth birthday Edward Curtis entered the class of 1873 at Beloit College, but transferred his studies to Yale as a sophomore in the academic class of 1874, where his literary abilities were evinced by his selection as editor of The Yale Courant and the winning of a Townsend prize. The two years following his graduation at Yale were spent in teaching, after which he entered Union Theological Seminary, which, on his graduation in 1879, awarded him a fellowship for study abroad. In the Divinity School his interest had been directed toward Old Testament studies, and these he pursued for two semesters at Berlin; but illness prevented his securing the degree of Ph.D. In 1881 he returned to America to take up the work of instructor in Hebrew and Old Testament in McCormick Theological Seminary, Chicago, advancing to the full professorship in 1886. Meanwhile, on Apr. 27, 1882, he married Laura E. Ely of Rev. B. E. S. Ely of Ottumwa, Ia., and in 1883 was ordained to the Presbyterian ministry.

Although no considerable volume came from Curtis's pen during his years at Chicago, his teaching ability and the articles he contributed to periodicals such as The Presbyterian Review and The Old Testament Student secured for him a call in 1891 to the Holmes Professorship of Hebrew Language and Literature in Yale University, a position in which he spent the remainder of his life, combining with its duties those of acting dean of the Divinity School in 1905.Neither the handicap of ill health (he had suffered from angina pectoris since 1901, and had a partial stroke of paralysis in 1906 which greatly limited his eyesight) nor the burden of administrative duties outside his classroom work prevented the completion in 1910 of his chief contribution to scholarship, his Critical and Exegetical Commentary on the Books of Chronicles in the International Critical Commentary series, the work being shared by a favorite pupil, A. A.
Curtis

Madsen. A smaller commentary, The Book of Judges, intended for the Bible for Home and School series, left unfinished at his death, was completed and published by Madsen in 1913. Curtis's public reputation will rest on the Commentary on Chronicles, but pupils and colleagues revered him even more for his character of unassuming helpfulness than for his patient and accurate scholarship.

B. W. B.

CURTIS, EDWIN UPTON (Mar. 26, 1861–Mar. 28, 1922), mayor and police commissioner of Boston, was descended from William Curtis (see sketch of Benjamin Robbins Curtis). George Curtis of the sixth generation, a lumber merchant, in 1845 married Martha Ann, daughter of Joseph Upton of Fitchburg, Mass., and Edwin Upton was their seventh child. Born at Roxbury, Mass., he attended the grammar and Latin schools there and the Little Blue Family School for Boys at Farmington, Me., proceeding thence to Bowdoin College, where he won distinction as an athlete and oarsman and graduated in 1882. He read law at Boston in the office of Ex-Governor Gaston, also attended the Boston University Law School, and was admitted to the Suffolk County bar in 1885. Commencing practise in Boston, he took an active interest in public affairs, being an ardent adherent of the Republican party, and in 1888 became secretary of the Republican City Committee. In 1889 he was elected city clerk. Two years later he retired and resumed practise, at the same time identifying himself with the then growing movement for civic reform. Such was the prominence which he acquired in this connection that in 1894 he was nominated by the Republican party for mayor, and won a spectacular victory by over 2,500 votes. In his inaugural address to the city council he outlined the changes which he advocated, among them being the appointment of a Board of Commissioners to control the election machinery, a revision of the system of financing the public schools, and the placing of each city department under a commissioner. All his major recommendations were carried into effect, and his administration procured for the respect and confidence of all parties and classes in the city. On retiring from the mayoralty he again resumed the practise of law. On Oct. 27, 1897, he was married to Margaret the daughter of Charles Waterman of Thomaston, Me. He continued his public activities, serving as a member of the Metropolitan Park Commission, assistant United States treasurer at Boston, and collector of the Fort of Boston. In December 1918 by appointment of Gov. McCall he became police commissioner of Boston. For some time previously there had been an undercurrent of dissatisfaction in the police force due partly to alleged inadequacy of salaries, and in 1919 matters came to a crisis. The Mayor refused to recommend an increase of pay, and the men thereupon organized a local union affiliated with the American Federation of Labor, intending by this means to compel compliance with their demands. Curtis promptly suspended from duty all those who had become officials of the new union, upon which three-fourths of the police force went on strike, Sept. 9, 1919. The Commissioner announced that no strikers would be reinstated, intimating at the same time to Gov. Coolidge that the latter must either remove him from office or accord to him the whole-hearted support of the Commonwealth. The Governor in response furnished Curtis all the assistance required. For a few days much rowdiness occurred in the city and business was badly disorganized, but public opinion was with Curtis; the loyal remnant of the police and the Massachusetts State Guard, assisted by a volunteer force of citizens, in a short time put an end to violence and intimidation, and normal conditions were restored. In the meantime, adamant in his attitude toward the strikers, the Commissioner proceeded to create a new police force. Though hampered by certain political elements and bitterly assailed by organized labor, his efforts were successful and the elimination from the force of those who had participated in the strike established the principle that loyalty to constituted government must not be subordinated to outside authority. In 1921 his health became seriously impaired and he was urged by friends to retire, but he resolutely refused, saying that it was his imperative duty to remain at his post as head of the reorganized police in view of the short time which had elapsed since the strike. He died early in the following year.

H. W. H. K.

CURTIS, GEORGE (Feb. 23, 1796–Jan. 9, 1856), banker, was descended from Henry and
Curtis

Mary (Guy) Curtis who came to America in 1635 and settled at Watertown, Mass., and from their son, Ephraim Curtis, the first white settler of Worcester, Mass. George, the son of David Curtis, an ironmaster, and his wife, Susannah Stone, was born in Worcester but after a boyhood spent in local schools and sporadic employment near his home, went with his brother to Providence, R. I. He obtained employment in a bank in that city and learned the business through practical experience, eventually becoming cashier of the Exchange Bank, a well-known local institution of that day. On Mar. 6, 1821 he married Mary Elizabeth Burrill, daughter of James Burrill [q.v.]. She bore him two sons, James Burrill and George William Curtis [q.v.], and died in 1826. On Apr. 3, 1834 he married Julia B. Bridgham, daughter of Samuel Bridgham, the first mayor of Providence. By this marriage he had four sons, two of whom, Edward and John Green Curtis [q.v.], attained distinction in medicine. A natural interest in politics led Curtis to become a member of the Common Council in Providence, and later to be elected a member of the state legislature. He was speaker of the House in 1837–38 (J. J. Smith, Civil and Military List of Rhode Island, 1901, pp. 539, 552) and was apparently in a fair way to spend the rest of his life as an influential citizen of the state. The time, however, was one in which great banking changes were taking place and opportunities for personal advancement and money-making were numerous. Banking organization in New York City particularly was undergoing considerable modification and expansion. Believing that broad opportunities were offered in that city, Curtis removed thither in 1839, accepting an appointment as cashier of the Bank of Commerce. In that capacity he had, under the comparatively simple type of banking structure which prevailed in that generation, opportunity to direct practically all of the interior operations of what was later to be one of the city’s leading institutions. He thus became thoroughly familiar with the technique of banking and was recognized as one of the abler among the younger bankers of New York City. When the Continental Bank of New York was organized in 1844, he was offered the presidency and accepted it. In this position he continued until the end of his life. He was characterized by shrewd business ability, coupled with an outstanding reputation for honesty and trustworthiness, which resulted in his being offered many opportunities for service of a financial sort outside of his immediate banking duties. With a number of the more conspicuous bank-

Curtis

ers of the city he was interested in the organization of the New York Clearing House. The origin of the “idea” of this institution has been attributed to many persons and claimed by several. In its archives are various plans which were put forward, but the list includes none by Curtis. From the outset, however, he was active in the negotiations and discussions which led to final action; and when the general plan of the organization had been agreed upon, he drew up a set of rules or by-laws sometimes referred to as the “Constitution” of the Clearing House. This document was adopted on June 6, 1854, and furnished the basis upon which the new undertaking organized its operations (J. G. Cannon, Clearing Houses, Their History, etc., 1900, pp. 134–35). He did not live, however, to see the Clearing House develop, for only a few months after its organization his health became impaired and he finally went to Jacksonville, Fla., where he died early in 1856.

H. P. W.

Curtis, George Ticknor (Nov. 28, 1812–Mar. 28, 1894), lawyer, author, was a son of Benjamin and Lois (Robbins) Curtis. His ancestors were typical New Englanders, farmers, ministers, school-teachers, and seamen. His middle name was that of his paternal step-grandfather, whose son, George Ticknor [q.v.], the critic, was one of his closest friends. His brother was Benjamin R. Curtis [q.v.], justice of the United States Supreme Court. George was twice married: first, on Oct. 17, 1844, to the daughter of Justice Joseph Story [q.v.], Mary Oliver Story, who died in 1848, leaving two sons; second, in January 1851, to Louise A. Nystrom, by whom he had three sons and three daughters. He graduated from Harvard in 1832, and then taught school and studied law, in part at the Harvard Law School and in part in the Boston office of C. P. Curtis, a relative. He was admitted to the bar in 1836, and after a brief practice at Worcester, established himself in 1837 at Boston. In 1862 he removed to New York where he remained in practise until 1888, and continued to live until his death. For many years he maintained also an office at Washington, D. C., as much of his practise was before the United States Supreme Court. He enjoyed a high reputation
Curtis

as a patent attorney, being employed by many inventors, notably by Goodyear, Morse, and Cyrus McCormick. Outside this specialty he was engaged in the greenback cases, and in the Dred Scott case. In the latter he defended the freedom of Scott on the ground that Congress possessed the right to control slavery in the territories, and that consequently the Act of 1820 was constitutional. He entered politics as a Whig and a friend of Webster, serving in the Massachusetts House from 1840 to 1843. He declined re-election, and is said to have declined the ministry to Great Britain. In 1852, as United States Commissioner, he facilitated the return to slavery of Thomas Sims, under the Fugitive Slave Act of 1850, thereby incurring the hostility of the Abolitionists. As was the case of many of the Webster “Cotton” Whigs, he became a Democrat. In the Civil War he was a Unionist, but keenly critical of the administration, setting forth his position in a Fourth of July oration at Boston in 1862. In New York he was for some time associated with Tammany Hall, but refused all office. He exerted a certain political influence, nevertheless, through pamphlets and magazine articles, impressive because of his legal learning and impartiality. The first was an argument in favor of compensation for the Ursuline Nuns whose convent at Charleston, Mass., was burned by a mob. In 1885 he engaged in a controversy with John W. Foster [q.v.], publishing in that year International Arbitrations and Awards. In 1886 and 1887 he published defenses of Gen. George B. McClellan.

Living as he did in an atmosphere of scholarship and literary effort, including many of the leading authors of both America and Europe, Curtis naturally turned early to writing. His first work was the production of legal studies, which came to cover a wide field. In 1839 he published a Digest of Cases Adjudicated in the Courts of Admiralty of the United States, and in the High Court of Admiralty in England; in 1841, A Treatise on the Rights and Duties of Merchant Seamen; in 1847, A Treatise on the Law of Copyright; in 1849, A Treatise on the Law of Patents; in 1850, Equity Precedents; in 1854 and 1858, two volumes of Commentaries on the Jurisdiction, Practice, and Peculiar Jurisprudence of the Courts of the United States. These and other legal contributions were much used and went through many editions. Gradually he turned his attention to work less closely connected with his profession. In his late years he wrote a novel, under the pseudonym, Peter Boylston, John Charaxes: A Tale of the Civil War (1889); and Creation and Evolution? a

Curtis

Philosophical Inquiry (1887). More important were his biographical contributions, including a Memoir of Benjamin Robbins Curtis (1879), and, in two volumes each, a Life of Daniel Webster (1870) and a Life of James Buchanan (1883).

His reputation, however, will chiefly rest on his studies of the history of the Constitution of the United States. In 1849-50 he delivered a course of lectures at the Lowell Institute of Boston, on the history of the Constitution of the United States, on which he had the advice of Webster. An elaboration of these lectures was published as History of the Origin, Formation, and Adoption of the Constitution of the United States (two volumes, 1854-58). In 1889 he published the first volume of a revision and extension, entitled Constitutional History of the United States from their Declaration of Independence to the Close of the Civil War. In 1896 the second volume, edited by J. C. Clayton, was published. This work is the classic treatment of the Constitution from the Federalist, Websterian point of view. Curtis’s historical work is of the old school. He used but few sources and his conception of history, as of the forces of public life, was distinctly limited. Particularly after leaving Boston his life was spent almost entirely in his office, his study, and with his family, and many of his judgments reflect this somewhat cloistered existence. Within these limits he worked with exactitude, independence, and fine intelligence. His style is cumbrous, though with some Victorian elegance. His Buchanan and his Constitutional History are likely to remain standard.

[A number of Curtis’s letters are among the Geo. B. McClellan MSS, in the Lib. of Cong. The Memoir of Benj. Robbins Curtis referred to above contains some family history. See also Catherine P. Curtis, “Genealogy of the Descendants of Wm. Curtis,” M.S. in Lib. of Cong.; Quin. Cat. of the Law. Sch. of Harvard Univ. (1915); obituaries in Harvard Grads. Mag., June 1894; N. Y. Times and Boston Transcript, Mar. 29, 1894.]

C.R.F.

CURTIS, GEORGE WILLIAM (Feb. 24, 1824–Aug. 31, 1892), author, orator, was born in Providence, R. I., of an old New England family, being the son of George Curtis and Mary Elizabeth Burrill, daughter of James Burrill [q.v.]. He lost his mother while he was still an infant, and it was his elder brother James who thereafter exerted for many years the strongest influence on his life. As boys they spent five years together at a school in Massachusetts, and then returned to Providence where their father had re-married. In 1839, when Curtis was fifteen years old, the family took up residence in New York City, and here, for a few

614
years, Curtis held a clerkship. Then followed a stay of two years, again with his brother James, at Brook Farm, where association with the spirits of the Transcendental Movement, deepened the idealistic strain in Curtis, who was to become, in the record of America, the outstanding example of the man of letters who sets aside the possibilities of literary fame because of the inner urge toward what he considers to be the highest duties of citizenship. The most potent influence upon him during that period was Emerson, and even after Curtis had left Brook Farm, and had returned to New York, he would frequently visit Concord in order to benefit by conversations with the benign philosopher and poet. The Puritan strain in Curtis thus became at an early age affected by the consciousness of the brotherhood of man, while the charm of his own nature never swerved him from fearless adherence to conviction.

In 1846 Curtis left New York for a four years' stay in various countries of Europe and in Egypt and Syria. His wanderings were to bring forth two books of travels—* Nile Notes of a Howadji* (1851) and *The Howadji in Syria* (1852). These books, based on letters sent to the *New York Tribune*, with whose staff Curtis was connected, display engaging fancy and graceful descriptive powers, traits manifest also in *Lotus-Eating* (1852) and in *Polisphar Papers* (1853), a volume which, with its gentle satire of the social life of New York, was a direct descendant of Irving's *Salmagundi*. Shortly after Curtis's marriage, on Thanksgiving Day, 1856, to Anna Shaw of Staten Island, *Putnam's Monthly*, of which he was an associate editor, went into bankruptcy, and he assumed a debt from which by process of law he could have escaped, a debt that taxed his resources until, after a considerable number of years, it was met in full. His final work in the Irving tradition, *Prue and J* (1857), established him firmly in the hearts of his readers. Here the sentimental yet manly and philosophic observer of life gives his most ambitious portrayal of that happiness which is not dependent upon wealth.

The second half of Curtis's career was made memorable by a series of noble orations. The first, delivered to the students of Wesleyan University at Middletown, Conn., was entitled *The Duty of the American Scholar to Politics and the Times* (1856). The scholar, for Curtis, was not the closeted specialist, but that "priest of the mind," dedicated to the elevation of public thought and action, devoted to the eternal interests of his own community and of the community of mankind. Curtis adjured his youthful hearers to enter upon the fight of Freedom; to justify and to carry to success the experiment which the American Republic symbolized. In rousing enthusiasm toward resistance against slavery, Curtis made evident those two strains whose blending has so largely directed the course of American civilization. He showed himself in his gallantry, his flair for the graces of life, the Cavalier; he showed himself in his stern adherence to the obligations of life, the Puritan.

The services of Curtis in the four or five years that were to pass before the Civil War disrupted the country, and the influence of his voice during the war period, can hardly be overestimated. His speeches gave new impetus to patriotic fervor, and his writings as the editor of *Harper's Weekly*, an office assumed in the critical period of the conflict in 1863, were so fair, so keen, so persuasive, that their author created for himself a position in the public mind commanded by probably no other literary publicist. Hundreds of thousands of hearers and readers looked upon him as their mentor, and regarded him with respect due to the cogency of his unprejudiced argumentation, and with affection due to the modest human courtesy of his approach.

Keenly in touch with the practical working out of affairs and, throughout his life, an exemplary member of numerous civic committees, Curtis, from youth to old age, opposed with tact as well as with fervor, and with cheering optimism, the tendency to look upon the highest moral principles "as something too visionary, too abstract and impracticable for working men in actual life." In his Phi Beta Kappa oration at Harvard in 1862, "It is as sure as sunrise," he said, "that men and nations, either in their own lives and characters or in those of their descendants, will pay the penalty of injustice and immorality." His lecture entitled "Political Infidelity," and delivered more than fifty times, in different states from Maine to Maryland, in 1864 and 1865, maintained, in memorable phraseology, that "whatever in this country, in its normal condition of peace is too delicate to discuss is too dangerous to tolerate. Any system, any policy, any institution, which may not be debated will overthrow us if we do not overthrow it."

When the Civil War had ended new problems engaged the attention of Curtis. He opposed all caste usurpation, and advocated the necessity of a better understanding between capital and labor. He was among the first to fight for the enfranchisement of women, feeling that "the spirit of society cannot be just, nor the laws equitable, so long as half of the population are
politically paralyzed." He was among the first to advocate civil-service reform, and as chairman of both the New York State and the National Civil Service Reform Associations, he did more than any other man to make merit, and not party affiliation, the approach to civil office. He had been a leading spirit in the Republican party since its inception, but when James G. Blaine, in the eyes of Curtis a corrupt man, ran for the presidency, Curtis urged the election of Grover Cleveland and became the most influential of Independents in national affairs. He gave his most careful thought and many of his hard-pressed days to educational activities, and, as chancellor of the University of the State of New York, he engaged in matters of detail while he continued, in and out of season, to insist on that public duty of educated men which, at Union College in 1877 and at Brown University in 1882, was the theme of orations that continued and deepened the inspirational argument of his first great address in 1856. Underlying all his talks, all his writings, were the free-minded citizen's appreciation of the mental processes of others, the student's analysis of history (and especially deeply was Curtis versed in the history of his own country), and the gentleman's graciousness in winning sympathetic attention. If in his casual papers as editor of "The Easy Chair," in Harper's Magazine, he often, and of necessity, engaged in topics of the day, in his more elaborate addresses he expounded in illuminating manner the permanent principles of American progress.

A lover of music and of art, happy in his home on Staten Island, rich in friendships—with James Russell Lowell and Charles Eliot Norton as his two intimates, and his brother, James Burrill Curtis, as the nearest and dearest of his friends—he was never tempted by the more obvious lures of wealth or position. He was the adviser of Presidents, but when he could have had from Mr. Hayes the mission to England, he decided that he could be of more use to his fellow citizens in his capacity with the Harpers than he could possibly be at the Court of St. James's. He acted as delegate to Republican state conventions, but he desired no political advancement for himself, and he withstood with calm temper the attacks of those who, when he turned Independent, accused him of political infidelity. Political infidelity was for him disloyalty to the principles, and not to the behests, of any party; and one of his most memorable sentences is that wherein he adjoins the youth of the country that "if ever one of you shall be the man so denounced, do not forget that your own individual convictions are the whip of small cords which God has put into your hands to expel the blasphemers."

If the man of letters gave way to the publicist in the second half of Curtis's life, his commemorative addresses included not only really great tributes to statesmen such as Charles Sumner, Wendell Phillips, and President Garfield but also, with keen knowledge of literary values, to Robert Burns, to William Cullen Bryant, to James Russell Lowell. The Lowell address delivered first in 1892, on Feb. 22, the birthday of both George Washington and Lowell, and repeated at New York in May, closed Curtis's career as an orator. One remembers this final public appearance of the firm and sweet-souled leader of the public conscience—the charm of his voice, the beauty of his looks, the graciousness of his manner. He had nothing of the dramatic orator, nothing of the sensational actor, but the simplicity of his gestures, the music of his tones, and the utter sincerity of the man won every audience he addressed. He remains a fragrance in the record of American letters and one of the thoroughly fine forces in the development of American civilization.

CURTIS, JOHN GREEN (Oct. 29, 1844—Sept. 20, 1913), physiologist, was the son of George [q.v.] and Julia (Bridgham) Curtis. He was born in New York the year that his father became president of the Continental Bank, and like his brother, Dr. Edward Curtis, and his half-brother, George William Curtis [q.v.], derived from his parents a love of scholarly pursuits and a faith in high ideals which he carried
Curtis

through life. As a young man he showed great fondness for the classics and during his college course at Harvard he acquired such mastery of Latin and Greek that these languages became in his hands tools of great usefulness in later life. He graduated from Harvard College in 1866, taking the M.A. degree in 1869. While in college he decided to study medicine and in 1870 he received the degree of M.D. from the College of Physicians and Surgeons of New York. On Oct. 20, 1871 he married Mrs. Martha (McCook) Davis. After graduation he entered at once upon the practise of his profession, at the same time serving as assistant demonstrator of anatomy in the medical school and as assistant physician in Bellevue Hospital. Practise of medicine, however, did not appeal to him, and his scholarly taste and interest in science gradually drew him into teaching in the medical school. Here, under Prof. Dalton he became deeply interested in physiology and was soon appointed adjunct lecturer, later adjunct professor of physiology at the College of Physicians and Surgeons. On the retirement of Dr. Dalton he became professor of physiology and head of the department, serving in that capacity from 1883 to 1909, when he retired as professor emeritus.

Curtis was a man of singularly pleasing personality. From 1890 he was secretary of the faculty of the medical school at Columbia, which position brought him closely in contact with the student body, and to him they turned freely for guidance and counsel. In physiology he had two special interests, one being the development of a truly scientific laboratory for the teaching of experimental physiology, so well equipped that it would furnish likewise every opportunity for physiological research. This he accomplished in such fashion that the laboratory became one of the centers of American physiology. The other interest was the early history of physiology, the origins of physiological conceptions, as contrasted with modern physiological thought. For years he studied in the original texts the writings of Aristotle, Hippocrates, Galen, lesser Greek and Latin writers, and especially the writings of Harvey. Among the manuscripts he left was one published in 1915 by his colleague, Dr. Frederic S. Lee, under the title Harvey's 

Curtis, MOSES ASHLEY (May 11, 1808–Apr. 10, 1872), botanist, minister, was born at Stockbridge, Mass., the son of Thankful Ashley, a daughter of Gen. Moses Ashley, and of Rev. Jared Curtis, who was afterward for many years chaplain of the state prison at Charlestown, Mass. In the private school kept by his father he prepared for Williams College, from which he was graduated in 1827. Three years afterward (October 1830), he went to Wilmington, N. C., as tutor in the family of Gov. Dudley. In 1833 he returned to Massachusetts, where he began to study for the ministry. On Dec. 3, 1834 he married Mary de Rosset of Wilmington; in the following year he was ordained in the Episcopal Church; and immediately took up missionary work in western North Carolina, with headquarters at Lincolnton. From 1837 to 1839 he taught in the Episcopal School at Raleigh, which he left, on account of his health, to recuperate in the mountains, where he acquainted himself more thoroughly with the flora of the montane region of the state than any one had ever done. In 1840 he was called to mission work in Washington, N. C., and early in 1841 removed to Hillsboro where he lived till his death, with the exception of the years 1847–56 when he took the pastorate at Society Hill, S. C.

His botanical interests were, he hints, first awakened by Prof. A. A. Eaton’s lectures at Williams. It is not clear how he acquired the training necessary to have produced so remarkable a paper as his first, the “Enumeration of Plants Growing Spontaneously Around Wilmington, N. C.” (Boston Journal National History, May 1835). This survey of the coastal plain vegetation within two miles of Wilmington revealed that he in a very short time had discovered almost as many flowering plants as were then known from the entire state of Massachusetts; but included only the higher or flowering plants. At that time the lower phyla, especially the fungi, algae, lichens, etc., were receiving scant attention. As early as 1845 Curtis had begun to collect lichens for Tuckerman of New England, and his lichen studies soon led into the wider field of all the fungi. Before long he was in communication with Fries of Upsala, Sweden, with Ravenel of South Carolina, and with A. W. Chapman, who dedicated to him his Flora of the Southern United States. He lived in and explored precisely the same country that had been known to Schweinitz only a few years before, yet he was able to discover a large number of new species.
to be of notable service to Fries, and to collect an unusual mycological herbaria in the western world. These specimens were ultimately purchased by Farlow of Harvard, Peck of the New York State Museum, and Bessey of Nebraska, and form collections of great historical value. His correspondence with Berkeley of England began in 1847 and resulted in a personal and scientific friendship of great value to science. The North American Fungi, which was published after his death, was quite as much the work of Curtis as of the better-known British botanist. His matchless collections, as well as his acumen in the discovery of new species and his full notes, were indispensable to the first-hand authenticity and completeness of the publication. In 1860 he published his Geological and Natural History Survey of North America, Part III, Botany; Containing a Catalogue of the Plants of the State, with Descriptions and History of the Trees, Shrubs, and Woody Vines; and followed this, in 1867, with a work of similar title "containing a catalogue of the indigenous and naturalized plants of the state," probably the most complete and scholarly state flora that had been published. Besides the usual list of flowering plants, the fungi received a careful attention unusual in those times. The publication of the latter work was long delayed by the Civil War, to which Curtis makes one of his few allusions in the introduction, as "more important matters of national interest." Like the evolution controversy, the great military conflict seems scarcely to have touched his tranquil nature, given as it was to religion and science which for him transcended all animosities. He was fervent in his belief, however, that the starving condition of the Southern armies and peoples could have been relieved by a better knowledge of the edible fungi, and he prepared a volume on the subject, which remains in manuscript in the hands of his descendants.

CURTIS, NEWTON MARTIN (May 21, 1835-Jan. 8, 1910), soldier, legislator, was born at De Peyster, St. Lawrence County, N. Y. His father, Jonathan Curtis, was a descendant of William Curtis who landed at Boston in 1632, and his mother, Phebe Rising, was also of New England stock. Jonathan, after serving with credit in the War of 1812, went to St. Lawrence County, then a pioneer community, to take up land in Ma-

comb's tract. Newton Martin Curtis was educated in the common schools and in the Gouverneur Wesleyan Seminary, and taught in Illinois for a time. In 1857 he returned to De Peyster to become its postmaster, to read law, and to manage his father's farm. When the news of the fall of Fort Sumter reached St. Lawrence County, Curtis joined others in raising a company of infantry, Company G of the 16th New York, of which he was commissioned captain, May 15, 1861. He remained in the army throughout the war, serving in the armies of the Potomac and of the James. He was one of the officers whose conduct at the capture of Fort Fisher, Jan. 15, 1865, was recognized by the thanks of Congress and the Congressional Medal. For the same service he was made brigadier-general on the field, brevetted major-general, Mar. 13, 1865, and was commended by the New York legislature. During the first year of Reconstruction he served as chief of staff of the Department of Virginia, and as commander of Southwestern Virginia with headquarters at Lynchburg, showing a sympathetic understanding of local problems which won the friendship and cooperation of the community. He was mustered out on Jan. 15, 1866. After the war, he made his home in Ogdensburg in his native county. He was collector of customs for the Oswegatchie district and a special agent for the United States Treasury Department. From 1884 to 1890 he was a member of the New York State Assembly and a member of Congress from 1891 to 1897. In the state legislature and in Congress he was especially concerned with measures for the remedial care of the insane and for the abolition of capital punishment. To convince the people at large of the need for these reforms, he also lectured and wrote in the public press. Largely as a result of his efforts, New York State established at Ogdensburg the St. Lawrence County State Hospital for the Insane. He was also interested in scientific farming and its development in New York State. He was president of the State Agriculture Society in 1880, a member of the committee which placed the experimental station at Geneva, the first secretary of the station's Board of Control and for six years its president; a life member of the American Shorthorn Breeders Association and of a similar English Association. Among his publications were a pamphlet, General Curtis on the Death Penalty, issued by the Howard Association, London, in 1891; a speech dated Jan. 9, 1892, published in the Congressional Record; Capital Crimes and Punishments Prescribed Therefor, etc. (1894), and a book of Civil War history, From Bull Run to Chancellorsville (1906). In 1863, he married
Emeline Clark of Springfield, Ill., who died Aug. 4, 1888. In appearance Curtis was a typical soldier; tall, broad-shouldered, and erect. He was a genial, broad-minded man, and a public-spirited citizen.

A. B. M.—r.

CURTIS, OLIN ALFRED (Dec. 10, 1850–Jan. 8, 1918), Methodist theologian, was born at Frankfort, Me., the son of Reuben Curtis, a Methodist preacher, and of Mary (Gilbert) Curtis. When his father moved away to Wisconsin young Curtis went into business in Chicago. There he was deeply affected by the preaching of Moody. He engaged earnestly in religious work, and finally determined to enter the ministry. At twenty-seven he graduated from Lawrence University, at Appleton, Wis., and three years later from Boston University Theological School. In Boston he felt the influence of Phillips Brooks. The occupations of his next nine years further prepared him for teaching. He was pastor of Methodist Episcopal churches in Janesville, Wis. (1880–83), Milwaukee (1883–86), and Chicago (1888–89), and for two years (1886–88) studied at Leipzig. In 1889 he became professor of systematic theology in Boston University Theological School. During his six years there he studied at Erlangen (1890), Marburg (1893), and Edinburgh (1894). After another stay in Europe, in 1896 he took the chair of systematic theology in Drew Theological Seminary. There he taught for eighteen years, with notable success. On his retirement he became professor emeritus and lecturer, living at Leonia, N. J.

In Curtis’s personality there was an extraordinary meeting of qualifications for the teaching of theology. Thorough technical training had given him command of the history of Christian doctrine and of German and other contemporary religious thought. His intimate familiarity with great literature constantly enriched his teaching. He was widely read in history, particularly American. He had an ardent outspoken patriotism and served as chaplain on a ship during the Spanish-American War. A poetic sense of the beauty and spiritual meaning of nature, expressed in a posthumous volume, pervaded his thought. For background his teaching had an uncommon realization of the urgency and needs of human life. He took a strong individual interest in his students. Above all he had a living moral enthusiasm and a vivid Christian faith. Original religious experience, giving keen insight, moulded his conceptions of doctrine. He taught in language unconventional and dramatic, and with intensity which often left him exhausted after meeting a class. These things combined to cause what one who studied under him called his “quite unrivaled power of making systematic theology a commanding and vital matter in the lives of students” (L. H. Hough). His theological position, while rich in his own perceptions, was generally that of Methodist evangelicalism. He was much influenced by the personalism of Bowne of Boston, and by the idea of racial solidarity. But more significant than his particular views was his vitalizing power. Undoubtedly he was the most influential Methodist theologian of his time. He was married in 1880 to Eva Farlin (died 1883), in 1889 to Ellen Hunt (died 1895), and in 1906 to Ida Gorham. His publications, beside many periodical articles, were: Elective Course of Lectures in Systematic Theology (1901); The Christian Faith Personally Given in a System of Doctrine (1905), the exposition of his theology; Personal Submission to Jesus Christ, Its Supreme Importance in the Christian Life and Theology (address, 1910); The Mountains and Other Nature Sketches (1920).

R. H. N.

CURTIS, SAMUEL RYAN (Feb. 3, 1805–Dec. 26, 1866), soldier, lawyer, engineer, was the son of Zarah and Phalley (Yale) Curtis, both originally from Connecticut. His father had been a soldier in the Revolution. At the time of the birth of Samuel the Curtis family was living near Champlain, N. Y., but soon afterward moved to Licking County, Ohio. In 1831 Samuel graduated from West Point, was assigned to the 7th Infantry, and sent to Fort Gibson. On Nov. 3, 1831, he married Belinda Buckingham of Mansfield. In the summer of 1832 he resigned his commission and returned to Ohio, where he was one of the engineers employed on the National Road. In April 1837 he became chief engineer of the Muskingum River improvement project, serving until May 1839. Meantime he had studied law, and for several years he maintained a law office at Wooster, Ohio. At the outbreak of the war with Mexico he was made adjutant-general of Ohio, but resigned to become colonel of the 3rd Ohio Infantry. At the end of
the war he accepted the position of chief engineer of the proposed improvement of the Des Moines River and moved to Keokuk, Iowa. The Board of Public Works expressed its satisfaction at having obtained the services of a man "who is morally, as well as scientifically, worthy of entire confidence" (Journal of the Senate of Iowa, 1848-49, p. 343). He continued in this work until December 1849. In the spring of 1850 he became city engineer of St. Louis, Mo., where he remained for three years. His chief work here was the construction of a dike to deflect the current of the Mississippi River so as to deepen the channel on the St. Louis side. After leaving St. Louis in 1853, he assisted in promoting what was known as the American Central Railroad. He also maintained a law office in Keokuk, and in the spring of 1856 was elected mayor of that city (Orion Clemens, City of Keokuk in 1856, p. 4).

In the fall of 1856 he was the Republican candidate for Congress from the 1st Congressional District in Iowa. He was elected and reelected in 1858 and 1860. During his third campaign he was described by an observer as "tall, finely though heavily formed, with high forehead, large hazel eyes, decidedly grave face adorned with side whiskers; in demeanor serious, deliberate, in speech and action undemonstrative" (E. H. Stiles, Recollections and Sketches of Notable Lawyers and Public Men of Early Iowa, 1916, pp. 130-31). In Congress his chief interest was the Pacific railroad and he was chairman of a special committee to make plans for it (House Report No. 428, 36 Cong., 1 Sess.).

When the Civil War broke out Curtis was chosen colonel of the 2nd Iowa Infantry and sent to protect the railroads in Missouri; but he soon returned to Washington for the special session of Congress which met on July 4, 1861. While there he was appointed brigadier-general, and on Aug. 6 he resigned his seat and started for the front. In the spring of 1862 he commanded the Union army which defeated the Confederates at Pea Ridge, Ark. In recognition of this victory he was made major-general, and in September 1862 he was given command of the Department of the Missouri with headquarters at St. Louis. Missouri at this time was torn by factional strife and in the performance of his duty Curtis incurred the enmity of Gov. H. R. Gamble. The lack of cooperation between the civil and military authorities caused President Lincoln much anxiety, and after several months he made a vain attempt to restore harmony by removing Gen. Curtis, since, as he explained, he had no authority to remove the Governor. In January 1864, he was assigned to command the Depart-
Curtiss

became a traveling correspondent whose letters to the press gave him national prominence. Of his work during these years a prominent newspaper man of Chicago has said, "For many years Curtis wrote a daily column on affairs of the day, describing important events, and picturing foreign countries as a result of his travels, for the Chicago Record. He was a most diligent, prolific, and brilliant newspaper writer: a great gatherer of facts, an excellent interviewer, and a close observer. His writing of a daily column of descriptive and news matter was in those days something of an innovation. He made of it a department which attained international recognition." But in addition to his newspaper work he found time to write and edit many books. During his régime as first director of the Pan-American Union he started the publication of handbooks—several of which he wrote himself—which have done much to promote friendly relations between South America and its sister continent. Among his travel books possibly the most important are: A Summer Scampcr Along the Old Santa Fé Trail (1883); The Yankees of the East; Sketches of Modern Japan (1896); Between the Andes and the Ocean (1900); Today in Syria and Palestine (1903); Egypt, Burma, and British Malaysia (1905); Modern India (1905); Turkey: The Heart of Asia (1911); Who Woke Up Turkey? (1911). Interested in adult education he was a loyal supporter of the Chautauqua movement. He was always willing to help his friends, especially those in newspaper work. Eugene Field, to whom money had been loaned, once inserted in his column of the Chicago Daily News, "W. E. Curtis is in town to look after his permanent investments."

Curtiss, Samuel Ives (Feb. 5, 1844-Sept. 22, 1904), theologian, was a child of the manse, his father, after whom he was named, having been the pastor of a Congregational church in Union, Conn., for thirty-eight years. His mother's name was Eliza (Ives) Curtiss. He graduated from Amherst in 1867, and from Union Theological Seminary, New York, in 1870. Immediately thereafter, on May 10, he married Mrs. Laura Sessions. He was one of the first group of young scholars to cross the Atlantic and seek further preparation at German universities. After a year at Bonn, he went to Leipzig, where he spent four years, receiving the degree of Ph.D. Noting the need of religious services in English for the growing number of American students and starting such services himself in a private house, he had the satisfaction of later seeing the establishment of an American Chapel which insured the relative permanency of the work. In 1878 he was made Licentiate in Theology by the University of Berlin. He was also given recognition as a scholar by three American institutions, obtaining the degree of D.D. from Iowa College in 1878, from Amherst in 1880, and from Chicago Theological Seminary in 1903. After he had joined the faculty of Chicago Theological Seminary in 1878 as professor of Biblical literature and history, he became actively interested in Chicago's need of city missionary work, and largely through his efforts and his contagious enthusiasm the Chicago City Mission Society was established by the Congregational Churches in 1881.

As a scholar Curtiss was an indefatigable worker and a courageous thinker. As a student at Leipzig, he worked for four years with Franz Delitzsch, and though starting as a loyal defender of traditional views, he followed Delitzsch into the camp of the modern, critical historians. He brought to the Chicago Theological Seminary from Germany the first critical, scholarly Old Testament library to be set up in America. In the Seminary he at first taught both Old Testament and New Testament, but the work expanded so rapidly that he was soon able to call to his aid a professor of New Testament and a professor of Assyriology. His greatest single contribution to scholarship was Primitive Semitic Religion Today, 1902; (Urschriftliche Religion im Volksleben des heutigen Orients, 1903) giving the results of observations made during several trips to Palestine in the closing years of his life to study the folk-lore and religious practises of the present-day population of Palestine. He translated from the German, Bickell's Outlines of Hebrew Grammar (1877), Delitzsch's Messianic Prophecies (1886), and Delitzsch's Old Testament History of Redemption (1881). Aside from many articles upon Old Testament topics in current journals, his only other significant works were a monograph on The Levitical Priests (1877), another on Moses and Ingersoll (1886), and one on Franz Delitzsch (1890). His richest legacy consisted of the large number of students who caught something of his spirit during the twenty-six years of his tenure of office and helped to spread a tolerant and kindly feeling in the churches. His equipment for scholarly work made him for long the outstanding man among his colleagues upon the faculty of the Chicago Theological Seminary.
Curwen

[The Chicago Seminary Quarterly for 1904 made its October number a memorial to Curtis, and the same journal in its issue of July 1903 contains an autobiographical sketch of Curtis entitled "Twenty-five Years as a Seminary Professor." See also Who’s Who in America, 1903-05; Biblical World, Nov. 1904; Bibliotheca Sacra, Jan. 1905.] J.M.P.S.

CURWEN, SAMUEL (Dec. 17, 1715—Apr. 9, 1802), Loyalist, author, was born in Salem, Mass., the son of George Curwin, a minister, and Melhitile (Parkman) Curwen. He was descended from George Curwin, of North England, who settled in Salem, Mass., in 1638. Following his father’s footsteps, he attended Harvard, graduating in 1735. About this time he began to spell his name Curwen. Poor health forced him to abandon his studies for the ministry, and an unhappy love-affair led him to seek distraction abroad. Upon his return, he engaged in commerce. In 1744 he was a captain in the New England expedition against Louisburg, the base of predatory French cruisers. In May 1750, he married Abigail Russell of Charlestown, Mass. He was in the officers of Essex County, and judge of admiralty at the outbreak of the Revolution. Association with prosperous business circles made his views conservative, and the holding of office through administrative favor inclined him to support the existing authorities. When Gov. Hutchinson returned to England, Curwen’s name was attached to an address of approbation and sympathy. Public opinion arose against the “Addressers.” Alarmed at the “soured and malignant” temper against “moderate” men, he embarked for Philadelphia. His wife did not accompany him, fearing the dangers at home less than an ocean voyage. The atmosphere of Quaker Philadelphia was less pacific than he had hoped, so he took ship to England on May 12, 1775. The first year of his exile he spent in London, but as it became apparent that the struggle in America would be of considerable duration, he visited the industrial cities of England, hoping to find the cultural advantages of London at less expense in some other city, but returned disillusioned. His resources were running very low, when in March 1777, the English government granted him an annuity of one hundred pounds. He recorded his life as a refugee in an interesting journal and in letters. The Loyalists in London led an isolated existence. The most irksome feature to Samuel Curwen was the lack of occupation, the “constrained, useless, uniform blank of life.” He was usually pessimistic about his personal affairs, and about political conditions, but he could not forget that he was an American, and British contempt for colonial ability stirred him to indignation. His own convictions, although sincere, were based on the belief that rebellion could not be successful, and he came to regret that he had not kept his opinions to himself. As soon as peace was established he began to consider returning to America. He landed in Boston, Sept. 25, 1784, somewhat disappointed in the physical aspects of the land he had longed to see again. He was not persecuted for his political course but lived a quiet and secluded life until his death in his native Salem.

CURWOOD, JAMES OLIVER (June 12, 1878—Aug. 13, 1927), novelist, son of James Moran and Abigail (Griffin) Curwood, was born in Owosso, Mich., where he also died. His father was related to Capt. Marryat, the novelist, and his mother, according to the legend, was remotely descended from an Indian princess. When he was about five, his family took up an eight years’ residence on a farm near Vermilion, Ohio, close to Lake Erie. Shortly after acquiring his first gun, at the age of eight, he began writing adventure stories remarkable both for length and for profuse incident. Expelled from school, he successively toured much of the South on a bicycle, peddled medicines, trapped wild animals, and studied (1898-1900) at the University of Michigan. From 1900 to 1907 he worked as reporter and finally as editor of the Detroit News-Tribune. Then he returned to live in Owosso with the definite purpose of making himself an author. With The Courage of Captain Plum (1908), he inaugurated a series of books which, despite his long annual sojourns in camp, numbered twenty-six before death intervened nineteen years later. His writings are concerned chiefly with the extreme northwest of this continent—God’s Country, he named it—with the wild animals that live there, and with the human masters of both land and beasts. He dealt with a type of life exactly suited at his precise moment to the vague imaginings of the rank-and-file citizen, and he instinctively availed himself of the conventional literary devices that make for popularity. Of the sixteen novels including The Grizzly King (1916) and culminating with Nomads of the North (1919), he is reported to have sold at the outset an average of about 10,000 copies each, but modern advertising arrangements ran up the advance orders for The River’s End (1919) to 100,000 copies, and for The Valley of Silent Men (1920).
Cushing

Choate, Nathaniel Hawthorne, William Lloyd Garrison, Robert Rantoul, and John Greenleaf Whittier. Industry was alive in the New England ports, and, watching the Cushing vessels sail away for China and India, the boy developed a fondness for the sea and a longing for foreign travel. A handsome and precocious youth, he entered Harvard at thirteen, graduating in 1817 as a member of the Phi Beta Kappa and as Latin Salutatorian in the class with George Bancroft. After a year at Harvard Law School, he entered the office of Ebenezer Moseley, in Newburyport, where he studied intermittently for three years, being admitted to the Massachusetts bar in 1821. In February 1820, he accepted from President Kirkland an appointment as tutor in mathematics at Harvard, but resigned in July 1821, after he had demonstrated that he could have had a brilliant future as a teacher. Meanwhile he had translated Robert J. Pothier's treatise On Maritime Contracts of Letting to Hire (1821), and, at the request of his friend, Edward Everett, had begun to contribute to the recently founded North American Review. While he was building up a practise in Newburyport, he edited the local newspaper, delivered many public addresses, mastered at least four modern languages, and entered aggressively into politics. He secured election in 1824 as representative to the Massachusetts General Court, and in 1826 became a state senator. Essex County had been a stronghold of uncompromising Federalism, and Cushing entered public life as a supporter of John Quincy Adams against Jackson. In the autumn of 1826, running for Congress against John Varum, Cushing, in spite of the encouragement of Webster and Everett, was defeated, largely through the opposition of William Lloyd Garrison, who, although indebted to him for advice and financial assistance, forced his way into a Cushing rally and delivered a scathing attack upon his patron.

On Nov. 23, 1824, Cushing married Caroline Elizabeth Wilde, daughter of Judge Samuel Sumner Wilde, of the supreme judicial court. By 1829 overwork, both in literature and in practical politics, had undermined his health, and he and his wife sailed for Europe, where they spent over a year traveling in England, France, and Spain. The vacation not only restored his strength but also familiarized him with old-world systems of government. On his return, he found that Varum had resigned, and he was drawn into an acrimonious contest with several other candidates for the vacant Congressional seat. Between 1831 and 1833 there were seventeen elections in Essex north district, with Cushing usu-
of 1,800 covers, at which Webster was a guest and speaker, and Cushing was rightly supposed to be more in Webster's confidence than any one else in the Massachusetts delegation in Congress. It was tacitly assumed by both Webster and Everett that Cushing was their legitimate successor to political honors in Massachusetts. He had now, indeed, reached a point where success seemed to be his. When Harrison, the first Whig president, whose campaign biography Cushing had prepared, came into power on Mar. 4, 1841, the latter was jubilant. But Harrison died within a month, and John Tyler, moving into the White House, entered upon that political duel with Henry Clay which was to be disastrous to so many careers. Even while Harrison was alive, Clay had been disposed to claim the leadership of the Whigs, and, with Harrison gone, he assumed the tone of a dictator, actually laying down a legislative policy. Tyler's prompt vetoes of the Whig bills for a National Bank placed him in open opposition to the exasperated Clay, who expelled him formally from the party. On Sept. 11, 1841, four members of the cabinet resigned at Clay's instigation, only Webster, the secretary of state, remaining. Cushing had now definitely sided with Tyler, whom he regarded as more trustworthy than Clay. In a pamphlet addressed to his constituents he defended Tyler's vetoes as being matters of conscience,—a contention in which he was correct, for Tyler, before his election as vice-president, had not disguised his antagonism to a National Bank. Cushing thus enlisted with the "Corporal's Guard," a little group of Congressmen who supported Tyler against Clay. Despite his protests, he was ignored in the Whig councils, and, from that date until the Civil War, he was known as a Democrat, voting consistently for Democratic principles and candidates.

The Whigs, incensed at those of their number who did not participate in the plot to "head Captain Tyler," called Cushing a renegade. His motives in opposing Clay were, however, mainly patriotic, and history has justified his action on the National Bank question. If Cushing did hope for any personal advantage, he chose the wrong course, for he could expect nothing from the outraged Whigs. He closed his Congressional career, which had opened so auspiciously eight years before, with a valedictory on Mar. 3, 1843, in which he complained of the injustice with which he had been treated. On the same evening Tyler sent Cushing's name three times to the Senate as his nominee for secretary of the treasury to succeed Walter Forward, but he was rejected on each trial by a larger negative vote.

624
Cushing

Humiliated though he was, Cushing was not to be without consolation. For some years the State Department had been considering the sending of a commissioner to China to arrange a commercial treaty with that empire, and in 1843 Congress made an appropriation of $40,000 for this purpose. The original scheme had been to offer the mission to Everett, then minister to England, in the hope that Webster might be allowed to escape gracefully from the cabinet by following Everett to the Court of St. James's. Everett, however, declined to sacrifice himself and his aspirations for Webster's benefit; and Tyler, during the Congressional recess, appointed Cushing as commissioner to China. The latter promptly accepted the post, and, with a considerable fleet, proceeded to China by way of the Mediterranean and the Indian Ocean, his flag-ship, the Missouri, being burned in the harbor of Gibraltar. Arriving off Macao on Feb. 27, 1844, he skilfully avoided all the difficulties brought up by the Chinese diplomats and arranged the Treaty of Wang Hnya, signed on July 3 of that year. Cushing was tactful but resolute in his demands, and insisted that all the customary courtesies should be observed. When the Chinese commissioner, Kiyeng, sent him a communication with the title of the United States on a line lower than that of the Chinese Empire, Cushing indignantly protested, and the Oriental apologized. The treaty thus framed opened five Chinese ports to American merchants, settled many disputed points regarding tariff and trade regulations, and established the important principle of "extraterritoriality," specifying that citizens of the United States living in China should be subject to the exclusive jurisdiction of American laws and officials. It is recognized as an important step in our commercial and diplomatic history. On Aug. 27, 1844, Cushing began his return voyage across the Pacific, landing at San Blas, Mexico, and going overland by stage to Vera Cruz, being robbed by bandits on the way. The Treaty of Wang Hnya was approved by the Senate on Jan. 16, 1845, and formally proclaimed on Apr. 18, 1846.

Although the Chinese mission, because of its unqualified success, brought Cushing much fame, he was, for the moment, out of touch with politics. He made an extended tour to the Northwest, exploring Wisconsin and Minnesota, often in the deep wilderness. When he reappeared in civilization, he had been elected again to the Massachusetts General Court. Cushing was frankly an advocate of a big army and navy and held views which would to-day be called "imperialistic." He had favored the acquisition of Oregon and Texas, and he was later to advocate the annexation of Cuba. In 1846, on the eve of a war with Mexico, he was one of the few Northern statesmen to support President Polk. On the opening day of the legislative session in January 1847, he introduced a bill appropriating $20,000 for a regiment to serve in the emergency. When the proposal was rejected, Cushing spent over $12,000 from his own purse, organized a regiment, and was chosen its colonel and dispatched with an expedition to the Rio Grande. For a few months he was commandant in the notorious border town of Mata-moros, where he showed himself to be a strict disciplinarian. In April 1847, he was promoted brigadier-general, and in November he started with his brigade from Vera Cruz, following the picturesque route taken only a short time before by the victorious Gen. Scott through Cerro Gordo, Jalapa, Perote, and Puebla, to Mexico City. To his disgust, he arrived after the fighting was over, and was left with no further military duty to perform except to sit on a Court of Inquiry investigating charges brought by Gen. Scott against Generals Worth and Pillow and Col. Duncan.

During his absence in the army, Cushing had been nominated in 1847 by the Democrats as a candidate for governor of Massachusetts, but had been defeated by his Whig opponent, George Nixon Briggs, in a contest based mainly on the war issue. A feature of the campaign was the publication of Lowell's Biglow Papers, voicing in scathing satire the Northern sentiment against the Mexican War and the annexation of Texas. Lowell was especially caustic toward Cushing:

"General C. is a drelle smart man:
He's ben on all sides that give places or pelf;
But consistency still wuz a part of his plan,—
He's ben true to one party and that is himself."

This characterization, made in the heat of political controversy, was clearly unjust, but it appealed to the popular fancy, and Cushing suffered from it during the remainder of his career. When he reached Newburyport, in July 1848, on his return from Mexico, he was greeted with a salute of one hundred guns. In the autumn, however, when again a candidate for governor, he was beaten a second time by Lowell's "Guvener B."

Cushing never thought it beneath him to serve the people, even though in a modest position. He was often moderator of his town meeting, and in May 1851, after he had secured the passage by the General Court of a bill incorporating Newburyport as a city, he was chosen the first mayor by a vote of 964 to 88. In June 1852, he resigned in order to accept an appointment by Gov. Boutwell as associate justice of the supreme judiciary court of Massachusetts. Although he sat for only
Cushing

a few months, he made a reputation for familiarity with the law and soundness of judgment. In preparation for his duties he read through in six weeks the entire series of *Massachusetts Reports*, covering at that date sixty octavo volumes of approximately 800 pages each. "When he came upon the bench," said Chief Justice Shaw, "we did not know what to do with him; when he left, we did not know what to do without him" (*Ibid.*, II, p. 109).

During the spring of 1852, Cushing, who had been made a delegate to the National Democratic Convention at Baltimore, was active in scheming for the nomination of Gen. Franklin Pierce as a compromise candidate for president of the United States. Recent discoveries prove that the introduction of Pierce's name at Baltimore was the climax of a carefully laid plan, in which Cushing had a leading part. After Pierce's overwhelming victory over the Whig, Gen. Scott, Cushing was naturally much in the public eye, and it was rightly surmised that he was to be one of the chief advisers of the new administration. But, although it was predicted that he was to be secretary of state, that honor was finally awarded to William L. Marcy, and Cushing became attorney-general. At Marcy's request, much of the business formerly transacted by the Department of State, including pardons, legal and judicial appointments, and extradition problems, was assigned to Cushing, with the result that the functions of the attorney-general were virtually doubled. Cushing was the first incumbent of that office to hold strictly to the residence obligation and refrain from the private practise of law. H. B. Learned says of him, "He left behind him a collection of official opinions that for extent alone has never been equalled before or since his day" (*The President's Cabinet*, 1912, p. 178).

In addition to his routine duties, which were heavy, Cushing became on many matters the mouthpiece of the Pierce administration and was one of the two most powerful men in the cabinet, the other being the secretary of war, Jefferson Davis. On Sept. 29, 1853, he sent to Richard Frothingham, editor of the *Boston Post*, a letter known as "Cushing's Ukase," in which he stated Pierce's desire "that the dangerous element of Abolitionism, under whatever guise or form it may present itself, shall be crushed out"; he prepared daily editorials for the Washington *Union*, the administration organ; he favored, although he did not help to originate, the Kansas-Nebraska Act (1854); and in November 1855, at Pierce's request, he issued an official opinion which in every essential respect covered the ground of the Dred Scott Decision (1857), insisting that the Missouri Compromise of 1820 must have been declared by any court to be null and void *in incepto*, "because incompatible with the organic fact of inequality and internal right, in all respects, between the old and the new states." In foreign affairs, Cushing, the representative of "young America" and the apostle of "manifest destiny," approved the doctrines of the Ostend Manifesto and did his utmost, up to the verge of war with Spain, to acquire Cuba for the United States. He directed the prosecution of Crampton, the British minister in Washington, on the charge of recruiting soldiers within our borders for the British army during the Crimean War. For some months the relations between the two nations were strained, especially when Congress sent Crampton his passports and he returned to England; but the good sense of the British government averted disaster. Cushing in this case, as well as in many others, was aggressive in maintaining our national rights. His so-called "Anglophobia" was actually a phase of his intense Americanism.

With the inauguration of President Buchanan in 1857, Cushing, after continuing to act as attorney-general until his successor, Jeremiah S. Black, had arrived, resumed his seat in the Massachusetts legislature, where, even with a majority against him, he exercised an extraordinary influence. His association with Southern statesmen had left him with a gradually deepening bitterness against radical abolitionists like Garrison, but he never became an apologist for slavery. When Jefferson Davis, after a summer in Maine, spoke in Faneuil Hall (Oct. 11, 1858), Cushing introduced him. At the Boston Union Meeting (Dec. 8, 1859), Cushing, with Everett and Levi Lincoln, condemned John Brown's raid and painted the horrors of servile insurrection. By 1860, he had reached a point where he reluctantly confessed that he viewed a separation of the states as the only practicable solution of the controversy, and his prophecy, in January 1860, of civil war, culminating in the dictatorship of some "man on horseback," was widely quoted. It was in this letter that he said, "The South . . . will defend itself at all hazards, within the Union if it may, and, if not so, then outside the Union" (*Ibid.*, II, 242).

The National Democratic Convention which opened, Apr. 23, 1860, in Charleston, S. C., was from the start a struggle for supremacy between the Douglas and the slavery elements of the party. Cushing, the permanent chairman, employed all the devices of parliamentary law to keep the peace. The extremists, however, would not listen to compromise measures, and, after
Cushing

Douglas had led for fifty-seven ballots, the convention declared a deadlock and adjourned in disorder. When it reassembled at Baltimore in June, Cushing once more presided; but, after it became evident that Douglas was sure to be the nominee, he followed the radicals out of the hall. The seceders called a rival convention, and, with Cushing in the chair, named Breckinridge and Lane as standard-bearers. The victory of Lincoln on Nov. 6 convinced Cushing that the Union could not be preserved. His friends in the South openly preached secession, and Cushing, in a series of three addresses in Newburyport, argued that the blame must rest upon the abolitionists for their agitation of the slavery evil. If the Republican party was not prepared to make concessions, it should let the Southern states “go in peace.” He was sent to Charleston as President Buchanan’s personal representative in order to delay, if possible, the passage of an ordinance of secession, but arrived on Dec. 20, just too late. When he was invited to attend the ceremonies connected with the signing of the ordinance, he indignantly declined and returned to Washington. His association with the South was over.

Stronger than any other of Cushing’s principles was his love for the Union, and, when the news arrived of the firing on Fort Sumter (Apr. 12, 1861), he went back at once from Washington to Newburyport and, at a patriotic mass meeting, publicly announced his loyalty to the Federal cause. He then offered his services to Gov. Andrew, saying, “I have no desire to survive the overthrow of the government of the United States.” The famous war governor refused them, saying, “I am compelled sadly to declare that, were I to accept your offer, I should dishearten numerous good and loyal men, and tend to demoralize our military service” (Ibid., II, 277). President Lincoln, with more wisdom, accepted Cushing’s legal assistance, and, as the war progressed, entrusted him with important government affairs. At the time of the Trent incident, he was consulted often by both Seward and Lincoln. He supported every war emergency measure, and, on the night before the election of 1864, spoke in Faneuil Hall for Lincoln and against McClellan. He remained a Republican until his death. At the close of the conflict Cushing commenced the active practice of law in Washington, purchasing an estate at Falls Church, about six miles from the capital, and becoming a citizen of Virginia. President Johnson appointed him (1865) chairman of a commission to revise and codify the statutes of the United States. In 1868 he was sent on a diplomatic mission to Bogota, where he negotiated a treaty with the Colombian Government regarding the right of way for a ship canal across the Isthmus of Panama.

President Grant had confidence in Cushing’s judgment and asked his opinion on vital problems. Chief among these was that of the “Alabama claims,” arising out of deprivations committed on Northern commerce during the Civil War by the Alabama, the Florida, and other vessels built under British registry but later flying the Confederate flag. As early as 1865 it was rumored that Cushing was to be sent to London as a special agent to adjust the demands of the United States upon Great Britain. With all the prolonged and complicated negotiations of the next few years Cushing was intimately concerned; indeed it was through his suggestion to Sir John Rose that the movement for the Treaty of Washington was started. This Treaty (1871) provided for a Tribunal of Arbitration, consisting of one representative each from the United States, Great Britain, Italy, Switzerland, and Brazil, to meet at Geneva for the purpose of settling the American claims. Cushing, who was appointed senior counsel for the United States, with William M. Evarts and Morrison R. Waite as associates, prepared no small part of the American argument. When he arrived at Geneva in June 1872, he effected, by tactful diplomacy, a compromise through which the issue of the so-called “indirect claims” was evaded, and thus enabled both countries to continue without loss of dignity. He later helped to write the American “Counter Case” and delivered his “Reply Argument” in excellent French, to the amazement of the Swiss, Italian, and Brazilian arbitrators. The decision of the Tribunal on Sept. 14, awarding the United States $15,500,000, was the culmination of Cushing’s labors over a period of several years. For Sir Alexander Cockburn, the British arbitrator, who had shown himself to be haughty and disagreeable, Cushing conceived an intense dislike, and, on his return to the United States he published The Treaty of Washington (1873), in which, while presenting a full account of the events leading up to the Geneva Tribunal, he made a vigorous attack on Cockburn.

Late in December 1873, Grant appointed Cushing as minister to Spain, and he was about to sail when the news came of his nomination as chief justice of the Supreme Court. On the death of Chief Justice Salmon P. Chase (May 7, 1873), Grant had offered the vacant place to Senator Roscoe Conkling, who had declined it. He then rather hastily named his attorney-gen-
eral, George H. Williams, but when it became evident that the latter would be rejected by the Senate, he was quietly withdrawn. Then the President turned to Caleb Cushing. If Cushing had sinned in the eyes of the Republican party before 1860, he had amply redeemed his errors, and, as a friend of Sumner and Grant, was in the full confidence of the administration. But his enemies began to rise against him: Harlan's Washington Chronicle denounced him bitterly; old slanders were revived and new ones imagined; and Senator Sargent of California, who still cherished a boyish grudge against Cushing, discovered and printed in garbled form a letter from Cushing to Jefferson Davis in March 1861, recommending a former clerk for a position. Finally Cushing himself requested Grant to withdraw his name, declaring at the same time that he "had never done an act, uttered a word, or conceived a thought of disloyalty to the United States." It was the most notable instance in our history of a rejection for high office on purely partisan grounds, for every one admitted that, in legal learning and acumen, Cushing would have been a worthy successor to Marshall, Taney, and Chase.

Having delayed his departure until it was certain that he was not to be chief justice, Cushing proceeded to Spain, where he found relations between the United States and that country very much strained. The affair of the Virginiius (November 1873) had affronted American pride, and Gen. Sickles, Cushing's predecessor, had disregarded the instructions of Secretary Fish. Cushing, well-versed in Spanish character and psychology, averted danger without injuring the prestige of either nation. No one of our ministers in Madrid has been more popular in Spain. In June 1877, Cushing resigned and retired to Newburyport, where he settled down among his books in the library of his house on High Street. He still went occasionally to Washington, his last trip being made in March 1878, at the earnest request of Roscoe Conkling. He declined a nomination for Congress and refused to run for the attorney-generalship of Massachusetts. A severe attack of erysipelas in July 1878, was a warning of the end, and he died, Jan. 2, 1879. His body was laid in the New Burial Ground, in Newburyport, and a memorial service was held in the City Hall some months later, with formal eulogies by his friends. His nearest surviving relative was his half-brother, John N. Cushing.

Cushing was an extraordinarily versatile and well-rounded man. To a naturally keen mind, he joined other qualities which gave him intellectual distinction. With tireless physical and mental energy, he rose at dawn and was seldom in bed until after midnight. Always busy with some definite task, he had no interest in frivolity or motiveless amusement. A remarkable gift of concentration enabled him to read and digest books with astonishing speed. Through a policy of order and punctuality he avoided any waste of time and he was never idle. He had, furthermore, the insatiable curiosity, the passion for accuracy, and the perseverance of the true scholar, and there were few fields of research into which he did not penetrate. As a young man, he had an enthusiasm for botany and astronomy, but he gave away a fine collection of minerals because such pursuits seemed likely to interfere with his political ambitions. His acquaintances told amazing tales of his information on unusual subjects. Once some of them laid a trap for him. After having read up on Chinese musical instruments, they introduced the theme casually during a dinner conversation. For a brief period Cushing was silent, apparently listening attentively. Then he began to talk, pouring out such a store of facts about musical instruments in general and Chinese musical instruments in particular that those present had to confess the trick which they had played. In Madrid Cushing once astonished Sir Henry Layard, the explorer of Nineveh, by his references to obscure points in the history and archeology of that city. When a well-known dictionary was sent to him by the publishers, he read it and marked over five thousand errors in the vocabulary of modern geographical names. Emerson declared him to be the most eminent scholar of his day, and Wendell Phillips once said, "I regard Mr. Cushing as the most learned man now living" (Ibid., II, 401).

Cushing's genius was acquisitive and critical rather than creative. In contributing to the Encyclopedia Americana and the American Annual Register he amassed a vast store of knowledge, and he also wrote many articles of the "heavy" historical and biographical type for the North American Review and similar periodicals. Besides the dozens of commemorative and occasional addresses which he delivered during a long life, he published a History of Newburyport (1826), a Review Historical and Political of the Late Revolution in France (1833), and Reminiscences of Spain (1833),—the last being overshadowed by Irving's Alhambra (1832), which preceded it by only a few weeks and was much superior to Cushing's book in style and substance. He also projected biographies of Judge John Lowell and of John Tyler, but his
Cushing

plans were not carried out. Among his papers is a considerable amount of poetry, both original and translated; but, while it is technically flawless and displays facility in rhyming, it lacks inspiration. As a linguist, Cushing was excelled by few Americans of his generation. He could converse fluently in French, Spanish, and Italian, and could read easily any of the modern European tongues. On his voyage to China he so mastered the Manchu language that no interpreter was required at his private meetings with the Chinese envoys. At the Geneva Tribunal he shifted from English to French and from French to Italian without the slightest hesitation. He acquired German in middle life, merely as a pastime. In a period when public speaking was looked upon as a fine art, Cushing was a famous orator. As an undergraduate he made a serious study of Demosthenes and Burke, and practised gestures before a long mirror in his bedroom. In the old Hall of Representatives in Washington he was one of the few members whose voice could be heard even in the farthest corner. Ordinarily he was rather cold and formal in his manner, but, once aroused, he was irresistible and sometimes swept an audience off their feet by the fervor of his appeal. Like Webster and Everett, he was a favorite on the Lyceum stage.

In the legal profession he took high rank, and, if he had been able to devote himself to regular practise, would have stood even higher. In court-room pleading he was not notably successful, for he disdained the arts of persuasion and conciliation; but he was expert at summarizing evidence and had great weight with judges, who could appreciate the intellectual quality of his arguments. At certain periods in his life he had a large chintz stage, and in 1873, when he was appointed minister to Spain, he returned over $200,000 which he had received in retaining fees.

In his prime he was robust and powerful, not quite six feet tall, but compact and tightly built. His features were strong and resolute, the jaw especially denoting a tenacious will. His eyes were small, but very bright and restless, with a kind of “gipsy gleam.” Although he was careless in his dress, he carried himself with dignity and impressed people, even in his old age, as being very handsome. He was temperate in his habits and cared little for luxuries, being content always to live in a simple manner. He was never a really popular politician or a good vote-getter. His temperament was too coldly intellectual, and his reserved manner did not appeal to the man in the street. Like Everett and Sumner, John Hay and Woodrow Wilson, he was a scholar-statesman, a little aloof from the common people. He was not a good judge of men and motives, and was easily duped by schemers. In his attitude on public questions he was inclined to be dogmatic. The theory that he was fickle and inconsistent cannot be sustained, for, once he had made up his mind, he rarely altered his opinion. Although he was consumed by ambition, he never changed his views in order to gain preferment for himself; on the contrary, when he took Tyler’s part against Clay, when he supported the Mexican War, and when he defended the South in the decade before the Civil War, he deliberately espoused causes which led to his virtual ostracism in his native state. Even his shifts of party affiliation—from Whig to Democrat in 1841, and from Democrat to Republican in 1861,—are easily explicable on the theory of his devotion to the Union. He himself said, at the close of his long career, “Every act of my political life, in whatever relation of parties, was governed by the single dominant purpose of aiming to preserve the threatened integrity of the Union” (Ibid., I, 6). Far from being tricky or evasive, he was almost ludicrously deficient in tact and adaptability. It was his chief weakness as a practical statesman that he believed in the power of reason as a means of bringing men to his point of view. He had little personal magnetism and few of the graces which arouse enthusiasm; indeed his aggressiveness often made him disliked. This accounts, in part, for the number of his enemies,—men like Garrison and Benton and Lowell,—who molded public opinion against him. Not the least of his many disappointments was his knowledge that his motives were not really understood. He had an opportunity to be a leader in the abolition of negro slavery, but he rejected it for what he conceived to be a nobler ideal—the preservation of the Union. He was unfortunate in being drawn, against his will, into the many controversial questions centering around the status of the negro, and he was not at his best in political controversy. The violent animosities of the struggle between the North and the South did not, for many years, allow a just estimate to be made of Cushing’s character and achievement, but we can now judge him more fairly. His diplomatic successes in China and in Spain; his effective opposition to Clay’s attempt to revive a National Bank; his work in elevating the office of attorney-general; his large share in presenting the American cause at Geneva,—these are Cushing’s positive contributions to our history. He stands out, because of his indus-
Cushing

try, his scholarship, and his versatility, as one of the most picturesque and talented figures of the nineteenth century.

[The chief source of information about Cushing is his biography in two volumes by Claude M. Fuess (1923), a book based largely on the great collection of material preserved by Cushing himself. Cushing’s own published speeches on many subjects are available, and the files of Boston and Washington newspapers are full of references to him. A Memorial of Caleb Cushing from the City of Newburyport was printed in 1879. For his China mission, see Sen. Docs. Nos. 58, 67, 28 Cong., 2 Sects., and Tyler Dennett, Americans in Eastern Asia (1922).]

CUSHING, FRANK HAMILTON (July 22, 1857–Apr. 10, 1900), ethnologist, the son of Thomas and Sarah Ann (Harding) Cushing, was born in the village of North East, Erie County, Pa. When he was three his family moved to Barre Center, not far from Albion, N. Y. At birth a mite, weighing one and a half pounds, Cushing was a “pillow baby.” He grew slowly and was not able to compete in sports with his hardy brothers and sister; and his cloistered life forced him to educate himself from his immediate environment. As he grew stronger, he extended his range to the woods and fields. An arrowhead found by chance was the trivial object that turned his interest to ethnology. His intimate communings with nature, together with his constant study of the old family dictionary, laid the foundation of his knowledge of words and things. At eighteen he took a course in natural science at Cornell. At the suggestion of L. W. Ledyard, an acquaintance of his father, an article by young Cushing on the natural history of his neighborhood in New York was sent to Prof. S. F. Baird [q.v.], secretary of the Smithsonian Institution, to apprise him of the promise of the young man as a scientific worker. This article was published by the Institution and led to his employment in the Smithsonian. In 1879 Maj. Powell appointed him to the Bureau of American Ethnology, where he labored until his death. He was married to Emily T. Magill. Outstanding achievements were his study of the Zuñi Pueblo Indians during a five years’ sojourn with them; his explorations of ancient pueblos in the Salt River Valley, Ariz., and his investigations of the ancient dwellers at Key Marco, Fla. What he brought to these investigations in the way of knowledge, skill, and scientific imagination is incalculable, but the very superabundance of his ideas acted as a brake on publication. There was too much to set down. Thus his written works are comparatively few. The more complete of them are those growing out of his life at Zuñi, published only after the most thorough rewriting and editing, and never satisfying him. A posthumous work, Zuñi Folk Tales (1901), is really more expressive of his character than any other. His Zuñi Creation Myths (1896), also an example of his power of expression and interpretation, is an aboriginal American epic. Especially valuable to ethnologists is Zuñi Breadstuff (1920, republished), a comprehensive review of his life of a tribe, its fullness due to the fact that he was compelled to write it in monthly instalments for The Millstone, a trade journal of Indianapolis. From his early years he had an insatiable desire to know the processes by which the artifacts he found were made. He constantly practised the aboriginal crafts until he became a master of them. Thus he furnished ethnology with a valuable adjunct in the study of native as well as ancient arts. Appraisals by his contemporaries estimate the position he held in science. “Cushing was a man of genius. He had not only the zeal for labor . . . but he had the genius for the interpretation of facts . . .” (J. W. Powell, American Anthropologist, 1900, p. 366). “Cushing was a man of genius, . . . stood out not only as a man of intellect but, preeminently, as a master of those manual concepts to which he gave name as well as meaning—indeed, might fittingly be styled a manual genius!” (W. J. McGee, Ibid., p. 355). “The keynote of Mr. Cushing’s personality seems to have been an unconscious sympathy” (Alice C. Fletcher, Ibid., p. 307). He was always ready to impart his knowledge, and many ethnologists were fortunate in hearing what he had to say. Though he left but a sparing record of his passing genius, so fertile and so freely bestowed, what he did accomplish, struggling with a frail body and over-active mind, is a notable contribution to the growing science of ethnology.

W.H.

CUSHING, JOHN PERKINS (Apr. 22, 1787–Apr. 12, 1862), merchant, philanthropist, was born in Boston, the son of Robert Cushing, a descendant of Matthew Cushing who came to America in 1638, and of Ann Maynard (Perkins) Cushing, daughter of James Perkins and sister of Thomas Handasyd Perkins. Early in life he became a clerk in the mercantile firm of Perkins & Company, established by his two uncles, James and Thomas H. Perkins, for carrying on trade with China and the North-west Coast. In 1803, he accompanied Ephraim Bumstead, the eldest apprentice in the company, on a voyage to Canton. Bumstead was taken ill and obliged to return home, and Cushing was left, at the age of sixteen, to carry on the busi-
ness in China. When Thomas H. Perkins heard that Bumstead had died on the return voyage, he decided to go at once to China; but a letter from Cushing soon arrived, giving such a glowing account of the business that Perkins permitted Cushing to act as resident agent. In China—where he was known as “Ku-shing,”—he conducted affairs so ably that he was admitted to a partnership and became the most highly respected foreign merchant in the country. Except for two short visits home, he remained in China for nearly thirty years, amassing a fortune which, for those days, was colossal. He came back to Boston in 1830, broken in health, and erected a handsome mansion in Summer St., surrounded by a wall of Chinese porcelain and administered, to the amazement of Boston society, by a staff of Chinese servants.

Not long after his return, he married Mary Louise, daughter of the Rev. John Sylvester J. Gardiner, rector of Trinity Church, Boston. He acquired a splendid estate in Watertown, outside of Boston, and built the finest conservatory in New England, which was thrown open freely to the public when the flowers were in bloom. He had constructed for himself a sixty-foot pilot schooner, The Sylph, which, in 1832, won the earliest American yacht race on record, against the schooner yacht Wave, owned by John C. Stevens, of Hoboken, over a course extending from Vineyard Haven to Tarpaulin Cove. Although Cushing’s fortune was estimated in 1831 as more than two million dollars, he was a modest and unostentatious man, who, nevertheless, was widely known for his charities. The Boston Transcript described him as “one of the most opulent and public-spirited citizens of Massachusetts.” He died at his home in Watertown,—now a part of the Town of Belmont,—and was buried in Mount Auburn Cemetery.

CUSHING, JOSIAH NELSON (May 4, 1840—May 17, 1905) Baptist missionary, was born at North Attleboro, Mass., the son of Alpheus N. and Charlotte Everett Foster Cushing. His early education was begun in the local school and continued at the age of fifteen in the Opalic Institute at East Attleboro, where he was converted during a revival meeting under the Rev. C. G. Finney. He prepared for college at Pierce Academy, Middleboro, Mass., and entered Brown University, from which he graduated in 1862. In 1865 he completed his seminary training at Newton Theological Institution, and was ordained in Providence, R. I., shortly thereafter. In the spring of 1865 he had sought appointment under the American Baptist Missionary Union, and was designated to work among the Shans of Burma. While seeking a wife during the following year he taught at Newton. On Aug. 28, 1866 he was married to Mrs. Ellen (Winsor) Fairfield of Boston, and on Oct. 24 they set sail for the East, arriving in Rangoon, Mar. 11, 1867. For seven years he was stationed in Toungoo, studying the Burmese and Shan languages, making evangelistic tours throughout the Shan States, and preparing tracts, Gospel translations, a grammar and handbook of the Shan tongue.

In 1874 ill health forced the Cushings home. One year was spent in Washington, D. C., another in Boston, and then in June 1876 they resumed their work in Burma, making their headquarters at Bhamo, a new station near the Chinese border. From 1880 until 1885 Cushing resided in Rangoon and gave his time to translation and preaching. His wife and son, Herbert, returned to America in 1880, to remain permanently. On Nov. 23, 1880, he finished his translation of the Shan New Testament, and on Jan. 13, 1885, the remainder of the Bible. Soon thereafter he sailed for America by way of the Pacific, and spent a year with his family in Newton, Mass., where he took special work in the Institution. In the fall of 1886, leaving his family, he returned to Burma. For a part of the year 1887 he was principal of the Baptist College in Rangoon. From 1888 to 1890 he was pastor of the Rangoon Baptist Church. In 1891 he completed the stereotyped edition of the Bible in the Shan tongue. In 1892 he was given charge again of the College (now Judson College) and continued in the office of principal until Feb. 14, 1905. It was he who virtually transformed the school into a college, securing endowment, erecting buildings, and gaining educational standing for it. In 1894 the institution became affiliated with Calcutta University on a “First Arts,” or Junior College basis. Cushing filled many offices and received many honors. He was for nearly twenty years a member of the India Government Text Book Committee and vice-president of the Burma Educational Syndicate. In 1891 he was a delegate to the meeting of the Evangelical Alliance in Rome. His enduring monuments are the College, his Shan Bible, and his Shan Bible Dictionary. He rendered distinguished service.
to the British Burma Government, the cause of of scholarship, and Christian missions. In addition to the authorship of various tracts and articles, and his work of translation, he wrote a book, Christ and Buddha (Phila., 1907).

[Information may be found in contemporary numbers of the Baptist Missionary Mag., in W. St. John, Josiah Nelson Cushing (Rangoon, 1912), and in W. S. Stewart, Early Baptist Missionaries and Pioneers, vol. II (1926). See also J. S. Cushing, Geneal. of the Cushing Family (1905).]

CUSHING, LUTHER STEARNS (June 22, 1803—June 22, 1856), author, jurist, was born in Lunenberg, Worcester County, Mass., the eldest of the eight children of Edmund Cushing and Mary (Stearns) Cushing. Edmund Cushing held public offices in town, county, and state for forty years, being a representative in the Massachusetts General Court, a state senator, and a member of the governor's council. Luther was educated in the local schools, studied in a law office in Lunenberg; and entered Harvard College, where he was the only graduate in the class of 1826 to receive the degree of LL.B.

For some years after leaving Harvard he was associated with Charles Sumner and George S. Hilliard in editing a periodical called The American Jurist and Law Magazine, published in Boston. He became, in 1832, clerk of the Massachusetts House of Representatives, holding the position for twelve years. In 1844 he was elected as a representative to the General Court, but was soon named as judge of the city court of common pleas. In 1848 he resigned in order to become official reporter of the decisions of the supreme court of the commonwealth. In that capacity he prepared twelve volumes of law reports (LV to LXVI), extending from 1848 to 1853. He was also lecturer on Roman Law in Harvard Law School, 1848-49 and 1850-51. On July 16, 1851 he was appointed to a professorship but declined on account of ill health (Chas. Warren, Hist. of Harvard Law School and of Legal Conditions in America, 1908, II, 185). He died in Boston on his fifty-third birthday. Cushing was married, May 19, 1840, to Mary Otis Lincoln, a lineal descendant of the patriot, James Otis. After her death in 1851, he married, Oct. 29, 1853, Elizabeth Dutton Cooper. He had three children by his first wife.

Cushing's reputation is based almost entirely on his published books. He was a diligent worker, who translated into English several important legal treatises in foreign languages, among them being Savigny's Law of Possession (1838), Pothier's Treatise on the Contract of Sale (1859), and Mattermaier's Effects of Drunkenness on Criminal Responsibility (1841). Among his important original volumes are: An inquiry into the present state of the remedial law of Massachusetts; with suggestions for its reform (1837), A Practical Treatise on the Trustee Process (1853), Reports of Controverted Election Cases in the House of Representatives of the Commonwealth of Massachusetts from 1780 to 1852 (1853), An Introduction to the Study of Roman Law (1854), and Lex Parliamentaria Americana (1856). This last book, better known under its English title of Elements of the Law and Practice of Legislative Assemblies in the United States, is a volume of more than a thousand pages treating of the common parliamentary law as modified in our legislative assemblies. Published only a few weeks before his death, it was received with universal approval, and a reviewer in the Boston Transcript said, "It will at once assume the very highest rank as a standard authority." More familiar than any of these, however, is the little volume called A Manual of Parliamentary Practice (1844), which bears the secondary title, Rules of Proceeding and Debate in Deliberative Assemblies. In its best-known form it is a small book, four inches by six in size, including 177 pages of text, and easily slipped into the pocket. It happened to fill a long-felt need, and, as soon as it appeared, Cushing's Manual, as it was commonly called, became a guide for the procedure of all organized assemblies. Its sale was extensive, and thousands of copies were sold abroad as well as in this country. After his death, it was revised from time to time and a few pages of comments by the author's brother, Judge Edmund Lambert Cushing, chief justice of the superior court of New Hampshire, were added; but it was so thorough and complete in its original form that it is in constant use to-day by legislative bodies. Cushing was a man of amiable and social disposition, who made friends wherever he went. He knew all the eminent men of his period in Massachusetts, including Sumner, Everett, Choate, Rantoul, and Robert C. Winthrop, and was frequently a guest in their homes. As a translator he was scrupulously accurate and painstaking, and he was careful to base his work upon the best authorities. Because of his wide knowledge, he was often consulted by distinguished persons on points of law. The writer of his obituary sums up his character by saying that he was "widely known and universally esteemed."

[Boston Advertiser, June 23, 1856; Jas. S. Cushing, The Genealogy of the Cushing Family (1905).]

CUSHING, THOMAS (Mar. 24, 1725-Feb. 28, 1788), merchant, politician, the eldest son of
Cushing

Thomas and Mary (Bromfield) Cushing, was born in Boston. His father had risen to political leadership in Massachusetts serving as representative to the General Court, 1731 to 1742, and as speaker, 1742 until his death in 1746. Thomas Jr., received his first degree from Harvard in 1744. Three years after his graduation, he married Deborah Fletcher. He concerned himself with commerce for almost twenty years until the political developments of the sixties opened a new destiny for him in political service. In 1761 he began a service of fourteen years as representative of Boston in the General Court, and in 1766, when Gov. Bernard disapproved of Otis as speaker, Cushing was appointed in his stead. He was reelected eight successive years. With Samuel Adams, James Otis, and John Hancock, he took an active part in the protest against the new British colonial policy inaugurated in 1763. He was elected to the standing committee of the “Society for Encouraging Trade and Commerce within the Province of Massachusetts Bay” in 1763 and a member of the committee appointed by the General Court in 1764 to obtain concerted action among the colonies against the Stamp Act. John Adams wrote in his diary (1765), “Cushing is steady and constant and busy in the interest of liberty and the opposition, is famed for secrecy and his talent for procuring intelligence” (Works of John Adams, 1850, II, 163). He was a type of the commercial class on the seaboard, determined to oppose the regulatory innovations, yet hopeful of peaceful settlement and reluctant to advocate measures more radical than economic boycott. With this purpose, he signed the non-importation agreement of 1768, served as member from Boston in the convention of Sept. 22, 1768, and helped prepare the 1769 address to the governor praying for the removal of British troops. He accepted an appointment on the Boston Committee of Correspondence, May 28, 1773, and when Franklin transmitted the celebrated Hutchinson letters to him, as speaker of the House, these were broadcast by the committee. In July 1774, he was chosen a member of the Committee of Safety, and a handbill, distributed in September 1774, included him among those charged with treason by the British government. He was elected to the Provincial Congress of Massachusetts, to the Second Provincial Congress, and to the First and Second Continental Congresses. He served on important committees concerned with mercantile and monetary affairs and strongly urged non-importation, non-consumption, and non-exportation. With the advent of 1776 it became clear that he was unprepared for the extreme event for which Samuel Adams had struggled. To denounce the innovations since 1763 and to force reconciliation by economic pressure had been his sole aim. Accordingly the General Court replaced him by Elbridge Gerry in the Continental Congress. But although his convictions did not permit him to declare for independence, Cushing did not desert the patriot cause and he was reelected to the Council, which exercised supreme executive power in Massachusetts in 1776, 1777, and 1778. In financing the Revolution he served as president of the New Haven Price Convention (Jan. 15-20, 1778), delegate to the Hartford Convention (Nov. 8, 1786) and commissioner to the Providence Assembly to provide supplies for the French fleet and army. Of his attitude toward a new form of state government in Massachusetts, John Adams wrote in 1779, “Cushing was avowedly for a single assembly, like Penna.” Upon the adoption of the Massachusetts constitution, Cushing was elected lieutenant-governor and was annually reelected until his death. He belonged to the “Hancockian party” which dominated Massachusetts politics from 1780 to 1793, and the inability to elect Cushing as governor in 1785 over James Bowdoin, gave the first check to the influence of John Hancock (A. E. Morse, Federalist Party in Massachusetts, 1909, p. 27). In 1780 he was one of the founders of the American Academy of Arts and Sciences, and in 1785, Harvard, which he had served as an overseer, awarded him the LL.D. degree. He died at Boston, Feb. 28, 1788. Although not a man of eminent leadership, he was a tactful, reliable, and extremely useful person during the trying years after 1763. With fidelity he filled many posts, following as his maxim, “Let us act with zeal, not rashness!”

CUSHING, WILLIAM (Mar. 1, 1732–Sept. 13, 1810), jurist, was born at Scituate, Mass., the eldest son of John Cushing by his second wife, Mary Cotton. He was descended on both sides from the old office-holding oligarchy of provincial Massachusetts. His maternal grandfather, Josiah Cotton, schoolmaster, county judge, member of the General Court, and preacher to the Indians at Plymouth, was a grandson of the famous John Cotton, first minister of Boston. The Cushing family descended from Matthew Cushing,
Cushing

who settled at Hingham, Mass., in 1638, and was the ancestor in other lines of Thomas, Caleb, and Luther S. Cushing. William Cushing's grandfather and father both served as members of the Governor's Council and of the superior court, the highest law court of the Province. After graduating at Harvard in 1751 Cushing taught school for a year at Roxbury, Mass., and then studied law in the office of the famous provincial lawyer, Jeremiah Gridley of Boston. Admitted to the bar in 1755, he practised in Scituate until the creation of the new county of Lincoln in the district of Maine in 1760 required the appointment of county officers. William Cushing received the posts of register of deeds and judge of probate, while his younger brother Charles was appointed sheriff. The brothers took up their residence at the new county seat, Pownalborough, now Dresden, on the Kennebec, where for the next twelve years Cushing was the only lawyer in a back-woods community, eight days' journey from Boston and sparsely settled by French and German immigrants. The only knowledge we have of him in these years is in connection with his professional appearances before the superior court at Falmouth, where he was often associated in cases with John Adams, who travelled the Maine circuit.

In 1771, John Cushing, William's father, resigned the post as judge of the superior court which he had held for twenty-three years, and William, returning to Massachusetts, became his successor (1772). The British crown determined to make the provincial courts independent of colonial opinion by paying the judges' salaries. In March 1774 the Massachusetts General Court voted the judges of the superior court salaries from the colonial treasury, and called on them to refuse the crown grant. Four judges, including Cushing, obeyed: Oliver, the Chief Justice, refused and was impeached. Cushing's attitude at this juncture is described by a contemporary: 'He was a sensible, modest man, well acquainted with law, but remarkable for the secrecy of his opinions, . . . He readily resigned the royal stipend without any observations of his own; yet it was thought at the time that it was with a reluctance that his taciturnity could not conceal. By this silent address he retained the confidence of the court faction, nor was he less a favorite among the republicans' (Mercy Otis Warren, History of the Rise, Progress, and Termination of the American Revolution, 1805, vol. I, p. 118).

Nothing is more remarkable than the way in which Cushing, though holding high office, succeeded in remaining in the background during the pre-revolutionary struggle. In 1776, however, he drafted the instructions from his home town of Scituate in favor of independence.

In 1775 the revolutionary council of state, which took over the government of Massachusetts, reorganized the courts, retaining Cushing alone of the previous judges as a member of the new supreme judicial court. John Adams was appointed chief justice, but never took his seat, Cushing presiding in his absence as senior associate justice; and when Adams resigned in 1777, Cushing became chief justice, a post which he held for the next twelve years. The system of reporting the opinions of the courts not yet having been introduced, a few newspaper notices of charges to grand juries are the only record of Cushing's judicial labors in Massachusetts except in one important case. This was a criminal action tried at Worcester in 1783 against one Jennison for assault committed in attempting to repossess himself of a slave. Cushing charged the jury that the clause of the Massachusetts Bill of Rights of 1780, which declared that "all men are born free and equal," operated legally to abolish slavery in the state. During Shays's rebellion one of the objects of the malcontents was to prevent the sittings of the courts, and they attempted to obstruct the supreme judicial court at Springfield on Sept. 29, 1786. It is probably of Cushing's behavior on this occasion that a record has been preserved: 'The Chief Justice was applied to by a committee from the mob and entreated to yield to their wishes; he replied, that the law appointed the court to be held at that time, and it was their duty to hold it accordingly; and, followed by his Associates, he proceeded into the street. His countenance was blanched to paleness, but his step was firm. As he advanced, the crowd opened before him ... and the court was regularly opened' (Flanders, Lives and Times of the Chief Justices, II, 34).

Cushing was a member of the Convention of 1779 which framed the first state constitution of Massachusetts, and was vice-president of the state convention of 1788 which ratified the Federal Constitution. On the organization of the United States Supreme Court, he was the first associate justice appointed. During his twenty-one years on the Court, he delivered opinions, all of them brief, in nineteen cases, of which the most important are Chisholm vs. Georgia (2 Dallas, 419), Ware vs. Hylton (3 Dallas, 199), and Calder vs. Bull (3 Dallas, 386). In them he concurred with the majority of the judges and did not add to their exposition of the law. During the absence of Jay on his mission to England, Cushing acted as chief justice, and administered the oath to Washington at his second inaugura-

634
Cushing

The chief work of a Supreme Court justice during Cushing's service was to hold the federal circuit courts. This duty took Judge Cushing all over the country. "His travelling equipage was a four-wheeled phaeton, drawn by a pair of horses; which he drove. It was remarkable for its many ingenious arrangements (all of his contrivance) for carrying books, choice groceries, and other comforts. Mrs. Cushing always accompanied him, and generally read aloud while riding. His faithful servant, Prince, a jet-black negro whose parents had been slaves in the family . . . followed behind in a one-horse vehicle, with the baggage" (Flanders, op. cit., II, 38). Cushing was noted for the ceremoniousness of his deportment. He was the last American judge to wear the full-bottomed English judicial wig. "I very well remember," wrote one who had seen him, "the strong impression his appearance made upon my mind when I first saw him, as he was walking in a street in Portland. He was a man whose deportment surpassed all the ideas of personal dignity I had ever formed. His wig added much to the imposing effect" (J. D. Hopkins, Address to the Cumberland Bar, Portland, Me., 1833, p. 44).

He is said to have finally abandoned this wig in consequence of the unpleasant observation it attracted when he first held court in New York. The boys followed him in the street, but he was not conscious of the cause until a sailor, who came suddenly upon him, exclaimed, "My eye! What a wig!" Cushing was of medium height and slender, with bright blue eyes and a prominent aquiline nose. His portrait was painted by Sharpless in 1799. His few letters which have been preserved display a playful wit not reflected in his public character. His manner is said to have been benign and cheerful, and his eloquence in addressing juries is universally commented on.

Judge Cushing died at Scituate, Sept. 13, 1810, without issue. In 1774 he had married Hannah Phillips of Middletown, Conn., who died in 1834 at the age of eighty.

[There is no biography of Cushing. The fullest account is in Henry Flanders, The Lives and Times of the Chief Justices of Supreme Court of the U. S. (1858), vol. II, based on a manuscript sketch by Chas. Cushing Payne; the most recent account is a paper by Chief Justice Arthur P. Rugg in Yale Law Jour., Dec. 1920, vol.]

Cushing

J. Di.

CUSHING, WILLIAM BARKER (Nov. 4, 1842-Dec. 17, 1874), naval officer, was born at Delafield, Wis., the fourth son of Milton Buckingham Cushing, M.D., and his wife Mary Barker Smith of Boston, both descended from the oldest colonial stock. Dr. Cushing moved to Chicago in 1844, and in 1847 to Gallipolis, Ohio, his death occurring the same year. His widow then settled at Fredonia, N. Y., where she established a successful school, her four boys aiding in the support of the family. In 1856 an appointment was secured for William as page in the House of Representatives at Washington, and the next year he was appointed to the Naval Academy. His lack of application, his love of skylarking and practical jokes, even at the expense of his professors, and a too evident aversion for discipline led to a recommendation for his dismissal from the Academy in his senior year, the privilege of being turned back for a year being denied him. He was allowed to resign March 23, 1861, but, aided by his friends, he was enabled to take part, with the warrant rank of acting master's mate, in several operations carried out by the U. S. Minnesota. As prize-master he took the Delaware Farmer to Philadelphia, and, in May 1861, with one volunteer officer and only the captured crew of the Pioneer, he safely sailed that prize to New York. This dangerous and responsible duty proved his real worth, and he was restored to the Navy, in October 1861, as acting midshipman, being assigned to duty in the North Atlantic Squadron. On account of the increase of the commissioned personnel, incident to the war, he became a lieutenant on July 16, 1862, at nineteen years of age.

As executive officer of the Commodore Perry, commanded by his friend Flusser, Cushing performed an act of gallantry which was highly praised by his superiors. While descending the Blackwater River after the battle of Franklin, Oct. 3, 1862, the Perry jammed her bow into the bank and was charged by a strong force of the enemy. Cushing, disregarding orders to get under cover, called for volunteers, ran a field-piece out on the forecastle, and, though all his mates were killed or wounded, succeeded in discharging the piece at point-blank among the enemy, causing them to retreat and saving the ship from capture. Assigned thereupon to the command of the small steamer Ellis, he captured the Adelaide and destroyed the extensive salt works in New Top-
sail Inlet. Ordered to capture Jacksonville, N. C., and destroy the salt works at New Juliet, he secured the Wilmington mail, took two prizes, shelled and captured the town on Nov. 23, 1862, and destroyed a Confederate camp. Endeavoring to cross the bar of the Onslow River two days later, the Ellis ran aground, and Cushing was obliged to transfer his crew to one of his prizes, the vessels still afloat being ordered to stand off the inlet, while Cushing, with six volunteers manning a single-pivot gun, remained in the Ellis in an effort to save her, the ammunition and the rest of her artillery being salvaged by the prize. Early next morning, the enemy’s fire increasing in fury and there being no chance of saving the ship, she was set fire to, and Cushing and his men made their escape in an open boat from under the very guns of the foe. In consequence of the loss of his ship Lieut. Cushing asked for a court of inquiry, but received instead the compliments of his superiors for his coolness and courage.

Commanding in turn the Commodore Barney and the Shokokon, he was, on Sept. 5, 1863, ordered to the command of the Monticello. The following February he performed, in the words of J. R. Soley (The Blockade and the Cruisers, p. 94), “two of those dare-devil exploits which gave him a name and a fame apart in the history of the War.” The first of these took place in February 1864, while the Monticello was blockading the mouth of the Cape Fear River. With two small boats and twenty men he proceeded up the river to Smithville, in order to surprise and capture certain important Confederate officers. The enterprise was a partial success, although the officer of the highest rank was not captured. The second expedition was made in the following June and was a night expedition to the near neighborhood of Wilmington, in which Cushing captured a mounted courier with important information. After brilliant service in the blockading fleet off the North Carolina coast, his plans to fit out torpedo-boats to destroy the formidable and dangerous Confederate ram Albemarle were approved. The Albemarle, after destroying several Federal vessels, was lying at Plymouth, N. C., eight miles up the Roanoke River, a town which she had been instrumental in capturing. She was on the point of undertaking serious maneuvers against the Union fleet, when, on Oct. 27, 1864, Cushing in a torpedo-boat launch manned by a crew of fifteen men who had all volunteered for “extra duty,” crept up the river in the dark accompanied by a small cutter, and, eluding the enemy’s lookouts, steamed directly for the Albemarle, lying at her moorings surrounded by a raft of logs to prevent boarding.

Cushing had decided in case he could surprise the ram, to capture her by a rush of his few but well-armed men; but, as the single sentinel on board the ship gave the alarm and the small-arms firing became brisk, Cushing dashed straight at the Albemarle, and the full head of steam carrying the launch over the protecting logs, he succeeded, after considerable trouble, and after having his clothes pierced by five bullets and the sole of one shoe carried away, in lowering the boom and exploding the torpedo under the vessel’s hull. “The explosion took place at the same instant that one hundred pounds of grape at ten-feet range crashed in our midst, and the dense mass of water thrown out by the torpedo came down with choking weight upon us” (Cushing’s own story, United States Naval Institute Proceedings, XXXVIII, 979). Twice refusing to surrender, Cushing plunged into the river, swam a long distance down-stream and gained the opposite bank. After hours of difficult working through swamps, hungry and exhausted, he finally came upon a shore post of Confederate soldiers near the mouth of the Roanoke. Awaiting his opportunity, he appropriated their skiff and rowed out into the open for hours toward a light which proved to be that of the Federal picket vessel, Valley City. Of his companions on the torpedo-launch two were drowned, one escaped, and the rest were taken prisoners. Before he left on this hazardous expedition he had laughingly remarked, “Another stripe or a coffin!” He received not only the stripe making him a lieutenant-commander at the age of twenty-one, but the highest praise of the Navy Department, as well as swords, medals, and testimonials from many citizens and organizations, and the formal thanks of Congress given at the express request of President Lincoln. On Nov. 22, 1864, Cushing was placed in command of the flagship Malvern of the North Atlantic Squadron, the capture of which, when she was the blockade-runner Malvern, was considered one of the most brilliant exploits of the blockading squadron (Soley, The Blockade and the Cruisers, p. 163). It was, however, recognized that Cushing’s talent for more active command should not be wasted, and he was again placed in charge of the Monticello, the wisdom of this appointment at once appearing in the series of daring and successful operations which soon followed. One of these was sounding for anchorage previous to the first attack on Fort Fisher, during which Cushing, with fourteen companions in a small boat, was under the fire of that fortress and other works for six hours. At the attack on Fort Fisher on Jan. 15, 1865, he commanded a
Cushing

company of sailors and marines from his ship and led the assault over one hundred yards of sand under short-range fire, finally leaping the parapet and participating in the capture of the work, being the only surviving officer of his command. After the fall of Fort Fisher he rendered hazardous duties in taking up torpedoes, and the subsequent days of the war saw his capture of two blockade runners and his construction of a "mock Monitor," the appearance of which caused the evacuation of a strong Confederate earthwork. In four years Cushing had risen from the position of a "bilged" midshipman to the rank of lieutenant-commander. While he was perhaps oftener under fire than any other officer of the Navy, he seems to have escaped with hardly a scratch. After the Civil War he served both in the Pacific and Asiatic Squadrons, commanding the Lancaster, 1865–67, and the Monitor, 1868–69. He was detached on Nov. 12, 1869, and on Feb. 19, 1870, he married Katherine Louise Forbes at Fredonia, N. Y. From Mar. 30, 1870, he served as ordnance officer at the Boston Navy Yard and was promoted to be commander on Jan. 31, 1872. On July 11, 1873, he was ordered to the command of the U. S. S. Wyoming, and, learning that the crew of the Virginia were being summarily executed at Santiago de Cuba, he left Aspinwall without orders and landed at Santiago Nov. 16, 1873, seeking an immediate interview with the Spanish Governor, Burriel. He informed that functionary that "if he intended to shoot another one of the Virginins' prisoners he would better first have the women and children removed from Santiago." This warning protest was confirmed by Cushing's superior officer, Commander Braine, who arrived shortly afterward in the Juníata, and no more prisoners were executed. Cushing's acts and correspondence in connection with this affair, and his subsequent seizing of the General Sherman, proved that he possessed an appreciation of international law and diplomacy which, with his love of reading, no doubt would have tempered his natural vehemence, had not his brilliant career been cut short by ill health. He was ordered to Washington as assistant to the executive officer of the Navy Yard, but was taken to the Government Hospital for the Insane on Dec. 8, 1874, dying there on the 17th. He was survived by his wife and two daughters.
